We are not urging you, however, to do this; we do not have any faith in your theory; no faith in your ability to secure it. Our experience and results of past efforts in this direction are ample proof that any renewal of such an effort at this time will meet with no better success, but we desire to remind you that if you have faith in this policy, and mean to carry it out, you are wasting a golden opportunity by not attempting to pass some legislation to carry into execution this Republican scheme of financial relief instead of burning daylight by your forced and repeated adjournments. Now that you have about discharged the first duty laid upon this special session of Congress under the call of the President in compliance with the President's request, the second obligation thereby imposed has been reached, for he said in his inaugural address that the question of first importance was the tariff, and then a revision of our monetary system.

We have in the case of this Administration and the Administration that came into power in 1893 a peculiar political paradox. In 1893 we won the battle and our triumph was complete on the tariff question. The shouts of the marching victors and the glare of the lighted bonfires had scarcely died away when President Cleveland convened Congress in extraordinary session to revise the currency laws and our financial system, notwithstanding he and the enthusiastic Democratic hosts had won the election on the tariff issue. In 1896 the Republican party claim they triumphed on the money question, and thereupon, with precipitate haste, President McKinley convenes Congress in its thirteenth extraordinary session to consider and pass a tariff measure. In view of existing conditions, it is hardly likely that the Republican party will escape a similar fate as the result of the extra session of 1897. When it becomes known, and that will not be long, that the Dingley bill levies upon the people of this country, as it does annually, additional taxes estimated at \$113,000,000 and makes the average rate of duties 57.03 per cent, as against 49.58 per cent under the late McKinley law and 39.94 per cent levied under the Wilson bill, the full measure of its enormous exactions will readily be appreciated.

But, Mr. Chairman, speaking for myself, and I believe reflecting the sentiment of the Democratic party, as well as a large per cent of the more conservative of all other parties, I say we would much prefer to support a measure that would restore to the circulation of the country this vast sum of money rather than withdraw it from the people and the channels of trade by taxation and put it into the Treasury of the United States, especially when not needed to meet the demands of the Government. The question of tariff agitation has been one of periodical recurrence since the foundation of the Government, and our history attests the fact that we have had periodical reverses and hard times under what has been called high protection and low tariffs, and some of the most acute stages of these hard times have been reached under the highest tariff laws. So that it is not safe to rely upon tariff legislation as either a sure preventive or a safe curative of these ills. They have played their part, I concede you, in aggravating the evils which have their origin in a still worse system, if possible, than any tariff laws. But by the operation of these unjust and inequitable laws the masses of the people, and especially the agricultural classes and the great producers of wealth in the great farming districts of the Southern, Central, Western, and North-western States, who depend upon the great agricultural products of these sections, beyond the reach of all benefits of protection, have been drained of their resources. In proof of this fact I desire to submit, to be printed as part of my remarks, a tabulated statement carefully prepared by a reliable and enterprising newspaper in the year 1895, the Atlanta Constitution, based upon official data furnished by the auditors and comptrollers of forty-three States and Territories, regarding the increase and decrease of property valuation therein for the years 1893 and 1894. The following table is a summary of the facts gathered:

State or Territory.	1893.	1894.	Increase.	Decrease.
Alabama	\$290,172,590	\$243,171,677	-----	\$17,000,913
Arizona	28,408,138	27,061,979	-----	1,406,239
Arkansas	173,626,484	171,965,480	-----	1,597,004
California	1,216,700,000	1,205,918,000	-----	10,782,000
Colorado	238,722,417	208,905,279	-----	29,817,138
Florida	102,905,406	104,246,969	-----	1,341,563
Georgia	452,644,907	429,012,923	-----	23,631,984
Idaho	33,000,000	28,000,000	-----	5,000,000
Illinois	847,191,516	824,651,628	-----	22,539,888
Indiana	1,362,004,609	1,275,435,377	-----	86,569,232
Iowa	565,857,799	556,412,766	-----	9,445,033
Kansas	356,621,818	337,501,722	-----	19,120,096
Kentucky	706,790,076	696,220,942	-----	10,579,134
Louisiana	250,045,503	251,001,948	-----	1,045,845
Maryland	524,056,241	529,138,103	-----	5,081,862
Maine	270,812,782	272,319,370	-----	1,506,588
Massachusetts	2,791,582,144	2,815,883,621	-----	24,301,477
Minnesota	642,903,651	648,759,254	-----	5,855,603
Mississippi	190,949,527	159,058,436	-----	1,891,091
Missouri	994,589,787	999,951,980	-----	5,362,193

State or Territory.	1893.	1894.	Increase.	Decrease.
Montana	\$127,548,175	\$118,850,892	-----	\$8,698,083
Nebraska	194,733,124	183,717,498	-----	10,015,626
Nevada	26,178,060	23,629,720	-----	2,548,340
New Hampshire	274,816,342	239,683,799	-----	35,132,543
New Jersey	768,285,274	774,388,332	-----	\$6,103,058
New Mexico	43,630,240	41,128,620	-----	2,501,620
New York	4,038,068,949	4,273,942,431	-----	235,883,482
North Carolina	261,717,727	262,927,119	-----	1,209,392
Oklahoma	15,020,927	14,830,495	-----	190,432
Oregon	168,088,995	159,399,383	-----	8,689,612
Pennsylvania	3,115,339,549	3,162,114,251	-----	46,774,702
South Carolina	170,242,261	173,508,289	-----	3,266,028
South Dakota	136,032,840	128,046,765	-----	7,986,075
Tennessee	338,731,725	319,822,197	-----	18,909,528
Texas	886,175,306	867,814,306	-----	18,361,000
Utah	117,505,375	99,542,472	-----	17,962,903
Vermont	170,051,865	175,132,912	-----	5,081,047
Virginia	406,945,118	464,038,922	-----	57,093,804
Washington	285,634,246	228,356,572	-----	57,277,674
West Virginia	222,218,154	229,007,407	-----	6,789,253
Wisconsin	654,000,000	600,000,000	-----	54,000,000
Wyoming	32,356,801	29,198,041	-----	3,158,760

The official record of the value of property returned for taxation in 1893 and 1894: Five hundred millions missing from the South and the West.

This table is given to prove that whatever financial disasters may overtake the balance of the country, New England and its allies remain undisturbed and continue their work of accumulation.

#### NEW ENGLAND.

Out of these 43 States and Territories, only 12 show an increase of property valuation, while the remaining 31 show almost uniform decreases. The total increase for the 12 States is \$337,800,753.

Of this amount, \$235,883,482 comes from New York alone. Seventy per cent, it is seen, comes from New York, and 70 per cent of the balance comes from Massachusetts and Pennsylvania. The total increase in the remaining 9 States is \$30,822,022.

The thirty-one States and Territories show a falling off. This decrease in property valuation amounts to the enormous sum of \$500,185,785. This remarkable showing, when compared with the per cent of the increase in the wealth of the Eastern States, is startling and can only be accounted for upon some theory of a radical wrong in the operation of the system of laws which have from time to time been placed upon our statute books. New Hampshire and Vermont show a decrease, but, taken as a whole, the entire New England and Middle Atlantic States show a net increase in property valuation for taxation of \$312,110,555. Only two of the Western and Middle States show an increase, and the net decrease from that vast territory foots up \$319,824,735. In the 12 Southern States given, 4—North and South Carolina, Florida, and Louisiana—show a small increase.

Here are facts and figures that, if correct—and their accuracy is not disputed—of themselves furnish an argument unanswerable, showing the most monstrous system of legalized robbery and exchange brigandage of this or any other country. If any further proof was wanting to convince any fair and candid mind that this system is wrong and must be changed, and that without delay, if we shall hope to preserve our free institutions and secure our people from total bankruptcy, it may be found in the still further comparisons as shown by a quotation from the able and exhaustive speech of the Hon. J. L. McLAURIN, of South Carolina, upon this subject, delivered from the floor of the House pending this debate. Mr. McLAURIN said, in the course of this speech:

I shall quote, to some extent, from a synopsis of the census bulletins by Mr. S. S. King, found in his book entitled *Bondholders and Bread Winners*. I will begin with the States of Indiana, Illinois, Iowa, Nebraska, Louisiana, Mississippi, Alabama, Georgia, and North Carolina. These nine great States are those upon which the country depends for the production of wheat, corn, and other cereals, meat, dairy products, sugar, cotton, tobacco, rice, and almost everything that the agricultural portion of our country produces.

With these I will compare the States of Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, and Pennsylvania. In these nine States is found the great manufacturing and money centers of the nation. The relative condition of these two groups of States should give a fair interpretation of the truth or falsity of my position. The first group of States has 486,040 square miles of land, while the second group of States has but 168,655 square miles, about 3 to 1. The population of the first group is 13,400,167 people, while the second is 14,507,407. During the ten years between 1880 and 1890 the first group, or producing States, gained in wealth \$559,441,974, while the second group, or manufacturing and money-lending States, gained in wealth \$3,054,762,722. In other words, the nine manufacturing States, with but one-third as much land and less than two million more people, gained in wealth five times as much as the producing States. The producing States gained 22 per cent in people and 20 per cent in wealth, while the manufacturing States gained 30 per cent in people and 40 per cent in wealth.

Again, let us compare these nine producing States with the single State of Massachusetts. As I stated before, these nine States contain 486,040 square miles. Massachusetts has only 8,315 square miles. These nine States contain 13,400,167 people, while Massachusetts has but 1,783,085. These nine States in 1880 had an assessed valuation of \$2,702,919,155. The assessed valuation of Massachusetts was \$1,584,756,802. The relative position which these nine States held to Massachusetts regarding land, labor, and capital was: Land, 58 to 1; labor, 7 to 1, and capital, 3 to 1. The nine producing States had 58 times as

much land, 7 times as much labor, and double the amount of capital that Massachusetts had. Under such conditions it would seem that with all these advantages the increase of wealth would be largely in favor of the nine producing States; but such is not the case. While these nine producing States increased in wealth during the ten years between 1880 and 1890 \$599,441,794, the little State of Massachusetts increased in wealth \$599,377,824.

This one little manufacturing State increased in wealth nearly ten millions of dollars more than these nine great producing States. Striking as these figures are, they will be surpassed as the comparison is continued. To these nine great producing States I will add Florida, Kentucky, and Kansas, and compare these 12 States with the State of Pennsylvania. These 12 States contain 667,100 square miles. Pennsylvania has but 45,215. In 1880 these 12 States contained 16,323,441 people. Pennsylvania only 4,282,891. The assessed valuation of these 12 States in 1890 was \$3,335,313,121, that of Pennsylvania \$1,693,459,016. The gain of these 12 States in wealth in ten years was \$897,184,160, while the gain of Pennsylvania for the same period was \$909,382,016. With 14 times as much land, 4 times as much labor, and twice as much capital, these 12 great States were led by the single State of Pennsylvania more than \$12,000,000.

To these 12 States I will add Tennessee, Virginia, and West Virginia, making 15 States, and compare them with New York. These 15 States have an area of 776,480 square miles; New York has but 49,170. These 15 States had a population of 19,996,827 in 1880, while New York had 5,082,871. The assessed valuation of the 15 States at that date was \$3,995,169,502, while that of New York was \$2,651,940,006. The gain of these 15 States in wealth during the ten years named was \$1,117,188,218; that of New York was \$1,123,385,932.

With one-sixteenth as much land, one-fourth as many people, and but two-thirds as much capital, this one State of New York increased its wealth about six millions more than these 15 great States. It seems almost incredible, but such are the facts.

Again, Mr. Chairman, I desire to submit in this connection, and have printed, a table showing the losses in farm values from 1850 to 1890.

	Total values.	Farm values.	Other values.
1850.....	\$7,135,780,228	\$3,271,575,426	\$3,864,204,802
1860.....	16,159,616,066	6,645,045,007	9,514,571,051
1870.....	30,038,518,507	9,232,803,861	20,805,714,646
1880.....	43,642,000,000	10,197,066,776	33,444,933,224
1890.....	65,037,091,197	13,279,232,649	51,757,858,548

These figures show a steady increase in manufacturing wealth and a steady decrease in farm values.

The capital invested in manufacturing industries increased 121 per cent from 1850 to 1890, while during that same period farm values decreased from 30 per cent of the total wealth of the country to 20 per cent of the same.

#### FACTORY AND FARM LABOR COMPARED.

The census reports contain the following complete statement regarding the entire manufacturing interests of the country:

Entire capital invested.....	\$6,524,475,305
Value of all manufactured products.....	9,370,107,024
Miscellaneous expenses.....	\$630,944,058
Wages paid.....	2,282,825,265
Cost of raw material.....	5,158,868,353
Net profits.....	1,297,471,948

This table shows a net profit of 20 per cent on the capital stock of all manufacturing concerns for the year 1890.

The census also gives a corresponding but not so complete a statement regarding agriculture:

Number of farms in the United States in 1890.....	4,564,641
Number of acres in farms.....	623,218,619
Number of acres in average farm.....	137
Total value of farms and stock.....	\$15,982,267,689
Value of farm products sold, consumed on the farm, and on hand.....	\$2,460,107,454
Value of farm products per average farm.....	\$538

A careful comparison of these statements will furnish material for much serious consideration. The manufacturing interest, with capital of six and one-half billions, made a net profit of \$1,297,471,948, and paid for labor over two billions of dollars. During the same year agriculture, with nearly sixteen billions capital, made a gross profit of \$2,460,107,455, and is credited with paying nothing for labor.

The census shows more laborers on the farm than in the factories, but if we call the number equal and give them like wages we find the net profits of agriculture to be only \$177,279,189, or but 1 per cent of the capital invested.

A difference in remuneration of 19 per cent per annum between agriculture and manufacture is unfair and can not be defended.

I will print the following statement, sent Senator MILLS, of Texas, in response to an inquiry, which bears upon the question under discussion:

DEPARTMENT OF LABOR, Washington, D. C., February 6, 1894.

MY DEAR SIR: In response to yours of January 19 and January 20, I have the honor to state that from the very best sources which I have been able to

consult I estimate the average annual earnings in all manufacturing industries in the countries named by you to be as follows:

Country.	Total value of products.	Number of employees.	Product per hand.	Annual wages paid.
United Kingdom.....	\$4,100,000,000	5,180,000	\$790	\$204
France.....	2,245,000,000	4,443,000	545	175
Germany.....	2,915,000,000	5,350,000	545	155
Russia.....	1,815,000,000	4,760,000	381	120
Austria.....	1,265,000,000	3,000,000	409	150
Italy.....	605,000,000	2,281,000	265	130
Spain.....	425,000,000	1,167,000	364	120
Belgium.....	510,000,000	953,000	545	105
Switzerland.....	160,000,000	370,000	431	150
United States.....	7,215,000,000	3,837,000	1,880	347

1. United States, \$347; 2. Great Britain, \$204; 3. France, \$175; 4. Belgium, \$165; 5. Germany, \$155; 6. Austria, \$150; 7. Switzerland, \$150; 8. Italy, \$130; 9. Spain, \$120; 10. Russia, \$120.

The above estimate has been made, so far as the United States is concerned, from the actual number of persons employed and the total wages paid to them, as shown by the census of 1890. For Great Britain they have been made largely from British figures, and for the other countries the estimates have been made from statements originating with foreign authorities and verified by facts collected by agents of this Department. While the actual figures given in the above estimates may not be more than approximately correct, the proportions, I feel sure, are fair.

I am, very respectfully,

CARROLL D. WRIGHT,  
Commissioner.

Again, I submit as appropriate in this connection a still further extract from the speech to which I have referred, including a tabulated statement accompanying the same, under the heading of the

#### DISTRIBUTION OF CAPITAL AND WEALTH.

I will now take up the distribution of the capital and loanable funds, which will show a greater inequality than that which exists in either previous statement. In this connection I will print a table from the report of the Comptroller of the Currency for 1893:

Table showing, by States and Territories, the population of each on June 1, 1893, and the aggregate capital, surplus, undivided profits, and individual deposits of national and State banks, loan and trust companies, and savings and private banks in the United States on or about June 30, 1893; the average of these per capita of population, and the per capita averages of such resources.

State or Territory.	Population June 1, 1893.	All banks.	
		Capital, etc.	Average per capita.
Maine.....	664,000	\$89,707,745	\$135.10
New Hampshire.....	385,000	102,640,545	266.60
Vermont.....	333,000	47,893,258	143.79
Massachusetts.....	2,462,000	803,901,450	326.52
Rhode Island.....	307,000	142,298,067	387.73
Connecticut.....	791,000	218,071,008	275.60
New York.....	6,311,000	1,830,980,879	291.55
New Jersey.....	1,557,000	130,829,792	87.88
Pennsylvania.....	5,600,000	635,060,300	113.40
Delaware.....	175,000	15,630,358	89.31
Maryland.....	1,060,000	110,307,805	103.27
District of Columbia.....	280,000	22,364,276	83.14
Virginia.....	1,690,000	44,829,571	26.13
West Virginia.....	800,000	22,624,943	28.28
North Carolina.....	1,698,000	13,167,178	7.89
South Carolina.....	1,184,000	19,010,617	16.06
Georgia.....	1,917,000	38,014,463	19.83
Florida.....	437,000	8,624,906	19.74
Alabama.....	1,592,000	14,144,814	8.94
Mississippi.....	1,332,000	12,162,863	9.13
Louisiana.....	1,190,000	38,632,863	32.78
Texas.....	2,386,000	73,245,261	30.70
Arkansas.....	1,222,000	8,337,230	6.83
Kentucky.....	1,905,000	78,873,840	41.40
Tennessee.....	1,830,000	37,623,635	20.62
Missouri.....	2,815,000	176,000,771	62.07
Ohio.....	3,804,000	246,557,236	64.81
Indiana.....	2,250,000	78,954,829	35.09
Illinois.....	4,119,000	285,184,145	69.23
Michigan.....	2,237,000	130,848,877	58.50
Wisconsin.....	1,826,000	97,715,823	53.51
Iowa.....	1,982,000	123,873,045	62.49
Minnesota.....	1,498,000	110,295,433	73.62
Kansas.....	1,516,000	52,497,761	34.63
Nebraska.....	1,303,000	81,135,798	62.17
Nevada.....	45,000	1,074,641	23.86
Oregon.....	373,000	17,062,442	48.15
Colorado.....	405,000	39,446,851	79.69
Utah.....	230,000	14,040,682	61.04
Idaho.....	108,000	23,348,828	31.01
Montana.....	179,000	3,677,749	20.52
Wyoming.....	77,000	4,598,619	59.72
New Mexico.....	165,000	3,380,024	20.52
North Dakota.....	253,000	10,885,193	43.02
South Dakota.....	430,000	13,499,311	31.39
Washington.....	485,000	30,715,337	63.33
Arizona.....	64,000	1,814,001	28.35
California.....	1,317,000	289,584,676	219.88
Oklahoma Territory.....	130,000	1,523,792	11.57
Indian Territory.....	105,000	801,822	4.72
Total United States.....	67,021,000	6,412,990,954	.....

This vast fund of so-called loanable funds does not stand for the money in circulation alone. It includes not only that, but the deposits, redeposits, and bank credits which enter into our complex commercial system.

#### A STARTLING COMPARISON.

Taking the table as it stands, it will be seen that the eleven Eastern States, Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Maryland, and Delaware, control \$4,142,372,216 out of the aggregate amount of \$6,412,939,953.

The eleven Southern States, Virginia, West Virginia, North and South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, and Arkansas, control but \$291,711,700, and the remaining twenty-seven States and Territories control \$2,078,756,999. In other words, the eleven Eastern States hold 64 per cent of these loanable funds, while the eleven Southern States have but 5 per cent.

A careful analysis of this statement will be required to discern its full import. The eleven Eastern States, with an area of only 117,062,640 acres, control \$4,142,372,216 of this fund, while the eleven Southern States, with 479,956,756 acres, have but \$291,711,700. Reduced to an average, this gives the eleven Eastern States \$35.38 per acre, and to the eleven Southern States less than 7 cents per acre.

Again, the population of the eleven Eastern States is 13,984,000. The population of the eleven Southern States is 14,967,000. Reduced to a per capita average gives each individual in the Eastern States \$216, and each individual in the Southern States \$14.03.

In other words, it is shown by this table that while the 11 Eastern States named, with an area of only 117,062,640 acres, and a population of 13,984,000, control \$4,142,372,216 of the total aggregate available capital and loanable funds of this country, or, reduced to an average, these 11 Eastern States control \$35.38 per acre or \$216 per capita, while the remaining 38 States and Territories of the Union, with a population of 49,037,000, or nearly three times as large as that of the Eastern States, with an acreage covering more than four-fifths of our vast domain of territory, possess only \$2,270,567,737 of the \$6,412,939,953, or about \$51 per capita.

These figures, Mr. Chairman, afford to the patient and painstaking student, interested to inquire into the general trend and tendency of Republican policies, high protection laws, and adverse silver legislation that have dominated and controlled the administration of public affairs for the last fifteen or twenty years, valuable and instructive reading. A careful and conscientious investigation of the facts disclosed is calculated to excite distrust among the thoughtful and reflecting and create a belief among many unprejudiced minds that we are being deceived and victimized by the confidence "game" that has ever been employed to entrap the unwary and unsuspecting. They know, and we know, that they have as a victim a people of easier access than the foreigner; a people who are unable and can not escape the binding effect of Congressional action; a people whose Representatives upon this floor have been admonished that they have and shall have no hand in the construction of this bill; a people who, for all purposes of taxation and paying tribute, have ever been regarded and treated as foreigners by the gentlemen who are forcing this measure through this House. That people are the great producing classes of the West and the great North and Southwest.

The agricultural class of this country, constituting its greatest productive power and nearly one-half of its consuming power and force, is a class whose homes and modest abodes are left unlighted and untouched by the benefaction of its favor and abandoned to the vengeance of the destroying angel conjured up by the provisions of this bill. The authors of this bill know well that the producing class of this country can not escape the operation of that economic law that declares that the debts and taxes of a nation must eventually be paid, if at all, in the product of that country; that the farmer, the artisan, the miner, and the laborer must wrench from the soil and carve from whatever material resources nature has endowed and blessed the land with sufficient of its raw products to give in exchange for and to pay and liquidate all these debts and taxes.

Those who purchase these products and handle them in the shops and on the markets can, and do, generally, protect themselves from the burden of these debts by the prices they fix in their own markets. As the bonded and national debt increases, as taxes are increased, as privileged, exempted, and monopolistic classes are built up, they can save themselves from the extra taxation consequent thereon by ceasing to purchase or, as is usually the case, by falling back on the producer and force him to take less for the products of his toil and labor. This accounts for the fact that during times of great depression and stagnation the producer gets less and less for his products, while there is no corresponding diminution in the prices of those things he has to buy. And thus the great burden of increased taxation at last falls either directly or indirectly upon the producer. Have they no right to complain—to enter their protest against this iniquitous system of taxation?

There is absolutely no security, no protection for him. He can not, in the very nature of things and the position he occupies in industrial society, be protected only in so far as his natural rights are protected by just and equitable laws, laws that preserve and maintain his rights to deal with his fellow-men without their exacting therefor a surrender of an undue proportion of the fruits of his labor and toil, a right which the pending bill proposes to

wrest from him by a combination of open violence and latent duplicity. An increase of the national debt, an increase of the Government expense, or an increase of taxation for any purpose, is a warning given to the producer that he must make up his mind to take a less price for the results of his labor, a less price for his wheat, his corn, his oats, his surplus of whatever it may consist.

How different a similar condition of public affairs, though even much more aggravated than that with which we are confronted to-day, was met by Sulley, the great minister of finance of Henry of Navarre, in the most trying crisis of the French people, when he undertook to restore and secure prosperity to the industries of that country, rent and wrecked by the fierce and bitter passions of internal religious wars. He proceeded upon the wise and statesmanlike principle that agricultural prosperity and thrift were the foundation of all prosperity, and he succeeded in reviving the ruined and destroyed industries of that country by curtailing the expenses and reducing the taxes of the Government and abolishing and wiping out trade and commercial restrictions that fettered and shackled agriculture.

How very different, indeed, the spirit that animates and stimulates the Dingley bill—a spirit that has held high carnival and run riot in the conduct of public affairs during the last twenty or twenty-five years, that has increased the expenses of the Government from a few millions to over \$500,000,000 annually, and has swollen the tide until of recent years it has reached the high-water mark of over \$1,000,000,000; a spirit that has begotten such extravagance among our people in certain quarters that the boast of our Republican friends that this is a billion-dollar country and their party a billion-dollar party is greeted with shouts of applause. Conscious that privilege, trusts, and monopoly spring from indebtedness, high and excessive taxation that burden and enthrall a people, that same spirit, intensified and encouraged by the insatiable greed and avarice of those who fatten and thrive upon this boasted profligacy, has seized this, another opportunity of securing princely bounties under the provisions of this bill, a fitting culmination of that policy which is rapidly converting American citizenship into a mere taxpaying and burden-bearing function to sustain the royal privilege of individuals and classes.

To illustrate the statesmanship applied and the methods employed in the administration of our national debt, and to afford a fair example of how debts and taxes are made a burden that incessantly prey upon and eat out our substance and destroy our resources, I hereby submit a statement which, though often made, can not be too often repeated:

On the 1st of March, 1866, the national debt was.. \$2,827,868,959  
The Cleveland Administration added to that..... 262,315,400

Total..... 3,099,484,359

The bondholders paid for the above bonds only \$1,633,739,638, and the Government has paid back therefor to the bondholders the following sums:

On the principal..... \$1,800,000,000  
In interest..... 2,600,000,000  
By way of premium..... 58,000,000

Total paid to bondholders..... 4,458,000,000

So that there has been paid back to the bondholders nearly three times the amount which they paid to the Government, and there is still left a balance of the national debt unpaid amounting to \$1,226,007,800.

But the most surprising feature of the condition of the national debt and its management is not disclosed in the above exhibit, but consists in the fact that after all these more than thirty years of struggle, hardship, and honest effort to pay this debt it stands to-day equally as large, equal as a burden, equal in its purchasing power, when compared with the present prices of wheat, corn, cotton, meat, and other products of the farm and field, as it was when it was first assumed. However paradoxical this may seem, yet it is true, as the following tabulated statement will show:

Table showing the average price in 1865 and in 1895 of nine of the staple products of the country.

	1866.	1895.
Wheat.....per bushel..	\$1.90	\$0.58
Corn.....do.....	1.06	.30
Flour.....per barrel..	10.75	3.50
Cotton.....per pound..	.42	.08
Mess pork.....per barrel..	28.37	8.20
Sugar.....per pound..	.11	.05
Wool.....do.....	.53	.21
Beef.....per cwt.....	15.25	9.50
Bar iron.....per pound..	.061	.021

The following table shows how much of the above and foregoing products, respectively, the whole national debt could have

purchased in 1866 and how much the balance left at the close of the year 1895 could purchase:

	1866.	1895.
Wheat.....bushels.....	1,486,842,105	2,153,620,688
Corn.....do.....	2,708,800,000	5,630,003,903
Flour.....barrels.....	232,790,697	353,571,428
Cotton.....pounds.....	5,885,416,000	14,558,823,529
Meat pork.....barrels.....	99,576,313	150,915,853
Sugar.....pounds.....	25,383,348,314	24,750,000,000
Wool.....do.....	6,330,188,679	5,755,815,953
Beef.....cwt.....	181,967,213	130,283,136
Bar iron.....pounds.....	41,851,851,851	46,348,314,006

So it will be observed that the national debt is, in fact, greater than the foregoing figures show, for the reason that the last bond issue of Mr. Cleveland is not included or considered in the table. It is therefore apparent from the foregoing tables and figures that the purchasing power of the national debt is not only not reduced, but, if any difference, greater now than it was in 1866, and after we have paid upon that debt the enormous sum of \$4,458,000,000.

But, Mr. Chairman, this is not all. In order that we may more thoroughly comprehend and understand the effect of this system of increasing the purchasing power of the debts and taxes, and I may well add the money of the country, by the establishment of the gold-standard policy upon the individual, we can not fail to note the ever increasing number of failures reported since the adoption of this appreciating standard of money.

Number and liabilities of failures.

Year.	Number of failures.	Liabilities.	Year.	Number of failures.	Liabilities.
1873.....	5,163	\$228,490,000	1885.....	10,637	\$124,220,321
1874.....	6,830	156,230,000	1886.....	9,634	114,644,119
1875.....	7,740	201,000,000	1887.....	9,634	167,500,944
1876.....	9,002	191,117,000	1888.....	10,670	128,829,973
1877.....	8,872	190,000,000	1889.....	10,882	148,784,337
1878.....	10,478	204,483,132	1890.....	10,907	189,856,904
1879.....	6,639	98,149,033	1891.....	12,273	180,808,658
1880.....	4,736	65,732,000	1892.....	10,344	114,044,167
1881.....	5,282	81,155,982	1893.....	15,242	246,749,889
1882.....	6,736	102,000,000	1894.....	13,885	172,902,856
1883.....	9,184	172,874,172	1895.....	13,197	173,198,080
1894.....	10,906	226,340,427	1896.....	15,088	226,000,834

If we take the official reports and apply them to an ordinary farm, such as the ordinary farmer owns and occupies, and estimate the prices of the surplus products he and his family raised and had for sale twenty-four years ago and now, we find that it loses annually, as near as the same can be approximated from statistics. On 500 bushels of wheat, \$250; on rye, oats, potatoes, etc., \$50; on 600 bushels of corn, \$120; on 10 tons of hay, \$30; on 3 horses and mules, \$100; being a total of \$500.

Now, taking the farming land as a whole, it is estimated from the figures of the Agricultural Department that the reduction of the annual income is \$7 per acre. One billion eight hundred million dollars has been taken from the farmers' annual income, which if left to them, would be a better encouragement and protection to the industries than a thousand Dingley bills.

During this period we have passed through many varied experiences—panics, major panics and minor panics, bankers' panics and business panics, bankruptcies without number or limit, five or six great labor strikes, resulting in labor wars and more or less loss of life and property; all under the fostering and paternal care of high protection.

Now, Mr. Chairman, in view of the fact that the measure now proposed, which purports to be a measure to provide revenue for the Government and to encourage the industries of the United States, will not accomplish the full measure of relief that is demanded, whatever may be its merits as a revenue producer and whatever effect it may have upon the general business situation, it is plain to all thoughtful and reflecting men that the time has arrived when the financial problem must be taken up and solved, to the end that needed relief beyond the reach of tariff legislation shall be afforded the masses; and while not technically germane to the subject of this bill, yet is so intimately connected therewith that its consideration can not well be avoided consistent with an intelligent understanding of the situation, I shall venture in this connection to briefly state a few facts and reasons why I regard this question as of first importance in the reforms conceded to be necessary.

By whom is this problem to be solved, and how is the relief to be secured? We all agree, at least did so during the last campaign, that to make gold only our money standard is to benefit the few and oppress the many. What, then, are we to have—silver and gold on a parity as our standard money, or shall we

reverse the position of the two metals as they now stand before the country and legally legislate silver into the position of gold and place gold where silver now stands? Such a result, it is contended by our Republican friends, would follow the free coinage of silver by independent action of this Government. This argument has been employed and relied upon by the advocates of the gold standard, and as a further and still more serious objection, they insist that this result would drive gold out of the country and bring about a derangement in our financial and commercial relations that would disturb and destroy business confidence and involve in ruinous consequences our whole financial system.

Little indeed do they consider the almost universal ruin and bankruptcy they have entailed by the establishment of their policy. If, as contended, such a departure in the value of the two metals, or difference in the value of the two dollars, would certainly follow as the natural and logical result of the policy for which we contend, then there might be some reasonable excuse for the position now occupied by the majority of the other side of this Chamber. But in order to make any kind of defense of your position, you assume premises and take for granted certain facts that have not only never been conceded or admitted, but have always been open questions of dispute and controversy. Your contention rests wholly upon theoretical reasoning, and not upon proven or demonstrated facts.

Your contention ignores not only the experience of more than eighty-odd years of our history, but important and controlling facts that are capable of proof and the most satisfactory demonstration. But if it should be conceded that the free and unlimited coinage of silver at the ratio of 16 to 1 upon terms of equality before the law with that of gold would place this country upon a silver instead of a gold basis, what would be the result? Would Wall street then, as it does now, control the finances of our country? Would there be any more labor troubles? Would there be an increase in the number of poor, impoverished, and idle men and women without employment or working at starvation wages? It is the common belief that with this change would come an end to all these troubles. But this is not the contention. This is not the question at issue.

The controversy is one of wider scope. The Democratic party assumes and places its claims to public confidence and popular approval upon the higher plane of the sovereign right of a free people to exercise the supreme prerogative of legislating upon all matters affecting the general interest, welfare, and prosperity of the people, free from the dictation and independent of the consent of any other government, potentate, or power. The Democratic party has faith in the ability, resources, and strength of this Government, patriotism of its people, and wisdom of its statesmanship to devise, establish, and maintain a financial system, as well as a revenue system, on its own responsibility, without the aid or consent of any foreign influence, power, or government.

In this we differ from our friends upon the other side of this Chamber, who occupy the unique position of declaring to the country in their McKinley and Dingley tariff bills that we are independent, great, and powerful, and will enact such tariff legislation as suits us, regardless of the financial or commercial interests of any and all foreign powers, even to the extent of shutting them out and our people in in all commercial exchange, barter, and trade, but that we are too weak, impotent, and powerless to regulate our own money system without the consent of the leading commercial nations of Europe.

The Democratic party believes that our people are more dependent upon Europe and the great commercial nations of the world for a market in which to sell and dispose of our surplus products—the wheat, cotton, corn, and other staple products of the farm, as well as the products of our mills, mines, and factories—than we are upon their wisdom and disinterested statesmanship to influence, mold, and shape our financial policies. The Democratic party believes in a safe, sound, and stable currency, and enough of it to transact the business of the country and afford a sufficient circulating medium to restore back losses sustained in the shrinkage of property values.

The minority upon the floor of this Hall, representing a majority upon this question outside of this House, are as firm and sincere in their devotion to a sound and safe currency system as our friends of the majority, and all their apparent candor in professing to believe otherwise is merely a play to the galleries and the country. I will not impugn the motives of those who differ with me upon the questions involved in this controversy, but I have the right to question the motives of those who attempt to pose before the country as the censors of other people who may happen to not agree with their views upon questions of finance.

But let us see if the leaders upon your side have always entertained the views they now profess; whether your party has not been upon both sides of this question. I wish first to quote the language of some of the recognized leaders of your party, whose statements will not be denied as authoritative declarations of the position of your party at the time they were made. Many years

ago, at the close of the civil war, and before it became fashionable for our friends to denounce the advocates of silver money as anarchists, Abraham Lincoln, in his last public utterance, on the 14th of April, 1865, addressing Mr. Colfax as he was on the eve of his departure to the West to examine into the condition of the projected Union Pacific Railway, said:

Mr. Colfax, I want you to take a message from me to the miners whom you visit. I have very large ideas of the universal wealth of our nation. I believe it practically inexhaustible. It abounds all over the Western country, from the Rocky Mountains to the Pacific, and its development has scarcely commenced. During the war, when we were adding a couple of millions of dollars every day to our national debt, I did not care about encouraging the increase in the volume of our precious metals. We had the country to save first. But now that the rebellion is overthrown and we know pretty nearly the amount of our national debt, the more gold and silver we mine, we make the payment of that debt so much the easier. Now, I am going to encourage that in every possible way.

We shall have hundreds of thousands of disabled soldiers, and many have feared that their return home in such great numbers might paralyze industry by furnishing suddenly a greater supply of labor than there will be a demand for. I am going to try to attract them to the hidden wealth of our mountain ranges, where there is room enough for all. Immigration, which even the war has not stopped, will land upon our shores hundreds of thousands more per year from overcrowded Europe. I intend to point them to the gold and silver fields that await them in the West. Tell the miners of the West for me that I shall promote their interests to the utmost of my ability, because their prosperity is the prosperity of the nation, and we shall prove in a very few years that we are indeed the treasury of the world.

This was the strong and patriotic language used by this eminent statesman and patriot. As he stood at the close of his illustrious and eventful life, at the termination of one of the greatest civil wars of ancient or modern history, looking upon the devastation it had wrought and the enormous debt of nearly \$3,000,000,000, a charge upon the exhausted resources of his country, the energy, patriotism, and industry of his fellow-citizens, he turned his gaze toward the setting sun, toward the rich deposits of gold and silver ores with which an all-wise and beneficent Creator had blessed these mountain ranges, and with hope and trust pointed to these rich resources of his country, containing an inexhaustible supply of the precious metals, which, under the Constitution, could be coined and converted into primary legal-tender money with which this great burden could be paid and liquidated. But alas, this fond dream of the martyred President must come to naught at the plotting of the money changers in the very temple made sacred by the blood of his martyrdom.

Again, I quote from an eminent Republican authority, the Hon. Jerry Rusk, the Republican Secretary of Agriculture under Mr. Harrison, who said, on page 8 of his report for 1890, referring to the silver legislation known as the Sherman Act:

The recent legislation looking to the restoration of the bimetallic standard of our currency and the consequent enhancement of the value of silver has unquestionably had much to do with the recent advance in the price of cereals. The same cause has advanced the price of wheat in Russia and India, and in the same degree reduced their power of competition. English gold was formerly exchanged for cheap silver, and wheat purchased with the cheaper metal was sold in Great Britain for gold. Much of this advantage is lost by the appreciation of silver in those countries.

Again, I quote from President Harrison's message to Congress on the 1st of December, 1890:

The general tariff act has only partially gone into operation, some of its important provisions being limited to take effect at dates yet in the future. The general provisions of the law have been in force less than sixty days. Its permanent effects upon trade and prices still largely stand in conjecture. It is curious to note that the advance in the prices of articles wholly unaffected by the tariff act was by many hastily ascribed to that act. Notice was not taken of the fact that the general tendency of the markets was upward, from influences wholly apart from the recent tariff legislation. The enlargement of our currency by the silver bill undoubtedly gave an upward tendency to trade and had a marked effect on prices, but this natural and desired effect of the silver legislation was by many erroneously attributed to the tariff act.

So you will observe that you have ex-President Harrison and his trusted and efficient Secretary of Agriculture against you in 1890; in fact, against themselves now.

But this is not all. President McKinley, then a member of this House, in 1890, on the 7th of June, in the course of his remarks, as recorded on page 5813, in volume 108, first session of Fifty-first Congress, made use of the following language:

Mr. Speaker, no man should hesitate between the two millions a month that we have now and the four and a half millions a month that we shall have under the proposed law. We get an increased volume of money with safety to the Government and the citizen. Pass this bill and what do we have? An increase of \$80,000,000 annually of circulation to be put out among the people and into the avenues of business. Vote against this bill and, in my judgment, you vote that there shall be no legislation upon the silver question at this session of Congress. That is what I fear it means.

We know we can not have free coinage now except in the manner as provided in the bill. You know you could not have it when you were in the majority in this House. You know you can not get it now. You do not mean to get it. Therefore I say that to defeat this bill means to defeat all silver legislation and to leave us with two millions a month only, when by passing this bill we would have four and a half millions a month of Treasury notes as good as gold. For one, Mr. Speaker, I will not vote against this bill, and thus deprive my people and my country, and the laborers and the producers and the industries of my country, of thirty millions annually of additional circulating medium.

Again, Mr. McKinley had another opportunity of expressing himself upon the subject of the free coinage of silver, or rather the increase of the currency by this means; and as he was about

that time usually credited with speaking his mind pretty freely, he took the occasion at his now somewhat famous Lincoln banquet speech at Toledo, Ohio, in answer to a speech made upon a similar occasion by President Cleveland at the "Old Roman" banquet at Columbus, same State, to say:

During all his (Mr. Cleveland's) years at the head of the Government he was dishonoring one of our precious metals, one of our own great products. He endeavored even before his inauguration to office to stop the coinage of silver dollars, and afterwards, and to the close of his Administration, persistently used his power to that end. He was determined to contract the circulating medium and demonetize one of the coins of commerce, limit the volume of money among the people, make money scarce, and therefore dear. He would have increased the value of money and diminished the value of everything else—money the master, everything else its servant. He was not thinking of "the poor" then. He had left "their side." He was not "standing forth in their defense." Cheap coats, cheap labor, and dear money. The sponsor and promoter of these professing to stand guard over the welfare of the poor and lowly! Was there ever more glaring inconsistency or reckless assumption? He believes that poverty is a blessing to be promoted and encouraged, and that a shrinkage in the value of everything but money is a national benediction.

This is the arraignment by the present incumbent of the Presidential chair of his predecessor in that high office. How does the matter stand to-day? Could not the ex-President, with equal if not more propriety, to-day reverse the game and employ with even greater force this same language against his distinguished successor and his party? Certainly no one will dispute that Major McKinley of 1890 is against President McKinley of 1897 upon the subject of the coinage of silver money. If Grover Cleveland had abandoned the poor when he antagonized silver, what position does the Republican party occupy in this Hall at this time?

There is another Republican authority of national distinction, perhaps the most eminent and influential of his party—certainly the most conspicuous upon all questions of public finance in this country at this time—the Hon. John Sherman, chief Cabinet officer of the present Administration. In his book on Finance and Taxation, on page 530, he says:

Take one-half of the solid money of the world out of existence; take the sole standard of more than two-thirds of the human race, reduce it to a base metal, and the effect upon the commerce of the world would be incalculable. These two metals—gold and silver—have traveled side by side from the beginning of time; the records of human history do not go back to a time when they did not move together; they have varied in value, sometimes one and sometimes the other being higher, but they have gone on, gold the money of the rich, silver the money of the poor, the one to measure acquired wealth, the other to measure the daily necessities of life; and, sir, no act of Parliament, although it may disturb for a moment the relations of these two metals to each other—nothing but an act of God can destroy the use of both of them by mankind.

How does this sound, as coming from this great financier when he is writing history, compared with his and his party's utterances when engaged in the attempt to perpetuate the rule of the gold-standard policy, of which they were the authors? Here is a clear and distinct exposition of the position of the Republican party upon this question; at least so far as their position can be ascertained through the authentic declaration of its leaders and recognized spokesman. And yet it is now assumed by your party that the position of the Democratic party and those who are affiliating with it threaten the integrity of our national and individual credit. May we not, in the language of our now honored President, exclaim: "Was there ever more glaring inconsistency or reckless assumption?"

Sir, during the last campaign it was the frequent habit of some of the lesser lights of your party in my section of the country, where party strife and feeling usually reach fever heat, either through ignorance or, what is still worse, willful perversion of the facts of history, to make the public statement, with an assumed air of lofty contempt for anyone who would dare to question its accuracy, that there never existed in this country such a thing as the free and unlimited coinage of silver money at the ratio of 16 to 1; that the silver dollar was never recognized as the unit of value. In answer to such arguments, and for the benefit of such as may not have had the opportunity of making an investigation of this question, let me quote from the Report of the Director of the United States Mint for 1896 upon this subject, at page 453. He says:

In 1792 the Congress of the Confederation chose as the monetary unit of the United States the dollar of 375.64 grains of pure silver. This unit had its origin in the Spanish plaster or milled dollar, which constituted the basis of the metallic circulation of the English colonies in America. It was never coined, there being at that time no mint in the United States. The act of April 2, 1792, established the first monetary system of the United States. The bases of the system were: The gold dollar, containing 24.75 grains of pure gold and stamped in pieces of \$10, \$5, and \$2.50, denominated, respectively, eagles, half eagles, and quarter eagles; the silver dollar, containing 371.25 grains of pure silver. A mint was established. The coinage was unlimited, and there was no mint charge. The ratio of gold to silver in coinage was 1 to 15. Both gold and silver were legal tender. The standard was double.

Thus it was that the unit of value was fixed by the very first act of Congress upon the subject, and thus it continued, with slight changes in the weight and fineness of the gold coinage that finally resulted in fixing the ratio between the two at 15.988 to 1, or approximately at 16 to 1, as we usually denominate it, until the act of February 12, 1873, which "provided that the unit of value of the United States should be the gold dollar of the standard weight

of 25.8 grains." (See page 454, Report of Mint Director for 1896.) This is the change that resulted in the establishment in the United States of the gold-standard policy in lieu of the double standard, which up to that time had prevailed from the foundation of the Government, and which marked the period of the beginning of that decline in the values of all property of which the people at this and at all times since have been so bitterly complaining.

It is this policy that we contend shall be changed and the double standard restored as it existed prior to this act of February 12, 1873. It will thus be seen that we are asking for no new and untried experiment, no new system of finance, but merely a return to that which for so long had furnished our people a monetary system so satisfactory, equitable, and just that no party ever dared to suggest any change or intimate to the country that there existed any design or purpose to alter the same prior to the time it was done. All that is demanded now is a return to that constitutional system established by Hamilton and Jefferson, by the wise and patriotic statesmanship of the fathers.

Can we safely return to this system? This is the vital question. Are we able to reestablish this system upon the double standard of gold and silver at the old and long-recognized ratio between the two coins, and maintain the parity of the same? According to the best reasoning that has yet been advanced upon this question, I think we may safely rely upon our ability to do so without hazard to any interest or danger to credit or business. It is and has been the established rule among all countries of which we have any knowledge that, as concerns the regulation and fixing of the value and ratios of metals used for the coinage of money since the earliest history, that the country producing the largest amount of the ore from which such money is coined takes the lead and has exercised the right to fix the relative values of the coins. There is no reason why this should not be true now.

The United States is the largest producer of silver of any other known country. The estimated total production of the silver of the world from 1880 to 1895, inclusive, estimated at its present coinage value, is \$3,675,721,200. The estimated total production of silver in the United States for the same period is \$1,367,401,200, or an average in the annual yield of the world's product of \$102,103,366, and in the United States of \$37,983,361. (See Report of the Director of the United States Mint for year 1896, page 62.) It will thus be seen that the United States possesses nearly one-third of the total resources of this precious metal produced in the entire world. This constitutes an almost inexhaustible source of wealth to our country, and but for the restrictive and prohibitory laws upon our statute books could be utilized to the immense advantage of all branches of business, enterprise, and development, as well as making us, as a nation, invincible in the commerce of the world.

To depend upon the cooperation of the strong commercial nations of Europe to aid us in restoring bimetalism, therefore, would seem so unnatural and stupid that it requires no very fine sense of humor to discover the absurd folly of such expectation. These countries are opposed in their financial as well as public policy to any such agreement as is contended for by the Republican party; and as long as they can induce us to delay the only remedy we have, by tempting us to further efforts to secure this kind of agreement, the more time they get to strengthen the barriers and make more difficult our return to this policy by independent action.

Year by year they are busily at work scheming for a further extension of their policy of contraction and appreciation of money and still further reduction in the prices of all other forms of property. Year by year they are forcing other smaller and less powerful countries to adopt their gold standard out of pure selfish and mercenary motives. Shall we persist in pursuing such a blind, stupid, and suicidal policy until all avenues of escape from the clutches of the money power shall be forever closed?

I for one do not believe that the people are yet willing, when they come to see and understand the full effect of this policy in all its hideous and monstrous iniquity, to tamely submit. As was remarked a few days ago, while statistics and the official report of the Director of the Mint show that there is in circulation in this country the sum of a little the rise of \$24 per capita of money, yet it is a well-known fact among the people in the rural and farming districts that this is not the case with them; that, in fact, they do not receive their pro rata share of the money shown to be available for circulation, and it is exceedingly doubtful if they have a per capita circulation in those sections exceeding from \$9 to \$12. The volume of money is congested under this system in the money centers. We insist upon such a change as will force circulation among the people.

Mr. Chairman, in conclusion, the people whom I represent on the floor of this House are a part of the web and woof of our American citizenship. They were educated in the schools erected and built under the influence of the same free institutions that constitute the pride, the grandeur, and glory of all the States of this Union; they are bold, ardent, and enterprising, and possess a broad and

sympathetic spirit with all that will add to the prosperity, advancement, and welfare of the whole people, to the strength and grandeur of the Republic. But a majority of them are firmly convinced and believe, Mr. Chairman, that the financial policy which you have carried out, and which is yet indorsed by the majority on this floor, has brought ruin, want, and distress to the homes and firesides of many of our people. They believe it has covered our land with swarms of idle, discontented, and poverty-stricken men, and that during all this time you have looked on their distress and trouble with unaffected complacency, if not with criminal indifference. They ask and appeal to you at the earliest—at the very first—opportunity to make a partial reparation for the great wrongs they have suffered. They ask to have restored back to them the opportunities they believe will come when the free and unlimited coinage of silver and gold shall again be secured to the country under the guaranties of the Constitution as our fathers made it. They will hail with joy and cheerful greeting a return to moderate and just taxation and the money of the Constitution.

#### The Tariff.

#### SPEECH OF

HON. JEHU BAKER,  
OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. BAKER of Illinois said:

Mr. CHAIRMAN: I purpose stating in as few words as possible some of the views which I hold in regard to a just civil policy for the United States. It is plain that such a policy can be no other than that which is best for the preservation of our republican institutions. If these institutions are to be preserved in fact and in vital force, as well as in form, it is absolutely necessary that the great mass of our people should form a clear idea of, and be ardently attached to, the fundamental principle upon which they rest. That principle as stated by Jefferson and as stated by Lincoln is the same.

Jefferson's conception was that all the powers of our Government should be employed with equal regard to all classes, all sections, all individuals, and with special favors to none. This constitutes the essence of all that is rightly meant by "Jeffersonian Democracy." Lincoln's conception of the same principle is found in the immortal words that ours should be "a government of the people, for the people, and by the people;" and this constitutes the essence of all that is rightfully meant by "Lincolanian Republicanism."

Over against this great basic principle of our Republic, as thus conceived by Jefferson and Lincoln, there is another principle which seeks to draw the policies of our Government away from the equal conservation of the rights of all, and to employ its powers to the undue advantage of some. So has it been with all republics heretofore, and so the case is with us to-day.

We are in the midst of a conflict between two social forces, the one consecrated to the preservation of that tap-root principle of equal justice upon which our Republic was founded, the other devoted to the evil work of unduly promoting the interests of classes and special interests, and of unduly ignoring and disregarding the just interests of the great mass of the people.

The fate of our Republic, as such, depends upon the issue of this conflict. If the basic principle of equal rights upon which it was founded shall be preserved, it will indeed be the glory of the earth, not only in point of mere material greatness, but as an expression of the highest development of humanity that the world has seen.

If this broad basic principle of general humanity shall be overshadowed by the narrower principle of class ascendancy, then our Republic, thus degraded from the vital principle of its own life, will run a low career and perform a comparatively ignominious role on the plane of the world's history. One instantly sees and realizes the tremendous import of the issue thus pending.

Let us test the general drift of our actual public policies by the plain and indisputable criterion which I have thus laid down. Let us see whether these policies show the ascendancy of the broad foundation principle of our Government or the ascendancy of the narrower principle of class domination. Let us see whether we find in them either the Democracy of Jefferson or the Republicanism of Lincoln. In glancing at some of the elements of our policies which will bring an answer to this inquiry into clear light the first and most prominent place must be assigned to the money question.

The money scheme which is now imposed upon our country

rests all values upon the gold standard—upon one only of the precious metals.

The total volume of commodities increases at a much greater ratio than the total volume of gold. The demonstrable effect of this is that a given amount of gold continually purchases an increasing amount of commodities, a process which is continually squeezing the money value out of property and labor and squeezing this lost value into the gold-standard money.

The dollar that is loaned comes back not only with its interest, but with an increase in its purchasing power. The dollar that is invested comes back not only with its profits, but also with an increase in its purchasing power. This is not an honest dollar, but clearly a dishonest one. An honest dollar is content with its interest, with its profits, and with retaining a level instead of an increasing purchasing power over all other property.

The average increase of the purchasing power of gold has not been less than 50 to 100 per cent in the course of about twenty-four years, which means that idle gold has been drawing to itself an increase in value of not less than 2 per cent per annum, whilst not only farm products but farms themselves have greatly shrunk in value, with the alarming accompanying fact that farm tenantry is increasing and ownership by the actual tiller of the soil diminishing.

This gold-standard scheme of finance menaces the world with a new form of tyranny extending from the eastern limits of Europe to California, and from Russia to Australia. It has originated with that money power which dominates the Parliament of Britain, the Reichstag of Germany, the imperial councils of Russia, and which has unhappily gained a temporary control over our own Republic.

The bottom meaning of this financial scheme thus initiated by the holders of vast masses of capital is to so order the relation of money to all other property as to continually enhance the property value of money and to depreciate the money value of property, thus giving to aggregated capital an ever-increasing cinch on the wealth of the world. The wickedness of this scheme is so manifest that it need but to be stated to be condemned. It discloses an abysmal departure from that principle of equality on which, as we have seen, our Republic was founded.

It is not only partial, but flagrantly partial, in favor of the strong holders of capital, and against the rights of the masses of the people. It gives, and purposely gives, to the owners of money an unjust advantage over the producers of wealth.

The atrocity of this scheme becomes strikingly apparent when we consider its relation to the vast debt of all sorts owed in the United States. This debt—national, State, corporation, county, municipal, and individual—is stated by competent authority to be as high as \$34,000,000,000. As we have seen, the gold unit has been increasing at not less than 2 per cent per annum in its purchasing power. To be within the safest possible limits, let us suppose it increases only 1 per cent per annum.

Now, 1 per cent of \$34,000,000,000 is \$340,000,000, a sum due solely to the increase of the purchasing value of the gold unit over other property. It is easy to see that no scheme could be more cunningly and wrongfully devised for the undue piling up of the wealth of a nation in a few great centers.

To correct this enormous inequality, this cruel injustice, this outrageous departure from the fundamental principle of our Republic, the people demand a stronger basis of primary money, the restoration of silver to its full and free fellowship with gold at the ratio which it held and honestly maintained down to the moment when it was arbitrarily degraded in order to foist the narrow and unjust single gold standard in the interest of a strong money-holding class.

I will next state what I conceive to be the substance of the paper-currency question. I think one of two general schemes will ultimately be carried out. Our paper money will either be simplified as a currency very similar to our greenbacks and issued directly by the Government, or else simplified as a bank currency similar to our United States bank paper and issued indirectly through United States banks.

In the one case the institution of our currency will be held in the power of the people. In the other case it will be farmed out to bank corporations. In order to simplify our currency in the latter manner it will be necessary to largely increase our bonded debt, in order to take in the existing currency, and after this is done the number of banks will largely increase.

Instead of 4,000 banks we shall have six, eight, ten, fifteen thousand, and ultimately more. These numerous bank corporations will act as one as distinctly as the different links in a long iron chain. They will exert an enormous power over the business interests of the country, over elections, and over Congress. They will constitute the strong fortress and the organized center of the money power.

Now, which of these two schemes appears to be most in harmony with the genius of our republican institutions and with that principle of equality on which these institutions are founded? Is

it wiser for the people to turn over to corporations that part of the money power which is connected with the institution of the nation's currency or to hold this power in their own hands? It appears to me that this question can admit of but one answer, and that the wise course of policy on this great point is for the people to issue their paper currency directly through their Government, just as they issue their gold and silver money, subject to proper regulation respecting redemption.

The income-tax question is another element of great national importance. Nothing can be more essential than just taxation—a just distribution of the burdens of our Government—and no tax can be more equitable or more easily borne than a just, graded income tax. We had such a tax for a number of years. It was held to be constitutional by all branches of our Government, and we raised from it a large sum of money without oppression and without imposing undue hardship upon the citizen.

No tax could be more in harmony with that fundamental principle of our Republic which I have pointed out than a tax that calls upon the citizen to pay in proportion to his ability to pay. Had the recent income-tax law been permitted to go into effect there would have been no question about insufficient income to pay the Government expenses; and it seems to me that the acrid and abnormal humor of the time, rather than the ascendancy of supreme judicial reason, has led to the narrow defeat of that law.

The decision, of course, is binding in the case. It is final in no other sense; and I have no doubt whatever that it will succumb, as so many other decisions have succumbed, to a wiser and deeper judicial interpretation of the constitutional question upon which it was passed. That principle of equal justice on which our Republic rests loudly demands that great fortunes shall bear an even hand in support of the Government which protects them.

I will next briefly state what I regard as the fundamental principle which should govern our tariff legislation, and also what I regard as the grave abuse which has entered into that legislation. The Democratic platform of 1888 and the Republican platform of 1892 substantially agree in stating the correct principle. They both declare in favor of levying duties equal to the difference between the wages of American and foreign labor.

Such is the simple principle upon which both parties have agreed, and, if fairly carried out, it would lead to a scale of duties which, under the existing condition of things, would be as just to all sections and classes as it would be possible to devise. But the prevailing vice of such legislation has been and is that this principle has not been properly adhered to in practice.

The manufacturing class has exerted undue influence in the framing of our tariff laws and induced the establishment of duties considerably higher than those which would result from the difference between the wages of home and foreign labor. This deviation from the true principle constitutes a chronic and mischievous abuse, which is injurious to the great mass of the people and beneficial to the manufacturing class only. I find that the bill reported by the Ways and Means Committee is another and conspicuous instance of this same abuse.

In conclusion, I will again allude to that vital principle of equal justice which lies at the foundation of our Republic, and fix attention upon the fact that in all the great elements of public policy to which I have referred that principle has been and is being violated. Beyond all doubt we have reached a period in our national life which demands a tremendous reaction in the interest of the people and in behalf of the simple basic principle of our democratic institutions.

#### The Tariff.

#### SPEECH

OF

HON. GEORGE N. SOUTHWICK,  
OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. SOUTHWICK said:

Mr. CHAIRMAN: The duty of the Republican majority in the House of Representatives at this juncture is clear. It is to pass a tariff bill which will restore to the Treasury of the United States a surplus revenue and to the labor and industry of the country a thorough system of protection.

The American people have rendered their decision and an overwhelming majority of Republicans has been sent to the popular branch of the National Congress, instructed to carry out to its logical conclusion and in its letter and spirit the paramount issue

of the campaign of 1896 as laid down in the opening demands of the St. Louis platform.

A President whose very name is the synonym and embodiment of the American principle of protection to home labor and industry has assumed office and called the Congress together for the especial purpose of enacting a measure which shall at once provide both the revenue and the protection which are needed. The demand of the hour is for action. The vast business interests of the country—agricultural, industrial, commercial, and financial—harassed and weakened by the unfortunate developments of the past four years, are looking to us for prompt and effective relief. The wage workers of the nation are equally desirous for a restoration of that opportunity for employment at fair wages which existed under the last Republican tariff until the Democratic triumph of 1892 caused widespread and wholesale curtailment of industry and unemployment of labor.

#### MORE REVENUE MUST BE RAISED.

That added revenue must be supplied to the United States Treasury at once is admitted on all sides by men of all varieties of political persuasion. For the past four years and during nearly every month of that period the expenditures of the Government have been in excess of its receipts, and no less than four large issues of Government bonds have been necessary to save the Treasury of the nation from embarrassment and its credit from impairment. A strange spectacle that—the most powerful nation on the face of the earth, and the only one of the great nations which has seriously endeavored to pay its debts, being compelled to issue bonds and burden a future as well as the present generation for the purpose of raising money with which to meet the current expenses of the Government.

From the close of the period of heavy expenditures growing immediately out of the war of the rebellion, in 1866, under a system of tariff protection, every year witnessed an excess of receipts over expenditures down to the inauguration of Grover Cleveland in March, 1893; and a bonded debt of \$2,773,236,173 in the former year was reduced to less than \$1,550,000,000 in the latter year. During this period of twenty-six years the Republican policy of protection to American industry prevailed unimpaired; and, although repeated changes were made in tariff duties and internal-revenue taxes to meet the changing requirements of the times, at no time did the receipts of the Government fall below its expenditures.

Even during the last fiscal year of the last Republican Administration, ending with June 30, 1893, when the success of the Democratic free-trade movement and the inauguration of the Cleveland Administration had already spread panic, ruin, and distress over the land, a slight surplus remained as the result of twelve months' operations of the Government. To the present generation, therefore, the four Government bond issues during the four years of Democratic ascendancy at Washington which followed the triumph of November, 1892, were a fiscal anomaly. Never before had it witnessed the issue of Government obligations in a time of profound peace; never before even a Treasury deficit at the end of a fiscal year.

#### THE CLEVELAND BOND ISSUES.

Between March 4, 1893, and March 4, 1897, the Cleveland Administration issued bonds to the par value of \$362,315,400, on the sale of which the Government realized \$293,481,894. There were two issues each of \$50,000,000 of 5 per cent ten-year bonds and two issues of 4 per cent thirty-year bonds, one of \$62,315,400 and one of \$100,000,000. When 5 per cent shall have been paid on \$100,000,000 for ten years, and 4 per cent shall have been paid on \$162,315,400 for thirty years, it will be realized that the elevation of the Cleveland Democracy to power in 1892 cost the country, in the principal and interest of additional public debt, the enormous sum of \$507,063,890.

The Cleveland Administration during its four years of bond issues restored the public debt of the United States to the figures of 1886. It offset the steady reduction of the debt during the preceding seven years. On July 1, 1886, the principal of the public debt was \$1,783,438,697. On November 1 of the four years of bond issues the principal of the public debt made this exhibit:

November 1, 1893.....	\$1,549,556,293	November 1, 1895.....	\$1,717,461,779
November 1, 1894.....	1,026,154,037	November 1, 1896.....	1,785,412,640

Note the steady increase in the principal of the public debt as bonds were issued to raise money with which to pay current expenses and meet the constant deficit in the revenue!

#### A HIGHER ANNUAL INTEREST CHARGE.

Note also the steady increase in the most obnoxious of all our regular expenditures—interest on public debt—during the four years of bond issues! The total payments for interest during the fiscal year ending with June 30, 1892, were \$33,378,116. The four fiscal years following make this comparison:

June 30, 1892.....	\$37,264,286	June 30, 1895.....	\$39,978,680
June 30, 1894.....	27,841,406	June 30, 1896.....	35,365,029

Compared with the last full year of Republican administration, it will be seen that the Cleveland bond issues increased the annual charge for the 1896 year over the 1892 year by the enormous sum of \$12,006,913, a sum which amounts to nearly 24 per cent of the entire annual expenses of the nation for all purposes.

#### SURPLUSES FOR OVER TWENTY-FIVE YEARS.

Permit me to call attention to the extraordinary showing made under the various revenue laws enacted by the Republican party from the close of the heavy war expenditures in 1866 down to the time when Mr. Cleveland and the Democracy were voted into power, pledged to overturn the protective system which had prevailed since the day when the signature of Abraham Lincoln gave the binding effect of law to the Morrill tariff bill of 1861. Every fiscal year's close, as already stated, netted the Treasury a surplus of revenues over expenditures. The surplus fluctuated from a maximum of \$145,543,811 in the year ending with June, 1882, to a minimum of \$2,341,674 for the year ending with June, 1893—the last fiscal year of a surplus. To my mind no greater testimonial to the capacity of the Republican party to manage the fiscal affairs of this great Government of ours wisely and well could be adduced or even desired than the record of the years intervening between 1866 and 1893.

Immediately on the close of the great war for the preservation of the Union, a policy of debt-paying was inaugurated by the Republicans, which was maintained to the close of the party's long lease of power, and which was a source of patriotic pride to every American regardless of party affiliations. General business prosperity, high wages, and extraordinary ability to command the comforts and even luxuries of life under the protective system furnished abundant sources of revenue from which to draw. And yet on three different occasions—in 1868 to 1870, when tea and coffee were placed upon the free list of the tariff; in 1883, when the tariff was revised as a whole; and again in 1890, when the tariff bill which bears the name of our honored President became a law—the surplus of revenue was so great that its reduction, both from customs duties and internal-revenue taxes, was deemed necessary. Nevertheless, in all these revisions of the revenue laws such practical knowledge of the workings of duties and taxes was evinced in the statutes framed by Republicans that the receipts of the Government continued to produce moderate surpluses and permit the maintenance of the debt-paying policy. Let me cite the surpluses in the years 1866 to 1893, inclusive:

1866.....	\$37,223,204	1880.....	\$65,863,653
1867.....	131,091,345	1881.....	100,069,405
1868.....	28,297,798	1882.....	145,543,811
1869.....	48,078,469	1883.....	132,879,444
1870.....	101,601,917	1884.....	104,383,626
1871.....	91,146,757	1885.....	63,463,771
1872.....	86,588,905	1886.....	66,956,599
1873.....	43,102,959	1887.....	103,471,098
1874.....	2,544,832	1888.....	111,361,274
1875.....	13,576,058	1889.....	87,761,981
1876.....	29,025,242	1890.....	85,040,272
1877.....	30,340,578	1891.....	26,836,542
1878.....	20,739,552	1892.....	9,914,454
1879.....	6,879,301	1893.....	2,341,674

#### DEMOCRATIC DEPRESSION AND DEFICITS.

Now, observe the reverse of this picture! In addition to the uncertainty, panic, disaster, depression, and distress of 1893 which followed the triumph of the Democracy under Grover Cleveland's lead, the country was cursed in the following year by the enactment of a stupid and blundering tariff bill—the joint product of the Wilsons and Gormans of the National Congress—which from the date of its enactment to the date of its repeal will be found to have yielded a deficit every year, and, with a few exceptions, every month of its existence.

And I know of no more startling evidence of the incapacity of the Democratic party to administer the affairs of this vast and complex Government of the United States wisely and well than the wreck and ruin, the deficits and the bond issues, which marked the period beginning with March 4, 1893, and continuing for four years. Where, between 1866 and 1893, every Republican year produced an excess of national receipts over expenditures, between 1894 and 1897, every Democratic year produced a deficit. Here is the dismal record of deficits for the four fiscal years ending with June:

1894.....	\$69,863,290
1895.....	43,805,223
1896.....	25,293,246
1897 (estimated).....	65,000,000

Total deficiency..... 203,811,729

And right here let us recall the persistent claim of the Cleveland Administration that the bond issues were made to secure gold with which to maintain the gold standard and redeem legal-tender notes on presentation, rather than to meet the current expenses of Government. Secretary of the Treasury Carlisle applied the term "endless chain" to the operation by which legal-tender notes were presented and gold obtained. The constant

deficits explain clearly why the chain kept moving, and also suggest why the chain did not move during Republican years when surpluses, rather than deficits, were provided. The legal-tender notes redeemed in gold during the recent Cleveland-Carlisle régime were immediately paid out again for current expenses, and again presented for redemption in gold, and the process was repeated.

It was the deficit of revenue, however, which necessitated constant replenishment of the Treasury's finances, and the replenishment was in the form of gold secured by the sale of bonds. It was the deficit which reduced the Treasury resources, weakened the Government's credit, and induced holders of legal-tender notes to demand their redemption in gold. When the full record of the four fiscal years of deficits shall be made up, it will be found that the \$208,811,720 of estimated Democratic deficit was made good by the transfer to the Treasury of \$293,481,894 of gold secured by the sale of bonds to the par value of \$262,315,400.

From January 1, 1870, when specie payments were resumed under the Hayes-Sherman administration of the Treasury, down to the year 1893, the "endless chain" was unknown in American finance. That strange contrivance was developed by the impaired condition of our Treasury resources and national credit under a deficit of revenue, which strained our entire financial system at every point.

#### A BILL "TO PROVIDE REVENUE."

Under the pending tariff bill, reported from the Ways and Means Committee by Chairman DINGLEY, the Republicans in Congress propose "to provide revenue for the Government and to encourage the industries of the United States." We propose to restore a surplus of revenue and a sufficiency of protection.

On the assumption that the imports under the proposed tariff bill, if enacted into law, would be the same as the imports in the fiscal year which ended with June, 1896, the revenue which the several schedules of the new bill would yield, compared with the revenue obtained under the present tariff in the 1896 year, would be substantially as follows:

*Rough preliminary estimate of revenue from proposed bill.*

	Duties—		
	Collected in 1896.	Estimated.	Increase.
A. Chemicals, oils, and paints	\$5,513,545	\$8,196,226	\$2,682,681
B. Earthenware, and glassware	7,644,422	11,901,532	4,257,110
C. Metals, and manufactures of	13,332,092	17,343,676	4,010,984
D. Wood, and manufactures of	884,713	2,143,698	1,258,975
E. Sugar	29,910,016	51,645,893	21,735,877
F. Tobacco, and manufactures of	14,859,117	22,257,788	7,398,671
G. Agricultural products and provisions	7,850,890	14,169,988	6,319,128
H. Spirits, wines, and other beverages	6,835,648	8,732,827	1,797,179
I. Cotton manufactures	9,311,330	11,077,119	1,765,789
J. Flax, hemp, and jute, and manufactures of	12,018,083	19,834,845	7,816,762
K. Wool, and manufactures of:			
Wool	33,027,606	17,538,309	17,538,309
Manufactures of wool	12,504,008	50,274,704	27,240,935
L. Silk and silk goods	1,242,425	14,357,556	1,853,550
M. Pulp, paper, and books	10,920,164	1,900,531	88,466
N. Sundries		14,168,898	8,248,734
Unenumerated:			
Unmanufactured	37,879	37,879	
Articles transferred from free list to dutiable	124,256	124,256	
		4,000,000	4,000,000
Total revenue	155,625,917	260,105,710	113,479,793

This estimate of an increase of over \$113,000,000 in annual revenue, as compared with the amount yielded under the Wilson-Gorman Act now on the statute books, may not be fully realized under the adverse operation of several imaginable factors. But liberal allowance can be made for disappointment in the matter of revenue, and yet the members of the Ways and Means Committee, who have made a close and careful study of the problem for several months, are confident that enough money will be provided to meet the expenditures of the Government and permit the resumption of the debt-paying policy which characterized our fiscal affairs from 1866 to 1893. On their judgment I confidently rely.

#### GENERAL FEATURES OF THE BILL.

In a general way, the duties of the new bill may be said to be higher than those of the existing tariff act of 1894 and lower than those of the so-called McKinley Act of 1890. Nevertheless, the bill is quite as thoroughly protective in its character as was the act of 1890. Changed conditions, and especially a lower range of general prices, have rendered the higher duties of 1890 unnecessary for protective purposes.

Throughout the entire bill, except where it was not practicable to do so, specific duties have been substituted for ad valorem. This change has been made in the interest of honesty and fairness to importers, protection to American labor and industry, and revenue to the United States Treasury. The ad valorem duties of the existing tariff law are one of its most obnoxious features, as they place a premium on crime, in the form of undervaluation, and vir-

tually reduce duties below the percentages provided in the bill. No more comprehensive nor effective argument against ad valorem and in favor of specific duties was ever framed than that of Daniel Manning, the first Secretary of the Treasury under President Cleveland. That document will ever continue to be cited as long as tariffs and tariff discussions shall continue.

In examining the composition of the new bill it will be found that the metal and cotton schedules are substantially the same as those of the present tariff act of 1894. The agricultural, earthenware and glass, and the silk, liquor, and wool and woolen schedules are substantially the same as those of the 1890 act. The other schedules represent duties above 1894 figures and under those of 1890.

#### AN OBJECT LESSON IN WOOL AND WOOLENS.

Time does not permit, nor does the occasion require, either a discussion of the elementary principles of the free-trade and protective systems. Nor do I care to analyze the various provisions of the proposed act and compare their expected results with what has actually occurred under Wilson-Gorman duties. But as wool and woollens have been the "bloody angle" of tariff fighting, I can not refrain from calling attention to the contrast drawn by the Republican members of the Ways and Means Committee between the results of the McKinley wool and woolen duties of 1890 and the Wilson-Gorman woolen duties of 1894.

The importations of clothing wool in the year ending with June, 1893, under the tariff of 1890, was about 40,000,000 pounds, and of manufactures of wool about \$36,000,000—mainly goods worn by the well-to-do, who think it the proper thing to wear foreign-made cloth and who are willing to pay the duties imposed upon it. From these importations of wool and woollens in 1893 the Government derived a revenue of about \$44,500,000.

The importations of clothing wool in the fiscal year ending with June, 1896, exceeded 127,000,000 pounds—three times as much as in 1893—and of manufactures of wool more than twice as many pounds in 1896 as in 1893; and yet the revenue derived by the Government from this enormous increase in the imports of wool and woollens in the fiscal year 1896 was only \$23,000,000—a loss of over \$21,000,000 from that realized in 1893.

In other words, by placing wool on the free list and reducing the duties on manufactures of wool the Treasury lost \$21,000,000 of revenue, our farmers lost a market for the 80,000,000 pounds of wool which they raised in 1893 in excess of what they raised in 1896-97, as well as nearly 10 cents per pound in price, involving a loss to them of nearly \$30,000,000 per annum already on this one farm product, and our manufacturers and their workmen lost a market not only for the goods which increased foreign imports had supplanted, but also a market for goods which the farmers and masses of the people were able to purchase in 1893, but which they could not buy in 1896 because of a loss of employment and purchasing power.

Beyond this it has been demonstrated that by placing wool on the free list, to the injury of the farmer and manufacturer, we have not been thereby enabled to increase our exports of manufactures of wool (as it was claimed would be the case), and we have greatly increased the use of shoddy by diminishing the purchasing power of the masses and thus compelling them to seek the cheapest cloths.

On that central proposition of tariff discussion I rely confidently on the strength of the protective position.

#### WOOL AND WOOLENS IN ALBANY COUNTY.

The Twentieth Congressional district of the State of New York, which I have the honor to represent, contains three cities and ten country towns; producers and manufacturers; farmers who grow wool on the hills of the Helderbergs, and manufacturers in Albany and Cohoes who transform wool into woollen garments. Free trade in wool has well-nigh ruined the wool industry of Rensselaerville, Berne, and other towns where the flocks have been numerous. They have been largely slaughtered by reason of the low and unprofitable price which wool has brought by reason of the free-wool provision of the Wilson-Gorman Act of 1894.

Nor has free wool brought prosperity to the woollen manufacturers of Cohoes and Albany, who under the McKinley Act of 1890 were running their factories at full capacity, and who have experienced a shrinkage of orders during the past four years, until at times scarcely more than a quarter of their factory capacity was required. The wage workers in the woollen factories have felt the change quite as much as their employers, if not more so. Farmer, manufacturer, and wage worker are anxious for a return to McKinley rates on wool and woollens, which will once more stimulate the production of sheep and the growing of wool, will tenant silent and deserted factories, and will restore to willing workers the opportunity to earn a living at fair wages. Business men largely dependent on the trade of the farmer, manufacturer, and wage worker are no less anxious for the restoration of "McKinleyism" in Albany County. How many hundreds of thousands of dollars "Wilsonism" in wool and woollens has cost the people of Albany County it would be difficult to calculate, but the sum total would be appalling.

## PROTECTION AGAINST CANADIANS.

The restoration of the McKinley agricultural schedule is also a matter of especial concern to Albany County farmers. They object to the admission of the products of Canadian farmers, who are favored by cheap water and rail transportation, who live cheaply, who hire cheap farm labor and who do not pay taxes for schools and other expensive institutions in the State of New York, into the markets of that State in vast quantities. The restoration of the McKinley duty on hay especially will be highly acceptable. From Canada 79,678 tons of hay came into the United States, principally into New York, in 1892. In 1896 the importations increased to 303,641 tons. Excessive importations indicate insufficient protection.

## STAND FIRMLY FOR PROTECTION.

In conclusion, let me urge steadiness and confidence on the part of Republicans. We are framing a tariff law which, in my opinion, will stand unrepealed for the next thirty years, and when revised, will be revised by its friends. This generation of Americans has learned its lesson—a sad and costly lesson—but it has learned it well; and the haste which the party of free trade has made to discard its historic issue and take up another indicates that no political party in the immediate future will dare revive the dangerous and destructive principles of the Manchester school of political economy. Business men especially are clamoring for the passage—and that, too, speedily—of a tariff bill which will dispose of the tariff problem.

## THE ELECTIONS OF 1894 AND 1896.

A mighty surge of popular sentiment swept the northern country bare of free traders in 1894 and carried an unprecedented majority of Republicans into the popular branch of Congress in order that a stop might be put to the further enactment of free-trade measures of the Wilson, Gorman, "popgun," or any other variety. In 1896 the American people completed the work begun in 1894 by choosing a President and a Congress pledged to restore to the country a tariff law such as we prospered under before and hope to prosper under again. Let us do our plain duty, do it fearlessly, and appeal confidently and aggressively to the protective sentiment of the people in 1898.

## The Dingley Bill.

## SPEECH

OF

HON. M. N. JOHNSON,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 24, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. JOHNSON of North Dakota said:

Mr. CHAIRMAN: In 1890, when we had reached a point in the development of our national greatness where it required \$500,000,000 to pay our ordinary running expenses for a year in time of peace, there was a great outcry against the "billion-dollar Congress." Substantially there was a billion dollars appropriated by that Congress—not quite, but so near it as to make the margin not worth disputing about—

Mr. SAYERS. Does the gentleman mean to say that there was not a billion dollars appropriated by the Fifty-first Congress?

Mr. JOHNSON of North Dakota. Well, that depends upon how you figure it.

Mr. SAYERS. I want the gentleman to answer that question.

Mr. JOHNSON of North Dakota. I say that the amount lacked about \$12,000,000 of a billion dollars; but, as I have already said, the margin was so small that it is not worth disputing about. In the next Congress, when the gentleman from Texas [Mr. SAYERS] was chairman of the Committee on Appropriations and the Democratic party was in power all round—

Mr. SAYERS. If the gentleman will allow me, the gentleman from Texas was not chairman of the Committee on Appropriations in that Congress. The gentleman from North Dakota makes about as great a mistake in that statement as he did in his former one.

Mr. JOHNSON of North Dakota. Well, I believe it was the gentleman from Indiana [Mr. HOLMAN] who was chairman of the Committee on Appropriations in the Fifty-second Congress, and the gentleman from Texas was second in rank on the committee. I took but a very humble part in the work of that Congress. It was in the Fifty-third Congress that the gentleman from Texas became chairman. I cheerfully bear witness here to-day to the

fidelity and the earnestness with which the gentleman from Indiana, ably supported by the gentleman from Texas and the whole Democratic party, made the very best efforts that it was possible for mortal man to make to keep down expenses, and they were kept down mainly by postponing the payment of just claims due from the Government; yet that Congress exceeded the billion-dollar mark by \$27,000,000.

In the next Congress succeeding, when the Democrats had the President and the House and the Senate, and the gentleman from Texas [Mr. SAYERS] was promoted to the head of the great Appropriations Committee, they again succeeded to the title which they had given to the Fifty-first Congress, of a "billion-dollar Congress." The Fifty-first appropriated \$988,417,183, the Fifty-second \$1,027,104,547, and the Fifty-third \$989,249,205. And, Mr. Chairman, in my judgment the time will never come, unless some great calamity should overtake us and destroy our enterprise, our capacity to do business, and our greatness as a nation, when there will ever again assemble in this Hall anything less than a billion-dollar Congress.

We may say, then, that in round numbers it costs \$500,000,000 to pay the ordinary expenses of this Government for a year. Eighty or ninety million dollars are paid out for the postal service. Those millions are collected for the most part at the stamp windows where postage stamps are sold, and there is no outcry against that expenditure or that burden of taxation. One hundred and forty million dollars are collected by the sale of internal-revenue stamps to be used mainly upon tobacco, beer, and whisky, and about the same amount of money, \$140,000,000, is annually paid out in pensions to the crippled soldiers of our various wars.

There is very little outcry either against the collection of those one hundred and forty millions, or the disbursement of them. These items account for some \$220,000,000 of our annual expenditures. Then there are miscellaneous items amounting to from \$20,000,000 to \$50,000,000 a year, such as the receipts from the sale of public lands, tax on banks, the improvement of our rivers and harbors, war claims, Indian treaties, and various items which it is not necessary now to enumerate. This leaves a sum ranging from \$200,000,000 to \$250,000,000 a year that must be collected at the custom-houses.

We are all agreed essentially as to the amount that it is necessary to collect. We are all practically agreed that it must be collected by means of a tariff. Now let us clear away everything about which there is no dispute. There is no dispute as to the \$90,000,000 expended for the postal service. There is no dispute, or practically none, as to the \$140,000,000 collected from the internal revenue and paid to the pensioners. There is practically no dispute as to the amount of money that we must raise by means of a tariff.

The only dispute comes as to what kind of a tariff we shall adopt. And on that the dispute is sharp and decisive. On this point the Democratic party teaches that a protective-tariff policy is a robbery and a fraud and advocates a tariff "for revenue only." We teach that a protective tariff is the very foundation of the happiness and the prosperity of the country and that a tariff "for revenue only" always brings disaster on our industries.

What is a tariff for revenue only? Stripped of all disguises, stripped of all modifications, it must be levied upon such things as we can not produce in the United States. That is a "tariff for revenue only."

Mr. LIVINGSTON. If a tariff is levied upon an article manufactured in this country in moderate amount so as not to prohibit importations, may not that be called a revenue duty?

Mr. JOHNSON of North Dakota. Just as soon as you place a tariff upon any article which is grown in our fields or found in our mines, or our fisheries, or our forests, or made in our factories, no matter whether that tariff is high or low, the duty becomes to that extent more or less protective of the industry engaged in the production of that article.

It is a very easy matter to arrange a tariff for revenue only so as to produce a given amount of revenue (if that were the only question), and then horizontally raise or depress it from time to time. Nothing could be easier than that; it would require no statesmanship. But it is an entirely different thing to go over the lists, examine every article, every method of production, the methods and cost of transportation, connected with everything that you can buy or sell, everything that you can carry in a ship—to sort over these different articles in this way, placing some articles on the free list and others on the dutiable list, with such scientific arrangement that while not prohibiting importations of the article, the duty imposed shall produce revenue sufficient to supply the wants of the Government and at the same time protect the home industries. That is the problem which was presented to us.

Mr. Cleveland, in 1887, without discriminating between a revenue tariff and a protective tariff, taught the broad doctrine that a tariff is necessarily a tax added to the price of the article and paid by the consumer. His disciples here to-day still teach, and

some of them believe, that doctrine. A purely Democratic tariff—a tariff for revenue only—I admit, is a tax which is added to the price of the article and paid by the consumer. And on that account we of the Republican party will have none of it. But a protective tariff, a tariff on articles the like of which we ourselves produce in great abundance, is not a tax paid by the consumer, but by the foreign producer. That is the essential difference between a protective tariff and a tariff "for revenue only."

Take, for instance, tea or coffee. If you impose \$100 a pound duty on tea or coffee, then, with the exception of what may be smuggled in, the article will necessarily be sold \$100 a pound higher on account of that duty, because we can not produce the article in this country. There is a tax laid for revenue only, which is added to the price of the article and paid by the consumer. On that account we of the Republican party have carefully gone through the schedules and eliminated from the dutiable list everything of that kind which you can think of that can be bought or sold or transported from one country to another, and have placed on the free list everything which we can not produce in this country except a few luxuries.

We do not claim that a tariff of 80 cents a bushel on barley, 25 cents a bushel on wheat and potatoes, \$4 a ton on hay, \$30 apiece on horses, \$2 a thousand on lumber, 75 cents a ton on coal, \$2 a ton on clay, or 10 cents a cubic foot on limestone is in any case added to the price of the article and paid by the consumer, for the very simple reason that all these things are produced in our own country in such great abundance that the home competition fixes the price. Foreign competitors who insist upon crowding such things into our markets must do two things: First, pay the tariff into the Federal Treasury; second, sell their wares, if at all, at the market price. The same principle applies to crockery, glassware, hardware, cutlery, machinery, and cotton cloth.

And how enormous is that free list after all. Under the McKinley law it ranged from 51 to 59 per cent of our entire imports.

Mr. McRAE. Are we to understand the gentleman as arguing that a protective tariff reduces the price of the article taxed?

Mr. JOHNSON of North Dakota. As a rule it has that effect when the home production has increased sufficiently to fully or nearly supply the demands of the home market.

Mr. McRAE. Is that the reason you put a tax of 25 cents a bushel on wheat?

Mr. JOHNSON of North Dakota. Now, I will tell you about that. When you come to agricultural products, when you come to anything that we produce in this country in great abundance, we of the Republican party have placed a tariff on it. Wheat comes under that class. We say to every man in every corner of the world who has anything to sell which the American people wish to buy and which we can not ourselves produce in great abundance, "Come, and welcome; bring your wares with you; sell them to our people as cheaply as you can and in as large quantities as you like."

That is our policy. Everything of that kind is placed on the free list. But when we come to that other great class of articles, like wheat and hay and barley and oats and glassware and crockery and furniture and pig iron and sheet iron and tin plates and carpets, and everything which our people produce in great abundance, then, while we do not place a prohibitive duty upon those things, we do say to those men who wish to crowd upon our market things which we do not need and do not want, like wheat, of which we ourselves have a great abundance, "If you foreigners wish to crowd such things upon our market, we will not absolutely prohibit their importation, but we do say that you must pay a peddler's license for the privilege of using our good market, the duty being measured as nearly as possible in amount in accordance with the difference between what you pay for labor abroad and what we pay here." Importations of articles of that character in small quantities will not noticeably affect the prices in our markets.

Mr. BARLOW. The gentleman says that under a Democratic tariff the consumer pays the tax. Let me ask who will pay the tax under your bill?

Mr. JOHNSON of North Dakota. I will tell you that. It is divided between the foreign competitor and the "dude," the unpatriotic, and the foolish who are willing to pay two or three prices for an article because it is imported. [Applause on the Republican side.]

In the case of wheat and hay and barley I do not pretend to say and you do not pretend to say that the tariff is added to the price of the article and paid by the consumer. Not at all. Our friends who buy quantities of barley along our northern border from Canada take it rather hard that we have placed a duty of 80 cents a bushel on barley. I wish I could say to the farmers of North Dakota that that meant an addition of 80 cents a bushel to every bushel of barley that they raise. But that is not the doctrine of the Republican party. That will not be the effect, either to buyer or seller. It may raise the price of barley slightly, but it will surely reserve our own market for our own farmers, except when the price of barley is high enough so that Canadian and Russian

farmers can afford to pay 80 cents a bushel as "tariff taxes" into the United States Treasury for the privilege of sharing in the benefits of our good markets.

The doctrine—our doctrine—is that if the foreigner wishes under that law to crowd me and the other Western farmers out of the barley market at Buffalo and Milwaukee he must pay into the Treasury of the United States for that privilege the sum of 30 cents a bushel on the barley that he imports to this country.

But the importation of barley does not regulate the price in the markets of Buffalo and Milwaukee. The same may be said also of potatoes. We have placed a duty of 25 cents a bushel on potatoes. We do not pretend that that tariff of 25 cents is added to the price of potatoes. Not at all. That is not the theory. But the question is, Who pays? We do say that the foreign competitor, in the Bermudas, in Ireland, Scotland, and elsewhere, who wishes to crowd, and does crowd, upon our markets, in spite of the tariff, millions of dollars' worth of potatoes every year, must pay the 25 cents a bushel into the Federal Treasury for the privilege of using the markets of the United States.

Mr. SIMPSON of Kansas. Will the gentleman allow me to ask him a question?

Mr. JOHNSON of North Dakota. Certainly.

Mr. SIMPSON of Kansas. Do you hold to the theory that in this case the foreigner pays the tax?

Mr. JOHNSON of North Dakota. That depends on circumstances. On certain articles, such as barley and potatoes, he certainly does. On others it is divided. On those which we produce in this country in such great abundance that the matter of home competition regulates the price, as for instance, in tin plate, pottery, barley, hay, wheat—in all such cases the foreigner necessarily pays the tax.

That is manifest for many reasons. Why, for instance, are they protesting now in England, France, Germany, Italy, and Japan against the passage of this bill if they do not think it would be injurious to them? Would not our tariff legislation be a matter of practical indifference with them if the consumer here paid the tax or duty? [Applause on the Republican side.] But they know, Mr. Chairman, that under a protective-tariff system instead of taxing the consumer in this country we simply impose a license which is subtracted from the profits of the foreign competitor. [Applause on the Republican side.] That is the distinction.

It is true with reference to the great majority of articles under the protective system. I do not say that the foreigner pays the whole duty in every instance. In some cases it is divided between him—the foreign manufacturer—and the man in this country who foolishly and unnecessarily chooses to pay more for an imported article than for an article of domestic manufacture of same quality. [Applause on the Republican side.] For instance, suppose that you go down the street here for the purpose of buying a pocketknife; if you adhere to the opinion that used to prevail in some parts of the country twenty-five years ago, that unless a knife was marked "Sheffield" on the blade it was worth little, you may be compelled to pay a big price—larger than you need to pay—because you adhere to the antiquated belief that Sheffield makes the best cutlery in the world.

That illustration applies to many other cases. You in Kansas, out in your part of the country, stick to the old forgotten antiquated notions; but in North Dakota I and the people I have the honor to represent have passed away from that period, and when I go to purchase a pocketknife I select one that has the stamp of some American firm upon it, made in my own country, and I get a better knife than the Sheffield knife, and I pay less than half the money for it. [Applause on the Republican side.] In that case, if my friend chooses to purchase the Sheffield knife and pay an additional price, he pays the tariff; if he gets it for the price of an American knife of the same quality, then the Sheffield maker must pay the tariff.

Mr. CURTIS of Kansas. Will the gentleman allow me?

Mr. JOHNSON of North Dakota. I have promised to yield for an inquiry to my friend from Kansas on the left [Mr. SIMPSON].

Mr. SIMPSON of Kansas. Then in this case you hold to the theory that the foreigner pays only one-half of the tax and the consumer in this country pays the other half?

Mr. JOHNSON of North Dakota. Oh, Mr. Chairman, we discriminate carefully upon that point. We take every article and give it consideration, and put the tariff where it will least affect our people.

We go to the pains of taking and studying the condition of every article mentioned in the tariff, and in some instances we know that the foreigner pays the entire tax, and in others it is paid unnecessarily, unpatriotically, and foolishly by the "gone-to-seed" Populists all over the United States [applause and laughter on the Republican side] who buy imported articles when they could get better articles cheaper at home.

Mr. SIMPSON of Kansas. But the point is that the foreigner pays one-half and the consumer the other half?

Mr. JOHNSON of North Dakota. Well, I am not quite so

mathematical as to make that precise declaration. I have made a statement which, I think, the gentleman will admit to be correct. I say as to the great products of the country—corn, cotton, cloth, crockery ware, coarse textiles, iron, steel, etc., and those things that we make in large quantities ourselves, if the foreigner wishes to compete with our people, he can only do it by paying the rate of duty which we choose to fix upon the admission of his manufactures into this country.

Mr. SIMPSON of Kansas. The gentleman differs from the great leader of his party, the present occupant of the White House, in that regard.

Mr. JOHNSON of North Dakota. Not at all. Mr. McKinley never taught that the foreigner in every instance paid all of this tax.

Mr. SIMPSON of Kansas. Now, if the gentleman will permit me—

Mr. JOHNSON of North Dakota. Well, Mr. Chairman, I think I would rather proceed without interruption.

Mr. SIMPSON of Kansas. I only want a moment.

Mr. JOHNSON of North Dakota. How much time does the gentleman want?

Mr. SIMPSON of Kansas. Just a quarter of a minute.

Mr. JOHNSON of North Dakota. All right. I have served with my friend for many years, and I am glad to be able to oblige him in any way.

Mr. SIMPSON of Kansas. Mr. McKinley, the present occupant of the White House, said in the national Republican convention of 1892 that the Democratic party believes in direct taxation—that is, in taxing ourselves—but “we, the Republican party, do not believe in that principle so long as we can find anybody else to tax. We propose to raise our money and pay all public expenses by taxing the productions of other nations, rather than those of our own people.”

Mr. HENDERSON. That is the best thing Jerry ever said. [Laughter.]

Mr. SIMPSON of Kansas. I want to put the gentleman in accord with his party.

Mr. JOHNSON of North Dakota. Oh, I was in accord with my party before you ever came to these Halls. I never differed with my party. [Laughter.]

Mr. SIMPSON of Kansas. I want to keep you with your party.

Mr. JOHNSON of North Dakota. The quotation which the gentleman from Kansas read was one of the best things that Mr. McKinley ever said. As far as it went it was all right, but he did not have an hour's time in which to make that speech. He said, as brightly and clearly as you could drop fresh dollars from the mint, a thing that is true as far as it went, essentially, that a protective tariff is paid by the foreign competitor for the use of our markets.

Take the case of that poor young married couple, for instance, that were started out for exhibition all over the United States by the free-trade and free-coinage leader of the gentleman's party. The gentleman from Kansas [Mr. SIMPSON], in common with others who believed as he did, taught that they were taxed and taxed and robbed at every turn, especially in the matter of building a poor shanty out on the Nebraska prairies. Now, let me tell you what they can do under the protective system. They can build a house, a good comfortable dwelling, out of lumber, stone, brick, plaster, glass, and iron, found entirely in the forests and in the quarries and in the mines of their own country.

The tax gatherer can never come between them and the sandpit or the limekiln, because none of these things which they need to build their house are brought across the border. They can furnish that house with American-made carpets and furniture and musical instruments, utterly regardless of the tax gatherer. They can set their table with American-made crockery and glassware and fine linen tablecloths, and load that table with a thousand varieties of food, with fish, game, domestic meats, vegetables, and breadstuffs, made from every kind of grain that grows under the shining sun. They can put on that table the lemons and oranges of Florida and California, the rice of Louisiana and South Carolina, the peaches of Delaware, the apples of Michigan, and the wheat bread of North Dakota.

There is absolute free trade, under our theory, among the forty-eight States and Territories. I can clothe myself and my family very comfortably with cotton, flax, hemp, and wool, all produced in the United States of America, without the intervention of the taxgatherer. Unless we voluntarily elect to pay higher prices for foreign goods simply because they are “imported,” we can get these American-made articles and escape the so-called “tariff tax.”

Mr. OTJEN. And the articles will be just as good.

Mr. JOHNSON of North Dakota. Just as good, and better in many instances, I dare say. And let me tell you, my friends, that there is a moral principle and a duty of good citizenship involved right here. If you have only a dollar or only one hundred dollars to spend, you are not your own master. We are in one sense each our brother's keeper. We are the servants of God and the loyal

citizens of our own country. When you go to spend that dollar, or that one hundred dollars, you hold in your hand wages—bread. That bread you can give to hungry mouths in America, or you can send it across the seas. Every individual of you has that responsibility. We can not feed and employ all the world.

We can feed and furnish an abundance of labor to every citizen who lives under the protective folds of our own flag, if we will only be so plainly and simply patriotic as to buy only of our own citizens in preference to foreigners in those cases where we can get just as good articles for less money at home. That is all we have to do to restore employment and prosperity. [Applause on the Republican side.] You may say that your tastes and habits require you to get some things indispensable to your health and comfort which we can not produce in this country. I agree with you. Our civilization has brought us to that point. We require tea, coffee, spices, tropical fruits, and other articles not grown or made in our climate. A tariff on such things would be a “tax” added to the price of the article and paid by the consumer, a “tariff for revenue only,” always an engine of oppression and ruin. In preparing this bill we have placed every one of those articles upon the free list, except a few luxuries that are unnecessary for comfort and happiness. That is the doctrine of the Republican party.

I remember in the Fifty-second Congress, when Mr. Bryan was talking on one of Mr. Springer's popgun bills, the free-wool bill, he said, “I am in favor of free wool, in order that the great majority of the American people, who do not keep sheep, can get their clothing cheaper,” and the whole Democratic and Populist parties were with him in that position. The gentleman from Kansas [Mr. SIMPSON] supported that bill. Mr. Cleveland taught the doctrine in 1887 that the tariff was a tax and prices were too high.

They held out to the laboring men of the country these promises of cheap bread, cheap clothing, cheap everything. The gentleman from Virginia [Mr. SWANSON] yesterday was well within the bounds of Democratic orthodoxy when he said that for every dollar that under a protective tariff actually reaches the Federal Treasury five dollars stop in the coffers of the protected industries. That is Democratic doctrine. Four years ago many people believed it was sound and true.

Under a promise to stop this robbery and make everything cheap, the Democrats and Populists got control of the country. We agreed with them that if these theories were put into governmental operation they would produce cheapness, but we denied that cheapness meant happiness. That was the difference between us. The result was what we predicted. A tariff for revenue only resulted in cheaper wool, cheaper bread, cheaper everything; there was no doubt about that; but did cheapness produce happiness, as they said it would? No; it produced misery, just as we said it would.

Now, then, instead of admitting the folly of their philosophy, instead of coming to the altar as penitents, last fall they exploited another humbug to the people. [Laughter.] Now, then, these very same gentlemen who four years ago promised happiness through cheapness cry out against “falling prices,” “shrinkage of values,” and other synonyms for the “cheapness” they deliberately produced, and actually tried to make people believe that it was the remote and speculative act of 1873, and not the act of 1894, that gave us both cheapness and misery. Then the cry was, “Stop the robbery, no matter if it stops our industries.” Now the jugglery is to try and make the farmers and laborers believe that they will get higher prices and better wages if only paid in a depreciated currency. Then they were apostles of cheapness; now they are preachers of inflation. The producers of the country want the best dollar in the world; and if they can only get again the prices and wages, the markets and opportunities they had, even during the poorest years of Republican supremacy, they will be very thankful. In the tariff debate in 1892 I made a prediction which I will now read. It is found in the CONGRESSIONAL RECORD, volume 22, page 3006. I then said:

Sheep husbandry, like every other industry, has its natural and unnatural enemies, against which it must be successfully defended before it can thrive and prosper. Sheep are constantly exposed to the danger of injury from vicious dogs and wolves, and scab and foot rot, and Democracy.

[Loud laughter and applause.]

The most destructive of all these is Democracy. The enactment of this law would be fatal to more sheep in a single season than have been destroyed by the combined depredations of dogs and wolves and scab and foot rot in twenty years.

[Renewed applause.]

I challenge search from one end of the Old Testament to the other for a prophecy that has been more literally fulfilled than this. [Laughter and applause.] At that time we had 47,000,000 sheep; now we have only 36,000,000. The destruction wrought is not measured by the loss of the 11,000,000 sheep that have had their throats cut; not only by the depreciated value of the survivors, amounting to \$63,000,000, but by the still greater loss in the depreciated value of the wool clip, amounting to \$99,000,000 in these four years.

We import now a large amount of agricultural products. More

than half of our imports are agricultural. We are sometimes told, "Oh, the agricultural imports do not amount to anything!" I have here a copy of a circular, No. 11, from the Department of

Agriculture of the United States, giving in detail all our agricultural imports for the last five years, which I will print. The report is as follows:

[Circular No. 11.]

United States Department of Agriculture, section of foreign markets. (Under the immediate supervision of the Secretary of Agriculture.)

AGRICULTURAL PRODUCTS \* IMPORTED BY THE UNITED STATES IN THE YEARS ENDED JUNE 30, 1892 TO 1896, INCLUSIVE.

Value of imports and domestic exports of the United States, total and agricultural, and excess of agricultural exports over agricultural imports, from 1892 to 1896, inclusive.

Year ended June 30—	Imports.			Domestic exports.			Excess of agricultural exports over agricultural imports.
	Total.	Agricultural.	Per cent agricultural.	Total.	Agricultural.	Per cent agricultural.	
1892	\$827,402,462	\$427,296,622	51.64	\$1,015,732,011	\$709,993,343	70.76	\$372,736,721
1893	866,400,922	415,820,002	47.99	881,090,785	617,718,161	70.11	261,888,129
1894	654,994,622	357,743,253	54.62	869,204,937	630,270,788	72.51	272,527,535
1895	731,009,965	365,232,029	49.91	703,362,509	554,732,846	78.86	189,449,817
1896	779,724,674	382,138,155	49.01	863,200,487	571,898,845	66.25	189,761,030
Annual average for the 5 years 1892-1896	772,098,529	389,052,012	50.47	874,512,164	634,922,990	72.60	245,270,984

\* The list of products classed as agricultural in this circular differs in several particulars from the classification made by the Treasury Department and also from that hitherto employed by the Department of Agriculture. A number of articles that seem properly to fall within the agricultural category are for the first time included. For this reason the total values of agricultural imports and exports here given are somewhat in excess of those printed in previous statements.

The following tables exhibit in detail the quantities and values of the various agricultural products imported and exported by the United States in the fiscal years 1892 to 1896, inclusive:

Imports of agricultural products into the United States during the five years ended June 30, 1892 to 1896, inclusive.

NOTE.—The tariff law of 1890 was in effect until August 27, 1894, at which date the present tariff became law.

That is an average of over 50 per cent of all our imports in the last five years. The gentleman from Missouri [Mr. DOCKERY] said yesterday that tea, coffee, and cocoa were included in this statement of agricultural imports. That is true. They are strictly agricultural products, and they are the only items in the whole list that are not produced on the farms of the United States. Let me say, further, that in these statistics we have charged up as agricultural products in the wool schedule only the actual raw wool, and have passed the woolen goods as manufactured products. Of these we imported last year \$53,494,193 worth.

Now, if you were to take the wool that comes in in the shape of woolen goods and classify it where it belongs as a farm product,

by the side of raw wool as a farm product, and were to add a few other items of the same kind, manufactures of flax and other vegetable fiber, over \$27,000,000 worth, articles produced originally on the farm but advanced somewhat in the factory, they would more than take the place of tea, coffee, and cocoa, which we do not produce in this country, so that it is strictly true that a little more than one-half of our imports are agricultural products of a kind that comes in direct competition with the products of our fields and flocks.

On these things we have placed a protective duty in this bill for the direct benefit of the farmers. Forty-four million dollars of these imports are animal products, the like of which we produce

in great abundance, and from the sale of which a large number of our people make their living, and for which we ought not to send our good American gold abroad. Seventy-eight million dollars of it is for animal and vegetable fibers, such as wool, cotton, flax, and hemp, every pound of which our farmers can and will produce in time, if only properly protected against unfair competition of the cheap land, cheap labor, and cheap civilization generally of the countries which under free trade have driven our farmers, to this extent, out of our own American markets.

In 1894, for instance, we sent abroad \$128,218,773 for sugar. All this had to be paid for in gold. No wonder there is a drain on our gold reserve. We intend by this bill to change the direction of that current and pour that mighty stream of gold into the pockets of our own farmers, laborers, and machinists by establishing here the beet-sugar industry.

Mr. McRAE. I am not quite certain that I heard the gentleman's figures correctly, but if I did, does it not appear from the statement he has himself read that there was a larger per cent of agricultural products imported under the McKinley law than under the Wilson law?

Mr. JOHNSON of North Dakota. It does. There was a larger free list under the McKinley law. Sugar was then on the free list. In fact, there is a greater freedom of trade under a Republican tariff than under a Democratic tariff. These figures show that when we have good times, when business is humming and booming, a protective tariff is not prohibitory at all, but it does secure the millions to the Federal Treasury which the Democratic party throws away or gives as a present to our foreign competitors.

Mr. McRAE. Then the purpose is not to keep out these agricultural products, but to get them in?

Mr. JOHNSON of North Dakota. The purpose is either to keep them out or, if they do come in, to get a good big revenue from them. [Applause on the Republican side.]

Mr. BELL. May I ask the gentleman a question?

Mr. JOHNSON of North Dakota. Yes, sir.

Mr. BELL. I understand you to say that we import but few cowhides.

Mr. JOHNSON of North Dakota. Oh, not at all; there is a very large importation, amounting to \$30,000,000 a year.

Mr. BELL. And that is all imported for sole leather.

Mr. JOHNSON of North Dakota. Mainly for sole leather.

Mr. BELL. Were they not put on the dutiable list in the preparation of the McKinley bill originally, and was it not so stated in the report of Mr. McKinley, and were they not struck out when the New England shoe manufacturers came forward and interfered?

Mr. JOHNSON of North Dakota. Free hides has been a Republican doctrine ever since the close of the war, or at least since 1873.

Mr. BELL. Why was that a Republican doctrine?

Mr. BRUMM. If the gentleman from North Dakota will permit me, I will answer that question. It is because no man goes directly into the business of raising hides. The raising of hides is not an industry; it is an incident to an industry.

Mr. JOHNSON of North Dakota. Certainly. We could not increase the production of hides by putting a tariff on hides. The hide is a by-product.

Mr. HANDY. May I ask the gentleman from North Dakota a question?

Mr. JOHNSON of North Dakota. Certainly.

Mr. HANDY. Is it not a fact that the morocco factories of this country, many of which are located in my district, import large numbers of goatskins—something like thirty million?

Mr. JOHNSON of North Dakota. Certainly. That is an article that we do not produce in this country to any extent.

Mr. DE GRAFFENREID. Do I understand the gentleman to say that we do not produce goats in this country?

Mr. JOHNSON of North Dakota. Not to any amount; a tariff on goatskins would be a tariff for revenue only.

We of the Republican party, when in charge of the Government, reduced our enormous national debt one thousand nine hundred millions in twenty-eight years. That was a reduction at the rate of \$68,000,000 a year. The Democratic party, running the Government on the opposite policy, have increased the national debt \$262,000,000 and over in three years. We reduced the interest on our national debt from \$129,000,000 a year to \$22,000,000 a year. They, with a richer and a more numerous people, have reversed that policy and have increased the burden of our interest charge from \$22,000,000 to \$23,000,000 a year. That is a fair comparison.

Now, I wish to have a word with these theoretical wheat farmers from Alabama and Montana. It is pathetic to hear them grieving over the depression of the wheat farmer and attributing whatever misfortunes he may have had to the gold standard. In the last Congress I made some remarks on that question. I showed how enormously the price of wheat had dropped in every instance with the triumph of the Democratic party and had risen with the triumph of the Republican party, and then on the 6th day of February, 1896, I predicted the rise in the price of wheat which oc-

curred last fall. I predicted it in this language. Calling attention to the ups and downs in wheat prices, I said:

Unless God changes the laws of nature and of economics, the same change in the price of wheat will take place in December, 1896.

That prophecy was as literally fulfilled as the prediction which I made with regard to sheep and free wool in 1892. I have heard gentlemen say on this floor that that rise was caused by the famine in India. Of course I could not foresee the famine in India, but I could foresee the triumphant election of Mr. McKinley. [Applause on the Republican side.] The advance in the price of wheat was a little greater than I expected. It was about 20 cents a bushel, whereas I did not expect an advance of over 12 or 15 cents a bushel.

Mr. HOWARD. Why did not cotton advance after the election of Mr. McKinley?

Mr. JOHNSON of North Dakota. If you men from the cotton States would come up here and honestly and sincerely pledge your support to the protective doctrine, we would include cotton in the same list in which we have put wheat and hay and corn and potatoes, and the gentleman from South Carolina [Mr. McLaurin] who, in my judgment, points out the true road to the future greatness and power of the South, would not stand here alone pleading for prosperity for the cotton States. [Applause on the Republican side.]

Ever since 1846 cotton has been on the free list at the request of the members from the cotton States, who have insisted that they did not want or need protection on cotton.

Gentlemen on this floor who claim that they can explain the rise in wheat by the famine in India must necessarily come upon our platform and adopt our theory, which is that the price of wheat is regulated by the law of supply and demand and not by the kind of money used in the trade. That has always been our position. But let us ask what effect did the famine in India have upon the world's supply of wheat? Was it sufficient to cause the difference in price? That it caused some of it, I will admit, but after all, how picayunish is that supply!

Mr. HOWARD. May I ask the gentleman one more question?

Mr. JOHNSON of North Dakota. Not until I get through with this point. They have never exported more than 35,000,000 bushels of wheat a year from India. What sort of a figure does that cut after all? And it is years since they exported that much; that was in the eighties. Since 1891 they have never exported more than 25,000,000 bushels of wheat a year. Twenty million bushels may continue to be put down as the total annual export from India. They raise only 250,000,000 bushels a year—half as much as we do—and they have six or seven times as many people as we have to consume it nearly all at home.

Reduced to five-year periods, the annual average exports of wheat from India have been as follows:

	Bushels.		Bushels.
1893-1897	574,446	1883-1887	35,214,655
1873-1877	4,230,503	1868-1872	31,281,266
1878-1882	13,804,666	1863-1867	21,704,000

Now, if the cutting off of 30,000,000 bushels of wheat from the supply of the world by last year's drought in India would cause this rise in price, what effect would the reduction of 120,000,000 bushels in the demand have on depressing the price? Six times as much, surely.

I did not figure on the insignificant effect of reducing the world's supply by 20,000,000 bushels; that is something, but very little. I did figure on a Republican victory opening our mills and factories and restoring the home market for wheat which we had before 1892.

I did count on reopening the market for 60,000,000 bushels of our wheat by reciprocity, which is one of the most beneficent features of this bill.

The gentleman from Iowa [Mr. DOLLIVER] yesterday made the statement, which is supported by the figures, that we are consuming now about a bushel and a half of wheat less per capita than we did in 1892—and that is true, because, cheap as wheat bread is, there are thousands—yea, millions—of our fellow-citizens who have gone hungry for the simple reason that they are out of employment and have not the money with which to buy this wheat bread, cheap as it is.

We know that by putting the Dingley bill on the statute book we can restore again the conditions of industry that we had under the McKinley law. The tendency will be to buy at home instead of abroad, even if prices on some things may be a little higher. We know that that will cause our people to earn money—to have money with which to buy. There are more than seventy millions of us. A bushel and a half apiece would make over 100,000,000 bushels increase in the demand for wheat right in our own country. Is not that likely to have a much greater effect upon the wheat market here than simply increasing or decreasing the demand in the markets of the world by the paltry amount of 20,000,000 bushels from India? We shall furnish the entire 100,000,000 bushels at home, but could only get a chance to supply a small share of the 20,000,000 abroad.

It is very fashionable to assume that wheat has been going down and down and down during late years. The wheat market is very sensitive, and oscillates from day to day and from year to year, but on the whole it went up and up and up as long as the Republican party was in power—measured by what the wheat farmer got for his product. I am not talking about the export price—the price in New York or Liverpool. What does the farmer of Kansas or North Dakota care about that? All he cares about is what he gets for his product on his farm.

I will take the four States Iowa, Minnesota, Kansas, and Ne-

braska and will trace the farm price of wheat back to 1862. The only reason I do not include my own State is because in those days we produced no wheat. Our State was then a barren Indian country. Now we produce annually in my district one-seventh of the entire wheat crop of the United States. It is unreasonable to suppose that the pouring of 61,000,000 bushels of wheat into the surplus of the country from the district which I represent, as we did in the year 1895, had no effect on prices, while 20,000,000 bushels from India—only a third as much—had the effect of advancing the price of wheat 20 cents a bushel.

*The bushels of wheat raised, the total value in currency, and the average currency and gold values per bushel of the same, on the farms, of the wheat crops of Iowa, Minnesota, Kansas, and Nebraska, from 1862 to 1895, inclusive.*

[Including estimates for Minnesota for 1896, for which no Government figures are given.]

Years.	Production.	Total value.	Average value per bushel in cents.					
			Four States.		Iowa (gold).	Minnesota (gold).	Kansas (gold).	Nebraska (gold).
			Currency.	Gold.				
1862-1866	<i>Bushels.</i> 84,585,105	\$60,080,213	106.5	71.4	72	60	66.4	84.1
1867-1870	151,910,000	130,001,410	86	66.4	66.3	65.3	82	55.5
1871-1874	224,824,000	181,438,420	80.7	72.0	70.8	73.1	88.0	60
1875-1878	319,073,206	235,870,585	73.9	68.5	68.1	72.9	89	80.6
1879-1882	398,653,768	349,117,128	86.1	86.2	82.2	80.5	79.3	79.3
1883-1886	454,474,400	279,808,688	61.6	65	64.3	59.8	54.4	54.4
1887-1890	385,019,000	252,634,185	70.8	71.8	73.4	60.4	65.2	65.2
1891-1894	454,776,789	280,613,498	59.3	67.6	62.1	55.5	55.6	55.6
1895	116,945,533	51,086,841	43.0	46	44	45	45	40
1862-1895	2,590,231,795	1,857,601,208	71.7	69.4	71.3	71.8	65.0	61.2

Here are the average prices of wheat on the farms in the four States I have named—Iowa, Minnesota, Kansas, and Nebraska. The average price during the years 1862 to 1866 was 71 cents a bushel; from 1867 to 1870, 66 cents a bushel; from 1871 to 1874, 72 cents a bushel; from 1875 to 1878, 68 cents a bushel; from 1879 to 1882, 86 cents a bushel. Then during the four years that Grover Cleveland was President for his first term there was a drop in prices. We were threatened with "tariff reform." During those four years the average price was 61 cents a bushel. Under Republican supremacy the price rose to 70 cents per bushel. From 1891 to 1894 it was 59 cents; in 1895, 43 cents.

We thus find that, measuring prices always in the same kind of money, there has never been a time when the farmer got as much per acre or as much per bushel, considering the cost of production, as he did the last year under Republican supremacy.

Mr. DEGRAFFENREID. How much wheat was imported last year?

Mr. JOHNSON of North Dakota. About 2,000,000 bushels.

I admit that wheat was higher in New York in 1865 than it is now; but what do we care about that? The railroad companies then got 96 cents where they now get but 12 cents for their services, and probably made less clear money than they do now. We in the West at one time supposed that the farmer would get the benefit of the decreased cost of transportation. In that we were mistaken; the consumer has got that. We, however, have got our full share in the cheapening of the production. Whatever saving there has been from the increased use of machinery we have got almost the entire benefit.

Let me mention an incident in connection with this matter of improved methods of wheat raising. When the World's Fair at Chicago was in progress, some of our wheat farmers in North Dakota wished to show the commissioners of the different nations of the world how we raised wheat according to up-to-date methods, the object being to show foreign countries why they could not successfully compete with us in wheat raising. A train of palace cars was sent down to Chicago, and the commissioners of the different nations were invited to come to North Dakota and see how we raised wheat. About half of them accepted the invitation. At 9 o'clock in the morning the train of cars stopped by the side of a wheat field which had been selected for the exhibition.

A mile square of wheat, golden, beautiful, ripe grain, ready to be cut, was marked off. Mr. Larimore, the proprietor of the farm, put in 45 machines, each drawn by three mules, and one man to each machine as driver, which came up as regularly and as beautiful as so many batteries of artillery going into action. They came up on echelon, and followed each other around in regular order throughout the field of grain.

By 3 o'clock in the afternoon they had succeeded in cutting and binding—each machine being a self-binder—the entire mile square which had been taken as a sample.

No man could witness such methods of harvesting wheat on such a vast acreage of new and fertile land without reflecting that something less remote than the "crime of '73" had become a factor in the world's price of bread. [Loud applause.]

#### The Tariff.

#### SPEECH

OF

HON. J. YOST,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 24, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. YOST said:

Mr. CHAIRMAN: One of the most unjust schedules in this bill is that relating to manganese, which is put on the free list. We have failed heretofore to produce a sufficient quantity of this material for the simple reason that there has been no earnest, comprehensive effort to develop the deposits known to exist in a dozen States of the Union. Capital is required to make this development, but capital can not be induced to invest as long as the material to be won is forced into direct competition with similar material mined abroad under a different labor system and entered here duty free. In 1895 our domestic production of manganese was less than 10,000 tons, or about 10 per cent of the manganese consumed. But a few years ago a single mine in the district I represent produced nearly 20,000 tons per year. To-day that mine is not in operation. This practical abandonment was not due to an exhaustion of the ore. It is attributable directly to the influx of the foreign product.

Not only has this importation had the effect of closing the mines already developed, but it has placed an embargo upon any further effort to utilize the vast stores of this material which now lie useless in the mountains of the South. As the importations have increased, so has the domestic supply decreased. The following figures, taken from the last Report on the Mineral Resources of the United States, tell their own tale:

Year.	Domestic production of manganese.	Imported for consumption.	Percentage of American product.
	<i>Tons.</i>	<i>Tons.</i>	
1880	24,197	4,135	85
1890	25,684	23,968	39
1891	23,416	28,624	45
1892	13,613	38,364	19
1893	7,718	67,717	10
1894	6,308	44,055	12
1895	9,547	80,111	10

It is idle to contend that we can not produce manganese of good quality and in sufficient quantities. Heretofore the larger proportion of manganese produced in the United States was mined

in the Valley of Virginia, in Georgia, and in Arkansas. The late Joseph D. Weeks, who for a number of years, including 1896, prepared the article on manganese for Mineral Resources of the United States," and who was recognized as an expert, stated that the occurrence of manganese—

Is almost coextensive with brown hematite iron ores. It is found all along the western slope of the eastern ridge of the Appalachian Mountains from Maine to Georgia.

The indications are that there are very large deposits in the Rocky Mountain region, and on the California coast very large deposits of manganese have been observed. In many cases, however, the ore is so far from railroads and from the points of consumption as to make it impossible to mine it profitably, whilst in other cases it is too high in phosphorus to make it largely available in steel manufacture.

Along the western slope of the Blue Ridge Mountains in Virginia, where the larger proportion of the domestic manganese has been produced, the deposits have been traced for over 100 miles. The developments made, principally at Crimora, have shown not only large quantities, but that the quality is fully up to the requirements of the trade. Similar results have been attained at Elkton and other points where a real effort at development has been made. At still other points on the same range preliminary exploration has proceeded far enough to demonstrate the practicability of extensive and profitable operations, could the necessary capital be enlisted to inaugurate the enterprise upon business lines. And this represents but a section of the manganese deposits of the United States.

Were the actual demand made upon us, in three years' time we could be producing every pound of this material that might be required by our manufacturers. So long, however, as the foreign product is permitted to enter our ports duty free, so long will capital shrink from home employment and seek investment across the water, where the cheap-labor system and ocean freights guarantee a higher percentage of profit. If we close this door, or at least make it more difficult of ingress, we divert the channel of investment and turn it to the development of those resources with which we have been so abundantly blessed. The same argument advanced in favor of manganese on the free list, the same cry of inability to supply its place with the domestic product, has been employed to oppose every real effort at American development.

Less than ten years ago we were solemnly assured that tin plate could not be made in this country. As the result of a protective duty, we have demonstrated that it can be and is being made here. The quality is as good and the cost to the consumer has been lessened. So, too, with sugar. For years it was contended that, inasmuch as the cane-producing territory was limited, we would be compelled for all time to import the bulk of the sugar used. A wise tariff act started the beet-sugar industry, and but for the repeal of that act we should by this time have been in a fair way to produce all the sugar used. Even as it is we have made such headway in beet culture that it is only a question of time when we shall supply the entire domestic demand for sugar, if not export it. So, too, it will be with manganese, if the proper effort is made to protect us against this importation and develop our own deposits. A duty of \$2 per ton would be the equivalent of 25 per cent ad valorem. This would afford ample inducement to open our mines; would, under present importations, bring to the Government an annual revenue of \$175,000, and, even if the whole duty were added to the price, it would not increase the cost of steel rails more than 10 cents per ton.

Our own laborers need the employment which the production of this imported manganese requires; our own mines are ripe for development. Both objects can be attained by the imposition of a reasonable duty, and no American interest will be injured.

#### The Tariff.

#### SPEECH

OF

HON. JOHN B. CORLISS,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 29, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government, and to encourage the industries of the United States—

Mr. CORLISS said:

Mr. CHAIRMAN: The history of our country and the bitter experience of the people during the past four years have demonstrated the wisdom and necessity of a protective tariff. By looking backward and reviewing the effects of laws upon the happiness and prosperity of the people, and in the light of our experience, we may justly hope to find wisdom to guide us in the present and future.

We find that the protective-tariff principle has been the backbone and framework of our political system, our business prosperity, our national progress, and the extraordinary activity and happiness of the American people.

Commencing with the establishment of the protective-tariff system in 1812, we have suffered five periods of great depression, each of which has followed the enactment of laws based upon the principles of free trade; and every period of prosperity during the entire peaceful history of the nation has been during the existence of a protective-tariff law. In 1812 the first high protective tariff was enacted to give strength and stability to the Government in the then approaching war with Great Britain, and a period of great prosperity was enjoyed until this first protective-tariff law, then regarded as a war measure, was repealed, when the business of the country was speedily prostrated and the people reduced to want, idleness, and misery.

The effect of the repeal of this first protective tariff, about 1820, may be illustrated and the condition of the people properly described in the words of Colonel Benton, then a leading Democratic statesman in Congress, who, in describing the condition of our country, said:

No price for property, no sales except those of the sheriff and the marshal, no purchasers at execution sales except the creditor or some hoarder of money, no employment for industry, no demand for labor, no sale for the products of the farm, no sound of the hammer except that of the auctioneer knocking down property. Distress was the universal cry of the people; relief the universal demand.

How truly history repeats itself. This language seems to fit the experiences of the people under the Administration of Grover Cleveland—some time since the idol of Democracy. Relief then was at last secured, as it must be now, by the enactment of a protective-tariff law. There was, however, this difference between that period and the present: The wise and great statesmen of that day, disregarding party prejudices, recognizing the bitter experiences of the people and the evil effects of free trade, the distress and unhappiness, united—Clay and General Jackson, Webster and Van Buren, William Henry Harrison and Silas Wright—in one common cause for the relief of their country and people and the establishment of American interests by strong protective-tariff laws.

Under the stimulating influences of these laws our country was soon restored to prosperity, and for over twenty years we gradually advanced in national wealth, in business and industrial progress and happiness, until, through the political evolutions of partisan strife and the fascinating representations of eloquent theorists, the protective tariff was again destroyed, and the progress of American interests and industries ceased.

The misery and misfortune of the people and the condition of our business interests may be again best illustrated by quoting from the message to Congress of the Democratic free-trade President Buchanan during this second period of depression in the history of our country under free-trade laws:

With unsurpassed plenty in all the elements of national wealth, our manufacturers have suspended, our public works are retarded, our private enterprises of different kinds are abandoned, and thousands of useful laborers are thrown out of employment and reduced to want.

When we consider this testimony in the light of the experience of President Buchanan, who in his earlier career had earnestly supported a protective tariff, but for political supremacy had unfortunately given way to the theorists and consented to the enactment of a free-trade law, we wonder at the tenacity with which many leading Democratic statesmen follow the unfortunate and misleading theories of free trade.

The nation has enjoyed most profound peace and abundant harvests for over thirty years. Her unbounded resources are but half discovered; her manufacturing, commercial, and agricultural interests, through the genius of her people and favorable climate, are unlimited in scope and power of development. During the Administration of the Republican party, under President Benjamin Harrison, and the blessed fostering effects of the McKinley tariff law of 1890, every avenue of human employment seemed to be filled by people with happy hearts. Every factory was alive with the mechanical genius of American artisans; every mine was being worked to its full capacity, daily yielding to the people the hidden wealth of the earth; every farmer was gladdened with the fruits of an abundant harvest, sold at good prices in an American market; every laboring man throughout the length and breadth of our land was actively employed at good wages for the support, happiness, and blessing of his family; the homes of all classes of our people were filled with the necessities and comforts of life; idleness, want, and financial suffering were unknown to the great mass of our industrious people; the revenue of the nation was ample for the demands of the Government, the obligations of our bonded indebtedness, the care of those who bravely defended and preserved by their patriotism the Union, as well as the maintenance and development of the American Navy for the protection of the national honor.

When we recall the glorious progress of the nation and the happiness of the people during this period of Republican Administration of national affairs, and compare it with the dark, gloomy, cloudy, and miserable four years just passed under Democracy, we turn with sorrowing hearts and mournful regrets that more of our citizens could not have heeded the prophetic words of our beloved statesman, James G. Blaine, who, foreseeing the danger of free trade in this country, warned the people in these words:

I am an American, and I rejoice every day of my life that I am. I enjoy the general prosperity of my country, and know that the workmen of this land are the best paid, the best fed, and the best clothed of any laborers on the face of the earth. Many of them have homes of their own. They are surrounded by all the comforts and many of the luxuries of life. I shudder, however, at the thought that the time must come when all this will be changed, when the general prosperity of the country will be destroyed, when the great body of workmen in this land who are now so prosperous will hear their wives and children cry for bread; that the day must come when the great factories and manufactories of this land will shut down, and where there is now life and activity there will be the silence of the tomb.

And the reason why this must be is this: The great Southern wing of the Democratic party are determined to establish the doctrine of free trade in this land. They will be assisted by their Northern allies. The fight is now on. There is a great body of visionary but educated men who are employed day by day in writing free-trade essays and arguments in favor of that doctrine, which find their way into every newspaper in this land. The great body of our people have never experienced themselves the sufferings which always result when the protective principles are laid aside. Poisoned and excited by the wild statements of these writers, and the demagogic appeals of Democratic speakers, the result will be that in the very near future these forces which are now working will be strong enough to defeat at the polls the party advocating the doctrine of protection.

It must inevitably follow that uncertainty and doubt will ensue. The business men of the country, fearing the destruction of the principle of protection, will decline to engage in business, consequently mills will shut down and the workmen will be thrown out of employment. The people will then see what they have never seen before, that they can not be prosperous and have work while this principle is threatened. In the midst of their suffering they will learn that the only way they can be prosperous and happy is to vote for the party that has built up the industries by which they have gained a livelihood; because they will then see clearly that when the manufactory is shut down there is no demand for the only thing which they have to sell, and that is their labor.

Mr. Chairman, in order to illustrate the loss to the American wage earners under the free-trade Wilson Act, I have had prepared a list of the manufactured goods imported into this country during the year 1894 under the McKinley tariff law, as compared with the same articles imported in the year 1896 under the Wilson law, and desire that the table may be printed as a part of my remarks. It will be observed that the total importations in 1894 amounted to \$154,649,867.32; in 1896, \$270,151,878.81, a difference of \$115,502,011.49.

It is well known that manufactured articles embrace about 25 per cent of raw material and 75 per cent of labor. Had the manufactured articles above mentioned been produced in this country we should have consumed in the year 1896 \$67,537,969.70 of the raw material of our own country, and expended for the laboring people of this Union the enormous sum of \$202,613,909.11 in wages. This would have employed the 6,000,000 idle artisans in our country in 1896, at an average price of \$1.50 per day, for twenty-two and one-half days. Under the Wilson law this labor was given to the artisans of Europe and other lands, and the profit upon this labor and material was distributed to the manufacturers of foreign countries. What intelligent laboring man can examine these facts and ever again vote for a party advocating the principles of free trade?

Mr. Chairman, I have the honor to represent one of the largest manufacturing districts in this country, in which nearly every character of manufactories may be found, and during the life of the McKinley tariff law we employed over 35,000 artisans in the manufacturing industries of my city. During that happy period no man who was honest and industrious sought employment in vain or suffered for the necessities of life; but during the past three years, under the Wilson law, nearly 16,000 of these artisans have been forced into idleness, want, and misery. They are honest, industrious, and intelligent citizens, and it is through no fault of theirs that they have suffered from lack of employment.

Mr. Chairman, I am deeply interested in the schedule with reference to sugar contained in this bill. In Michigan we have the soil and willing hands ready to raise the sugar beets required for the production of sugar in this country. Why, with the natural soil, climate, and the genius and activity of our people, should we permit Germany, the West Indies, or any other country to produce for us the sugar that is required by our people? And I rejoice in the belief that through the blessings of this proposed tariff law, when enacted, this great industry may be encouraged to such an extent that in a few years the present order of things may be changed, and instead of receiving from foreign countries more than three-fourths of the sugar we use, it may be produced in our own land.

Mr. Chairman, it has been wisely said, "Show me the laws of a nation and I will tell you the condition of its people." How clearly this wise saying has been demonstrated during the past three years under the evil effects of the Wilson Act!

Mr. Chairman, the American laborer, through the uplifting

influences of the McKinley law, was raised to a self-respecting, independent social condition, and enabled to obtain comforts which in foreign countries are enjoyed only by the rich. The capacity to produce as well as the ability to consume products was increased in this country during that period through the genius and enlightenment of our people until the 70,000,000 of population had become, through active employment at good wages, capable of not only producing but also consuming a third more than the artisans of Europe, and more than twice as much as the people of any other nation.

It is unjustly claimed by many that our misfortune arises from overproduction, stimulated by a protective tariff; but the list of manufactured articles to which I have referred that were imported in 1896 in excess of 1894 demonstrates the fact that the overproduction came from some other land, and not from the laborers of our own country.

Mr. Chairman, whenever the wage earners of our land have steady employment and fair wages, every avenue of trade and business prospers. The farmers, in their present distress, can justly attribute their misfortune to the destruction of the American market, which, under the blessings of a protective tariff, was enabled to absorb, through its employed laboring men, the products of the soil.

We want not only protection to capital, manufacturing industries, and the producers in this country, but also protection to the laborers against the unjust competition from foreign workmen who periodically invade our labor markets and rob us of the fruits of labor justly belonging to our own people.

I have suggested to the Ways and Means Committee an amendment embracing the provision in the immigration bill which I had the honor to present, and which was adopted by this House notwithstanding the veto of the President forbidding the "birds of passage" from entering this country and engaging in competition with our own people, and I regret that the committee are unwilling to favorably consider my suggestion. As Republicans we have ever contended that the protective tariff maintained high wages and benefited the laboring man as well as the capitalist and producer. If that be true—and I am one who believes in the principles of protection—then we should assure the laboring men of our fidelity to their interests by the adoption of a provision similar to the one suggested to the committee.

By this law we would stop not only the products and the manufactured articles made by the cheap laborers of foreign lands, but the skilled mechanics and laborers from coming into the large cities along our borders and competing with our artisans in the building and other trades. Mr. Chairman, the American people not only want this measure, but they likewise and with equal interest and earnestness demand an immigration law that shall restrict, regulate, and control the immigration of the illiterate, half-civilized people from foreign lands who are now and have been for a decade overcrowding our ports for admission. While I am as loyal to our foreign-born citizens as any man upon this floor—and I believe they have come to our country and adopted it as their home for themselves and their families, and are as loyal to the flag as any man who was born beneath it—yet they, as well as I, appreciate the danger that is menacing our people in the indiscriminate immigration permitted under the present insufficient laws.

Laws should be enacted by a nation for the elevation of the masses and not the classes—laws that will destroy special privileges in the hands of the favored few and level them to the plane of equity and justice and of humanity. This measure, coupled with a wise immigration law, will, in my judgment, elevate the masses, grant them employment at good wages, and extend the blessings of prosperity to their families.

In the light of our commercial depression and the restriction of commerce in foreign markets, who does not regret the stupid blunder of the Democratic party in repealing that most wise provision of reciprocity conceived by the prophetic genius of America's most beloved statesman, James G. Blaine, who, through the magic of his diplomatic power during its brief existence, opened new avenues of commerce and additional markets in foreign lands for American products?

Once more, thank God, the American manufacturers and producers, under the present measure, may soon enjoy the advantages and blessings that may be secured through the reciprocity provision embraced in this bill. Mr. Chairman, through the influence and power of this clause and the stimulating influence of a protective tariff to American interests we may hope to soon see American ships, built in American shipyards, from American material, by American workmen, manned by American seamen, carrying our products to new and reopened markets of the world, and proclaiming the greatness and glory of this nation and the magnitude of its wonderful resources by transporting the products of this country into the markets of the world under the protection of the American flag. [Applause.]

Mr. Chairman, the destiny of a nation must depend upon the character of its people, and our greatest duty is to preserve, by

wise laws, not only the American producer, manufacturer, and laborer, but the honor and prosperity of the nation and the character of American citizenship; and the adoption of this measure is, in my judgment, a step in the progress of humanity. [Applause.]

### The Tariff.

The supreme policy of every nation is to develop its own producing forces.—*Byes.*

### SPEECH

OF

HON. GEORGE EDMUND FOSS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. FOSS said:

Mr. CHAIRMAN: I do not wish the opportunity to pass without identifying myself by voice as well as by vote with this important measure—the most important which has engaged the attention of Congress and the country for some time.

Political parties are in the control of a higher providence than our own. They move upon the field of human action for a time, but remain only so long as they meet courageously and wisely the issues of the ever present. The people are holding parties to-day to a stricter accountability. They are saying, "Not many promises, but more performance." [Applause.]

The Republican party in its national convention pledged the people to replenish our depleted Treasury and to revive the dead and dying industries of the country. A trusting people placed its confidence in that party, and on the 4th of March, one of America's greatest statesmen stepped forth and took the oath of office as President of the United States. [Applause.]

Immediately he called Congress in extraordinary session to redeem a promise—to make the people's wish the people's will, and we, their chosen representatives, are here to do it. Let us act wisely but expeditiously, for this measure means the relief of a long-suffering people. [Applause on the Republican side.]

The distinguished chairman of the Committee on Ways and Means, quoting from another, well said that "it is a condition and not a theory that confronts us." When I heard him say that, my mind echoed and re-echoed with another sentiment—that it is the same old condition which has always confronted the American people at the close of any and every Democratic Administration. [Applause on the Republican side.] The same old condi-

tion of closed workshops and empty factories, of smokeless chimneys and idle spindles, of ruined homes and starving people, of free trade and no trade, of low wages and no wages. The last time the Democratic party was in full power in this country it left the Government in the same condition in which it finds itself to-day—with a depleted Treasury and destruction upon every hand. The sublime faith of the people saved it then, and will save it now. First of all, the Government needs more revenue. The receipts have been running behind the expenditures at the rate of over \$50,000,000 per year.

*Receipts and expenditures from July 1, 1893, to June 30, 1897.*

Year.	Total revenue.	Total expenditures, including premiums.	Deficit.
1894.....	\$297,722,019.25	\$367,525,279.63	\$69,803,260.38
1895.....	313,390,075.11	356,196,298.29	42,806,223.18
1896.....	409,475,408.78	434,678,654.43	25,203,245.65
1897 (estimated).....	407,793,120.75	472,293,120.75	64,500,000.00
Total.....			202,312,129.46

It has always been regarded that the best and easiest method of raising revenue is to place a duty upon the foreign imports. During all of that period from the close of the war, in 1865, down to the inauguration of Grover Cleveland, March 4, 1893, while the Government was run upon Republican tariffs, a deficiency was never known.

*Revenue and expenditures of the Government from July 1, 1865, to June 30, 1893.*

Year.	Total revenue.	Total expenditures, including premiums.	Excess of revenue over expenditures.
1866.....	\$558,062,620.06	\$520,800,416.09	\$37,262,203.97
1867.....	490,634,010.27	357,542,675.16	133,091,335.11
1868.....	405,638,083.32	377,340,284.86	28,297,798.46
1869.....	370,943,747.21	322,865,277.80	48,078,469.41
1870.....	411,255,477.63	309,653,590.75	101,601,916.88
1871.....	383,323,944.89	292,177,188.25	91,146,756.64

1884.....	248,519,809.02	244,120,244.33	4,399,564.69
1885.....	323,080,703.38	280,226,955.11	42,853,748.27
1886.....	326,439,727.06	242,483,138.50	83,956,588.56
1887.....	371,403,277.66	267,932,179.97	103,471,097.69
1888.....	379,296,074.78	267,924,801.13	111,371,273.65
1889.....	367,050,058.84	299,238,978.25	67,811,080.59
1890.....	403,060,962.63	318,040,710.65	85,020,251.97
1891.....	392,612,447.31	385,773,905.35	6,838,541.96
1892.....	354,937,784.24	345,023,330.58	9,914,453.66
1893.....	385,819,623.78	383,477,954.49	2,341,674.29
Total.....			1,815,083,249.22

Average yearly excess of revenue over expenditures, \$64,824,401.76.

During these twenty-eight years we have always had abundant revenue and a surplus in the Treasury. The surplus for these years aggregated \$1,815,083,249, making an average for each year of \$64,824,401. Such were the fruits of the Republican tariff policy.

This measure will give the country the necessary revenue. The committee in their report say:

If the bill should become a law by May 1, it is more than probable that it would yield an increase of revenue of nearly \$30,000,000 from sugar, \$10,000,000 from wool, \$14,000,000 from manufactures of wool (assuming that the imports of each would be one-half what they were in 1896), \$1,500,000 from lumber, \$3,000,000 from tobacco (assuming that the revolution in Cuba will continue), \$1,800,000 from silk manufactures, \$2,000,000 from metals, \$3,000,000 from glassware and earthenware, \$4,000,000 from chemicals (including argols and opium transferred from the free list), \$5,000,000 from jute and flax (including burlaps and bags transferred from the free list), \$3,000,000 from agricultural products and fruits, \$1,500,000 from liquors, \$1,500,000 from silks, \$5,000,000 from sundries (including articles transferred from the free list), \$1,500,000 from cotton laces and other fine cotton goods and yarns, or a total of \$75,000,000.

Our Democratic brethren object, and say that this measure raises too much revenue, and warn us against the dangers of a surplus. I am reminded of what a distinguished American citizen once said, "that it was much easier to take care of a surplus than a deficit." These warnings come with poor grace from a party which has placed our Government during the last four years in the mud and mire of financial bankruptcy. [Applause.] What does that party know about a surplus, when it has never produced one in fifty years or been able to pull itself out of a deficiency?

Again, this measure means the encouragement of American industries. The duties are so laid as to protect our own people. Now, the gentlemen upon the Democratic side have made merry over our diversity of opinion as to particular schedules. I believe that the rates might be lowered in some instances and not to the disadvantage of American interests. It is a difficult problem to fix the duties upon all the different articles, and it is not unreasonable that we should seemingly differ among ourselves. We may justly do so; but upon the great principle of American protection there is and will be no division in our ranks. [Applause on the Republican side.]

Let me read from the Republican national platform of 1896, adopted at St. Louis:

We are not pledged to any particular schedules. The question of rates is a practical question, to be governed by the conditions of the times and of production; the ruling and uncompromising principle is the protection and development of American labor and industry. The country demands a right settlement, and then it wants rest.

The country demands a tariff that is neither too high nor too low—a tariff high enough to protect the industries of our country and low enough to furnish the required revenue. But above all, the country demands a tariff measure that will be so reasonable and just to all its diversified interests as to commend itself to the honest judgment of the whole American people, and thereby remain upon the statute books of our country for many years to come, indorsed and repeatedly reindorsed by a greater and a greater majority of the voters of the land. [Loud applause on the Republican side.]

Protection has always been recognized as the national policy of our country ever since Washington signed the first tariff act. It is extremely amusing, if not edifying, to hear our Democratic brethren, who seem to have little respect for history, continually proclaim that their great worthies, Jefferson and Jackson, were free traders. I assert that Jefferson, the patron saint of the Democratic party, was a protectionist. Let me read from a letter which he wrote under the shades of Monticello upon March 2, 1815, to Jean Baptiste Say, a Frenchman who was about to emigrate to this country:

The prohibiting duties we lay on all articles of foreign manufacture which prudence requires us to establish at home, with the patriotic determination of every good citizen to use no foreign article which can be made within ourselves, without regard to difference of price, secures us against a relapse into foreign dependency. And this circumstance may be worthy of your consideration should you continue in the disposition to emigrate to this country.

This proves that Thomas Jefferson not only believed in the doctrine of protection, but, still more, wore upon his body the evidence of the faith that was in him.

Andrew Jackson was also a protectionist. Let me read a short extract from a letter which he wrote to Dr. Coleman April 26, 1824, and mark how appropriate it is to this day and hour:

In short, sir, we have too long been subject to the policy of British merchants. It is time we should become a little more Americanized, and instead of feeding the paupers and laborers of England feed our own, or else in a short time by continuing our present policy we shall be rendered paupers ourselves.

In the light of history, I say to the gentlemen upon the other side that if the Democratic party of to-day had one particle of the patriotism in it that inspired the old Democracy of Jefferson and Jackson, you would be striking hands with us across this Chamber in one common effort of patriotic loyalty to relieve a bankrupt Treasury and to restore prosperity to our country. [Loud applause on the Republican side.]

This measure preserves the home market, the best market of the best people upon the face of the globe, to the American producer. The value of the home market has been estimated at various times, but perhaps with greater accuracy by Mr. George B. Curtiss in his valuable work on Protection and Prosperity. The following figures show the value of our home market in 1890 as compared with foreign markets:

American manufactures.....	\$9,054,436,337
American farm products, at least.....	7,000,000,000
Foreign goods.....	789,510,409
Total.....	16,843,745,746
We exported of all products.....	845,233,828
American market.....	15,998,451,918
Foreign markets.....	7,500,000,000
American over all available foreign markets.....	8,498,451,918

The American market, according to the above, is worth twice as much as all the foreign markets of the world. Who shall say that the American home market is not worth preserving for our own people? What kind of statesmanship is that which would surrender it to others who do not live here and have no interest in the development of our institutions and the working out of the grand destiny of our America? [Applause.]

Again, this measure means American wages for American work-

ingmen, which will give to them and their families the opportunity of enjoying higher standards of living. This, in my judgment, is the strongest argument in favor of the protective policy. The census of 1860 under a low tariff revealed the fact that the number of workmen in the manufacturing establishments of this country was 1,311,246, who earned in wages \$378,878,966, or an average of \$288 for each person. The census of 1890, after thirty years of Republican tariff legislation, revealed a more splendid truth—that the number of laborers had increased to 4,712,622, earning \$2,283,216,529 in wages, or \$484 for each person annually, an increase of nearly 70 per cent.

The bone and sinew of this country to-day are the American workmen, and what increases their comfort and prosperity strengthens and cements the American body politic. Wendell Phillips once said:

It is the dollar left on Saturday night after all the bills are paid that means education, independence, self-respect, manhood. It increases the value of every acre near by, fills the town with dwellings, opens public libraries and crowds them, dots the continent with cities and cobwebs it with railways. The one remaining dollar insures progress and guarantees millions to its owner.

Phillips was right. It is that dollar which means the character and intelligence and progress of the American people. It is that dollar which sends the boy and the girl to the school, the seminary, and the college, and builds them up into strong manhood and gentle womanhood, which above all are the most finished products of American manufacture in this nineteenth century of Christian civilization. It is that dollar which means the security of the present and prosperity of the future. [Loud applause.]

This measure protects the interests of all sections of the country—the North, the South, the East, and the West. There is no sectionalism in it. The men who framed this measure represented all localities and all interests. Their labors have demonstrated that they not only represented the constituencies which elected them, but still more, in a larger and truer sense, that greater constituency which extends from the shore of the Atlantic to the coast of the Pacific, from the Gulf to the Lakes—our common country.

Lastly, this measure means the industrial independence of the nation. One hundred years ago our forefathers, out of love for man and in fear of God, wrought out the political independence of the land. It remains for us to achieve its industrial independence.

Under it prosperity will come slowly, perhaps, at first, because all true progress is necessarily slow in its beginnings. It will come with returning confidence and with reassuring hope. It will come with the stately march of the people's sublime faith in their country and in the ability of the Republican party to govern it. It will come in the closing of the present century. It will come in the dawning of the new. It will come under the Administration of William McKinley. [Long-continued applause.]

#### The Tariff.

#### SPEECH

OF

HON. JOSEPH H. WALKER,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. WALKER of Massachusetts said:

Mr. CHAIRMAN: There are some things material to this discussion that are incontestably true, and must be admitted by all men who will candidly discuss an economic question:

First, that there is as between countries an economic level in manufacturing and a wage level, and that the wage level may and does differ very widely between those same countries from the economic level. The United States, England, France, and Germany are very nearly on the same economic level; that is to say, in the development of their industries and in their use of machinery and methods. The wage levels of those countries, however, differing so widely, make competition unequal without protective tariffs. Of course this general difference in wage levels does not represent the difference in each industry, some industries having more advantage in lower wages in one country than in another, and therefore, to thoroughly protect the wage earners of this country as against wage earners engaged in the same industries in European countries on the same economic level, different rates of protective duties are necessary in a protective tariff.

Again, it is incontestably true that all inventions and improvements in methods in this country are immediately taken to Europe

and there adopted, not only in machines, but in the speed of their running and in the units of products required of each operative in the same class of factories in the countries named, so that the unit of production per wage worker is practically the same in duplicate factories in each of the four countries.

Second, that the cost of taking any product from any European port and delivering it to any port in the United States is less than the average cost of taking the same product of American mills within a radius of 200 miles of any large city from which it is distributed and delivering it to that city.

#### Factories touch ends the world over.

This shows that to-day all factories in all countries have an economic position of touching ends the world over, distance between them being practically annihilated. It is therefore inconceivable to any practical manufacturer how anything can protect American wage earners from having their wages reduced to the general level of the European countries named, all on the same economic level as we are, but having a very much lower wage level than we, except a protective tariff. Eighty years ago the cost of freight and commissions and the crude methods of handling products gave the American producer a considerable advantage, while it is clearly seen that the ocean carriage of to-day, by its improved methods, not only destroys this former advantage, but it gives a decided advantage to the European manufacturer so far as freight to our markets is concerned.

#### Southern opposition to protective tariff.

It is, furthermore, incontestably true that the framers of the Constitution and American statesmen down to 1830, with but two or three conspicuous exceptions, were unanimously in favor of a protective tariff. In fact, no one disputes that the desire for such a tariff had a large influence in the framing and adopting of the Constitution of the United States. Again, it is incontestably true that the sole ground, as announced by themselves, upon which Hon. George McDuffie, John C. Calhoun, and all other Southern statesmen, without exception, founded their opposition to protection was on the fact of the difference in the labor system of the South from the labor system of the North. This was stated with great clearness and force and without abatement by Hon. George McDuffie and all the Southern statesmen of that day. The fact that their horses, mules, and human laborers were each worked without wages, while the laboring people of the North received wages, was the sole and only ground upon which they based their opposition to a protective tariff, and their position was as impregnable as their reasons from their position were sound.

At the very beginning of the discussion they threatened disunion unless a free-trade tariff was adopted, and that they entered upon disunion and were only prevented from consummating it by the resolute conduct of President Jackson is also true. It is, furthermore, a matter of undisputed history that all the results of their ostensible submission were abrogated in the tariff act of 1832. Their declaration that there could be no peace in this country so long as the majority insisted upon a protective tariff was announced at that time and has been repeated in every tariff discussion by every leading Southern statesman from that day to the present, and conspicuously so in that of 1894. I shall use the speeches and conduct of the giant advocates of free trade in the House during the discussion of the Wilson bill rather than the feeble echoes of that debate that were heard in this House upon the Dingley bill.

#### Shaking the bloody shirt.

The gentleman from Georgia, Hon. Charles F. Crisp, on February 1, 1894, used the following language:

For thirty years the reign of the protectionist has never been peaceful. It has never been quiet. And so long as men love liberty and equality and right they never will rest easy under a system which is oppressive and unjust. [Applause on the Democratic side.]

Even my friend from Maine [Mr. Reed], a gentleman usually free, in his public utterances at least, from reflections of that sort, in the conclusion of his argument to-day, thirty years after the war, seeks to arouse some of the feeling of that distant period. . . . When Democrats talked about a reduction in the tariff, our kind and loving friends on the other side said, "Oh, go to the polls and vote as you shot, against the South," and that ended it.

Any allusion to the great historic facts which I have mentioned brings a sharp reproof and a declaration upon the part of even the most fair-minded free traders that we are "shaking the bloody shirt." Every allusion upon our part to the very significant facts of our history receives that reply.

On May 10, 1888, the Hon. Henry G. Turner, of Georgia, used the following language:

If we are unfit on account of our relation to slavery to consider public measures proposing to reduce the burdens of the people, might I not with equal propriety say that those who enslaved the African can not be trusted with the task of revising the privileges of freemen? [Applause.]

#### Protection "cruel and inhuman."

Furthermore, the accusations heaped upon Northern members of Congress upon the floor of the House and Senate, and in the public press, by these Democratic free-trade statesmen, is insult-

ing beyond endurance. The Hon. William L. Wilson, of West Virginia, on January 8, 1894, used the following language, quite remarkable for a man who counts himself and is a most accomplished scholar and genial gentleman under all other conditions:

Sir, this system has made the great protected industries of this country a part of its Government patronage. After every Republican victory since 1874 they have come here, as other party workers, to receive their reward in the shape of new taxes on the American people.

And so I say there is no hope for free government in this country, there is no hope for pure government in this country, as long as the great, powerful, wealthy, combined interests of the country are a part of its Government patronage, bribed by its largesses and overawing it by their clamors. It is their clamors to-day, their indignant, maddening, menacing clamors that are heard over this House. . . . The McKinley bill represented not high and exorbitant protection, but all that greed and selfishness and rapacity desired to exact from the American people. [Applause on the Democratic side.]

Protection is a cruel and inhuman system of taxation.

Hon. BENTON McMILLIN of Tennessee, on January 29, 1894, said:

We come resolutely to the discharge of duty and determine, whatever else occurs, robbery shall no longer be carried on by operation of law.

#### THE ABLEST FREE-TRADE SPEECH EVER MADE.

This practically repeats the sentiments of McDuffie, who, as chairman of the Committee on Ways and Means, made his famous report in 1832, and whose speech, made in the House on May 28 of that year, is the ablest free-trade speech ever made. It is begun on page 3120 of Gales & Seaton's Register of Debates in Congress, part 3, volume 8, from which I shall quote very extensively.

[Hon. George McDuffie.]

As to any adjustment of this great question, therefore, which shall give tranquility to the public mind and restore the broken harmony of this Union "my final hope is flat despair." . . . It can no longer be disguised that there does exist, under the unjust and oppressive legislation of Congress, and without any agency of Providence to that effect, a radical hostility of interests between the two great subdivisions of this confederacy.

The question for the manufacturing States to determine is, "What portion of your unlawful gains will you surrender to save the Union?"

#### THE PROFITS OF MANUFACTURERS.

The same talk of "unlawful gain by manufacturers" is heard from the free traders in every debate since 1832 as at the present moment. Never were statements made that are any more unqualifiedly untrue. Not one of the free traders from 1832 to the present moment ever substantiated their insulting statements to us manufacturers and to the advocates of protection on the floor of Congress by a single well-authenticated fact. Every pretended fact quoted is invariably shown to be garbled or wholly untrue. It is shown by records, open to all the public, and very fully developed by the Hon. William F. Draper, in a speech delivered in Congress January 13, 1894, CONGRESSIONAL RECORD, Fifty-third Congress, second session, volume 137, page 804, that, taking the whole body of manufacturing and other corporations in New England, the manufacturing corporations only averaged to declare a dividend of 3½ per cent on the market price of their whole paid-up stock; that the railways declared a dividend of a little over 4½ per cent, and banks a little over 4½ per cent. Furthermore, that with the additions to the plants of manufacturing establishments and the repairs necessary to prevent them from deterioration, the selling price of the total manufacturing stocks in New England did not cover the actual money expended on them, counting their original cost and what had been spent upon them in the five preceding years, so that these dividends represent more rather than less than the actual profits in manufacturing.

#### PROFITS COME OUT OF NATURE.

No well-informed person, thoroughly familiar with the facts, believes that a single dollar has been made in New England in the last twenty years that has lessened the wages of the working people by a single farthing. Every dollar of profit comes out of nature, in inventions, and in improved methods, and in enlarging factories so as to produce more units of products at the same amount of fixed charges. Only a very small part of these inventions are of such a nature as to bring them within the law of patentability. The price of products at retail to the wage earner who produces them averages much less in any five years than the actual cost of production would have been had the inventions of that five years not been made.

This proves what is incontestably true, that the profits of the manufacturers and the comparatively few large fortunes that are made come out of nature and not out of the wages and the sweat and toil of the American workingman. The Committee on Manufactures of 1832, composed of John Quincy Adams, of Massachusetts; Dixon H. Lewis, of Alabama; Lewis Condit, of New Jersey; James Findlay, of Ohio; Henry Horn, of Pennsylvania; Charles Dayam, of New York; J. T. H. Worthington, of Maryland, and John S. Barbour, of Virginia, in their report against that of McDuffie, said:

The tariff presents two great transcendent, opposite, and irreconcilable interests in deadly hostility to each other. . . . The interest of the South

is identified with England, the foreign rival and competitor of the Northern manufacturer against him, and for his ruin the Southern planter and British manufacturer are colleagues.

These words might have been written with reference to the position of the Democratic free traders in every Congress from 1832 to the present moment, and it accurately states the issue.

#### MOTIVES OF THE FREE TRADERS NOT QUESTIONED.

I am not questioning the patriotism nor loyalty nor the motives of the free traders. I am simply presenting to the House the fact that the free trader of to-day is the lineal economic descendant of the free trader of 1832; that McDuffie and Calhoun of South Carolina, and Toombs of Georgia, do not vary in sentiment by the smallest fraction from the Hon. William L. Wilson, of West Virginia; Hon. Henry G. Turner, of Georgia; Hon. BENTON McMILLIN, of Tennessee; Hon. ROGER Q. MILLS, of Texas, and the whole body of free traders of to-day.

While all cause for a divergence of opinion or of interest between the people whom they represent and the people of New England passed away a third of a century ago, they are still grinding in the prison house of the enemies of their country, echoing the songs and praises, as well as the complaints and accusations, that are only consistent with the conditions of labor where man, alike with the ox and the ass, receives no wages for his toil. When the attention of these free traders is called to the fact that they are still advocating the cause which was coupled with that of a desire and purpose to perpetuate human bondage, they reply to us in the words of Hon. Henry G. Turner on January 3 and 13, 1894, as follows:

The Confederate constitution! Why the gentleman's invocation of this Confederate bit of history? \* \* \* It was because of the four years of that constitution that the Republican party has had an existence in this country. [Applause and laughter on the Democratic side.] It was because of the vigor with which the principles of that constitution were sustained that the policy of protection has raged in this country from one ocean to the other. \* \* \* I respectfully submit that it was that historic incident which has furnished to the gentleman and his party not only the justification but the opportunity for this system of extortion.

Being unable in the slightest degree to comprehend the significance of the freedom and, therefore, wages of the black man of the South as distinguished from his formerly receiving no wages and being a subject of merchandise, like the mule and horse, they are still echoing the now discordant words of ancient days.

#### MR. MILLS ON PLUNDER.

The melodious voices of the Hon. ROGER Q. MILLS and of Hon. BENTON McMILLIN are still heard echoing through the Capitol, saying the same things in the same words of their forerunner, McDuffie. Mr. MILLS, on February 21, 1894, made the following polite and soothing remarks, which practically repeat the speeches of McDuffie in 1832:

Mr. MILLS. Mr. President, I do not feel that it is the duty of Senators and Members of the House of Representatives to consult the people of the United States who are receiving the plunder from the pockets of the vast body of yeomanry in this country. \* \* \*

It is complained that we do not open hearings that the men who have had their hands to their shoulders in the pockets of the people of the United States may be permitted to say to the committees of the two Houses, "We will permit you to take 3 cents but not 4," and we are told that the country is distressed and that men are out of work because Congress will not permit them to keep their hands in the pockets of the people and continue to rob them. \* \* \*

I was not sent here, sir, to consult the manufacturers of this country as to how much I would permit them to take out of the pockets of my people. \* \* \*

Mr. HAWLEY. Will the Senator allow me to make an inquiry?

Mr. MILLS. Certainly.

Mr. HAWLEY. It will make no difference to him that under laws in existence for thirty years establishments have four, five, or ten million dollars' worth of capital, with plants that have grown up, employing three or four thousand people, and that they know perfectly well that under either the Mills bill or the Wilson bill they will have to discharge their employees or cut their wages down 40 per cent? He does not care one cent for that? He says these men are robbers, because under the laws of the country they have built up magnificent establishments and caused the growth of great towns and the putting of \$130,000,000 in the savings banks of my State by wage workers! \* \* \*

Mr. MILLS. If your doctrines are true, why do you not put a protective tariff around each one of the States? Why do you not prohibit the people of each State from trading freely with the people of other States? If your doctrine is true, why do you not put a protective wall around each county in each State and develop that county, and make it independent and self-sustaining? Why do you not carry it out to its last analysis and put a protective wall around each precinct and township in each county? Then why do you not carry it to its ultimate analysis and build a wall a mile high around each man, and let him develop himself and produce all the things and satisfy his own wants, and leave him independent of all other parts of the community?

How delightfully oblivious to the present economic condition of the whole world, as compared with eighty years ago, does Mr. MILLS appear! Eighty years ago a country of two or three millions of people might with great propriety have adopted a general protective tariff when men worked singly or in small groups, but with modern appliances it is impossible to make a market that will allow the highest order of and cheap production by a less number than 10,000,000 people, and, furthermore, he has not the slightest realization that an inhabitant of one American State can entertain a brotherly feeling toward a citizen of another State. Whatever sacrifice may come temporarily to the dwellers

in one State in working up to the economic condition of the dwellers in another State, it is still the sacrifice of brethren for brethren and of the same household, and not the sacrifice of the birthright of brothers for the profit of aliens.

#### CLEVELAND'S BETRAYAL OF HIS PLEDGES.

Furthermore, anything is justifiable to a free trader to accomplish his purpose. Never was a baser betrayal of pledges given than the free-trade message and action of President Cleveland contrasted with his pledge given in the following platform adopted by the Democracy in 1884, upon which only could he have been elected:

#### DEMOCRATIC PLATFORM OF 1884.

The Democracy pledges itself to restore economy, \* \* \* but in making reduction in taxes, it is not proposed to injure any domestic industries, but rather to promote their healthy growth. \* \* \* Moreover, many industries have come to rely upon legislation for successful continuance, so that any change of law must be at every step regardful of the labor and capital thus involved.

The necessary reduction in taxation can and must be effected without depriving American labor of the ability to compete successfully with foreign labor and without imposing lower rates of duty than will be ample to cover any increased cost of production which may exist in consequence of the higher rate of wages prevailing in this country. Sufficient revenue to pay all the expenses of the Federal Government \* \* \* can be got under our present system of taxation from the custom-house taxes on fewer imported articles, bearing heaviest on articles of luxury and bearing lightest on articles of necessity.

And the following from the platform of the Democracy in 1893 was only exceeded in the brutality of its words and the brutality of what it proposed by the agony it brought the American people as they writhed under the hurt of its only partial accomplishment:

We denounce Republican protection as a fraud; a robbery of the great majority of the American people for the benefit of the few. We declare it to be a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties, except for the purpose of revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered.

#### PURPOSE OF FREE TRADERS TO REDUCE NORTHERN WAGES.

The proven falsehood concerning the enormous profits of the manufacturer of the North is now no more boldly proclaimed by our free traders than it was by McDuffie in 1832. But the purpose of the free traders to reduce the wages of the workmen of the North is precisely the same, but is not so plainly stated, excepting by a few overzealous, incautious free traders. Read the following words of McDuffie:

[Hon. George McDuffie.]

The truth is that the people of the North will continue to manufacture if the duties should be entirely repealed. The only difference would be that they would have to curtail their enormous profits and reduce the extravagant wages of their labor and sell their manufactures cheaper.

The hyperbole in which the present free trader deals on the wool question would be past belief did we not listen to him, in view of the fact that the tariff on wool and woollens does not increase the cost of clothing at retail to the American purchaser by the smallest fraction in excess of the increased wages the operative in woolen mills received over those of Europe to a tithe of what he states, and in view of the fact, as reported in the Statistical Abstract of the United States for 1896, that the consumption of raw, unwashed wool per capita for each year averages only 6½ pounds and the duty of 11 cents a pound can in no event add more than 72 cents per capita above the extra cost of American labor, which would be only \$2.88 in a family of four, and their earnings would be increased a hundredfold this extra cost. This duty being the 100 per cent talked about, the following words of Hon. William L. Wilson, of January 8, 1894, are a curiosity. How it exhibits the sublime ignorance of a really honest-meaning man:

When the average duty of woollens is 100 per cent, when the laborer must work another full day to pay the taxes on goods purchased with one day's work, these gentlemen are gathering in midwinter, in the greatest city of the country, to "protest" against any lessening of their bounties.

Why, Mr. Chairman, a tariff of 50 per cent means simply that a man must labor a day and a half for that which he can otherwise get by one day's labor. A tariff of 100 per cent means that he must labor two days to get that which he could otherwise get by one day's labor.

[Hon. George McDuffie.]

\* \* \* The benefit which the manufacturers receive from this system may be measured by the damage they will sustain by the repeal of it; and if we are to place any reliance on their statements, they will be great and overwhelming.

While the damage to manufacturers would be overwhelming, it would mean utter destruction of all prosperity to the wage earner.

#### FREE-TRADE DISREGARD OF ACCURACY.

The utter disregard of the accuracy of careful truthfulness of statement of these same free traders is again illustrated by the words of the Hon. D. W. Voorhees, April 12, 1894, disputing the facts of history as known to every man about the Capitol:

The farmer, the mechanic, the wage worker, and the manifold producers of every kind, come not here. \* \* \* Their careworn, sunburnt faces have never been seen in the pulpit or in the hurried, heated, anxious haunts of unhalloved avarice; their hard, toil-worn hands are not grasped or felt in salutation as we struggle through waylaying crowds from committee room to the door of the Senate.

## PROTESTS OF WORKINGMEN AGAINST THE WILSON BILL.

Delegation after delegation of workingmen and farmers haunted the halls of the Capitol, trooping through it in crowds, begging and pleading for a hearing before the committee, or even private interviews with their members, and, with few exceptions, were steadily refused a hearing through the whole period of this disgraceful Democratic legislation of 1894.

Here again are the words of McDuffie, showing that the whole ground upon which free trade was advocated was boldly proclaimed to be that the South, having unskilled and unpaid labor that could not engage in manufacturing, and being employed without wages, was the only logical economic ground of free trade. McDuffie is correct. Protection in a tariff is worse than folly for a country that refuses to manufacture.

This reciprocal exchange of productions [with England] is beneficial to both parties, but most beneficial to us, for the very reason that we obtain the productions of the cheapest labor. In other words, we obtain more value than we give. \* \* \*

"More value than they give," but this "value" is taken from unpaid labor then and underpaid labor in Europe to-day.

I speak of what I know experimentally when I say that if the planters of South Carolina were compelled to pay 50 cents a day for the labor they employ on their plantations, they could not afford to produce cotton for less than 25 or 30 cents a pound.

But why is it that they need this very high and extravagant protection? It is because foreign manufactures are purchased with the productions of the Southern States, and because these productions are produced by slave labor, which is four times as cheap in the operations of agriculture as the white labor of the Northern States. \* \* \* This is the true and only cause why the manufacturers require the Government to interpose its powerful arm to keep down competition.

## WAGES OF NORTHERN MECHANICS TO BE REDUCED BY FREE TRADERS.

Yes, it is unpaid labor in competition with high-wage labor that McDuffie talked of, as it is now the cheap labor of Europe giving an advantage the free trader of to-day longs for, and is the ground of his demanding free trade, refusing his opportunity to do his own manufacturing. Contrast the following words of Mr. McDuffie with those of Hon. Charles F. Crisp and those of Hon. W. C. P. Breckinridge, the fitting representatives and high priests of free trade in this country, only excelled by Hon. R. Q. Mills and Hon. Benton McMILLIN. It will be seen that Mr. Crisp has the courage of his convictions and does not attempt to conceal the fact that what he proposes as a free trader is to reduce the wages of the Northern mechanic. Please notice after his declaration the loud applause on the Democratic side:

Will any gentleman have the goodness to point out what right of the manufacturers I violate when I carry my cotton to Europe, exchange it for manufactures, and bring them into the United States for the purpose of using them myself or of selling them to other people? \* \* \* Competition in the labor market naturally tends to reduce the wages that the laborer receives. The Democrats believe, whether gentlemen on the other side do or not, that the law of supply and demand applies to all things, and therefore that it applies to the wage earner as well as to anybody or anything else. \* \* \* One dollar and a half a day for three hundred days in the year in a market where competition is permitted is infinitely more valuable to the laboring man than \$2 a day for two hundred days with a market where monopoly prevails. [Loud applause on the Democratic side.]

[Hon. W. C. P. Breckinridge.]

Is it unjust for those people to ask that when they come to commute that price, when they want clothing for their children and food in their houses, when they want homes and education, that the price of the things they buy shall not be fixed in a high-tariff, high-wage market?

I am for ultimate free trade. I am for the possession of the oceans by free ships, freed from all the navigation laws which now hamper and embarrass us. \* \* \* Low-priced labor is itself incapable of making a high-priced article; for he who has to buy that fabric of low-priced labor buys an article that is necessarily inferior.

Mr. MARSH. What does my friend think about the costly and magnificent shawls which are made in India? Does he call them a mean and low product?

Mr. BRECKINRIDGE of Kentucky. The gentleman forgets that comparison of price of wage is an element which is of course to be taken into consideration. The very labor which is put upon those fabrics is the highest priced labor in the community in which they are produced, and as to other labor is its superior.

Aha! supply and demand is the Democratic doctrine of labor, is it—supply of European low-priced labor in the form of goods against high-wage American labor; and Mr. Crisp thought to beguile the workingmen by talking about three hundred days' labor at a dollar and a half being better for the workingman than two hundred days' labor at \$2 a day.

## AMERICAN WAGE EARNERS WANT WORK THREE HUNDRED DAYS IN THE YEAR.

This is precisely what the Democrats mean—a reduction by one-quarter of the wages of labor. But what American wage earners propose to have, and to insist on having, and do have, except in the days of Democratic free-trade tariffs, is work three hundred days in the year at the same wages the honorable gentleman would employ them for only one hundred and fifty days in the year.

See how Hon. W. C. P. Breckinridge gives himself away in his reply to Mr. MARSH. "High-priced labor on goods in the community in which they are produced as to other labor" there is superior. Certainly it is. The very finest labor in Germany is the cheapest

labor in Germany, receiving from 75 cents to \$1 in Germany, where it receives from \$2 to \$3 here, producing the same number of units per wage earner there as here.

What a strange question does the Hon. Mr. Breckinridge ask in the following:

If, Mr. Chairman, protection is not intended to enable the producer of the protected article to obtain a higher price for that which he produces than he would otherwise obtain, how does "protection" protect, from what does it protect, and for what purpose does it protect?

It protects the wage earner from having the bread taken out of his mouth by European cheap labor. It protects him by keeping the American market for what he makes.

## PROTECTION DEMANDED TO GIVE US CONTROL OF OUR HOME MARKET.

Free traders will never understand the doctrine of protection. None are so blind as those who will not see. Protection is demanded, not to increase prices, but to give us the control of our own home market for the products of the American wage earner. Free traders have been challenged over and over again to mention a single article in common use that has not been sold at a lower price within a comparatively brief period from the day a protective tariff was put upon it and its manufacture in this country entered upon or on a large scale. They never have done it and they never will do it, because they never can do it. The history of everything, from pig iron and steel rails to wire nails, has shown a tremendous and comparatively immediate reduction under a protective tariff, and of being manufactured in this country, and this while wages were actually increased as the unit of products was reduced in price.

## SENATE REPORT ON WAGES, PRICES, AND TRANSPORTATION.

The Senate report of the Finance Committee in the second session of the Fifty-second Congress on prices, wages, and transportation, made up by the most honest, nonpartisan statisticians in the country, and the statistical accuracy of which is indisputable, being unanimously indorsed by both Democratic and Republican members for its accuracy, shows with wonderful clearness the course of wages and the price of products. It is agreed by all statisticians that all modern estimates the world over are best understood by taking the year 1860 as the base line, calling that 100 and all other years over or under 100, according to ascertained facts as to their being higher or lower than in 1860. The summing up in that report, Volume I, pages 9 and 14, shows that average relative wages and prices of products in coin, taking the 68.60 per cent of total expenditure of wage workers, according to their importance, are as follows:

Years.	Money wages.	Prices of commodities.	Real wages in commodities.	Duties collected per capita.
1840, 1841, 1842	82.2	95.5	86.3	\$1.19
1843, 1844, 1845	84	85.8	98	1.54
1851, 1852, 1853	92	100.5	91.5	2.74
1860	100	100	100	1.68
1870, 1871, 1872	140.8	119	123.3	5.10
1876, 1877, 1878	136.2	106.9	127.4	2.89
1880, 1881, 1882	143.9	107.5	138.5	3.85
1887, 1888	157.3	95.4	164.9	3.64
1890, 1891	168.4	94	179.1	2.66

## Import duties collected per capita in Great Britain in year ending

March 31, 1892.....\$2.53  
Population of Great Britain.....37,879,285

The increase in real wages from 1840 to 1860, fifteen years, 3 cents, only 1½ mills each year; increase in real wages 1860 to 1870, 1871, 1872, twelve years, 23.30 per cent, 1.94 per cent each year, nearly 2 cents; increase in real wages, 1870 to 1880, 1881, 1882, ten years, 12.33 per cent, 1.23 per cent each year, nearly 1½ cents; increase in real wages 1880 to 1890, ten years, 40.6 cents, or 2.931 per cent each year, nearly 3 cents. Notice again that in the whole fifteen years of the Democratic free-trade tariff, wages increased only 2 cents, or as much as they increased in every single year of protection.

## INCREASE OF REAL WAGES UNDER PROTECTION.

So real wages increased 14½ times as fast under the first twelve years of protection as under free trade. On top of this enormous increase they did not rest, but in the next ten years of protection increased nine times as fast as under the free-trade tariff of 1846.

On top of these two increases wages increased in the next nine years of protection 22 times as fast as under the free-trade tariff of 1846.

How do American wage earners like Democratic free trade?

No one who desires to know the real feeling and purposes of the free traders toward the wage earners of the country can afford to omit the careful reading of the following discussion:

Hon. WILLIAM L. WILSON. \* \* \* Mr. Chairman, there is nothing different in the method of procedure on the part of the protected industries of this country from what it has always been in the past, except that with greater power, with the command of greater wealth, with greater influence than ever before, and assisted somewhat by the commercial crisis and hard

times, they are exercising over their own employees a compulsory and bulldozing power that fills the petition boxes of the House with their petitions. [Applause.]

Mr. HENNER of Pennsylvania. I have presented petitions from the employees of the Amalgamated Association under seal, men who have been locked out and are to-day locked out in my district; and certainly they are not coerced [by their employers] in this matter.

Mr. LANE. That is coercion itself.

Mr. WILSON of West Virginia. If locking out is not coercion in the estimation of the gentleman, I would like to know what does constitute it? [Laughter and applause on the Democratic side.]

Mr. DENSON. That is bulldozing refined.

Mr. WILSON of West Virginia. That is exactly what it is. It is a system of bulldozing that is resorted to on such occasions. The manufacturers lock out the employees, and they can afford to do it, because they have accumulated the surplus stock that needs a market, and are falsely and brutally attempting to make men believe that that is done by reason of the pendency of a new tariff bill. [Applause on the Democratic side.]

But, Mr. Chairman, my friend from Pennsylvania does not seem to have heard my statement. I stated that my mail is filled every day with private letters from the workmen in different parts of the country engaged in the protected industries, telling me how they were drawn up like cattle and forced to append their signatures to such documents, and begging me not to suppose that they really signed the petitions in earnest.

Sir, when starvation and calamity and lockouts are in the country, it is not surprising that the poor laboring man who can not wait for his breakfast, while the capitalist can wait for his interest, does some things blindly and quite unreasonably. The virtue of womanhood itself, Mr. Chairman—

Mr. DOOLITTLE. Will the gentleman allow me to interrupt him for a moment?

Mr. WILSON of West Virginia. Go on with the question.

Mr. DOOLITTLE. Do you desire to compare the intelligence of the labor of this country with the intelligence that animated the slave labor of the South prior to the War?

Mr. WILSON of West Virginia. I think nobody above the intelligence of a slave would ask such a question. [Prolonged applause and laughter on the Democratic side.]

Mr. DOOLITTLE. Mr. Chairman, if the gentleman will permit me—

Mr. WILSON of West Virginia. I will say to my friend, before he continues, that I believe I owe him an apology. I desire to be perfectly courteous to every member of the House, and I withdraw what I said.

Mr. REED. But you can not withdraw the Democratic approval of it. [Laughter and applause on the Republican side.]

Mr. WILSON of West Virginia. Mr. Chairman, the virtue of womanhood itself has not always been able to resist the cry of hunger in her own family and of suffering in her own household. And no more could we expect that the honor of honest American manhood in such a crisis as this could always resist poverty and want at its own fireside.

And now, Mr. Chairman, I want to say to these gentlemen who are predicting all these terrible misfortunes and all this destruction of American industry as the result of releasing the American people from some of the taxes they pay to their taskmasters that . . . when the tariff of 1846 was before this House, prophecies of its effect as gloomy, as direful, as threatening as those of Sir James Graham were made upon this floor. . . .

Mr. WALKER. Will the gentleman allow me to ask him one question?

The CHAIRMAN. Does the gentleman from West Virginia yield to the gentleman from Massachusetts?

Mr. WALKER. It is very short.

Mr. WILSON of West Virginia. I do.

Mr. WALKER. I wish to ask simply when this speech will be published, for we want to get it as soon as we can. [Laughter on the Democratic side.] I ask the gentleman when it will appear in the RECORD?

Mr. WILSON of West Virginia. Probably quite quick enough for the gentleman from Massachusetts. [Applause on the Democratic side.]

Mr. WALKER. I ask the gentleman if he thinks that is an entirely fair answer to my question?

Mr. WILSON of West Virginia. It will be published as soon as the gentleman will want it; but to give the gentleman an entirely courteous answer, which I always desire to do—

Mr. WALKER. I think I am entitled to it.

Mr. WILSON of West Virginia. I will say it will appear in the RECORD just as soon as I have sufficient strength to revise the notes and put it in.

Mr. WALKER. I think we are entitled to it at once. [Laughter on the Democratic side.]

Mr. WILSON of West Virginia. You will get it as soon as you will want it.

What an insult to American manufacturers for the Hon. William L. Wilson to say to them:

With free wool the manufacturer only is to blame for not being able to produce cloth as cheap as English and German manufacturers.

With free wool, iron, and coal we will make a market for our goods in all the world.

Better give a man untaxed raw material than untaxed food and untaxed tobacco if all can not be untaxed.

AMERICAN WAGE EARNERS WOULD NOT WORK FOR EUROPEAN WAGES.

Here is the demand of American manufacturers, while paying double the wages that the German and English manufacturers pay, that they sell their cloth, if they have free wool, at the same prices that the English manufacturers and German manufacturers sell their goods for. Are the manufacturers to be insulted by saying that "they are to blame" if they do not sell at European prices with free wool and still pay American wages? He knows, and he has no right to appear in an economic discussion in America if he does not know, that under an absolute free-trade tariff every woolen mill in America would be closed, for the American wage earner would starve before he would work in America for the wages paid in Germany.

A Northern Democratic free trader, in the person of Hon. John C. Black, of Illinois, again proclaimed the doctrine that American wages should be brought into direct competition with European wages. He did not conceal the fact that he knew that in such a case the wages of American workmen must be practically reduced to the European level, in the following words:

The strongest reason that has induced this unprecedented immigration, that which has been the mainspring to all this, is the false and alluring cry,

dinned in the ear of the laborer, formerly contented in Europe and elsewhere, that here he could have higher wages.

Mr. REED. Then the gentleman favors an equality of wages between this country and others from which we have immigration?

Mr. BLACK of Illinois. That is not a fair way to put the question.

Mr. REED. You can make it fair in answering.

Mr. BLACK of Illinois. I make answer by the removal of the artificial means by which we create a fictitious value of the article of wages, and let wages have its natural level, as it does elsewhere.

I would restore a natural condition of affairs by taking down the protective system, which pretends to give higher wages here than otherwise would be given.

The following discussion between Hon. NELSON W. ALDRICH, of Rhode Island, and the Hon. John M. Palmer, of Illinois, fairly represents an honest protectionist, and an honest free trader who does not hesitate to state the fact that he is not willing to enter upon any legislation, as the free traders in effect do if they have not the courage to state it, that will have any tendency to protect American wages from being reduced to the European level.

[Congressional Record, Fifty-third Congress, second session, May 15, 1894, pages 5681, 5682, 5683.]

Mr. ALDRICH. . . . If Senators upon the other side are willing to admit the principles . . . fairly set forth in the Democratic platforms of 1863 and 1884; if they are willing to come to an understanding that duties shall be imposed that are equal to the difference in the cost of production between our own and competing countries, a difference which grows out of the greater earnings or the wages of labor here, then we shall be glad to meet them and make an agreement which would really take the tariff question out of politics. Are they willing to do that? . . . Why not make it equal to the exact difference in the cost of production? . . . Otherwise the cost of production must be reduced in the United States . . . by decreasing wages below their present point. It can be done in that way, and in that way alone.

Mr. PALMER. . . . What is the claim set up by those who advocate protection? It is that we can give to the country prosperity and we can give to labor steady employment.

The Senator understands . . . that Congress must in some way in the passage of the pending bill see to it that labor is provided with employment and with remunerative wages. That is the work he has undertaken. . . . Who . . . pays all these wages that we are talking about? Where does the money come from which the Senator from Rhode Island [Mr. ALDRICH] intends shall go into the pockets of labor? Who is to furnish the money? . . . Where does it come from? . . . Somebody must furnish the money to pay those remunerative wages. Who does this? It is obvious I do not; and we do not propose to furnish it. It must fall somewhere. Upon whom does it fall? That is one of the difficulties of this subject—you can not tell upon whom it falls. . . . Protectionists . . . say: "Adopt our policy and we will give to labor fair wages;" but I insist as answer to that proposition that you levy upon somebody else. I myself claim no power to take the control of the property of my country and appropriate it to any special use. If they [the manufacturers] choose to be benevolent, let them be benevolent with their own. If they can not carry on one business profitably let them engage in some other. . . . There is no prospect of maintaining high wages for agricultural laborers. . . . They are never taken into account in all these schemes for high wages.

Mr. ALDRICH. I beg to ask the Senator from Illinois to return to the subject now under consideration by the Senate. . . . I stated that I was desirous of levying duties in the bill which would so far as possible equalize the difference in the cost of production of those articles in this and in competing countries, so far as that difference grows out of the greater earnings and wages paid to people engaged in these and collateral industries in the United States.

Now, is the Senator from Illinois willing to go to that extent? . . . Mr. PALMER. I am not.

#### THE PARTIALLY PROTECTIVE GORMAN BILL OF 1894.

The reason that every mill was not closed under the Democratic tariff of 1894, or wages reduced by one-third to one-half, was because the Wilson free-trade bill as it left the House was made into the partially protective Gorman bill in the Senate, as was proclaimed in the Senate by Hon. ROGER Q. MILLS on May 8, 1894, as follows:

Mr. MILLS. . . . No man can torture me into the admission that the bill pending before this body is in any respect a response to the pledges made by the Democratic convention to the Democratic people of the United States. . . . I am humiliated enough, sir, . . . without being compelled to bow down in humiliation and take even the badges of protection. . . . The Democratic party in 1892, through its convention, said to the people of the United States that protection was a fraud. . . . I am not responsible for these measures, and I do not intend to assume the responsibility.

Hon. George McDuffie, in his speech, boldly proclaimed that free trade would ruin New England and the North, and the Hon. Charles F. Crisp and the Hon. BENTON McMILLIN say scarcely less in the following:

[Hon. C. F. Crisp.]

The system has grown a ring each year, until those who have fostered it think that it can not be cut down except by violence and with the ax.

[Hon. Benton McMillin.]

Sir, let come what will, we will reduce this tariff to a revenue basis. . . . We will discharge the high trust that has been reposed in us and bring the country back to that era of prosperity which it had attained, and under which alone it reached the great success that it had from the adoption of the Walker tariff in 1847 down to the repeal of the law. This war against tariff revision has been carried on for the benefit of the few at the expense of the many.

#### FREE-TRADE TARIFF OF 1847 PRODUCED DISASTER.

Yes; and Mr. McMILLIN clearly says he desires the results of the Robert J. Walker tariff of 1846, that gave us the most disastrous

crisis in 1857 that this country ever saw, as every unbridled rule of the Democratic party in this country has brought a crisis and destruction in a comparatively brief period.

Civilization consists of and is expressed by the things that men can do. The skill and rapidity with which they do them and their excellence in doing them and their assisting others by protective tariffs to do them is the very expression of Christian civilization.

#### ENGLAND ONLY A HUGE WORKSHOP.

It has been so declared by every wise statesman of this and of every other normal nation. England is no exception. She is not a normal nation. England neither produces the raw material for the hands of her wage earners in her factories and workshops, the food for their mouths, the clothing for their backs, nor the shelter for their heads. Nearly all is sent her from abroad. England is only a country of huge workshops.

It is clearly understood that a diversification of industries within a comparatively small and fairly well populated territory is necessary, in order that all the people in the territory may partake of the advantages of civilization. When the Southern statesmen of 1832 proclaimed their doctrine of free trade and tried to force it upon the whole country, they were thoroughly consistent. They proclaimed that they not only had in their section no industries but planting, and wanted none, but that their laborers received and should receive no wages. They were determined never to have any manufacturing industries, never to have any civilized conditions in their country excepting to the exceedingly few persons living there who owned the laborers.

#### FREE TRADE AND SLAVERY GO TOGETHER.

This is no reviving of disagreeable memories. It is but the simple statement of a fact in economics. A protective tariff for such a people in such a country would be the very acme of folly. It would only exceed the folly of their children of to-day who adhere to the same free-trade system in exactly opposite conditions of wage labor. Their advocacy of free trade to-day is as clear evidence that their heads are befuddled with ancient and exploded theories as the proclamation by McDuffie and their fathers of free trade in 1832 showed them the wisest of statesmen, if master and slave were the normal condition of the Christian white man and Christian black man. No man in listening to these words of truth and soberness can regret their truth or can regret the necessity of uttering them more than I who utter them, but "truth is truth as God is God," and to falter would be sin.

The following words of McDuffie are as true as truth of Holy Writ, as were all his words in his defense of the economic position of master and slave:

What is the aggregate effect of the whole protective system on the two great subdivisions of the Union—the planting and the manufacturing States?

It is precisely as if the taxes collected in one country were disbursed in another; and I will venture the opinion that if the taxes raised in England for the last twenty years had been disbursed on the Continent the whole island would have been at this moment a desolate waste.

What mockery in the following words of the Hon. BENTON McMILLIN, after the threat of a free-trade tariff in the election of Grover Cleveland in 1892 had wrought havoc with the mills all over the country! Standing upon the ruins that he himself and those like him had wrought, and gloating over them, he taunts the manufacturers who are watching their idle mills and their starving operatives, who had found employment and plenty in them, and many of them their own kith and kin. Mr. McMILLIN said:

Mr. Chairman, . . . after trying this system for more than a quarter of a century, it is well for us to turn and ask how you like it? All that protection could do has been done to protect and secure the home market. Still manufacturers have failed. Still industry languishes. . . . Where is that universal prosperity that was promised to extend all the way from the Atlantic to the Pacific and all the way from the Lakes to the Gulf? Where are those splendid wages that it was said would be paid? . . .

On their closed doors to your great woolen mills is posted the uncertain time when they will open. Or if they are engaged in work at all, you will find that the laborers have been brought back to their looms at reduced wages. Go to our cotton mills. There you will find also a portion of them closed, notwithstanding they have free raw material. . . .

Do the wheels of industry hum with the animation of active life? Are our furnaces heated? Are our factories running? Are our great manufacturing establishments giving day and night or even day employment to their laboring men? Are the cities where manufacturing establishments are located prosperous? Are the people happy and contented?

#### THE SHAME OF CLEVELAND'S ADMINISTRATION.

The following words of the Hon. Joseph H. Choate, at Cooper Union, March 28, 1894, were more than merited:

I perceive the difficulties the President is experiencing in trying to drive the solid South and Tammany Hall without getting thrown himself out of the car. The shame of his Administration . . . is in permitting the South to wreak vengeance on the North. They are trying to give us that four-footed wild beast, that Democratic "what is it," generally known as the Wilson tariff bill.

Again, listen to Hon. George McDuffie, in taunting the New England agricultural laborers, echoed in this Hall by the free traders of to-day:

I am prepared to maintain before any tribunal of New England farmers . . . that it would be impossible for New England to carry on with old

England a commerce consisting of an exchange for the manufactures of the latter, when it is known that the price of agricultural labor is much higher in the Northern States than in any part of the European world. Does any one suppose that gain can be produced by such labor?

. . . dealing with England . . . manufactures could be . . . obtained and sold by the labor of the South cheaper than they could be obtained and sold by the labor of the North.

Nothing could be more unjust than to charge these free-trade Democrats with desiring the destruction of the industries of New England and the Northern States to-day, and yet the effect of their words and of their legislation has been proved to have accomplished it. If they would study the facts of the census of the United States and of every trade journal in the country, or listen to the words of absolute truth of their countrymen who are in a position to know, they would know, precisely as McDuffie showed that he knew, what destruction their free-trade tariff would work, as it always has worked to all the industries of this country, agricultural as well as every other industry, as I will show in due time.

Listen again to the words of Mr. McDuffie:

The great and patriotic ground upon which they [protective duties] are levied is that it is deemed quite injurious to the wealth and prosperity of the free States of the North that [England] should undersell their manufacturers. . . . These duties are therefore levied. . . .

This bill would impoverish and desolate the manufacturing States! What, I pray you, would be the effect of a dissolution of the Union on their prosperity? . . .

It will not do, therefore, to show me, however clearly, that the passage of this bill will destroy your interests and desolate your country. . . .

I admit, sir, that this bill, should it pass, will do very great damage to the manufacturing States.

#### THE SOUTH BECOMING A MANUFACTURING PEOPLE.

The desolation that he prophesied to the manufacturing States has always come to them under Democratic free-trade tariffs, as he knew it would, and every other well-informed statesman knows that a free-trade tariff will surely bring it. The only hope of the South is that she abandon free trade and that she become a manufacturing people, as she is now fast becoming, notwithstanding the bourbonism of too many of her representatives on this floor.

The antagonisms of the different sections of the country and the determination to perpetuate them, and, in fact, the necessity of their being perpetuated if the laborers of one section were to receive no wages and the laborers of another section were to receive high wages, is clearly shown in the following quotation from Mr. McDuffie:

Suppose that the people of the South made these goods by the use of machinery in the same manner as they are made in the North. . . . would you have precisely the same right to contend that free manufacturing labor at one dollar a day could not compete with slave labor at one-fourth of the price, and upon this ground claim a protecting and discriminating excise duty of 40 or 50 per cent?

. . . The Southern States of this Union are reduced to a condition strictly and to all intents and purposes colonial, under the dominion of the manufacturing States; a condition incomparably worse than that from which our forefathers released themselves by the Revolution. . . .

. . . The Southern States are sinking under a weight of oppression that no free people on earth has ever endured so long.

At the close of the late war with Great Britain everything in the political and commercial changes, resulting from the general peace, indicated unparalleled prosperity in the Southern States and great embarrassment and distress to those of the North. . . . On the other hand, the prospects of the Northern States were as dismal as those of the Southern States were brilliant. . . .

But where are now those cheering prospects and animating hopes? Blasted, sir, utterly blasted by the consuming and withering course of a system of legislation which wages an exterminating war against the blessings of commerce and the bounties of a merciful Providence, and which, by an impious perversion of language, is called "protection!" . . .

And where, sir, are the dismal prospects of the Northern States? The same power which has blasted the fair prospects of the South has, by the same act, brightened those of the North. . . . [There] you behold the most animating spectacle of cities, towns, and villages rising up like "bright exhalations," and as if by magic, throughout the whole region of the manufacturing States.

#### THE WORK OF THE DILIGENT BRINGS PROSPERITY.

The facts are that the prosperity that was to come to the South because of its system of unpaid labor—which was clearly proved to be its right by a priori reasoning—did not come and never does come to any people where the laws of man and God are violated in their economic condition. But prosperity did come to the North, and Mr. McDuffie, feeling that a portion of the profits of the unpaid labor of the South was shared by the North through the system of protection, was determined, as are his political descendants to-day, to deprive the North of its prosperity, that the South might reach the whole of what they felt to be their every advantage from its unpaid labor conditions. Notwithstanding the passing away of the conditions of unpaid labor which created the feeling above expressed by McDuffie, his descendants in economics, the free traders of to-day, are unwilling to pursue the same methods that are pursued at the North, and which would inevitably bring to them the same prosperity that the North enjoys. But instead of building up their own section by manufacturing, the means employed in every Christian country, they would destroy the work of the hands of the diligent, which always brings prosperity to every country—a hundred years' work.

#### PROTECTION HAS ALWAYS BROUGHT LARGER LIBERTY.

It sounds strangely in the ears of one familiar with the means that have been taken by the enactment of laws to secure justice

to the workmen of this country in developing its industries to hear the denunciations of an economic policy which is adopted by every country in the whole civilized world. The strangest part of the whole performance is that it is constantly upon their lips that they are seeking the larger liberty of the people, when every fact in economic science and every revelation as to the advance of the country in our census reports show that the policy of protection has always brought larger liberty in a larger prosperity to our wage earners, and the tariffs of the Democratic party have always brought idleness and adversity; and furthermore, to see how the sayings of the free traders of to-day are identical with those of 1832, as follows:

[Hon. George McDuffie.]

They [the Southern States] do not ask the Government to give them aid of any kind. They only ask that it will let them alone while honestly employed in the pursuit of happiness.

It is justice, and not interest, that consecrates the struggles of men and of nations.

[Hon. Charles F. Crisp.]

The gentleman belongs to that class who believe that by a system of taxation we can make the country rich. \* \* \* He believes that it is possible by tax laws to advance the prosperity of all the industries and all the people in the United States.

The Democratic idea of an American system is the largest liberty to all the people consistent with the individual rights of every person. [Applause on the Democratic side.]

[Constitution of the Confederate States, Section VIII.]

1. \* \* \* No bounties shall be granted from the treasury; nor shall any duties or taxes on importations from foreign nations be laid to promote or foster any branch of industry.

[Hon. H. G. Turner, May 10, 1863.]

Against this exaction, known under the specious name of protection, I protest to-day. I impeach protection of high crimes and misdemeanors.

[Hon. R. Q. Mills, May 7, 1890.]

When you leave the House and Senate with this enormous load of guilt upon your heads and appear before the great tribunal for trial, may "the Lord have mercy on your souls." [Great applause on the Democratic side.]

[Hon. George McDuffie.]

The same delusion, sir, which converts the military murderer into a hero converts the legislative plunderer into a patriot.

But legislation \* \* \* is the most powerful of all plunderers, and whenever restrictions or taxes confer wealth and prosperity upon one portion of the Union it necessarily follows that an equal or greater amount of wealth and prosperity must be taken from some other portion.

[Hon. Charles F. Crisp, May 8 and 9, 1890.]

Our merciless tariff system does not create wealth; it only prevents its natural distribution; it takes from the many to enrich the few. Never until recent years have there been built up in this country such immense fortunes as exist now.

If we can collect our duties or taxes from the foreigner, \* \* \* we will raise millions by taxing the people of foreign countries, reward every domestic industry with any amount of bounty they want.

[Hon. George McDuffie.]

\* \* \* Legislation can exercise no creative power in the way of producing wealth. No legislator has yet discovered the philosopher's stone, and magic is not one of the powers conferred by the Constitution. Hard work, patient labor, these are the only agents, under Providence, by which wealth can be created.

But \* \* \* legislation \* \* \* is the most powerful of all plunderers; and whenever restrictions or taxes confer wealth and prosperity upon one portion of the Union, it necessarily follows that an equal or greater amount of wealth and prosperity must be taken from some other portion.

[Hon. C. R. Breckinridge, January 30, 1894.]

The despotisms of Europe dare not fasten the burdens of taxation upon the poor to the extent that we do. What they dare not attempt by force we achieve and surpass by fallacy and delusion.

OUR POLICY IS TO KEEP OUR HOME MARKET.

These declarations are proven to be the exact opposite of every fact of American history. A comparison of the results of the Gorman-Wilson tariff, which was not half as disastrous as would have been the Wilson tariff pure and simple, is shown by the following statement, taken from the Statistical Abstract of 1896, which proves to any candid man that the policy of this country is to conserve, protect, and keep to ourselves our home market, which a free-trade tariff turns over to foreigners, to the detriment of our own people.

EFFECT OF THE WILSON-GORMAN TARIFF ON THE FARMER.

And the farmer is equally interested with the mechanic in the protection of our home market. The value of the home market to the farmer is nowhere shown any more conclusively and the Democratic free-trade assertions more conclusively proven untrue than by the United States Treasury Statistical Abstract. The consumption of our farm products by our people reached its maximum in 1892. Passing over 1893, the year of the panic, and taking 1894, it shows that more than 51 per cent more pounds of our raw cotton were consumed by our own people in 1892 under the Republican tariff than in the year 1894 under the threat of a Democratic free-trade tariff; that more than 73 per cent more wheat was consumed by our people in 1892 than in 1894; that more than

33 per cent more corn was consumed by our own people in 1892 than in 1894; that more than 32 per cent more pounds of wool were consumed in 1892 than in 1894.

On top of this curtailment of our market in reducing the power of our people to buy and consume the products of the farm because of the threat of free trade in the process of enacting the Gorman-Wilson free-trade tariff in 1894, our total exports of domestic merchandise to each man, woman, and child in the land were 23 per cent more under the Republican protective tariff in 1892 than under the Democratic free-trade tariff of 1894. Not only this, but our total imports were also 32½ per cent more in 1892 than in 1894. Thus does the mere threat of and the process of enactment, much more the actual operation, of a free-trade Democratic tariff destroy our own market by closing factories and making people idle so they can not earn wages to buy either home products or imported products.

The statistics of this country prove to any man who is not absolutely blinded by free-trade theories that to increase our foreign trade we must have a protective tariff in order to make our people prosperous in an opportunity to earn the money to buy imported goods as well as domestic goods.

INCREASED COST OF COLLECTING REVENUE UNDER A DEMOCRATIC TARIFF.

We must add to this most terrific condemnation of a Democratic free-trade tariff, by the cold facts of our statistical bureau, that it costs 37½ per cent more to collect the revenue under the Wilson-Gorman free-trade Democratic tariff than under the McKinley Republican protective tariff. Great as was the falling off in the consumption of agricultural products, the consumption of manufactured products fell off very much more under the threat of the Democratic tariff of 1894 than the falling off in the consumption of the products of the farmer from 1892. Markets are in the total volume of wages paid, and not in the numbers of people. The loss of employment of the artisan and laborer hurts the farmers first and most of all classes in the community.

EXTENT OF THE AMERICAN MARKET.

In normal protective-tariff conditions, such as 1892, it is stated by Mulhall that the production and consumption of the manufactured products in the United States is one-third of that of the world. The inhabitants of the world are given as from 1,400,000,000 to 1,500,000,000; our country as 70,000,000. This fact shows that the market of the 70,000,000 of people in this country in the high wages and incomes they average to receive is equal to one-half of the people of the rest of the world, or 700,000,000 of average people. Of wheat, corn, cotton, and wool we consumed 47 per cent more in 1892 than in 1894. In 1892 our market equaled 700,000,000 under the Republican protective tariff. The Democratic free-trade tariff practically reduced our market in 1894 to the equivalent to 371,000,000 of the average people of the world. We know this by the official figures I have given of our Treasury Department, made by a most accomplished statistician, but an earnest free-trade Democrat as well, that including manufactured articles, of which, proportionately, less are consumed in the hard times than of the absolute necessities of life, our home market for the products of the farms was 47 per cent, and for all products reduced much more than that by the Democratic free-trade tariff of 1894 from that of the Republican conditions of 1892, as has been before stated.

CONCLUSIVE ANSWER TO THE FREE TRADERS.

This is our conclusive and overwhelming answer to the question of free traders, "Where is the market you promised us under a protective tariff?" and to all the assertions of free traders in their protest against a protective tariff which never one of them supports by a single public record of undisputed fact, while protectionists invariably support their assertions, as I am now doing, by public records and incontestable proofs. Bold assertions of transparent untruths is the vital breath of the free trader, based sometimes, their enemies say, in malignant envy and hate of successful labor and enterprise. The Democratic free trader always proceeds upon the assumption "that nature wants no more than nature needs," and that "man's life is as poor as a beast's." These free traders assume that the life of the wage workers should be as poor as beasts', in that they assume that man's ambition is to spend as little as possible and sustain an animal life, when the economic fact in man's condition is that he expends as much as he possibly can. Men will lie awake a hundred hours and devise a hundred ways of spending every dollar they can get where they will lie awake one hour to devise a way to save a dollar already earned or that they have the promise of earning.

MONETARY CONDITION OF 1892.

It will not do to lay the trouble of 1894 to monetary conditions for they were precisely the same in 1890, 1891, and 1892 that they were in 1893 and 1894, unless they were improved, as the Democratic free traders insisted they would be, by the repeal of the purchasing clause of the silver act of July 14, 1890, on November

1, 1893. The trouble began in the threat of the immediate enactment of a Democratic free-trade tariff in the election of an avowed free trader in November, 1892. While the ultimate result of the continued purchase of silver would have been disastrous ten to twenty years hence, there is not the slightest evidence that the destruction of 1893 would have then come. But it is a fact that in the monetary conditions existing when a Democratic free-trade tariff was made certain in the election of 1892 the soil was especially prepared to make the fruit of the Democratic free-trade seed to spring up in a night, as did Jonah's gourd. The panic of 1893 surely was the fruitage of Democratic free-trade seed, Mr. Chairman, and every candid, thoughtful, unprejudiced statistician and economist the world over can but admit the fact, in view of these incontrovertible statements, that the words and deeds of the apostles of free trade in 1892 and of their descendants in the present day, which they are constantly repeating under opposite labor conditions at the South, are bearing their legitimate fruit. Truly "the fathers have eaten sour grapes and the children's teeth are set on edge." Nothing shows the absolute blindness of the free traders to the best interests of the country more than the following:

[Hon. Benton McMillin, May 8, 1890.]

In my own State the coal, iron, and limestone lie in sight of each other. Cotton or blue grass may be grown on the land. The cotton raised may be manufactured with the water power at the field. There, for hundreds of miles, is a mild climate, producing every agricultural product needed, teeming with population.

#### OPPORTUNITIES DESPISED.

Words of a purblind prophet of evil! How much better does he, wandering over this untold wealth of his native State, which is only waiting to yield itself up to the hand of the diligent, than the Indians who wandered over it before him? They were excusable, for they knew not of it. But who shall answer for him and the like of him? What would his State now be had he and his used the opportunities a protective tariff has pressed upon him for a century? What would Tennessee now be had the same industry, thrift, and intelligence been displayed by her people that has wrung wealth from the unfriendly soil and climate of New England?

But his people are not all deaf or blind. There are many towns in the South, and, in fact, all over the country, that are applying the principles upon which a protective tariff is based in offering to remit the taxes upon the plant and capital of any man who will establish manufacturing in their town, and to also furnish capital, in some cases, because they know that it is only by diversifying industries and promoting manufactures in conjunction with agriculture by nominally but not really unequal taxation in a country without manufactures that the people can make faster progress in civilization and in culture.

#### THE OPPORTUNITY TO EARN BRINGS PROSPERITY.

Take any territory of 3,000 people wholly devoted to agriculture, and build a factory in its center, giving employment to 300 workers of that population, each averaging to earn \$300 per annum, or a total of \$90,000 per annum, and the 2,700 remaining will produce more of corn, oats, wheat, barley, potatoes, and of all the agricultural products they were before raising, because of the factory bell, and will have the \$90,000 besides. Everyone will be more enterprising and in a happier condition because of the community receiving the \$90,000 more than it previously received. Of course they will spend this much more in houses and improvements, in their lands and clothing and a higher grade of food, clothing, and houses, cultivating flowers—in everything that ministers to a higher civilization. Furthermore, there is no possible way that this \$90,000 can be spent except in buying things that set 300 more people to work earning another \$90,000, and they 300 more, and so on to the end.

It is calculated that any man idle costs somebody \$1 a week. Deduct this from the increased expenditure, and it is shown by very careful estimates that each 1,000 people set to work, by employing others in spending their money, before the increased employment ends it gives employment to 9,000 people, and so when a Democratic free-trade tariff throws a thousand people out of employment and stops their purchasing power by \$300,000 in lessening the market, before it ends it ultimately reduces the market in throwing people out of employment \$2,700,000.

#### EXPERIENCE DISPUTES FREE-TRADE THEORIES.

While this statement is theoretical—but every statement of the Democratic free traders is—its probable truth is shown by the figures given in the Statistical Abstract in the reduction of our market by the Wilson bill, and is in accordance with the experience of every community in which a new factory is erected, while the theories of the Democratic free traders are disputed by the experience of every community on the face of the earth as regards manufacturing industries in conjunction with agriculture.

The following declaration of the Hon. George McDuffie is echoed in every Democratic free-trade speech:

The protecting duties are oppressive and unequal taxes upon the productions of the planters, imposed for the purpose of giving bounties to the manufacturers.

The tyranny of a protective tariff and its favoritism is exactly the tyranny and favoritism enforced in all economic law. Where a section of a country or a part of the people only avail themselves of great natural advantages at their hands, or of legislation to secure the benefits which may be had from them, they suffer accordingly. There is nothing so destructive of old investments and no such tyranny as the tyranny of new inventions in the hands of those who use them upon those who adhere to the old conditions and refuse to use them. The cotton gin used by the enterprising planters made the success of those who refused to use it impossible.

#### THE TYRANNY OF INVENTIONS UPON THOSE WHO REFUSE THEM.

The McCormick reaper in use in the great wheatfields of the West has been a fearful tyranny upon farmers who refused to use the machine upon their farms; and so with the mowing machine, the horse rake, and the hay tedder. The turnpike, the railroad, and the steamboat, in their use by those who believe in using such modern inventions, are a fearful tyranny upon those who still adhere to the mules and the farm wagon to take their crops to a distant market on dirt roads. The sewing machine, the telegraph, the telephone, and the typewriter are instrumentalities of oppression beyond measure to those who neglect or refuse their use. The public school makes a disparity that can not be measured between the children of those parents who use it to advantage over the children whose parents keep them from its great advantages.

A protective tariff which puts a duty on articles high enough so they may be produced in this country at American wages in competition with the low wages of Europe makes it possible for every man with sufficient capital, skill, and enterprise to enter into that business to better his condition and that of his town, county, and State. It gives the opportunity to every American wage earner competent to work for him to get work in the factory established, whether it be South or North, East or West, in Massachusetts or South Carolina, Minnesota or Alabama, Georgia or Nevada.

#### PROTECTION BENEFITS EVEN THOSE WHO DENOUNCE IT.

Furthermore, as I have before shown, it does benefit, and tremendously benefit, even those sections that refuse to avail themselves of its advantages in making a market for their products by increasing the consumption, and therefore the price of products many times more than the price of the articles the farmer buys is increased by the tariff, even admitting that they are increased, which is not the fact, on the whole; while no Democratic free trader has ever yet answered the challenge of protectionists, ringing in their ears for a century, to show a single article on which a protective tariff was placed and the production of that article largely entered into in this country where the price of the article has not been materially reduced by home competition. So the protective tariff is not an injury even to those persons and those neighborhoods that do not avail themselves of the advantages a tariff offers as does a water power or mineral deposits. The prices of articles to the people in those sections that paid no wages to the toilers from 1832 to 1860 were not increased at all, but were reduced, by the effect of the protective tariff in stimulating manufacturing in this country in competition with England.

#### "THE HAND OF THE DILIGENT MAKETH RICH."

The divine right of those sections of the country that refused to avail themselves of the advantages of modern civilization that would have been brought to them by education of the hand and head of their people in manufacturing pursuits is the same divine right to complain as the aborigines in this country have who wandered over its fertile soil, its rich coal mines, iron mines, copper mines, lead mines, silver mines, and gold mines beneath their feet, never availing themselves of the great advantages which were at their hand. Not the hand of one who hesitates, complains, and waits, but "the hand of the diligent maketh rich;" the diligence of the head to plan and discover as well as the diligence of the hand to execute.

#### DEMOCRATIC DENUNCIATION OF MAJORITY RULE.

Listen again to the words of the Hon. George McDuffie:

\* \* \* The late Emperor of France \* \* \* [n]ever levied military contributions from the subjugated nations \* \* \* more intolerable and oppressive than this irresponsible majority have levied from the productive industry of the planting States to gratify the insatiable avarice of this manufacturing confederacy.

It is a monstrous heresy to suppose that a majority has any natural right to govern merely because it is a majority. This right is purely conventional.

I mean not to cast any special reproach upon the manufacturing confederacy, which constitutes the existing majority in this country; I speak nothing but the plain truths of philosophy when I say that on such a question as that which we are now considering they can not, in the nature of things, have any more sense of moral responsibility than an infuriated mob.

There is the same unreasoning denunciation of the "irresponsible majority" and protestation against the only principle upon which any republican government can be maintained, namely, that a majority shall rule, in the speeches of the Hon. Charles F. Crisp

and the Hon. Henry G. Turner, of Georgia, of the Hon. BENTON McMILLIN, of Tennessee, and of the famous Breckinridges from Kentucky and Arkansas in 1894 that there was in the words of Hon. George McDuffie in 1833. That voice has been heard now these sixty years. It is the same tyrannous demand of a minority to rule who, representing people who will not avail themselves of the advantages at their hands, denounce the great majority who are using every advantage of modern civilization and enlightened legislation. A strange doctrine for pretended Democrats to proclaim—to denounce the deliberate, conscientious, and honorable action of the majority as the "action of an infuriated mob."

#### THE TARIFF ON DRAFT ANIMALS.

The Hon. Henry G. Turner, of Georgia, was exceedingly disturbed at a specific duty of \$30 per head on mules and horses. He could import a mule from Mexico for less than \$10. This duty protected all of the enterprising Northern farmers along the thousands of miles of division line between Canada and the United States in the industry of breeding horses and mules. And he and his confreres in free-trade sorrow represented States which rent some of their richest lands for pasturing at 3 cents an acre, upon which mules could be raised at a cost of not exceeding \$5; and yet, because they have not the thrift and enterprise to do so, they would deprive all the rest of the country of the advantages of a tariff on live stock to protect the whole body of American farmers.

Mr. Turner said:

Mr. Chairman, \* \* \* the specific duty of \$30 per head now existing looks grotesque when applied to a Mexican mule worth less than \$10. With unsparing hand we have degraded the Texas mule to the vulgar level of his Dakota kindred. Such is the unsectional and impartial effect of taxation fixed according to value.

#### THE PROSPEROUS FARMER.

The census shows the American farmer to be the most prosperous class in the country. It shows that the number of farms in this country is about 5,000,000, which, with their improvements, are valued at about \$13,000,000,000. The total of all farm mortgages is \$1,000,000,000, or about 8 per cent of the total of their valuation. The average life of a mortgage is a little less than five years. A comparatively small percentage of the mortgages on Western farms are held in the East. Two-thirds of all the mortgages are held by persons residing in the States in which the mortgages are, and less than one-third by residents of other States. The rate of interest on farm mortgages varies from about 5½ per cent in Massachusetts to 7 per cent in the newer Middle and Western States, rising to 10 per cent in the recently settled States and Territories.

By the figures as to mortgage foreclosures it is shown that the farmers were 80 per cent better off in 1890 than they were in 1880, there being only one-fifth as many mortgages foreclosed in 1890 as in 1880. The farmers who pursued mixed farming, raising cattle, hogs, sheep, corn, wheat, etc., are almost invariably prosperous and gradually getting well off. It is reported from some counties in the country that not 2 per cent of these farm mortgages are foreclosed, and a very large percentage of the foreclosures are upon farms devoted exclusively to one crop, as wholly to cotton or to wheat.

#### FARM MORTGAGES.

The farmer has had his full share in the increased wealth of the country with every other class, and especially in the lessened rate of interest on mortgages. As a class, they have not given mortgages because they were poor or growing poorer, but in order to extend their business. Of the mortgages given, 77.38 per cent were for money to purchase more land or to improve the land they then had, and about 9 per cent for durable personal property. It is shown that only 2.8 per cent was borrowed to meet farm or family expenses. In investigations in Michigan and elsewhere, where the figures in such things would be far under the more Western States, it is shown that of 31,570 farms owned by men of foreign birth who immediately settled in Michigan—

The farmers brought into this country.....	\$4,633,188
They owed on mortgages.....	11,191,714
<b>Total.....</b>	<b>15,824,902</b>
The assessed valuation of their farms was \$52,537,871.	
The true valuation of their farms was.....	65,672,393
Showing that they had accumulated in a comparatively few years.....	49,847,431

Besides this great gain, they own all their stock, tools, and other personal property; and this represents the true condition of things in every State in this Union of States of average productive soil.

The impression that farmers are not "the most prosperous class in the country" arises from brief periods of short crop, or the misfortunes of comparatively few individuals and few neighborhoods, or where land is so unproductive it never should have been taken up.

So much for the protective tariff from 1860 to 1892 in "impoverishing the farmers and planters—robbing and oppressing them." The farmers everywhere are "robbed and oppressed" by their own conduct when they refuse to avail themselves of every invention of machinery to till their lands and to invite factories to be established among them, and as they are by idleness or slovenly methods of preparing their lands and putting in and cultivating their crops.

#### HOW PROTECTION HELPS THE FARMER.

In answer to Mr. Crisp's question—

Will you tell me how your protective tariff benefits the man who raises cotton, or corn, or wheat, or meats? The producers of these great staples are forced to seek their market abroad.

As he is the exponent of Democratic free traders, we would refer them to the statistics already given of the diminishing consumption of farm product in 1894 under the threat of free trade as compared with 1893 under a protective tariff. Furthermore, the trade of the country, both foreign and domestic, has languished under every free-trade Democratic tariff from 1832 to the present time, and it has thrived and increased under protection. Republican protectionists would most respectfully refer Democratic free traders to the following exhibit, giving official figures from the census of the United States, proving beyond all peradventure "how protection helps the farmers to sell their products abroad as well as at home."

Animals in the United States at each census and number per 1,000 of population.

	1860.		1870.		1880.		1890.	
	Number.	Number per 1,000 population.	Number.	Number per 1,000 population.	Number.	Number per 1,000 population.	Number.	Number per 1,000 population.
Cattle.....	25,610,019	814	23,830,906	617	35,925,511	716	42,801,907	683
Swine.....	33,512,867	1,003	35,134,609	832	47,081,700	950	51,612,790	824
Sheep.....	32,471,275	714	38,477,031	738	35,192,074	701	44,330,072	707
Mules.....	1,151,145	36	1,135,415	29	1,812,806	36	2,331,027	37

#### SHEEP.

Sheep have remained nearly the same in number per capita at each census for forty years.

#### MULES.

It will be seen by the above table that the number of mules to each 1,000 of population in 1870 was less by 47 per cent than in 1860, probably caused by the civil war, but reached the same number per capita in 1890 and remained the same at 1890.

#### CATTLE.

The cattle per capita were 24 per cent less in 1870 than in 1860. In 1890 there were 11 per cent less cattle than in 1860, and less by 16 per cent, or one-sixth less in number, in 1890 than in 1860.

#### SWINE.

It is still more remarkable that the farmers should also allow the hog product to decline, thus losing both of the two most profitable farming industries.

Swine fell off from 1860 to 1870 by 30 per cent per capita.

Swine fell off from 1860 to 1880 by 11 per cent per capita.

Swine fell off from 1860 to 1890 by 20 per cent per capita.

Swine fell off from 1880 to 1890 by 13 per cent per capita, or one-eighth.

Swine fell off from 1860 to 1890 by 29 per cent per capita, or three-tenths.

## BLASTING RESULTS OF DEMOCRATIC FREE-TRADE TARIFFS.

The exhibits given of the blasting effects of Democratic free-trade tariffs and the beneficent effect of Republican protective tariffs make the following words of the Hon. ROGER Q. MILLS, pronounced May 7, 1890, exceedingly discordant:

In 1830 \* \* \* we were promised that we were going to have manufactures right beside the farmers in the country; that they were to bring the producer and the consumer together, etc.

Our commerce is shrinking, our surplus is piling up, in mines, factories, and fields, and yet they want us to draw a Chinese wall around the country to compel us to trade among ourselves.

Republican protectionists repeat, as I have done many times heretofore in this address, the statement that so long as they stand idly by fuming and scolding and denouncing the methods of encouraging industry that secure prosperity where adopted, in every civilized country of the world, instead of availing themselves of the advantages at their hands, their words will have no effect. Such vaporings concerning "Chinese walls to compel trade among ourselves" sound very strangely in view of the exhibit of the products of those sections of the country that avail themselves of the protective tariff to establish industries as compared with those

\* Coin values. Currency was depreciated 25.3 per cent in 1870.

There is no reason why boots and shoes as other things should not be manufactured in Georgia with the same beneficent results to them that that industry has brought to Massachusetts, instead of which she has abandoned it altogether. Why should a policy be adopted in this country that will shut up the mills in the manufacturing States and will not open mills in the non-manufacturing States? Now that the same system of compensating the laborers by wages prevails in every section of this country, it is no one's fault in the manufacturing States if the people of the nonmanufacturing States do not establish manufactures in them. In fact, despite the words and example of these Democratic free traders, it is shown that the manufacturing per capita has increased one-half in Georgia between 1880 and 1890, more than one-half in Tennessee, the same in Virginia, about one-third in Maryland, threefold more in Alabama, half as much again in Pennsylvania, while in Massachusetts it scarcely increased at all.

## MASSACHUSETTS REJOICES IN SOUTHERN INDUSTRIAL ACTIVITY.

We make no complaint in Massachusetts. The men in the States of Georgia and Tennessee and Alabama and in all others are Americans and our brothers. We bid them welcome in honorable competition, and rejoice even when our industries go to those States, being more than willing and abundantly able to substitute some new industries as our older industries depart to those sections, as it is true our coarser cotton industry has already gone, and as the iron industry is now traveling southward. We bid them welcome to our fields and godspeed them in their honorable industrial progress.

I make these remarks, caustic as they may be in some passages, that I may stir up—not that I would injure—our brothers, whom I love, to the same honorable, persistent, and self-sacrificing industry practiced in the older and more happy sections of the country which early adopted the system of wage labor rather than non-compensated labor, and are now reaping the advantages of a hundred years of progress.

Probably enough, and more than enough, has been said to carry conviction to every man who will candidly reflect upon it; yet I propose to exhaust this subject before I close, as far as I am able to do so.

## MONSTROUS DEMOCRATIC DOCTRINE.

What a monstrous doctrine it is that the Hon. Charles F. Crisp, Hon. William L. Wilson, Hon. ROGER Q. MILLS, and Hon. George McDuffie announce in the following extracts, "that protection builds up industries which it is wasteful upon the part of the manufacturers to carry on!"

[Hon. Charles F. Crisp.]

This protective system builds up industries which it is wasteful upon the part of the manufacturer to carry on. It destroys the natural industries of the people, and builds up an artificial industry.

[Hon. William L. Wilson.]

Every industry that leans on taxation for support, that calls upon the law to make the consumer of its products pay more than he would otherwise be obliged to pay for them, call it by what name we may, is a pauper industry, supported by the self-supporting industries of the country. [Applause on the Democratic side.]

[Hon. George McDuffie.]

When a planter exchanges his cotton for foreign manufactures, these manufactures become the productions of domestic industry by the same act which makes them his property, and the cotton, in like manner, becomes the production of foreign industry. It is as if the planter were gifted with the power of necromancy, and could transmute his cotton into manufactures by the mere touch of his wand.

\*\*\* I am as truly a manufacturer of cotton and woolen goods as the gentleman from Massachusetts. \*\*\* I cultivate the earth and convert its products into manufactures by exchange, while the gentleman from Massachusetts accomplishes the same object by turning spindles and throwing shuttles. The only material difference between the two operations is, that mine adds most to the wealth of the nation. \*\*\* The farmers of the South labor to the best advantage in the production of cotton and exchange it for shoes made in Massachusetts, bacon cured in Kansas, the flour produced in Indiana, Illinois, and Iowa, the silks of France, the sugar of Cuba, the coffee of Brazil, and the tea of China.

Will some of their disciples that a kindly fortune has not yet removed from these halls furnish us with a list of "industries that

protection has built up that it is wasteful to carry on"? Will any one of them rise up and name one such industry? You once said it was the manufacturing of tin. Do you say so now?

## PROTECTION APPROVED BY WASHINGTON, JEFFERSON, AND JACKSON.

Please do not omit to notice properly the Democratic applause bestowed upon the honorable gentleman. Not a word in this remarkable statement of Hon. George McDuffie that has not been in substance, if not in form, pronounced in all tariff discussions since they entered upon the policy of denouncing a protective tariff. A protective tariff was the very first measure that was passed by the American Congress after the adoption of the Constitution, under the advice and guidance of George Washington, Jefferson, and Alexander Hamilton, and defended and justified by Jackson and Jefferson.

Most remarkable are the statements that these Democratic free traders make, only exceeded by the remarkable methods they take in attempting to prove their erroneous statements, such as the following, by the Hon. ROGER Q. MILLS, on April 4, 1894:

A very exhaustive examination was made of the cost of the production of wheat in the United States a few years ago by Dr. Edward Atkinson. He showed that a bushel of wheat could be produced in the United States at a cost of less than 40 cents, and in California less than 36 cents. There is not a spot on the Continent of Europe that can produce a bushel of wheat at that cost. The lowest I have seen is Germany, at 84 cents. India can not produce wheat at a cost of 40 or 50 or 60 cents a bushel; much less can it produce it at that cost and pay the cost of transportation and drive us out of our own markets. \*\*\* A California farmer who uses the machine told me that with five hands at \$4 per day each he cuts, thrashes, winnows, sacks, sews up the sacks, and puts away ready to be shipped in one day 1,200 bushels of wheat, and the labor cost is less than 2 cents per bushel.

How are the farmers of this country pleased with Mr. MILLS's declaration that wheat can be raised at a labor cost of 2 cents a bushel? His showing that 36 to 40 cents is the normal price of wheat in the United States does not exactly harmonize with the ordinary stump speech of the free-trade Democratic politician when he is seeking election.

The Hon. Charles F. Crisp was exceedingly modest when he said:

I have never yet known a Republican arguing the advantages of a protective tariff to have any idea or conception of what consistency is. [Laughter and applause on the Democratic side.]

## PROTECTIONISTS RELY ON SOLID FACTS.

Mr. Chairman, I have to suggest to the Democratic free traders on this floor that the speeches of protectionists are buttressed with incontrovertible facts and statistics, and from documents made up by public officers wholly uninfluenced by partisan considerations; and not only are the Republicans justified in every instance by every public exhibit of economics, but by them are the words of the Democratic free trader as thoroughly condemned. They may be consistent—in fact, they have been consistent for sixty years in their perversity and utter refusal to open their eyes to the truth regarding their own country or any other, still continuing to recite the formulæ which Hon. George McDuffie prepared for them in 1832. These gentlemen insist that the wool duties do not go into the pockets of the farmers, and that the duties on woollens do go into the pockets of manufacturers. Read as follows:

[Hon. Charles F. Crisp.]

In this report the gentleman from Maine correctly states the effect of a tariff duty.

"Our goods"—

I want you to hear this, because it is the Democratic idea, and though in a Republican report it is the truth—

"Our goods are now met by foreign goods on our own shores at a price made up of raw materials plus labor and plus the present rate of tariff on very nearly equal terms."

If you reduce the tariff, says the gentleman from Maine—perhaps I had better read, so that I can not misquote him:

"Our goods are now met by foreign goods on our own shores at a price made up of raw materials, plus labor, plus the present rate of the tariff, on very nearly equal terms. When the tariff element is lowered"—

Hear him—

"then something must be lowered on our side."

And he proceeds to say that it is the profits of capital and the wages of labor that must be lowered. \*\*\*

It says that putting raw wool on the free list and reducing the rate on woollen goods will reduce the price that the farmer gets for his wool, will reduce the wages that the spinner and the weaver gets for his labor, and yet will accomplish only an "imaginary and infinitesimal difference in the price of clothing." Now, if the manufacturer gets his wool cheaper, and if he gets his wages cheaper, let me ask you why he will not sell clothing cheaper? [Applause.]

You gentlemen of the minority state in your report:

"If the tariff element be lowered, then something must be lowered on our side."

[Hon. William L. Wilson.]

\*\*\* Have no right to raise the price of wool to the consumer if you could thereby increase the price of wool to the farmer; but the tariff on wool does not increase the price of wool to the farmer by a farthing.

\*\*\* He would be a bold man who would rise and assert that the McKinley bill, with its increase of taxes on wool and woollens and its prohibitory

taxes on every imaginable substitute for wool, has been of any benefit to the American woolgrower. I do not believe that the duty on wool has in any year been of substantial advantage to the American woolgrower.

Prices for Australian average fleece, scoured, are as follows for London and America:

Comparison of prices of Ohio and Australian scoured wools.

Year.	Price of fine Ohio fleeces, scoured, America.	Price in London of Australian average fleeces, scoured.	Difference of the two prices in the two countries.
1881	\$0.85	\$0.53	\$0.32
1882	.90	.53	.37
1883	.86	.51	.35
1884	.80	.48	.32
1885	.71	.41	.30
1886	.74	.41	.33
1887	.73	.45	.28
1888	.69	.49	.20
1889	.73	.49	.24
1890	.73	.44	.29
1891	.69	.40	.29
1892	.65	.38	.27
1893	.60	.32	.28
January, 1894	.45	.28	.17
March 1, 1894	.45	.28	.17
August 1, 1896	.35	.25	.10

Average difference, 20 cents.

The above table proves that the sayings of the Hon. Charles F. Crisp and the Hon. William L. Wilson are exactly contrary to the facts. These figures prove that the farmer gets every farthing of the duty in increased price of his wool, while under the free-trade Wilson tariff prices are the same here as in London.

#### EFFECTS OF TARIFF LEGISLATION ON WOOL.

I will also insert in my speech a further exposition of the wool situation. It appears by these tables that there were one-sixth more sheep owned by the farmers in 1892, under the protective tariff, than in 1896, under the Democratic free-trade tariff, and that the value of the total sheep was 80 per cent more in 1892 than in 1896, showing a loss to the farmer in sheep alone, caused by the Wilson bill, of \$51,000,000.

They also show that while our consumption of wool increased in that period one-quarter, our imports of wool increased three quarters.

They also show that while the cotton-cloth product of the country per capita did not increase at all from 1870 to 1890, with free cotton, but rather fell off, the wool increased very nearly one-quarter.

They also show that the wool grown by our own people went up under a protective tariff from 162,000,000 pounds in 1870 to 303,000,000 pounds in 1893.

\* Mr. North's figures.

NOTE.—These are the estimates of the Department of Agriculture. The commercial estimates of the domestic clip are considerably higher than those of the Department, and reach 364,000,000 pounds in 1893.

The wool clip grew from 162,000,000 pounds in 1870 to 303,000,000 pounds in 1893.

Wool production of the world, 1860-1894.

\* All Africa.

† All South America.

The following words of the Hon. ROGER Q. MILLS, on May 7, 1890, which received the most hearty Democratic applause, rise to the general level of the observations of the Democratic free trader:

New protection against competition means more work and less results, and boiled down to its last analysis it means all work and no results. [Applause on the Democratic side.]

## MORAL RESULTS OF THE LOSS OF WORK.

What Mr. MILLS says in this paragraph about more work is absolutely true, but the all work and no pay is past finding out. The protective tariff only affords an opportunity to work.

Read the following discussion that occurred in the House of Representatives on April 3, 1894, concerning the Pensacola Navy-Yard. What is therein said of the condition to which the most skillful and enterprising and well-educated mechanics have sunk there, shows to what condition all would sink were they deprived of the opportunity to work. It shows what would be the result all over this country, excepting no portion of it, did we abrogate every feature of protection from our tariff laws. The present generation of mechanics would starve before they could bring themselves to work at European wages, and civilization in this country would be set back a hundred years. As was shown in our history from 1873 to 1879, it took our mechanics then eight years, filling every hamlet with tramps, to bring their minds to accept only a reduction of 10 per cent in their wages:

Mr. MALLORY. \* \* \* [The Pensacola] reservation is situated differently from any other in the United States, and the people on it are differently situated from the people residing on any other territory of the United States, unless it be this District of Columbia.

There are \* \* \* two villages, known as Woolsey and Warrington, in which there are from twelve to fifteen hundred people. \* \* \* The great bulk of these people came down there before the war for the purpose of assisting in building two vessels which were being constructed by the Government at the Pensacola Navy-Yard and which were completed about 1858—the gunboat *Seminole* and the sloop of war *Penacola*.

These people were skilled mechanics, who came there from Baltimore,

New York, and other places in the North, bringing their families with them; and under the impression that shipbuilding would be continued, they settled there. \* \* \* On that reservation some three or four hundred children are growing up in ignorance, whose parents are utterly unable to provide for their education even in the most rudimentary form.

These men were skilled mechanics who went there anterior to the war, and were usually men of first-class ability. They went there, of course, expecting this navy-yard to be continued in operation. Since the war they have had but very little to do in the line of their skill. Most of them are now old men.

If the navy-yard had been carried on as it was previous to the war, the young men who grew up there would have learned their trades in the machine shops and carpenter shops in the navy-yard and would have taken the places formerly filled by their fathers. But there was no work of this kind for them to do. They have been unable to learn any trade and are too poor to go away. Those of them who were able to go off, a number of the younger men, went up to Pensacola, where they pursued their avocations, and gradually withdrew their families from the naval reservation.

But this applied to only a very limited number. \* \* \* They are there now, their homes are there, and they, like ourselves, are human. There are a lot of children there of these men who were leading men in their avocations, and it is a matter of charity to do something for them.

Mr. DOLLIVER. What do they do for a living?

Mr. MALLORY. Well, some of them have minor places in the yard as watchmen and laborers. Some of them fish for a living, and some of them act as pilots on Pensacola Bar. This village is located but a short distance from the mouth of the bay, about 8 miles from the city of Pensacola by land and about 5 miles by water. Some few of these people obtain their living in that way. There is an army post at Fort Barrancas, on the military reservation adjoining this naval reservation, where there are a number of troops stationed, and some of these people keep stores and supply the troops with what they choose to buy. There are generally from three to five companies stationed there. Aside from this, however, these people have no means of living. They can not go out into the world, for their only property consists in the houses in which they live. Some of these are fairly good houses, frame houses, but they can not sell them. They are all anxious to go away, and would do so if they could dispose of their houses, but they can not manage to get rid of them.

Mr. GRISSENHAINER. What are the reasons which keep these people on the reservation, if they have no schools there, no right to vote, and no other rights?

Mr. MALLORY. They stay there simply because they are unable to get away. If a man has a house there he can not sell the house for anything. There is no immigration there and no demand for this property any more, and the people can not leave.

Mr. CUMMINGS. The gentleman from Florida [Mr. Mallory] has referred to the anomalous condition of the people living on this naval reservation in his State.

What are these poor white and black children, living upon this naval reservation and holding out their hands to the Government of this country, begging for education—what are they, if not wards of the United States? They are certainly not the wards of the people of Florida. They are children of nowhere.

Now, I say that this country is great enough and broad enough to make no distinction between the children of the white man, of the black man, and the children of the red man. Above all, they can not afford to discriminate in favor of the children of the red man and against the children of the black man and of the white man. In this case they are certainly poorer than the Indian children, and they are calling aloud for an education.

## MECHANICS MUST HAVE WORK TO EARN THEIR BREAD.

Furthermore, were every manufactured article that the people of this country needed to consume presented to them as a free gift for a period of ten years, the story of the skilled mechanics and their families who went to the Pensacola Navy-Yard would be the fate of all the mechanics in this country. It would be a worse affliction to this country than has been any plague or pestilence that has ever visited any country in the last hundred years. For what could the mechanics in this country do to earn bread for their mouths, clothing for their backs, or shelter for their heads during that ten years, and if the whole supply for men's wants would bring devastating ruin to our people, what part of the whole of the goods that we should manufacture in this country for ourselves and that American mechanics now receive American wages for producing can we afford to take from Europe and let our mechanics stand idly by and see us consuming them while they starve? Read the words of the Hon. George McDuffie upon this very point, as follows:

As to voluntary and gratuitous donation (of goods) from foreign governments or foreign manufacturers, I admit that this would be the most fatal of all modes of requisition to the interests of the domestic manufacturers. It would absolutely destroy the entire value of all their investments in buildings and machinery.

After listening to that, again listen to the words of the Hon. Charles F. Crisp on February 1, 1894:

Mr. CRISP. Mr. Speaker, the gentleman from Maine [Mr. REED], belongs to that school who believe that scarcity is a blessing, and that abundance should be prohibited by law. \* \* \* You claim that we owe to protection the sunshine, the showers that fall, the fertile fields that surround us, the intelligence, the enterprise, the energy of our people—all these things you gravely credit to protection—

because we propose to so frame our laws as to invite a larger use of sunshine and showers to our American workmen in larger employment, such silly words as these are sounded in our ears as we present to them the actual facts in the case.

Hon. William L. Wilson rises to say:

I ask how is it possible for a tariff which, under any careful and accurate analysis, "protects" the wages of only 5 per cent of our laboring people to increase the wages of the other 95 per cent? [Applause.]

## WILSON CONFOUNDED BY M'DUFFIE.

It appears from all Mr. Wilson's address on the protective tariff, eloquent, cultured, and in every way polished and estimable gentleman that he is, that he has not the slightest capacity to appreciate the simplest statements in economics. Does he not know that while it may be true that only 5, 10, or 15 per cent of our people are actually working upon things that could be transported from Europe to this country, that the 95, 90, or 85 per cent have the natural protection of its being impossible to transport here the things they make from any other country? The Hon. Mr. Wilson can not be made to believe that houses built by carpenters, railroads, canals, all farming employments, the shoeing of horses, in fact, the whole myriad of ordinary employments on things not transportable, are protected by the protection of this 5, 10, or 15 per cent of which he speaks in such derision. Let his teacher, whose lessons he has partly forgotten, the Hon. George McDuffie, answer the Hon. Mr. Wilson in the following words:

Whatever increases the prosperity and profits of the great and leading employments of capital in any community has always been found to increase the prosperity and profits of all subordinate employments, as well as the wages of labor. It is obvious that in the same local community where the transfer of capital and labor from one employment to another is easily affected, there can not long continue different rates of profit and wages of labor.

If, for example, protecting duties enhance the money price of the various manufactures upon which they are laid, to the full extent of these duties, they at the same time enhance the price of all other articles in the manufacturing region.

I have heretofore adverted to the extraordinary fact that the wages of agricultural labor are four times as high in the manufacturing States as they are in the planting States.

So it seems that all classes prosper equally in a democratic community, that is to say, a community where the laborers are paid wages and do not work without compensation, as do horses and mules. All classes in the locality availing itself of the advantages of a protective tariff to improve its conditions in manufactures so as to employ all of its people reap such advantages. Republican protectionists are ready freely to admit that for a community of patricians and plebeians a protective tariff has no uses and is an abomination.

## ADVANTAGE OF DIVERSIFIED INDUSTRIES.

I desire to call your attention to the following very interesting table, which shows the advantage to a community of diversified industries, which are only possible to this country in the present and future, as in the past, in protecting the high wages of our working people by a tariff on products produced in Europe at low wages:

Table showing the assessed valuation of real and personal property and taxation in the United States, by groups, census of 1890.

Group.	Valuation assessed for taxation.									
	Total real property.	Real property per capita.	Total personal property.	Personal property per capita.	Total real and personal property.	School expenditure, each pupil.	Total real and personal property per capita.	Total.	Per cent per dollar.	Per capita.

South Central.—Kentucky, Tennessee, Alabama, Mississippi, Louisiana, Texas, Oklahoma, Arkansas. Population..... 10,972,893

Western.—Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Idaho, Washington, Oregon, California. Population..... 3,027,613

## A PEOPLE'S WISDOM REVEALED IN THE RATE OF TAXATION.

It is perfectly clear from the above table that the statements made as to the poverty of one section of the country as compared with another are exceedingly erroneous. The wealth of the Western States per capita is more than that of the North Atlantic States, and were the wealth per capita and the labor of every section of the country used with equal wisdom and discretion and if there were the same persistent industry, frugality, and wisdom exercised in investment and expenditure, all sections of the country might be equally prosperous. The Western States have the wisdom to spend \$3.35 per annum per capita on the schooling of each pupil, and the North Central States \$2.81, and the North Atlantic \$2.74, while the South Atlantic reaches only 89 cents, and the South Central 94 cents. While the per capita valuation is little more than double what it is in the South Atlantic and the South Central States, in the North Atlantic States the taxation per capita is three times as much. The surest index to the wisdom of a people is the rate of taxation among them.

## TARIFF OF 1846 BROUGHT NO PROSPERITY.

But there is no statement of the Democratic free trader that is more exaggerated in its untruthfulness than that this country prospered more per capita and in all sections of it under the Democratic free-trade tariff of 1846, from the year 1846 to 1860, than in any years of our history. The real facts are that the fourteen years preceding 1860, under the Democratic tariff of 1846, were the most distressing the country ever saw, since the Revolution, for so long a period. It may have been equalled in the years 1893, 1894, and 1895 under another Democratic free-trade tariff. It is true that the cotton industry was fairly prosperous under the cotton tariff of 1846, for we never had a tariff since 1833 that did not fairly well protect the cotton industry. Even what prosperity there was in the country during that fourteen years was not even and general, but was local, in particular industries, and spasmodic. Had it not been for the great market made for our products by the Mexican war and the reduced competition among wage workers in the persons taken out of the community as soldiers; and for the market made by the Irish famine in 1847; and for the discovery of gold in California in 1849, occupying other thousands; and for the Crimean war in 1855 and 1856, which offered a tremendous

market for our products, that would indeed have been a period of desolation for the whole country.

For the figures included in the tables which follow I am indebted to Senate Report 1394, part 2, page 124, Fifty-second Congress, second session, made on March 3, 1893, and to the United States Census, in almost all cases:

## Price of calico in April of each year.

[Senate Report No. 1394, part 2, page 124.]

Year.	Value.	Price.	Yards made.	Per capita increase in ten years.
1850.....	\$61,860,000	\$0.10	619,000,000	.....
1860.....	115,682,000	.10	1,157,000,000	19.99
1870.....	132,585,000	.094	1,385,000,000	6.8
1880.....	192,090,000	.08	2,401,000,000	25.13
1890.....	267,982,000	.06	5,358,000,000	42.8

The above table shows, for instance, that the price of cotton cloth to the people was not reduced by a farthing from 1850 to 1860 under a free-trade tariff, while from 1860 to 1890 it was reduced from 8 cents to 5 cents under a protective tariff. It shows also that in the ten protection years from 1860 to 1870, as compared with free trade from 1850 to 1860, the increase in the number of yards per capita fell off 70 per cent because cotton could not be had from 1861 to 1866. In the ten years ending in 1880 the increase in yards made was more per capita than the increase from free trade 1850 to 1860 by 26 per cent. In the ten years ending in 1890, under protective tariff, the increase in yards made was more per capita by 111 per cent than from 1850 to 1860 under the free-trade tariff of 1846.

## RECKLESS ASSERTIONS OF THE FREE-TRADE BOSTON HERALD.

The free-trade Democratic Boston Herald has been most vociferous and constant in its statement that the country was more prosperous under the tariff of 1846 than under any tariff we ever had. On November 29, 1893, it made the following statement, and

it is a type of all the Democratic free-trade papers in their assertions, and is as wide of the truth as they all are:

#### A PREVIOUS LOW TARIFF.

The country advanced in prosperity under the tariff of 1846 as it had never advanced before. \* \* \* The figures of the census show \* \* \* that the period was one of unexampled growth in the general prosperity of the people. Labor in especial had never found more ready employment or been better remunerated. All this is matter of record, and no intelligent person will deny it unless he deliberately means to deceive.

What one free trader says, so say they all.

The following tables are a conclusive answer to all such reckless statements. It will be seen that it is stated that the increase in the valuation of the United States from 1850 to 1860 was 125 per cent, but that resulted from causes very exceptional, mostly the opening of new States and giving valuation to millions of acres of land for the first time, and many of them having little or nothing to do with the real prosperity of the people. These gains in valuation were 109 per cent in the North Central States and 132 per cent in the Western States. The per capita gain was less than one-third for 1850 to 1860 of that of 1860 to 1870.

True valuation of the United States, in coin, and increase in percentages without regard to population.

	Valuation, including slaves.	Increase in decade.	Valuation in coin and less slaves.	Increase in decade.
		Per cent.		Per cent.

#### PER CAPITA REPORTS THE TRUE TEST OF PROSPERITY.

The true test of prosperity "is per capita," not in the gross. It will be seen that the increase per capita of wealth in the United States from 1850 to 1860 was only 24 per cent under a Democratic free-trade tariff, while it was 86 per cent from 1860 to 1870 under the Republican protective tariff, notwithstanding our fearful civil war; that it was 49 per cent from 1870 to 1880 under protection, more than double that from 1850 to 1860. The adversity which came to our country from 1873 to 1879, in our successful struggle to resume specie payments, reduced the percentage of gain down to 49 per cent from 1870 to 1880; and because we attained so high a rate of wages and such a degree of prosperity previous to 1880, and because of a reduction of the tariff made in 1883, the gain in wealth per capita was only 20 per cent from 1880 to 1890. The unrest of the people under those conditions gave the protectionist Republicans the election in 1888.

#### LABOR COSTS IN MANUFACTURED ARTICLES.

I know of no more conspicuous example of a man refusing the testimony of all persons in position to know the facts and wandering around in statements never made to reveal the exact labor costs of things he applies them to, than the so-called proofs as to costs of articles of manufacture given in a speech made on April 24, 1894, by Hon. ROGER Q. MILLS, of Texas. He takes his original figures from the census and makes very grotesque deductions of "facts" therefrom.

The census gives the labor cost in a ton of steel rails as \$31, meaning the cost of the labor of handling the prepared steel billets into the furnaces and through the rolls into the storage yard. There is not a boy around a rolling mill that does not know that the labor cost in a ton of steel rails begins at the coal mines and ore beds to railway stations and wharves and on longer or shorter lines of transportations—in fact, that the "labor cost" of a ton of steel rails is every dollar they have cost less the charge for royalty on the raw ore and coal as it lies in the mountain, which probably does not exceed 10 per cent of its cost as it leaves the rolls in the mill.

In \$100 worth of cutlery, labor cost \$44.24, which only includes the cost above all the finished product to the manufacturers of it, of whom the maker of the cutlery bought it—probably back to the mines of fully 95 per cent of the finished cutlery.

He goes over fifteen articles, all of his statements concerning which are as wide of the mark as those I have given.

Among them, a ton of pig iron; he gives the labor cost as \$1.50, every particle of cost of which is labor, directly or indirectly, excepting what was charged the miners for the coal and ore before it was touched in the ground—comparatively a few cents.

I have not the true figures of labor cost on the articles Mr. MILLS gives, but I have had the reputation of giving, for several censuses, the most accurate figures as to labor cost that were published in them of things manufactured by myself. The detailed figures will be found in CONGRESSIONAL RECORD, Appendix, Fifty-second Congress, first session, volume 127, page 127.

In \$100 worth of upper leather, direct labor cost given the census taker, \$14.70; actual labor cost back to the hide and bark tree, \$34.80.

In \$100 worth of sole leather, direct labor cost given census taker, \$5; actual labor cost back to the hide and bark tree, \$28.

In \$100 worth of light calfskin leather, direct labor cost given census taker, \$23; actual labor cost back to the skin and bark tree, \$48.

In \$100 worth of coarse brogan shoes, direct labor cost given census taker, \$18; actual labor cost back to the primary raw products entering into them, \$53.

In \$100 worth of men's fine calfskin shoes, direct labor cost given census taker, \$31.20; actual labor cost back to primary raw material, \$62.70.

Manufacturers have given me the labor cost as follows:

In \$100 worth of coarse cotton cloth, direct labor cost given the census taker, from \$26.50 to \$45.25, according to the goods; actual labor cost, including keeping up mill, machinery, etc., from \$44.50 to \$87.

In \$100 worth of fine cotton cloth, direct labor cost given census taker, from \$46.50 to \$50.50; actual labor cost, including keeping up mill and machinery, etc., from \$65 to \$75.

In \$100 worth of woolen dress goods, with a duty of 11 cents a pound on wool, direct labor cost given census taker, \$52.47; actual labor cost, including keeping up mill, machinery, etc., \$78.30.

Possible saving, if no duty was paid on wool, of only 10 per cent if of all wool, and the farmer got half as much for it as under protection; but the actual saving on these goods would be from 4 to 7 per cent, or 2 to 4 cents a yard.

In \$100 worth of low-grade wool cheviots, medium quality beaver, etc., used by the masses, direct labor cost given census taker, \$60; actual labor cost, including keeping up mill, machinery, etc., \$86; a possible saving, if no duty was paid on wool and the farmer got half as much for it, of about 7 per cent, figuring very small per yard.

In \$100 worth of No. 3 highest grade of fur beaver, all wool, direct labor cost given census taker, \$58.50; actual labor cost, including keeping up mill, machinery, etc., \$81; possible saving, if no duty was paid on wool and the farmer got half as much price for it, as he surely has, of 9½ per cent.

On a pair of highest cost trousers, for which I had paid \$15 for years, my tailor figured a saving under the Wilson bill of 45 cents.

Goods made in a large first-class cotton or woolen mill are increased in cost to the manufacturer, by running half the machinery in his mill, from 6 to 10 per cent, as the "fixed charges" remain about the same. For our manufacturers to have all the American market and thus be able to run their mills full of operatives is worth very nearly or quite as much to them in reducing the cost of goods as to take the 11 cents a pound duty off of wool and run their mills only half full of operatives, as the "fixed charges" and "wear and tear" and depreciation of machinery are rather more than less when half the machinery is idle. So with all large mills of every kind.

#### "ROBBER BARONS."

These statements, which every intelligent, truthful American manufacturer will substantiate, will only confirm the Hon. ROGER Q. MILLS, the Hon. BENTON McMILLIN, etc., and all free traders made up of theorists in the schools, statesmen from nonmanufacturing sections, foreign-born importers camped in our country, merchants dealing largely in foreign goods, and the like, in their conviction that only "robber barons," "American sharks," "plunderers," "three-card monte men," as they call us, and generally disreputable men, desire a protective tariff to rob their fellow-men.

These few examples illustrate the intense desire of every free-trade writer I ever read or heard talk, privately or publicly, to "make out his case" rather than to know and tell the exact truth concerning manufacturers.

"Upon what have these free traders fed" that they, as by right, assume to cast contempt upon the truthfulness, integrity, ability, and patriotism of the men who have developed the manufacturing industries of this country? We would humbly suggest to them that we would be much gratified if they would set such an example of character, good manners, and accuracy in statement that we could point our children to them for example.

The following quotation from the speech of the Hon. ROGER Q. MILLS, made May 17, 1890, has been the refrain of all Democratic free traders:

From 1850 to 1880 the national wealth increased at the rate of 126 per cent—twice as much as it has increased during any decade of protection.

Your manufactures increased.

Your farmers increased more than 100 per cent.

The country was not threatened with bankruptcy.

It is a fact, as has been before stated, that these monstrous statements of the free traders find a color of justification in just one item given by the Hon. R. Q. MILLS, increase of wealth 126 per cent, etc., but there is not another item in the whole vast amount of evidence from the census, or from any other source to which we look for data on this question, that gives the slightest color to this statement.

For population, take mean between population in two census years for the States and national.

Mean population.			
1850-1860	27,317,593	1870-1880	44,072,077

From 1860 to 1870, increased \$0.03 per capita, to.....	35,000
From 1870 to 1880, increased \$0.32 per capita, to.....	467,000
From 1880 to 1890, decreased \$0.06 per capita, to.....	330,000

## ALL CLASSES OF MANUFACTURES.

In 1850, total value of product was.....	7,082,075
From 1850 to 1860, increased \$10.18 per capita, to.....	17,000,000
From 1860 to 1870, increased one-half as fast, \$5.35 per capita, to.....	23,000,000
From 1870 to 1880, increased \$0.54 per capita, to.....	35,000,000
From 1880 to 1890, increased twice as fast, \$19.58 per capita, to.....	69,000,000

It will be noticed by the tables given that on carpets the increase was two and one-half times more under protection from 1860 to 1870 than under the free-trade tariff of 1846, from 1850 to 1860. Under the protective tariff it was three and one-half times more from 1870 to 1880, and three times more from 1880 to 1890 than from 1850 to 1860.

On hosiery and knit goods it increased four-fifths more from 1860 to 1870 under protection than from 1850 to 1860 under the free-trade tariff, one-half more from 1870 to 1880, and threefold more from 1880 to 1890.

On woollen goods the increase was three times more from 1860 to 1870 than from 1850 to 1860; seven-tenths more from 1870 to 1880, and one-half more from 1880 to 1890; while on cotton goods, every tariff having been fairly protective from the day the industry began in the United States, it shows a much less increase; but it did increase one-sixth more from 1860 to 1870 under protection than from 1850 to 1860 under free trade; one-half more from 1870 to 1880, and one-half more from 1880 to 1890.

In Massachusetts the increase upon cotton goods was very little above that from 1850 to 1860 until 1880 to 1890, when the increase was five-sixths more than from 1850 to 1860.

The statistics on woollen goods are given in the censuses in such varying forms that it is impossible to figure from the census, as sometimes woollen goods include all manufactures of wool and sometimes strictly woollen goods, and then worsted goods, carpets, etc.

Even in iron and steel manufactures in Massachusetts the increase was twice more from 1870 to 1880 as from 1860 to 1870 (the figures are not given for 1850), and three times more from 1880 to 1890 than from 1860 to 1870.

All classes of manufactures in Massachusetts increased per capita three-eighths more from 1860 to 1870, under a protective tariff, than from 1850 to 1860, under the free-trade tariff of 1846, and more than one-half more from 1870 to 1880, and nine-twentieths more from 1880 to 1890 than from 1850 to 1860. But I will not detain you by going through the figures for the various States. There are no statements that should excite greater interest in a lover of his country and prompt to careful examination, than these statistics that I have prepared with so much labor and pains.

## FREE TRADERS ARE "BLIND LEADERS OF THE BLIND."

Evidence so conclusive, so overwhelming as this, of the utter untruthfulness of the statements of the free traders concerning the effect on this country of Democratic free-trade tariffs and Republican protective tariffs, was never excelled by any evidence in any case since the world began, and yet these men, "blind leaders of the blind," have done as much to injure the country and to retard its prosperity, relatively, first to last, by their legislation, and will continue to do so, as any invasion of any civilized country in the last hundred years ever did to injure the country invaded. To a man who has the slightest capacity to appreciate the value

of facts in economics, any words I can add will not increase the effect of these crushing statistics. If these are not conclusive in the case, statements or arguments are wasted upon free traders.

WILSON BILL PASSED UNDER DEMOCRATIC PARTY LASH.

There were scores of Democrats in both the House and the Senate who realized what the effect of the Wilson bill would be if it passed, but the party lash drove most of them into voting for it. Only six braved the displeasure of the Democratic free-trade leaders; and the following order had to be issued on January 6, 1894, introduced by the Hon. THOMAS C. CATCHINGS, to compel the attendance of the reluctant Democrats, and adopted:

Mr. CATCHINGS introduced a resolution from the Committee on Rules, as follows:

"Ordered, That the Sergeant-at-Arms take into custody and bring to the bar of the House such of its members as are absent without leave of the House. This order shall continue in force beyond the adjournment of the session of to-day and until the further order of the House. The Sergeant-at-Arms is directed to employ a sufficient number of deputies to execute this order and take into custody said absentees wherever they may be found."

Furthermore, it is a matter of public knowledge in Congress that the wise Democratic leaders in the Senate were determined that the McKinley tariff should not be repealed. By some mistake, the knowledge of their determination came to President Cleveland and he revealed it to Speaker Crisp, and the leaders of the House called the Gorman tariff bill back from the hands of the conference committee of the two bodies and under the party lash rushed it through the House and Senate, thus repealing the McKinley tariff. The programme of the wise leading Democrats was to claim on the stump that they had done all they could to repeal the McKinley tariff and had failed, they knowing that the disasters that would follow the adoption of the Wilson-Gorman tariff would shortly give the Republicans the election in 1896, as it has done.

[Hon. Benton McMillin, May 8, 1890.]

We are to be congratulated that we have reached a question where sectionalism is impossible and where cursing of brother by brother can no longer be heard.

The present tariff system was adopted in time of war under pretext that it was necessary to carry on the war and only to be temporary. Pretending that it was only temporary in its needs and demands, it asks more protection as the industries grow older.

[Hon. Charles F. Crisp, May 8, 1890.]

When the Morrill bill was passed, it was passed as a war measure.

[Hon. W. L. Wilson, January 8 and 9, 1894.]

Protection, when expelled from our revenue laws, never came back into them with the conscious and intelligent assent of the American people. It crept stealthily in through the back door, when the people were in the agony of civil war, and it now seeks to hold its position because the people are in the agony of a commercial crisis. [Applause.]

It deliberately fastened upon the country a higher system of permanent expenditure, while it as deliberately proceeded to reduce revenues after the manner of protection, by repealing revenue taxes and by diverting a larger share of other taxes from the public Treasury into private pockets.

Sir, the dependent-pension bill would never have passed had there not been an overflowing Treasury to empty, and had there not been devised along with that bill a new scheme of taxation, under which those other pensioners, the protected industries of the country, were to get the first pull and the largest share of the taxes levied to pay pensions. [Applause on the Democratic side.]

Mr. Chairman, although . . . we have not the daily income to meet the daily expenditure, the burden of taxation has not been lightened. An examination of the returns of that taxation to-day shows that while the Treasury is starving the people are paying heavier taxes than they ever paid before. . . . Yet they hastened down again in 1890 and added nearly 50 per cent to the taxes exacted for their benefit from the consumers of woolen goods in this country.

THE MORRILL TARIFF NOT A WAR MEASURE.

Another untruth, persistently repeated again and again, is that the Morrill tariff was a war measure, as shown in the above quotations. Nothing could be further from the truth. Tariff legislation to increase the revenues was recommended by James Buchanan in a message to Congress long before. That bill was passed by a Democratic House, a Democratic Senate, and approved by James Buchanan, a Democratic President, on March 3, 1861, when it was not believed in the country, except at the South, that there would be any civil war. The bill was framed and every item in it adopted months before it was believed that the threat of war was serious.

Fort Sumter was not fired upon until April 12, and until that event the country was resting, practically, in absolute security, although that event proved that it was a false security. How a man like the Hon. William L. Wilson can be oblivious to the utter want of truth in such statements as he habitually makes concerning a protective tariff could not be believed did we not have his sayings before us. Any amount of further evidence of how oblivious these free traders are to facts is not wanting. Listen to what the Hon. Henry G. Turner and others said in the House on January 3, 1894:

Mr. Chairman, that allusion to the principles of the Confederate constitution has been heard before in tariff debates. [Laughter.]

Reference has been made to the duty on rice. The rice industry is an

exotic in this country, an industry which was unable to flourish unless New England had sold us the laborers for its cultivation. [Applause on Democratic side.] Their descendants are now free, but they have made little progress, and can not compete in other fields of labor. . . . If the gentlemen on the other side desire to strike off such incidental benefit as the rice duty affords to these poor people, let them rise in their places and take the responsibility. [Applause on the Democratic side.]

[Hon. C. R. Breckinridge, January 30, 1894.]

Upon the question of tariff reform the country has had for a number of years a most thorough campaign of education.

What methods have not been employed in reaching our present conclusions! The Democratic members of the Committee on Ways and Means, with an earnest desire to meet the reasonable expectations of all elements of the party, have conferred with our friends of every difference and shade of opinion, and in the fullest, frankest, and most candid manner.

[Hon. W. L. Wilson.]

We have acted honestly, boldly, and unselfishly in framing this bill.

DEMOCRATIC PROTECTION FOR THE SOUTH; DESTRUCTION FOR THE NORTH.

I have not the slightest doubt that Mr. Wilson thoroughly believed himself when he uttered those words, and that they were absolutely true to him, for his want of knowledge of the economic conditions of his country and his utter inability to appreciate an economic fact left him open to the most outrageous impositions by designing persons.

Never were the coarse cottons of the country, now manufactured at the South, any more thoroughly protected than in the Wilson bill.

Florida clay had a duty of \$3 a ton; New Jersey clays free.

Strap iron, for use at the South as cotton ties, came in free, but all other strap iron, for baling hay and all other purposes, had a duty of 35 per cent, and the iron out of which these cotton ties were made had a duty of 35 per cent, which killed the industry in this country.

Northern potatoes and many other agricultural products, a duty of 7 per cent; Southern peanuts, 35 per cent.

Northern grains of all kinds, 20 per cent; Southern rice, 1½ cents per pound, about 84 per cent.

Southern sumac a heavy duty; Southern dressed lumber, dutiable.

That eminent Democrat, Mr. Thompson, president of the lead trust, secured specific duties on lead paints.

The eminent Democrat, Hon. Frank Jones, of New Hampshire, said to be largely interested in building up a Canadian town which manufactures large quantities of lime, secured free lime.

The Hon. Henry L. Pierce, the eminent mugwump from New England, found a duty of from 3 to 8 cents per pound, specific, on manufactured chocolate, cocoa, and broma, and after it was safely in the bill protested against it, but the committee was so impressed by his sincerity that they kept it in the tariff.

Cotton-bale bagging has a specific clause as to custom-house drawbacks not given to grain bags or any other Northern articles.

Tennessee marble, in the rough state, was carefully taken care of by a duty of 20 per cent. Granite, which is quarried in New England, was put on the free list; and so ignorant were they of trade names even, that they put "linen hydraulic hose" in the schedule of "wearing apparel" with a duty of 35 per cent, in section 279 of the Wilson bill, and if their attention had not been called to it in warning, they probably would have put "hydraulic rams" in the clause admitting breeding animals free.

The Wilson bill was sent over to the Senate with a duty of 5 per cent on sole leather and belting leather. A day or two after I noticed this duty I saw the Hon. Thomas E. Proctor, of Boston, the head of the great United States Leather Company Trust, a man who is so fierce a free trader and so opposed to protection that he always declares in conversation that all tariff taxation is but "legalized robbery." Seeing him in Washington, I said: "Well, Mr. Proctor, are you traveling for your health? Do you find the air of Washington, under the dominion of the free-trade Democrats, exhilarating?" "Oh," he said, "I thought I would just run down to Washington for a little rest." In a day or two I saw that they had changed the tariff on sole leather and belting leather from 5 per cent to 10 per cent.

FREE COAL.

How ill informed was the Hon. William L. Wilson of the actual tariff conditions between this country and Canada on a matter generally known to others, is shown by the following quotations of remarks made to correct him in the House on January 27, 1894:

Mr. ALDERSON. Mr. Chairman, I desire to call the attention of the members of the committee, and especially of the gentleman from West Virginia [Mr. Wilson], to the fact that he is mistaken in the statement made by him on January 23 last, that the legislative acts of the Dominion of Canada declare "that when the duty on Canadian coal is taken off by the United States, the duty upon United States coal will be taken off by Canada." In support of his statement, the chairman of the Committee on Ways and Means [Mr. Wilson] quoted the following language from the act of the legislature of Canada:

"Under proclamation of the governor in council, which may be issued whenever it appears to his satisfaction that similar articles from Canada may be imported into the United States free of duty, or at a rate of duty not exceeding that payable on the same under such proclamation when imported into Canada."

I presume the gentleman quotes from section 9 of chapter 33, of the Revised Statutes of Canada for 1860. \* \* \* Mr. Chairman, the gentleman from West Virginia has evidently overlooked the fact that by an act "assented to" May 22, 1888, section 9 before mentioned was amended. I quote from this act, viz:

"Section 9 of the said act is hereby repealed," etc.

As bearing upon this subject I quote a telegram which has been received by Hon. William Lamb from Sir J. S. Thompson, attorney-general of Nova Scotia, premier and minister of justice of the Dominion of Canada:

OTTAWA, ONTARIO, January 25, 1894.

WILLIAM LAMB:

There is no enactment in Canada making free admission of coal a necessary result of the taking off of duty in United States or authorizing governor in council by proclamation to make coal free in Canada.

J. S. THOMPSON.

In the speech made in the House by the Hon. JAMES A. TAWNEY on January 24, 1894, he quoted from a letter written by the Hon. Henry Petit, president of the French committee "appointed to secure the repeal of the McKinley bill." This letter is addressed to the chamber of commerce and syndical chambers of France. In it Mr. Petit says:

I have the honor to inform you that the French committee for furthering the abolition of the McKinley bill was completed November 16, in the sitting held at the Grand Hotel.

The latest communications received from Washington authorize us in thinking that the project in view of a general American tariff abolishing the McKinley bill will be brought forward in December by Mr. William L. Wilson, president of the Committee on Ways and Means of the Congressional House of Representatives.

Our delegate, M. Leon Shotteau, will then be in Washington. \* \* \* He will attend the legislative debates, give us an account of the proceedings, and endeavor to get the desires and wishes which we have imparted to him incorporated in the new law.

#### SENATOR VEST'S STINGING WORDS.

So much for the success which Mr. Wilson attained in "boldly and unselfishly framing the Wilson bill;" but when he said "we," if he meant himself alone, he acted honestly. No man who knows him will doubt his word. No wonder the Hon. GEORGE G. VEST said in the Senate, of his associates, when he saw the Wilson bill Gormanized, in view of the Democratic platform adopted at Chicago in 1893, that "the Democratic party had been nibbled by pismires and kicked by grasshoppers." But when these words were reported to the wage workers of the country, they replied to Mr. VEST: "In your Wilson bill we are bitten by vipers and stung by adders."

The stinging letter of Mr. Carlisle addressed to Senator HARRIS, concerning the tariff, was said to have been written without the President's knowledge, but Secretary Carlisle told Congressman MEYER that he wrote his letter to Senator HARRIS with the full approval of the President, and that the views which he expressed were those of Mr. Cleveland. This statement was published in the Journal of September 13, 1894.

#### DEMOCRATIC OUTCRY AGAINST DUTIES ON WOOL.

The outcry of the Democratic free traders against the duty on wool is one of the curiosities of legislation. What article could by any possibility be selected for taxation that would make the taxes bear most heavily on the North, with its rigorous climate, and rest more lightly on the sunny South than wool, or what article can be selected more meet for taxation as a luxury than carpet wools and carpets? It is believed by those competent to speak upon the subject that 99 per cent of all the increased cost in woolen goods because of a duty of 11 cents a pound on wool has been paid by the people in the northern half of this country. Furthermore, it is believed as well, that nine-tenths of all taxation, all tariff taxation, and all Government taxation of every name and nature is paid by the people in the northern half of this country in the things they consume.

Furthermore, taking the expenditures under the river and harbor bills and under the postal service and on subsidies to railways for fast-mail service in the South, it is believed that three dollars are expended by the National Government in the States south of Maryland and of the Ohio River and east of the Mississippi River where those people in any form whatever, pay into the United States Treasury one dollar. The whole country rejoices in its ability to thus build up the waste places of our common country, particularly the section which suffered so severely and made itself so poor by the civil war. There is nothing that rejoices the hearts of right-minded men in the whole country, and particularly in New England, more than to see the South coming forward and taking possession, as they are, of the coarser manufacturing of the North, driving the North into the manufacture of the finer grades of products, knowing that the South will also soon follow in manufacturing the finer grades, as her mechanics become more and more skilled. This is particularly illustrated in the cases of the products of iron and cotton manufacturing.

#### KEY TO THE PROTECTIVE SITUATION HELD BY THE FARMER.

The key to the whole protective situation, and rightly, is in the hand of the farmer, a considerable part of which is involved in the duty on wool. Under the fostering care of a protective tariff the United States has come to produce one-ninth of all the wool in

the world, and because of the production of so much wool here wool is cheaper to all the wage workers of the world by a very considerable percentage. Destroy the growing of wool in the United States, and wool will cost very materially more the world over. Furthermore, it is of the greatest consequence to the farmer in every respect that he be encouraged in the sheep industry. It gives him not only clothing for his back, food for his mouth, but the keeping of sheep is more enriching to the land than that of any other animal. The following statement is exceedingly suggestive on this question:

#### DEPARTMENT OF AGRICULTURE, OFFICE OF THE SECRETARY.

Washington, D. C., May 25, 1894.

DEAR SIR: In reply to your letter of the 24th instant, the statement which I inclose gives the number of sheep and quantity of wool produced, as shown by each census from 1850 to 1890, inclusive, with the average yield of wool per sheep as computed from these data.

Respectfully,

J. STERLING MORTON, Secretary.

Hon. J. H. WALKER, M. C.,

House of Representatives, Washington, D. C.

#### NUMBER OF SHEEP AND YIELD OF WOOL IN THE UNITED STATES.

The following are the figures on the number of sheep in the United States and the quantity of wool produced, as shown by each census from that of 1850 to that of 1890, inclusive:

Census year.	Number of sheep.	Pounds of wool produced.	Average per sheep in pounds.		
			Census.	S. N. D. North Wool Book, 1892, p. 15.	Wool and Cotton Reporter.
1840.....				1.9	1.9
1850.....	21,723,230	32,516,850	2.43	2.4	2.4
1860.....	22,471,275	60,264,913	2.68	2.7	2.7
1870.....	28,477,651	100,102,387	3.52	3.5	3.5
1880.....	35,102,074	108,481,751	4.79	4.8	4.8
1890.....	635,935,364	165,449,230	4.60	4.55	4.55
1892e.....				4.8	4.8
1893.....				4.5	4.5
1894.....				4.3	4.3

a The quantity set down in the census table is 155,681,751, but a footnote states that this is exclusive of the fall clip of sheep reported on farms in Texas and California, amounting to 13,000,000 pounds. It is also exclusive of certain other quantities, but these were obtained from other sheep than those reported in the table, including 7,000,000 on ranches and ranges whose wool product is separately reported at 34,000,000 pounds.

b Exclusive of spring lambs.

c The number of fleeces shorn in the fall of 1889 and spring of 1890 was 32,123,898, and the quantity of wool stated in the table is given as the product of these fleeces, the average yield per fleece being 5.15 pounds. From this it appears that the average per sheep in pounds for 1890, as shown in the last column of the table, is 0.55 pound below the average for the sheep actually sheared; and it is probable that the average for the other years may be subject to a similar correction.

d 1891.

e Increased clip to each sheep since 1890, two-thirds more.

In view of the fact that goods from European ports can be delivered to ports in this country for an average of about one-half in ocean freights what it costs to deliver the goods from our own factories to the same distributive points, it is believed by the men in this country who from experience and investigation are best competent to give an opinion upon the question that an absolutely free-trade tariff would surrender the whole length of the Atlantic Slope east of the Alleghany Mountains and much besides to European manufacturers of every manufactured product that can be named.

And here I want to call the attention of the House to the singular fact, as showing the different ideas of what is fair as between gentlemen and what is honorable as between parties in a tariff discussion upon the part of Democrats and Republicans, that the Hon. William L. Wilson, chairman of the Committee on Ways and Means, kept his speech out of the RECORD, so that it could not be replied to authoritatively, from January 9 to January 23, thirteen days; the Hon. BENJAMIN MCMILLIN, nineteen days; the Hon. Henry G. Turner, seven days; the Hon. William J. Bryan, thirteen days—all members of the committee, and only Mr. Wilson in bad health—an average of thirteen days; while the speech of the Hon. THOMAS B. REED appeared immediately, as did also that of the Hon. SERENO E. PAYNE; that of Hon. J. C. BURROWS appeared in two days, and the Hon. JOHN DALZIELL in five days, making an average of a little over a day that the Democrats had to wait to know exactly what was said by the Republican members of the committee, that they might make a proper reply. This illustrates the general conduct as between the gentlemen composing the two parties.

#### DEMOCRATIC METHODS.

Again, when the Republican protectionists are revising the tariff the meetings of their committee are open to farmers, wage workers, manufacturers, and all citizens alike. Every citizen is given a reasonable chance to give what information he may have. When the Democratic free traders are framing a tariff they assume that the manufacturers of this country, except a few of the

"democratic persuasion," are thoroughly unreliable, as they call them, and these Democrats do not hesitate to allude to them in their speeches in the most opprobrious terms. It is singular that the man who had more to do with the framing of the Wilson bill than all other men in this country, on the committee or off, was Mr. Jacob Schoenhof, a man in whom the honorable merchants and manufacturers of this country had less confidence as to integrity and fairness, not to say truthfulness, than any other man who could have been found in the land by the most careful searching; and what he gave the committee for truth has been proved over and over to be the exact opposite of the truth; and this is not only a case of error in the framing of the tariff of 1894, but this is the course always pursued by the free traders in revising the tariff.

#### FREE TRADERS SNEER AT PATRIOTISM.

There is no more discreditable chapter in the language than admissions of the Democratic free traders and their repudiating and decrying the noblest of all passions, second only to that of love of parents and children, namely, patriotism, love of country; and in this again is the Hon. George McDuffie their mentor, teacher, and leader, as he is in all free-trade arguments. Listen to the following, from the Boston Herald, deprecating patriotism, in sneering at love of the American flag—the leading free-trade paper of the Northeastern section of our country:

[From the Boston Herald, editorial column, Thursday, December 17, 1891.]

The bill introduced into the United States Senate by Senator Sherman, of Ohio, intending to promote and encourage the display of the flag of the United States, shows that a mania, which we believe had its origin in this part of New England, is threatening to extend all over the country. \* \* \* What is the special gain in this ultra fervid devotion to a mere symbol? Our flag is nothing more than a number of pieces of textile fabric, of three different colors, sewn together for the purpose of making a predetermined combination. \* \* \* So the patriotic ideal is in itself a selfish conception of humanity, unduly exalting one community of the world's people at the expense of all others.

It is also recognized by English statesmen and publicists that free trade is inconsistent with a feeling of patriotism.

#### ENGLISH TESTIMONY.

That the principle of free trade is antagonistic to that of patriotism is boldly stated by W. Peart Robinson, B. A., of Balliol College, Oxford, England, in an article in the Westminster Review, as follows:

Nationalism is (to borrow a Darwinian term) the natural check to free trade, and for this reason, that whereas free trade would commercially benefit the human race probably more than any other measure, if universally adopted, it would correspondingly interfere with the national principle or idea.

It is obvious that the national idea (patriotism, or whatever it be called) militates against the adoption of universal free trade. The desire is felt to nurse home industries with the object of keeping as many persons employed as possible, and so provided with subsistence within the boundaries marked out by this political unit.

Hon. George McDuffie makes the following observations on the subject:

Another specious and imposing argument which has been very successfully used in favor of the protecting system is that it will increase the national independence. This, like the notion of paying tribute to foreign industry, addresses itself to the prejudices of patriotism, and passes current without examination. \* \* \*

Northern manufacturers, \* \* \* as we have heard a thousand times, \* \* \* are waging a great national contest in favor of domestic industries and against foreign industries, and it is gravely contended that every patriot is bound upon his allegiance to take sides with the domestic against the foreign belligerent.

#### COLONIES OF GREAT BRITAIN BELIEVE IN PROTECTION.

Free trade is so repugnant to all national and patriotic feeling that it has steadily lost ground for twenty years. Every colony, even of Great Britain has adopted a protective tariff, even against the mother country. Mr. Gladstone, in a recent speech, most lugubriously says of free trade:

Great Britain remains to-day the solitary adherent.

Never were truer words spoken than that free trade is repugnant to every noble instinct shown in the love of home, love of our native town, of our native city, and of our country.

#### PURE MEN THE SOURCE OF CLEAN GOVERNMENT.

Free traders always assume that they have a right to rule by right Divine, and that all the virtues are theirs alone. Whatever may be their history or experiences, they assume that they "are not as other men are." The Hon. Grover Cleveland, at the dedication of the Mary Washington monument, on Wednesday, May 10, 1894, used the following language:

As a clear and wholesome stream must have its flow from a pure fountain head, so must a clean and beneficent popular government have its source in pure and morally healthy men.

And the Hon. W. C. P. Breckinridge, of Kentucky, on January 11, 1894, remarked:

But, Mr. Chairman, when you go through that great city of Boston, when you see her great buildings, when you see even her schools of charity, and when you go deeper and find that they are based on the tariff on copper, the tariff on this article and that, you can not help having in your heart a certain feeling of regret that those princely fortunes did not rest upon the golden rule of doing unto others as you would have them do to you, instead of upon the principle of getting out of others something for which you gave nothing in return. [Applause on the Democratic side.]

How his pure soul was shocked as he walked the streets of Boston.

And what a shelter the noble sacrifices made by these Democratic statesmen for free trade, make for them in adversity. That they should be bearded in their den and routed by what they call the robber barons, American sharks, and three-card-monte men is very humiliating, as shown by the following words of the Hon. Mr. Breckinridge:

[Newspaper item.]

PROUD OF HIS RECORD.

LAGRANGE, KY., May 28.

Colonel Breckinridge had come from Washington to speak to his friends in Oldham County. In his ten years of service as their Representative there never was a time when he had not tried to serve them to the best of his ability. At the same time he wore no man's collar and he was an enemy of all kinds of jobs. For this he was detested and hated by the monopolists, and this way he had earned the ill will and hostility of the high-protection tariff men.

He said that after the election of Cleveland for the first time the Democratic party presented the spectacle of being unable to support its principles. On the very day the lightning flashed the story of Cleveland's defeat to Washington he pledged to Mr. Cleveland his support years from that time. He told how he talked to the people of seventeen different States, educating them up to the idea of tariff reform, and how this education had caused the people to triumphantly elect Mr. Cleveland for a second term. "They tell you that Charles Stewart Parnell was turned out of Parliament. Can anybody give the name of his successor?"

The speaker then referred to his war record in such a touching manner that many of the old Confederate soldiers present shed tears.

#### FARMERS AND WAGE EARNERS GET THE PROFIT OF PROTECTION.

It is susceptible of proof and has been proved from the public records of the manufacturing industries of this country that every farthing of the advantage that comes to anybody in this country because of protective duties goes into the pockets of the farmers and the wage earners. The profits to manufacturers are not as large as to manufacturers in England. Every speech upon the side of free trade is tuned to the following words of the Hon. Charles F. Crisp, of May 8, 1890, in harmony with all speeches of Democratic free traders:

It is "currently reported and generally believed" that the protected industries of this country contributed a great campaign fund [applause on the Democratic side] and \* \* \* being in power by their aid you propose maintaining the existing unequal and unjust laws to enable these manufacturers to recoup from the people the money "laid out and expended" in your behalf.

All of them are of the same spirit:

[Hon. R. Q. Mills, May 14, 1890.]

If there were anything that we could do by laws to cheapen the price of the manufactured product, the whole manufacturing fraternity of this country would be up in arms on this floor to defeat such a proposition.

[Hon. Benton McMillin, March 11, 1892.]

Mr. McMILLIN. \* \* \* While protection was holding forth one hand with alleged benefits to the people, it had the other thrust deep down in their pockets grasping the last dollar that extortionate greed could wickedly covet.

[Hon. W. C. P. Breckinridge, January 11, 1894.]

I do not mean to say that it [protection] does not give a certain market. Indubitably inside of the circle, within the barrier, the shark can fatten himself on the smaller fish. But if you give the same shark the wider market, being an American shark, my judgment is that soon he will feed as well or better on the foreign fish than he now does on the home fish in the American market. [Applause on the Democratic side.] I have not the slightest prejudice—

Mr. WALKER. Will the gentleman allow a question?

Mr. BRECKINRIDGE of Kentucky. Yes.

Mr. WALKER. I would like to ask the gentleman who he alludes to when he speaks of the "American shark."

Mr. BRECKINRIDGE of Kentucky. I beg the gentleman's pardon. I did not mean to hurt his feelings, at any rate. [Laughter and applause on the Democratic side.]

Mr. WALKER. I ask the gentleman from Kentucky if he considers that a proper answer to an entirely candid question?

Mr. BRECKINRIDGE of Kentucky. Well, the gentleman and I will not quarrel about whether it is not, as I have but little time.

Mr. WALKER. Being an American manufacturer, and being one of the gentlemen who helped make these tariffs, I ask the gentleman from Kentucky if he includes me in the number?

Mr. BRECKINRIDGE of Kentucky. If you are within the description that I gave, it is with exceeding great regret that you have drawn your own picture. I did not do it. [Applause and laughter on the Democratic side.] I have said nothing, Mr. Chairman, that was personally offensive to anybody. I trust that nothing I shall say will be held personally offensive.

[Hon. D. W. Voorhees, April 2, 1894.]

Sir, for no earthly consideration would I paint an unjust or overwrought picture of the dangerous pretensions and intolerable arrogance of accumulated wealth now manifest in this country. \* \* \* So unjust, relentless, unsparing, insolent, and brutal has been the money power in these later days, and indeed for years past, that rather than leave them unsaid I would cheerfully leave my seat on this floor to be occupied by some one else. \* \* \*

The people from this time forward, more than ever before, will organize and take rapid and heroic measures against the continued and brutal dictation of the plutocracy, against the paramount influence of wealth, against the rule and supremacy of the rich in shaping the financial policy of this Government in their own interests. \* \* \* All history shows that not a dollar extorted by the tariff ever goes beyond the pocket of the protected manufacturer.

I will not stop to consider at this point the vast individual robberies committed in protected markets, the untold and incalculable millions of black-mail levied by American manufacturers for their own pockets. \* \* \*

He now stands not only revealed, but confessed as a giant robber, a predatory monster, obstructing the highways of legislation and challenging legislators themselves to stand and deliver. \* \* \* The lowest depths of human depravity may be raked in vain for a baser or more infamous scheme by which to obtain money dishonestly. \* \* \* Not more than four days in the week belong to the laborer himself under tariff laws as they now stand; every hour of the other two days are absorbed in paying the manufacturer's increased prices on the necessities of life which a protective tariff guarantees.

[Hon. George McDuffie.]

You openly and unblushingly perpetrate plunder, and consecrate the outrage by calling it protection!

#### A REPETITION OF M'DUFFIE'S SPEECH.

[Hon. Roger Q. Mills, May 7, 1890.]

Mr. MILLS of Texas. This bill is the first in the history of the Government that has come before the American people with its mask thrown off and with the audacity of a highwayman demanding that the people shall throw up their hands and surrender their purses. \* \* \* Will it feed more mouths? Will it clothe more backs? Will it give more shelter to their heads to stop them from marketing the produce of their labor? \* \* \*

[Hon. Henry G. Turner, May 19, 1890.]

Mr. TURNER of Georgia. Up near the throne is an abundance of money and to spare, while in the provinces there is a famine. I ask, sir, in that condition of affairs, how would any respectable tyrant on the face of the earth treat his revenues? If he would not release the unnecessary taxes to his subjects, or should undertake to confer them on favorites, he would commit a crime for which many a king has lost his crown and for which many a fair country has lost its best promises. [Applause on the Democratic side.] And Republican statesmen in the pending bill have committed that crime in a free country! They propose to take off the sugar duty, nine-tenths of which goes into the Treasury, and put it where nine-tenths of it will go, not into the Treasury, but into the pockets of favored individuals. \* \* \* Making \$27,000,000 as the measure of the bounties paid last year to our manufacturers. \* \* \* an annuity computed at the Government rate of interest, the principal of that annuity would amount to \$6,200,000,000. \* \* \* The moderation of this estimate of protection no man will deny. \* \* \* The present system \* \* \* is brigandage without reciprocity.

#### SPEAKER RANDALL OSTRACIZED BY FREE TRADERS.

The intolerance of these men spares neither position nor fame. Because the Hon. Speaker Samuel J. Randall would not wreck the industries of his country by voting for the free-trade tariff of his associates in the Fiftieth Congress, his fellow-Democrats ostracized him, and this treatment of him by them had a considerable share in hastening him to his grave. The Hon. ROGER Q. MILLS objected to granting him an extension of time to finish a speech, which was then being freely granted to all the leading members on both sides of the House, until Major McKinley shamed him into it by granting Mr. Randall a portion of his own time. This is an exceptional case, to be sure, but it shows what an intolerant spirit is shown toward protectionists.

These men really believe that the commerce of this country wholly depends upon cotton, rice, and tobacco, and that did we not raise cotton, rice, and tobacco we could hardly have attained a respectable position as a nation. Like the barbarian, proud of his full dress composed of a breechcloth, with rings in his nose and ears, and feathers in his hair, they strut about denouncing protectionists as dishonorable, robber barons and American sharks. The following extracts from their speeches will give some little idea of their comprehension of modern commerce and civilized conditions:

[Hon. George McDuffie.]

If there were no such products in the United States as cotton, tobacco, or rice, would not the protecting system be downright nonsense, a mere impotent monument of human folly? How could the people of the United States obtain foreign manufactures when they had nothing wherewith to pay for them?

[Hon. Henry G. Turner, September 27, 1890.]

In return for that cotton which goes abroad we receive those importations of merchandise from the duties on which is derived the chief portion of our revenue.

[Hon. George McDuffie.]

I would ask the gentleman from Massachusetts what harm the Manchester manufacturer, with his 10-cent calico, could possibly do him, with his calico of the same quality at 20 cents, if there was no domestic production of the United States that could be exchanged in England for the former? \* \* \*

It is a contest between the domestic producer of the article, which is exchanged for the foreign manufactures, and the domestic manufacturer. \* \* \* The real parties to this contest \* \* \* are not the foreign manufacturers and the domestic manufacturers (for these can come in conflict only in foreign markets), but they are the planters of the South and the manufacturers of the North.

[Hon. W. C. P. Breckinridge, January 11, 1894.]

I represent a section nearly all of whose products have their price fixed in a free-trade market. The price of that cotton bale is fixed at Liverpool. \* \* \* Our tobacco, enough of it exported abroad for some of certain qualities to have their prices fixed abroad. Our wheat has its price fixed in Liverpool. Is it asking too much that you give to the grower of wheat, cotton, and tobacco the same market in which to buy as that in which he sells?

Now, I plead for a home market in its true sense. I plead that the sweat which is necessary to make a home comfortable shall buy where it sells, on the same basis and under the same advantages. [Applause on the Democratic side.] And that is what this bill does.

#### TAXATION AN INDEX TO CIVILIZATION.

If there is one fact any more clear than another to the economists of to-day, it is that the very conditions of civilization are those of taxation and of interindebtedness. The degree of civilization of a community is largely shown by the rate of taxation which it imposes upon itself in order that every man in the community may enjoy all the substantial advantages open to any part of the community and the interindebtedness of the people. The

taxation in Massachusetts of every name and nature in 1891 was \$38,121,229, which is equivalent to a taxation per capita of \$17.02, or on a family of five of \$85.10, and yet there is scarcely a speech of the free-trade Democrats that does not go to the point of declaring all taxation an evil and little better than robbery.

The following words of Hon. George McDuffie and of Hon. Henry G. Turner vary but little upon this point:

[Hon. George McDuffie.]

To what charter, human or divine, can you appeal for the power of taking away the property of one man for the purpose of giving it to another? No government on the face of the earth ever had or can have the right to exercise such a power, either directly or indirectly, openly or in disguise.

[Hon. H. G. Turner, January 13, 1894.]

Mr. Chairman, what is taxation? In its last analysis, taxation is confiscation, by the Government, of the property of the citizen. \* \* \* And protection is power conferred on individuals to confiscate the property of their neighbors! The one is a burden; the other is robbery! [Loud applause.]

Their ideas of the conditions upon which trade exists between countries are equally crude, as is shown by the following quotations from their speeches:

[Hon. George McDuffie.]

That every prohibition of importation is a prohibition of exportation. \* \* \* It shall assume \* \* \* annually send to Liverpool cotton, tobacco and to the amount of \$50,000 and convert them into cotton and woolen goods. \* \* \* There is not a single fiber in the whole mass that is not the product of American industry.

Duty (I will suppose) of 40 per cent. The whole duties would amount to the enormous sum of \$30,000. \* \* \* The great and patriotic ground upon which they are levied is that it is deemed quite injurious to the wealth and prosperity of the free States of the North that you should undersell their manufactures. \* \* \*

It is obviously immaterial to them whether the duties are levied on the productions of their industry, when they exist in the form of cotton and rice, or after they have been transmuted by exchange into manufactures. \* \* \*

An import duty on the manufactures they obtained would be a tax upon them as producers, precisely as if an export or an excise duty had been laid upon their cotton, tobacco, or rice. \* \* \*

The people of the South (whether correctly or not I will hereafter consider) are firmly impressed with the belief that, under any system of duties, while the revenue is derived almost exclusively from imports, their proportion of the burdens imposed by Federal taxation will be much greater than it ought to be according to the principle of the Constitution, which regulates the apportionment of direct taxes. \* \* \*

I will suppose forty out of every hundred bales of the goods into which they had converted their cotton were taken. No one could fail to perceive that the system of protecting duties would be as unjust, unequal, and oppressive as the wickedness of man could make it.

[Hon. Charles F. Crisp.]

If he buys his goods abroad and pays the duty, it goes into the Treasury of the United States and is called a tax; if he buys the goods at home and pays the increased price that is put upon them by the tariff, it goes into the pocket of the protected manufacturer and is called "protection." [Applause.] \* \* \* I can show you—I think I can demonstrate clearly—how the tariff hurts them; and I defy any of you to show wherein they are benefited by a protective tariff.

Suppose a farmer in Minnesota has 5,000 bushels of wheat and a farmer in Georgia has 100 bales of cotton. That wheat at 80 cents a bushel is worth \$4,000, and that cotton at 8 cents a pound is worth \$4,000. Let those producers ship their staples abroad. \* \* \* The wheat and the cotton are sold in that free-trade market. The wheat is sold for \$4,000; the cotton brings the same amount. The Minnesota farmer invests the \$4,000 he has received for his wheat in clothing, crockery ware, iron, steel, dress goods, clothing—whatever he may need for his family in Minnesota. The Georgia cotton raiser invests the proceeds of his cotton in like kinds of goods. Each of those men ships his goods to this country, and they reach the port of New York. When either undertakes to unload them, he is met by the collector of customs, who says, "Let me see your invoice." The invoice is exhibited, and it shows \$4,000 worth of goods.

Those goods represent in the one case 5,000 bushels of wheat; in the other case 100 bales of cotton. The collector at the port says to either of these gentlemen—the man who raises the wheat in Minnesota or him who raises the cotton in Georgia—"You can not bring into this market those goods for which you have exchanged your products unless you pay to the United States a tariff fixed by the McKinley law—a tax of \$2,000." \* \* \* You can not convince that unrighteous United States officer that the foreigner is to pay that sum of \$2,000; he requires the Minnesota farmer or the Georgia farmer to pay it. What is the result? The goods that cost either of these men \$4,000 without the tariff cost him \$6,000 with it.

In 1892, under the McKinley bill, there was imported into the United States 48,000 pounds of woolen and worsted cloth, of the value of \$13,000. The duty on that cloth was \$21,000. If the foreigner paid the tax, he paid more than \$21,000 for the privilege of selling to the American people \$13,000 worth of goods [applause on the Democratic side]; and the foreigner "he paid the freight." [Laughter.] What nonsense this is!

Restrictive protective tariff forces the American people to buy in the highest market on earth and forces the great agricultural class, which exports \$700,000,000 worth of their products every year, to sell in the cheapest markets of the earth. [Applause on the Democratic side.]

[Hon. R. Q. Mills.]

To check importations is to check exportation. \* \* \* No man can call to mind a trade where each did not give something in exchange for that which he received.

These statements are conclusively disputed by the figures from the United States Statistical Abstract given by me in a speech delivered in this House on March 24, 1897.

It will be seen that the value of agricultural products exported per capita in 1890 was less by one-eighth than in 1880. The increase in wages and the employment of every one of our people who desired employment so increased the American market for agricultural products that a very much larger share of them was

consumed in our own country, but the value of manufactures exported in 1890 is shown to be more than one-ninth more than in 1880. This came from the cheaper cost to the manufacturer and to the community of products under a protective tariff, which is something free traders never can comprehend. As our factories were run full and the "fixed charges" were not materially increased, the cost of each unit of product was very materially reduced, as is always the case under a protective tariff, and therefore we were enabled to compete with the foreign manufacturer on many kinds of manufactured articles. This enabled us to export them in competition with the foreigner.

*Exports of domestic manufactures and products of agriculture.*

	1880.	Value per capita.	1890.	Value per capita.	Increase per capita.	Loss per capita.
Agriculture.....	\$686,000,000	\$13.72	\$799,000,000	\$12.10	.....	\$1.62
Manufactures.....	103,000,000	2.06	159,000,000	2.40	.....	.....

*PROTECTIVE TARIFF INCREASES BOTH EXPORTS AND IMPORTS.*

The ridiculous theory that taxation of imports is equivalent to the taxation of exports is one of the cardinal doctrines of the free traders, and yet it is a fact susceptible of ample proof that the protective tariff always increases both imports and exports, because it increases the wages and incomes of our people and increases the number employed, and thus increases the money the people have to spend. The following table is a conclusive answer to these statements of the free traders:

*Table showing excess of imports over exports in fourteen years, under the free trade tariff of 1846; also the excess of exports over imports under protective tariff, 1879 to 1892; also total commerce for each period; also each item per capita.*

	Free trade, 1847-1860.	Protection, 1879-1892.
Population.....	26,000,000	57,000,000
Foreign commerce.....	\$6,496,795,734.00	\$30,830,108,429.00
Commerce, per capita.....	249.87	535.26
Excess of imports.....	404,888,581.00	.....
Excess of imports, per capita.....	15.57	.....
Excess of exports.....	.....	1,435,008,521.00
Excess of exports, per capita.....	.....	25.17

This table is in harmony with what always prevails under a protective tariff, and is a conclusive answer to the statement that "we can not export if we do not import." A protective tariff always increases both. In fact, the history of every country shows that there is not in the record of the commerce of the countries of the world the slightest ground for any such declaration.

*MCKINLEY PROSPERITY OF 1892.*

While the McKinley bill was under discussion in the House, the Hon. ROGER Q. MILLS, of Texas, made the following observations:

If our friends push their doctrine a little further, the smokestacks in Pennsylvania will have to be utilized as observatories to study the laws that govern the heavenly bodies.

The gentleman from Ohio [Mr. McKinley] asked was the foreign market better than the home market? Who was ever fool enough to answer that it was? The answer that Democrats give is that the home and the foreign market is better than the home market. [Applause on the Democratic side.]

And yet the result of that tariff was that the year following it, and up to the time of the election of a free trader and the threat of a free-trade tariff in 1892, it is conceded by all, were the most prosperous years that this country ever saw. The following circular shows the condition in which England was during the same year that this country was enjoying a prosperity never before known by any country:

66 STATE STREET, Boston, January 6, 1894.

*CONDITION OF THE COTTON-SPINNING INDUSTRY IN ENGLAND.*

The balance sheets of 93 corporations in Oldham, England, for the year 1893, show that 31 companies made profits aggregating £31,876 16s. 5d., and 62 corporations showed losses of £104,844 12s.

So that the final results show a net loss for the year of the 93 companies amounting to £72,967 15s. 6d.

The bad condition in which the business has been getting may be judged from an examination of the balance sheets for the past four years:

	£	s.	d.
At the end of 1890 only 8 of the companies had adverse balances, amounting to.....	8,412	0	0
At the end of 1891, 49 companies showed adverse balances of.....	142,767	4	5
The adverse balances of 67 corporations at the end of 1892 amounted to.....	209,252	12	4
At the end of 1893 the adverse balances of 63 companies were.....	306,800	14	6 1/2

FRANCIS E. BACON & CO.

In this same year our mills were more prosperous than ever before in the history of the country, and the consumer got his goods cheaper than ever before.

*THE "CHINESE WALL" OF PROTECTION.*

A great deal is always heard about a protective tariff being a Chinese wall:

[Hon. Benton McMillin.]

We pledged them that the doctrines promulgated by the authors of the

present law—the doctrine of exclusion and of the destruction of commerce—should no longer prevail.

[Hon. Charles F. Crisp.]

The idea of our Republican friends of an American system is a Chinese wall that will force our people to trade with themselves, and not permit them to trade with anybody else.

And yet our total foreign commerce in the last year, uninfluenced by political tariff discussion and legislation, compared with the most normal year under the McKinley bill—1892—was as follows: In 1892 our imports and exports were \$1,858,000,000, while in 1889 they were \$1,488,000,000, showing a gain of \$370,000,000, or an increase of very nearly one quarter, and our exports exceeded our imports by \$203,000,000, more than one-third more than our imports. In 1892 our exports of agricultural products were \$799,000,000, while in 1889 they were only \$532,000,000, an increase of more than one-half in exports of agricultural products. In 1891-92 our domestic manufactures that we exported were \$327,000,000; in 1888-89 they were \$269,000,000, an increase of more than one-fifth.

For the fourteen years of the free-trade tariff of 1846 our foreign trade was \$17.08 per capita; for the fourteen years from 1876 to 1890, under protection, they were \$25.20 per capita—more than half as much again—and under the McKinley bill it went up \$3.12 more than in the figures given. How utterly every statement of the free traders is at variance with fact! By the statement of the London Fair Trade Journal of July 1, 1892, English trade had fallen off \$55,000,000 in six months, and yet the Democratic free traders assert just as confidently as ever, and will continue to while their breath holds out, that a protective tariff destroys trade and a free-trade tariff for this country increases it—exactly contrary to facts.

*TAXATION IS BENEFICENT.*

Taxation is but the expending by the Government of that portion of the money of the citizens that the Government by aggregating the part taken in taxes can secure more comforts and luxuries and happiness for the citizens than each and every citizen could secure for himself in expending the same amount of money by himself alone, and yet this great fact of the necessarily increasing expenditure by the aggregate of the people through their Government as civilization advances, is never realized by these free traders. Note the remarkable coincidence in the words of the Hon. Charles F. Crisp and the Hon. George McDuffie and Hon. BENTON McMILLIN on this question:

[Hon. C. F. Crisp.]

And we propose to meet the other deficiency in the good old Democratic way—by reduction of expenditures. [Loud applause on the Democratic side.]

[Hon. George McDuffie.]

If I should ever return to this body, I intend to propose a general system of retrenchment and economy, \* \* \* to insist that the aggregate burden of taxation shall be as light as possible, and that not a dollar shall be expended by the Government that can be avoided by a rigid economy.

[Hon. Benton McMillin.]

Sir, it is the result of that general and useless extravagance which characterized the Fifty-first Congress, by which for the first time in the history of this Republic the expenditures were carried to \$50,000,000 a year, and that reckless waste which was more prodigal than would have been attempted or thought of by the "prodigal son."

[Hon. George McDuffie.]

Free trade is the great doctrine of political reformation in modern times.

I desire again to call the attention of the Democrats in this House to the wonderful prosperity the country showed in 1892, brought to it by a protective tariff, as proved by every publication which shows the condition of manufacturing and trade in the country.

How certain these Democratic free traders are that the protective tariff is not a means to raising wages! The declarations of the Hon. William L. Wilson and the Hon. Charles F. Crisp on this point are peculiarly interesting to men actually engaged in manufacturing, men who know the advantages to the workingmen of a protective tariff:

[Hon. W. L. Wilson.]

Protective tariff does not help to raise wages. The only protection to labor is in its trades unions. What hope is there in a labor strike when the supply exceeds the demand?

The iron and steel organization declared the Carnegie troubles a rebellion of organized labor against the manufacturers.

Not protective tariffs but the general intelligence of the people determines the rate of wages in a country.

[Hon. Charles F. Crisp.]

High wages in this country, Mr. Speaker, are more dependent upon the independence of the laboring men, upon trades unions, upon labor organizations, upon the intelligence and capacity of the American laboring man to demand his rights than they are upon any protective tariff. [Applause on the Democratic side.]

The American laboring man wants what? He wants steady employment at reasonable wages.

*DIRE RESULTS OF THE WILSON TARIFF.*

The fact that wages have been reduced, idleness has been brought to hundreds of thousands of workingmen, and the low price of products, and especially farm products, under the Wilson tariff

that has compelled the manufacturers to reduce wages or to close up their mills and factories, is a conclusive answer to these men.

Finally the struggle of the free-trade Democrats to divest themselves of the responsibility of causing every serious financial and industrial crisis but one that this country has ever seen is really pitiful. After the threat of secession by South Carolina and the return to Congress of her Representatives, it is as clear as that the sun shines at noon time that the tariff reduction of 10 per cent each year, secured by them, in its operation closed the mills, factories, and workshops of this country, throwing capital out of use, wage earners out of work, and that the course of wild speculation that culminated in 1857 was the legitimate fruit of that act in the struggle of idle capital to find profitable employment. It is equally true that the tariff of 1846 was the direct cause of the industrial depression and financial panic of 1857.

## TARIFF OF 1846.

The Mexican war of 1846, the Irish famine of 1847, the discovery of gold in California in 1849, the Crimean war in 1855-56, as has been said before, made a tremendous market for our products and obscured the real effects of that tariff from our people for a long period, but it thoroughly prepared the conditions in the country, by closing the mills and workshops and throwing operatives out of employment, for the disastrous effect upon us of the failure of the crops of the farmers in 1857. If the country had been normally prosperous in the years previous to 1857, the destruction of the products of the farmer in that year would have affected it but little as compared with the results produced.

## CRISIS OF 1873.

The commercial and industrial crisis of 1873 resulted from the issue of the greenback and the depreciation of our currency and the struggle to resume specie payments, but the cost of foreign goods because of that depreciation at first was enormously increased and then reduced, as is shown by the following table:

Year.	Average premiums on gold.	Average rate of duties collected in gold.	Amount of premium in currency on duties collected.	Amount of premium paid on price of goods.	Total per cent currency duties paid and currency premium on price of goods.
	Per cent.	Per cent.			Per cent.
1862.....	17	36.19	\$0.062	\$0.17	59
1863.....	47	32.62	.153	.47	95
1864.....	118	36.69	.43	1.18	198
1865.....	81	47.50	.386	.81	167
1866.....	46	48.33	.222	.46	117
1867.....	39	46.67	.178	.39	103
1868.....	41	48.63	.190	.41	110
1869.....	41	47.22	.194	.41	108
1870.....	16	47.08	.075	.16	71
1871.....	12	43.75	.062	.12	61
1872.....	12	41.35	.05	.12	59
1873.....	12	38.07	.064	.12	58
1874.....	11	38.53	.042	.11	54
1875.....	17	40.62	.069	.17	65
1876.....	11	44.74	.049	.11	61
1877.....	5	42.89	.021	.05	50
1878.....	1	42.75	.004	.01	44
1879.....		44.87			44.87
1880.....		43.48			43.48

As the increase of price by the tariff of any part of goods imported had we been on a specie basis during this period, would have been about 44 per cent, but from the depreciation of the currency was carried up in 1864 to 198 per cent, and wages partially carried up in proportion, the wages in this country were then so high that when the cost of foreign goods to the purchaser in 1873 was reduced to only 58 per cent, American mills were closed, and the wage earners were thrown out of employment. Foreign goods then took the place of American goods. This had the same economic effect on the country—until wages were reduced about 10 per cent in 1878, and our mills were again started up—as the adoption of a Democratic free-trade tariff has always had.

## THREAT OF FREE TRADE PRODUCED THE PANIC OF 1893.

That the financial and industrial panic of 1893 was the direct result of the threat of a Democratic free-trade tariff seems beyond all question, and yet all free-trade Democrats' brains are as fertile in finding reasons other than the true reason for that disaster as they ever have been for every one of the preceding, extended, and fearful financial and industrial depressions, and this notwithstanding the fact that every one that has come upon us, except that of 1873, was under a Democratic free-trade tariff and under a Democratic Administration. They prove themselves in no way responsible for the ills their country has suffered from their legislation as conclusively and as satisfactorily to themselves as the Hon. ROGER Q. MILLS, of Texas, and the Hon. BENTON McMILLIN, of Tennessee, succeeded in proving what the labor cost of manufactured articles in this country is as shown by the figures given in the census. That the census maker's figures have

no legitimate connection with and are not taken from manufacturers with a view of their giving any solution to the actual labor cost of the articles they relate to, except in the mills in which they are given and for the work done upon the article in each particular mill, and not with reference to the labor cost of the manufactured articles from the primal raw material to the finished product, is entirely clear to all except to the Hon. ROGER Q. MILLS, the Hon. BENTON McMILLIN, and their confederates.

## The Tariff.

## SPEECH

OF

HON. THEOBOLD OTJEN,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. OTJEN said:

Mr. CHAIRMAN: This bill under consideration has two purposes—first, the raising of sufficient revenue to meet the necessary expenses of the Government; second, the encouragement and promotion of new industries and the protection of those which are already established throughout this country. That there exists a necessity for raising more revenue with which to pay the ordinary and necessary running expenses of the Government I think can not be questioned by any intelligent man, in view of the fact that since the coming into power of the Cleveland Administration, with its avowed free-trade policy, the running expenses of the Government have exceeded its income by the aggregate sum of \$293,811,729. The deficiency is as follows:

For the fiscal year ending June 30—

1894.....	\$69,803,200
1895.....	43,805,223
1896.....	25,293,246
1897 (estimated).....	65,000,000
Total deficiency.....	203,811,729

This deficiency has been made up by the sale of Government bonds amounting to the sum of \$262,315,400, from which the Government has realized \$293,481,894. This condition of affairs could not long continue. The individual who from year to year expends more than his income is on the road to inevitable bankruptcy, and the same rule holds good when applied to nations. Those who oppose this bill assert that by a proper exercise of economy the running expenses of the Government can be reduced and brought within its present income; that increased revenue is not needed.

It is easy to cry "Economy!" but how will you economize? Where will you begin? A hundred and forty-one millions of dollars is paid annually in pensions to the defenders of this nation. Will anyone say that we can or should economize in this particular? You can reduce the running expenses of the Government if you stop building a navy, if you stop building coast defenses, if you stop improving the great waterways of commerce. I do not believe that the enterprising, intelligent American citizens wish Congress to adopt such a policy. I do not believe they wish us to stop building a navy—one sufficiently strong to protect the rights and interests of American citizens abroad. I do not believe they wish us to leave twenty-seven of our great cities defenseless and at the mercy of a foreign foe. I do not believe they wish us to suspend the needed public improvements of this country. I do not believe that because times are hard they wish us to make them still harder by stopping all public works. What they do demand, and what they have a right to demand, is that every dollar of public money shall be honestly and economically expended, and no money expended upon useless improvements; that strict economy shall prevail in all the departments of the Government, consistent with the due and proper administration of public business.

It is conceded by all that the bulk of the revenue necessary to pay the running expenses of the Government should be collected upon imports, but as to the policy in levying this duty there is a radical difference between the two great parties. The Democratic party believes in free trade, or a tariff for revenue only, while on the other hand the Republican party believes in levying this duty on imports in such a way that it will bring sufficient revenue to meet the needs of the Government and at the same time retain the markets of America for our own people and afford protection to our industries.

The Republican party believes in levying a duty which shall be equal to the difference in wages paid here by our manufacturers and producers and the lower wages paid by the manufacturers and producers abroad, thereby placing our people upon the same level

with their foreign competitors. Protection should be the policy of this country as much as free trade is the policy of Great Britain. Great Britain maintained a protective policy until she had built up her vast industries. England, being a small country, was forced to seek a foreign market in which to sell her goods. Then she became the champion of free trade. It is wisdom upon her part to advocate that policy, but with us the conditions are entirely different.

We have within our border the greatest market in the world; we have a country diversified in soil and climate, rich in mineral and agricultural resources; a great empire of forty-eight States and Territories in which trade is as free as the air we breathe; free trade among 73,000,000 people, a people who consume more, many times, than any people on the face of the earth. Why should we let the foreigner trade free in our markets? Would Great Britain, France, or Germany do it if they had our great market? I think not. Why should we let them enter our market free? The foreigner pays none of our taxes; he does not help to maintain our Army or Navy; he does not help to build our public buildings; he pays none of the numerous expenses of our Government, nor does he owe any obligations to it. He comes simply to sell his goods in our market for his own gain, then takes his money out of the country to a foreign land, where other people will receive the benefit therefrom. A tariff is simply a toll collected from the foreigner, a license fee for the privilege he enjoys of selling his goods in our market.

It is a fact easily demonstrated by past history that low tariffs lead to panics and hard times. Practically all the panics and periods of hard times have taken place under low tariff rates. It is also true that a high rate of duty, properly adjusted and distributed, will bring prosperous times and sufficient revenue for the Government. Practically all the good times this country has ever had have been under a high protective tariff. From 1821 to 1838 the average tariff rate, taking into account all imported goods, both free and dutiable, was 34.55 per cent per annum. During this period good times prevailed in this country and the Government paid off practically all of its indebtedness. Regarding the prosperity of this period, President Andrew Jackson said, in his annual message, in December, 1832:

Our country presents on every side marks of prosperity and happiness unequalled, perhaps, in any other portion of the world.

In 1828 the free trader made an attack upon this tariff. Hot-bed methods of building up our industries were denounced. A reduction of one-tenth per annum was made until all the duty above 20 per cent should be reduced to that figure, making the average duty per annum, between 1834 and 1843, 17.09 per cent, being a reduction of over 50 per cent from the rate of duty existing in 1828.

The result was that it brought a large balance of trade against us, and the panic of 1837, with idle factories, men out of employment, and general poverty of the people. These hard times and the financial distress continued until 1844, when new and increased tariff rates were put in force. The new tariff rate of 1844 to 1856 increased the average tariff rate from 17.09 per cent to 23.46 per cent. This tariff rate was not sufficiently high to properly stimulate our industries; yet that, taken together with the Crimean war and the gold discovery in California gave this country a fair degree of prosperity.

Manufacturers were not prosperous, and have never been excepting under a Republican protective tariff. Farm products brought a fair price; labor could find employment at moderate rates then prevailing, and a fair degree of prosperity prevailed, notwithstanding the large balance of trade against us. As if to make ruin and bankruptcy the more sure, the free traders secured a reduction of the low rate of 23½ per cent tariff, making the average tariff rate between 1856 and 1861, 16.32 per cent, and the inevitable result came, bringing the panic of 1857. President Buchanan, in his message to Congress says officially of this disastrous free-trade period:

With unsurpassed plenty in all the productions and all the elements of natural wealth our manufacturers have suspended. Our public works are retarded, our private enterprises of different kinds are abandoned, and thousands of useful laborers are thrown out of employment and reduced to want. We have possessed all the elements of material wealth in rich abundance, and yet, notwithstanding all these advantages, our country in its monetary interests is in a deplorable condition.

From 1863 to 1872 we had an average tariff rate of about 40 per cent. This was during the civil-war period, and, although the balance of trade was against us, yet this tariff helped materially to mitigate and reduce the great burdens entailed upon the Government by the war, by yielding to it a large revenue. In 1870 to 1878 came tariff reductions, amounting to 17 per cent. These reductions, on account of the war prices then prevailing here, gave the foreign manufacturer a great advantage over our own producer, and produced an enormous adverse trade balance against us in 1872-73 of \$290,000,000. This, added to our already burdensome foreign debt and the loss to our manufacturers and merchants and their inability to meet foreign competition, brought on the panic of 1878.

Our return to specie payments was an element in it, but the

heavy reduction of duty was a sufficient cause for the panic. The average of duty between 1873 and 1890 was 29.70 per cent. The country gradually recovered from the panic of 1873 and entered upon a period of great prosperity. The balance of trade during this period was in our favor by the great sum of \$1,376,000,000. Railroads were built, manufactories increased at an unprecedented rate, employment was abundant, and wages were never higher. Prosperity prevailed among all classes.

In 1890 the tariff was again reduced, with a view of reducing the rate of duty, so as to satisfy the clamor of the free trader, by the act known as the McKinley law, a law which was woefully misrepresented and led people to believe that it was a very high protective measure. The duty collected under the McKinley tariff from 1891 to 1894 averaged 23.72 per cent, a reduction of nearly 7 per cent from the prior tariff rate. Until the election of 1892 we enjoyed a degree of prosperity never before seen in this country or any other. The balance of trade in our favor in 1891 and 1892 was \$243,440,300. But Democracy and free trade were voted into power in 1892, and, as usual, panic and hard times followed.

Little attention had been paid by the people prior to the election to what was contained in the Chicago platform of 1892. As soon, however, as it became known that the Democratic party was to be in control of the Government on and after March 4, 1893, the country suddenly remembered the free-trade platform of the Democracy and became thoroughly alarmed. No one could tell what that party would do with the tariff, whether they would reduce the rate of duty 25 per cent or 50 per cent or would adopt free trade. The country was in a state of uncertainty, and was kept in suspense for eighteen months; business could not prosper under such uncertain conditions. As a result, merchants and wholesale buyers ceased to buy their usual stock of goods, buying only such amount of goods as they could dispose of from day to day, no more than what would supply the present demands of business. Those who had large stocks of goods on hand made haste to reduce them, for no one could afford to have a large stock of goods on hand and have the party in power, by its legislation on the tariff, reduce the value of every dollar of it.

The same state of affairs was true as to the manufacturer. No manufacturer would manufacture goods to keep in stock, but ran on actual orders only. This drawing in and slacking up by the merchant, wholesale buyer, and manufacturer gradually brought on stagnation in business and the panic was the result. It was the radical free-trade Chicago platform, with the knowledge of the people that the Democratic party had the power to carry it out, that brought on the panic of 1893, with its long train of hard times, closing factories, idle men, and bankruptcy. Mr. T. B. Walker, of Minneapolis, Minn., gives a concise summary of tariff changes and their effect, which I here quote:

It will be observed that the panics come always in periods of reduced tariff. In 1837 is shown the lowest percentage of duties collected in the history of the nation, being less than 14 per cent. This low rate was undoubtedly exaggerated a little by the hard times which, as usual, necessitated purchasing lower-priced goods that are charged with a smaller percentage of duty. The tariff rates during the whole period from 1834 to 1843 average but a slight fraction above 17 per cent, making 17½ per cent reduction from the average of the preceding period. In 1836 the imports ran up to \$10.44 per capita, which was the highest rate that had been shown in our history to that time, and the largest for many years afterwards. The balance of trade for that year was \$52,000,000 against us, being more than double the balance for any year to this time, or that occurred again within the sixteen following years.

These extraordinarily large imports in 1836 were preparatory to the crash of 1837. A nation may as readily bring financial troubles as a business firm by purchasing more than its available means will warrant. The panic of 1857 came in the fourth period, when the average tariff was only 16.37 per cent, the lowest rate for any period. It averaged a little lower than the second period, although in 1837 the rate for that year ran lower than for any year in this fourth period. The imports for several years previous to 1857 ran higher than at any other time in our previous history. The balance of trade during this fourth period showed a balance of \$174,000,000 against us, or an average of \$1.14 per capita.

The panic of 1873 came after four reductions had been made in the tariff rates, in 1870, 1871, 1872, and 1873, amounting to 17 per cent. This did not bring the rates as low as they had been in three of the four periods previous to the war, yet it placed our manufacturers and business men at such a disadvantage that they were unable to compete with foreign productions of goods, as wages, interest rates, and other expenses could not be reduced rapidly enough to meet the tremendous advantages given to Europe, and enormous importations of merchandise was the result. The imports for 1872 were \$13.80 per capita, being the highest rate in the whole of our tariff history before or since, excepting only the figures for 1873, which were \$15.91, or \$2.11 above the extraordinary rate for 1872. The balance of trade against us in 1872 was nearly \$132,000,000, while in 1873 it reached \$158,000,000, the greatest aggregate debit balance that we have ever experienced.

This panic was probably hurried along and intensified by the apparent shrinkage of values from the return toward specie payments, but the heavy tariff reduction was the leading factor, and which would inevitably bring such result. Running along thence from 1873 toward the last panic, we find that the McKinley law of 1890, which showed first in the returns of 1891, reduced the rates from 29.70 to 22.72. It is probable that under this reduction and readjustment the nation might have gone on with moderate prosperity had no other conditions intervened to cause a setback. But the success of the populist free-trade Democratic party in 1892 unsettled confidence and prepared the way for the panic—not from actual conditions of bankruptcy, but from an apprehension coming from a knowledge of the evil that would be wrought by the party that came in power.

One of the benefits of a protective tariff is that it largely holds our market for the benefit of our own people, and gives the labor which is required to make the products used here to the American workman instead of giving it to foreign workmen. To illustrate

that a protective tariff holds the American market for the American producers and makes employment more abundant here, let us assume that the demands of our market require 10,000 wagons per annum; that under a low or free-trade duty 5,000 of these wagons are made abroad and are shipped here and sold in our market. Now, suppose we add a protective duty on the importation of wagons, and by means of this additional or protective duty only 1,000 wagons are imported instead of 5,000. The difference between the two systems is a net gain of 4,000 wagons manufactured in our own country, and our workmen have had the extra employment required to manufacture these 4,000. An ordinary wagon costs about \$40, and, taking into account the labor, from the ore in the mine to the bar of wrought iron, and the wood in the forest to its final condition, about \$35 of the \$40 represents labor to produce the same. Hence, by the policy of protection we have paid to American labor a sum amounting to \$140,000 instead of having paid that amount to foreign labor. Protection has saved to our manufacturers and producers a market for 4,000 additional wagons and paid to them \$160,000, of which sum labor receives \$140,000, and the American people have both the wagons and the money, and a variety of interests and occupations have been benefited in their manufacture.

A protective tariff enables us to maintain a good standard of American wages. It levies a duty on competing articles sufficient to equal the difference between the low wages paid in Europe and the higher wages paid here, making it possible for our manufacturers to pay the better American wages. It also gives the American workman the work required to produce the goods our home market demands, making employment more abundant here instead of having a large part of the work done abroad. When employment is abundant wages are good. When we have dull, free-trade times employment is scarce and wages invariably fall. Not alone must we guard against and compete with the low wages paid in Europe, but we are confronted with the fact that we must also compete with the miserably low wages paid in India, China, and Japan, for these countries are rapidly coming into competition with our own in all kinds of manufactured products.

Table of American wages.  
[From Senate report by Mr. Aldrich.]

Blanks denote no journeymen are employed.

a Equal to 50¢ to 54 cents American money. f \$6 per 1,000.

b Mexican money. g 60 per cent.

c \$5 per 1,000 and upward. h 50 per cent.

d \$11 per 1,000. i \$7 per suit.

e Women, 27½ to 50 cents per day. k 50 cents per hour.

It should be the policy of the American people to maintain a high standard of wages, wages sufficiently high to enable the American workman to live as a freeman should, and to educate his children, fitting them to become intelligent and patriotic citizens. Free trade in its full application means that the American workman must be reduced to the low standard of living prevailing among the working people abroad. It means the reduction of wages until they reach a plane substantially the same as is paid in Europe. Yes, more than that, substantially the same as is paid to the degraded laborer of Asia.

This country can not afford to adopt a system that will reduce the standard of intelligence of the American workman. The toilers of this country form the great bulk of the American citizens, and the ballot which has been placed in their hands requires a high state of morals and intelligence to fit them to properly perform the duties imposed upon them. In our form of government there is often referred to the common people of the country some of the great questions of state for decision. They are the final judges, the supreme tribunal, as they were of the money question in the last Presidential election. The permanency of this Government requires not alone that the present standard of intelligence, self-respect, and manhood of the common people of this country shall be maintained, but, if anything, advanced.

A protective tariff encourages the building up of our industries. This proposition can scarcely be denied, in view of past events. The marvelous growth of our industries of all kinds under an adequate protective tariff in the past twenty years should be argument enough to convince any candid man. We need not theorize about this proposition. We can refer you to a great industry which has been built up by the McKinley tariff—the tin-plate industry. July 1, 1891, we had not a tin-plate mill in the country. The entire consumption of tin plate, amounting to

1,036,489,074 pounds, was imported. The McKinley Act placed a duty of 2.3 cents per pound on iron or steel plate coated with tin or lead by the dipping or any other process, and to-day we have nearly two hundred tin-plate mills in operation in this country, as the following table will show:

Name of firm.	Location.	Mills completed.

Capacity of the 188 mills..... 5,700,000  
 Boxes.  
 The consumption of tin plates in the United States per annum is about..... 7,000,000  
 Deduct supply for Pacific Coast, dressed meats and fish, and for Standard Oil Company, imported plates for export on which drawback is allowed, about..... 1,500,000  
 Net market for consumption of domestic plates..... 5,500,000

Could any people have a better illustration of the practical effects of a protective tariff?

The Democratic free-trade orators and papers told us that we could not make tin plate in this country. They ridiculed the new industry and for a long time denied that any mills existed here or that any tin plate was made. Notwithstanding the ridicule and misrepresentations of the free trader, the new industry has grown and prospered, until to-day the stubborn facts have hushed the free trader into silence, and no one dare stand up before the American people and deny the existence of this new and vigorous industry. It can well be said that the McKinley tariff is the father of the tin-plate industry, an industry which in the first four years of its existence has given employment to over 12,000 men, and indirectly, taking into account railroads, miners, teamsters, and laborers, to over 40,000 men.

Is there anyone so stupid as to say that a policy which has built up in this country an industry which gives employment, directly and indirectly, to 40,000 men, and in the first four years of its existence has saved to this country \$34,000,000, an industry which benefits every trade, occupation, and profession, is not beneficial to the country? Neither has the farmer been neglected, for he is benefited as much as anyone, for it has given him a market to supply the needs of over 100,000 consumers of his products. Nor can the free trader in this instance say that the tariff is a tax and is paid by the consumer.

The wholesale price of imported coke bessemer tin plates, I. C., 14 by 20, at New York, freight and duty paid, per box of full weight, 108 pounds, in July, 1891, when the McKinley Act took effect, was \$5.35. In March, 1896, it was \$3.85, a reduction in cost of \$1.43, or more than 25 per cent.

The following table gives the production of tin plates and terne plates in the United States in the fiscal years from July 1, 1891, to June 30, 1896:

Production of tin plates in the United States.

1883.....	221,233	18,150,773			

This bill provides a duty of 1½ cents per pound upon sugar of full strength and on refined sugar of 1.875 cents per pound. This duty is imposed upon sugar, first, to raise revenue, and second, to encourage the building up of the sugar industry of this country. The people of this country consume nearly one-third of the entire product of the world, consuming annually about 2,200,000 tons. In 1896 we imported 3,896,338,557 pounds, which cost the American people \$89,219,776. Why should we not produce the sugar we need and save this vast sum of money to our own people? Why send abroad from ninety to one hundred million dollars annually for an article we can produce as well as not?

Investigations have shown that twenty-three States of our Union are as well adapted to raising the sugar beet as any country in the world. We can raise as good sugar beets as Germany, France, or Austria, which are now among the great sugar-producing countries of the world, simply because the industry has been encouraged by those countries in paying a bounty on its production. The following table shows that the bounties paid by some of the countries of Europe to factories producing sugar from the beet in 1894 were as follows:

Germany.....	\$5,781,250
France.....	10,000,000
Austria.....	2,000,000
Belgium.....	5,000,000
Total.....	22,781,250

To which should be added Russia, Sweden, and Denmark, making a total of over \$25,000,000.

In 1880 nearly two-thirds of the world's sugar was from cane. In 1895 nearly two-thirds of the world's supply was from the beet. Germany imposes an import duty on sugar of 4½ cents per pound, thereby holding the home market to her producers, as the duty is practically prohibitory. She also pays an export duty of 27 to 38 cents per hundred to her producers, to aid them in gaining foreign markets for her surplus sugar. The world's production of sugar in 1896 is estimated to have been 8,248,246 tons, not including maple or sorghum sugar, as follows:

Cane sugar.....	Tons.
Beet sugar.....	3,537,151
	4,711,195
Total.....	8,248,346

Of this amount, the United States produces: Cane sugar, 237,000 tons; beet sugar, 37,000 tons. The following table shows the beet-sugar production and number of factories in different countries in the year 1895-96:

Country.	Factories.	Production.
	Number.	Tons.
Germany.....	403	1,830,500
Austria-Hungary.....	213	1,063,000
Russia.....	226	595,000
France.....	368	745,000
Belgium.....	121	250,000
Holland.....	30	85,000
Sweden.....	15	132,595
United States.....	7	30,000
Other countries.....	50	60,000
Total.....	1,443	4,771,095

Should we manufacture all the sugar we purchase from foreign countries, it will require 530 factories, each making 36 tons of granulated sugar every twenty-four hours, during a season of one hundred days and nights; and it is estimated that each factory will extract the sugar of 800 tons of beets each twenty-four hours, or 30,000 tons in one hundred days, making a total for the 530 factories of 15,900,000 tons of beets. Calculating that it will be necessary for each factory to employ 160 men at \$3 per day, this would make a sum of \$32,000 per factory each season, and for the 530 factories \$16,960,000. Figuring a yield of 16 tons per acre on an average, each factory will require a crop of 19 acres per day, or 1,900 acres for the campaign of one hundred days, and a total of 1,007,000

acres of land for the 530 factories. The number of men employed in the factories and in the production of the beets will support a population of over 2,000,000 people.

I heartily favor that part of this bill authorizing the Government to negotiate treaties of reciprocity. Reciprocity is that policy which simply asks foreign countries to give us something in exchange for the privilege of selling their tea, coffee, hides, and other products free in our market, by giving us lower duties upon some of our agricultural and manufactured products. This policy has been tried under the McKinley tariff and was found to work to great advantage in our foreign trade. In flour alone, in less than two years' trial of this policy, we increased our export trade 4,000,000 barrels per year, 2,000,000 barrels of which went to the Latin-American countries. Our export trade with these countries in 1893, compared with 1890, increased \$12,649,568, and we lost in trade, through the repeal of reciprocity by the Wilson bill, comparing 1895 with 1893, \$10,944,528.

The free traders threw away in one year, by the passage of the Wilson bill, all we had gained under reciprocity in three years. I believe it is the duty of the Government to begin to look outward and to extend our foreign trade wherever possible, especially with the Latin-American countries. These countries lie to the south of us and are our natural markets if we would only make sufficient effort to secure them. They are rich in mineral and agricultural resources, are capable of sustaining a vast popu-

lation, are new and just beginning to develop, and will need many of our agricultural and manufactured products.

The exports to the Latin-American countries with which reciprocity treaties were in force were as follows during the years ending June 30, 1890, 1893, and 1895:

Country.	1890.	1893.	1895.
Brazil .....	\$11,972,214	\$12,388,124	\$15,135,125
Cuba .....	13,084,415	24,157,698	12,533,390
Puerto Rico .....	2,207,538	2,510,007	1,830,323
Santo Domingo .....	850,217	1,143,479	1,318,919
Salvador .....	803,546	1,138,439	1,236,595
Nicaragua .....	1,373,019	937,859	937,329
British West Indies .....	8,288,781	9,006,032	7,607,561
British Guiana .....	2,106,345	2,000,675	1,664,830
Honduras .....	532,024	471,095	615,009
Guatemala .....	1,345,719	1,763,802	1,500,032
Total .....	42,869,823	55,519,391	44,574,863

Increase of exports of 1893 over 1890..... \$12,649,568  
Decrease of exports of 1895 compared with 1893..... 10,944,528

We can not hope to find a profitable market for our manufactured goods in Europe, but as this new continent develops and grows we can secure our just share of its trade if we make the effort to do so. Let the Government appoint energetic, business-

like officials to these countries, who will closely watch the interests of our people and seek to extend our trade whenever and wherever possible.

This bill seeks to build up our industries instead of destroying them, as did the Wilson bill, particularly regarding the sheep industry of this country. Through the injurious effects of that bill the number of our sheep has decreased over nine millions from January 1, 1893, to January 1, 1896, as the diagram on page 1056 will show.

1894.....	45,048,017	1.96	88,186,110	287,105,960
1895.....	42,294,064	1.58	66,824,621	254,296,728
1896.....	38,298,793	1.70	65,167,735	

Their value since 1893 has decreased over \$60,000,000. You can not destroy a great industry, producing an annual wool clip valued at over \$90,000,000, without injuring other industries and affecting the prosperity of the country.

Those who believe there is not money enough in circulation to do the business of the country should be willing to vote for this bill, and retain here over a hundred million of dollars which is paid annually to foreign producers of sugar. They should be willing to vote for this bill and retain within our border over \$90,000,000 paid annually to foreign producers of wool and woollen goods. Mr. Chairman, this bill should be passed promptly, so that the business interests of the country can adjust themselves to it. The people are anxious to have Congress act and to afford them the relief that this bill provides. Pass it promptly, and I believe we will soon see a gradual revival of business, and soon prosperity will again prevail throughout this land.

## The Tariff.

## SPEECH

OF

HON. W. F. LOVE,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897,

On the bill (H. R. 579) to provide revenue for the Government and to encourage the industries of the United States.

Mr. LOVE said:

Mr. CHAIRMAN: The tariff has been an issue with the American people for more than a century, and has been discussed in all of its phases by the most distinguished statesmen, profoundest thinkers, and ablest writers of the age; therefore, it is difficult for one to advance new ideas or contribute additional learning to this exhausted subject.

But realizing the magnitude of the interest involved and its far-reaching and disastrous effect upon the American people, my duty to those whom I have the honor to represent demands that my voice and my vote should be used against this proposed legislation.

There are some provisions in this bill acceptable to me, but I have great objections to others, while against the bill as a whole I earnestly protest. What should hinder us from exercising our own judgment upon these provisions, singly and severally? Why should the friends of this bill place us in a condition where we can not give to each item that is distinct and separate in itself a separate and distinct consideration? We have not been allowed time to consider this important bill by sections. Not an amendment has been allowed except when offered by the Ways and Means Committee. How is it possible for this House to vote intelligibly on a bill of 163 pages, when only about 20 pages of it have had any consideration in the Committee of the Whole? This bill is expected to raise annually at least \$118,000,000 by an indirect tax on the people to protect trusts. There is no need for this reckless haste.

There is in the Treasury now \$117,000,000 in excess of the amount that is required for the gold reserve, and the amount is increasing each day. This amount, even at the rate of deficiencies for the last two years, would supply the deficiencies and run the Government for two years longer, with the ordinary revenues under the Wilson bill, and they would increase under a normal condition of affairs. There can be but one reason for this extraordinary procedure. It is not want of time. The only solitary reason is that this bill is of such character that if submitted in the ordinary, orderly way to the members of this House, there is great fear on the part of those who have it in charge that it would fail in its present form, would be made less burdensome upon the people, and less beneficial to special interests. This bill, we are informed by the minority of the Committee on Ways and Means, was framed almost entirely by the agents of the protected interests of our country, and many paragraphs of the bill are in the exact language of their petitions.

Gentlemen, you can prevent a fair discussion and perfection of this bill here, but we will force you to discuss it before the people, where speech is free and where debate is not limited to the five-minute rule.

Mr. Chairman, agriculture, manufacture, and commerce constitute the immaculate tripod upon which rests the fabric of American institutions, and their great interests should be united and inseparable. All legislation is unwise which proposes to benefit one of these without looking to consequences which may fall on the others. Now, let us apply the schedules of this bill respectively to these three fundamental sciences of our Government and see what would be the effect.

## AGRICULTURE.

Agriculture is the oldest, the broadest, and most important of all the fields of human labor. It marked the dawn, has distinguished the progress, and is destined to crown the last stages of activity. In all ages and in every era of the world's history agriculture has been regarded as the basis of national development and greatness and the nursery of civilization; therefore it is specially entitled to the fostering care of all governments. It is alarming when we study the statistics and learn how agriculture is waning in this country. It challenges our deepest concern. In 1850 the assessed wealth of this country was \$8,000,000,000, of which sum the farmers owned \$5,000,000,000. In 1860 the wealth

of the United States was \$16,000,000,000, of which the farmers owned \$12,000,000,000. In 1870 the wealth of this country was \$30,000,000,000, of which the farmers owned \$11,000,000,000. In 1880 the value of all property in the United States was \$46,000,000,000. Of this, the farmers owned \$7,000,000,000. In 1890 the entire wealth was \$63,000,000,000, and the farmers had but \$9,000,000,000.

The census reports show great inequality between farm and factory labor, as is proven by the following tables:

The census reports contain the following complete statement regarding the entire manufacturing interests of the country:

Entire capital invested.....	\$6,524,475,906
Value of all manufactured products.....	9,370,107,624
Miscellaneous expenses.....	\$630,944,028
Wages paid.....	2,282,823,235
Cost of raw material.....	3,158,868,353
	8,072,635,678
Net profits.....	1,297,471,948

This table shows a net profit of 20 per cent on the capital stock of all manufacturing concerns for the year 1890.

The census also gives a correspondence but not so complete a statement regarding agriculture:

Number of farms in the United States in 1890.....	4,554,641
Number of acres in farms.....	629,318,619
Number of acres in average farm.....	137
Total value of farms and stock.....	\$15,082,307,980
Value of farm products sold, consumed on the farm, and on hand.....	\$3,460,107,454
Value of farm products per average farm.....	\$538

The manufacturing interest, with a capital of six and one-half billions, made a net profit of \$1,297,471,948, or 20 per cent on the investment, and paid labor over two billions of dollars, while agriculture, with nearly sixteen billions capital, earned a gross profit of \$2,460,107,455, and is credited with paying nothing for labor. Now, if the gross proceeds of an average farm of 137 acres is \$538, and five persons are allowed for each family, it will show a gross income annually for each person of \$107.75, or an average per capita income of 29 cents per day, out of which all expenses must be paid, including food and clothing. Now, as will be seen in a statement sent Senator MILLS, of Texas, which I will print, the gross income of the American factory operative is \$347, or 95 cents per day, more than three times that of the farm laborer:

DEPARTMENT OF LABOR, Washington, D. C., February 6, 1894.

MY DEAR SIR: In response to yours of January 18 and January 26, I have the honor to state that from the very best sources which I have been able to consult I estimate the average annual earnings in all manufacturing industries in the countries named by you to be as follows:

Country.	Total value of products.	Number of employees.	Product per hand.	Annual wages paid.
United Kingdom.....	\$4,100,000,000	5,180,000	\$790	\$204
France.....	2,245,000,000	4,443,000	545	175
Germany.....	2,915,000,000	5,350,000	545	185
Russia.....	1,815,000,000	4,760,000	381	120
Austria.....	1,265,000,000	3,690,000	409	150
Italy.....	605,000,000	2,281,000	265	180
Spain.....	425,000,000	1,167,000	364	120
Belgium.....	510,000,000	953,000	545	165
Switzerland.....	300,000,000	370,000	443	150
United States.....	7,215,000,000	3,897,000	1,880	347

1, United States, \$347; 2, Great Britain, \$204; 3, France, \$175; 4, Belgium, \$165; 5, Germany, \$185; 6, Austria, \$150; 7, Switzerland, \$150; 8, Italy, \$130; 9, Spain, \$120; 10, Russia \$120.

The above estimate has been made, so far as the United States is concerned, from the actual number of persons employed and the total wages paid to them, as shown by the census of 1890; for Great Britain they have been made largely from British figures, and for the other countries the estimates have been made from statements originating with foreign authorities and verified by facts collected by agents of this Department. While the actual figures given in the above estimates may not be more than approximately correct, the proportions, I feel sure, are fair.

I am, very respectfully,

CARROLL D. WRIGHT, Commissioner.

In the United States there are over 8,000,000 persons engaged in agriculture, with a capital investment of more than \$13,000,000,000, which is constantly decreasing in value under the protective system, from which they receive no benefits, although they bear the greatest share of its burdens. The products of agriculture constitute about 70 per cent of our exports; they largely pay the balances in our foreign trade. Last year our farm products sold for \$369,879,297. Of this amount \$190,000,000 was on cotton. Now, if agriculture is such an important factor in our Government, is it not just and wise that that industry should be fostered and

raised from its low depression? Will the farmer be benefited in the least by this measure? Certainly not.

On the contrary, it is an insult to every producer of cotton, corn, wheat, and oats in the country. The protection you offer the farmer on his products is a farce, since the import of those articles is so infinitesimally small compared with the export. You have lauded the farmer in most eloquent terms as you have boastfully told of his going through the pelting rain and drifting snow on election day to vote for protection. If this statement be true, what base ingratitude on your part to give them no share in the distribution of election favors that you have so lavishly been bestowing upon many political manipulators. The only thing that has contributed to the farmers' advantage of recent years, beyond his own individual efforts and close economy, has been the low prices at which he could supply his needs.

Now, by this measure you propose to remove even this advantage by increasing the price of the articles he must necessarily buy without enhancing in the least the price of farm commodities. How do you expect to establish a better home market for manufactured goods—which is your pet theme—when the farmer, who is the best customer, is unable to buy even the necessities of life at present prices? Under the present law nearly all agricultural implements, including cotton gins, bagging, and ties, salt, and other necessary articles on the farm are on the free list, which is about the only protection the farmer can receive. You now propose to tax them an average of 45 per cent, which will be levied on the farmer's labor; yet your pretended purpose is to protect American labor and industry.

I would like to have some member of the Republican party point to a single section of this act that will give an increased price or enlarged market for the farmer's products to compensate him for the increased cost of the necessities of life. This bill compels the farmer to sell in the cheapest market in the world and buy in the dearest. It is true that grain of all kind, vegetables, meats, and live stock are put on the dutiable list, but we raise a large surplus of these articles which must find a market beyond the seas, and their market price is regulated here as well as abroad by their foreign value.

The McKinley Act placed a tariff of 15 cents per bushel on corn and 25 cents per bushel on wheat, both of them, like cotton, raised largely in excess of the home consumption. Did the import duty then help the corn and wheat producer? No. Although the production of both corn and wheat decreased for several years after that tax went into effect, the price of corn declined from 40.6 cents per bushel in 1891 to 25.3 cents per bushel in 1895. Wheat declined from 83.9 cents per bushel in 1891 to 50.9 cents per bushel in 1895.

The total agricultural exports for the fiscal year ending June 30, 1896, were \$569,879,297. Of this amount, \$504,758,012 consisted of the great staple articles of the West and South, which were forced into seeking a foreign market. This country can produce these articles cheaper than elsewhere in the world, and the United States therefore holds the home market as to farm products against all importers regardless of the tariff. The United States exported for the fiscal year 1896 of corn and corn meal 101,100,375 bushels, and imported, all told, 4,838 bushels, brought here principally for seed purposes; of tallow, exported 52,759,212 pounds, and imported 8,262,597 pounds; lard, exported 509,534,256 pounds, and imported 2,116 pounds; beef, exported 360,674,917 pounds, imported 598,608 pounds; oats, exported 13,612,590 bushels, and imported 47,506 bushels. Of bacon and ham we exported 425,352,187 pounds and 129,036,351 pounds, respectively; imported of both, 275,503 pounds. Of mutton, exports, 422,950 pounds; imports, 158,068 pounds. Of pork, 70,243,029 pounds; imports, 29,847 pounds. The duty paid last year on imported wheat was \$432; corn, \$784; corn meal, \$10.26; oats, \$272; flour, \$313. The whole duty that would be collected on the importation of these farm products will not amount to over \$25,000.

You can not delude the farmer with the hope that by this proposed law you can give him a better market at home for his cotton, wheat, and other products, for year by year we see a great and increasing surplus of our products going abroad for a market, and there are millions of acres of land yet to be brought into cultivation that must find an outlet in the markets of the world. The manufacturers themselves must find consumers for their products in foreign markets, for our industries have a capacity to produce twice as much as the American people can consume. We have, in fact, risen to be the producing nation of the earth.

Recent statistics show that we are producing 37 per cent of the steel production of the whole world, 32 per cent of the pig iron, 27 per cent of the iron ore, 30 per cent of the coal, 80 per cent of raw cotton, 12 per cent of wool, 18 per cent of the wheat, and 87 per cent of corn, which, on the average, shows that we are producing more than 40 per cent of the staple products of the earth, while we have only 4 per cent of the population, which is self-evident that we can not continue in our progress unless the markets of the world are open to purchase the products of our toil.

The farmer does not ask for any special favors or privileges, but only demands that the Government be administered for the general welfare of all classes without discrimination.

#### MANUFACTURES.

Do our manufactories need further and increased protection; and if so, how much? On this point we have had many general statements, but little precise information.

There are 20 per cent of the working population and about 8 per cent of the total population engaged in manufacturing pursuits. Now, suppose the increased duties proposed by this bill would give them an increase of profit and wages. Should it be done at the expense of the remaining 92 per cent of our population?

It is often asserted on the floor that our manufacturing industries have suffered greatly by the enactment of the Wilson law. Now, let us investigate the official statistics. The volume of foreign goods imported into the United States during the last fiscal year was \$160,000,000 less than was imported during the last fiscal year under the McKinley law, which proves that the foreigner is less in the home market than ever before. The statistics show that the productions of iron ore under the Wilson bill are 40 per cent greater than they were under the McKinley bill, pig iron 25 per cent greater, iron furnaces in blast 25 per cent greater, while our exports of iron and steel increased 20 per cent under the Wilson bill, and our consumption of iron ore has increased 45 per cent.

It was predicted that the reduction in tariff on iron ore under the Wilson bill from 75 to 40 per cent would cause large importations, but the figures show to the contrary, for in 1895 the exports of iron and steel were \$35,062,838, the largest ever before. The Treasurer's report shows that in 1893, under the McKinley law, we imported \$18,735,728 more than we exported, while in 1895, under the Wilson law, our exports exceeded our imports seventy-five millions and in 1896 over one hundred millions, and during the last eight months our exports have exceeded our imports more than three hundred millions.

Our importations from foreign countries have fallen off, as compared with the McKinley bill, very materially. Since the passage of the Wilson bill our exports of cotton goods have increased more than 50 per cent, making a total of \$16,000,000, higher than ever reached before. From 1891, the first year the McKinley law went into operation, to 1896, the last year of the Wilson Act, our domestic exports of manufactures increased largely, as you will observe by the following table:

Domestic exports, 1892	\$158,510,937
Domestic exports, 1896	228,571,178

A net increase of from 15.61 to 26.48 per cent.  
Some of the principal increases follow:

	1892.	1896.
Agricultural implements	\$3,219,130	\$5,176,775
Animals	22,935,086	41,840,269
Fruit	2,434,793	5,679,066
Hides	1,333,655	3,858,946
Iron and steel manufactures	28,909,614	41,160,877
Leather manufactures	13,278,847	20,242,756
Chemicals and drugs	6,545,354	9,063,058
Copper, and manufactures of	4,614,597	19,730,104
Breadstuffs	128,121,656	141,356,923
Cotton manufactures	13,604,857	16,837,396
Glass	868,374	1,062,225
Paper, and manufactures of	1,290,169	2,713,875
Tobacco, and manufactures of	25,220,472	28,951,723
Wood, and manufactures of	26,270,940	31,947,108
Wool, and manufactures of	519,198	913,609

#### Total imports and exports of manufactured goods.

Year.	Imports.	Exports of domestic manufactures.
1890	\$789,310,409	\$151,102,376
1891	844,916,196	168,927,315
1892	827,402,462	158,510,937
1893	890,400,922	158,023,118
1894	654,904,622	183,728,808
1895	731,989,965	183,595,743
1896	779,724,674	228,571,178

It will be seen from these tables that the amount of goods manufactured and sold abroad has increased and the importations decreased. Now, then, in the face of these facts, how can anyone contend that the present condition of the country is due to the passage of the Wilson bill or foreign competition? To show how unequal the tariff burdens are resting upon the country, enabling the East and North to prosper at the expense of the South and West, I will print in my remarks a statement prepared with great

care by the gentleman from South Carolina, Mr. McLaurin, including his comments on the same.

During the early months of 1895 the Atlanta Constitution, another leading Southern journal, succeeded in collecting data from the auditors and controllers of forty-three States and Territories regarding the increase and decrease of property valuation therein for the years 1893 and 1894. The following table is a summary of the facts gathered:

State or Territory.	1893.	1894.	Increase.	Decrease.
Alabama	\$200,172,500	\$243,171,677		\$17,000,913
Arizona	28,498,183	27,061,974		1,436,209
Arkansas	173,526,484	171,965,480		1,561,004
California	1,216,700,000	1,205,918,000		10,782,000
Colorado	238,722,417	208,905,279		29,817,138
Florida	102,965,406	104,246,969	\$1,281,563	
Georgia	452,644,907	429,012,923		23,631,984
Idaho	33,000,000	28,000,000		5,000,000
Illinois	847,101,516	824,651,628		22,550,888
Indiana	1,302,004,609	1,275,435,377		26,569,232
Iowa	535,857,790	556,412,793		9,445,003
Kansas	350,821,818	357,501,722		19,139,096
Kentucky	706,799,076	694,220,342		10,578,734
Louisiana	250,045,503	251,091,348	1,045,845	
Maryland	624,056,241	629,138,103	5,081,862	
Maine	270,812,782	272,819,370	2,006,588	
Massachusetts	2,791,582,144	2,815,883,621	24,301,477	
Minnesota	642,003,651	649,759,254	7,755,603	
Mississippi	160,949,827	159,058,496		1,891,331
Missouri	994,589,787	999,951,909	5,362,122	
Montana	127,548,175	118,850,892		8,697,283
Nebraska	194,733,124	183,717,498		10,015,626
Nevada	20,178,000	23,629,720		2,541,720
New Hampshire	274,816,342	269,683,799		5,132,543
New Jersey	768,265,274	774,398,332	6,133,058	
New Mexico	43,630,240	41,128,620		2,501,620
New York	4,038,058,949	4,273,942,431	235,883,482	
North Carolina	261,717,727	262,927,119	1,209,392	
Oklahoma	15,029,927	14,830,495		199,432
Ohio	1,752,990,930	1,742,662,115		10,328,815
Oregon	108,088,996	150,369,383		17,689,322
Pennsylvania	3,115,320,549	3,162,114,251	46,793,702

The official record of the value of property returned for taxation in 1893 and 1894: Five hundred millions missing from the South and the West.

This table is given to prove that whatever financial disasters may overtake the balance of the country, New England and its allies remain undisturbed and continue their work of accumulation.

#### NEW ENGLAND AND ITS ALLIES.

Out of these 43 States and Territories only 12 show an increase of property valuation, while the remaining 31 show almost uniform decreases.

The total increase for the 12 States is \$387,800,753. Of this amount \$235,883,482 comes from New York alone. Seventy per cent, it is seen, comes from New York, and 70 per cent of the balance comes from Massachusetts and Pennsylvania. The total increase in the remaining 9 States is \$30,822,002.

The 31 States and Territories show a falling off. This decrease in property valuation amounts to the enormous sum of \$500,185,795. It is widespread, there being no such radical decrease as New York shows in opposition. New Hampshire and Vermont show a decrease, but taken as a whole the entire New England and Middle Atlantic States show a net increase in property valuation for taxation of \$312,110,553. Only 2 of the Western and Middle States show an increase, and the net decrease from that vast territory foots up \$319,824,785. In the 12 Southern States given, 4, North and South Carolina, Florida, and Louisiana, show a small increase. I am at a loss to account for such an increase, unless it be from the same cause as in South Carolina, where a reassessment of railroad and bank properties was effected which materially increases the taxable valuation of the State.

But with this increase the net loss for that section is \$90,284,580. Bear in mind that the year 1894 is compared with the panic year of 1893. These figures are startling. It is a story of stupendous losses the people have sustained and of the extraordinary gains that have been made by the money and manufacturing centers of the East at the expense of the other sections.

It is a story of increasing poverty and disaster on the one hand and increasing power and wealth on the other. As I understand it, this immense sum refers to the loss in property values usually listed for taxation. It does not refer to or include the depreciation of the products of labor, the depression in business and its losses, or the enforced idleness or waste of labor efforts. Such losses can not be approximated, much less be given in detail.

Such a statement as this ought to reveal quite clearly that a vast difference of conditions and degrees of prosperity exists among the people of this country.

In order to sustain my contention that the East has been piling up vast accumulations of wealth, while the great producing sections of the nation can barely hold their own, I will give a comparison between the census of 1890 and the census of 1890. If the figures which I have just given surprise the gentleman from Maine, those which I am about to give will be utterly startling. In fact, to analyze them carefully is to discover the most monstrous system of exchange brigandage of this or any other country. It is enough to convince any right-minded man that this system must be changed, and that at once, if we would preserve our free institutions or national integrity.

I shall quote to some extent from a synopsis of the census bulletins by Mr. S. S. King, found in his book entitled *Bondholders and Bread Winners*. I will begin with the States of Indiana, Illinois, Iowa, Nebraska, Louisiana, Mississippi, Alabama, Georgia, and North Carolina. These 9 great States are those

upon which the country depends for the production of wheat, corn, and other cereals, meat, dairy products, sugar, cotton, tobacco, rice, and almost everything that the agricultural portion of our country produces.

With these I will compare the States of Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, and Pennsylvania. In these nine States is found the great manufacturing and money centers of the nation. The relative condition of these two groups of States should give a fair interpretation of the truth or falsity of my position. The first group of States has 486,040 square miles of land, while the second group of States has but 168,665 square miles, about 3 to 1. The population of the first group is 13,409,167 people, while the second is 14,507,407. During the ten years between 1880 and 1890 the first group, or producing States, gained in wealth \$59,441,674, while the second group, or manufacturing and money-lending States, gained in wealth \$1,684,762,722. In other words, the 9 manufacturing States, with but one-third as much land, and less than two million more people, gained in wealth five times as much as the producing States. The producing States gained 22 per cent in people and 20 per cent in wealth, while the manufacturing States gained 30 per cent in people and 40 per cent in wealth.

Again, let us compare these 9 producing States with the single State of Massachusetts. As I stated before, these 9 States contain 486,040 square miles. Massachusetts has only 8,315 square miles. These 9 States contain 13,409,167 people, while Massachusetts has but 1,783,085. These 9 States in 1880 had an assessed valuation of \$2,792,919,355. The assessed valuation of Massachusetts was \$1,584,756,802. The relative position which these 9 States held to Massachusetts regarding land, labor, and capital was: Land, 58 to 1; labor, 7 to 1, and capital, 2 to 1. The 9 producing States had 58 times as much land, 7 times as much labor, and double the amount of capital that Massachusetts had.

Under such conditions it would seem that with all these advantages the increase of wealth would be largely in favor of the 9 producing States, but such is not the case. While these 9 producing States increased in wealth during the ten years between 1880 and 1890 \$59,441,704, the little State of Massachusetts increased in wealth \$59,377,824. This one little manufacturing State increased in wealth nearly ten millions of dollars more than these 9 great producing States. Striking as these figures are, they will be surpassed as the comparison is continued. To these 9 great producing States I will add Florida, Kentucky, and Kansas, and compare these 12 States with the State of Pennsylvania.

These 12 States contain 667,100 square miles. Pennsylvania has but 45,215. In 1880 these 12 States contained 16,323,441 people. Pennsylvania only 4,282,801. The assessed valuation of these 12 States in 1880 was \$3,335,313,121, that of Pennsylvania \$1,683,450,016. The gain of these 12 States in wealth in ten years was \$87,184,160, while the gain of Pennsylvania for the same period was \$60,382,016. With fourteen times as much land, four times as much labor, and twice as much capital, these 12 great States were led by the single State of Pennsylvania more than \$12,000,000.

To these 12 States I will add Tennessee, Virginia, and West Virginia, making 15 States, and compare them with New York. These 15 States have an area of 776,480 square miles; New York has but 49,170. These 15 States had a population of 19,996,827 in 1880, while New York had 5,982,871. The assessed valuation of the 15 States at that date was \$3,965,109,502, while that of New York was \$2,651,940,000. The gain of these 15 States in wealth during the ten years named was \$1,117,183,313; that of New York was \$1,123,385,932.

With one-sixteenth as much land, one-fourth as many people, and but two-thirds as much capital, this one State of New York increased its wealth about six millions more than these 15 great producing States. It seems impossible, but such are the figures.

I will make but one more comparison. To the 15 States named I will add Missouri, Arkansas, South Carolina, Maryland, Delaware, and the great State of Ohio, making 21 States in all. Here is an empire in extent and in the diversity of its productions. The resources of this vast territory are almost beyond comprehension, while the industry and intelligence of its people are unsurpassed.

These 21 States, with all their possibilities, I will compare with the 9 States first mentioned, the 6 New England States, with New York, New Jersey, and Pennsylvania added. The area of the 21 States is 985,635 square miles; that of the 9 States 168,665 square miles. In 1880 the population of the 21 States was 28,242,922, while that of the 9 States was 14,507,407.

The assessed valuation of the 21 States in 1880 was \$6,839,554,628; that of the 9 States was \$7,559,928,915. The 21 States gained in wealth during the ten years named \$1,608,193,657. The 9 States during that period gained \$1,684,762,722. These 9 States gained nearly twice as much as the 21 States in the face of all this disadvantage. Surely this showing makes good the declaration of the poet:

"The seed ye sow, another reaps;  
The wealth ye find, another keeps."

[Applause.]

Again, the capital invested in the manufacturing industries increased 121 per cent from 1880 to 1890, while during that same period farm values shrunk from 30 per cent of the total wealth of the country to 20 per cent of the same.

We are urged to adopt the system of protection on general principles. And what would be the consequence of the universal application of such a general principle but that nations would abstain entirely from intercourse with one another? In this enlightened age of the world nations will supply themselves from the best sources, and the true policy of all producers, whether of raw material or of manufactured articles, is not vainly to endeavor to keep other vendors out of the market, but to outstrip them in it by the quality and cheapness of their article. It is not in the nature of commerce to enrich one party at the expense of the other. In this day of knowledge and progress there can be no commerce between nations but that which shall benefit all who are parties to it.

A distinguished writer, discussing this subject, said he objected "to all attempts to frustrate the benevolent intentions of Providence, which had given to various countries various wants in order to bring them together. Commerce, to continue undisturbed and secure, must be, as it was intended to be, a source of reciprocal amity between nations and an interchange of productions to promote the industry, the wealth, and the happiness of mankind."

The doctrine of prohibition sought to be indoctrinated by this measure, and which proved to be disastrous in the McKinley law, as a general doctrine would be preposterous. Suppose all nations were to adopt it, they would be prosperous, then, according to

the arguments of gentlemen on the other side of the Chamber, just in proportion in which they abolished intercourse with one another. Protection and encouragement are, doubtless, sometimes wise and beneficial if kept within proper limits, but when carried to the point of prohibition become an absurdity.

#### DINGLEY BILL AN INCREASE OVER MCKINLEY BILL.

In 49 out of 82 items in Schedule A there is an increase over those of the McKinley law, and in every one of the other items, almost without exception, the rate is much higher than under the Wilson bill.

Twelve out of the 14 schedules show an increase over the McKinley law. The rate of duty under the McKinley law averaged 49.58 per cent, the rate of duty under the Wilson law averaged 39.94 per cent, and the rate of duty under the proposed bill is 57.03 per cent, or 8 per cent higher than the rate fixed by the McKinley law, which was condemned by the American people.

The consumer, in order to protect the home market, will be required to pay 82 per cent on paints, 58 per cent on nails, 93 to 120 per cent on glass, 133 per cent on table cutlery, 129 to 195 per cent on pocketknives, 80 to 170 per cent on ready-made clothing, 178 to 350 per cent on worsted knit goods, 170 to 200 per cent on dress goods of certain textures, 38 per cent on muslin, 110 per cent on hats, 100 per cent on woolen goods, 200 per cent on floor matting, and 110 per cent on blankets. On all these articles the finer the goods the lower the duty.

#### SUGAR SCHEDULE.

One of the most unjust schedules proposed in this bill is the differential on refined sugar, or the difference between raw and refined sugar, which is specially to the interests of the sugar trusts. The duty on raw sugar has been increased three-fourths of a cent per pound, from nine-tenths to 1.63 cents, while the duty on refined sugar is 1.87½ cents per pound. The differential duty proposed is twice the amount allowed under the existing law, or 36½ cents per 100 pounds. In the last ten years of its existence the sugar trust has taken from the people \$97,000,000 in the way of excessive profits. I will here quote the following extracts from the recent remarks of the distinguished gentleman from Tennessee [Mr. McMILLIN] pertaining to this subject, which, no doubt, will be read with much interest:

#### TAKING CARE OF THE SUGAR TRUST.

Mr. Chairman, not only have the gentlemen increased this burden of taxation, but in doing so they have taken good care of the corporations and trusts which now control the sugar market. Notwithstanding the fact that sugar manufacturing can be done in this country as cheaply as anywhere in the world, notwithstanding its manufacture is in the hands of the most gigantic trust organized in this or any other country, they give such a margin to the trust in the way of difference between the tax placed on raw and on refined sugar that they not only perpetuate its existence and power but continue its enormous profits and dividends. In the presence of these gentlemen who framed this bill it was demonstrated by witnesses who came before the Ways and Means Committee at the hearings—

First, that a gigantic trust existed in this country to control manufactures, regulate prices, and increase their profits.

Secondly, that the two wings of this trust—the eastern and western—have entered into an agreement by which they farm out and appropriate the territory of this great Government and these 72,000,000 people among themselves, each agreeing to supply certain portions of the territory and not to invade the other's territory nor, within the other's territory, cut prices.

Thirdly, that in order to carry out this scheme and insure its perpetuity and profits, the American Sugar Refining Company controls absolutely the price of refined sugar every day. Its operations were made successful by entering into contract with those by whom the sugar is sold that they would not sell the sugar thus purchased below the price fixed by the refiners. A contract to this effect has to be signed. The profits paid to the grocer who handled the sugar came by way of a commission of three-eighths of a cent a pound paid back to the grocer if he was able to certify that he had sold according to the trust prices and direction. If he is unable to make this certificate, he gets no profit. He was, therefore, unable to cut the price of sugar under any circumstances. If he had a faithful and heavy customer with whom he would gladly divide his commission, the iron-bound obligation with the trust prevented him from doing so and cut him off from all profit if he did.

Sir, the hearings show that the sugar schedule of this bill was framed in New York and furnished to the committee.

Sir, that was the condition when the hearings were on; that is the condition to-day. Leaving the one-eighth difference between raw and refined sugar as contained in the present law, the committee, at the behest of somebody, has fixed the differential rate between raw and refined sugar at 35 to 40 cents per 100 pounds, all of which goes to increase the price of sugar and to sustain the most colossal trust of modern times. How much more is obtained by controlling absolutely the sugar market for 72,000,000 people I do not undertake to say. [Applause on the Democratic side.] What excuse is there for this? The trust came before the committee and made its demands. Its demands were heeded. That will not be denied by any man who has read these hearings. Now, I ask you whether there is any trust on this earth that is larger than the 72,000,000 of our American people if their representatives do their duty? [Applause on the Democratic side.]

During the discussion of this measure the Democrats and Populists have repeatedly attempted to incorporate an amendment that would deprive trusts of the benefit of protective features of this bill, but in every instance it has been vigorously resisted and defeated by the Republicans. That party owes too much to the trusts to legislate against them—on the contrary, they are fondly fostered.

In the Fifty-first Congress some of the leading Republicans, as will be seen by the following extracts from the CONGRESSIONAL RECORD, believed that the duty then collected on imported sugar,

amounting to \$35,975,984.52, or nearly \$1 per capita, was a burdensome tax:

[Ways and Means report, by William McKinley, Fifty-first Congress, first session. Report Volume V, page 14.]

The committee recommend up to and including No. 16 Dutch standard in color and molasses be placed on the free list.

In 1889 the duties collected on imported sugar and molasses amounted to \$55,975,610. Add to this the increase of price of domestic sugar arising from the duty, and it is clear that the duty on sugar and molasses consumed by the people of this country is at least \$64,000,000, or about \$1 for every man, woman, and child in the United States, more than it would have been if no such duties had been levied and the domestic product had remained the same.

Even on the assertion that with proper encouragement we shall eventually be able to produce all or nearly all the sugar required for the consumption of our people—an assumption which you can believe to be sustained by the facts, notwithstanding the slow progress thus far made in sugar culture in this country—this encouragement can be given much more economically and effectually by a bounty of 2 cents per pound, involving the expenditure of but little more than \$7,000,000 per annum, with the present production of sugar in the United States, than by the imposition of a duty involving the collection of \$65,975,610 in duties in the last fiscal year, not to mention the amount indirectly involved. When it is considered that this increase in the cost due to the duty on sugar falls on the article of prime necessity as food, your committee are persuaded that justice as well as good policy requires that such an unnecessary burden in the way of a direct tax should be removed from sugar and that the encouragement required to induce the production of sugar in the United States should be given through a bounty rather than by import duty.

In support of this report Mr. McKinley spoke as follows:

Now, Mr. Chairman, what have we accomplished by this? We pay annually \$65,000,000 upon the sugar we import. The gentlemen on the other side claim rightly that this is a revenue duty. It is a revenue duty. It is a Democratic duty. Being a Democratic revenue duty, every dollar of it is paid by the American consumer. Last year we paid \$65,000,000 out of our pockets to protect whom? To protect the men in the United States who were producing just one-eighth of the amount of our consumption of sugar. Now, we wipe that out, and it will cost us to pay the bounty just \$7,000,000 every twelve months, which furnishes the same protection at very much less cost to the consumer. So we save \$48,000,000 every year, and leave them in the pockets of the people. [Applause on the Republican side.]

Sir, when we lift from the American people this vast sum of \$48,000,000 of taxes, they can put up every twelve months 48,000 houses costing \$1,000 apiece.

Mr. DINGLEY's remarks on the same subject were as follows:

The greatest relief will be found by the transfer to the free list of sugar up to and including No. 16 and molasses, because sugar and molasses have become as necessary articles of food as flour, and seven-eighths of our consumption is imported, a condition of things which both sides admit makes the duty a tax that increases the burden of the people nearly to the extent of the tariff. . . . The duty became a tax which increased the cost of not only imported but domestic sugar to the consumer to that extent. The duty collected on sugar and molasses the last fiscal year was \$55,975,610, or nearly 2 cents per pound. Adding to this the increased cost of the 275,000,000 pounds of sugar produced in this country, equivalent to the duty of 2 cents per pound, and the duty imposed on these articles was practically a tax of about \$63,500,000, or \$1 per head, on the people of this country. . . . The transfer of sugar and molasses to the free list will afford conspicuous relief to the people of this country.

The following were the remarks of Mr. PAYNE of New York:

It appears last year we imported sugar and molasses to the amount of 2,700,547,667 pounds, on which, including molasses, we paid duties amounting to \$55,975,984.52.

Now, in this instance the tariff was a tax and was added to the price which the consumer paid for the imported sugar. There is no mistake about that. No Republican has ever denied that. . . . We take off a dollar on the annual cost of sugar to every inhabitant of the United States. What do you say to that? Why, it helps the farmer, it helps the laboring man, it helps the poor man, to give them this prime article of food at a lower price, and with the competition that comes from Germany and France, from Cuba, and from all quarters of the earth, I have no doubt that when this law goes into effect every man can buy his sugar at 2 cents a pound less than under the present tariff.

These gentlemen, who are the acknowledged leaders on protective tariff, said that the duty then imposed on sugar was a burdensome tax, and to transfer sugar and molasses to the free list would give conspicuous relief to the people. Now, with increased rates of duty, they propose to put these articles back on the dutiable list. Will not that be imposing a conspicuous burden on the people? And if to take off the tax was to cheapen sugar 2 cents per pound, to put it back now would certainly increase the price 2 cents per pound or more.

#### TARIFF NOT THE CAUSE OF DEPRESSION.

Neither high nor low tariff are altogether responsible for the existing depression. For the last few years, at least, in Europe as well as America, industrial conditions have been similar. In Germany and Russia, where protective duties are highest, and in free-trade England the vast majority of the population are in distress and despair, which is conclusive evidence that the same cause operates everywhere to produce the same effect, namely, a money famine. This causes a shrinkage in the value of all forms of property and a corresponding increase in the value of money. Our constituents need more money with which to buy goods before they are forced to pay higher prices for them. If any proposition in economics is unassailable, it is that the quantity of money in circulation determines the price of commodities, supply and demand being normal. Increase the volume of money in circulation, and prices rise; diminish it, and they fall.

#### COMMERCE.

In 1861 American vessels carried 70 per cent of our exports, while to-day they carry about 13 per cent. Under the Walker

tariff, from 1846 to 1861, the tonnage of our shipping engaged in foreign trade increased almost 300 per cent, and from 1861 to 1893, under tariff laws, we have less than a million tons engaged in foreign trade, showing a loss of two-thirds of our foreign tonnage. I need not say that the navigation of the country is essential to its honor and its defense. Yet, instead of proposing benefits for it in this hour of its depression, we threaten, by this measure, to lay upon it new and heavy burdens.

#### DEMOCRATS CHARGED WITH DEFICITS IN THE TREASURY.

The Democratic Administration is charged with the deficit in the Treasury. There never was any deficit under President Cleveland's first Administration. On the contrary, a large surplus was created. The deficiencies began under President Harrison, after the passage of the McKinley bill, as the following table will show:

Table showing the receipts, expenditures, and deficiencies during fifteen months of President Harrison's Administration, and during a period when the McKinley bill was in full operation.

Month of—	Receipts.	Expenditures.	Deficiencies.
November, 1890.....	\$28,678,674.71	\$42,570,022.40	\$13,891,347.69
February, 1891.....	29,273,173.02	29,725,099.80	451,926.84
March, 1891.....	29,027,455.46	29,062,737.10	35,281.64
May, 1891.....	27,289,365.94	27,680,236.65	400,870.71
October, 1891.....	28,448,562.21	30,660,810.52	2,212,248.31
December, 1891.....	37,646,515.73	30,434,727.67	7,211,788.06
January, 1892.....	30,383,478.60	34,175,350.10	3,791,871.50
April, 1892.....	25,971,224.04	30,050,631.97	3,088,407.93
May, 1892.....	28,228,308.45	31,732,793.80	3,504,485.35
July, 1892.....	34,314,331.25	37,249,407.04	2,935,075.79
October, 1892.....	31,839,138.21	31,891,250.18	51,111.97
November, 1892.....	28,739,835.38	29,640,778.28	910,942.90
December, 1892.....	33,006,963.60	33,459,909.59	452,945.99
January, 1893.....	35,003,052.31	38,351,432.18	3,348,379.87
February, 1893.....	29,698,142.23	30,866,273.00	1,168,130.77

The Republicans during the first Congress under President Harrison made an increase of annual charges upon the Government of more than fifty millions. They depleted the Treasury, and when they saw deficiencies staring them in the face, they ordered the preparation of plates upon which to print bonds. The deficit reported in President McKinley's message of \$69,803,260 on June 30, 1894, was incurred while his tariff bill was in force. The revenues from the Wilson law, under normal conditions, would be ample to run the Government, economically administered. The appropriations of the last Congress were increased fifty millions. The great panic which began in 1893 greatly reduced the revenues of the Government.

The receipts now, however, under this law, are increasing daily, as the following table will show, and no doubt would be ample for all necessary purposes:

#### Excess of receipts over expenditures.

March 6, 1897.....	\$288,686.78	March 19, 1897.....	\$98,671.01
March 8, 1897.....	26,863.00	March 20, 1897.....	74,029.48
March 12, 1897.....	427,363.49	March 22, 1897.....	\$33,015.31
March 13, 1897.....	283,674.65	March 23, 1897.....	53,643.95
March 15, 1897.....	919,755.50	March 24, 1897.....	90,487.87
March 16, 1897.....	2,383,886.87	March 25, 1897.....	691,065.32
March 17, 1897.....	227,127.24	March 26, 1897.....	144,780.08
March 18, 1897.....	900,340.31		

#### CONCLUSION.

Now, in conclusion, Mr. Chairman, it does seem to me that the pervading topic throughout all this discussion has not been American industries, not American interests, but denunciation of party policies, reflection on the past Administration, and exultation and loud commendation of the Administration now in power. We should rise above party prejudices and party policies in the inauguration of an American policy that will elevate the poor as well as the rich, the weak as well as the strong, giving equal and exact justice to all. Let us guard our sacred institutions from all perversion. The wise and just policy of this country is not only one of economics, but a peaceful one as well.

No nation ever had less to gain from forcible aggrandizement. Our augmentation is by growth, not by acquisition; by internal development, not by external accession. No scheme can be suggested to us so magnificent as the prospects which the sober contemplation of our own condition, unaided by projects, uninfluenced by ambition, spreads before us.

A country of such vast extent, with such varieties of soil and climate, with so much public spirit and private enterprise, with the population increasing rapidly, with capacities for improvement inexhaustible, needs but wise and just laws, time and peace to make it beyond controversy the greatest nation on earth.

Human liberty may yet be obliged to repose its principal hopes on the intelligence, virtue, and vigor of this nation, when the beacon fires of our free institutions and religious liberty that we have kindled will everywhere light up the continents of the earth and the islands of the sea, and shall diffuse their rich and mingled radiance over the vast map of the nation. [Great applause.]

Asphaltum Mines of the Uncompahgre Reservation—Shall  
We Depart from a General Policy?

SPEECH

OF

HON. JOHN F. SHAFROTH,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 23, 1897.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the Indian appropriation bill—

Mr. SHAFROTH said:

Mr. CHAIRMAN: There is a phase of this question which apparently looks to the financial interest of the nation, and yet beyond the surface there is a far greater interest involved, one that may affect the policy of the nation as to the development of its mineral resources. The leasing of the asphaltum mines in the Uncompahgre Reservation might produce a little revenue to the Government, but it would establish a precedent diametrically opposed to the general mining laws, which have produced such marvelous results in the addition of wealth to the nation.

I do not know whether there is a company or an individual after these asphaltum or gilsonite properties, and I do not care. I have never talked with any of the parties; I have never known any of the parties. The Representative who is influenced in behalf of a corporation that might acquire some of these mines by the opening of the reservation ought to be ashamed of his vote, and is unworthy of the position he holds. It is sufficient for me to know that the proposed amendment to lease these gilsonite mines is an encroachment upon the general mining laws under which all the Rocky Mountain States have been developed. It is therefore upon grounds of public policy that we oppose this amendment.

The Uncompahgre Reservation in Utah was set aside by Executive proclamation on January 5, 1882, as a temporary resting place for the Uncompahgre Ute Indians until agricultural and grazing lands were allotted to them in severalty. These Indians had sold their lands in Colorado for the sum of \$1,750,000, and the Treasury now holds that sum in trust for their benefit, paying them annually interest upon the same. Each Indian is allowed to select 160 acres of agricultural land and a like amount of grazing land upon paying to the Government \$1.25 per acre out of said trust fund. The act of June 15, 1880, which recites the treaty with these Indians, provides for the appointment of commissioners to make allotment of lands in severalty to them.

On August 15, 1894, another act of Congress authorized the appointment of another commissioner to allot lands in severalty to these Indians, and further provided that the remainder of the land in the Uncompahgre Reservation should immediately after the allotment be open to entry under the mineral and homestead laws of the United States. Notwithstanding the fact that it has been the duty of the Government ever since the treaty to allot lands to these Indians, not one acre of land has yet been allotted.

It is conceded by all that only 10,000 acres out of the 2,000,000 acres contained in the reservation are fit for agricultural purposes, when there are 956 Uncompahgre Ute Indians, composing about 300 families. The agricultural land in this reservation is not worth \$1.25 per acre, and for that reason the Indians do not select it. Thus by proclamation of the President 2,000,000 acres of land have been withdrawn for fifteen years from mineral entry in order to make allotment of agricultural lands to the Indians, when only one-half of 1 per cent of it is fit for that purpose, and it is not likely that even a part of that will ever be taken.

Is it right that the Government should segregate this land from the public domain and declare to a State, whose prosperity in a great measure depends upon the development of the same, that no miner shall be permitted to go thereon and develop its resources?

I submit, gentleman, that there is not a man on the floor of this House who would like to see the Government cut out of his State 2,000,000 acres and prohibit a white man from setting foot thereon. When it strikes home, everyone can see the injustice of it. If it is not right as to each one of your States, how can it be as to a new State, whose future is dependent upon the uncovering of its mineral wealth?

Mr. Chairman, we people of the West feel deeply interested in this matter, because we see that the proposition to lease or sell asphaltum mines in this reservation is an encroachment on what we have thought were our rights, an encroachment upon what we have thought was the policy firmly established by this Government as to its mineral lands.

Why, Mr. Chairman, is it right that Utah should have 2,000,000 acres set aside from public entry, while we in Colorado have the right to explore our lands, to locate under the general laws asphaltum mines, or any other mines that may exist in its borders?

The United States years ago established the present policy as to

its mineral lands. The enormous development of the mining States has demonstrated the wisdom of that policy. You must stick to that policy in dealing with the lands of each State, if you want to be fair to all the States. When you indorse the position that the President can withdraw from public entry 2,000,000 acres of land in Utah which is not suited for the purpose authorizing such withdrawal, and after the existence of the wrong for fifteen years, have it restored to the public domain under a law providing for a system of leases or sales of its mineral lands, you are working a wrong not only to one State, but to a good many States.

Mr. Chairman, on the 22d of February last President Cleveland set aside 21,000,000 acres of land, so that the miner can not go thereon to explore, the homesteader can not go thereon to locate his homestead. Twenty-one million acres of land, by one stroke of his pen, withdrawn from sale and settlement. Other large quantities of land in the West have been set aside by the previous proclamations of Presidents. What does it mean, Mr. Chairman?

It means that if this policy of making the miner pay a royalty for working these asphaltum mines prevails, you will have the same policy pursued as to gold, silver, copper, and lead mines which may be found on all these reservations that have been set aside by Executive orders. It means, Mr. Chairman, the dwarfing of the development of all the Western States. It means that the President may withdraw from settlement, from prospecting, from development, other large quantities of land covering the greater part of the territory in our respective States. It means, if carried to its logical result, that the industries of the Western States shall be made, by a system of royalties, to pay an undue proportion of the expenses of the Government. I submit, gentlemen, it is not right. If such a quantity of land were set aside in your districts, you would be raising heaven and earth to have it restored to public entry.

But, Mr. Chairman, I want to examine some of the arguments made on the other side, outside of the question of the general policy of the Government. I want to see if those arguments are sound. I want to see whether the declarations as to the richness of these mines can be established.

Any man who understands mining, any man who understands how risky and often disappointing it is, must know that it is absolutely absurd to talk in the manner that some gentlemen have talked concerning the richness of these asphaltum mines.

Why, Mr. Chairman, the gentleman from Alabama [Mr. UNDERWOOD] stated here yesterday that the profits which would accrue to the individuals locating upon these lands by reason of opening the same to public entry would be \$230,000,000. Upon what did he predicate that statement? He took the report made by an officer of the Geological Survey. I have examined that report. I have been to the Bureau to find upon what facts it was made, and I have found that it was merely an estimate. They told me that they did not sink a single shaft, they did not bore a single hole, for the purpose of determining the extent of these deposits.

One man was sent out there, and he made a general examination. He saw the outcroppings, just as we see outcroppings of most gold and silver mines. If you did not have surface indications, you would not likely find any mine in the world. Digging a hole in the ground irrespective of the place where you dig it would be of no value in the discovery of mines. You have surface indications as to an asphaltum vein, just as you have surface indications of a gold lode or a silver lode.

The CHAIRMAN. The time of the gentleman from Colorado [Mr. SHAFROTH] has expired.

Mr. KING. I ask unanimous consent that the time of the gentleman be extended ten minutes.

There was no objection.

Mr. SHAFROTH. Now, Mr. Chairman, what do we find?

Mr. LACEY. I will ask the gentleman to yield to me for a moment, so that I can offer a substitute. I should like to hear the remarks of the gentleman on this substitute, and to give him an opportunity to know what the proposition is.

Mr. SHAFROTH. I shall be glad to do that.

Mr. LACEY. I offer the following substitute for the motion already made.

The CHAIRMAN. The Clerk will report.

The Clerk read as follows:

The Committee of the Whole recommend that the House nonconcur in the Senate amendment, and the conference committee is instructed to insist upon a provision for leasing the gilsonite mineral lands with such limitations and restrictions as will prevent the control of the said mineral by combinations of any kind, such leases to be for limited amounts and for limited terms.

Mr. MAGUIRE. Limited "periods," I think, would be better than "terms."

Mr. SHAFROTH. Mr. Chairman, I will come to that proposition in a few minutes. I want to take up the question of the value of these asphaltum mines at the present time. I claim, Mr. Chairman, that the report made by Mr. Eldridge, of the Geological Survey, is a general report, made from only a casual examination.

An officer of the Department told me this morning that it was not made in their regular work. Mr. Cleveland refused to sign a certain proclamation opening these lands to entry under the act of August 15, 1894, on the ground that the Government should receive a revenue from these mines, and he wanted a report upon the same. Secretary Smith thereupon requested that some one be sent immediately to make an examination, and Mr. Eldridge was appointed for that purpose. I therefore submit that this report, which involves an estimate made under these circumstances, where the employee knows that the person who appoints him has a certain theory concerning the matter, can not be a safe report.

I do not care how honest the man was, his mind must have been influenced by the position the President had taken. In examining this matter, I find that this report goes upon the theory that these veins are of certain widths and extend 1,000 feet in depth. Now, how does he know that? Nobody has ever dug down there. No one has ever determined how deep they are. He has not sunk a shaft even 10 feet in depth on any of them. How does he know the character of the asphalt at the various depths? We know in gold and silver mining that at a certain level you will get one grade of ore, and at certain other depths you will get ores of different grades. The result in asphaltum mining must be the same. If it is rich on top, it may be that it is poorer as it descends. The report estimates that the mines will produce 23,000,000 tons of asphaltum, and that it will all be of marketable value.

We know that in fissure veins the deposits often pinch out, and there is no reason to believe that these deposits are an exception. It seems to me that he would be an unsafe person who would be willing to predict that these estimates would be borne out, and anyone who would so predict would be a very unsafe adviser.

Mr. Chairman, we find that these deposits have been discovered for about ten years. I had a little practical experience concerning asphalt found in the western part of Colorado. I had the good fortune at one time to be the city attorney of the city of Denver. We wanted to pave some of the streets of that city, and as I was the legal adviser of the board of public works, it became my duty to investigate the subject. We called for bids for paving a certain section of the city. Bids were given by the Barber Asphalt Company. A home company had been incorporated, claiming to have mines in western Colorado and eastern Utah, and it expected to drive the Barber Asphalt Company out of existence. They showed samples that were beautiful; to my mind far prettier than those exhibited by the Barber Asphalt Company. They offered to give bond for the faithful performance of the contract, and in every manner showed good faith; they believed their asphaltum was excellent.

You know, gentlemen, the report of the Geological Survey states that some of these asphaltum veins extend into the State of Colorado for several miles. This report estimates that there are 880,000 tons of gilsonite in that part of the Bonanza vein which lies in the State of Colorado. The gentlemen in this home company thought they had a great investment. They made a lower bid than the Barber Asphalt Company, but we thought it was unsafe to enter into a contract with them. They were willing to give bond, but if there was a liability upon the bond it meant delay. The "law's delay" exists at this time, as in the time of Shakespeare.

The board of public works concluded to refuse to accept their bid unless they would lay some asphalt paving in the city of Denver for the purpose of testing whether that asphalt was of good quality. We selected the street in front of the city hall, and they laid a beautiful piece of asphalt paving. The Barber Asphalt Company never laid any superior in appearance. For the first two weeks they took almost every prominent man in Denver there to show what a bonanza they had; but at the end of three months three-fourths of that asphalt had worn down to the concrete.

It would not stand wear, and when the time for the letting of the bids came, they did not even ask for the contract. The idea that something inaccessible is very great and rich does not always prove to be correct. Mr. Chairman, we are always going beyond the reality; we are always thinking that something we can not reach is much better than what we have. It is still true that distance lends enchantment to the view.

Mr. GAINES. Am I correct in understanding the gentleman to intimate that the asphaltum in these lands is of the same character as the asphaltum that he has been talking about?

Mr. SHAFROTH. Of the same character.

Mr. GAINES. Then why is there such a scramble to get hold of it?

Mr. SHAFROTH. I do not know. I feel satisfied that it is not useful for paving purposes, unless some method of mixing it with other substances may be discovered which will make it valuable. I know that the Barber Asphalt Company sent out agents to investigate lands of that kind, and their representative told me that they found the asphaltum was of no value for their purposes. There may be other uses to which it can be put, as ingredients in the manufacture of varnish and paints, but for paving purposes it is not valuable and not of the rich quality as that

found in Lake Trinidad. But, Mr. Chairman, I hope these mines are rich. We want all the deposits of this country to be rich, because just in proportion as the resources of any portion of the country are found to be valuable will an addition be made to the wealth of the country and to the happiness of our people and of all mankind.

Mr. LINNEY. Will the gentleman permit a question?

Mr. SHAFROTH. Yes, sir.

Mr. LINNEY. Would not one of the best ways of determining the actual value of this mineral deposit be to lease the lands for some time?

Mr. SHAFROTH. I will come to that in a minute. Now, Mr. Chairman, the proposition is made that we should lease these lands, and the gentleman from Alabama [Mr. UNDERWOOD] has suggested that we sell them at auction. What does that mean? If this were a case where the value of the property could be easily ascertained, there might be something in that idea, but before a man buys anything he wants to know what he is going to buy.

A man will not buy a hole in the ground. A man in mining never gives anything for a mere prospect. It has got to be developed. Now, what does the development of a mine mean? I can illustrate it by the mines at Cripple Creek in my State. In order to make sales of those mines, what do they do? They sink a shaft a thousand feet in depth on the vein. They take at each foot of that shaft the mill run of the ore. At each hundred feet they make a level—that is, a tunnel—running the length of the vein. They ascertain the mill return upon the ore taken from each of those levels.

From such data you can ascertain approximately the value of a mine. You can calculate the quantity of ore between the first and second levels, you know the mill run, and can thus find the value of that body of ore. You get similar figures for the ore between the next levels, and so on, and in that way you can ascertain with reasonable certainty the value of the mine; but even then you can not sell it for anything like what it figures up. The man who buys it expects to make a good profit or else he will not buy. The result is that it takes thousands and thousands of dollars to put a mine in condition for sale.

So it must be with these asphaltum veins. First, you would have to sink shafts at least a thousand feet in depth; you would have to run levels that would require the expenditure of a very large sum of money; you would have to develop your asphaltum mines before you could put them on the market for sale. If you did not, they would bring nothing. Does the United States want to make such large expenditures? Does it want to go into the mining business?

[Here the hammer fell.]

By unanimous consent, the time of Mr. SHAFROTH was extended for five minutes.

Mr. SHAFROTH. Now, Mr. Chairman, as to the leasing proposition, what does a lease mean? It means a partnership upon the part of the Government to conduct a purely private business for profit. A lease in such a case as this is bound to create a monopoly. Why? The Government invites proposals to lease this land. What does that mean? In the first place, it means the expenditure of money to develop the mine. In the next place, it means the building of a railroad, and the construction of a railroad in the heart of the Rocky Mountains is not a small matter. It will cost a great deal of money. It means an expenditure of millions of dollars. Who is going to undertake that expenditure if the Government reserves the right to lease other parts of the same veins to others?

Under such conditions who is going to build the railroad? These mines are worth nothing without a railroad to take the product to market. If you are going to lease these lands, that evidently means that only one proposition from the various bidders will be presented, and it will be something like this: "We will lease all of these lands if you will let them all to us, but we will not accept a lease of a part only. We will not go to the expense of laying out millions of dollars in the construction of a railroad and in developing these mines unless we are sure of getting the benefit of our expenditures, unless we are sure that the Government will not undertake to lease other parts of the land near by and give others the benefit of our improvements."

The leasing proposition, therefore, if carried out, would simply mean that one corporation would control these deposits. Now, what does that mean? Gentlemen say it means that the Government will get some revenue. That is true; but what else does it mean? It means that that one corporation can fix the price of this article at whatever it desires, so that where the Government gets 1, 2, 3, or 4 per cent out of it as royalty the people who want to use this product will have to pay a hundred per cent profit upon it. That affects not only the people of Utah but the people of the city of Washington and of every other place that may require the use of this kind of material.

Now, we are acting here as trustees for the entire people, and I submit that any general policy that we adopt ought to be one that will benefit all the people. I know that the policy which we

have pursued heretofore in dealing with our mining lands has brought immeasurable advantages to the people of the United States. I know that policy has produced great development and wealth in the wilderness of the West, and one of these days, by pursuing that course, you will have in the Rocky Mountain region, in wealth and population, empires among the States.

I know, too, that it is not everyone who takes the pick and goes out prospecting who finds a paying mine. I know that thousands and thousands of dollars have been lost, and, in the long run, I believe it to be the fact that as much money has been expended in mining as is taken out in the form of the precious metals.

Mr. COOPER of Wisconsin. One question, if the gentleman pleases. He is trying to establish, as I understand, an analogy between gilsonite mines and gold mines?

Mr. SHAFROTH. Yes, sir.

Mr. COOPER of Wisconsin. Now, will he permit me to ask him this question: Suppose there were only one paying gold mine in the United States, or only one piece of land where gold could be found in paying quantities, would the gentleman be in favor of turning that property over to a corporation at \$5 an acre? Would he, in other words, be in favor of making it possible for any one individual or one corporation to monopolize the production of gold in the United States?

Mr. SHAFROTH. No, sir. But that is not the question here. There are a great many of these mines—

Mr. COOPER of Wisconsin. Is it not a fact that the only place where gilsonite is accessible in paying quantities to-day is on this particular reservation?

Mr. SHAFROTH. No, sir; such deposits are found in California—

Mr. COOPER of Wisconsin. Not to amount to anything.

Mr. SHAFROTH. Not only that; but this very geological report of which the gentleman has made so much capital shows that there is a vein extending into the State of Colorado the deposits of which amount to as much as 880,000 tons. Yet have we heard of anybody getting rich off of that property? Why, sir, there is enough asphaltum there to pave the streets of all the cities west of the Missouri River for twenty years. Yet have we heard of anybody making any money out of it? When have we heard of the shipment of one dollar's worth of this mineral from those mines?

Mr. BARLOW. Did not the gentleman say that the deposits there had been tested and found not to be worth anything?

Mr. SHAFROTH. I think so; I do not think they are worth anything for paving purposes, yet they are of the same character as these deposits now under discussion. The theory put forth here that these mines are extremely rich and valuable will not bear the test of reason. But even if they were, the vast quantity of asphaltum that exists there would, upon opening the lands to location under the mineral-land laws, prevent high prices, produce low prices, and thus benefit the entire people of the United States.

Mr. Chairman, this Government has never attempted to make a profit out of the public domain. The acquisition of territory has always been for the sole purpose of political jurisdiction, for political power—the wise policy of all governments. It is the allegiance of the people who inhabit and build up the territory that has made us such a great and powerful nation. Let us not depart from that policy.

#### The Dingley Tariff Bill.

#### SPEECH

OF

HON. WILLIAM SULZER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1897.

On the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. SULZER said:

Mr. CHAIRMAN: In the brief time allotted to me it will be impossible for me to discuss this bill in detail.

One remark of the gentleman from New York [Mr. RAY] amused me, and I can not let the opportunity pass without making a brief reply thereto. He read extensively from the report of the investigating committee on the Homestead strike, at the Carnegie Iron and Steel Works, in Pittsburgh, Pa. We all know that strike occurred at a time when protection, as understood by the Republican party, was in full force and effect; at a time when the McKinley law was in full operation. The law did not increase wages or give additional opportunities to labor. It did just the reverse. Under it the greatest strikes ever known in the country occurred, and there were more lockouts and more labor disturbances in all parts of the land during the time it was in operation

than at any other time in the history of the country. The McKinley law, however, was not altogether a failure. It was entitled "A bill to decrease revenue." It was intended to wipe out the surplus, and it did. That far it was a success.

This bill is entitled "A bill to provide revenue and encourage industries," and if it becomes a law, is destined in my judgment to be a worse failure than the McKinley law. It is not what it purports to be on its face. I can not see how it will encourage industries, increase wages, protect the laboring man, help the toiler and the wage earner, benefit the farmer, or bring additional revenue to the Treasury. I can see, though, how it will decrease revenue, stagnate business, imperil labor, and bring about the same condition or a worse condition of affairs than the McKinley law did. If so, we will soon be much worse off than we are now and on the bond-issuing basis again, helping the bankers and the syndicates by issuing bonds for gold in time of peace.

This bill will not increase the demand or the price for the products of the farmer or the pay of the mechanics, the artisans, or the toilers of the country. It will not make times better or more prosperous. It is not a bill in the interest of all the people. It is a bill in the interest of the few. It is a bill purely and simply in the interest of the trusts, the monopolies, and the syndicates. By a system of taxation it takes from the poor and gives to the rich. It is legalized robbery. It adds additional burdens upon the masses and lends additional advantages and facilities to the classes. It steals from the many for the few, and does it by operation of law. It is the most unfair, the most unjust, and the most iniquitous tariff bill ever introduced in Congress. It is protection run mad. It has very little to commend it when the gentleman from New York [Mr. RAY] is compelled to go back to the Homestead strike in order to justify it. That great strike occurred, as you all know, in one of the greatest protected industries of the country. The men at the head of it were making millions, and the men who did all the work and produced all the product were becoming poorer and poorer each month and each year. The few doing nothing and getting all, the many doing all and getting nothing.

No measure which is a protection measure, for protection and protection only, will help the artisan, the mechanic, and the wage earner of the country. If the gentleman from New York [Mr. RAY] is so solicitous about the Carnegie Steel Works, why does he not, and why does not the majority here, consent to permit the minority leader on the floor of this House to offer, as he desires, an amendment in regard to the so-called steel trust? Let us take a vote on that and on the sugar-trust schedule, and have the record made up for all time to come.

This bill has been hastily prepared by the Committee on Ways and Means. An extraordinary session of Congress has been convened to consider it and pass it. It is to be rushed through as a panacea for all our ills.

Here in the House no opportunity is permitted members to offer amendments to the bill or endeavor to perfect it, except by members of the Ways and Means Committee. The bill, take it all in all, is in its present shape very crude and full of imperfections, inequalities, and inconsistencies.

There is not in the bill, from one end of it to the other, a single line or a single paragraph for the benefit of organized labor or for the protection of the working people of the country. Everything is protected but labor. Labor comes in free. The labor here must compete with the labor of all the world.

Everything in this bill, from the beginning to the end, is in favor of the manufacturers, the monopolies, the trusts, and the syndicates—those gigantic combinations which contributed the large sums of money to the Republican campaign fund in the last election to defeat the will of the people.

There is no doubt those vast contributions were made with an understanding, expressed or implied, that the contributors, in case of Republican success, were to be paid by special legislation in their interest and special favoritism in their behalf. To-day you are simply carrying out that understanding. To-day they and their beneficiaries are seeking their reward.

I believe this bill is one of the most iniquitous measures for the purpose of raising taxes by increasing the burdens of the people that has ever been introduced in the Congress of the United States. It is the worst piece of class legislation in all our history.

It violates every principle of democracy. It violates that cardinal principle of Jefferson—"Equal rights to all, special privileges to none." It burdens beyond the calculations of the human intellect the struggling people of our country in order to enrich and make more prosperous the few. It takes from those least able to pay and gives to those most able to pay. It is for the rich and against the poor; for the few, against the many.

We know to-day, beyond all contention, that the tariff is a tax, and beyond all dispute that the consumer pays the taxes. Ultimately nearly all the burdens of taxation in this bill must fall upon the yeomanry of the country.

By this system of indirect taxes this bill robs democracy and enriches plutocracy. No party that stands for the people can support it. The party that does support it must fall.

This tariff bill is worse than the war-tariff bill, worse than the McKinley bill, and in all respects is the most outrageous tariff measure ever fathered by the Republican party. It fosters every trust and monopoly and saddles the great burdens of government on the farmer, on the toiler, and on the wage earner of the country. If it should become a law in its present shape, its authors will rue it.

It is not a revenue measure at all. On the contrary, many people think, and justly so, in my judgment, that it will not raise as much revenue as the present law. Carry protection, as understood by the gentlemen on the other side, to its logical sequence, and it would mean prohibition. A Chinese wall of protection would be built around the country against the goods of other countries. There would be no imports, and hence there would be nothing to tax and no revenue derived from importations.

The protection policy of the Republican party is absurd and ridiculous.

The Democratic party stands for a fair, just, and equitable revenue system, a tariff for revenue that will support the Government, economically administered, with equal justice to all and favoritism to none, having a jealous care for our farmers and toilers.

The Democratic party does not believe in free trade any more than it believes in protection for the sake of protection. Free trade is a fallacy. Free trade is a heresy. Free trade is a scarecrow—a bugaboo. Free trade at the present time and for generations to come in this country is an absolute impossibility. There is not a civilized country in the world to-day that is a free-trade country. All the nations of the earth raise most of their revenue from a tax on imports. We must do the same, but we do not believe in taxing the necessities of life and exempting the luxuries of life. On the contrary, those articles the least needed by all the people should pay the highest tax, and those most needed by all the people should pay the least tax.

All raw material essential to our industries and manufactures should be admitted free in order that this country can compete in manufactures with all the world. The more free raw material, the more will be imported; the more that is imported, the more will be manufactured; the more manufactured, the more factories, the more mills, and the more industries will spring into existence; the more factories, mills, and industries we have, the more men will be employed; the more men employed, the more wages will be paid; and the more wages paid, the happier the home and the freer the people; and the happier they are, the more contented and the more prosperous the family and the little children, and the better for all the people. This, in my judgment, is the true theory for this country to pursue and the right policy to follow.

Protection has nothing to do with the price of labor. Capital buys labor as cheaply as it can. Wages are regulated by the inexorable law of supply and demand. Whenever you find two employers looking for one workman wages will be high, and whenever you find two workmen looking for one employer wages will be low. When the demand is greater than the supply wages go up, and when the supply is greater than the demand wages go down. Tariffs, taxes, and import duties have nothing to do with it. In all prosperous communities labor is sought for, not turned aside.

I do not believe in free trade any more than I believe in protection for the sake of protecting the few as against the many. "Equal rights to all, special privileges to none," should be the cornerstone of every revenue measure. As Daniel Webster once said, "The authority of Congress to exercise the revenue power with direct reference to protecting manufacturers is a questionable authority." At all events, it is an unfair and an unjust policy.

We should legislate for the best interests of the whole country, and not for the interests of any one section of the country, or for the advantage of the trusts, the monopolies, the syndicates, and the manufacturers.

It can not be successfully denied that this bill is unfair and unjust to the masses. It can not be honestly controverted that it is full of inequalities and full of inconsistencies. The people will soon know it is the most partial tax measure the House of Representatives has ever been called upon to consider—the culminating atrocity of class legislation by the Republican party.

You say on the other side that this is a measure to increase the revenue. In other words, a measure to increase the taxes of the people. If I understand aright the temper of the American people to-day, it is not a question of more taxes, but a question of more money with which to pay taxes. The tariff will not restore good times or hasten prosperity. More money will.

Our volume of currency has been contracted, while our population has increased. Under the gold standard money is getting dearer and scarcer, men and property poorer and cheaper. To-day the money of the people is not one-half per capita what it was a generation ago. We should increase the volume of our currency by restoring bimetalism in order that the people may have more opportunities to earn money.

The people to-day do not ask for more protection, but they do

ask for the restoration of the money of the Constitution, the free and unlimited coinage of gold and silver, as intended by the fathers of the Constitution.

National bimetalism is the question of the hour, not taxation. The Republican party must meet this issue. It can not be ignored. It can not be shifted or side tracked. It can never be settled until it is tried.

According to this morning's report of the Secretary of the Treasury, we have lying idle in the vaults of the Treasury Department over \$220,000,000 in excess of the \$100,000,000 of gold to keep up the gold reserve. According to the amount of revenue derived from the present law and this large and growing surplus, no legislation to increase the taxes of the people will be necessary for several years to come, and perhaps not at all. If there is any injustice or any inequalities in the present law, it can be amended, but a general revision of the whole tariff law at this time is inopportune and will have just the opposite effect on the country of what the President and you imagine.

This monkeying with the tariff is to be deprecated at this time. It throws doubt and uncertainty over the business of the whole country. It halts progress, and lays a restraining hand on labor and forces it to remain idle and at a standstill. It paralyzes every industry and jeopardizes all our commerce. It shuts out of employment thousands and thousands of working people, increases distress, woe, misery and want, and poverty stalks the land.

Your boasted prosperity is not forthcoming. Times are getting worse, not better.

We are to take a vote upon this bill to-day. I repeat, the bill has not been properly considered. During the limited time for debate allowed in the House only one-tenth of the bill has been considered. The bill contains about 163 pages. Thus far we have only debated and considered about 14 or 15 pages. In an hour or two the previous question will be ordered, debate will be cut off, and the vote on the bill will be ordered. Undoubtedly it is the intention of the majority to pass it. In its present shape and present condition, how can you honestly and consistently vote for it. No doubt, however, but that it will pass. It is the order of the President, the decree of the committee, and the majority will humbly submit and vote for it. But I desire to ask gentlemen upon the floor of this House, excepting, perhaps, members of the committee, how they can intelligently vote for the bill? Why all the hurry? Why all the haste? "Better be slow than be sorry."

You know it is a very imperfect bill; you know it is a hastily prepared bill. You know it has not been considered or debated section by section or schedule by schedule. There are many schedules in the bill which few members understand or can comprehend. Even the members on the other side are not a unit in regard to it. Already you have disagreed regarding several schedules. Already thousands and thousands of protests are being received and filed against this monstrosity of tariff manipulation.

Under all of these circumstances, and many more that I could set forth if I had the time, it is impossible for me to cast my vote in favor of this bill. Pass it, and you will regret it. Pass it, and the day of reckoning is not far distant. Pass it, and you will soon realize your mistake. Pass it, and you will soon hear from the people. You are sowing the wind and will reap the whirlwind. [Applause on the Democratic side.]

#### Approval of the Journal.

#### SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 13, 1897.

The House having under consideration the approval of the Journal of the proceedings of Monday, May 10—

Mr. WHEELER of Alabama said:

Mr. SPEAKER: I rose with the intention, in the most respectful manner, of very briefly submitting some remarks as to the constitutionality of the resolution the House adopted last Thursday, to adjourn from Thursday until Monday, from Monday until Thursday, and so on, until further order.

LIMIT OF POWER OF LESS THAN A QUORUM.

Section 5, Article I, of the Constitution reads:

Each House shall be the judge of the elections, returns, and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members in such manner and under such penalties as each House may provide.

I ask the special attention of the House to the expression:

But a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members.

And I respectfully submit that these words define and limit the power granted by the Constitution to a less number than a quorum of either House of Congress. When less than a quorum of this House is present, it is not a House of Congress, and when less than a quorum of the Senate is present, it is not a Senate, and no powers can be exercised by less than a quorum of either House except those which are contained in the words that I have read.

The fourth subdivision of this clause of the Constitution is as follows:

Neither House, during the session of Congress, shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two Houses shall be sitting.

If the resolution—

Mr. DINGLEY rose.

Mr. WHEELER of Alabama. I hope my friend from Maine will allow me to proceed without interruption, at least that he will refrain for the few moments that I shall occupy the floor.

Mr. DINGLEY. Mr. Speaker, I call the gentleman to order. He is not speaking to the question.

Mr. WHEELER of Alabama. I am speaking to the point—

The SPEAKER. The Chair hopes that the gentleman from Alabama will confine himself to the subject under discussion, which is whether the Journal correctly states the proceedings of the House.

Mr. WHEELER of Alabama. As to the point of order by the gentleman from Maine [Mr. DINGLEY], my answer is that if the Journal is in affirmation of anything which is in violation of the Constitution, if it states that action was had by the House which is not authorized by the Constitution, now is the time to make the point, and surely it is—

The SPEAKER. But the Journal is not in affirmation of anything except a truthful statement of the proceedings of the House.

Mr. WHEELER of Alabama. Well, I ask unanimous consent to occupy the floor for five minutes, or for sufficient time to present the question to the House.

The SPEAKER (continuing). The House may have proceeded correctly or incorrectly, constitutionally or unconstitutionally, but the question is, Has the action of the House been properly recorded?

Mr. WHEELER of Alabama. The Speaker will bear me out—

The SPEAKER. If the House should assert that they had not done this, it would not prevent them from having done this.

Mr. WHEELER of Alabama. When they have done a thing which is in violation of the Constitution, it is a nullity and has never been done.

The SPEAKER. Oh!

Mr. GAINES. And Thomas Jefferson was the first man who said that.

Mr. WHEELER of Alabama. And Hon. James G. Blaine, when Speaker, and Hon. Nathaniel P. Banks, after he had been Speaker, both reasserted and reaffirmed this principle of parliamentary law.

I respectfully insist, Mr. Speaker, that the meaning of this clause of the Constitution is that, in order for the House of Representatives to have power to adjourn for more than one day, a quorum of the House, that is, a majority of its members, must be actually present on the day and at the time that the adjournment takes place.

It certainly does not mean that a minority—that is, less than a quorum—can exercise this power, because such a body would not be a House of Congress. I believe this is the first time since the adoption of our Constitution that an attempt has been made by which in an indirect manner a minority, or less than a quorum, has openly assumed to adjourn for more than one day. Whenever the question of the power of the minority has arisen, it has been decided that less than a quorum of the House of Representatives has no power whatever except—

To adjourn from day to day and compel the attendance of absent members.

I have before me several rulings which are in point.

#### RULINGS BY SPEAKERS OF THE HOUSE.

I read from the Journal of the second session Fifty-third Congress, page 211:

In the absence of a quorum, a motion to summon a member to the bar to answer for contempt and violation of rule in refusing to vote was held not in order.

Also in the Journals, first session Twenty-ninth Congress, page 356; second session Twenty-ninth Congress, page 348; second session Thirty-second Congress, page 388; Globe, second session Forty-second Congress, page 3857, it was ruled—

Where less than a quorum is present, a motion to take a recess is not in order; and no motion is in order except for a call or to adjourn.

Journal, second session Fifty-second Congress, page 105, it was held that—

A recess can not be taken, even by unanimous consent, when the record discloses the absence of a quorum.

Rules, page 503, says:

A smaller number than a quorum may adjourn from day to day.

Journal, second session Fifty-third Congress, pages 818, 819, says:

A quorum was held to be required to discharge the Sergeant-at-Arms from further proceeding on a warrant of arrest continued in force after the call of the House had terminated.

Journal, first session Forty-eighth Congress, pages 1385, 1386, says:

When a vote taken by yeas and nays shows that no quorum has voted, it is the duty of the Chair, under the Constitution (Article I, section 5), to take notice of that fact.

Journal, third session Forty-second Congress, page 447, says:

It appearing from the Journal that an order was made when, as appeared from the Journal, less than a quorum was present, such order should be treated as a nullity.

Mr. DINGLEY. I call the gentleman to order. He is not speaking on the question before the House.

The SPEAKER. The gentleman from Alabama will proceed in order.

Mr. WHEELER of Alabama. I respectfully submit, Mr. Speaker, that if the resolution reported by the Committee on Rules and adopted by the House last Thursday was only intended to inform the members that it was the intention on the following Monday to adjourn over until the next succeeding Thursday, such a resolution would not be in violation of the Constitution. Such a resolution would carry with it no intimation that it was intended that the three days' adjournment should be had on the following Monday by less than a quorum. There was a quorum present last Thursday when the resolution was adopted, and the Record shows that leaves of absence had not been granted to an extent which would have reduced the House to less than a quorum.

On the other hand, if it should be admitted that when the House passed the resolution it intended we should meet at the end of three days and then adjourn for three days, even if we were without a quorum, it would be an admission that our purpose was to deliberately violate the Constitution.

It is true it would be an indirect violation of the Constitution, but to do this indirectly is more serious, objectionable, and dangerous than to boldly adopt a direct method.

Mr. DINGLEY. I call the gentleman to order. He is not speaking to the question before the House.

Mr. WHEELER of Alabama (continuing). I have thus far referred to the proper construction of the language of the Constitution as we find it; but if we examine the proceedings of the Constitutional Convention of 1787, we find additional evidence to sustain me in my interpretation.

#### QUESTION OF QUORUM AND ADJOURNMENT IN CONSTITUTIONAL CONVENTION.

Mr. Randolph's rough plan or draft of a constitution which he presented to the convention on May 29, 1787 (Elliott's Debates, pages 127 and 128), did not go into details so far as to refer to the question of quorum or adjournment, but the draft as proposed by Mr. C. Pinckney on the same day (Elliott's Debates, page 130) without any qualifications provided as follows:

In each House a majority shall constitute a quorum to do business.

The same paragraph contained the provision that—

Neither House, without the consent of the other, shall adjourn for more than — days, nor to any place but where they are sitting.

There was, therefore, nothing in this proposed constitution which authorized less than a quorum to do anything whatever.

I find from Elliott's Debates that on June 13 (page 180) Mr. Gorham made a report from the committee of the whole which was in effect a proposed constitution; on June 15 (page 191) Mr. Patterson presented a plan; on June 17 (page 205) Alexander Hamilton also presented a plan, and on June 30 (page 266) Benjamin Franklin made a speech and presented a brief outline, but none of these propositions made any suggestion upon the question of quorum or adjournment. Several committees were also appointed by the convention to consider certain paragraphs of the various plans which were before that body, but the reports of these committees were silent upon these questions.

#### THE COMMITTEE OF DETAIL.

The convention was organized for business by the election of George Washington as president on May 25, but on July 23, after two months' deliberation, no plan having been agreed upon (I read from the journal of the convention, page 199):

It was moved and seconded that the proceedings of the convention for the establishment of a national government, except what respects the supreme executive, be referred to a committee, for the purpose of reporting a constitution conformably to the proceedings aforesaid.

On the 24th the committee was selected by ballot, and consisted of Mr. John Rutledge, of South Carolina; Edmund Randolph, of Virginia; Nathaniel Gorham, of Massachusetts; Oliver Ellsworth, of Connecticut, and James Wilson, of Pennsylvania.

Oliver Ellsworth was afterwards Senator and Chief Justice of the United States and member of the commission appointed by Adams to negotiate with France.

John Rutledge was an associate justice of the Supreme Court and also Chief Justice.

James Wilson became an associate justice of the Supreme Court.

Edmund Randolph became Attorney-General and Secretary of State, and all these gentlemen were members of their respective colonial or State conventions which ratified the Constitution.

This shows the high order of the men who were the real framers of the Constitution. This committee was called the committee of detail.

A series of resolutions which are found on pages 207 to 214, inclusive, of the Journal, which were really propositions for the basis of a constitution, together with the plan for a constitution offered to the convention on May 29 by Mr. C. Pinckney, and that offered by Mr. Patterson on the 15th of June, were referred to the committee of detail.

On August 6 Mr. Rutledge delivered the report of the committee. It is found on pages 215 to 230, inclusive, of the Journal.

Article VI, sections 3 and 8, which are found on pages 218 and 219, are as follows:

SEC. 3. In each House a majority of the members shall constitute a quorum to do business, but a smaller number may adjourn from day to day.

SEC. 8. Neither House, without the consent of the other, shall adjourn for more than three days, nor to any other place than that at which the two Houses are sitting. But this regulation shall not extend to the Senate when it shall exercise the powers mentioned in the — article.

THE CLAUSES WE VIOLATE WERE DELIBERATELY ADOPTED.

It will be observed that the committee of detail had added the words:

But a smaller number may adjourn from day to day.

This was the first proposition of the Constitutional Convention to give less than a quorum any authority whatever.

After some discussion, to which I will refer hereafter, the section was adopted.

On August 10 (Journal, page 242) Mr. Randolph, seconded by Mr. Madison, moved to further amend by adding to the third section of Article VI:

And may be authorized to compel the attendance of absent members in such manner and under such penalties as each House may provide.

That was agreed to by all except Pennsylvania, which was divided.

It is significant that after the most careful deliberation and discussion the only power given to less than a quorum of Congress was to—

Adjourn from day to day, and compel the attendance of absent members in such manner and under such penalties as the House may provide.

Mr. DINGLEY. Mr. Speaker, I must insist upon the point of order.

Mr. WHEELER of Alabama (continuing). Now, in the face of these recorded facts, and in direct and flagrant violation of the deliberately expressed judgment and defined meaning of the framers of the Constitution, an arrogant Republican majority is seeking to trample that sacred instrument to dust, thus establishing a most dangerous precedent.

#### ARTICLES OF CONFEDERATION.

The Articles of the Confederation provided that all important measures should receive the assent of nine States, and it forbade any question, except adjourning from day to day, being determined except by a vote of the majority of the United States.

I will read this clause of the Articles of the Confederation:

The United States, in Congress assembled, shall never engage in war; nor grant letters of marque and reprisal in time of peace; nor enter into any treaties or alliances; nor coin money; nor regulate the value thereof; nor ascertain the sums and expenses necessary for the defense and welfare of the United States, or any of them; nor emit bills; nor borrow money on the credit of the United States; nor appropriate money; nor agree upon the number of vessels of war to be built or purchased, or the number of land or sea forces to be raised; nor appoint a commander-in-chief of the Army or Navy (unless nine States assent to the same); nor shall a question on any other point, except for adjourning from day to day, be determined unless by the votes of a majority of the United States in Congress assembled.

When the Constitutional Convention assembled, but eleven States were present. The first rule adopted was in these words (I read from the Journal, page 62):

A House to do business shall consist of the deputies of not less than seven States; and all questions shall be decided by the greater number of these which shall be fully represented. But a less number than seven may adjourn from day to day.

These facts show that the tendency has been to prohibit less than a quorum of a parliamentary body exercising any other power than to adjourn for a single day. One purpose was to prevent legislation by a few members, and another was to induce or compel their attendance. This was material when the Congress consisted of but one body, but the importance was intensified and such a proviso became imperative when Congress became constituted into two bodies.

The early history of our country shows that one of the great difficulties experienced by the Congress under the Confederation was to secure the presence of a quorum, and therefore it was found to be very difficult to enact laws.

#### ARGUMENTS IN CONVENTION FOR SMALL QUORUM.

Some of the framers of the Constitution sought to lessen or remove this embarrassment by reducing the quorum to less than a majority.

On August 10 the article we are considering was taken up for consideration, and the main contention was that the proposed constitution should provide that "less than a majority of each House should be made a quorum." I read from Elliott's Debates, page 405:

Mr. Gorham contended for a reduction. He said that—

Less than a majority in each House should be made a quorum; otherwise great delay might happen in business, and great inconvenience from the future increase of numbers.

Mr. Mercer also contended for less than a majority. He said:

So great a number will put it in the power of a few, by seceding at a critical moment, to introduce convulsions and endanger the Government. Examples of secession have already happened in some of the States.

He was for leaving it to the legislature to fix the quorum, as in Great Britain, where the requisite number is small, and no inconvenience has been experienced.

Colonel Mason also spoke on this subject, and said:

I admit that inconvenience might spring from the secession of a small number.

Colonel Mason contended, however, that—

It would be dangerous to the distant parts to allow a small number of members of the two Houses to make laws.

In his speech he also said:

If the legislature should be able to reduce the number at all, it might reduce it as low as it pleased, and the United States might be governed by a junta. A majority of the number, which had been agreed on, was so few that he feared it would be made an objection against the plan.

Mr. King also spoke on this subject in favor of a small quorum. He said:

There might be some danger of giving an advantage to the Central States but was of opinion that the public inconvenience, on the other side, was more to be dreaded.

Mr. Gouverneur Morris also took the same view. He moved—

To fix the quorum at 33 members in the House of Representatives and 14 in the Senate.

Mr. Morris also said:

This is a majority of the present number, and will be a bar to the legislature. Fix the number low and they will generally attend, knowing that advantage may be taken of their absence. The secession of a small number ought not to be suffered to break a quorum. Such events in the States may have been of little consequence; in the national councils they may be fatal. Besides other mischiefs, if a few can break up a quorum, they may seize a moment when a particular part of the continent may be in need of immediate aid to extort, by threatening a secession, some unjust and selfish measure.

The question was also very generally discussed by other members of the convention. They all seemed to admit that inconvenience might arise unless a small body was authorized to do business; but finally, after most mature consideration, a majority of all the members of each House was fixed as a quorum, with an addition of a proviso authorizing a minority—

To compel the attendance of absent members in such manner and under such penalties as each House may provide.

I think it is clear that adjournments from Monday to Thursday by less than a quorum is in violation of the Constitution, but I am also prepared to show that the adjournment from Thursday to Monday also infringes the Constitution, because it is an adjournment for more than three days without the consent of the Senate. [Applause.]

I will discuss that subject upon another occasion.

#### Warehouse for Indian Supplies.

#### SPEECH

OF

HON. DAVID H. MERCER,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 22, 1897.

The House being in Committee of the Whole on the state of the Union and having under consideration amendments of the Senate to the bill (H. R. 15) making appropriation for the current and contingent expenses of the Indian Department—

Mr. MERCER said:

Mr. CHAIRMAN: My motion is to concur in the following Senate amendment:

That the Secretary of the Interior shall, within sixty days after the passage of this act, establish and thereafter maintain at the city of Omaha, in the State of Nebraska, a warehouse for Indian supplies, from which distributions shall be made to such Indian tribes of the West and Northwest as the Secretary of the Interior may direct.

Mr. Chairman, in several Congresses we have more or less referred to this subject-matter. I desire to call the attention of the House to proceedings had in this body in 1894, to some remarks made by the distinguished Representative from Chicago, Mr. ALDRICH, in which he lays down a cardinal principle:

The nearer the base of supplies is to the consumer the cheaper the consumer can obtain his goods. This is a well-recognized axiom among business men, and the first principle of commercial science.

Now, at the outset, I desire to say that this amendment does not imply any infringement upon the rights of Chicago or New York. Those cities are large enough to take care of themselves. But, Mr. Chairman, I am somewhat surprised at the gentleman from New York or the gentleman from Chicago (if the gentleman from Chicago should take that position) charging that this would be an infringement upon the rights of either one of those two great cities.

What do they expect? We of the West, together with the South and the Middle West, gladly rushed to the rescue of Chicago and gave her the World's Fair. Then at New York they had a great naval display. Again, in Chicago they had the greatest telescope in the world, and in New York they had Boss Tweed, and they have now a Republican administration of the city. [Laughter.] In Chicago they have their large packing houses. In New York they have their large warehouses; but, Mr. Chairman, if you will give us a little chance in the city of Omaha we will try to duplicate all those great necessities of human existence. [Laughter.]

A MEMBER. Including Tweed? [Laughter.]

Mr. MERCER. Well, we don't call about Tweed. He is dead. We prefer animation in Omaha. Mr. Chairman, in the State of Nebraska to-day we are supplying more corn than is supplied by any other State in the Union except Iowa. Omaha is the base of supplies for nine-tenths of the Indians in this country, and if you will establish a warehouse there, it will afford a market for the bacon and pork, the cotton and sugar of the Southern States, it will take care of the products of the West and the Middle West, and at the same time it will not interfere one iota with the business of New York or of Chicago. The gentleman representing Chicago to whom I referred awhile ago [Mr. ALDRICH] said on that occasion:

If, for instance, a Chicago manufacturer bids 3.25 cents per pound free on board at Chicago, and the New Yorker bids 3.21 free on board New York, the practice would be to accept the New York bid, although the additional cost for freight to the agency would amount to at least 30 cents per hundred-weight, increasing the net cost of soap—

And remember, Mr. Chairman, that the Indians out West use soap of late years, since they have been educated at Carlisle and other institutions. [Laughter.] I continue the extract—

increasing the net cost of soap to the Department by anywhere from 5 to 10 per cent, all of which goes into the pockets of the New York manufacturers and railroads. This, I say, has been the practice of the Department for years, and it can not continue if this Bureau is transferred to the West.

Now, if that is true with reference to Chicago and New York, why is it not doubly true with reference to Omaha? Most of the supplies that are purchased by the Indian Department—and I believe they purchase from three to four million dollars annually—are produced in the Western States. For instance, I quote again from the gentleman from Chicago, Mr. Aldrich, who says:

Why, of some 80,000 packages of goods purchased by the Bureau last year for shipment to the Indians 60,000 went from Chicago and but 20,000 from New York.

Now, let us see what classes of goods mainly are purchased through this Government agency. The Indian Bureau asks bids for the following, among other supplies: Bacon, 901,365 pounds; barley, 30,000 pounds; beans, 278,910 pounds; beef, 34,450,000 pounds; coffee, 476,500 pounds; corn, 517,000 pounds; flour, 8,639,100 pounds; hard bread, 155,000 pounds; sugar, 929,915 pounds, and so on.

Gentlemen will observe in that enumeration that nearly all of these articles are produced in the West and the Middle West, or at least the majority of them.

[Here the hammer fell.]

Mr. MERCER. Mr. Chairman, I ask that I may have five minutes more.

There was no objection, and it was so ordered.

Mr. MERCER. Take the vast population of the Indians in the West and the Northwest, and you will find that they are more readily reached by the distribution of goods from the city of Omaha than from any other city in the country.

Mr. BARTHOLDT. Except St. Louis.

Mr. MERCER. I do not except even St. Louis, although St. Louis is a magnificent distributing point, and I have no doubt that the St. Louis influence and the Missouri influence will be in favor of concurring in the Senate amendment. [Laughter.] When this matter came up in the Senate it was thoroughly discussed, and after careful consideration the Senate, by a vote of 27 to 17, virtually resolved in favor of this proposition.

Mr. ALLEN. And that is a deliberative body, is it not? [Laughter.]

Mr. MERCER. So I understand. I accept the gentleman's suggestion.

Mr. DOLLIVER. Mr. Chairman, it appears that the Winnebago and the Omaha reservations are some 50 miles nearer to Sioux City than they are to Omaha. Has my friend from Nebraska taken that into account?

Mr. MERCER. Yes, I have; but the gentleman's statement is not correct. The northern line of the Winnebago reservation is perhaps a few miles closer to Sioux City than it is to Omaha.

Mr. DOLLIVER. It is only 20 miles from Sioux City.

Mr. MERCER. The northern line of the reservation is.

Mr. DOLLIVER. I call my friend's attention to the fact that if the mere question of convenience is to determine this matter, we might compromise the controversy by agreeing upon Sioux City as the base of supplies. [Laughter.]

Mr. MERCER. I will say to the gentleman from Iowa that the Winnebago and the Omahas who occupy those reservations do not get any benefit from the warehouse system, because they are American citizens who exercise the right of suffrage. There are about 500 voters on those reservations. Those Indians farm their own lands, clothe themselves, and handle their own finances. The great body of the Indians out West have to be clothed through the Bureau, and the lines running out of Omaha are better situated for the economical distribution of supplies than those running from any other center.

Mr. DOLLIVER. Does my friend mean to say that the freight rates from Omaha are cheaper than from Sioux City?

Mr. MERCER. I mean to say that goods shipped from the Southern States have a nearer outlet to Omaha than to Sioux City and are more readily transported from the Gulf, so that the freights would be cheaper for Gulf and ocean shipment than to Sioux City.

Omaha is the largest city in the Missouri Valley and her commerce is enormous. Lines of railroads enter her limits from the East and West, the North and South, and I may be pardoned for adding that most of these lines go to make up some of the greatest railway systems in the world. The city adds to her population and business annually, and in time she will be the largest city west of Chicago. Omaha is an ambitious city, and boasts the pride. She seeks to better her advantages at every opportunity, and the virtue of all her endeavors wherein the Government bears a relationship is that instead of growing at the expense of the Government she offers recompense for favors granted.

The establishment of a warehouse at Omaha will not subject the Government to expense; on the contrary, it will prove a saving of thousands of dollars annually, while conveniencing both producer and consumer. Omaha and Nebraska manufacture or produce everything which goes to a supply depot, and, in conjunction with the territory tributary thereto, can furnish the desired quantity. The transmississippi country furnishes the best flour, the best corn meal, the choicest sugar, and the most delicious beans, and the finest hams, bacon, and meats of all kinds—in fact, it is a storehouse of wealth, and Omaha is its great distributing center.

Large wholesale and jobbing houses compete with each other for trade, thus insuring to the Government fair prices for goods bought, while South Omaha, our next-door neighbor and the magic city of the continent, is rapidly supplanting Chicago as a cattle, hog, and sheep market.

Next year, beginning in June, the Transmississippi and International Exposition will open its gates in Omaha, and for six months the world can feast its eyes upon a sight second only in grandeur and importance to the World's Fair. Evidences of the growth and prosperity of twenty-four States and Territories will be on exhibition, and if you will pay us a visit about that time you will justify your votes in establishing an Indian-supply depot at Omaha.

I trust, Mr. Chairman, the committee will sustain the action of the Senate and concur in this amendment.

#### Indian Appropriation Bill.

#### SPEECH

OF

HON. WILLIAM H. KING,

OF UTAH,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 17, 1897.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate numbered 10 to the bill (H. R. 15) making appropriations for the current and contingent expenses of the Indian Department and for fulfilling treaty stipulations with various Indian tribes for the fiscal year ending June 30, 1898, and for other purposes—

Mr. KING said:

Mr. SPEAKER: Owing to the fact that the personnel of the House is not the same upon each occasion when this matter has been under discussion, it may not be inappropriate to allude to questions covered heretofore.

This is a subject which seems to be as enduring as the stars. It appears that this special session of Congress was called to consider only two subjects—the tariff and the opening of the Uncompahgre Reservation. The first was quickly disposed of by this body; the other, oscillating between this end of the Capitol and the conference committee, rudely disturbs the peaceful slumbers of the House

and rouses distinguished gentlemen till they become the protagonists of (as I sincerely believe) an unrighteous cause.

It will be remembered that the Senate amended the bill and provided that after the agricultural lands had been allotted to the Indians the residue, at the expiration of a certain time, should be thrown open to occupancy and location under the general land and mineral laws of the United States. No exception to the general law was established and no discriminatory legislation proposed. This provision the House rejected, and after repeated conferences the measure reported has been evolved. It is now proposed to lease the mineral lands within the reservation, and to control them by agents and Government hirelings, and satraps and taxgatherers, and toll collectors and departmental clerks, who are as blind to the greatness of our nation and the needs of the West as the bats that beat so helplessly against the granite walls of the Department buildings.

And that is not all:

The Secretary of the Interior is authorized and directed to make all necessary regulations to carry this provision into effect.

There are to be "rules and regulations," which mean circumlocution and red-tape, and petitions and orders, and declarations and files, and memoranda and writings, and notations and briefs, and legal opinions, and heads of Departments and bureaus, and surveys, and plats and maps, and reports, and the thousand nameless, dilatory, never-ending proceedings which prevent action, destroy hope, and bring ruin. Then there is the fixing of the royalty to be paid by the operators of the property, the preparation of more rules, providing for classifying the material mined and for the time and manner of measuring and regulating the output; regulations as to when the mines shall be worked and timbered and drained and the improvements to be made.

To enforce and execute these regulations there must be more agents, and inspectors and experts, and accountants and weighers, and engineers and foreman, and supervisors and keen, lynx-eyed deputies, and gaugers and appraisers and classifiers. But this is merely the background to the charming picture presented for our consideration. Regulations and orders and laws are futile without penal provisions; so there must be the fines and forfeitures, and misdemeanors, and perhaps felonies. The occupant, if he is not the creature of a favoritism which this system creates, would vainly consume his time in attempting to comply with the regulations, and repelling or placating the horde of officials enforcing the shameful system of espionage and surveillance. But to enforce the criminal features there must be marshals and deputies, and commissioners and judges, and jurors and lawyers, and court-houses and jails, and so on ad infinitum.

What a splendid spectacle such legislation presents! The mere enumeration of some of its workings causes one to wonder whether this plan is not the emanation of a Spanish grandee in the time of Philip II. Instinctively we look to see the dark-visaged soldier, representing the thieving, scoundrelly officer of the Crown, that hounded and harassed the miners of Mexico and other Spanish provinces, and robbed and plundered while ostensibly enforcing the "regulations" which were so essential to secure the "royalty" due the king.

The SPEAKER. The time of the gentleman has expired.

Mr. KING. I ask unanimous consent to continue my remarks. Utah is deeply interested in this legislation, and has but one Representative.

The SPEAKER. For what time does the gentleman ask to continue his remarks?

Mr. KING. For twenty minutes at least.

The SPEAKER. The gentleman from Utah asks unanimous consent to continue his remarks for twenty minutes. Is there objection? The Chair hears none, and the gentleman will proceed.

Mr. KING. It would certainly be a quixotic effort if this vast machinery which will be constructed, if the committee's amendment is adopted, were only designed for this occasion. I sincerely believe, if this becomes a law, it will be the death knell to our mining laws, and be regarded as a precedent for the withdrawal of all mineral lands from location, and for the enactment of a measure the avowed object of which will be to obtain revenue for the Government, or the still more absurd and preposterous reason, to preserve the mineral wealth from becoming the subject of monopoly. Because of this belief, I shall do all within my power to defeat the committee's recommendation.

Unpleasant and wearisome as this struggle has been, it will be continued, so far as I am concerned, as long as the mineral-land system of the United States is assailed and efforts made to yoke us to the iniquitous and intolerable system of leasing and landlordism. While upon its face the matter under consideration may appear insignificant, it is nevertheless one of great importance. The question is not merely whether a small tract of land in Utah shall be opened to occupancy with or without restrictions, but the real question is: Shall the wise and beneficent mineral policy, which has contributed so immeasurably to our country's welfare and development, be repealed, and one the history of which is

indissolubly connected with the tyrannies of monarchies and the doctrine of the sovereignty of kings be fastened upon us?

Neither words nor rhetoric nor subtle arguments can disguise the issue. If the report of the conference committee is adopted, or the amendment just offered by my friend from Iowa [Mr. LACEY] is approved, this Congress will have raised its voice against the West and declared that the view so long maintained that the mineral wealth was the free inheritance of all, and open to the explorations of the poorest and humblest in the land, is no longer to prevail, and the paternalism of Spain is to become the policy of this Republic. It is no sufficient answer to this question to disclaim opposition to the mining laws of the Government, and to say that the only design is to withhold the application of the mineral laws from the Uncompahgre Reservation. It is seldom that the opponents of a policy or system which is strongly entrenched openly attack it or advocate its complete destruction. Occasionally a legislator unmasks his batteries upon an existing law and demands its repeal and the overthrow of everything founded upon it.

But more frequently the destruction of a system is quietly compassed. No protestation of affection for the magnificent juridical system relating to the mining industry of the United States will avail, because the course proposed will ultimately destroy it. It can not seriously be contended that the perpetuity of the system is not menaced when exceptions are made and the universality of the laws' application denied.

The distinguished gentleman from New York [Mr. SHERMAN] frankly admits that the adoption of the report introduces a change in our mineral laws and the gentleman from Iowa [Mr. LACEY] confesses that his amendment is a repeal of the law of 1866, so far as gilsonite upon the reservation is concerned. But it is contended gilsonite is a new mineral, and therefore a different law should be applied. It is new in the sense that the chemical formation is somewhat different from other hydrocarbons; but as a bituminous hydrocarbon it is not new. It is a mineral, and is governed by the general mining laws.

No good reason is offered for this legislation. Asphalt in its various forms, elaterite, gilsonite, etc., is being discovered in many States and Territories of the West. That found upon the reservation does not constitute a monopoly, created by nature, as suggested by the gentleman from Iowa. And if it were found only in the reservation, still there could be no monopoly, and it would be of but little commercial value if there is the quantity represented by the Government geologist, Eldredge. He claims there are at least 23,000,000 tons of gilsonite to be found easily and readily upon the reservation. This enormous amount renders the mineral of but little value. The only reason which I can see for supporting this scheme which changes our mining laws is that members are desirous of still further striking down the West and rendering it still more dependent upon the East. Why do members of the House single out Utah and apply this discriminatory legislation to it?

It has been shown during the discussion of this subject that gilsonite exists in many other places in the United States, but there is no proposition yet to withdraw such lands from the operation of the mineral laws. Is it thought best to proceed cautiously in this plan to destroy the West (by destroying the present mineral system) and to drive the wedge insightfully now, and select Utah as the entering point because of its supposed weakness? Why should gentlemen from the East concern themselves so much about this matter, unless, as suggested, it is the inauguration of a policy which is to culminate only when the West is punished and prostrated. If the generous policy of inviting the children of the Republic to go upon the public domain, and there build them homes and cities and by their industry and indomitable courage take from the uncertain depths the mineral wealth which has crowned and glorified our nation, is wrong, why not boldly denounce it and proclaim that the hour has arrived for its overthrow? By denying the application of the law, if only within the 2,000,000 acres of the reservation, you confess your opposition to it. The strength of a law is its universality.

Restrictions and exceptions and modifications presage its downfall. They are the insidious workings which crumble the foundation. But I inquire again, Why single out Utah? If gilsonite lands in Utah are not to be opened by American citizens, why permit similar lands elsewhere to be freely entered? If clerks and typewriters and bureaus and Departments at Washington are to say who shall work mineral lands in Utah, and how much shall be paid for the precious privilege of working them, why not extend the field of operations for these omnipotent persons? If the present operation of our mineral system is unsatisfactory and our Government needs revenues and royalties and further employment for the myriads who are now in its service, as well as a reason for additional boards, bureaus, subdepartments, prefects, divisions, commissioners, and agents, why not commit to the Secretary of the Interior the management of the entire mineral domain? Why select gilsonite and say, "We will apply a rule with

reference to it that we do not apply to other minerals?" And why launch proscriptive legislation at gilsonite in Utah and not that found in Colorado and elsewhere? This is class legislation. One section of the country is discriminated against, and certain minerals are placed under a ban and subjected to Federal control.

Gentlemen forget that our welfare is theirs; that our misfortunes will be visited upon them. Between 1848 and 1880 more than \$1,100,000,000 of gold and silver were produced in the West. The heroic, adventuresome sons of the East crossed the trackless West. The old Gothic spirit of invasion, so long held in abeyance, manifested itself, and from the cities and farms went the "strong hands and true hearts," followed by fathers' blessings and mothers' tears, that builded empires and added glory and luster to our country. The poetic dream of Freneau, the colonial poet, when he spoke of the young Republic, has been realized. Beyond the Mississippi "nations have risen not less in power than Greece and Rome of old." Our successes have been yours. When wealth was discovered, it was borne by ship and train and car to the homes of our fathers. With it came prosperity to the East. The gold and silver of the Pacific States unlocked the chains of industrial slavery that bound our nation and produced the marvelous prosperity enjoyed between 1851 and 1873.

The West supplied the gold and silver employed in carrying on the war; it enabled the Government to resume specie payment. God placed gold and silver and other minerals in the wild mountains and rocky fastnesses and desert plains of the West, and it has furnished a currency designed by the Creator as the money of the world. It has poured the product of its sons' toils and sorrows and privations, heartaches and hearts' blood, into the channels and arteries of trade and commerce. If an expanding, undebased currency is essential to prosperity and national growth, the West has builded your cities, freighted your commerce, established your manufactures, chained the oceans with steel and iron, and made this nation the foremost in the history of the world.

The duty of the Government with respect to the public domain was announced in the days of Alexander Hamilton, when he promulgated his magnificent opinion and submitted to Congress the mode of dealing with the public lands. There was then no suggestion of hoarding them or making vast revenues out of them, nor was there any proposition to lease the mineral lands, but the theory always has been to unfold the public domain, invite our children and our children's children to go out and conquer these empires, to bring prosperity from desolation, and to make additional stars that will shine in luster in the galaxy of the States. The West comes to you asking not for bread, but only for her rights. Do not give her a stone. She comes and says, "We have builded and beautified and prospered under the mineral system now in force."

All we have is our mineral wealth and the poor patrimony of sterile land that the gentleman from Iowa [Mr. LACEY] has just referred to when he stated that Utah had received more public lands than the State of Missouri. Does not the gentleman know that in Utah to-day we have deserts hundreds of miles in extent and mountains barren as the wastes of Arabia, and that to sustain a Commonwealth were largely upon the mineral wealth obtained from the ground?

I beg of you, gentlemen, not to bind Prometheus. Do not take away that which will "make us poor indeed" and not enrich you.

There has been great solicitude apparently on the part of some members here for the West; and it was remarked the other day when we were discussing the forestry reserve question that the East would have to protect the West against itself, the idea being that we desired to commit suicide, that we desired to pursue a plan that would be self-destruction to the West. You all know, gentlemen, that that insinuation is ill founded and unjust. It is true that while we have toiled and striven to develop this country and to take from the earth the wealth hidden there, yet as soon as it came to the surface it was poured into the lap of the East, to its enrichment and our impoverishment.

The representatives of the West come here to Congress and vote millions for your rivers and your harbors. They vote for your tariff laws, by which a portion of the country east of the Alleghany Mountains can be made rich and prosperous. But when we ask simple justice at the hands of our friends in the East they rise up and say, "You are about to commit suicide, and we must stand as a pillar of strength to prevent your self-destruction." We admire the magnanimity of some of those distinguished gentlemen who have so much consideration for us; but we desire to tell them that we have made the West what it is—rescued it from barrenness and sterility, and that now all we ask is that the Government shall give us an equal chance and shall not by discriminatory legislation take from us the enjoyment of rights and privileges belonging to American citizens.

I ask you again, my friends, why should you turn your backs upon the West? Why put an entering wedge into the mineral system of the country and destroy it? We tell you we know what our wants and needs are. We tell you that the people who

will locate these mines are the men of bone and sinew who have aided in building our Commonwealth. Then you say, "You do not know what you want, and we who live in the East must come and be your teachers."

We thank you for your magnanimity, but we tell you we know what we want, and we point to the West and its glorious achievements as a vindication of the policy that has been pursued by our fathers and by the legislators of the past. Do not repulse the West. I plead with you to-day not to introduce this discriminatory and sectional legislation, because that is exactly what it is. And now, without a moment's warning, without reason, without any occasion whatever, a proposition is launched upon this House to repeal that system under which our fathers founded that great empire that has given beauty and dignity and luster to the American Republic. I say it is a shame for you, my brethren of the East, to come here now and try to strike us down—try to repeal the laws under which the West has been builded and to establish anew a system that has received the condemnation of our fathers whenever brought to their attention.

There can be no indictment of the splendid system of jurisprudence which was constructed by the miners of California, and which was sanctioned by the Congressional legislation of 1866. Practical in its workings, just in its operations, simple in its application, it grew into beautiful proportions, and will ever remain a phenomenon, as well as an imperishable monument of the love of order and government in the Anglo-Saxon heart, and an unerring indication of the capacity of freemen for self-government. I solemnly protest against this iconoclasm. It seems that nothing is sacred, and that the object of legislation is to destroy that which has been perfected. There is legislative vandalism. The classic structures of Europe have not escaped the battering irons and sledge hammers of modern architects. Notre Dame would be converted into a country steeple tower. Such is the reverence the present pays to the past.

Much is said by the East about sectionalism. If there is a spirit of sectionalism in the land, the East is responsible. The contests of parties if honestly waged are wholesome, but when one portion of a country is arrayed against another, or one class against another class, there is cause for regret, if not apprehension.

Whenever any measure is proposed which is peculiarly related to the West, and with which the Representatives from that section are familiar, immediately the East is possessed of a consuming desire to control the matter, direct the legislation, and absolutely change or materially modify the plan under consideration. Who can deny that much of the legislation of the past quarter of a century has been sectional?

We come here realizing the vast wealth and the great importance of the East. Most of the legislation directly affects it. You demand colossal sums for rivers and harbors, and you go not away empty; you construct tariff bills and write their schedules; you build up and foster the manufactures of New England; you demand high protection for the manufacturer of woolen goods, but oppose similar tariff to the woolgrowers of the West; you produce the finished article, and therefore prohibit competition by iniquitous tariff schedules; but we produce wool and lead and raw materials, and you "all barriers would burn away" restrictive of their importation. You have the products of our mines, and though one-half of the money of the land has been destroyed, some would now further destroy us (in still further enhancing the value of the dollar) by overturning the system which has given it to commerce. We sometimes feel like the colored preacher who sang:

Lord, I hear of showers of blessings  
Thou art scattering full and free—  
Showers the thirsty land refreshing,  
Let some droppings fall on me.

You have the money and the wealth; we have courage and faith, and feel we have now reached man's estate, and will demand equality in the matter of legislation. We are one people, and wise, patriotic legislation and the pursuit of a policy which is not sectional will inure to the advantage of all and preserve our nation impregnable in the affections of the people and invincible amongst the nations of the earth.

Members say the opening of these gilsonite mines will prove of immense advantage to the nation, and that the small royalty proposed would not retard the operations of the mines or prove onerous to those engaged in their development. The latter contention I will reply to later in the course of my remarks. If the royalty were only 1 cent per ton upon the gilsonite taken from the ground, my opposition would be the same, and all the influence I possess would be employed to defeat such a scheme. As stated, a principle is involved. If 1 cent can be charged as a toll, or royalty, or tariff, or whatever name may be applied to it, then the right of the Government to charge any amount is admitted, and our mineral system is assaulted and a policy inaugurated which the experience of the past has proven to be hurtful. If a penny can be charged as royalty by the Government for mining a ton of gilsonite, the precedent will have been established, and

the demand will be made to place all minerals in the same category and operate all mines under the authority and supervision of the Government.

No one is credulous enough to believe, if this effort succeeds, the further application of the leasing principle will cease. And in fairness, why should it? If it is advantageous to the Government and the people to develop the mineral wealth by bureaus and clerks and departments (and this must be the contention to justify us in supporting this proposition), then we should, to be honest, immediately repeal the entire mineral law and declare that, as we have no king who can claim the mines as his *jura regalia*, they will be appropriated by virtue of the sovereign power of the United States. If a royalty must be charged on gilsonite, impose it for working gold and silver mines. Let us be honest, and dynamite the entire building instead of hacking off a corner to day and withdrawing a foundation stone to-morrow. But you can not enact such measures without breaking faith with the American people. After a full and complete examination of the methods to be pursued in dealing with the mineral lands, it was announced as the policy of our Government that the mineral wealth belonged to the bold and courageous explorer. It was a bequest from God to the daring miner.

And even before this enactment the Supreme Court of the United States had recognized the magnificent system of mining rules adopted by the miners of the Pacific Coast. In the case of *Sparrow vs. Strong* (3 Wall., 104) the court says:

We know also that the territorial legislature has recognized by statute the validity and binding force of the rules, regulations, and customs of the mining districts. And we can not shut our eyes to the public history which informs us that under this legislation, and not only without interference by the National Government but under its implied sanction, vast mining interests have grown up, employing millions of capital and contributing largely to the prosperity and improvement of the whole country.

A brief glance at the origin of the system which this legislation proposes to repeal and some of the benefits resulting therefrom may not be inappropriate. The discovery of precious metals in California was followed by a mighty tide of emigration to the Pacific Coast. The lands were unsurveyed. There was no legislation by Congress which was applicable to the people in their dealings and relations to the mineral deposits. Possessed of a love of order, and desirous of fair dealing and equal opportunities, as well as the establishment of a system which would secure peace and security of title and interest in property, they adopted customs and regulations which became the rule of property. In the eloquent language of Senator STEWART—

The reason and justice of the laws they formed challenge the admiration of all who investigate them. \* \* \* These regulations were thoroughly democratic in their character, guarding against every form of monopoly and requiring continued work and occupation in good faith to constitute a valid possession. \* \* \* The miner's law is a part of the miner's nature; he made it and he loves it, trusts it and obeys it. He has given the toil of his life to discover wealth, which, when found, is protected by no higher law than that enacted by himself under the implied sanction of a just and generous government.

These rules produced a system of free mining. There were no royalties, no leasing, no interference by the Government, but a declaration of the fact that the lands of our country were the patrimony of a free people. Protected in their location, feeling as secure as if buttressed by courts and juries and the complex laws of our modern civilization, they toiled on, hopeful of success, achieving victories and encountering defeats, giving their lives and their all to the enrichment of the nation.

These rules were approved by the United States Supreme Court.

In every district which they occupied they framed certain rules for their government. \* \* \* They all recognized discovery followed by possession as the foundation of the possessor's title, and development by working as the condition of its retention. And they were so framed as to secure to all comers within practicable limits absolute equality of right and privilege of working the mines. Nothing but such equality would have been tolerated by the miners, who were emphatically the lawmakers as respects mining upon the public lands. \* \* \* During the eighteen years from 1848 to 1866 the regulations and customs of miners as enforced and molded by the courts and sanctioned by the legislature of the State constituted the law governing property in mines and in water on the public mineral lands. (*Jennison vs. Kirk*, 98 U. S., 452.)

The legislature of California recognized these mining regulations and customs, and Judge Field and other eminent jurists so applied and molded them that a wise comprehensive "common law" was produced which will forever be a source of pride.

The system thus originating has been taken up and adopted by the States and Territories west of the Missouri River. And that is not all. This system, founded in the necessity of the hour, in man's sense of justice and love of right, became by adoption the child of our Government. In 1866 Congress declared—

That the mineral lands of the public domain, both surveyed and unsurveyed, are hereby declared to be free and open to exploration and occupation by all citizens of the United States, subject to such regulations as may be prescribed by law, and subject to the local customs and rules of miners in the several mining districts, so far as the same may not be in conflict with the laws of the United States.

The discussions in Congress prior to the passage of the act, including that which occurred in 1850, conclusively establish the fact that free entrance upon the mineral lands and unrestricted

occupancy of the same for mining purposes were regarded as a right. The act of 1866—

was rather a voluntary recognition of a preexisting right of possession constituting a valid claim to its continued use than the establishment of a new one. (*Broder vs. Water Company*, 106 U. S., 236.)

And further, to show how the Supreme Court regarded the encouragement offered by the Government to the people to freely enter and occupy the mineral lands, and in support of the view that it would be mala fides to now depart from a policy not only approved but adopted, let me quote from the statements of the court:

The Government by its silent acquiescence assented to the general occupation of the public lands for mining; and to encourage their free and unrestricted use for that purpose reserved such lands as were mineral from sale and the acquisition of title by settlement. (*Atchison vs. Peterson*, 30 Wall., 512.)

Before 1866 mining claims upon the public lands were held under regulations adopted by the miners themselves. \* \* \* These regulations were framed with such just regard for the rights of all and afforded such complete protection that they soon received the sanction of the local legislatures and tribunals. \* \* \* In all the legislation, whether of Congress or of State or Territory, and by all mining regulations and rules, discovery and appropriation are recognized as the sources of title to mining claims, and development by working as the continued ownership until patent is obtained. (*Erhardt vs. Boaro*, 113 U. S., 535.)

In the most solemn manner Congress has declared the right of American citizens to occupy the mineral lands and procure title. The highest judicial tribunal has repeatedly affirmed the wisdom of free mining and the comprehensiveness and justice of the mining regulations, and has enforced them as the rule of property.

So I emphasize the statement that the contemplated legislation is a violation of "rights," and a repealing of common and statutory law, which is embedded in the affections of the people, and justifies the charge that if enacted the Government would be guilty of mala fides and the commission of a wrong.

The SPEAKER. The time of the gentleman has expired.

Mr. KING. I ask unanimous consent to proceed.

Mr. McMILLIN. I hope the gentleman will be allowed to continue his remarks.

Mr. LACEY. For what length of time?

Mr. BARTHOLDT. I suggest that no limit be placed upon the discussion by the gentleman from Utah. His side is not represented in the division of time on this floor. The gentleman from Iowa [Mr. LACEY] and the gentleman from New York [Mr. SHERMAN] are practically on the same side of the question.

Mr. McMILLIN. I suggest that the gentleman from Utah be allowed to continue twenty minutes longer. I am assured by him that he can conclude in that time.

There was no objection.

Mr. KING. I thank the House for its kindness.

The legislation of Congress and the decisions of the courts should not only estop the Government from enacting this legislation, but ought to be regarded as *res adjudicata*.

And it must not be forgotten that the land embraced within this reservation was a portion of the public domain; and the right of occupancy referred to attached thereto and to the minerals within its borders. By no act of Congress or otherwise has such land become entirely and absolutely segregated from the public domain. It is true an Executive proclamation in 1832 designated it as a "reservation," but this proclamation was predicated upon preceding legislation which gave the Uncompahgre Indians no permanent rights of property in these lands; and it is clear that the reservation was only created for a temporary purpose, until the United States could carry out its treaty with the Indians.

In other words, it was not intended that these lands should be withdrawn from the public domain and thereafter be exempt from the operation of the general land and mineral laws. The mineral ought therefore to be subject to entry in the same manner as other mineral lands. I do not deny the power of Congress to withdraw these mineral lands from entry, but deny its right. There has been no withdrawal, but a mere arrest of the right to enter until the Government allotted lands in severalty to the Indians. Technically, perhaps, while the proclamation was in force, the lands were not open to location, yet in all honesty and justice any entries made which were not in conflict with the purpose for which the reservation was created ought to be regarded as valid, and as soon as the Indians were provided agricultural and grazing lands in severalty, the rights of the entryman should attach and vest, and inchoate become definitive and indefeasible rights.

Gentlemen will remember that before the boundaries of the reservation were known numerous citizens of the United States made locations upon the mineral veins now declared to be within the reservation, and pursued the usual course (until interrupted by Government officials) necessary to obtain title. It will be conceded by all that, in the absence of the Executive proclamation referred to, these locations would be valid and the locators would acquire vested rights. But remembering the purpose of the proclamation, its tentative character, and the legislation of Congress in 1894 by which, after certain lands were allotted to the Indians,

the residue were to be opened to occupancy, it would seem, by every rule of law and justice, that these locators possess such property rights in the located claims as to render the amendment, if enacted, invalid. Congress recognized, in part, these claims as valid by passing a law withdrawing the lands upon which they were located from the operation of the proclamation.

This measure did not receive the President's approval. But the rights of these locators could not be extinguished; they might be suspended or held in abeyance. When the law of 1894 was passed and the lands not needed for allotment were returned to the public domain, these abeyant rights became vitalized. It is now proposed to divest these citizens of their property and to prevent other citizens from exercising the rights heretofore granted to American citizens. Such legislation is unconstitutional; it is retrospective; it confiscates property without due process of law and conveys it to the Government for speculative purposes. In support of the statement that as to persons who have locations upon the reservation this proposed legislation is unconstitutional, I desire to refer to the case of *Noonan vs. Caledonia Min. Co.* (121 U. S., 402). The court say:

Those in possession of mining claims which had been taken up and developed in accordance with the rules of miners in mining districts of the country, were entitled to the protection in their possessory claims. \* \* \* The rule laid down by the supreme court of the Territory is, in our judgment, the correct one, \* \* \* and that is substantially this: That where a party was in possession of a mining claim on the 28th of February, 1877, with the requisite discovery, with the surface boundaries sufficiently marked, with notice of location posted, and with a disclosed vein of ore, he could, by adopting what had been done, \* \* \* date his rights from that day; and that such location and labor and improvements would give him the right of possession.

In this case a mining location had been made within a reservation, and the court held that a compliance with the regulations of the district initiated such a right as would be entitled not only to protection by the courts, but would ripen into a perfect title. The mining regulations and the statutory provisions were complied with by those locating mineral claims within the Uncompahgre Reservation. The committee's recommendation, if crystallized into law, would reverse a policy long since settled and adjudicated, interfere with vested rights, rob citizens, and confiscate the property acquired by those who in good faith located mineral claims and are ready and desirous to perfect their title and obtain patent. Another point ought to be considered in this connection. The law of August 15, 1894, provided—

That the remainder of the lands on said reservation shall, upon the approval of the allotments by the Secretary of the Interior, be immediately open to entry under the homestead and mineral laws of the United States.

The commission negotiated with the Indians, ascertained that 10,000 acres only of land were susceptible of allotment, and designated by natural objects the situs of the land. The Secretary of the Interior, disregarding his sworn duty, deliberately violated this law, and refused to approve the action of the commission, hoping thereby to prevent the mineral lands within the reservation from being located under the mineral laws. To justify his misconduct he pleaded that rich deposits of gilsonite had been discovered, and that the Government ought to adopt some different method of disposing of the same. Such defiant conduct deserves condemnation. How members can not only complacently view his proceedings, but defend and justify them, passes all understanding.

But I insist that the mere perfunctory duty of approving the allotments made by the commission was not indispensable to the "opening of the reservation to entry." When the commissioners reported that a certain part of the reservation, the boundaries of which were clearly pointed out, was all that could be allotted, the residue was free from the cloud created by the Executive proclamation of 1893 and co instanti became reunited with the public domain and subject to entry. There ought to be finality some day to legislation. The law of 1894 was final and its provisions ample to protect the Indians and restore to the public domain the lands temporarily withdrawn. But the proposition now is to repeal this act, reverse the action of Congress, approve the conduct of officers who violated the law and who treated with derision mandatory provisions of important legislation.

If this House performs its duty, it will affirm the act of 1894, condemn the derelictions of former officials, and emphatically declare that this reservation shall be opened to location and settlement under the general land and mineral laws of the United States. What is offered as a substitute for the mineral system, the beneficent results of which none denies? One that had its birth in mediocrity, in tyranny, and the most despotic paternalism, and which has been condemned after experiment by the American people. I was inaccurate in stating upon a former occasion that the policy of leasing mineral lands by our Government was unknown. I now desire to invite attention to the operations of this system and the disastrous effects resultant therefrom. Under the monarchical governments of Europe mines were regarded as *jura regalia*. They were not treated as essentials of sovereignty but as incidental to the regal dignity of the crown and subject to servance at the pleasure of the king.

In the case of *Queen vs. Earl of Northumberland* (1 Plowden, 310) the court of the exchequer decided that the right of mines was a personal prerogative of the Queen. Onslow, the Queen's solicitor, argued that the precious metals being the most excellent of products, and the sovereign the most excellent of persons, therefore she should possess them. Similarly, it is now contended that the Government should possess the gilsonite because it is excellent and the Government is more excellent than the sovereign people. Upon the breaking up of the Roman Empire this regalian right, we are told by Gamboa, was insisted upon by the princes, and the mineral deposits were appropriated by them. The King of Spain in 1383 by royal decree ordained that:

All mines of silver and gold and lead and of any other metal whatever kind it may be, in our royal seignior shall belong to us; therefore no one shall presume to work them without our license and command. (Hallack 4.)

The plan now proposed sounds like a voice from Spain's spectral kings. Under this and similar decrees elaborate ordinances and regulations were promulgated for the control and operation of the mines. Spain was then monopolizing and taxing everything, and so established the system of royalties and leasing. A review of the mining industry under this system is absolutely convincing that it resulted in failure and disaster. Ninety-nine per cent of those obtaining licenses to prospect and develop mineral wealth defaulted in meeting the conditions of the leases. The machinery employed in enforcing the regulations was stupendous, and their enforcement was a source of great expense to the Crown. The onerous character of the regulations, the cupidity and avarice of the officials enforcing them, the oppressive exactions of local agents, commissioners, and boards, the uncertainty of tenure, the knowledge that if rich strikes were made, changes in the lease would be prescribed, the knowledge that the property could never become possessed—these and many other circumstances conspired to render the leasing system, when applied by the Government to mineral lands, not only unsatisfactory, but profitless to the Crown and injurious to the subjects.

Mr. Fremont states that with all the machinery employed the Spanish monarchs never received in any year to exceed \$60,000 as royalties from all their mineral properties.

The history of Spain's efforts to lease the mineral lands and obtain royalties therefrom is one of fraud and failure and humiliation and disgrace; and yet it is that system that gentlemen now advocate and offer as a substitute for one the history of which has been glorious and the results of incalculable benefit.

So destructive of the mining industry had Spain's policy been that the production of minerals had practically ceased at the time Mexico threw off the Spanish yoke; and to revive the languishing enterprise Mexico abolished the multiplied taxes and royalties and substituted a mere duty of 3 per cent. The work of resuscitating this languishing industry continued and the quicksilver mines were freely granted to all who would engage in their development. Miners were relieved from personal contributions as well as military service, and rewards of \$25,000 each were decreed to the first four operators who would extract a certain quantity of quicksilver. Taxation and royalties and the efforts made to control the mines by leases and regulations, enforced by employees and hirelings thousands of miles from the source of authority and power, destroyed that which would have contributed to Spain's glory. Mexico reversed, in part, this destructive policy.

It certainly can not be designed to obtain revenue from this proposed royalty upon gilsonite; and yet wherever the leasing system has been adopted, its justification was placed upon that ground. Blackstone states that the ancient sources of revenue were waifs, wrecks, estrays, deodands, and mines, but that they were repealed by a uniform system of taxation. Is it proposed to adopt the obsolete and condemned methods of the past in order to obtain revenue? Yet history demonstrates that mines controlled by the Government failed to yield a revenue. It must be conceded that the earliest Congressional legislation in regard to mineral lands was founded upon the idea of revenue to be obtained by leasing the lead and copper mines. But after forty years' experience the entire scheme was pronounced a failure and abandoned, and the mines offered for sale, preference being given those in possession under leases.

On January 30, 1828, the Committee on Public Lands in the House, in obedience to a resolution which required an inquiry "into the expedience of repealing such laws of Congress as prohibit the sale of public lands in the State of Missouri which contain or are supposed to contain lead mines," submitted a report in which it was stated that it had been the policy of the Government since the acquisition of Louisiana to retain under its immediate control the lead mines of Missouri by withholding from sale the public lands in which those mines existed. "The original motives which led to the adoption of this policy, as is believed, can not be traced to any documentary source."

After referring to the report of the War Department, in which it was stated that the product of the public lands had not increased and that the veins, though existing, were abandoned for

the hope of more accessible veins at different points, the committee stated:

This, the committee supposed, must ever be the case so long as those who work the mines have only a limited and temporary interest in them and are under the necessity of receiving an immediate remuneration from the capital vested in and the labor bestowed upon their mining operations. The ore will remain in its natural bed and never be drawn forth to mingle with and increase the aggregate mass of national wealth until subjected to the unimpeded action of exclusive individual interest.

There is another view of the subject which the committee believe entitled to great consideration. If all these (mining lands) are to be occupied by tenants of the Government, there would be created a numerous band of dependents, who, however they may affect the General Government, can not but be viewed by the local authorities with distrust and jealousy. A population thus dependent upon the Federal Government and its officers for the continuance of their vocations must of necessity be unsettled and fluctuating, and the products of their temporary and irregular labors will afford a limited compensation for the exclusion from so large a portion of the State of a more settled, permanent, and useful class of citizens. Believing that the laws prohibiting the sale of public lands in Missouri which contain lead mines should be repealed, the committee report a bill.

In the first annual message of President Polk, December 2, 1845, it was shown that the leasing system was unprofitable; that the entire amount received by the Government from 1841 to 1844, both years inclusive, was \$3,854.74, and that to collect this amount \$36,111.11 was expended in salaries, clerk hire, agents, superintendents, bureaus, etc. The President then adds:

To this pecuniary loss may be added the injury sustained by the public, in consequence of the destruction of timber and the careless and wasteful manner of working the mines. The system has given rise to much litigation between the United States and individual citizens, producing agitation and excitement in the mineral regions and involving the Government in heavy additional expenditures.

It is believed that similar losses and embarrassments will continue to occur while the present system of leasing these lands remains unchanged. \* \* \* The present system is believed to be radically defective. More than a million acres of the public lands supposed to contain lead and other minerals have been reserved from sale and numerous leases upon them have been granted to individuals upon a stipulated rent. The system of granting leases has proven to be not only unprofitable to the Government, but unsatisfactory to the citizens who have gone upon the lands, and must, if continued, lay the foundation of much future difficulty between the Government and the lessees.

President Fillmore, in his annual message of December 2, 1849, recommended extending the generous land laws of the Government to California, Utah, and New Mexico. Referring to the manner of disposing of the mineral lands of California, he declared that he was at first favorable to leasing them in order to obtain revenue, but that a recollection of the "experience in leasing lead mines and selling lands upon credit" had convinced him that great difficulty would ensue in collecting rents, "and that the relation of debtor and creditor between the citizens and the Government would be attended with many mischievous consequences."

The questions of leasing and royalty received earnest attention in the Senate in 1850. Senator Fremont, of California, had introduced a measure providing for certain police regulations for mining districts (Congressional Globe, Thirty-first Congress, page 1862). Some Senators advocated a policy which would yield revenue to the Government, and Senator Ewing proposed an amendment which introduced a system of seigniorage, the product of the mine going to the Government, from which a portion was returned to the miner.

Senator Benton eloquently pleaded for a system of free exploration upon the mineral lands, and said:

I am of the opinion that the United States ought not to undertake to make a revenue out of the mines; that the United States ought to content herself with getting the wealth out of the bowels of the earth itself, which is now lying so useless; that she ought to content herself with receiving what will pay the expenses of the administration of such a system, and that system ought to be just as simple as it can be made and at the same time preserve order among the miners. \* \* \* I do not believe in nations working gold mines at all.

I believe in individuals managing things of this kind, but not nations. I believe the true treasure of every government is the affections of the people, and that the true riches of every nation is the people first and the wealth afterwards that flows from that industry. \* \* \* I therefore wholly object to the whole idea of deriving revenue from these mines. \* \* \* I am in favor of getting what revenue we do get from the gold mines through the secretions of commerce, with no superintendence over the man as to what he digs, and no accountability of the digger for what he gets; with nobody to stand over him and say how much he gets, and no one to call him to account and tell him what he gets. \* \* \*

And have we not had experience in the attempt of our Government to raise revenue from mines? Have we forgotten the lead mines and salt springs we reserved in Missouri and Illinois? And have we forgotten that when we acquired these countries and heard of the salt springs and lead mines there, we were inflamed with the idea of the United States deriving revenue from boiling salt water and digging lead mines? Under that excitement these salt springs and these lead mines were reserved to be leased. What was the result of it? It turned out that the Federal Government was never made for the purpose of boiling salt water or digging lead.

When I first came here, the first legislative duty I had to perform was to endeavor to free the State of Missouri of the incumbrance of the landlordship of the United States over the lead mines and salt springs, which was harassing the people. I was then joined by some of the fathers of the Republic—by such men as Mason—went against the whole idea of the Government working mines and making money out of it. We succeeded. The system was broken down in Missouri. The salt springs were given to the State. The lead mines, which had been reserved for lease, were thrown into market and sold, as other public lands, at \$1.25 per acre. So we got rid of these things in Missouri.

Then came on the lead mines of Upper Mississippi. Our imaginations

were inflamed again with the belief that we were to make a great deal of money by leasing out these lead mines. This scheme was adopted. I voted against it. \* \* \* I told the Senate then, as it happened to lead mines of the State of Missouri, so it would happen to the lead mines of Upper Mississippi; that this system would be harassing to the people, and cramping industry would end with bringing the United States in debt. That turned out to be the fact, for one of the last messages sent to us by President Polk was to recommend the breaking of this system. He showed the amounts requisite to keep up the system, which were enormous, and he recommended the abolition of the system.

During the discussion Senator Seward, and he ought to be good authority with my friend from Iowa [Mr. LACEY], stated (page 1365):

I will add now only this, that the objects of the United States in regard to the gold mines in California ought to be, in the first place, to bring to the general public use of the people of the United States the largest possible acquisition of national wealth from their newly discovered fountain; and secondly, to render the mining operations conducive to the best and speediest possible settlement of our vast countries on the Pacific, which are so soon to exercise boundless commercial, social, and political influences over the Eastern world.

The pecuniary wealth and political power then to be obtained will be obtained just in proportion to the number and assiduity of the persons who shall be engaged in working the mines of California. That number and that assiduity will be in exact proportion to the liberty of the terms upon which the mines shall be opened. It was on this ground that I voted against the proposition of my honorable friend from Ohio [Mr. Ewing] which contemplated seigniorage and revenue to the Government from these mines, and in favor of the provision contained in the bill, which stipulates for nothing in the way of revenue but enough to pay the expenses of regulating the operations of the mines.

The remarks of Senator Felch, of Michigan, upon the occasion so completely cover the subject that I can not refrain from reading:

In the first place we reserved the lands which had been sold by prior governments, but we have since abolished that system, because it was found impossible to manage these mines. We have lead mines in Missouri and Wisconsin and Illinois, and we commenced upon a system \* \* \* first by granting permits to work these mines, and then by reserving to the Government the right of mining where the title to the land was sold. In each of these instances we have found it necessary to abolish this system, because it has been found impracticable to carry it out and unprofitable to the Government.

When the discovery of the copper mines was made on Lake Superior, we reserved to ourselves the right of working them, and that right was afterwards abandoned because it was supposed to be a right held in derogation of the right of the State, and also because it was building up a leasing system and placing a tenantry upon these lands and holding them from local taxation, compelling the authorities of the State to preserve order among these tenants, while not an acre of these lands was taxed to pay for the expenses incurred by the State. In the year 1845 the matter underwent an investigation in the Land Office and in Congress.

The agents were all dismissed except one, and a recommendation has been made that he should be dismissed also. In all these cases everything shows that we have never made anything under the mining system and that it is one which must be abandoned.

The Senator then proceeded to argue in favor of the freedom of entry upon the mineral lands and against Government machinery, agents, etc., to control them.

During the discussion of the mining law of 1866 (Congressional Globe, Thirty-ninth Congress, page 3296) Senator Sherman approved the policy of free entry upon mineral lands. He stated:

I think it is the interest of the United States to get rid of the mineral lands of the United States, to give them into the hands of private individuals, to give them the title by patents in the ordinary way, so that the United States will be divested of all proprietary right over the mines. \* \* \* I might produce the opinions of Mr. Benton, Mr. Clay, and many of the most eminent statesmen of America to show that the title of mineral lands is of no benefit to the United States. From time to time the principle of disposing of mineral lands, salt mines, iron mines, etc., has been adopted, so that now, I believe, we have no proprietary title in the United States to any but the gold and silver mines. This bill gives the mineral lands to the people where they are, in Nevada and in the other mineral States. \* \* \* It gives them the lands for probably less than it will cost to lay them out, survey them, locate them, plat them, and sell them, so that it is substantially a grant of all the mineral lands to the settlers in the mineral regions; and that policy I am in favor of adopting; while, on the other hand, if you should adopt the proposition now made by the Senator from Oregon, the United States would retain possession and control of these lands, would be subject to expenses, and there would be no legal right, no legal title, to the improvements made on these lands. A settler going upon a claim and building his improvements on the land there has no title whatever; the title to the improvements is in the United States; he has nothing but a possessory title, a customary right, which the United States at any time may destroy, and it seems to me that nothing could be more injurious to the people who go to our mineral lands than this system of affairs—no title, no right to a man's improvements, at any time subject to the legislation of Congress, no inducements to make improvements, no fixed and permanent settlement.

On July 14, 1866, a proposition was submitted to the Senate by which the Secretary of the Interior was to be authorized to lease certain saline lands containing mineral springs. The scheme was severely condemned by Senators and the evils which have resulted from such a policy clearly indicated.

Senator Grimes said (Congressional Globe, Thirty-ninth Congress, page 3805):

This Government never has and it never ought to become the landlord of a portion of the people of this country. That is not the relation that is encouraged by any of the laws of our States to any considerable extent, and it should not be encouraged by the Government of the United States.

The true liberty, understand, in a republican government is that, so far as possible, every man shall be the owner of his own soil, the owner of his own tools, the owner of his own labor and his own machinery. \* \* \* But so long as you undertake to maintain the relation of landlord and tenant to the persons who are going to carry on these salting works, so long they will remain in an undeveloped state and the country will never realize a tenth

part of the advantage from the salt springs that we would realize if they were conducted by private enterprise alone. That is the experience of this Government; it has been from its foundation; it is the experience of every Government on the face of the earth. All such enterprises as these should be carried on by private energy and by private means; and so long as you allow the man who conducts it to be the owner of the property, so long he will be willing to invest more and more means in the appliances that may be necessary to conduct his business to a successful result.

Senator Conness declared that the leasing system was founded upon the monarchial idea that the most valuable things belong to the sovereign; but that he believed that nothing was of too great value for American citizens, and that, being the sovereigns themselves, it would be an act of supererogation and folly to lease the lands to themselves. Continuing, he said:

Why should not the ownership of that thing pass into the hands of the citizen? Is there anybody in the world, is there any power on earth, which can find the value or develop the value of a thing faster and more certain than its owner, and can there be any ownership of a higher character than of the American citizen? The whole system seems to me to be wrong. You are going to institute in one of your departments a power to lease and let a part of the public property to your own citizens, and no such lease, the bill provides, shall be for a longer period than twenty-five years, and then during the twenty-five years the lease is to be subjected to readjustment every five years by "disinterested referees."

The Interior Department or the Land Office is to appoint referees every five years. Where shall they go? Shall they act in regard to a piece of property that they know nothing about except as they get information from the Land Office, that information coming through a bureau that perhaps knows nothing about it? It appears to me to be very small business for this Government to engage in. It is especially provided, it will be observed, that this bill shall not apply to the section of the country from which I came. We are not to be made tenants. For one I am very much obliged to the committee for releasing us from such a vassalage.

If the saline lands and the mineral springs belonging to the Government are to be leased, why not lease the gold and silver mines? They are of infinitely greater value; they attract the attention of mankind to a greater extent and concentrate the effort of man and the capital that man can bring to the development of natural resources to a greater extent than these more ordinary classes of property.

Are the lessons of the past to be forgotten because, in the language of Senator Benton, our "imagination is inflamed" with the idea that the Government can profit from leasing gilsonite mines? I can not believe that a system having its origin in the despotism of monarchs and perpetuated to strengthen their power and enslave the people, a system which in its practical operation was unprofitable to the landlord and injurious to the tenant, and was the cause of litigation and strife between the government and the people; one which destroyed the mining industry in the provinces of Rome and the dependencies of Spain; a system which prevented private enterprise and created monopolies in the Crown and the courtiers and favorites of the court, and developed such ponderous machinery to carry into effect the volumes of ordinances, rules, and regulations imperative to the plan of government leasings and royalties that the miner was destroyed and frauds and corruptions were fostered and fostered, is to take the place of one which is the result of American freedom and civilization.

After fair trial in the United States, Government control and operation of the mines was condemned. There are no new grounds upon which to base a motion for a new trial. [Applause.] [Here the hammer fell.]

The Late Hon. W. S. Holman.

REMARKS  
OF  
HON. WILLIAM SULZER,  
OF NEW YORK,  
IN THE HOUSE OF REPRESENTATIVES,  
Thursday, July 8, 1897.

The House having under consideration the following resolutions:

"Resolved, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. WILLIAM S. HOLMAN, late a Representative from the State of Indiana.

"Resolved, That as a mark of respect to the memory of the deceased, and in recognition of his eminent abilities as a distinguished public servant, the House at the conclusion of these memorial proceedings shall stand adjourned.

"Resolved, That the Clerk communicate these resolutions to the Senate.

"Resolved, That the Clerk be instructed to communicate a copy of these resolutions to the family of the deceased."

Mr. SULZER said:

Mr. SPEAKER: From time immemorial, throughout all the ages, in all civilized nations, it has been customary for a grateful people to praise their illustrious dead and commemorate their acts, their deeds, and their achievements. In my opinion it is fitting and proper that this ancient and time-honored usage should never be departed from, and in all the years to come should be strictly adhered to, especially in this free land of ours. In harmony with this sentiment and on this sad occasion I desire to pay a just and deserved tribute to our late colleague, Judge HOLMAN.

WILLIAM S. HOLMAN was one of the men of the century. He

was a grand old man. He was a great man. He died in the ripeness of his years full of honor. He was a ripe scholar, a learned and able jurist, an experienced legislator, a broad and liberal-minded man, a good citizen, and a distinguished statesman. He belonged to the old school, and was one of the last of his class. For over half a century he served his constituents, his State, the country, and the people. He was a rugged man—strong in body and in mind—sturdy, sincere, and always steadfast. He had fixed principles, and he adhered to them without a deviation. He loved truth and honor and character.

He had strong convictions, and the inflexible courage to uphold and maintain them. He believed in the plain people, always kept in touch with them, and made their cause his own. He was the friend of the poor, of the toiler, of the wage earner, of the oppressed, and of the downtrodden. He championed the right, combated the wrong. He was on the side of every cause that was right and needed assistance. He strenuously fought every wrong that needed resistance. He was always on the side of the people and battled for their rights. He was their idol, their spokesman; he knew all their hopes, all their fears, and all their aspirations. He was a Lincoln-like man—kind, just, and sympathetic. A man of the people and for the people—a true American.

He was not only a great man, but he was as true a man as ever breathed. Yet with all his greatness he had a simple, homely way, typical of true worth and characteristic of genuine American manhood. He was a hard worker, tireless and indefatigable. He succeeded in accomplishing things. He was an able parliamentarian and one of the most distinguished legislators of his time. In debate he was seldom eloquent, but he was always quick and alert and ever ready. No one ever caught him napping. He had a genial, gentle nature, a happy, sunshiny disposition, and a sweet, lovable character. He was always the friend of young men, ever ready and willing to advise and help them. But above all, and beyond all, he was an honest man, the noblest work of God.

Judge HOLMAN's name for years was a household word. From one end of the land to the other he was known either personally or by reputation. By reason of his opposition to reckless and extravagant appropriations he saved the country millions and millions of dollars. How much can never be estimated, and, of course, will never be known. But every dollar saved lessened the burdens of the taxpayers, earned for him the enduring thanks of the people, and established his name as the "Great Objector" and the "Watchdog of the Treasury."

The great works he performed for all the people made him feared and disliked by the few whose schemes he checked and defeated. It was a thankless task, a never-ending work. But he never faltered and he never hesitated. He saw his duty, and without fear or favor he dared to do it. He knew his cause was just, and that time, which levels all things, would justify his course.

He was an original man. He had no predecessors. He may have imitators, but he will have no successor. His work was his own. He carved out his own career; his field of endeavor was all his own making. He was the architect of his own triumphs.

A great man is dead, and a grateful people mourn their loss. A great light has gone out forever, and we shall not look upon his like again.

He was not a man of war—not a military man. He was a great civic hero. His victories were the victories of peace, not the triumph of battle. He did not lead an army, but he fought for the masses, and against the encroachments of their rights. He was a leader of the plain people, and struggled day in and day out, year in and year out, to keep the Government within their control.

He believed in the principles of Thomas Jefferson. He knew the power for evil of concentrated wealth. He saw the tendency of the times, the drift of legislation, and he realized the danger to the Republic of a governmental policy which robs the many for the benefit of the few, and by indirection and under color of law makes the rich richer and the poor poorer. He knew that such a policy must sooner or later enslave the masses and destroy free institutions. Here he took his stand. He could not do otherwise.

He was the implacable foe of trusts and monopolies, and denounced them at all times and in unmeasured terms. He believed in equal rights to all, special privileges to none. He did not believe in taxing one man for the benefit of another. He stood for equal opportunities for all, injustice to none.

He believed that all men are created equal, and that governments derive their just powers from the consent of the governed.

He often stood alone, but he saw with a clear vision that the gradual infringement of these fundamental principles of the people menaced the stability of the Republic and threatened the perpetuity of free government.

Would that there were more men like WILLIAM S. HOLMAN. It would be better for the people and better for the country. The Republic would endure longer.

He was not a demagogue, but he was a fearless, honest, incorruptible patriot. He hated cant, false pretense, hypocrisy, and

cared nothing for the hate, the criticism, or the ridicule of the men whose attempts to filch the Treasury he detected and prevented. He worked on with a fixed and determined purpose. He knew he was right. His courage in the face of obstacles was magnificent. He never turned back. He never cringed or fawned to power or wealth that thrift might follow. A half century in public life, and a poor man. That tells the story, and the whole story. Grand record—noble record!

He was a wise and a just man in all things. He was as pure and as disinterested a patriot as ever lived. His life and his example will be an inspiration to all who follow after him.

What a lesson we can learn from his career! He trusted the people, and they trusted him. He was true to his trust, true to the people, and they were true to him. He had principles, and he fearlessly proclaimed them. He had convictions, and he never subordinated them for a temporary advantage, no matter how great or alluring it might be. He was sincere and honest in all he did. He loved the plain people, and he loved his country. He never forgot that he was a servant of the people, sent to Congress to serve them and protect and preserve their rights. He was always true to himself, and he knew that then he could not be false to any man, any duty, or any obligation. Let us follow in his footsteps; let us take his example as our bright, guiding star for the work we have before us, for the work that we must do.

Mr. Speaker, there are gentlemen here who knew Judge HOLMAN longer and better than I knew him. But no one in this House to-day appreciated him more, respected him more, or loved him more. I grieve with his friends and his relatives. I have lost a sincere friend, one of the best friends a man ever had.

It is not my purpose to sketch Judge HOLMAN's long and honorable career. Others have done that better and more eloquently than I can do it. They have told the story of his long and eventful life, of the great work he has done, of all that he accomplished and achieved, of the good he did in the world, and of his struggles for fifty years to make mankind better, happier, and more prosperous. The world is better because this man lived. He will be sadly missed. His place can not be filled.

Mr. Speaker, WILLIAM S. HOLMAN is no more. His career on earth is finished. His work is done. He has fought the good fight; he has run his course; he has kept the faith. He needs no monument of marble or brass. A grateful people, to whose service he dedicated his life, will keep his memory green. In his battle for the rights of man he wrote his name high in the world's temple of fame. The American historian will accord him a prominent place among the great men of this century. He builded better than he knew. His monument will be in the enduring hearts of his grateful countrymen, and, as the years come and go, it will grow larger and greater and grander and brighter, until—

His deeds become his monument,  
Better than brass or stone;  
They leave his name on Glory's roll,  
Unrivalled and alone.

The Late Hon. William S. Holman.

#### REMARKS

OF

HON. NICHOLAS N. COX,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 8, 1897.

The House having under consideration the following resolutions:  
"Resolved, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. WILLIAM S. HOLMAN, late a Representative from the State of Indiana.

"Resolved, That as a mark of respect to the memory of the deceased, and in recognition of his eminent abilities as a distinguished public servant, the House at the conclusion of these memorial proceedings shall stand adjourned.

"Resolved, That the Clerk communicate these resolutions to the Senate.  
"Resolved, That the Clerk be instructed to communicate a copy of these resolutions to the family of the deceased."

Mr. COX said:

Mr. SPEAKER: I feel truly privileged in being permitted in this the House of Representatives of the United States to pay my humble tribute to the memory and worth of Judge HOLMAN. My personal acquaintance commenced in the Fifty-second Congress, but I had known of him long before I ever met him. He is a part of our history for the last thirty years.

What can a man say of a dead friend that expresses what he feels? What can a man say of a good great man who has faithfully served his people that does the dead statesman justice?

In our past we all have a great pride, and in our future great hope. Behind us our warriors lie buried, and the great leaders of civil and religious liberty have passed away. Yet I do not despair

that our country will not produce others just as worthy and great. There is but one rule I know of that is universal in its application in the proper governing of man's conduct, and that is absolute devotion to our convictions of duty. Whether these convictions arise in our family relations and extend to every relation, no higher rule can be found than "do our duty." If they arise in our relations with our country or people, no rule of action rises higher, and no conduct more worthy, than a true, full, and complete fulfillment of what is our duty. No man will make a failure who obeys it. No man will be great who breaks it. He may glitter for a while under false light, but eternal truth will unfold him. No man can be a good Representative who has no regard for the performance of his duties.

May I not ask every man who knew Judge HOLMAN if in all their knowledge they ever saw a more devoted man to his duties? A man made up and molded in the ideas of our fathers. A man cast in the mold of simplicity and truth. A man trained with the love of country hanging about him like a garment. Some say rugged truthfulness. Truth needs no adornment. Plain with his fellow-man. Sincerity needs no assistance. Plain in speech, but strong in truth, honesty, and devotion. He may not have had the beauty of words, when such beauty alone consists in their use, but he had that which is much better—courage behind what he said, and the good of his fellow-man at heart.

He served more years in this body than any man that has lived. He was worth his weight in jewels in protecting the purse of the nation. He lived, he worked here in this arena for over thirty years. In war and in peace, in prosperity and adversity, not one breath of suspicion ever touched his character. No charge of corruption was ever heard against Judge HOLMAN. No combines, no trades, no collusion ever controlled him. He lived to a ripe old age, and now we see him as a true patriot, a devoted father, a warm friend, and a legislator that any and all may emulate and be proud of.

Our old landmarks are falling fast. New influences are at work. Wealth and avarice are gods, and even where nothing but love of country should exist these serpents are stinging out our vitals. May we have bold, fearless, honest men like Judge HOLMAN to pull out the fangs of these cold enemies of human liberty.

#### The Tariff Bill.

#### SPEECH

OF

HON. JOHN F. SHAFROTH,

OF COLORADO.

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 29, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. SHAFROTH said:

Mr. CHAIRMAN: I have listened to a good deal of the debate upon this question, and I must say to gentlemen on this side of the Chamber that I fear we are making the mistake of accentuating too much the tariff issue. You all know as well as I do that the American people care little about the question of the tariff. [Derisive cries on the Republican side.] Ah, gentlemen, you may say what you please, but as a matter of fact the only issue that is really before the American people is the issue between gold and silver.

You may say what you please, but we know that it is the continual shifting of the burdens that were formerly borne by both gold and silver onto gold alone that has increased enormously the burden upon gold, increased the demand for gold, and thus increased the value of gold; that as gold is the unit of measurement, its increase in value means its increased purchasing power, and its increased purchasing power means that it buys more. That means that the seller has to yield up more of the products of human toil for a given quantity of gold, and that produces the general fall of prices, which is really the cause of the prevailing distress throughout the world. It is this continued fall in prices that has produced ruin and disaster to business.

We believers in the restoration of silver have been trying for years to get a clear, distinct issue between bimetalism and the single gold standard, and it seems to me that a good deal of the discussion of the tariff question, at least on this silver side of the Chamber, might very well be dispensed with. For twenty years we have been trying to get this direct issue before the people, but one party would ride into power upon the cry of "high tariff," the other party would ride into power upon the cry of "low tariff,"

and the result has been that the true issue has been evaded by issues formed in Congress. I want the dust that has obscured the vision of the American people to be removed.

Mr. Chairman, the Republican party having elected their President, and having declared that a Republican tariff will restore prosperity, I for one am willing that they shall try it. I will not vote for it, but I will not obstruct its passage. I believe they ought to be given an opportunity to try it, and I believe that if this bill should be defeated either in the Senate or in the House, it would be the most disastrous blow that silver has received for ten years. Then the Republican party would go before the people and claim that we prevented prosperity. Again, the want of tariff would be the excuse for hard times, and again we might lose the battle. I believe, Mr. Chairman, that this should be distinctively a Republican measure, and that no one but Republicans should vote for it. I believe that the Republican party ought to be held responsible for it, and I protest that there ought not to be any obstruction thrown in its way by this side of the House. [Applause on the Republican side.]

We who formerly affiliated with the Republican party are small in numbers on this floor, but at the other end of this Capitol the seven Silver Republican Senators hold the balance of power; and in my opinion, Mr. Chairman, it is to the interest of all those who think that the cause of the prevailing depression is not to be found in either high tariff or low tariff that the Republicans should be allowed to pass their bill. In that way only will we be able to get a clear issue before the country between gold and silver. If this bill does the work promised by its friends, if it produces prosperity, well and good. We want prosperity, no matter how it comes; but we upon this side of the Chamber know that it can not produce prosperity. We know that the tariff is not the cause of these depressed times. We know that the seat of the disease is deeper than that. This being the case, it seems to me the wise thing to do is to let the Republicans enact their measure, and let it be tested.

We are willing to test our theory of bimetallism on that point, and when the Republicans pass a tariff bill and it fails to restore prosperity, then it will be impossible for them to avoid the issue between gold and silver in the next campaign. The march of events and not the logic of our cause is going to determine the result of the next election. As I have said, we have been striving for twenty years past to have that issue squarely presented, and by letting this bill pass we shall attain our object of eliminating the tariff question from the coming campaigns. I submit, gentlemen of the committee, that if the Republicans pass their bill and it fails to produce the results they predict—and we know it will fail—there is nothing under heaven that can prevent the next House of Representatives from being two-thirds for the restoration of silver. [Applause on the Democratic side.]

#### Protection and Silver.

#### SPEECH

OF

HON. FRANCIS G. NEWLANDS,  
OF NEVADA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 23, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. NEWLANDS said:

Mr. CHAIRMAN AND GENTLEMEN OF THE COMMITTEE: I propose to discuss this question from the standpoint of a Silver Party man, a member of that large organization of silver protectionists who in the last campaign formed an alliance with the Democracy and the Populists in the support of Mr. Bryan for the Presidency, an alliance which still exists, and which will continue, and which will eventually result in an amalgamation of the allied forces into one strong party, with bimetallism as the dominating issue, all other questions being subordinated to it, and the largest independence of action and variance of view upon other questions being permitted.

The question now arises upon this bill, What shall be the action of those allied forces? Shall they endeavor to combine in opposition to this bill, or shall they exercise liberty of conscience and independence of action according to their convictions with reference to this economic question? They are divided into free traders, those who are in favor of tariff for revenue only, those who are in favor of moderate protection, and those who favor a thoroughly protective policy. They have it in their power in the other

House by a union of action to obstruct this bill, and they probably have it in their power to defeat it.

On the other hand, the action of a few men belonging to the allied forces in the other House will result in the passage of this bill and the elimination of the tariff as a disturbing element in the future consideration of the bimetallic question. So far as I am concerned, I am free to say, protectionist though I am, that I would not hesitate a moment, if I felt I could advance the cause of bimetallism, to put the knife into this bill, to obstruct and defeat it. But I do not believe that this is the time or the opportunity for favorable results from any obstructive policy.

I believe that at the last election the people of this country declared in favor of protection, whatever they may have declared upon other questions. I believe that if the Democratic party had accepted the challenge of the Republican party and made the issue upon the tariff, they would have gone down in overwhelming defeat. As it was, they acted wisely, announced a truce regarding the tariff, made the money question the dominant issue, and almost snatched victory from the most desperate conditions.

I believe that the country has given the Republican party a contract for prosperity. They propose this as the sovereign remedy. Whether it will prove to be such or merely a palliative or quack remedy, time only will determine; but the people of this country, suffering as they are from the direst disaster, are, in my judgment, to be educated by events and not by arguments. I trust, therefore, that this bill will pass, because I believe it will clear the way for a calm, dispassionate consideration of the bimetallic question.

Having said this much with reference to the policy and the action of the silver men, I have something to say in reference to a financial and industrial policy, which in my judgment will alone secure an enduring prosperity and protect alike the factory, the farm, the plantation, the mine—a genuine American policy that shall protect every section, every class, every individual within our boundaries.

#### COMBINED PROTECTION AND SILVER LEGISLATION.

I believe in combined protection and silver legislation. I believe that both are essential to the prosperity of the country. I believe that the alliance of protection and the gold trust involves a contradiction. Protection means a raise in prices, or, at all events, a sustaining of prices by eliminating foreign competition. The gold trust means lowering prices; it means the appreciation of gold and a diminution in the value of products and property as compared with gold. So that protection and the gold standard involve two conflicting, contradictory forces, one operating to sustain prices and the other having the inevitable effect of lowering them.

If I could by my vote in this body or by my influence or voice aid in securing the passage of a measure that would give this country higher protection, adequate revenue, and at the same time the free coinage of silver, no effort of mine would be spared now and to-day to secure that result. But I do not believe that the temper of the country will stand the prolonged struggle which could alone bring about combined legislation. The country is in an experimental state. It has tried the repeal of the Sherman Act; it has tried the passage of the Wilson bill. It is now eager to accept the remedy proposed by the Republican party; and I believe in having the efficiency or inefficiency of that remedy demonstrated as quickly as due deliberation will permit.

#### PERIOD OF UNREST.

I have said that I believe in combined protection and silver legislation. We have had a very serious condition of things during the past three years—a period of unrest, dissatisfaction, and distrust. The cause for that was assigned by some to the incoming of a Democratic Administration and the tariff policy it inaugurated, by others to the repeal of the Sherman Act, by others to the lack of revenue, and by others to the diminution of protective duties. But we find that the roots of this discontent were fixed in the soil long prior to 1893.

Now, the Republicans here who allude to the years from 1890 to 1893 as the period of high-water mark in the prosperity of this country must admit there were elements of unrest prior to that time, for how was it that after the passage of the McKinley bill, during this very period of high-water prosperity in the New England and Middle States, the States of the West, the Northwest, and the Pacific Coast, States that had uniformly stood by the Republican party ever since their organization, sloughed off from the Republican party in 1892 and threw their support to Mr. Cleveland?

There must have been a condition of unrest and of dissatisfaction. What caused it? The lack of prosperity in the agricultural regions of this country, the low prices of farm products. So that we have here a period of comparative satisfaction and prosperity in the New England and the Middle States, and a period of suffering, dissatisfaction, and unrest in the agricultural States. What is the explanation? My answer is that the legislation of

this country upon the money question had caused the appreciation of gold and the diminution of the prices of products, and that the dislocation between gold and silver caused by the demonetization of silver gave to silver-standard countries in competition with our own an advantage in the production of farm products which was felt in the Liverpool market, where those products are sold and where their prices are fixed; for you all know that the price of the exportable surplus fixes the price of the whole. The Liverpool price of wheat and of cotton (differences in the cost of transportation being adjusted) fixes the domestic price of those products in this country.

#### BANKRUPTCY OF RAILROADS.

Now, since 1893 what has been the condition of this country? I think it is best illustrated by the condition of our railroads. Since 1893 44,000 miles of railroads in this country have gone into the hands of receivers. Some of them have gone out again through the process of "reorganization," so well known to Mr. Pierpont Morgan and his associates, but since 1893 44,000 miles, nearly one-third of the entire railroad mileage of the country, have gone into the hands of receivers.

Where are these railroads? I call attention to the map which I have had placed in front of the Clerk's desk. Upon that map those railroads are marked in heavy lines, and you see that they are almost entirely in the Southern, the Western, the mountain, and the Pacific States. You observe that the New England and Middle States have been measurably free from these railroad failures. Why was that? Simply because by our legislation we had raised a protective wall which protected the manufacturing industries of the New England and the Middle States, so that they have been able to sell their products in the protected markets of the South and West, and have accumulated large profits which they have deposited with their banks and trust companies.

They have loaned out these moneys to the South and the West, and so the New England and Middle States have gradually become not only the manufacturing States, but the creditor States of the Union, as distinguished from the farming, the mining, and the debtor States of the Union. Now, what has caused the distress of these railroads? You observe that they are confined to the cotton belt, the mining belt (which comprises six States and three Territories, one-third of the area of the entire country), and the wheat belt. You must admit that the distress of the people there is caused by the low prices of their products. You may say that the prosperity of a railroad does not depend on the prices of the products which it carries; that its prices for freight and transportation are inexorable, whatever may be the price of the products of its customers.

My answer is that while the effort of the railroads is to maintain an unvarying price for the service they render they necessarily fail in that effort. They must adapt themselves in some degree to the varying prices of the commodities produced by their patrons. But, in addition to that, a large portion of their prosperity depends upon transporting to their patrons the consumable goods from the factory and from the marts of commerce, and when the consuming capacity and the purchasing power of their patrons is gone they lose a large part of their revenue.

#### THE MINING AND FARMING REGIONS.

Now, so far as the mining region is concerned, which embraces this large area, the reason of the distress is apparent. The principal industry of those States is the mining industry. Silver mining is the basic industry of six States and three Territories, just as coal mining and iron mining are the basic industries of Pennsylvania; and when the prices of their product went down through the adverse legislation resulting in the gradual paralysis of the use of silver, general prostration ensued throughout that entire region.

The managers of these railroads, who conduct them mainly in the interest of the foreign holders of the gold bonds upon them, did not realize this. They wished to maintain the gold standard. They wished to maintain freights and other charges payable in gold, so as to pay the interest upon their gold debt. They did not realize that the mortgages upon these roads were really mortgages upon the communities which they served; that they had gold mortgages upon silver mines, and that, with the decline of silver mining, those railroads would go into the hands of receivers.

Such, however, was the result. Within sixty days after the repeal of the Sherman Act every transcontinental road, with the exception of the Southern Pacific, which taps the fertile valleys of southern California, yielding products capable of paying large freight rates to the railroad, went into the hands of receivers. The Northern Pacific, the Union Pacific, the Oregon Short Line, the Atchison, Topeka and Santa Fe, which serve not only the mining but the agricultural region, all went into the hands of receivers, and coincidentally with the decline of silver the prices of wheat and of cotton went down. So the earning capacity of these roads was lost, and 44,000 miles of railroad went into the hands of receivers within two or three years after the repeal of the Sherman Act in 1893.

Now, these are the facts. Although we may differ as to the cause, the condition of these railroads indicates the general prostration of the communities which they serve. Now, what do you propose to do? Raise this tariff wall higher to protect the manufacturing interests of New England and the Middle States. But, I ask, why are they suffering to-day? Their suffering has only become apparent within the last year. They did not realize before that there was a bond of sympathy which bound them to the mining, the cotton, and the wheat-growing States.

But they realize it to-day. They find that the consuming capacity and the purchasing power of these States have been lost. And you may raise this tariff wall as high as you want; you may have some beneficial effects from it in the restoration of the revenue of the country; you may have some beneficial effects from it in steadying this decline in wages which is now going on in New England and the Middle States; but you can not by that act restore the consuming capacity or the purchasing power of the Southern, the Western, and the mining States.

Now, let us consider what is the real cause of this fall in prices, for that is what this distress means; that is what the suffering means—simply a fall in prices. And in what are prices measured? Simply in money. And what, by the process of evolution through the past twenty-three years, has been made the only substantial money of the civilized world? Gold. So that it is low prices measured in gold that is causing the general prostration of this country.

#### APPRECIATION OF GOLD.

Now, let us trace the history of gold monometallism. We find that prior to 1873 three countries only in the world were upon the gold standard—England, Portugal, and Turkey. Those who contend that the gold standard was the cause of England's greatness will perhaps account for the general barbarism of Turkey and for the prostration and lack of enterprise of Portugal. In 1868 a new movement was inaugurated with reference to money, the result of the Paris conference, and in reading the proceedings of that body you will find that the general impulse which animated the members of it, according to the debate, was the desire to secure a universal money and a stable standard of value. And without much consideration—without any consideration of the quantitative theory of money—of the relation of the quantity of money to credits and values, they declared in favor of the gold standard because gold was a more beautiful metal, was more convenient to handle, and contained the greatest value in the smallest space.

So in 1873 the United States, led by some occult influence which no one has been able to explain, being then upon a paper basis, without silver or gold—when its silver mines were opening up in their abundance, as if Providence had presented a special benediction to aid us in the restoration of specie payments—inaugurated the crusade against silver and, in conjunction with Germany, went upon the gold standard.

Now, there is a great difference of opinion among the advocates of the gold standard as to whether or not gold has appreciated. I shall not take up time in a lengthy discussion as to this. But let me read to you the prediction of Dr. Linderman, at that time the Director of the United States Mint, an advocate of the gold standard, with reference to the effect then apparent and which he said would be more apparent in the fall of prices. On page 17 of Dr. Linderman's report for 1873, he says:

The countries adopting gold as the sole measure of value have, as a necessary consequence, assigned a subsidiary position for silver. This system increases the use of gold as money and decreases that of silver for the same purpose, or, in other words, enhances the value of the one and depreciates that of the other. While the demand for gold for coinage has materially increased, large quantities of silver hitherto in circulation as standard money in Germany, Denmark, and Sweden and Norway, and constituting treasury and bank reserves in those countries, will, by the substitution of the gold standard, be thrown on the market as bullion and aid in its further depreciation.

On page 21 of the same report Dr. Linderman says:

The gradual adoption of the gold standard, and consequent demonetization of silver, will, of course, be followed by an increase in the value of gold, or what is the same thing, a decrease in the price of articles measured by it. Indeed, it is quite certain that this effect is already perceptible in some portions of Europe. Be that as it may, however, it is safe to assume that Germany will soon have substituted three hundred millions of gold for silver heretofore used as standard money, and that Denmark, Sweden, and Norway will require nearly as much more, in consequence of changing their standard from silver to gold. Now add to the foregoing the requirements of France and the United States in the near future, and it will be readily understood that gold must appreciate in value.

Here, then, we have the statement as to the then existing conditions by a determined advocate of the gold standard and a prediction as to the consequences which would ensue in the future—a prediction which has been absolutely verified by events.

But our friends say that the production of gold has increased, and that this increase will do away with the difficulties created by the gradual discontinuance of the use of silver. Now, let us look at the condition of the gold stocks of the world to-day, with a view to determining whether or not this appreciation of gold is likely to continue or is likely to be diminished. And I propose, for my statistics, to rely entirely upon the report of the Director

of the Mint appointed by Mr. Cleveland—Mr. Preston; and certainly no one will accuse him of making statistics in the interest of silver or in the interest of bimetalism.

In his report, based upon statistics gathered from the most eminent statisticians of the world, he says that the total gold stock of the world is \$4,000,000,000. Now, it is an uncontested and an incontestable fact that this \$4,000,000,000 of gold could be put into a cube of 22 feet. A space 22 feet long, 22 feet wide, and 22 feet high will contain all the gold in the world—not the production of a single year, but the accumulation of the ages. And the question is now, Where is that cube of gold? In what countries are the different portions of it located, and what encouragement is there for countries that are attempting to introduce fully the gold standard to expect an increased amount? What encouragement is there for those that are now about entering upon this hazardous experiment? According to the mint director, \$2,000,000,000 of this gold, one-half of this cube of 22 feet, is actually located in England, France, and Germany, the creditor nations of the world, occupying the small space marked upon this map by this line in red.

Now, I ask you, if one-half of the gold stock of the world is absolutely required for the reserves of those three countries for their domestic exchanges, for the reserves which constitute the basis of their credit system, I ask you if the other half is enough for the rest of the world? But where is the rest of this money? Why, we find that about \$500,000,000 is in the United States and about \$500,000,000 in Russia. This makes England, France, and Germany, Russia and the United States the possessors of three-fourths of the entire gold stock of the world.

Now, what necessity is there for more gold? Are there any other nations that are seeking for gold? Why, you all know that we have not got gold enough yet in this country. We have been stranded three or four times within the past three years because of the deficiency of gold. The Baring Bros. failed in England in 1890. They invested too heavily in the Argentine securities. Credit was shaken in England. The bank reserves of gold had fallen too low. They had loaned out too much to the rest of the world, and they commenced to call it in. They fastened upon America, commenced to sell their securities and to withdraw the gold. Immediately a wave of contraction swept from New York to San Francisco, embracing every occupation, every industry, and every section. Again, when England differed with us upon the Venezuelan question, distrusted our foreign policy, and was disposed to show her lack of confidence in us by the withdrawal of gold, a selling of securities took place which immediately caused the greatest alarm in all the commercial centers of the Eastern States, and changed what had been a patriotic sentiment with reference to the time-honored Monroe doctrine into a miserable time-serving tory sentiment, such as that which existed during the Revolutionary war.

#### WILL THE STRUGGLE FOR GOLD CONTINUE?

Now, have the countries got through with their struggle for gold? Ah, we are told that this country must retire all its paper money, all its greenbacks, all its silver certificates and Treasury notes, which are construed by the Department to be demand notes for gold, and that we are to have bank currency substituted, with gold as redemption money. Did you ever think what a large reserve of gold would be required for this purpose, and do you realize that there is not a debtor nation in the world to-day, with the exception of the United States, that has any large amount of uncovered paper money out that has been able to maintain gold redemption?

The United States has only been able to do it by issuing gold bonds, which constitute really the premium for gold that this country has paid for the maintenance of the gold standard. That is true of Russia, struggling to get upon the gold standard; of Austria, struggling to get upon the gold standard; of Italy, Portugal, Spain, Brazil, Chile, all those nations which have got upon the gold standard or have signified their desire to do so, and are endeavoring to-day to secure gold with which to make gold redemption. In none of these countries are they able to redeem their paper money with gold. You have here, then, this extraordinary famine for gold, a gradual discontinuance of the use of silver, a gradual substitution of gold as the only primary money, the only money of redemption, the only money constituting a solid basis for the credit system of the various nations of the world. Can you wonder that every unit of that gold has gone up, and that every unit of products and property has gone down?

#### COMPETITION OF SILVER COUNTRIES.

Now, this has had another effect, and that is, the depreciation of silver has stimulated the competitive production of silver countries. Here I come to the most disastrous cause of the low prices of our cotton and of our wheat. It is easy enough to account for the prostration of our mining States. Silver has gone down, and so the basic industry of those States has been seriously impaired; but the cause of the lowering of the price of wheat and cotton is a little more remote, and you will find that its source is in the

competitive production of countries that are not upon the gold standard.

Now, what are those countries? First and notably, Argentina and India. This is the statement of all statisticians and of all consuls in foreign countries, and of travelers, that silver has maintained a stable purchasing power in the countries in which it is the money. In India silver will purchase as much of labor and of domestic products and domestic property as it ever would. Wages remained stable in silver countries. They are hardly conscious that gold exists; and so, whilst the gold price of silver has been steadily declining, they have not been conscious of it, and have been willing to accept the same old price for their wheat, their cotton, and their labor.

We have, then, these countries competing with us in the Liverpool market for the sale of their farm products. The old price of silver was \$1.29 in gold. That ounce of silver for years would buy a bushel of wheat in India. The Liverpool merchant was accustomed, until the recent famine in India, to buy silver from our discredited, mines, 2 ounces for \$1.29 in gold, and with it to get 2 bushels of wheat where he once got 1. The result is that the American farmer is compelled to compete with the Indian farmer in the Liverpool market and must come down to the same relative price in gold, and he has been compelled to accept 65 cents a bushel, or less, for his wheat; and so it has been with cotton and other farm products.

But we were told during the last election the price of wheat went up whilst the price of silver went down. This only proves the contention as the exception proves the rule. Recollect that we had been suffering from the competition of silver countries. The wheat famine in India destroyed the competition of that country, so that our wheat went up. This competitive cause being removed, the English merchants could not buy Indian wheat, and had no occasion to buy American bullion with which to pay for it; and so the market for our bullion was diminished and our silver temporarily went down. Should the wheat crop of Argentina fail, similar results would follow, wheat would go up, our silver would go down. But restore the old conditions, restore the normal product of the silver countries, and you have the old competitive force still at work, and the price of wheat, cotton, and other farm products sympathetic with the price of silver, and gold absolutely dominating the price of the farm products in this country.

#### MANUFACTURING COMPETITION.

I wish to ask you what hope is there if we continue in this line? Recollect that we have thus far met only the agricultural competition of silver countries. The manufacturing competition of these countries is now being stimulated by the maintenance of the low value of silver. It is easily accounted for. England was supplying the entire Orient with manufactured goods. The people of the Orient were accustomed to change their silver into gold at the old ratio of 15½ or 16 to 1. They now find that they are compelled to surrender twice as much silver as they did for gold in order to pay for foreign products imported into those countries. They have been reluctant to turn their silver into gold at this great loss; and so domestic production has been stimulated, and the construction of cotton mills, woolen mills, and silk mills has been going on in these silver-standard countries—in India, in China, in Japan, in Mexico—and all of them show the most startling evidences of prosperity as compared with the prostration of gold-standard countries.

I ask gentlemen, what country will the manufactured product of the cheap labor of the silver-standard countries, made doubly cheap by the depreciation of silver, first attack? The country of the highest wages. You are to-day erecting a tariff wall around the United States for the purpose of protecting us against the cheaper European labor, whose countries are upon a gold standard. What tariff wall can you erect short of absolute exclusion—and that is, of course, impossible—against the manufactured products of the cheaper labor of the silver countries, made doubly cheap by the decline of the gold price of silver?

For my part, I believe that the daily wage rests at the foundation of all values in this country. I believe that all values of all properties depend for value on the maintenance of the daily wage. It is the daily wage that enters into every product and property. Products and property simply represent stored labor, and when you lower wages, you lower every value, you lower the price of every product and the price of every class of property in the country, because other products and other property can be produced or constructed under the lower wage system at a great advantage and for a less price. Hence stability of values depends upon the maintenance of the daily wage.

It is for that reason that I am a protectionist. I realize the fact that the only way to protect this country against the competition of the cheap labor of Europe is to place a tariff wall around the country which will partially exclude that competition. That is how we secure protection for the factory. But, I ask, how can you secure protection for the factory if this bill is simply designed

to protect us against the labor of European gold-standard countries, when the production of silver-standard countries is increasing at a prodigious pace, and their competition is being made more and more effective day by day, as the gold price of silver declines?

#### TRUE PROTECTION.

What does true protection for this country mean? It means that we should protect every section, every interest, every class in it; that if there is any danger from the competition of cheaper labor—and all must admit it—we must protect against the competition of the Orient as well as against the labor of Europe; we must protect against the labor of Mexico, the labor of Japan, and the labor of India as well as against that of England. Otherwise you have what? You have a reduction of wages in this country to meet the competitive rates of other countries. You have a readjustment of all values; and I am sure that all of us have had enough experience during the past three years of the suffering and distress that are brought about by readjustments.

I admit that the world will go on under almost any economic condition, but it is this process of readjustment that tears the heart out of the generation in which the readjustment is accomplished. What we wish to do now in this country is to stay the fall of prices, to protect all our industries; to protect the factory, to protect the plantation, to protect the farm, to protect the mine.

How can you accomplish it more readily than by restoring silver to its old parity with gold? By doing that you double the labor cost of the farm products of the silver countries; you double the labor cost of the manufactured products of those countries; you paralyze the competition which has been so effective in the recent past, so far as our farms and plantations are concerned, and you paralyze the destructive arm that is now being raised against your manufacturing industries.

Now the question comes up whether bimetalism can be restored. I have not time to consider the question at length. I only wish now to relieve it of its exaggeration. The question is, first, whether international action can be secured, and if not, whether the United States alone can fix the gold price of silver, whether the United States can, by an increased use of silver, restore its value to its old parity with gold, for I wish to deny most distinctly that the silver men are in favor of a 50-cent dollar. Those who maintain the present system believe in 50-cent dollars, but we believe in restoring the value of silver, so that 100 cents of silver will be worth 100 cents of gold and the gold will be the equivalent of the silver and the silver of the gold.

#### AN EASTERN MISAPPREHENSION.

It is not intended to pay debts with 50-cent dollars or to drive away gold or to debase our currency. Our purpose simply is, by increasing the coinage and use of silver and by giving it equal privileges with gold, to raise its value, and by diminishing the strain on gold which gold monometallism has caused to take away its unjust appreciation, and thus by putting up the value of silver and pulling down the value of gold to restore the old ratio, so that 16 ounces of silver will be worth (in bullion as well as in coin) 1 ounce of gold. Thus the old unit of value—the dollar—based on both metals instead of one, will be restored and we shall have a gold dollar worth 100 cents in silver and a silver dollar worth 100 cents in gold.

If you ask why this rate is determined upon, our answer is not only that that has been the customary ratio for years, but also that the total stock of silver coin in the world is \$4,000,000,000; that the total stock of gold coin is approximately the same, and that if the total stocks of silver and gold were each melted into a solid mass, the silver mass would be about sixteen times as great in weight as the gold mass. We also answer that to-day the relative production of the two metals is approximately in the same proportion. We must establish by law some relation of value between the two metals. And we propose to value silver as it will stand after restoration to equality of privilege with gold, and not while it is discredited by unequal laws.

#### ADVANTAGE OF BIMETALLISM.

The advantage of restoration of bimetalism is apparent. It will not only give the world an increased volume of currency, proportioned to the increase of population and to the extension of business, commerce, and enterprise, but it will do away with the dislocation of exchanges that has existed between the gold-standard and silver-standard countries, a dislocation which has immensely stimulated the production of silver-standard countries in farm products, and which is about to stimulate their manufacturing production, to the injury of the gold-standard countries. Our wheat fields and our cotton fields have already felt the force of silver-standard competition, for the prices of oriental and other silver-standard countries—always stable in silver—have declined in gold, just as gold has appreciated.

The value of our exportable products with which we pay our debts has constantly declined. We propose by restoring the old gold price of silver to restore the old gold price of our farm products, and to change the balance of trade from an adverse balance

to a favorable one. That this ought to be accomplished every one admits.

#### INTERNATIONAL CONFERENCES.

The Republican party, by its plea for international adjustment, admits that gold monometallism is a bad thing, and that bimetalism a good thing, but it claims that bimetalism can only be restored by international action. I shall not dwell long on this aspect of the question. It is sufficient to say that the Republican party limits our negotiation to the leading commercial nations, England, France, and Germany. While the agricultural and manufacturing classes of those countries are friendly to bimetalism, and while parliamentary resolutions favoring bimetalism have been passed in each, France and Germany both declare that they will not act without the cooperation of England, and England, through the ministry of both her political parties, has declared her unalterable purpose to adhere to the gold standard.

#### ENGLAND'S CONTROL OF GOLD.

The reason is apparent. The great advance of gold monometallism has given England the control of the credits of the world. Her people now own in bonds of other countries an amount aggregating many times the total gold stock of the world. England is built up. Her narrow limits will not permit much increase of population. Her local property can not be much increased in value. By her manufactures and her extended commerce she has invaded every country with her forces of industry and enterprise, and she has accumulated the gold of the world, and she now loans it over and over again to the countries from which she has made profit. Her wealth consists mainly in credits, and the creditor class has become the dominating power. England has always been a class-governed country. The land-owning class, once so controlling, gave way to the manufacturing class under the leadership of Cobden, and the corn laws prostrated the agricultural interests. The manufacturing class has now yielded to the creditor or banking class, which to-day dominates the councils of England, fixes her policies, and enters her decrees.

The friends of bimetalism stood expectant when Balfour came into power. They now realize that shackles have been imposed upon his limbs, and that he is powerless to aid the cause which he so brilliantly advocated. What arguments can we use to abate England's purpose? That the amount of gold in the world is too limited for the world's business? Her answer is that her people own almost all the gold in the world; that they have enough and a plethora, and out of their abundance loan it to other nations on bonds and mortgages. Will you say that gold appreciates and that products have diminished in value? Her answer will be that she desires its appreciation. Will you say that the appreciation of gold has stimulated the production of silver-standard countries, and that their competition has lowered the gold price of all farm products? Her answer will be that she raises but little of these; that she buys, and that the cheaper she buys the better.

Should we point to the land-owning class in England, the burdens of which have become almost intolerable, her answer will be that some interests must suffer in pursuing a great national policy, and that the English Government will stand as heretofore for the interests of the governing class of the country, the class which subordinates every subject of domestic and economic policy to the desire of maintaining a constantly increasing control over the products of labor throughout the world by a system which makes her a controlling power in peace and war, a partner without risk in all enterprises, and the absorber of the profits of world-wide production.

To this policy of enlightened selfishness no man who knows the controlling motives of both nations and individuals can oppose rational objection. We do not object to English policy on English soil. We object to an English policy on American soil.

#### AMERICAN POLICY.

England's wealth consists in gold; our wealth consists in property and products. England is a creditor nation; the United States is a debtor nation. England is interested in having money dear and products cheap. We rely on good prices for our products in order to pay our foreign debts. England proposes to pursue a policy which will increase the value of the gold that she owns. Ought not we to pursue a policy which will increase the value of the property we own and of the products which we export? Do the imitators of the English policy in this country realize that there is a difference in interest between the buyer and the seller, between the creditor nation and the debtor or producing nation? What should be our policy? Why, to increase the use of silver and in that way increase its value so as to restore its old parity with gold.

We find that the dislocation between gold and silver has given the advantage in production to countries that are not on the gold basis; that their farm products (the prices of which are stable in silver, although reduced in gold) are competing with ours in foreign markets to our disadvantage, and that their manufactured products, produced at a labor cost stable in silver but reduced in gold, offer a menace in the future to our home manufactures, protected though they be by tariff laws. We have at stake the

interests of the great debtor nation of the world; of a nation yielding the greatest amount of farm products in the world—farm products on which we rely for the payment of our foreign debts and the prices of which have been driven down in gold as silver has fallen.

The Republican party proposes to confine our bimetallic negotiation to but three countries—England, France, and Germany—whose interests as gold-owning and creditor nations are directly opposed to our interests, while it ignores the numerous debtor and producing nations with which an effective alliance might be made for the increase of the use of silver.

#### WHERE IS THE GOLD?

Where is the gold of the world? Refer to the Mint Director's report and you will find that of the four thousand million dollars of gold in the world, all of which if melted would occupy a cube of only 22 feet, one-half is actually located in England, Germany, and France. Look at the registered list of bonds and mortgages and you will find that the other half, though scattered in other countries, is tied by the string of bond or mortgage to those three creditor countries, so that it may be drawn away at any time from debtor countries, thus prostrating their business and imperiling their finances. So that instead of devoting their time to the uninterrupted production of wealth, their energies are wasted trying to catch gold on the fly. Think of it! One-half of the gold of the world actually needed for the local business of those three countries, hardly discernible in the vast area of the earth's surface, and yet our monometallic friends tell us that the other half is sufficient for the business of the rest of the world, occupying a vast area of country and having a population twelve times as great as that of the three combined.

All agree that the competitive use of silver in the world's exchanges should be restored. The Republican party proposes that we shall limit our negotiations only to the beneficiaries of the gold monopoly, and that we shall not apply to the victims of that monopoly for assistance or aid. Was monopoly ever beaten down by such methods?

In transportation the victims of monopoly resort to a competitive road. In public lighting the victims resort to a competitive gas or electric light company; but according to the doctrine of the Republican party, the victims of the gold monopoly, who so greatly outnumber the beneficiaries of that monopoly, are not invited to join us for common defense and protection, but in place of that the United States, the victim suffering most of all, stretches out the hands of diplomatic persuasion to the countries whose monopoly it seeks to break down. Was monopoly ever impaired by persuasion addressed to the monopolist?

Had the Republican party proposed, instead of confining its negotiations only to three countries that have a plethora of metallic money, to call a conference of the debtor and producing nations of the world whose stocks of metallic money (both gold and silver) are small and which have been compelled to issue large amounts of depreciated paper money because of the scarcity of metallic money, we would then have a contemplated arrangement with countries whose absorbing capacity for silver would be great. The first step, however, toward such a union is the courageous action of this country. Let that action be taken and we will have the intelligent cooperation of Russia, Austria, and other European nations that have made ineffectual attempts by the accumulation of gold to provide for gold redemption, all of whom know that their accumulated gold would slip out of their boundaries like water out of a sieve if gold redemption were attempted. For it is a singular fact that there is not a debtor country in the world that has been able to maintain gold payments of its paper money, except our own, and we accomplish it only with bond issues, which in reality constitute the premium paid for gold.

#### NATIONAL ACTION.

But enough of international conference. It has simply been used as a club to beat down national action on the silver question. Are we not, gentlemen, exaggerating the difficulties of the task before us? Remember that in order to restore silver it is only necessary to absorb the current product of the mines. The accumulated stock is in the shape of coin bearing the stamp of various governments, and it is absurd to assume that the owners of such coin will send it here simply to receive the American stamp. Silver coin it is and silver coin it would remain. There is no surplus anywhere in the shape of bullion, for the bullion in our treasure vaults is constructively coined and is represented by silver certificates and Treasury notes now in circulation.

The current product of the mines is now all absorbed in current uses—in the arts, in coinage, and for other purposes. Any demand that we create would be a new demand, and would have a tendency to increase the value of the current product.

But we are told that increase of value will increase production. Of course no man can foretell what the production of silver will be, but the best test of the limitation of the future is the limitation of the past, and we all know that all the silver coin in the world—the result of silver mining for ages—can be put into a cube of 66 feet. The world has never produced enough of metallic money.

The fact that to-day over one-fourth of the money of the world is uncovered paper money proves this.

#### INCREASED USE OF SILVER.

Now, what increased use can you suggest for silver in this country that will increase the value of the product of the mines? Our per capita circulation is currently stated to be \$22 to \$25. Our population is increasing at the rate of over 2,000,000 a year. It would take between \$50,000,000 and \$30,000,000 a year to maintain the present per capita so long as the population increases at that rate. But is a per capita circulation of \$25 sufficient? Such a per capita circulation might be sufficient for a creditor nation like England, whose area is limited, whose population is dense, whose exchanges are easy, and whose ability to increase her coin reserves is made easy by the great debts owing to her people. But certainly it is not sufficient in a vast debtor country like this, with its immense area, its scattered population, and its limited methods of exchange. If we should increase our per capita to \$30, we would have to coin \$70,000,000 a year for five years.

Besides, our national-bank circulation has been gradually contracting and is bound to be withdrawn altogether when the balance of trade is restored in our favor by good prices for our products and the surplus of revenue is applied to the national debt. It will take \$40,000,000 a year for five years to take the place of the national-bank notes, so that we have here an increased demand for silver of nearly \$200,000,000 in this country, without any inflation or expansion beyond a per capita of \$30. This demand is equal to the entire current product of the mines, which is already exhausted in current use. Can any man say that a new demand of such magnitude shall not restore the old parity? And if the old parity is restored, will not this talk about 50-cent dollars and a debased currency entirely cease? The gold monometallics propose to maintain this parity by the redemption of silver in gold. We propose the rightful method of restoring parity by increasing the use and consequently increasing the value of silver, and by restoring its time-honored use as money of redemption equally with gold.

#### SILVER PRODUCTION EASILY CONTROLLED.

But suppose the fears of our alarmist friends are realized, and that nature, instead of exposing her silver treasures as she has done in the past, gradually and progressively to meet the wants of the world for money, should expose it in large abundance, is not this a matter of easy control? Recall that silver mines already existing will soon be exhausted. The Comstock lode in my own State, which alarmed all Europe, is now reduced in its production to \$500,000 per annum. The mines of the future are in the ungranted mineral lands of this country and Mexico, for remember that Mexico and the United States produce two-thirds of the silver of the world. Will it not be easy to limit those grants, either by exacting royalty or by total withdrawal, so that the silver stores of the future may not be unduly drawn upon for the present, and the calm and equal production of silver commensurate with its use may be established and secured?

#### THE AREA OF DISTRESS.

For three years you have been on the gold standard. Do you like it? For twenty-four years you have waited for international action. Can you wait longer, and who are to take the lead in this reform—the beneficiaries of the gold monopoly or its victims? And who are the victims? Look on the map of your country and mark the area of distress as indicated by the railroads that have been placed in the hands of receivers since 1893, comprising nearly one-third of the entire mileage of the country. You will find it in the mining belt, comprising six States and three Territories, whose basic industry, with which all their industries, agricultural, commercial, railroad, and banking, were correlated, is suffering from the decline of silver. Mark the wheat belt of the Northwest and the cotton belt of the South and you will find that in those areas devoted to mining, to wheat raising, and cotton growing more than one-half of the local railroad mileage has gone into the hands of receivers since 1893.

Low-priced products will not stand high rates. Producers who produce at a loss can not buy goods that require transportation, and so the railroads have suffered in the transportation of the products of the region through which they pass and of the goods which they return to the producers in exchange. The gradual fall in the price of silver has for twenty years seriously affected the Western and Southern States, as their products have been compelled to compete with the product of silver-standard countries, the prices of which, stable in silver, have gradually gone down in gold until their price is now one-half of what it used to be.

#### THE EAST WILL ALSO SUFFER.

It is true that the New England and Middle States suffered but little until 1893, and then largely because of diminished markets in the South and West and loss from their railroad securities and other interests in the South and West. They suffered the least because they were creditor States whose margin of security did not disappear until 1893, and also because they were manufacturing States whose industries were protected against cheap European labor, thus enabling them to monopolize the home market. They have not yet suffered from oriental competition, for the

manufactured production of those countries, stimulated by the appreciation of gold, has thus far met only the requirements of the local markets, although it has seriously affected English and German manufacturers who used to supply such markets, but the Eastern States will soon suffer from oriental competition. Japanese production is looking out for American markets, for their products will naturally seek a country whose labor cost is the highest. No tariff short of absolute exclusion will protect the Eastern States against this invasion, and exclusion is impossible, for the Western and Southern States will not consent to a policy which surrenders their products to the competition of silver-standard countries whilst it protects from such competition the manufactured products of Eastern States. It is evident that, with a view to protect the products of this country, whether from the farm or the factory, against the products of silver-standard countries, our policy should be by increasing the use of silver to pull up its value, and thus by the use of a competitive metal to pull down the value of gold. By doing this we will take away at least half of the efficiency of the competing labor of silver-standard countries.

We therefore claim that the free coinage of silver at the ratio of 16 to 1 by this country is practicable; that it will restore the old relative value of silver and gold, release this country from dependence upon foreign gold, impair the competitive efficiency of the cheap labor of silver-standard countries, restore the value of our agricultural products with which we pay our debts abroad, and save this country from a manufacturing competition that will prove destructive. This question has not been fought out in the manufacturing States of the country as it has been in the mining camps, but the manufacturers of this country will learn that their interests are in common with those of the general producers of the country, and the oriental competition which has been so destructive to the farmers will, in the end, be destructive to the manufacturers.

We hope to see the wheat interests and the mining interests, the cotton interests and the manufacturing interests united against the opponents of bimetallism. For recollect that it is the dealers in money, the dealers in products, and the carriers of products that have made a union against the productive energies of the country, whether those productive energies are displayed in cotton and wool manufactures in the New England and Middle States, the iron and coal industries in Pennsylvania, and the cotton industries of the South, or in the mining of silver in the great West, and we may rest assured that this country will in time pursue a policy of enlightened self-interest. It will realize it is to its interest as a producer of over one-third of the entire silver of the world, as the greatest debtor nation of the world, as the greatest producing nation in the world, to stop the appreciation of gold, to stop the increase in value of every unit of this four thousand millions in gold, whose present home is in three foreign countries. And with the change will come beneficent results not only to producers, but to the banking, mercantile, and railroad interests, which are now so steadily opposing us. They will realize that their prosperity is based upon the general prosperity of the entire country, and that the prosperity of this country can not continue so long as debtor and producing nations recognize gold as the only money metal, and by their action build up its value and increase its control over the products of labor.

Into this work the Silver party enters, animated by no sectional spirit, controlled by no feeling of envy against the more prosperous, but inspired by the desire to maintain a broad American policy which shall protect the interests of American production, whether in the mining camps of the mountains, the wheat fields of the West, the cotton fields of the South, or the factories of New England.

### The Tariff.

### SPEECH

OF

HON. ANDREW J. HUNTER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. HUNTER said:

Mr. SPEAKER: As this extraordinary session has now reached its closing hours, I regard it the duty of every Democrat upon this floor to emphasize the ultraism of the legislation now almost consummated. For more than four months we have been in session, ostensibly to conserve the best interests of all the people and create such laws as would secure to them in the future immunity

from the remorseless grasp of monopoly and trust robbery. But, instead of making laws for the people, the majority in this Congress, with the whole power of the Administration, has been consumed and exerted to destroy every interest of the laboring man and the farmer and build up a colossal money power.

The herald of fraud and deception announced to the country six months ago that the new President would come with healing in his wings and that prosperity would gladden every home. What has the President done to redeem any of these pledges? Nothing.

What have the Senate and House done to relieve the people of their burdens? Nothing.

No legislation has ever been proposed by them to relieve the necessities and wants of the people.

The Presidential office has been substantially abdicated, and we now have a general business manager who arranges all matters of legislation and diplomacy.

Secret meetings are being held by the trusts, corporations, and other bosses daily and nightly to influence legislation in their interests.

I believe that the legislation on this tariff bill is controlled absolutely outside and independent of the Senate and House by less than thirty interested gentlemen. The people and their representatives are not allowed to know what is going on and what this Administration is doing or is going to do. There is a studied effort, seemingly, upon the part of the managing party of this Congress to conceal every movement in the creation and construction of this bill. Hide-and-go-seek has been adopted as the new method of governing the people of this country.

The Republican portion of the Committee of Ways and Means go to their room and close the door, bolt every Democratic member out there in secret, patch up what they call a revenue bill; then come into this House, adopt an arbitrary rule denying to the people's representatives the right to examine and discuss the product of their deliberations. Under this gag process they pass the bill, send it to the Senate; then to conference; close the doors again against every Democratic member of the conference committee; and in this ex parte way force upon the people of the United States partisan laws fraught with all the schemes of human selfishness.

Behind these bolted and barred doors the American people are not allowed to go within this charmed circle, and no ordinary Republican is allowed within these sacred precincts unless he has been examined and accepted by the inspectors of the trusts, corporations, and syndicates. They have to be men who are willing to tax the millions for the benefit of the few.

Here is a secret conclave of eight men, presuming to fix the amount of gratuities, under the name of taxation, that 14,000,000 taxpayers have to pay to 600 trusts, corporations, and individuals.

Mr. Speaker, this bill is not intended to raise revenue to pay the expenses of the Government, to help the farmer, aid the laboring man, and stimulate legitimate trade and business of the whole country.

It is not the intention of its authors to bring prosperity to the homes of the toiling millions, those that produce the material wealth of the country. It is limited and specific in its application and effect.

It is for the protection of classes, that they may collect millions of bounties from the consumers of their goods.

If it had been innocently created as a revenue measure, its logical and natural effect would be the same—to foster trusts and combinations that rob the people under its provisions.

As absolute proof of this conclusion, let us examine a brief list of the corporations, trusts, and gentlemen that enjoy the lion's share under this bill. Here is the protection that is given by this bill to the men who subscribed to the Republican campaign fund last fall:

Trust.	Proposed protective duty.
Anthracite coal (bituminous competes) .....	67 cents per ton.
As .....	45 per cent.
Barbed wire .....	2½ to 3 cents per pound.
Biscuit and cracker .....	20 per cent.
Bolt and nut .....	1½ cents per pound.
Boiler .....	45 per cent.
Boot and shoe .....	25 per cent.
Borax .....	6 cents per pound.
Broom .....	40 per cent.
Brush .....	Do.
Button .....	47 to 78 per cent.
Carbon candles .....	20 per cent.
Cartridge .....	Do.
Casket .....	35 per cent.
Castor oil .....	35 cents per gallon.
Celluloid .....	65 cents and 25 per cent.
Cigarette .....	44 per pound and 25 per cent.
Condensed milk .....	2 cents per pound.
Copper, ingot .....	Free.
Copper, sheet .....	Do.
Cordage, binding .....	10 per cent and 1 cent per pound.
Crockery .....	55 per cent.
Cotton duck .....	35 per cent.
Cottonseed oil .....	4 cents per gallon.

Trust.	Proposed protective duty.
Cotton thread.....	6 cents per dozen.
Electric supply.....	45 per cent.
Envelope.....	20 per cent.
Flint glass.....	45 per cent.
Fork and hoe.....	Do.
Fruit jar.....	Do.
Galvanized iron.....	0.91 to 1 1/2 cents.
Glove.....	35 to 71 per cent.
Harrow.....	30 per cent.
Harvester.....	Do.
Hinge.....	14 cents per pound.
Indurated fiber.....	35 per cent.
Lead.....	21 cents per pound.
Leather board.....	35 per cent.
Lime.....	5 cents per 100 pounds.
Lined oil.....	20 cents per gallon.
Lithograph.....	20 to 41 per cent.
Locomotive tire.....	14 cents per pound.
Marble.....	\$1.50 per cubic foot.
Match.....	8 cents per gross.
Morocco leather.....	10 per cent.
Tomestone.....	50 per cent.
Trunk.....	35 per cent.
Tube.....	2 cents per pound.
Type.....	25 per cent.
Umbrella.....	50 per cent.
Vapor stove.....	8 to 10 cents per pound.
Wall paper.....	35 per cent.
Watch.....	35 cents to \$3 and 25 per cent.
Wheel.....	35 per cent.
Whip.....	Do.
Window glass.....	1 1/2 to 2 1/2 cents.
Wire.....	11 to 2 cents.
Wood screw.....	4 to 12 cents.
Wool hat.....	40 cents per pound and 55 per cent.
Wrapping paper.....	25 per cent.
Yellow pine.....	\$1 per M feet.
Petroleum.....	Free.
Pearl barley.....	2 cents per pound.
School books.....	25 per cent.
School furniture.....	35 per cent.
Sewer pipe.....	25 per cent.
Shot and lead.....	21 cents per pound.
Skewers.....	35 per cent.
Smelters.....	40 per cent.
Snathes.....	35 per cent.
Soap.....	20 to 50 per cent.
Soda-water machinery.....	45 per cent.
Spool bobbins and shuttles.....	35 per cent.
Sponge.....	40 per cent.
Starch.....	14 cents per pound.
Steel.....	45 per cent.
Steel rail.....	\$6.72 per ton.
Stove board.....	45 per cent.
Straw board.....	30 per cent.
Structural steel.....	5 to 10 cents per pound.
Sugar.....	1.95 cents per pound.
Tassel.....	30 per cent.
Tin plate.....	1.4 cents.
Oatmeal.....	1 cent per pound.
Oilcloth.....	35 to 50 per cent.
Paper bags.....	35 per cent.
Pitch.....	Free.
Plate glass.....	8.55 cents per square foot.
Pocket cutlery.....	100 per cent.
Powder.....	4 to 6 cents.
Preserves.....	35 per cent.
Pulp.....	\$1.50 to \$5 per ton.
Rice.....	2 cents per pound.
Rubber (gummed).....	50 cents and 55 per cent.
Rubber (general).....	30 per cent.
Safes.....	45 per cent.
Salt.....	12 cents per 100 pounds.
Sandstone.....	50 per cent.
Sanitary ware.....	55 per cent.
Sandpaper.....	35 per cent.
Sashes, doors, and blinds.....	Do.
Saws.....	12 to 50 per cent band.
Lard.....	2 cents per pound.
School slate.....	20 per cent.
Gas.....	Do.
Whisky.....	\$2.25 per gallon.
Nails.....	4 to 1 cent.
Wrought pipe.....	2 cents.
Stoves.....	8 cents per pound.
Coke.....	20 per cent.
Reapers and mowers.....	Do.
Thrashing machine.....	Do.
Plows.....	20 per cent.
Glass.....	45 per cent.
White lead.....	21 cents per pound.
Inte bagging.....	Free.
Lumber.....	\$1 per M feet.
Shingles.....	30 cents per M.
Beef.....	2 cents per pound.
Felt.....	40 cents and 55 per cent.
Lead pencils.....	45 cents per gross and 25 per cent.
Watches and cases.....	\$3 and 25 per cent.
Clothes wringers.....	45 per cent.
Carpets.....	25 cents and 40 per cent.
Dental tools.....	45 per cent.
Lager beer.....	20 to 40 cents per gallon.
Milk.....	2 cents per gallon.
Patent leather.....	30 cents per pound and 10 per cent.
Flour.....	25 per cent.
Bread.....	20 per cent.

This Congress was called together for the sole purpose of passing a law that would compel the toiling millions to pay back to these gentlemen the money they had advanced to secure a Republican victory last fall.

This law will not only reimburse these gentlemen the sixteen millions expended, but it will enable them to collect from their customers in excessive prices more than \$250,000,000 annually and prepare them with a fund that they may use to perpetuate their power through the machinery of Republican legislation.

These protected gentlemen can now well afford to give to the national Republican committee a receipt in full for all their advancements.

Mr. Speaker, this Administration stands for nothing but greed, extravagance, and the protection of the wealthy and powerful. Cuba, to-day, is in the grasp of a cruel despotism; her cries for liberty and free government are disregarded by a Republican Administration, because this Government does not dare to displease the Spanish bondholders and impair the value of their securities.

Belmont, Morgan & Co. and the Rothschilds must have their gains if hundreds of thousands of patriots upon that beautiful island shall perish in the cause of liberty.

We are told that this bill must be enacted into law not for the reasons heretofore assigned by our Republican friends, that we must prohibit imports and increase our export trade, for that day has come under the Wilson bill. We are now having the greatest export trade in our history.

The fiscal year of the United States Treasury Department closes with the 30th day of June, and the official statement of the exports and imports for the year just ended breaks the record in several important particulars.

The total exports of merchandise for the year were \$1,051,987,091, the largest in our history. The nearest approach made to this was in 1892, when the total volume of exports of all kinds was \$1,030,278,148. The volume of exports of domestic merchandise in that year was \$1,015,732,011, while last year these exports amounted to \$1,032,996,880.

The excess of exports over imports last year was also the greatest on record, amounting to \$287,613,186, the largest previous balances having been \$264,661,666 in 1879 and \$259,712,718 in 1878. In 1892, the record year in exports, the balance of trade in our favor was only \$202,875,680.

If these figures prove anything, they prove that in its relation to trade the Wilson tariff is not a "failure." They show also that the people of the United States are laying the foundation for an improved condition of affairs in the near future if Congress shall not interfere to prevent it.

All the prophecies and pretenses of our Republican friends have gone to wreck and ruin under the test of time and experience. They will have to invent new methods of deception in the future.

This Congress is now closing on a measure which assumes that the American people and American genius can not compete with the people of Europe in the production of the necessary articles of the highest civilization. This I deny. We are to-day shipping the product of American handiwork, the products of agriculture, in greater quantities than at any previous time in our history, under the inspiration of the advantages given to the people by a comparatively low tariff.

This Dingley bill will, by increasing the value of coal, iron, and lumber to our own people, cut off a large share of our export trade that we now enjoy.

Let us for a little while turn to the laboring men who have lost faith in the theory that high taxation makes high wages. Just now, while the Republican party are forcing through Congress a tariff higher than ever before, under the false plea that it is solely for the benefit of the laboring man, hundreds and thousands of honest men have gone out on a strike to try to force employment at wages that will arrest the demon of hunger that is now at their doors.

If the protective doctrine were half true, all that these laboring men would have to do to secure high prices and plenty of work would be to wait two or three days.

At last it is being borne in upon the popular mind, through hardship, that neither a protective tariff, a revenue tariff, nor absolute free trade can bring prosperity to the masses while the natural resources of the country are monopolized, while production and prices are controlled by trusts, and the railroads of the Union, the combination with those trusts, are empowered to dictate who shall and who shall not do business.

The grip of greed is on the country—a greed that is only intelligent enough to see where immediate profit lies and remains blind to the necessity for the general well-being on which the well-being of capital itself in the long run depends.

It is labor that is suffering most now. But nobody except the millionaires of the trusts and their hangers-on is satisfied with things as they are.

The new tariff will be tried and it will fail. Then the revolt against the paralyzing trusts, in whose interest alone tariff has been devised, will become general. There can be no genuine prosperity for either workmen or business men while the trusts own the country and rule and rob it and destroy one-half of the primary money of the people.

A measure conceived, as the Dingley bill has been, in the count-ingrooms of the protected monopolists could not fail to deceive the working classes and the farmers and be condemned by the Democratic party and all those who desire the welfare of the whole people.

The sole purpose of this legislation is to secure the highest tribute to the trusts and protected interests. Adequate revenue is totally disregarded and equality of burdens ignored.

The mask is thrown off now. We no longer hear the leaders of the Republican party claiming that protection is for the benefit of infant industries or that the foreigner pays the tariff duty. Protection pure and simple, without reference to revenue, is the full scope of this bill when it becomes a law.

Mr. Speaker, prosperity will come speedily to those protected by this bill, and distress and misery to those who have to do the protecting.

As the stocks and bonds of the protected trusts and mills begin to rise you will hear the subsidized press crying out that prosperity has come. But when labor and the farmer's products stand still, as they will, nothing will be said by them.

The adoption of this bill will consummate the complete surrender of the Republican party to the trusts.

Mr. Speaker, by this act Congress abdicates its constitutional duty to legislate for the welfare and happiness of the American people. It brings reproach upon American character, and strikes a criminal blow at popular government.

It will arouse bitter hostility by all other nations doing business with us, and cause the war cloud to hang heavily upon our horizon.

It was a sad day when the people of this country permitted the Republican party to gain control of this Government. They have repudiated the constitutional limitations of the taxing power, set that fundamental law aside, and have erected in its stead the hideous and plutocratic doctrine of protection.

The exercise of assumed power to compel one part of the American people to protect another part, under the sham pretense of raising revenue, is a crime, and under this bill stands out before the world as a speculative outlaw.

There was no excuse or reason for this extra session of Congress and the enactment of this Dingley bill but to tax the people that the trusts, who gave their millions to elect Mr. McKinley President, should have their money returned to them as soon as possible.

Mr. Speaker, no effort, no word of mine, can now avert the calamity that hangs over the energies, enterprise, and industry of the people of this vast Republic. The die is cast; the feast of the modern Belshazzar is now being spread; the banquet is announced; and the revelry of 400 trusts and corporations is now in the midst of its celebration.

The stockbroker, the gold gambler, and the trusts now feel perfectly safe and secure within their intrenchments, while the Republican party stands upon the outlines of their battlements with its sordid gold to purchase immunity from the wrath of an outraged people.

But, Mr. Speaker, the day of deliverance is near at hand; the time has fully come to go before the great masses of the country and open the book of tyranny and oppression in which the Republican party has written the law of slavery. All the people want to know is by whose hands these statutes were written. I say to them: "Go to New England, Pennsylvania, Wall street, and Lombard street, and there you will see the index engraven upon every page of avarice and greed. There you will see the political boss and the machine by which your sweat and toil is coined into their millions, and there you will learn how you do the protecting and who the beneficiaries of protection are."

Mr. Speaker, there is no remedy for these endless outrages upon the people's rights under the policy and legislation of the Republican party. They must turn to the great principles laid down by Thomas Jefferson and his associates, if they desire relief.

Therefore let us go back to the people, where the sovereign remedy may be had, and make our appeal. The people are always right, and make no mistakes when free to exercise their will.

Mr. Speaker, I have no fears that when the people speak in 1893 and 1900 upon the issues that this bill now creates, a condemnation will be registered against the encroachments upon their rights, and this insidious method of robbing the toiling millions under the pretense of raising revenue will be repudiated by them in no uncertain way. Then we can say to the world that popular government is safe in the hands of the people, and robbery can not longer be perpetuated by the tricks of legislation.

## The Tariff and the Trusts.

### SPEECH

OF

HON. S. M. CLARK,

OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. CLARK of Iowa said:

Mr. SPEAKER: There has been much clamorous insistence there should be additional antitrust legislation in the pending tariff measure. It is easy to show the public intelligence that in disregarding this demand the Republican Congress is not indifferent to the public welfare.

1. The public demands the speedy enactment of the tariff. No hindrance should be put in the way of that demand.

2. The tariff and the trust are wholly different legislative and economic measures.

3. There is already upon the statute book the law proposed. No practical or practicable good end is gained by duplicating this legislation.

4. No one has shown that there should be legislation against trusts, or that, if there should be, that which is proposed is that which is required.

5. Production and sales are controlled by trusts in England, Germany, France, and the countries that would take possession of the American market if the Congress could or should destroy American trusts and establish free trade. Thus American manufactures and labor would be displaced in America by foreign manufactures and labor controlled by trusts.

6. Trusts are a natural and normal result of the evolution of modern business and civilization, and they are more salutary and beneficent than the foolish and ill-digested legislation attempting to suppress them.

7. Labor, or that factor in production which receives wages, is organized as a trust. This is useful to the welfare of mankind; this compels the organization as a trust of that factor of production which pays wages. And the organization of the latter as a trust is just as beneficial to mankind as the former.

8. Laws attempting the suppression of the organization as a trust of that factor of production which receives wages have failed because those laws hindered the progress and well-being of mankind. Laws trying to suppress the organization as a trust of that factor of production which pays wages have also failed, because they are equally an attempt to hinder the progress and welfare of the people.

9. The welfare of mankind requires there should be high wages for labor and low prices of products made by machinery. This necessitates that the waste made by unprofitable competitive labor and the waste made by unprofitable competitive capital should be done away with, so that the gain made by stopping the waste of unprofitable competitive labor shall be equated with a like gain by stopping the waste of unprofitable competitive capital, and thus give high wages for labor with low prices of manufactured products. Waste is a moral and economic evil, destructive of industrial well-being. Trusts are the device of the highest intelligence of the modern industrial and commercial world to secure high wages for labor and low prices for products by minifying waste.

10. As everything of human origin is attended by both good and evil consequences, some evils will attend the noncompetitive organization of labor and the noncompetitive organization of capital. The province of legislation and government, so far as these have anything to do with the matter at all, is not to seek to destroy the organizations, but promote their benefits and restrict their ills.

11. In doing this it is well to remember that the history of the world shows that nearly every governmental or legislative interference with the freedom of the people in their industrial and business relations has been a blunder which the future has had to undo as best it could after a disastrous experience. What mankind does in its natural relations, free from factitious laws and governments, is a process of evolution guided by a divine will and a supreme and universal purpose and intelligence before the workings of which the centuries of human lawmaking are often but a comedy of errors. The laissez-faire school say: "Take the marring and meddling hands of short-sighted legislators off labor unions and trusts, off industry and commerce, off labor and capital, off human conduct and intelligence and free volition, and let human creatures work out their destiny according to natural evolution and the unrevealed but constantly revealing divine purpose in the universe, and then you will have a world of

science and natural order, the world of God's plan and purpose, not marred, hindered, and set back by the stupidity of lawmakers and rulers." That is the general proposition of economic science. But it must be modified and restrained by the functions of enlightened government; and where selfish personal interests and power prevent the beneficent operation of the natural law, there government must come in to guard and redress. Thus the free employment of labor is beneficent, but when women and children are coerced into unhealthy and degrading labor by individual greed, there it becomes the true province of government to interfere and protect. It is in this view that factory and mine inspection laws, for example, are wise and salutary. Economic science must recognize that government is part of the natural and divine order of things. It has its duty to perform, but that duty will be found in adjustment to, not in departures from, the natural order.

12. That factor of production which receives wages can only be paid or employed when that factor of production which pays wages can market the products of both factors at a profit. Without a market and a profitable market the whole industrial system of the modern world collapses.

13. Markets are now controlled by more or less organized national, international, and cosmic or world-wide conditions. It is now no more possible for the individual wage payer or the individual wage receiver to get a place for his products in the markets of the world than it would be for the individual soldiers of great armies to achieve campaigns without executive management and leadership. War had this same evolution from Samson or the savage making war on his own hook to the combined and managed strength of all.

14. Trusts are but cooperation, and the whole world seems to be moving toward cooperation. The workman or craftsman once went by himself. Then he combined in the lodge or society, then in the guild, now in labor unions or syndicates as wide as nations or as Christendom. The employer once conducted his own business with his own capital. Then he made a partnership, then a company, then a corporation, now a trust or corporation of corporations. The evolution has been as natural and inevitable for one as the other. The States that have passed antitrust laws have usually expressly exempted labor trusts and farmer trusts. That exemption surrenders the whole principle of antitrust legislation. Once the head of each family was a priest. Then a congregation followed, then a church. The Society of Christian Endeavor, the Epworth League, are great religious syndicates making into combined cooperative strength the formerly individual and isolated congregation or Sunday school. The tendency is everywhere.

15. The trusts now complained of exist under the Wilson tariff and years of Democratic Administration.

16. The industry of sugar refining in the United States has been organized as a trust for many years. The industry exists in that form and not another. Suppose it could be destroyed by punitive provisions in a tariff bill, what would take its place? What possible benefit would come to the American people? A great American industry would be destroyed, bringing loss to those who labor and those who pay labor. And if it were, when the destroyed industry should be rehabilitated it would again take the form of combination and syndicate, because commercial and industrial evolution is going that way. A destructive warfare upon existing and inevitable industrial conditions is wise only to the philosophy of nihilism; it is a fatuity in every other view.

17. The evils of trusts are subject to two restraints—natural law and statutory law. The safety and welfare of mankind are supreme, and will compel trusts and all societary institutions to serve them. Whatever is not in harmony with the well-being and progress of the people will be coerced into harmony with the people's welfare or be destroyed. Trusts and every form of wealth and power exist subject to that order. If ever there was a time when the people were not sovereign, that time is happily past. Trusts exist under compulsion to be of service to the people. The natural law will compel that. Wise and foreseeing statutory law should supplement the natural law. Statutory law not thus wise and foreseeing is futile and hindering. A law about trusts in a tariff bill is political legislation, and the people have a wise and prudent distrust of that. They want every tub to stand on its own bottom. They do not want their laws to be the short-lived passion or effervescence of partisanship, but, instead, conservative and necessary additions to the great structure of law, interpreted and enforced by wise and honest courts, which has safe-guarded the people for generations. Make your tariff law, give the Government a needed revenue; and when laws about trusts are needed, make them in laws that are inspired not by politics, but by justice and a really honest care for the people's welfare.

18. There has been a great change in recent years in the conclusions of economic science and public opinion as to the benefits of competition. John Stuart Mill as a deduction of science said that destroying capital and the resources of society by railway competition would be a public injury and an economic folly, and the experience of years has proved the correctness of his assumptions.

Farmers in their studies and debates on economic questions in granges and alliances set themselves against competition as an injury to them. Labor unionism has brought nearly all workingmen to that view.

Frederick Engels, in the Condition of the Working Class in England in 1844, had a chapter upon competition in which he said that competition had created the proletariat, crowded out the small farmers by means of the large farm system, ruined the lower middle class, centralized capital in the hands of the few and population into the cities.

#### Competition—

He said—

is the completest expression of the battle of all against all which rules in modern civil society. This battle, a battle for life, for existence, for everything—in case of need, a battle of life and death is fought—not between the different classes of society only, but also between individuals.

This view of the evils of competition has grown, among the working people at least, by leaps and bounds. Labor unionism shuts out competition by agreement among those who belong to it and by forcibly compelling that nonunionists shall get no work or wages. While the politicians and theorists are chattering and clamoring for competition, laboring people speak stern and resolute opinions against it. Mr. W. D. Ryan, secretary of the United Mine Workers of Illinois, said, in a recent open letter to Senator MASON:

The insane competition inaugurated by the coal operators has brought about a condition of suffering and destitution which was never equaled.

We have been forced to accept reduction after reduction until the price now paid is so low that miners can not earn an average of 75 cents a day, and the mines work only half time. I doubt if any more lives have been lost in Cuba since the insurrection commenced than in the mines of Illinois during the same time, and I am certain there are no more women and children hungry in Cuba at present than among the families of the miners of Illinois.

The wage earners see with clear vision that it is not capital in the condition of trust or syndicate, but capital in the condition of competition that is forced to pay low wages and brings misery to them.

19. One of the chief factors of prosperity is that the working people shall be employed at good wages. This, as I have said, and I want to enlarge upon it, can only be if those who employ labor can market their joint product at a profit. There is talk of labor and capital. The true view is that capital is labor; that production is composed of two factors, both labor—the labor that receives wages and the labor that pays wages. It takes as much labor to get and pay the wages as it does to earn and receive them. It is that which establishes what wages shall be between that factor of production which receives wages and that factor which pays them.

Property employs no one and pays no wages. A closed factory, an unworked mine, idle machinery make no wages, pay none. Beggars shiver in want upon the porches of splendid empty marble palaces in Italy. The property profits nobody. Glance over a few newspapers and you will see item after item showing how widespread and pervading is this recent attitude of the wage-receiving factor in production, which has displaced the individual by combination and done away with competition in the wage receiver's share of production. Just now it has closed the coal mines and shut coal out of every market. In the papers I read items like this: That the general wage committee of the Amalgamated Association of Iron and Steel Workers, in session at Detroit, decided that the wages for puddling should be \$1.50 a ton; that the tin-plate workers met at Pittsburgh, made their wage scale, and submitted it to the manufacturers; that the Miners' International Congress recently convened in London had about 100 members representing 1,150,000 British, French, German, and Belgian miners, and that an eight-hour working day was ordered by a vote by representatives of 1,064,000 miners for and 120,000 against the measure; that the Society of Engineers in England was considering whether or not it would permit the use of certain improved machinery.

With conditions like these controlling that element of production which receives wages, that element of production which pays wages must be left to a large liberty and discretion in devising methods and management to market the products profitably and pay wages, or the whole industrial world will be brought to wreck and ruin. I do not believe there is a legislator in this land wise enough to make a hard-and-fast law about trusts. They must disclose their effects by time, and legislators can not anticipate accurately what those effects will be.

20. Natural law promises its operation to guard the people from trusts by subjecting them to the like attritions that in the physical order wear the rocks to pebbles and level the mountains to the plains. I take up a paper and I read that the steel-beam trust, organized at Philadelphia, dissolved and an open market was made. The French copper trust of 1887 was so signal a failure, drawing banks and capitalists in the waves of its ruins, that it taught caution to greed and showed that the mighty operation of natural laws can not be circumvented by the devices of capital. There

are continuously enough failures of attempted trusts to impress this fact upon the caution of wealth.

21. There is reason even in the unreason of men. There must be some cogent causes for trusts, since they are the products of the largest business experience in a very enlightened period, and when the people have a controlling power in government that they never before had in the history of mankind. These causes must be found in what they have done that is salutary. When I was a boy, in a country home, the feeble light making darkness visible in the household when the night came was of home production. There was unrestricted competition as to that.

It is strange in that pervading gloom that any child escaped blindness. The era of petroleum came, but it was scarcely better in the home. Coal oil was so expensive that farm economies used it sparingly. That was the era of competition and costly production and sale. Then came the period of the Standard Oil trust. I go back to the country home of my childhood now, and it is ablaze with light. The Standard Oil trust has made oil cheap. Upon a small margin of profit assured to it by a known and controlled market the company has grown rich while it has lowered prices to the consumer and paid high wages and salaries to its employees. That is the economic basis upon which a trust rests. If it achieves these results, its existence is justified, and it is beneficent to the people. If it fails in this, then it may need to be subjected to the punitive restraints of legislation.

22. Mr. A. B. Salem recently made in an industrial paper a showing of some of the things trusts have done as to prices. In 1873 the Standard Oil Company was formed. The price of oil then was 25 cents a gallon. The oil was crude, explosive, and dangerous. The Standard Oil Company improved methods, and the safer, better oil sells in 1897 for 6 to 8 cents a gallon. The American Sugar Refining Company or trust was organized in 1887. It now sells for 4 cents a pound the same grade of sugar that was then selling for 7 cents. Rubber goods are lower than in 1892, when the United States Rubber Company or trust was organized. The United States Leather Company or trust was organized in 1892. It sells leather for much lower prices than then prevailed. Cordage sold for 10 cents a pound when the cordage trust was formed; it now sells for 6 cents. The telegraph companies combined in 1866. It then cost \$2.20 to send a ten-word message from New York to Chicago; it now costs 40 cents. In 1873 it cost 2.21 cents to move a ton of freight a mile by rail; in 1897, eighty-four one-hundredths of 1 cent. A corresponding decline has taken place in steel, glass, cottons, silks, and nearly every product made by combined capital and combined labor, while the sum paid to American working people to buy those cheapening products with has increased from \$620,000,000 in 1870 to nearly two and one-half billions now; and the average wages for the individual from \$303 in 1870 to \$485 in 1890.

23. With individual employers and under competition, the workingman was often unable to get his wages after he had earned them. This hardship seldom happens now under syndicated employment. This is a good service to mankind that must not be inconsiderately assailed by blundering and hindering legislation.

24. Ideal republics and Utopias can not be made by laws. It may be that the present society system, in which those having capital for the purpose of expanding it employ and pay wages to labor, may not be the system the future has in store. The future will determine that. But we have to deal with what is, not with what may be. Men, women, and children now have to live by a wage system. If we impair it, men, women, and children suffer want. If we destroy it, all perish. Whatever the society system of the future, it will come as a natural evolution and slowly. Legislators can not enact it into being offhand and ex cathedra.

Anything we do destroying or impairing the confidence and prosperity of those individuals, partnerships, companies, corporations, and trusts that now employ or would employ what they have in the further production of wealth throws labor out of employment, reduces the sum of wages paid, and adds to the volume of human suffering and sorrow. I have seen in the past four years the pallid faces of women bending over the feverish cheeks of the children of want. I have seen strong men grow feeble and into despair, wanting employment and not finding it. This because there were American lawmakers who in a fierce, blind prejudice struck down American employers under the pretense of sympathy with American labor. I will have no part or lot in such lawmaking nor in the spirit which inspires it.

25. The material question, then, is, Does the pending bill favor trusts to the disregard of the welfare of the people? Because care for the people should be the object of all lawmaking. There has been much declamation, but not the least proof that it so favors trusts. The workings of any tariff can not be accurately forecast; experience of it must be had. But the tariff experts of the United States Treasury Department have made the following comparative statement of protection given under the conference Dingley bill to sugar refining:

Present (Wilson-Gorman) law.....	19.82	Senate schedule.....	19.82
House schedule.....	12.55	Conference schedule.....	12.55

The careful, well-informed analysis and estimate by Mr. DINGLEY also makes the conference rate less than that of the Senate. In any event the protection given to the American refiner is less than that given by the Wilson-Gorman law. The advance in sugar stocks immediately upon announcement of agreement by the House and Senate conferees was the result of getting the sugar industry out from the uncertainty of legislation, and the assurance that whatever the tariff rate is it is fixed for four years. It is to be expected and to be hoped that a like confidence and rehabilitation may come to all the depressed industries of the United States.

#### False Promises and False Lights.

#### SPEECH

OF

HON. JAMES M. ROBINSON,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. ROBINSON of Indiana said:

Mr. SPEAKER: This is a fitting time, indeed—the dead hour of night—to pass this bill of spoliation that covers with a blanket mortgage in favor of wealth the future profits of honest toil. The deceptive title of this bill is only accentuated by the gloom and gressomeness of this midnight hour. All designs by man to make countless thousands mourn are canopied about with professions of virtue, and on this bill are hung out the false lights “to encourage industries,” while underneath the mask the trusts are fostered, and, like the big bats of South America, they will silently and noiselessly suck the blood from the veins of their victims while they lull them to sleep with the gentle motion of their wings.

A time will come when the people can measure the distance between promises and performance—words and acts.

The Presidential campaign year of 1896 will go into history for its rose-colored professions and promises, and the year 1897 will succeed it for its lack of performance. Is a Presidential campaign a license for all deception? Not only did the party then successful, by flagrant deception, win a victory, but no sooner were they entrenched in the position so gained than they again assumed a false ground, and the trusts, always in the saddle, turned the question from money to taxation, and declared that the advocates of Palmer and Buckner and others had voted for higher taxes as a remedy for the country's financial ills. The people know this to be untrue; but with this knowledge they have witnessed for the last four weary months this tariff bill, with its schedules and lists, its specifics and ad valorem, its rates, reciprocity, and rebates, its standards of color, its mystifying polariscopic tests, until the financial head has turned and the industrial heart has sickened at their mention. This bill covers with its tax nearly everything, to the waters under the earth; and all this weary labor, as it drags its slow length along, it is said, is done to secure revenue to cover the deficit. The gentleman managing this bill which bears his name [Mr. DINGLEY], at the opening of this session, within a few minutes on this floor, stated four times in succession that the purpose of this bill and the calling of Congress in special session was to provide revenue. With a few articles as exceptions, the whole matter has drifted into a field for the encouragement of capital seeking to control markets. Can the lovers of our institutions look with complacency on this sinister thwarting of the wishes of the people by this high-handed spoliation? This action of the majority is in keeping with their recent history.

They fed their victorious followers on promises, both offices and prosperity, and all humans waited, save and alone the miners, who, unable to longer live on starvation wages in this era of promised prosperity, struck for bread to keep soul and body together.

During the campaign the majority on that side said that the depression was not the result of industrial conditions, but the fruit of a lack of confidence; that business stood ready to embark as soon as the discussion was over and the President elected. The President was elected, but the elusive goddess was nowhere to be seen. Then it was said, “Give the Administration a chance. The President has not yet been inaugurated; when he is, all will be well.” The event over, the hand of depression still grew heavier upon us. Then they said, “Wait till the tariff bill is passed.” And now, as we stand on the threshold of this false mansion of manifold calamities and false promises, our ears are disturbed to frenzy by the walls of more starving miners striking for bread, industrial depression deeper and more disastrous, bankruptcy and battle for existence all over the land.

Driven from every position, we see them to-day reaching out into the unfathomable depths of political obscurity for some hook on which to hang their promised prosperity. Statesmen of both parties stand appalled as they see the fat kine of the land, so sumptuously provided for by this bill, eating up the lean kine, too weak to resist, too long fed on the superannuated chaff and dry husks of false promises, without performance, to survive. Sir, they have played upon the soft lute of hope so long that patience has ceased to be a virtue, and the imprisoned spirit of a long-suffering and deluded people clearly sees the hypocrisy of their pretensions.

Not deterred by the facts, but a few weeks ago a triumvirate of prosperity inflaters, three men of acknowledged leadership in wealth, amazed the idle and unemployed by proclaiming simultaneously, with a flourish of trumpets in the East, that the wave was upon us, and the slow plodders would have to clear the track or be engulfed. Seventy-five millions of Americans have waited in silence for the onset, but as usual have been doomed to disappointment. It is well to add that these three false prophets had no sooner heralded these tidings of their imaginations than they hid themselves aboard a boat and departed for a foreign and far-distant country.

Following this faith in fiction, the advance agent of the advance agent, the honorable Secretary of the Treasury, Mr. Gage, having heard the rumbling from Chicago, Canton, and Cincinnati, went to the latter city and proclaimed to the business world that prosperity was again our own, that our birthright had returned again.

Since that time the newspapers of the East played upon their fancy and tried to play upon the credulity of the people by announcing in one column that prosperity was upon us, and in another recounting a list of failures, strikes, and despondency. With this comes the evidence of Bradstreet that improvement has not appeared, that the metropolitan press is false in efforts to announce it, that any increase in the quantity of trade is lessened, in comparison with other years, by the reduced price of the commodity. Supporting Bradstreet is the "still, small voice" of ex-Postmaster-General John Wanamaker, bemoaning the fate of himself, his party, and his country, and charging that the Administration was false and faithless. It is time, Mr. Speaker, that the controllers of prosperity should treat this stubborn case heroically, and instead of trying to rejuvenate this inanimate object by blowing into it the blighted breath, let them turn their hoarded wealth into the Western arteries of trade. The people want more money, not promises, and unless they get it they will perish in the desert before they reach the promised land. Without it they can not pay these new-imposed, enormous taxes and live in happiness. No false promises of relief, by whomsoever made or howsoever given, will convince a suffering man that he has no pain. False lights of safety will no longer deceive. Men who are deluded themselves or who seek to delude others will not be believed. A people may excuse a failure to acknowledge the independence of an island near our southern shore, they may excuse your failure to pass a bankruptcy bill, but they will never excuse the fastening of the enormous tariff taxes on the toilers of the West in favor of the East unless the East shall give to those toilers the means with which to bear these burdens.

#### The Tariff.

#### SPEECH

OF

HON. E. D. CRUMPACKER,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 13, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. CRUMPACKER said:

Mr. SPEAKER: In view of the supreme importance of securing the passage of a revenue law at as early a date as possible, I had determined not to consume any of the valuable time of the House in engaging in the discussion of the bill under consideration. But taking into account what has been said by the opponents of the protective policy—the many captious criticisms and specious objections that have been made—I have yielded to an overmastering impulse to go upon record in this memorable contest, not only with my vote, but with a few brief observations upon some phases of the issue which have been the subjects of the most stubborn dispute.

The bill in its original form was the result of months of painstaking research and scientific investigation by the Ways and

Means Committee, and to my mind it was the most perfect specimen of revenue legislation, with collateral protection, that was ever submitted to the American Congress. Its main feature as a revenue-raising scheme was given proper prominence, and the schedules were so adjusted that ample protection was vouchsafed to American industries against undesirable and disastrous foreign competition. It embodied a more intelligent expression of the protection idea as an incident to a revenue bill than any that has ever been devised before. Of course it was not perfect, for perfection is not characteristic of human productions, but it seemed to fully meet the requirement of the times.

After its prompt passage by the House it was duly transmitted to the Senate, where it received the continuous, earnest, and conscientious consideration of that august body until its final passage on the 6th instant, by a substantial majority. There were 872 amendments made by the Senate, and this fact is laid hold of as a delectable morsel by gentlemen on the other side of the House as indubitable evidence of its incompleteness in the form in which it left this body. An analysis of the measure as it came from the Senate will show that a large percentage of the amendments consisted of changes in phraseology which had no material bearing either upon the revenue or the protective features of the bill.

But I admit, sir, that a number of important changes were made; but that was to have been expected. Those changes evidenced the high degree of care that was given to the consideration of the measure. No two bodies of men could arrive at the same conclusion upon a measure so complex as a tariff bill. In the House the majority in favor of the Republican doctrine is substantial, and the members, coming fresh from the people, with the popular welfare close to their hearts, responded with unusual alacrity and remarkable unanimity to the command of the sovereign authority. Not a single Republican voted against the measure, and its provisions were so palpably wise and just that it had the sanction of several opposition members.

In the Senate no party has a majority. There are 43 Republicans and 46 of the opposition holding all shades of political faith, but all united in their opposition to the present Administration—all hoping by accident or design the Republican party would be unable to carry out its pledges to the people, and that popular disappointment and loss of political prestige would follow. Concessions had to be made to secure sufficient support to enact any kind of tariff legislation. But, thanks to the able conference committee of the House, the differences have been happily adjusted, and the measure as it now stands, about to be crowned with legislative sanction, is substantially in as good condition as when it left the House. It will unquestionably produce an abundance of revenue to meet all of the expenses of the Government, and I confidently predict that under the protective provisions enterprise will be stimulated and there will be such a revival of business as will soon bring happiness and plenty to a patient, long-suffering people.

In 1894, when Democracy enacted the existing tariff-for-revenue-only law, the divergence between the two branches of Congress upon material questions was vastly wider than the differences that exist now, and at that time the Democrats had a substantial working majority in both Houses. The trouble then was in the household of Democracy—it was a family disagreement. Now Republicans are all agreed, but one branch of Congress is controlled by the opposition, and disagreements came from the very nature of things. Taking the situation as a whole, the country is to be congratulated upon the extremely felicitous outcome of the present contest. No little impatience has arisen over the seeming dilatoriness of this Congress, but all will soon be forgiven and forgotten in the light of the beneficent outcome.

#### THE PROTECTIVE POLICY.

The philosophy of the protective policy is to diversify industry in this country, and thereby bring the producer and the consumer into closer relations, so as to save unnecessary waste in the exchange of products. Prior to the enactment of the McKinley law, tin plate, for instance, was not produced in this country, though we had all the materials essential to its successful production, excepting, possibly, block tin. We were compelled to pay foreign producers several millions of dollars annually for tin plate, because we could not compete with them in its manufacture on account of the high standard of wages existing here. The quantity consumed in this country gave constant employment to about 30,000 laborers. American money went abroad to pay for it, and American laborers went without employment.

But our free-trade friends tell us that by purchasing tin plate from England we were enabled to sell that country more food products, and that the interchange was highly profitable to both countries: that England could produce tin plate at a smaller relative cost than she could produce food products, and that we could produce food products more advantageously than we could produce tin plate. That is the old and exploded theory that a country should always employ its industrial forces in those lines in

which it can produce at the smallest relative cost. Suppose, for the sake of illustration, that we supplied food products to all the foreign labor engaged in providing us with tin plate. Does it necessarily follow that the arrangement would be beneficial to us? Not by any means.

Trace a bushel of wheat from the farm in Indiana, for instance, to the tin-plate maker in England. It is sold by the farmer to the local grain buyer, who, of course, receives a commission, and he in turn sells it to an export dealer, and the expense of transportation to New York and another commission are paid. The exporter sells it to an importer at Liverpool, and the expense of handling, insurance, transportation, and another commission are added. The Liverpool importer sells it to a miller, and another commission is added; the miller sells the flour to a wholesale dealer, and another commission is paid; the wholesale dealer sells to a retail dealer, and another commission is paid; the retail dealer sells it to the baker, and still another commission is added; and the baker sells it to the consumer in the form of bread, when the final commission is added, and by this time the principal cost of the article is made up of the expense of repeated handling, transportation thousands of miles, insurance, and the commissions of the dealers.

This supposed transaction exemplifies the enormous waste of that kind of trade, a large portion of which might be saved if the tin-plate maker lived closer to the farmer. Tin plate goes through the same expensive and circuitous commercial channel in its course from the producer in England to the consumer in Indiana. This country can raise wheat at a better advantage than England can, and it can manufacture tin plate just as advantageously, except for the difference in the standard of wages. By the tariff act of 1890 a substantial duty was put on tin plate, and under its influence factories were built and operated in this country which in a short time produced all the tin plate needed for consumption here. The quality was equally as good as that imported and prices were equally as low. Now the Indiana farmer can raise wheat and send it to the tin-plate maker at Elwood, in his own State, at less than one-fourth the cost of sending it to the tin-plate maker abroad.

There is an enormous saving in the expense of handling and shipping and in the profits of the middlemen, and this is saved to the producer and the consumer. Now we have tin plate as cheap and as good as we ever had it, and millions of dollars annually are kept in this country—paid to American labor—that were formerly sent to England. Experience has demonstrated that we can produce tin plate at a smaller cost by making it than by raising wheat and other products to exchange for it in foreign countries. This illustrates the working of the protective policy in all instances, under properly regulated tariff schedules.

I am in favor of an extended merchant marine. I love the poetry and patriotism in the thought of the white squadron of commerce covering the seas under the ensign of the Republic; but when the merchant marine is to be extended at the expense of the great army of American toilers, it is a luxury we can ill afford. I believe, too, in the doctrine that legislation should not override natural conditions in the production of wealth. If one country has been peculiarly blessed by nature, no factitious conditions should be permitted to deny the benefits to all people; but when the advantage lies in sociological conditions—in an industrial despotism such as exists in the old civilizations to-day—it is unnatural and destructive, and this country owes it to humanity to protect American industries from such a blighting contact.

#### CAUSE OF THE PANIC.

It has been decidedly amusing to note the frantic efforts, futile though they have been, of gentlemen on the other side of the House to escape responsibility for the awful business panic from which the country is just emerging. They have fulminated oratorical thunder against the protective system and hurled red-hot anathemas at an imaginary entity denominated the "money power," in the hope of distracting attention from the record of their folly. Vain hope!

History shows conclusively that the country was in a prosperous condition, with no forebodings of trouble until after the election of Grover Cleveland and a Democratic Congress in 1892, pledged to repeal the industrial policy that had been a feature of our political system for over thirty years. The country heard no prophets of disaster until after that event; no business felt insecure and there were no indications of lack of stability or loss of confidence. It is now claimed that the tariff act of 1890, known as the "McKinley law," was largely responsible for the business depression, because it failed to yield sufficient revenue to meet the expenses of the Government for several months prior to its repeal. That law was enacted for the avowed purpose of reducing the revenues of the Government. There had been large accumulations of money in the Treasury under prior laws, and none of the Government bonds were due, so it could not be paid out.

Serious objections existed to a policy that unnecessarily withdrew from circulation so large a volume of currency, and it was agreed on all hands that relief should be had by a reduction of

the revenues. The McKinley law was designed to afford that relief not, as is frequently charged, by increasing duties to such an extent as to prohibit importations, but by enlarging the free list. That law admitted a larger percentage of importations free of duty than had been admitted for nearly thirty years. The item of sugar was put on the free list because the revenue was not needed, and the Treasury was relieved of \$50,000,000 a year by that alone. But that law produced ample revenue to defray all the expenses of the Government and afforded a substantial annual surplus besides until after November, 1892.

The point was never made against it prior to that time that it did not provide adequate revenue, and commercial treaties negotiated under its provisions increased our export trade until it reached the enormous sum of over a billion dollars in 1892, a sum largely in excess of the export trade in any year theretofore. The permanent redemption fund in the Treasury was never in jeopardy until after Democratic success in 1892. No one seriously questioned the ability of the Government to keep all of the currency at par with gold until after that fateful event, though the issue of silver and paper currency had more than doubled since the amount of the redemption fund was settled. During the years of 1890 and 1891 considerable quantities of gold had been exported to England to replenish the foreign stock, which had been depleted by the notable failure of the Baring Bros., but its effect was neither seriously felt nor regarded with solicitude in this country. Conditions were normal, confidence reigned, and business was active.

But, sir, a change, a fundamental change, in our industrial policy was decreed by the American people, and its effects were immediate and startling. The details of the policy to be inaugurated could not be known until the incoming Administration gave the country its proposed tariff-reform law, but it was known that the policy of protection would be superseded by some kind of a free-trade substitute. Enough was known to create a condition of dense and impenetrable uncertainty. Enough was known to stifle enterprise and paralyze activity. Importers, upon whose business operations the revenues of the country largely depended, reduced their importations to the minimum. This was in obedience to plain business law. A lower schedule of duties was to be enacted, and no prudent merchant or importer would attempt to carry any considerable stock of dutiable goods in the face of that fact.

All kinds of enterprise dependent on or affected by the tariff began at once to prepare for the advent of the new policy. The result was inevitable. "Coming events cast their shadows before them." A material decrease of importations resulted in a corresponding falling off of the revenues. This effect was noticeable during the last two months of the Harrison Administration. It was anticipatory entirely, and Secretary Foster, with characteristic sagacity, foresaw it, and advised measures to fortify the gold reserve, which would inevitably be endangered. The gold reserve is not a segregated fund, but is liable for the payment of general demands against the Government. It consists only of a general balance which the Government keeps in gold coin for the purposes of redemption, and thereby maintains all other currency at par with gold.

This fund fell from \$124,000,000 in November, 1892, to \$103,000,000 in February, 1893, and the tendency was still downward. It was obvious that the reserve could not be maintained at the minimum of \$100,000,000 in the face of a rapidly decreasing revenue, resulting from the falling off of importations under the influence of a proposed radical change in the tariff policy of the country; consequently Secretary Foster advised the issue and sale of \$50,000,000 of Government bonds, under a power vested in the executive department, to provide for the redemption of Treasury notes. The gold balance was greater in November, 1892, than in any other month during the year, excepting March. It was in a safe condition, and under a continuation of the Republican tariff policy there was nothing to excite apprehension or cause alarm.

But early in 1893 it became manifest that business principles were asserting themselves; that the revenues would become inadequate and the gold reserve be endangered. This uncertain and alarming condition, combined with former shipments of gold to Europe and general domestic overtrading, put in doubt the ability of the Government to keep the silver and paper currency at par with gold. It seemed likely that gold would go to a premium, and money holders made a mad rush upon the Treasury to secure that metal for the purpose of hoarding. Confidence fled, and the country was helplessly engulfed in the awful vortex of commercial ruin. That fearful national disaster, sir, was the logical, the necessary result of the proposed repeal of the protective policy. The havoc was aggravated by contributory forces, but that cause precipitated the trouble. It was the judgment of economic law and the price of Democratic victory.

There may have been times within the last forty years when the success of that party at the polls would not have been so destructive, but there has been no time when its success would not have been followed by serious business disturbances. The election of

President Cleveland in 1884 misled the American people. They overlooked the fact that he was not supported by a tariff-reform Congress, and was, in consequence, powerless to change the policy of protection. His election then did not seriously disturb existing conditions, because he was unable to inflict his reforms upon the country; but when his triumph meant a change of the industrial system, it was followed by the direst consequences.

Gentlemen may protest and asseverate, they may tax their fertile intellects in vain attempts to explain away the responsibility or shift it to the "crime of '73," but they can not prevail against the invincible truths of history. They can not "argue the words out of the instrument nor the seal off the bond." The American people have intelligence enough to locate the responsibility for the impoverished conditions of the country. They will not be misled by the stock epithets of "plutocrat," "shylock," "trusts," "extortion," "robbery," and the like. Lo, they have heard those things before; hence they sorrow.

For four years the public revenues have been insufficient. The last Administration was compelled to resort to expensive and humiliating expedients to fortify the public credit. It is the first duty of the present Administration, in the performance of its promises to the people, to correct the expensive and ruinous follies of the last. This will be largely accomplished in the enactment of a suitable revenue law. With the gold reserve rescued from danger, the protective policy reestablished, and the reciprocity plan restored, the foundation for a long era of prosperity will have been laid.

#### TRADE COMBINATIONS.

The floodgates of obsequious eloquence have been opened in this discussion upon the subject of "trusts" and "combinations." It is charged that protection creates trade monopolies. There is now a very stringent antitrust law upon the Federal statute books known as the "Sherman law." It prohibits combinations to forestall prices or to stifle competition in all lines of interstate trade. It must be kept in mind that Congress has authority to legislate only upon subjects that affect interstate trade. Trusts that pertain to trade and transportation between the several States may be prohibited by Federal legislation, but combinations existing in the respective States, under our peculiar form of government, must be handled by the State legislatures.

It is to be regretted that Congress has not a more extended control of those abominable creatures of greed, those industrial and commercial vampires that attempt to control production and price of articles of consumption. The States should enact rigid laws upon the subject, and rigidly enforce them in so far as they are within State control. Congress should, and doubtless will, add such supplemental legislation as experience shows to be needful, so far as it has power to act upon the subject. But, sir, let me ask what restrictive legislation was given the country by the last Democratic Administration on the subject of trusts? Not a single syllable. Those obnoxious combinations have been more bold and aggressive under the present tariff law than they ever were before. Why, it is charged even by Democrats that the law itself was the product of their reprehensible methods.

I concede that trade combinations to control prices are a menace to the welfare of society and ought to be eradicated by most drastic measures. No combination should be allowed to prostitute the privileges of trade in this country, and I am willing to support an antitrust law as strong as it can be written within the constitutional limitations upon the powers of Congress. But I deny, sir, that the protective policy fosters or encourages those abominable organizations, and appeal to history for vindication. Some of the most obnoxious trusts have existed with reference to transportation companies which can not be the subjects of protective legislation. Besides, there are oil trusts, coal trusts, coffee trusts, and others, the subjects of which are not dutiable.

The sugar trust grew into dangerous proportions while that article was on the free list. The vice of trusts is in the conspiracy to keep up the price of commodities. When they seek to repress competition, they are enemies to society. Under the operation of trade laws, competition in all lines of production will be sufficiently active to protect consumers if left free from factitious control. If import duties were materially lowered, so that foreign competitive products could be imported and consumed to a larger extent, the effect would be to destroy a corresponding amount of home competition. Production is regulated by consumption, and a healthy competition is all that can permanently endure. It is a law of nature that no two bodies can occupy the same space at the same time, and it is likewise a law of commerce that only a certain amount of competition can exist in a community at a given time. If commodities are brought from abroad, it is axiomatic that they will not be produced at home.

If no competitive articles are imported, the whole consumption will be produced at home. There will always be a reasonably sufficient quantity to supply the demand and but little more. The production will always relate to the consumption in pursuance of inexorable economic law. If we produced only half the

competitive commodities needed for consumption by our people and imported the other half, it would be equally as easy for the manufacturers and importers to effect combinations to control prices as it would for the manufacturers to do so if we produced the entire supply. The consequences of the trust would be as harmful in the one case as in the other, and the facilities for effecting it would be the same.

The talk about protection breeding trusts is utterly groundless. It has no foundation in fact or in philosophy. Trusts are facilitated by invention and development of industrial lines. Free-trade England has as much trouble with them as this country has. The only efficient method of dealing with trusts is to enact highly penal laws—State and Federal—against the promoters, and see to their enforcement. Large industrial institutions have facilities for economizing in the expenses of production that are not shared by small concerns. They can dispose of products at a small profit and receive large aggregate returns upon the investment. A small plow factory, for illustration, that turns out only 300 plows a year, could make only \$1,500 by selling plows at a profit of \$5 each, while a large factory that turned out 30,000 could sell them at a profit of \$1 each and then make a profit of \$30,000 a year. The large establishment would grow wealthy, and at the same time every purchaser would save \$4 on each plow. More than that, the large concern, by a careful system of economizing, could produce at a much less cost than the small one, and society would be materially benefited by it.

This is illustrated in the decline in prices of farm wagons, buggies, and all implements of husbandry within the last twenty-five years. It is a great blessing to the world to bring more of the comforts of life within the reach of the masses where it comes as a result of normal industrial growth. This beneficent result will be largely lost if manufacturers are permitted to combine and maintain the prices of their products at an unnaturally high standard. But prices reduced by unhealthy conditions carry no blessings to the people either of present enjoyment or future promise.

During the last four years conditions have been abnormal. Prices have been ruinously low as the result of Democratic incompetency. The opportunities of the wage earners have been destroyed and consumption has correspondingly diminished. The question of prices has not concerned the people so much as the question of earning money to buy at any price. It is no satisfaction to one without money or employment to know that many comforts of life can be had for a small sum of money. Activity, enterprise, is what the country needs most, and under the operation of the natural laws, aided by wholesome legislation, prices will find an equitable adjustment. Trusts have not been as disastrous for the last few years as distrust.

#### REVIVAL OF BUSINESS.

Prior to the last election the currency of the country was in a most unsatisfactory condition. Gold was being hoarded all over the land in the fear that it would be forced to a premium by the possible success of the free-silver party. There was no gold in actual circulation and none could be gotten at the banks. The Treasury reserve was unsteady and indicated the feverish anxiety of all business interests. It was constantly watched, and every fluctuation was noted with the gravest apprehension. The Republican party, true to its traditions, stood firmly for the existing standard of value and for the maintenance of the silver and paper currency at par with gold.

The immediate effect of the election was to give stability to the currency, for within three days after the result was known gold came from its hiding and could be had at the banks upon the same terms as other money. The "endless chain" ceased to operate, bond selling was stopped, and the Treasury reserve has been intact from that day to this. The net gold balance in the Treasury to-day is above \$143,000,000, and there is no probability of an immediate reduction. With the repeal of the Sherman silver law and the promise of a speedy enactment of an adequate revenue measure, there is no longer any fear of the soundness of the currency or of a slump to a depreciated standard of value.

Gentlemen on the other side of the House frequently refer to the continued depressed condition of business throughout the country as proof of the inefficiency of Republican policies. They derisively allude to the "advance agent of prosperity," and exhaust their vocabulary of vituperation upon every proposition for relief that does not contain as one of its ingredients the quick remedy of free silver. It must be admitted that there is still much distress throughout the land, but these same gentlemen prepared the soil in which they are now so industriously sowing the dragon's teeth of discontent. There never was a time when demagogues could obtain readier audiences and the country never produced a ranker crop of them. It is entirely natural that the millions of farmers and wage earners should become impatient for the return of a better day, and doubtless many are disappointed because its coming is not more precipitate.

We are apt to ascribe too much virtue to legislation in its power

to promote the public welfare. There is believed to be a kind of talismanic force in Government that will enable it, by some sort of magic, to legislate wealth into the pockets and happiness into the lives of the people. This is not a harmless delusion, for it begets disrespect for social institutions and brings established authority into contempt. Laws can not create wealth, but they can promote helpful conditions and aid economic law in producing desirable results; they can secure equality of opportunity and facilitate profitable exchange. The man who depends upon laws to be made rich will end his days in poverty.

The wealth-producing forces of this country have been badly deranged for the last few years and legislation may help restore their normal functions. But this result, to be permanent, must come gradually and by the old-fashioned process. It is much easier to get sick than it is to get well; it is easier to get poor than it is to get rich; it takes the country longer to recover from a panic than it does to get into one. The continued business depression only proves the extremely reduced condition of the country under Democratic policy. The journey back to prosperity is slow and tedious, like the recovery from a long period of sickness, in which the vital forces have been very nearly exhausted. The derangement of one organ involves others until the whole system is racked with disease and reduced in strength. Convalescence is a gradual process, requiring time and close attention, and it is usually attended with great impatience.

But the work of tissue building and strength gathering unconsciously goes on until a little improvement here and there is noticeable. Legislation, like medicine, is an important factor in the process of recovery if judiciously administered, but if not, it is liable to bring on a relapse. The country is in a state of convalescence to-day. Every commercial and industrial organism had become seriously deranged, and the derangement continued for so long that it became chronic. Confidence was destroyed, activity paralyzed, enterprise stifled. There was no work for the wage earner and no market for the farmer, because industry had no protection and money no stability. The immediate effect of the election was to inspire confidence in the stability of the currency and faith in the enactment of a law that would protect and give employment to American labor.

This faith will soon end in fruition in the enactment of the bill under consideration. The basic conditions for industrial activity will then have been laid and the foundation for a new growth in enterprise will have been constructed. Upon this foundation there can be no doubt of a substantial revival in all lines of production. It is not to be expected that improvement will precede the application of remedial agencies. When a physician is employed, no favorable results are looked for until the remedies prescribed have had time to operate. The beneficial effects of a governmental policy can not be fully realized until the policy has had time to effect reforms. The virtue in a protective tariff is chiefly in its operation, though some results are anticipated.

Evidence of a business revival is already seen in the disposition of investors to start new enterprises in anticipation of favorable legislation. The commercial reports of Bradstreet and Dun show more buying, more selling, more building, more activity than has been known for several years. One new enterprise will employ idle workmen, put money into their pockets, and they in time will consume the products of the farm and give employment to others. Know ye not that "a little leaven leaveneth the whole lump?"

The enactment of this bill will give a new impetus to trade and send the red blood of returning health into all the arteries of commerce. One industry after another will reopen its doors, until the vast army of unemployed will find work and wages and the home market—the best market in all the world—will be restored to the farmer. Commercial treaties will again be negotiated and the products of the farm will find a sale in markets that are now closed against them. Prices will then rise to a healthy permanent level in money as good as gold the world over. The tide is already rising, and if conditions have any significance, the country will soon enter upon an era of prosperity not surpassed in all its history.

The benefits flowing from the restoration of the protective policy will be shared by all the people. The farmers and wage earners will be the principal beneficiaries, and they ought to be, for they have been the greatest sufferers by the recent panic. I rejoice in the fact that the standard of living is improving among all classes every year. The cottage of the toiler to-day is furnished and adorned with comforts and luxuries that were found only in the houses of the wealthiest forty years ago. Cheapened cost of transportation puts within the easy reach of all locations of natural and historical interest with which the country so richly abounds. In reckoning the progress of civilization these momentous facts are apt to be left out of account. The country is prosperous only when the great masses of the people are prosperous.

In the millions of humble homes of the land abides the glory of our civilization and the safety of our institutions. The end and aim of all legislation should be to promote the welfare of the whole

people, and it is the earnest hope and confident expectation of its supporters that the pending bill will contribute largely to that end. In the adjustment of the schedules all interests have been carefully and honestly considered. The products of the farm have received ample attention in the way of substantial duties and provisions for treaties of commercial reciprocity with other nations. A reasonable duty has been placed upon sugar because of the new impulse given the beet-sugar production in this country, and because there is need of the revenue. There is little doubt that, with proper encouragement, in a comparatively few years we can produce all of the sugar required for our own consumption from beets raised by American farmers.

False prophets will predict disaster, but this great country can not be destroyed by pessimism nor its progress be retarded by the arts of the demagogue. Let us pass this bill without further delay and repair to our homes and abide in the faith of a return of peace and plenty.

**Tariff on Wool—As a Matter of National Protection in Time of War, and as a Matter of the Promotion of One of the Greatest Agricultural Interests, a Protective Tariff on Wool is Essential and Indispensable.**

## SPEECH

OF

**HON. CHARLES H. GROSVENOR,**

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States, and the question being upon agreeing to the report of the conference committee—

Mr. GROSVENOR said:

Mr. SPEAKER: Agriculture is the basis of national prosperity and national independence. A country in which agriculture languishes is a country in which prosperity will always be uncertain, if not impossible. Out of the earth comes wealth; out of the earth come the elements of independence. We must produce in this country wool enough to supply the wants of our people, or in case of war we must be dependent upon foreign countries to supply us with wool, and it must be introduced through the ports open to the possibility of blockades by those countries.

In advocating the adoption of this report, so far as this question of the wool tariff is concerned, I shall deal largely in generalities rather than specific tables and figures, and I plant myself upon one undeniable proposition, and that is that the wool interests of our country did prosper enormously under the McKinley Act.

I recognize that the woolgrower did not get from the McKinley law all that he anticipated, and yet I declare, and defy successful contradiction, that he had assurances of a benefit commensurate with all reasonable demands at the time of the overthrow and repeal of the McKinley Act. It is useless to go into figures. It is folly to bandy terms of reproach and harp upon worn-out strings of dissatisfaction.

More harm has been done to the woolgrowers of the country by the obtrusive efforts of men in the advocacy of their own interests and trades than by all the other opposition and complications combined. When a man advocates a special interest in a tariff bill, and plants himself upon the proposition that no regard shall be paid to the rights and interests of others, and that his selfish interests alone shall guide, he plants himself upon untenable ground. When a man declares that the ports of the country shall be closed to the importation of foreign wools of every description, when he knows that there is an indispensable necessity that we shall import in wool or cloth 350,000,000 pounds of wool, he plants himself in a position that answers his own argument and destroys his influence.

The woolgrowers of Ohio are familiar with the fact that in 1890 the McKinley Act went into effect, and that it was an improvement in rates upon the law of 1883. But it went into force in October, and the wool of 1890 was in the market, and no good came of the enactment of the McKinley law that year. In 1891 they met in the markets of the United States an anticipatory importation into the country of an enormous blockade of wool. It came here at the suggestion of the enactment of the McKinley law. It was crowded into the country as it has been crowded in this year,

only not in such large quantities, for the inducement was not so great.

So the farmer found in the year 1891 competition which lowered the prices and held them down; but in 1893 the effect of the McKinley Act began to be appreciated, and we found that Ohio XX wool was a ready sale in the market at from 26 to 32 cents a pound. There stand the figures. I hold them in my hand. Mr. Speaker, I deny contradiction. It placed the wool of the Ohio farmer upon a profitable footing, our flocks were growing, and we were moving rapidly forward to the ultimate time, which we are now looking for, when we could have supplied the people of the country with wool.

The curse of Democratic success struck the country, and the wool industry fell before it. We found ourselves with free wool. The enactment went into force in 1894. In anticipation of its passage wool fell in that year, but that was not all of it. Mr. Cleveland was elected upon a platform with a free-trade plank. He was elected in November, 1892. He was elected in the first and only year in which the McKinley law had been in operation, and the very moment Cleveland was elected wool fell in the markets of the world; fell in anticipation of free trade; fell in anticipation of the blight that has swept over us since. Our flocks have run down, and wool has gone down in Ohio to 15 cents.

Mr. Speaker, I stand here to-day and point to one of the cases that has come within my personal observation. The gentleman representing the Muskingum, Ohio, district on this floor, himself a producer of wool, has told me to-day that the clip of his flock of last year was sold in the market at 15 cents a pound, the highest possible result that he could attain. Those are the marks of difference between the McKinley rates and the Cleveland rates upon Ohio wool. What is the use of figures? What a contemptible subterfuge to constantly fill the country full of suggestions that the McKinley law was no protection. Theories work out, it is said, that the McKinley law was no protection. Facts work out that the McKinley law advanced the Ohio wool 10 and 11 cents a pound in the markets of the country. Who cares for Senate documents No. 17, second session Fifty-fourth Congress, and No. 36, first session Fifty-fifth Congress? Who cares for the utterances of professional shriekers? So I maintain, and defy contradiction, that the McKinley law was a splendid provision for the woolgrowers, and the woolgrowers of Ohio know it.

Mr. Speaker, during the last ninety days I have had from the real woolgrowers of Ohio—not the professionals, not the men who farm the farmers, but the men who farm sheep—letters saying that they would be delighted and would hail with joy the adoption of the McKinley rates, and they have secured them, and more, too as I will show you.

Now, then, Mr. Speaker, there are conditions in the world to-day that did not exist when the McKinley law was enacted, and these conditions have operated upon the woolen interests. A duty of 8 cents a pound upon wool to-day is nearly as great an ad valorem protection as was 11 cents under the McKinley law.

Let us see. Protection is a question of placing between the product of another country and the product of this country a sufficient differential to insure the market of this country to the product of this country. If you can buy wool in London at 10 cents a pound, then 10 cents is a hundred per cent ad valorem duty; but if you are compelled to pay in London 20 cents a pound, then 10 cents is only a 50 per cent ad valorem duty. Without multiplying words, without encumbering the minds of my hearers with senseless tables, the markets of the world have fallen, and wool is lower the world over than it was in 1890. The repeal of the McKinley law stimulated the production of foreign wools, because it opened the markets of the United States to the wools of foreign countries, and wools have come from countries which never prior to the repeal of the McKinley Act had been competitors.

What I have said about wool is also true of other commodities. In the McKinley law we put a certain duty upon the whole line of iron and steel productions, including steel rails. In this law we have placed a duty of scarcely more than 50 per cent of the McKinley rates on steel rails, and yet the protection is ample, and why? Because the cost of the production of iron and steel has been greatly reduced in the markets of the world, and the increased power to produce has cheapened the products all along the line of the efforts of man; improved machinery, more rapid transportation, cheaper labor in foreign countries, all these things have combined to make the great products of human agency, human effort, human intelligence, and human industry cheaper in the markets of the world, and so a duty which in 1891 was fairly protective, in 1897 is adequately protective.

When we came here last December to begin the investigation into this question and started in to frame the Dingley bill, the great expectation of the whole country was that we should get back to the McKinley rates on wool. The Ohio farmers by hundreds were struggling as near up to the line as possible, and I have in my possession scores of letters stating that I could not be held

responsible and they did not intend to hold me responsible for any inability to achieve the full McKinley rates. We entered upon the consideration of this question with the greatest possible care. I was interested to achieve the result, and more, if I could.

My greatest opposition to the McKinley bill consisted of two great propositions: First, that certain wools of the third class had been the medium and conduit of frauds upon the woolgrowers of the country who produced clothing wools. Observation and study had taught me that the wools covered as third class were transmuted into clothing wools as soon as they had cleared the custom-house, and the committee gave its very best effort to the removal of this difficulty, and the result was that we took from the third class the following wools: Bagdad wool, China lamb's wool, Castel Branco, Adrianople skin wool or butcher's wool, and classed these wools with the first-class wools with a sweeping proposition, to which we added "and such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, Egypt, Morocco, and elsewhere, and all wools not hereinafter included in classes 2 and 3."

Much of this description pertains to the McKinley law, but much of it was to take by names the wools of certain countries that had heretofore come in as third class and transfer them into the grade of first class. This, in our judgment and in the judgment of men skilled in wool and not in politics, the men skilled in truth and not in misrepresentation, covers the danger point of possible interference. My own opposition to the development of the McKinley Act was found in ad valorem duties upon third-class wools.

Ad valorem duties are dangerous in any event. They have been the cause of most of the trouble in our revenue system, and here in wool, above all others, except in the sugar schedule, was an easy administration of specific rates, and so I especially and under all circumstances have advocated specific rates; but we were met by the carpet men, who insisted that the McKinley law taxed their product high enough, and while it is true that I was exceedingly anxious that third-class wools should be justly dealt with, I was more anxious that wools of the first and second classes should be taken care of, and so while we permitted the ad valorem duties of the McKinley law to be applied to the third-class wools in the Dingley bill, which were unsatisfactory to me, it was the best that we could possibly do under the circumstances and at the time.

Then came the crisis, and then came the disaster. The bill went to the Senate, and there came an insidious and unwarrantable influence, which came in the form of an argument made to the Northwestern people—the growers of a coarser fiber of wool than our own—that gross injustice had been done to them; that while the House had restored the McKinley rates on the first and second grades of wool, it had struck down the third-class interests, and then these men were indoctrinated with the false proposition that their Territories and States protested against the third-class wools. I will not stop to argue it. The investigation has been long drawn out and thoroughly efficient, and the result presented, and the truth is that third-class wools—that is to say, carpet wools, wools of a character that come within the present definition of third-class wools—are scarcely produced at all in the United States.

We have proved and demonstrated that not 2 per cent of the product of the United States is carpet wool. But they were taught, they were assembled, they were harangued, and volumes of wrath were poured out upon the McKinley law and upon the Dingley bill, and the public were assured that the woolgrowers had been abandoned, and while this was going on the intelligent woolgrowers of my own State were importuning me to stand by and secure the triumph of the House bill and the House rates. Then came, like a clap of thunder out of a clear sky, the Senate bill, 8 cents a pound on Ohio first-class wool, 9 cents a pound on second-class wool, and specific duties on carpet wool that raised the tariff upon the lower division one and seventeen one-hundredths of a cent and lowered it upon the upper division one and forty one-hundredths of a cent, and the bunco performance was achieved.

How was it done? These men of the Northwest said to the Senate Finance Committee, "We must have these higher rates on cheap third-class wools." They were answered, "You do not raise it, you do not produce it," but they pointed to high authority that they did. Then said the Eastern manufacturers through their friends, "It is true; very well; if you think this condition necessary to your happiness, if you think it is necessary that you should have these higher rates upon this class of wools, meet us halfway and promise to give us lower rates on the first and second classes," and the transaction was consummated, and I have the highest authority that can be produced in the United States that these were the circumstances that produced the 8 and 9 cent rates on wool.

Later on the bill came into the Senate, and I said without hesitation to the distinguished gentleman in charge of the bill that I preferred free wool to those rates, I preferred free wool in order that my constituents might abandon the raising of flocks and

could be doing something else. Rather than they should have suffered, by any act of mine, under this blight and curse, I would have resigned my seat in the House of Representatives. But it was done, and done in this way and by these men, and everybody in Washington knows it, every member of Congress knows it, every carpet man knows it, every manufacturer knows it, and every producer of wool of intelligence who has had inside information knows it.

It came from a pettifoggy interference that arrayed figures and confused people by the multiplication of words and by iteration and reiteration—that brought it all about. The demand of 24 cents a pound duty on wool, the demand that impossible definitions in the character and preparation of wools for market should confuse and interfere with the wool traffic of the country, has done it. It had been a boomerang. It had been thrown at the enemy and it recoiled upon our friends. Personal considerations must not enter into public questions. It is not important who achieves results if the beneficiary is satisfied. It is not important that the conquering hero should be decorated with emblems of victory, provided always that the people of the country are properly cared for in the matter of legislation.

The Ohio woolgrower had strong friends on the floor of the Senate, and they went to work. They found where the difficulty lay, they understand it now, and they struck at the root of the evil, and Senator FORAKER and Senator HANNA protested that they would not be parties to the abandonment of the interests of the wool producers. They made vigorous warfare, both openly and eloquently upon the floor of the Senate, and privately among the members of the Senate, and they achieved a result that would have been barely satisfactory to the intelligent woolgrowers of the country.

Senator FORAKER, with matchless power, protested against the Senate rates, and as a result he secured an amendment in the Senate which brought 10 cents on Ohio first-class wool and 11 cents on second-class wool, and secured a dividing line at 10 cents a pound; on third-class wool at 4 cents a pound, and on the upper grade of wool at 7 cents a pound. Let us see now what this was. It was the subdivision of the House schedule, so far as the nationality of the third-class division was made, and it was 1 cent a pound on Ohio first-class wool below the McKinley rates and 1 cent a pound upon second-class wools below the McKinley rates, and in all other material respects it was the House provision. Then the woolgrowers of the United States of America began to see daylight, and the president of the Wool Growers' Association, Hon. William Lawrence, of Ohio, telegraphed the thanks of a million woolgrowers to Senator FORAKER. He deserved their thanks.

The bill passed; but there were men who were not satisfied, and a committee of conference was appointed. The country had stood by and defended the McKinley rates as well as the McKinley subdivisions, and these men met in conference of the two Houses, and ten days of faithful study, careful consideration, and just intercommunication of ideas passed between the members of the conference. For the result I am more than thankful. We have restored the old McKinley rates under which we prospered—11 cents a pound on Ohio first-class wool, 12 cents upon Ohio and all other second-class wool, and withal we maintained the definitions of third-class wool, and we have placed upon the lower grades, 4 cents a pound, and on the upper grades 7 cents a pound. In other words, we have taken exactly the achievement of Senator FORAKER, for which he received the thanks of a million woolgrowers, and fixed that, at their acceptance and upon their approval, in the law of 1897 as the definition and tariff duties upon third-class wool, and we have the honor to present to the woolgrowers of the United States an advance of 1 cent a pound upon each of the upper grades of wool.

So I am justified in saying, in the language of the most distinguished champion of the woolgrowers of America, because the most intelligent, fair, and just—

This is the best provision for the promotion of the wool industry that has ever appeared upon the statute books of the United States. Better than the law of '67, because of the changed conditions in the country and the war; better than the McKinley law, because of the specific rates upon third-class wool and because of the wise provision taking out of the third-class wools a vast series of productions that were the conduits of favoritism and fraud and placing them in the first column.

So we have met the woolgrowers and have received their official approbation. Many valuable suggestions appeared to Congressmen which, viewed alone from the standpoint of the parties interested, often seem reasonable, but when applied to some other established industry are often impracticable. Suggestions as to higher rates of duties on wool have often been made with much force, but the adoption of these extreme rates would only prove a positive injury to the cause of protection and to the woolgrowers themselves, for if the more extreme of these recommendations were adopted the nation would overthrow such a bill in a few years.

It is to the interest of everybody that the new tariff law shall be one so fair and just as to endure the test of all time, and this

Dingley bill offers every promise of being so full of merit that it will inflict no hardship upon any large class nor be injurious to any established industry. Owing to the altered condition of the times and the low price of everything which a farmer now raises outside of wool, flocks must increase rapidly. While the increase would be less rapid for the first year or two than would have been the case if some of the extreme rates recommended had been adopted, the rates finally agreed upon covering a period of years will undoubtedly prove to be the very best to the woolgrower that could have been devised.

Perhaps not the least convincing evidence of the need of a change in third-class wool is the fact that at the late conference between manufacturers and woolgrowers the former offered the McKinley law rates on wools of the third class without change, while at the same time they insisted upon a reduction on wools of the first and second classes. It is thus evident that the manufacturers themselves considered the McKinley rates on third-class wool the equivalent of 20 per cent less than the McKinley rates on the other classes, and Congress has done wisely in reestablishing the rates which were proven to be best for the first and second classes and increasing those where it was needed on the third and carpet class.

While it is true that a very small fraction of the domestic clip, estimated by some at 1 per cent, is coarse enough for carpet, it is also true that about 15 per cent of the third-class wool is annually manufactured into various forms of wool textiles other than carpet, such as horse blankets, etc., which takes the place of a like quantity of common grades of American wool. It is claimed because carpet wool is not grown in America that there should be no duty on carpet wool, but every pound of the latter enters into the construction of fabrics that could otherwise be made of American wool, and to that extent it competes with American wool, and it has been apparent that improvement was needed in this direction; but it is found that a raise of duty on carpet wools disturbed the carpet-manufacturing industry, and the changes made were all that it was possible to make without inflicting injury upon a great industry already established, whose output in normal times represents a production almost as valuable as that of the diminished wool clip.

The rates established for third-class wool approximate very closely those originally agreed upon by Mr. McKinley when the law of 1890 was enacted, but the pressure from carpet manufacturers for a change from specific to ad valorem duties was so great that it endangered the successful passage of the McKinley Act and at last the rates of the McKinley Act as originally reported, or those approximating them, have been secured for the woolgrower, and this is more important at this time than it was in 1890, owing to the fact that the improvements in machinery now make it possible to use third-class wool for clothing purposes, which was never thought of in 1890, except for the manufacture of carpets; and as further improvements are likely to take place, in all probability the quantity of carpet wool used for clothing purposes in the future will be greater than that used in the past, and provision has been made for this in the new act.

The passage of the Dingley Act marks the beginning of a new era of prosperity for the American woolgrower, whose industry under the unfortunate experiment of free trade has been languishing. With the experience of the effect of the McKinley Act before us, the reasonable expectation may be indulged in that with the increase in our flocks under the fostering influences of this act America will shortly produce nearly enough clothing wool, that is, wool of the first and second classes, to clothe her people. This is based on the rapid increase in the flocks occurring during the McKinley period.

If that act had been permitted to remain in force, America would soon have produced its own supply of wool, for it was increasing during the McKinley period with strides and bounds. This was not only owing to the duties, which furnished adequate protection at that time, but the McKinley Act protected the domestic wool manufacturers so justly that an expanding home market was furnished the producer of wool. During the McKinley period American mills manufactured 80 per cent of the woolen textiles consumed in the United States, only 20 per cent were imported. This was in strong contrast to the decrease in the American manufacture under the Wilson bill, for under the latter act domestic production of woolens decreased or fell off to less than 50 per cent of our consumption; that is to say, the foreign manufacturers, who under the McKinley Act were only permitted to furnish 20 per cent of the woolen textiles used in America, were, under the Wilson Act, permitted to monopolize 50 per cent of the production for our use.

With this experience before us of the effect upon the sheep industry of the McKinley Act, patriotic and conservative legislators were convinced that in making a new law it would be much safer to adhere to the McKinley Act rather than to venture into untried realms. Many suggestions, plausibly presented, which on the face appeared to be improvements on the McKinley Act, were set aside in favor of the principles and schedules and

rates of duties that have proven advantageous to both woolgrower and manufacturer where under the McKinley Act both were prosperous to a degree hitherto unapproached. The new bill, therefore, is found, so far as wool and wools are concerned, to retain all the advantages for the American woolgrower that he held under the McKinley Act, with some improvements and advantages that would not have been secured to him if the latter had been reenacted without change.

The most important change which is of advantage to the American sheep husbandry has been the transfer to the first class from the third class of many varieties of the finer grades of what were formerly inappropriately called carpet wools, but which were in point of fact clothing wools. Wools which under the microscope showed no traces of Merino blood, which would require their classification as wools of the first class, at the same time were so fine as to be largely used for the purposes requiring wools of the first class. The most conspicuous of these is China lamb wool, the wool resembling half-blood merino wool.

Another important change was in the Egyptian wools, which were washed and were so clean as to be suitable for use in carding and spinning without further cleansing. Egyptian wools, by the proper union of the best animals, providing for the survival of the fittest of them, could in time improve by scientific breeding until they would become equal to the common wools of the Ohio and Mississippi valleys. These were formerly dutiable at less than 8 cents per pound, and now would be required to pay not only the first-class duty of 11 cents per pound, but they would be subject to the double duty by reason of their having been washed after having been shorn. Under the McKinley Act some of the wools from northern Africa, which if properly classified would always have been of the first class, but which sometimes were passed by wool examiners as carpet wool, have by the new law all been gathered into the first class, so that the African wools are now practically dutiable as clothing wool.

Investigation reveals the fact that woolgrowers have no cause for complaint of the wool duties of the McKinley Act of the first and second classes. These were remarkably satisfactory to both producer and consumer; therefore they have been practically re-established as they were under that act. There was, however, just cause of complaint of the third-class or carpet wool schedule of the act of 1890, which arose mainly through the opportunity for undervaluation growing out of the ad valorem duties. Ninety-eight per cent of the third-class wool imported under the McKinley Act, which was nearly the whole of it, came in at the lowest rate under that act, and was valued at an average of only 84 cents per pound, which on its face indicated serious abuse in the way of undervaluations, which have been corrected in the Dingley Act, not only by increasing the average lowest possible duty a cent a pound, but also lowering the dividing line from 13 cents to 12 cents, thus subjecting to the higher duty of 8 cents the more valuable of the third-class wools, which were formerly passed through our custom-houses at a duty of less than half of this rate.

The American woolgrower has now before him an opportunity to expand his industry such as he has never enjoyed before. While the rates of duty are slightly below those prevailing after our civil war, they are in protective benefit fully as great as the higher rates of that time when consideration is given to the altered conditions of the present moment.

Under this act sheep husbandry should be one of the most profitable branches of agriculture, and the woolgrower and the farmers generally should consider the increase in flocks a patriotic duty. It should be considered alone, separate from the mere question of dollars and cents, though advantages in this respect are greater than ever before; but the building up of this great industry should be promoted by all classes of agriculturists as a matter of benefit to the nation in the way of increasing national wealth.

The flocks in many sections of the United States since the close of the Harrison Administration have been largely destroyed. These should be restored without delay from the ample flocks in the States of Wyoming, Montana, and Utah, where healthy young animals of the best breed may be had in countless numbers. These flocks are descendants of some of the best Eastern breeds, and the wool is only inferior to that raised in the pastures in the Ohio Valley because of the temporary effect of the climate and soil. These flocks, when shorn of their Territorial fleeces and transferred to the rich woolgrowing sections of the Central West, will in one year thereafter produce as good wool as was ever raised in those sections. Flock masters have often shown many of the characteristics of sheep, in so far as they are controlled by impulses and follow the example of leaders, and it has been popular to decrease sheep and to desire to get rid of them.

Now, there should be a popular demand again for sheep, and every farmer should endeavor to acquire them, and if the grower does his duty in this respect, in a comparatively short time the American manufacturer will no longer be dependent upon Great

Britain and Australia for his supply of the higher grades of wool. As a matter of national protection in time of war, and as a matter of the promotion of one of the greatest agricultural interests, a protective tariff on wool is essential and indispensable.

There is one feature of the desirability of woolgrowing that has not had proper consideration. The wool clip is the first crop which the farmer has for sale in the spring, and in addition to the ready money which this produces, in order to supply the household needs, there is besides a crop of lambs every spring that add to the value of this industry.

The bicycle and electricity have so largely usurped the use of the horse that this industry is no longer profitable of investment. The capital used in raising colts, including hay and grain consumed by them until they are matured and ready for sale, if invested in sheep husbandry would bring tenfold larger return, and as the beneficent effect of the McKinley tariff is demonstrated, this restoration has arisen by guaranteeing permanence, so that investment in sheep husbandry is free from the hazard of uncertainty and want of permanence.

I take it that the American people had no intention, in the election of Grover Cleveland, of sacrificing the great American wool industry, which at that time was the seventh largest agricultural industry, and the proof of this is found in the selection of the foremost apostle of protection as the desire of the people of the United States for the successor of President Cleveland. The election of President McKinley represented a large popular wave, patriotic and American throughout, which will be fulfilled with the restoration of the McKinley Act under the Dingley law; and with the sad experience of the experiment during the interval of its suspension, this generation is not likely again to permit a successful attack on the great industry of sheep husbandry.

The American woolgrower is to be congratulated on having representatives in Congress so successfully taking care of his interests, for the manufacturers of the East believed that the restoration of the McKinley rates invited their early overthrow and would guarantee lack of permanence for the new act; and while most of them recognized the justice of full and adequate protection to the woolgrowers, they believed, and conscientiously believed, that lower duties than the McKinley law would be ample protection and would restore the flocks, so that the accomplishment of the recovery of rates as high as the McKinley rates, while a matter of surprise to everybody, is nevertheless a singular triumph of the woolgrower through the devotion and patriotic and tireless efforts of their friends in Congress, and the initial movement which has so happily secured so much better rates for wool than many of its most earnest friends ever imagined possible should be credited to the representation which the woolgrowers had in Mr. DINGLEY'S Committee on Ways and Means.

Now, Mr. Speaker, so much for the wool schedule in this bill. It is possible that the price of woolen goods may advance slightly, but if so, there will be money to pay for woolen goods, and the benefit will be distributed through the agriculturists to the whole country. Will the woolgrowers of the United States go back to free trade? No wonder that the distinguished gentleman from Texas [Mr. BAILEY], seeing the handwriting upon the wall, has announced himself for a protective tariff on raw material, which includes wool. Nevertheless the Democratic party of the United States is unalterably opposed to the protection of wool. It has shown itself thus at every recurring opportunity, and it remains to be seen whether the woolgrowers of the country will again contribute to the election of a Democratic Congressman, a Democratic United States Senator, or a Democratic President of the United States.

Elections are just before us involving the voice of some of the great States upon this very question. In the State which I have the honor in part to represent on this floor the issue will be presented without qualification. The legislature to be elected this fall will voice the sentiment of the people of Ohio. No State suffered more by the election of Cleveland and a Democratic Senate and House than did Ohio. No State suffered the loss of a better industry than did Ohio by the overthrow of the wool industry; and the voters of Ohio, the woolgrowers of that State, have now an opportunity to vindicate the action of this Congress by voting the Republican ticket and standing by a protective tariff upon the wool product of Ohio.

Mr. Speaker, they will not go back to Democratic destruction. No amount of persuasion will ever again cause the woolgrowers to falter in their allegiance to the Republican party. Give them this protection and the agricultural wealth of Ohio and Michigan and all the States West and Northwest will rapidly increase and permanently occupy a high position. But give us a Democratic Senate and a Democratic House and a Democratic President, and all will be lost. The first effect of Democratic interference was more than \$200,000,000 struck down as though it had been burned up in a fire. The people of the country will take care of themselves upon this question in the future as they have in the past.

## The Tariff.

## SPEECH

OF

HON. JOHN A. MOON,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. MOON said:

Mr. SPEAKER: It is not my purpose to enter into an exhaustive or detailed discussion of the tariff, a question second in importance only to the financial issue; nor, indeed, can I hope to suggest new thoughts or impress my views on this House, but rather to record, by the courtesy of the House, some of the reasons for my unyielding opposition to the doctrine of a protective tariff.

Mr. Speaker, the representatives of the people under a constitutional government must find justification in the organic law for every exercise of the functions of government, whether executive, ministerial, or legislative; for every infraction of fundamental law unrebuked adds to the power of the forces engaged in the transformation and overthrow of popular institutions. Sovereignty or supreme power, from the exercise of which there is no appeal, belongs to the people.

State governments are the instruments ordained by the people of the respective States for the exercise of State sovereignty, and the Federal Government, ordained and established by sovereign States for their mutual welfare and benefit, was, within the limitations of the Federal Constitution, made absolutely sovereign as to all the power expressly conferred by that Constitution or fairly to be implied from the powers granted, and Congress was made the instrument to enforce by legislation the principles of the Federal Constitution. One of the most important powers granted to Congress was the right to "levy and collect taxes, duties, imposts, and excises, to pay debts and provide for the common defense and welfare of the United States."

Thus comes from the Constitution the right and power of Congress to levy and collect taxes, duties, imposts, and excises. When this great power is invoked and tribute laid upon the people, for what purpose shall it be done? To enable the Government which the people have ordained for their common defense and the general welfare to be administered and the purpose of its creation accomplished.

The right of the Government to levy this tariff or tax and appropriate the same to its use exists alone by the consent of the people under the powers granted by them in the Constitution, and the recompense which the citizen has in common with all others is the protection of life, liberty, and property by the Government, which can lawfully demand this tribute from him for that purpose alone.

It follows, therefore, that so long as the Congress of the United States shall confine the exercise of the taxing power to the raising of revenue to be expended by the Government in the performance of its legitimate functions, the Constitution is not infringed; but when Congress shall depart from the constitutional principle and mandate of taxation and levy taxes, imposts, duties, and excises for any other purpose than the collection of revenue for the legitimate use of the Government, it has broken the guards of the Constitution which called it into existence and fixed the limitation and measure of its power; it has then set at defiance the will of the people and given over their substance to pillage and public plunder. Can it be that a government whose powers are limited and defined by a constitution shall reach beyond that constitution for power?

That the United States Government can exercise no act of sovereignty not expressly delegated to it by the Constitution and not fairly implied from the power granted is a principle of construction always recognized (theoretically at least) by both the State and Federal judiciary. Let us apply the protective-tariff policy as contained in the bill now pending in this House to the test of this constitutional principle. This bill is entitled "An act to provide revenue for the Government and to encourage the industries of the United States."

So far as the purpose of the bill to raise revenue, as stated in its caption, is verified by its provisions, it is within the Constitution, and subject to no objection as a matter of principle; but the expressed purpose to "encourage the industries of the United States" by levying a tax in their interest is extra constitutional. Does the Constitution authorize the taxation of the people directly or indirectly that manufacturing industries may be pro-

moted and encouraged? Or will it tolerate the levy of duties, imposts, and excises in such manner as that they shall not be uniform throughout the United States?

If so, this would be an express grant of power, and Congress would be authorized to impose taxes for such a purpose, and might so impose the burden of taxation that uniformity would not exist. But the Constitution contains no such provision, nor does it anywhere grant an exercise of power from which such right of taxation could be fairly implied. The purpose, therefore, to tax in the interest of and for the "encouragement of industries" is obnoxious to the Federal Constitution and offensive to our sense of common justice. None but a conquered and humiliated people would submit to such a constitutional provision if it existed. If our Constitution were burdened with such a slavish provision, it would be the sacred duty of every freeman to aid by lawful measures in overthrowing it.

Putting aside the consideration of this question as obnoxious to fundamental law, as a question of common justice, expediency, or policy, it must be apparent to all who shall impartially view the general proposition of protection of industries by indirect taxation for their benefit that the theory rests upon an unsound principle and that its application would be ruinous to all classes except those engaged in the protected industries. None who believe in the capacity of men to rule themselves under a republican form of government are prepared to deny that equal and exact justice to all and special privileges to none is the only true rule of action in the formation or administration of law.

If equality before the law be the principle of republics, then only the advocates of unequal rights and despotic power can consistently urge a system of taxation that shall "encourage industries" by levying and collecting taxes indirectly, by customs duties or otherwise, from all other persons for their benefit. Would it be wise to so frame a tariff law that in the levy of taxes special advantages and benefits would accrue to the professional man alone? The world would laugh the proposition to scorn. Yet, as a matter of right, he would be as much entitled to the advantage as the manufacturer, since neither is entitled to such advantage.

No government in imposing taxes has the legal or moral right to intentionally benefit one or more classes of its citizens to the detriment of all others; and no law which is unequal in its benefits or application can fail to injure the mass of the people; and this injury falls most heavily and with unerring certainty upon the weak and powerless of society. When Congress is actuated alone by motives of the purest and most disinterested patriotism, when the wisest counsels prevail, and when the utmost skill and wisdom in legislation is called into requisition, no revenue law can ever do exact justice to all classes, even when the principle of uniformity and equality in taxation is determinately adhered to; but when equality in taxation is denied, when special advantages, bounty, and compensation are openly and boldly announced as true principles and worthy precedents, when we are admonished in Congress by legislation that the farmer, the merchant, and others of the common people have no rights which "Congress," under the control of the manufacturing magnates, should respect, then the time has come for the citizens to pause and take order for the future safety of the Republic.

It is useless for gentlemen to indulge in sophistry common to every drama of villainy and fraud. Every conscious man knows that Government has no right to tax him simply to benefit another; that no law is just which in its operation encourages and protects certain interests, enabling them to enforce unwilling contributions from him in the purchase of necessary but protected manufactured articles. A protective system of taxation by partially or totally excluding imposts destroys to that extent foreign competition with the home manufacturer in the markets, and thereby enables him to add to the cost of his productions not only legitimate profit but the amount of the duty in addition thereto. The custom duty is thus totally or partially denied to the Government, but the people pay it to the manufacturer in the additional profit he is thus enabled to charge for his goods. This is a direct and unjust advantage given by the act of the Government to one class of its citizens over all others. The Government thus becomes paternal and fostering to the privileged and protected manufacturer and alien and hostile to all other citizens.

When the protective policy in its application reaches the point of prohibition on imposts by excessive duties, the Government ceases to obtain revenue from the article; but the consumer of the article is subjected to the payment of a price covering the duty in its sale at the will of the manufacturer, and his burden of taxation on other articles of consumption is doubled, for the Government's revenue must be obtained. The Government, for its own use, has a right to tax the citizen, and in return for the tax the citizen is entitled to receive benefits in common with all others in the exercise by the Government of beneficent action; but it is denied that the Government has the moral or legal right to so adjust the levy and collection of imposts and customs duties or taxes that the ordinary citizen, in the purchase of manufactured goods, can by

the law itself be made to pay tribute to the manufacturer. And yet this is the only way in which these "industries" can be or are sought to be "encouraged" under this bill.

The schedules fully disclose the purposes as indicated in the caption. The bill, Mr. Speaker, is the enforcement of the doctrine that the classes are entitled to consideration by the Government to which the common people are not entitled. It is a surrender of the people's Government to those who would use it to exact unlawful tribute from them. The classes alone have been consulted. Revenue for the Government is made the incident to protection that monopoly may be afforded to the manufacturer. The only taxation authorized by the Federal Constitution is for the purpose of producing revenue for the maintenance of the Government itself.

A wise policy would dictate that no more revenue should be raised by taxes on the people than would be necessary for the support of the Government economically administered, and that in levying a tax for this exclusive purpose the necessities of life should be taxed as lightly as possible and that the greatest burden should rest on the luxuries, to the end that the great mass of people who are unable to indulge in luxuries may have the necessities of life at as low cost as possible. And it seems just that taxes should be so levied that those who receive the greatest blessings from Government in the protection and defense of their great material wealth should contribute to the Government of their means in proportion to their interests and their capacity to pay.

But this is not the policy of the pending tariff bill. It imposes the heaviest taxes on the articles of daily necessary consumption by the people; it lays the heavy hand of taxation on the articles of food and raiment of the common people. It makes those pay most who are least able to pay, and confers benefits on those who least need them in the preferences shown to "encourage industries." It deals in differentials, compensatory duties, and bounties for the wealthy corporations and monopolies, and in taxation, as tribute to them, on the common people. Even when a beneficent and legitimate policy is pursued, the question of just taxation is always vexatious. The direct and indirect tax are alike burdens to the people.

But taxation for the Government support must exist in some form. The Government can not move without revenue, but there is no reason in raising it to impose by the method of its assessment burdens additional to the needed revenue for the benefit of favored classes. In our dual system of State and Federal governments the people have been accustomed to a direct levy of taxes by the States, counties, and municipalities thereof in the shape of a capitation, specific, and ad valorem tax. The capitation tax, except a small sum, has seldom been levied, because of the apparent injustice of this method of taxation. The poor man with but slight material interests to protect does not receive that benefit from the Government to which he pays the tax that the man of large means obtains, and therefore should not pay the same tax; but receiving protection to life and liberty, he justly owes to the Government some financial support.

The ad valorem tax, or tax on the corpus of the property in proportion to its true value, with the exemption of a reasonable portion for the absolute needs of life, is the most practical and just method of taxing tangible property; but hidden wealth in money, bonds, and stocks can not be easily reached by this method, and equality on the basis of direct taxation, so as to subject all property to the payment of revenues, can never exist until taxes are levied on and in proportion to the incomes of men. These principles apply with equal force to State and Federal taxation. The people see and feel this method of taxation and appreciate its necessity, and can readily check the abuse of the taxing power. But the payer of Federal taxes is generally oblivious to the burdens resting upon him.

This tax is indirect. It is neither a capitation nor ad valorem tax, but one on the consumption of food, raiment, and the implements of industry. It is an invisible tax, yet, with the same force as the direct tax, it appropriates the property of the citizen. It is unseen, but is felt. The importer pays the tax in the first place. He adds his profit to the cost of the article, and then adds the customs duties to the price at which he sells. The consumer, therefore, finally pays the customs duties, which are thus concealed in the price of the article which he purchases.

The Government, when customs duties are not so high as to exclude importation on a given article, gets the benefit of the tax on the article thus indirectly but finally paid by the consumer; but when the duties are so high that importation is excluded and competition therefore destroyed, the Government receives no revenue from the article, and the manufacturers, having a monopoly, can add not only the amount of the customs duties to the cost of the legitimate profits, but under the practice and operation of the modern system of trusts competition between home manufacturers is destroyed, and the citizen is thus left to the merciless greed of those "industries" which this bill seeks to "encourage."

The principle of collecting revenue for the Government by cus-

toms duties is not criticised; it is a constitutional mode; but the method of taxation under this system by which the revenue becomes at times diverted from the Government for the benefit of the manufacturer is a just subject of criticism. An impartial levy of the indirect tax would fail of the proper imposition of revenue burdens on the basis of uniformity and equality in taxation unless supplemented by a tax on incomes to reach those citizens who receive benefits in the protection of their great interests by the Government far beyond their contribution to the Government under the indirect-tax system. Many of the advocates of the protective or confiscatory system of taxation are honest in their convictions and patriotic in their motives. If it were otherwise, there could and would be a speedy settlement of the issue. We think that their views are the outgrowth of a misconception of the true doctrine of taxation and of the cardinal principles of free institutions.

They do not contend for equality in taxation; they ignore this principle and discard it as unsound. They insist that the Government should confer special benefits on certain classes. They have no faith in the doctrine of equal and exact justice to all; but they are not all dead to moral duties and obligations. They do offer an apology for their apparent indifference to the common rights of all men, inasmuch as they justify the protective idea on the ground that the benefits obtained by the manufacturer by a protective tariff are so great as to enable them to conduct with increased capacity and labor their factories, thus giving employment to labor and affording means to the laborer to buy the products of the farmer and the goods of the merchant.

This is the excuse for diverting the power of the Government from its legitimate purpose to benefit a class. The supposed result is only partially true. As a matter of fact, the manufacturer may increase his plant and employ more labor and afford an additional or increased market to the farmer and merchant, but their benefits can only be where the particular plants are situated, and are strictly local; therefore only the manufacturing sections can get an indirect and temporary benefit from the preference shown the manufacturer. He becomes rich, while the whole country suffers irreparable loss from the policy, as the people pay the tax which contributes to the manufacturer's wealth when forced to buy his products at an abnormal price.

This principle of taxation is wrong, and it can never be made to operate other than in the interest of the classes. It had its origin in the false assumption that the Government should exercise paternal care over infant industries by a protective tariff, and it can find continuation only because these industries have now grown into monster powers, and in their advancing growth and constantly increasing strength and the enjoyment of immunity they have developed conditions and created sentiments which, although dangerous to liberty, enable them to now demand as a matter of right from the Government which nurtured them that which they once sought as a gracious favor. We can not indulge in a pernicious policy of taxation without suffering the consequences of a departure from correct principles. The Government has fostered monopoly until monopoly has usurped the Government and sits enthroned in power.

Why, then, discuss the schedules? The schedules of a tariff bill framed on lines of inequality and special favors are not the subjects of intelligent discussion, for, the true principle of constitutional taxation having been departed from, the schedules can only be the accomplished pillage of those corporate interests that have succeeded in putting their ratio of public plunder in the bill. The opportunities of all to be favored are equal when the principles of the bill open the schedules for this competition among the industries that are to receive benefits from the legislation. The race in such case is to the strong, and the doctrine of the survival of the fittest among public plunderers is invoked.

When we shall return to the true principles of taxation, duties will be fixed as nearly just as possible on articles of importation for the sole purpose of obtaining sufficient revenue, and no more, to meet the exigencies of government; we will make no discrimination for any class, but deal on the basis of equality with all interests in every section of the great union of States, assessing the revenues so as to destroy the tendency to monopoly and "break down the walls of protection and lead our commerce into the seas of the world."

The policy of a tariff for revenue only demands the legitimate exercise of the power of Congress for the common benefit of all of the people in procuring revenue for the Government. A tariff for protection not only demands this lawful revenue, but affords a method of confiscation of the people's substance by the "protected industries." One system is just, the other is despotic. One is Democratic, the other is Republican.

Mr. Speaker, it is conceded that the tariff duties under this bill are the most excessive that any Congress has yet undertaken to levy; and it is worthy of note that the more powerful of the great combines, trusts, and corporations of the country have secured the highest rate of duty on the articles manufactured and

controlled by them. These great monopolies are the masters of the situation. Have they conquered Congress? Are they dictating the nation's fiscal policy? Are they closing the ports of the world to the trade of this Republic? Shall they in these halls, where once the voices of patriots resounded and brave and honest men vied in advancing the glory of the Union, silence American Representatives and throttle debate?

Is the Government at last in their hands? Have they come at last to inform us that the doctrine of equality and justice taught by our fathers is a heresy, and that monopoly is indeed the genius of a free state, and that the trust is a blessing to the weary and disheartened toiler? We can not conceive that a personal conspiracy exists on the part of any of our countrymen against the liberties of the people; but conditions unfavorable to the perpetuity of free institutions are arising to engender gloomy forebodings for the future, and to make sad the hearts of those who love a pure and simple republic. They are the workings of those silent forces which threaten the permanency of republics when constitutional principles have been departed from and false theories of government set up in their stead.

How long can freedom exist when the sovereign power of taxation is used to foster the interest of classes against the common people, and when Congress delegates its power to national banks to issue and control the currency of the country, and when the Federal judiciary is steadily encroaching on the reserved rights of States and destroying constitutional barriers and long-established precedents for the benefit of corporate power? How bright should the dream of our country's glory be? Upon the proper solution of the questions of the currency, taxation, and Federal court usurpation depends the permanency of the Republic. These questions can never be determined in the interest of the masses of the people until the national bank is deprived of the right to issue or in any way control the national currency, and the Government again resumes the issue of its currency and the free coinage of silver, and levies its taxes on the basis of equality for revenue only, and strips the Federal judiciary of the power of usurpation.

The great struggle for the restoration of constitutional government to the people has begun. The power and influence of its enemies must not be underestimated. The wealth of this continent and its allied forces in Europe are in the opposition. Their emissaries are assiduously engaged in every hamlet, village, and city of the Union. It is but the repetition of history. If we could catch the spirit that inspired Washington, Jefferson, and Jackson; if the blood of the Revolutionary fathers could once more quicken in the veins of their posterity; if the sordid thought of life could yield to the lofty impulses of patriotism, these sinister influences would end, and another decade give us financial and commercial independence and determine the dead line of Federal jurisdiction, and remove from the Constitution the last taint of limited monarchy by amendments which would secure to the people a President and Cabinet, judges and United States Senators, as well as local Federal officers, by their direct vote at the ballot box. Then, Mr. Speaker, for the first time since the Republic was born, the American patriot for a moment may cease his weary vigil and lie down to dream of the future greatness and happiness of his country.

#### The Tariff.

#### REMARKS

OF

HON. JAMES A. TAWNEY,

OF MINNESOTA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration the conference report on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. TAWNEY said:

Mr. SPEAKER: When this bill was under consideration in the House several months ago I availed myself of the opportunity to discuss generally its provisions, the necessity for its enactment, and the principles upon which it is based. Since then a great deal has been said in both branches of Congress concerning the wood schedule, and particularly the proposed rate of \$2 a thousand feet on rough lumber. My only purpose now is to point out, as well as I can, the fallacy of the arguments advanced by those who are opposed to this particular schedule, and to briefly explain some of the reasons for the rate which the Committee on Ways and Means originally imposed upon rough lumber and which the conference committee has restored.

The remarks to which I have listened, both here and at the other end of the Capitol, concerning the proposed duty of \$2 a thousand on white pine lumber, show conclusively that gentlemen are either ignorant of the facts or that they are willfully trying to deceive their constituents by misrepresenting the same. As it is more charitable, if not more just, to assume the former to be the basis of the opposition and the reason for the argument which gentlemen have advanced against this schedule, I shall proceed upon the former hypothesis.

#### THE OPPONENTS OF A DUTY ON WHITE PINE.

When this bill was under discussion in this body and in the Senate, certain distinguished members of both Houses taxed their physical endurance to the utmost—some even exceeding the limit—in their effort to create the impression that, comparatively speaking, the lumber industry was insignificant and of no importance; that only a few States were interested in its prosperity; that the business consists chiefly of manufacturing and selling white-pine lumber; that this species of coniferous wood is very limited both in area and quantity; that practically all the standing pine is owned by a very few persons and corporations (two Senators placing the number at "about a dozen"); that the entire product is controlled by these few men and concerns; that the purpose of the proposed duty is to more firmly fasten their grip upon the lumber industry; and that the effect of duty will in the near future denude our forests and increase the price of stumpage and lumber to the extent of the duty.

To prevent these evils and avert this terrible calamity, it was proposed in the Senate to reduce the rate on white pine to \$1 a thousand, but no one in that body attempted, either by speech or by amendment, to reduce the proposed rate of \$2 a thousand on hemlock, spruce, cedar, fir, cypress, yellow pine, or any of the other woods. How ridiculously inconsistent would the schedule be with a two-dollar rate on these different classes of rough lumber and a one-dollar rate on white pine! But, Mr. Speaker, we should not be so uncharitable as to expect the jewel of consistency to be recognized, much less possessed, by the men who advocate this proposition.

#### THE EFFECT OF THE PROPOSED REDUCTION OF DUTY.

Let us briefly examine the effect of what these gentlemen propose, if enacted into law. In New England, and in a few of the other Eastern States, as well as in the Pacific Northwest, a very large proportion of the lumber used by the farmers in the erection of their houses, barns, and other buildings is spruce. In many other States, including Pennsylvania, Illinois, Iowa, Michigan, Wisconsin, Minnesota, and the two Dakotas, hemlock is used for these purposes, and is also used in the building of the cheaper buildings in our cities. In the Southern States it is the yellow pine that is thus used. In the South Atlantic and Gulf States, cypress and yellow pine is the lumber chiefly used by this class of our people, while south of the center of Nebraska to the Mexican line and west to the Rocky Mountains 60 per cent of the lumber used by the farmers and poorer classes in cities is the long and short leaf yellow pine; and west of the Rocky Mountains fir, cedar, and other redwoods constitute the greater part of the lumber consumed by this class of our people.

On all these different varieties of lumber thus used by the farmers and by all classes throughout this broad land the proposed duty is \$2 a thousand feet, and these distinguished gentlemen, who could not tell a white pine from a tamarack tree, did not even complain, much less could they find any excuse for offering an amendment reducing this rate from \$2 to \$1 a thousand feet, as they did in the case of white pine. But the two-dollar rate on white-pine lumber, lumber which readily sells in the open market as high as \$50 a thousand feet and is used in the construction and in the inside finishing of mansions and the less elegant residences of the rich, is to them an abomination and an outrage that ought not to be tolerated, much less permitted. If, as these men claim, the consumer pays the duty, then on the poor man's lumber they seem perfectly willing that a tax of \$2 a thousand should be imposed, while on that variety of lumber known as white pine and used chiefly by the wealthy they demand that the tax be reduced to \$1 a thousand.

The conference committee is to be commended for having restored the uniform rate of \$2 a thousand on all these different varieties of lumber. No reason has been, or can be, urged for discriminating against either variety.

But, Mr. Speaker, it may be of interest to inquire more fully into the alleged reasons which these enemies of white pine and substantial friends of the rich assign for demanding a high rate on the poor man's lumber and a low rate on the rich man's lumber. These various reasons may be grouped under three heads:

First, the extent and importance of the industry;

Second, the amount of supply and its ownership; and

Third, the purpose and effect of the proposed rate of \$2 a thousand feet.

## EXTENT AND MAGNITUDE OF THE INDUSTRY.

In the number of States interested, in the amount of capital invested, in the value of the product, in the number of separate manufacturing plants, in the number of men employed, and in the amount of wages paid no industry in the United States, except agriculture, equals the lumber industry. (See Circular No. 11, page 5, Agricultural Department.)

According to the census of 1890, there was invested in this industry at that time \$750,000,000, while the estimate of those acquainted with the growth and development of the business shows that in 1893 this investment reached the enormous sum of more than \$1,000,000,000. The manufacture of lumber is a leading industry in more than two-thirds of the States.

There are 25,000 separate manufacturing plants distributed from Maine to California and from the Lakes to the Gulf. If we add the planing mills and other allied industries, the number would reach 45,000. The output of these plants in amount and value varies from 5,000 to 500,000 feet per day and from \$2 to \$75 a thousand. The lumber industry gives employment to over 600,000 men, and furnishes homes to, feeds, clothes, and protects more than 3,000,000 of our population, and this does not include those engaged in the retail lumber trade, while indirectly, in transportation by vessel and rail, in the manufacture of mill machinery, and in the purchase of food and other camp supplies, this industry contributes more than any other to the support and maintenance of at least one-tenth of our total population.

According to the estimate of the Forestry Division of the Agricultural Department, the total annual cut of the sawmills of the United States, including all material requiring bolt or log size, is estimated at 40,000,000,000 feet, B. M. It is made up of the following kinds:

	Feet, B. M.
White pine.....	12,000,000,000
Spruce and fir.....	5,000,000,000
Hemlock.....	4,000,000,000
Long-leaf pine.....	4,000,000,000
Short-leaf and loblolly.....	3,000,000,000
Cypress.....	500,000,000
Redwood.....	500,000,000
All other conifers.....	1,000,000,000
<b>Total conifers.....</b>	<b>30,000,000,000</b>
Oak.....	3,000,000,000
All other hard woods.....	7,000,000,000
<b>Total.....</b>	<b>40,000,000,000</b>

From these figures it will be observed that the annual output or product of the white-pine lumber industry comprises only a little over one-fourth of the total quantity of lumber manufactured in the United States. It further appears that the varieties of woods from which this lumber is manufactured includes every species of timber known to our soil—the spruce of New England, New York, the Virginias, and the Pacific Northwest; the white pine and hemlock of North Carolina, Pennsylvania, Michigan, Wisconsin, Minnesota, and Idaho; the long and short leaf yellow pine of the Southern States; the cypress of the South Atlantic and Gulf States; the poplar and hard woods of the Ohio and Mississippi valleys, and the fir, cedar, and other red woods of the Pacific Coast.

## QUANTITY OF STANDING TIMBER.

The aggregate quantity of these different varieties of coniferous woods is so enormous in this country that no reliable estimate of the same has been or can be made. But this fact is not material except in so far as it shows that our supply at this time is practically unlimited, and many of these woods reproduce themselves. The attack upon this particular schedule of the pending bill has been aimed directly and entirely against white pine. The condition which renders it impracticable to estimate the quantity of all other woods likewise interferes to prevent an accurate estimate of the amount of standing white pine. In circular No. 11, issued by the Department of Agriculture, Division of Forestry, it is stated that a very rough and probably very liberal estimate of the amounts of timber standing in the various regions ready for the ax would give the following figures:

	Feet, B. M.
Southern States.....	700,000,000,000
Northern States.....	500,000,000,000
Pacific Coast.....	1,000,000,000,000
Rocky Mountains.....	100,000,000,000
<b>Total.....</b>	<b>2,800,000,000,000</b>

This estimate, it will be observed, does not include the virgin forests yet unexplored and unsurveyed, and therefore at this time unavailable for manufacturing purposes.

Those interested, including the States and the Federal Government, have caused to be made careful estimates of the standing white pine. From this source I learn that in the State of Michi-

gan there is about 20,000,000,000 feet of standing white pine; in Wisconsin, between twenty-five and thirty billion feet, and in the State of Minnesota, between thirty-five and forty billion feet, the maximum, according to these estimates, in these three States alone being 90,000,000,000 feet and the minimum 80,000,000,000 feet.

It must be remembered also that the total quantity of white pine in this country is not located in these three States alone. The States of Tennessee, North Carolina, Pennsylvania, Idaho, and other States each have very large quantities of this variety of coniferous wood. It would be well for those who predict that our white pine in the next five or ten years will be completely exhausted to recall the prophecies made after the publication of the statistics in the Tenth Census concerning the supply of white pine. Time has proven the extreme and absolute inaccuracy of these statistics and the predictions based thereon, for, while then it was claimed that only eight years' supply of white pine was standing, when the annual cut was 10,000,000,000 feet, we have, with an increased cut, lumbered white pine for sixteen years, and still there is an enormous quantity left.

In every respect the lumber industry is more national than any other except agriculture. It is not limited to the manufacture of white pine, as some would have the country believe. It includes lumber made from every variety of coniferous and hard woods in every part of our country. That our supply of white pine is infinitely greater both in quantity and area than has been represented in both Houses of Congress can not be questioned.

## IMPOSSIBILITY OF A TRUST CONTROLLING THE INDUSTRY.

But, Mr. Speaker, in the hope and for the purpose of exciting the prejudices of the people against those who have favored and voted for the duty of \$2 a thousand on white pine, it has been asserted, not here, but at the other end of the Capitol, that all our standing white pine is owned by about a dozen multimillionaires, or, in other words, that it is owned and controlled by a trust, and that this modern octopus will be the sole beneficiary of the two-dollar rate on this class of lumber. They have even gone so far as to figure the exact number of dollars which they say this trust will receive as a result of the proposed duty, because, they tell us, the duty will be added to the price and paid by the consumer. If that is so as to white pine, then the owners of timber and manufacturers of lumber other than white pine will derive a like benefit from a duty of \$2 a thousand on their product.

According to this theory, based upon the figures which I have given, showing the amount of lumber manufactured from these other woods annually to be 28,000,000,000 feet, the owners and manufacturers of hemlock, spruce, and all other kinds of lumber, except white pine, will reap an annual profit of \$560,000,000.

If the opponents of the two-dollar rate on white pine are sincere, if they believe what they say about the effect of this duty, why did they not attempt to prevent these enormous profits on other lumber by proposing a reduction of the duty from \$2 to \$1 a thousand, as they did in the case of white pine?

No, Mr. Speaker, the motive of their attack upon white pine is not the one assigned, nor is it because these gentlemen believe what they say, but believing the popular impression to be that white pine constitutes almost all that there is of the lumber industry of our country, they think it will be easier to accomplish their political purpose by assailing that particular branch of this industry, and thereby incidentally benefit the few Americans who have cut and sold their timber in Michigan under a two-dollar rate and who have since gone to Canada and there bought stumpage and now wish to import into our market their Canadian lumber free of duty.

Mr. Speaker, how false and ridiculously absurd is the proposition that all the white pine in this country is owned by only a few individuals or corporations, and that it is or can be controlled by a trust or a combination of any kind. Recently I received a letter from Hon. M. G. Norton, of Winona, Minn., whose reputation for truth and reliability is second to none in our State, transmitting a statement containing the names of 158 individuals and corporations who own standing white pine in the States of Minnesota and Wisconsin alone, and with whom he is personally acquainted. This statement is as follows:

## Owners of Minnesota white pine—65.

Clinton, Iowa—W. T. Joyce, W. J. Young estate, C. Lamb & Sons.  
 Dubuque, Iowa—Standard Lumber Company.  
 Lansing, Iowa—Lansing Lumber Company.  
 Winona, Minn.—Empire Lumber Company, Youmans Bros. & Hodgins, H. W. Lamberton, Laird-Norton Company.  
 Hastings, Minn.—R. C. Libby & Co.  
 St. Paul, Minn.—F. Weyerhaeuser.  
 Minneapolis, Minn.—F. B. Walker, Akeley Lumber Company, Boose, De-  
 laltro & Co., Carpenter, Lamb & Co., J. W. Day & Co., Gull Run Lumber  
 Company, Nelson Tenney & Co., Scanlon & Gipsen Company, Shevlin-Carpen-  
 ter Company, St. Hilaire Lumber Company, C. A. Smith & Co., C. A.  
 Pillsbury, St. Paul and Duluth Railway Company, Northern Pacific Rail-  
 way Company, Chicago, St. Paul, Minneapolis and Omaha Railway Company,  
 Duluth and Winnipeg Railway Company.  
 Little Falls—Pine Tree Lumber Company.  
 Brainerd—Brainerd Lumber Company.

Rock Island, Ill.—Rock Island Lumber Company, Weyerhaeuser & Denkmann.  
 Stillwater, Minn.—Jacob Bean, H. F. Hersey, East Side Lumber Company, Isaac Staples, Malloy Bros. & McClure, Mulvey & Carmichael, Otis Staples, William O'Brien, Merriam estate, J. S. & John O'Brien, David Toger, William Sautry, Musser-Sautry Company, E. W. Durant, Nelson & Johnson, St. Croix Lumber Company, Walsh, Donovan & Co., O'Neal Bros.  
 Willow Run, Minn.—Atwood Lumber Company.  
 Rutledge, Minn.—Rutledge Lumber Company.  
 Foley, Minn.—Foley Bros.  
 Melaca, Minn.—Foley & Bean Lumber Company.  
 Cloquet, Minn.—Cloquet Lumber Company, Northern Lumber Company, Johnson-Wentworth Company.  
 Duluth, Minn.—Cranberry Lumber Company, Duncan Brewer & Co., Merrill & Ring, Mitchell & McClure, Poyton, Kimball & Barber, B. B. Richards Lumber Company, Scott & Holden Lumber Company.  
 Davenport, Iowa.—Cable Lumber Company.  
 Little Falls.—Charles Weyerhaeuser.  
 Chippewa Falls.—Edward Rutledge.

*Owners of Wisconsin white pine—80.*

Hannibal, Mo.—Hannibal Sawmill Company.  
 Keokuk, Iowa.—Carson-Hand Lumber Company.  
 Burlington, Iowa.—Burlington Lumber Company.  
 Muscatine, Iowa.—Hershey Lumber Company, Musser Lumber Company.  
 Davenport, Iowa.—Lindsay & Phelps, Chr. Mueller & Sons.  
 Clinton, Iowa.—W. T. Joyce, C. Lamb & Sons.  
 Winona, Minn.—Laird-Norton Company, H. W. Lamberton, John Robson.  
 Quincy, Ill.—Gem City Lumber Company.  
 Rock Island, Ill.—Weyerhaeuser & Denkmann, J. P. Weyerhaeuser.  
 Moline, Ill.—Dimick, Gould & Co.  
 La Crosse, Wis.—C. L. Coleman, John Paul, H. Goddard, La Crosse Lumber Company, Hixon estate.  
 Stillwater, Minn.—Jacob Bean, Hersey & Bean, Isaac Staples, Merriam estate, J. S. & John O'Brien, Musser-Sautry Company.  
 Mason, Wis.—White River Lumber Company.  
 Drummond, Wis.—Rust-Owen Lumber Company.  
 Hayward, Wis.—B. L. McCormick, North Wisconsin Lumber Company.  
 Shell Lake, Wis.—Shell Lake Lumber Company.  
 Cumberland, Wis.—Beaver Dam Lumber Company.  
 Rice Lake, Wis.—Rice Lake Lumber Company.  
 Park Falls, Wis.—Park Falls Lumber Company.  
 Neenah, Wis.—Henry Sherry.  
 Phillips, Wis.—John R. Davis Lumber Company.  
 Eau Claire, Wis.—Daniel Shaw Lumber Company, Valley Lumber Company, H. C. Putnam.  
 Tomah, Wis.—C. A. & D. A. Goodyear.  
 Marinette, Wis.—Luddington, Wells & Van Schank, Peshtigo Lumber Company, Sawyer-Goodman Company, Hamilton-Merriam Company, H. Wittbeth Company.  
 Oshkosh, Wis.—Philetus Sawyer, Payne Lumber Company.  
 Ashland, Wis.—Ashland Lumber Company, Keystone Lumber Company, Shores Lumber Company.  
 Manistee, Mich.—Canfield Company.  
 Washburn, Wis.—Bigelow & Co.  
 Bayfield, Wis.—R. D. Pike Lumber Company.  
 Iron River, Wis.—John Gund Lumber Company, Lee-Ingram Lumber Company.  
 Milwaukee, Wis.—F. C. Bogle.  
 Riblake, Wis.—J. J. Kennedy.  
 Starlake, Wis.—Williams, Salsich & Co.  
 Chippewa Falls, Wis.—Chippewa Lumber and Boom Company, Chippewa Logging Company, Mississippi River Logging Company, Edw. Rutledge, W. E. McCord, R. D. Marshall, Earley Est, Flambeau Land Company, M. P. Larrabee, Macdowell & Irvine, R. D. Viles.  
 Eau Claire, Wis.—Davis-Starr Lumber Company, Dells Lumber Company, Half Moon Lumber and Shingle Company, Northwestern Lumber Company, J. S. Owen, Rust-Owen Lumber Company.  
 Menomonie, Wis.—Knapp, Stout & Co. Company.  
 Fairchild, Wis.—N. C. Foster.  
 Marshfield, Wis.—Upham Manufacturing Company.  
 Grand Rapids, Wis.—John Aspin.  
 Hurley, Wis.—Montreal Run Lumber Company, Kimball & Clark.  
 Mineral Lake, Wis.—Mineral Lake Lumber Company.  
 Rhinelander, Wis.—Brown Bros.  
 Tomahawk, Wis.—Bradly Bros. Company.  
 Merrill, Wis.—Merrill Lumber Company, T. B. Scott Lumber Company, H. W. Wright Lumber Company, Gilkey, Anson & Co.  
 Waunau, Wis.—Alexander Stewart.  
 Menasha, Wis.—Menasha Woodenware Company.

**In the letter accompanying this statement Mr. Norton says:**

We send you to-day, as per our telegram of this day, a list covering over 150 different owners of white pine in the States of Wisconsin and Minnesota. These are corporations and individuals that we happen to have personal acquaintance with, and know of their being interested in the ownership of lands containing white pine. If we had time to pursue this thoroughly, we think we should develop the fact that there are several thousand owners of white pine timber lands in this State and Wisconsin. We are constantly running against parties who are thus possessed of land, and among them are included widows and orphans and estates of men who, a long time ago, made what they called safe investments in this kind of property.

I suppose the idea of Mr. PETTIGREW and Mr. ALLEN was to show that the tendency of the lumber interest was toward a trust and a combination that would be hard on the consumer of lumber. Perhaps there is no other business in the world that is so far from being able to be controlled by a trust or a combination as the lumber business. There is such a diversity of interests that that sort of thing could not possibly exist, and the competition among all the different manufacturers is very sharp and very fierce, so much so that the manufacturers are now giving to the consumers lumber at less than the cost price.

I have also received communications from other reliable gentlemen in Minnesota and Wisconsin and who are thoroughly acquainted with the lumbering business of both of these States. Mr. William Irvine, of Chippewa Falls, Wis., writes that "there are over 500 individual owners of standing white pine in Wisconsin, not counting small holdings of homesteaders and farmers, of whom there are thousands. In addition, there are over a hundred lumber companies owning pine in this State." Mr. S. T. McKnight, H. A. Kelly, B. F. Nelson, and C. T. Smith, of Minneapolis, write me that "there are over 115 corporations and more

than a thousand individual owners of pine in Minnesota, including homesteaders and farmers."

In addition to this vast number of owners of standing white pine in these two States, it is a well-known fact that the Government owns a vast quantity of unsurveyed and unestimated pine-timber land, while the States of Minnesota and Wisconsin likewise own very large tracts. The diversified ownership, therefore, of the standing white pine and other timber and the vast number of independent and widely separated lumber mills make the formation of a trust for the control either of the standing timber or its product a physical impossibility.

But there is another factor which of itself would prevent a white-pine trust. It is the vast quantity of other lumber which competes with white pine and is used interchangeably with it. To form a lumber trust, therefore, one would have to combine almost every individual and every corporation owning standing timber or engaged in the manufacture of lumber.

Who would be fool enough to undertake the herculean task of combining the owners of the 25,000 separate lumber manufacturing plants and the several hundred thousand independent owners of standing timber for the purpose of controlling the lumber industry of our country? In the very nature of the case, therefore, the formation of a combination such as is claimed to exist is utterly beyond the power of man to accomplish.

To those who are inclined to believe that the price of lumber is necessarily increased by and to the extent of the duty, I would respectfully request their attention to the following table showing the average price of lumber in Minneapolis, Minn., the largest primary lumber market in the world, from 1879 to 1890, inclusive.

The following is the wholesale price of timber, joist and dimension, at Minneapolis on October 15 of the years named:

1879	\$11.00	1888	\$13.00
1880	12.00	1889	12.00
1881	13.00	1890	11.00
1882	15.00	1891	12.00
1883	15.00	1892	12.50
1884	13.00	1893	12.00
1885	13.00	1894	9.50
1886	14.00	1895	10.00
1887	14.50	1896	9.50

From this table of wholesale prices it will be observed that when the duty on rough lumber was reduced by the act of 1890, known as the McKinley law, from \$3 to \$1 a thousand, the price advanced from \$11 a thousand in October, 1890, to twelve dollars and a half in 1892. This fact can be verified from the books of every lumber concern in the Northwest, including the books of the lumbermen in the city of Winona. It is said to be a poor rule that will not work both ways. If the duty increases the price, its reduction should diminish that price. In the case of lumber, however, in 1890 the reduction of the duty had just the opposite effect. That the price of lumber will advance after the passage of this bill is no doubt true, but that it will advance to the extent and alone because of this particular duty, and independent of any advance in the price of all other commodities, is denied. All of our industries are interdependent. The prosperity of the one depends upon the prosperity of the other. To the extent that they all prosper, to that extent will each individual industry prosper.

**A TWO-DOLLAR DUTY NOT PROHIBITIVE.**

By some it is said that the two-dollar rate on rough lumber is a prohibitive duty. Let those who honestly believe this examine the statistics of the Treasury Department showing our imports of rough lumber prior to 1890, when the duty was \$3 a thousand, and they will find a complete refutation of this claim. During the year 1888 the duty on rough lumber was \$3 a thousand. That year we imported from Canada 608,836,000 feet of lumber, valued at \$7,397,078. Inasmuch as the importation that year was within 200,000,000 feet as much as we have ever imported in any previous or subsequent year, there is absolutely no ground on which to base the claim that the proposed rate of \$3 a thousand feet will be prohibitive.

If this proves to be a prohibitive rate, then almost every other rate imposed by this bill will, for the same reason, be a prohibitive rate, because an examination of the rates imposed by this measure will disclose the fact that the average ad valorem equivalents of the rates imposed in this schedule are far less than the average ad valorem equivalent rate of any other schedule in the bill. The average ad valorem equivalent of the rates on lumber is 16.53 per cent, while the equivalent ad valorem of the \$3 rate upon white pine, based upon the average value of the imported lumber, as shown by the statistics of the Treasury Department for 1893, would be 16.66 per cent, while the equivalent ad valorem of the \$2 rate on the higher grades of white pine is only 4 per cent.

There is not a schedule in this bill where the rates are nearly as low as they are in the wood schedule. Certainly, therefore, there can be no ground for claiming that these rates are prohibitive. As I have said before, if they are, then the rates proposed in all the other schedules will be likewise prohibitive, especially where they are imposed upon articles which we can produce.

A glance at the average ad valorem rates of duty imposed on the imports of our country in all tariff bills since 1870 will disclose the fact that the rates imposed by this lumber schedule on rough and all other kinds of lumber are from 20 per cent to 35 per cent lower than the average under any previous tariff law. These rates may be found on page 230 of the United States Statistical Abstract of 1896:

Year.	Per cent on dutiable imports.	Per cent on total imports, both free and dutiable.
1870	47.00	42.23
1871	43.95	38.94
1872	41.25	37.00
1873	38.07	26.95
1874	38.53	26.88
1875	40.62	28.20
1876	44.74	30.19
1877	42.89	26.88
1878	42.75	27.13
1879	44.87	28.97
1880	43.48	29.07
1881	43.20	29.75
1882	42.05	30.11
1883	42.45	29.02
1884	41.61	28.44
1885	45.80	30.59
1886	45.55	30.13
1887	47.10	31.02
1888	45.63	29.99
1889	45.13	29.59
1890	44.41	29.12
1891	45.28	28.25
1892	46.71	21.26
1893	49.58	23.49
1894	50.06	20.25
1895	41.75	20.23
1896	40.18	20.67

## PRESENT CONDITION OF LUMBER INDUSTRY.

The free importation of lumber since 1894 is not the only cause of the present low price of lumber and the decrease in wages and in the number of working days which this industry has heretofore furnished to labor. While it has contributed to that result, yet the present law, admitting so many other foreign products free of duty, and having reduced the former duties on others, caused the general depression in other lines of business and has greatly reduced the demand for lumber. This has left a large surplus of the domestic product on hand, and to this surplus has been added the large importations of lumber from Canada. This has overburdened our domestic market, demoralized the business, reduced prices, wages, and the number of days of employment.

That the lumber industry has suffered more during the past three years than any other is proven by the Weekly Review of R. G. Dun & Co., under date of January 8, 1897, in which it is stated:

Manufacturing failures average \$28,806 each and increased 34 per cent; trading failures increased 18 per cent and averaged only \$9,606 each. Over four-fifths of the increase in manufacturing and trading failures was in lumber and manufacturing, which was 170 per cent; dry goods, 50; woolen manufacturing, 161; clothing trade, 20; shoe trade, 87; leather and shoe manufacturers, 167; grocery trade, 33; machinery, 70; milling, 117; furniture, 90, and printing, 97 per cent. In ten other branches the increase was moderate, and in five, with the unclassified manufacturing and trading failures, the liabilities were smaller than in 1895.

The business failures among lumber manufacturers, dealers, carpenters, and coopers during the last three years show conclusively the very bad condition of the industry.

## THE EFFECT ON LABOR.

Taking 371 establishments in Minnesota as an example of the effect of the depression in the lumbering business, we find from the census of 1890 that in that year 9,314 mill operatives worked an average of nearly six and one-half months and received an average wage of \$43.75 per month. Under ordinary conditions, a large proportion of these mill operatives are employed in the woods during the winter season, but under the existing depressed condition of the lumbering business both the mill season and the woods season have been greatly lessened.

During the year 1896 the data relating to wages are in strong contrast to that presented by the Eleventh Census. Six concerns in Minnesota and Wisconsin show the following decrease in days employed and in wages paid:

	Days employment given all employees.		Amount paid in wages.	
	1892.	1896.	1892.	1896.
1	72,330	42,160		
2	75,309	34,176	\$141,477.75	\$64,935.90
3	53,656	40,230	99,798.53	73,570.95
4	54,187	23,638	87,902.71	39,230.57
5	25,402	24,148	59,585.51	54,282.28
6	136,192	70,296	210,310.92	110,674.74

From these figures it appears that in 1892 these six concerns furnished 417,066 days' employment to labor, while in 1896 they furnished only 237,648 days' employment, or a loss of 179,418 days' employment. It also appears from the foregoing figures that in 1892 these six different concerns paid in wages \$578,975.42, while in 1896 they paid only \$312,894.44, a loss in wages to the laboring man in the communities where these six plants are located, in one year alone, of \$266,080.98.

The lake group of States, which produce the greater part of all white pine cut, in 1890 paid in wages \$48,315,593. If the percentage of decrease shown by the companies above referred to holds good for the entire lake group, it would show a shrinkage of wages paid to labor of between twenty and twenty-three million dollars. That this is very likely to be the case is borne out by the facts showing the shrinkage in the cut for the past year. The four districts of Duluth, Superior, Minneapolis, and west Wisconsin and Saginaw show a falling off in 1896 from 1895 of over 850,000,000 feet, while Menominee, Marinette, Chequamegon Bay, and Merrill and Wausau show a falling off of 149,000,000 feet, or a total of 1,000,000,000 feet from the five districts reported.

## THE CONDITION OF THE LUMBERING BUSINESS IN CANADA.

The only market for Canadian lumber, except the better grades of white pine exported to Great Britain, is the United States. If the lumbermen in this country and the lumbermen of Canada produce lumber under equal conditions as to labor cost, etc., as claimed, then the business of the Canadian lumbermen must have suffered from the general depression of the business here in the same way and to the same extent as the business of their American competitors has suffered. If, on the other hand, the Canadian can produce lumber cheaper than the American, then the lumbering business in that country for the past four years has not felt the effects of the business depression here to the extent that the lumbermen of this country have. What are the facts? Pamphlet No. 10, published at the Ontario general election, 1894, informs us that—

The lumber trade is of Dominion concern, and perhaps ranks second in importance to Canada. All the provinces are more or less affected by the prices obtained and the markets available for sawed lumber, but to Ontario, Quebec, New Brunswick, and British Columbia—all large exporters of sawed lumber—the prosperity of the trade is of vital importance. The United States is practically our only market for sawed lumber and shingles, and its value may be judged from the fact that Canada sent there last year sawed lumber valued at \$8,900,000, and 357,000,000 shingles, valued at \$734,000, or a total value of \$9,634,000.

Speaking of the necessity for abolishing the Canadian export duty on logs as a consideration for the reduction of the duty imposed in this country upon Canadian lumber from \$2 to \$1 a thousand, this pamphlet says:

Under the operation of this system of reciprocity the money gain to Canadian lumbermen on lumber sent to the United States in 1892, including shingles, by reason of the reduction of the duty, would be \$1,000,000; but this is only a small part of the gain. The rougher grades of lumber were now capable of being marketed there at a profit, and it has been estimated by Colonel O'Brien, member of Parliament for Muskoka, and other competent authorities, and corroborated by the reports of the Crown timber agents and rangers of the Government, that from 30 to 50 per cent more pine timber is cut and marketed from the same area of licensed territory than was formerly the case. This means a large increase in the revenue of the province for material which had formerly gone to waste. It also means a large increase in the employment of labor and markets for produce.

In addition to the foregoing, we have the further fact which shows how the lumber industry of Canada has prospered during the past four years. That fact is found in the enormous increase in the importation of lumber from Canada from 514,461,000 feet during the fiscal year ending June 30, 1894, to 786,309,000 feet during the fiscal year ending June 30, 1896, an increase of 271,848,000 feet. Notwithstanding the fact that the consumption of lumber in this country was tremendously curtailed, that the United States has not in any twelve months since June 30, 1893, consumed to exceed 75 per cent of its annual consumption for several years prior to 1893, the Canadians have greatly increased the sale of their lumber in this market. Mills have been erected on Canadian soil, the employment of labor has increased, and the business has been more prosperous than for many years prior to 1890, while the American lumbermen have been obliged to curtail their output, reducing the number of days of employment as well as the wages of those employed. While they have been struggling to dispose of their product, especially their low-grade lumber, their Canadian competitors have maintained the volume of their sales, and have in fact increased them in the American market.

It is a remarkable fact that while our lumber has been lying idle in the piles awaiting buyers, the Canadian product has been moved in larger volume than ever before across our borders. This indicates clearly the danger to the lumber industry of our country from this formidable competition, which competition in the last few years has just commenced to be felt.

## DIFFERENCE IN LABOR COST.

A great deal has been said about the labor cost of producing lumber here and in Canada. I shall not stop to consider this phase

of the question, except to present to the House the following comparative table of wages paid at the Curtis Mills at Three Rivers, Province of Quebec, and the rate of wages paid at the Mitchell & McClure Mill, at West Duluth, Minn.:

*Comparative statement of wages paid at the Curtis Mill, at Three Rivers, Province of Quebec, and those paid at the Mitchell & McClure Mill, at West Duluth, Minn.*

Occupation.	Curtiss.	Mitchell & McClure.	Remarks.
First foreman	\$1,900.00	\$2,000.00	Per year.
Second foreman	1.75	2.00	Per day.
Engineer	1.50	2.25	Do.
Fireman	1.25	2.00	Do.
Band sawyer	2.00	5.00	Do.
Butcher	1.50	2.50	Do.
Carrington	1.00	1.75	Do.
Clearing saw	1.15	1.75	Do.
Clearing slabs	1.00	1.25	Do.
Gang sawyer	1.60	2.50	Do.
Tail sawyer, gangs	1.25	1.50	Do.
Clearing gangs	1.10	1.75	Do.
Edgermen	1.40	2.25	Do.
Clearing edger	1.10	1.37	First man, per day.
Do.	1.00	1.37	Second man, per day.
Clearing edger (slabs)	1.00	1.37	Second man.
Trimmers	1.25	1.75	First man, per day.
Do.	1.15	1.75	Second man, per day.
Do.	1.00	1.75	Third man, per day.
Extra man	1.00	1.50	Do.
Log jacker	1.00	1.75	Do.
Log loader (chain)	1.00	1.50	Do.
Clearing refuse dumps	.75	1.25	Do.
Jobber (see Remarks)	3.50	4.62	This jobber oils the mill and keeps the lower part clean. He employs two boys, whom he pays. We pay for oiling \$3.25, and for cleaning \$1.37; in all, \$4.62.
Band flier (two bands)	5.00	5.00	For one band.
Band flier's assistant	1.10	3.50	Employs his own helper.
Filer for two gangs	3.50	9.75	Head flier, \$6; two helpers, \$4.75.
Filer for two gangs and a circular.			
Boom men	1.00	1.50	
Blacksmith	1.30	2.25	
Carpenters	1.25	2.25	
Watchmen	8.00	2.50	Per week, seven days.
Do.		1.62	Per day.
Teamsters and common labor.	1.00	1.25	Do.

From this statement, which shows the average wages paid in this country and in Canada, it is very evident that the rate of \$2 a thousand upon rough lumber does not equal the difference between the labor cost of producing lumber here and in Canada. In further corroboration of this fact, however, I desire to quote from the remarks of Hon. PAGE MORRIS, before the Committee on Ways and Means, Thursday, December 31, 1896, when the committee was considering this schedule:

Now, again, this question was asked, What about the wages? Now, during the canvass last fall, and there is a gentleman here who will corroborate my statement—as I say, I have not had an opportunity to verify these statements by the official statistics as I ought, but I think it will be shown, when we come to present the memorial here, that in the lumber milling the differences in the wages paid to the laborers in this country will not average less than 30 per cent in our favor, and I think we will go up to 50 per cent. I know that last fall, when the political campaign was being made, I inquired from lumbermen at my own home, and I had lumbermen in Canada written to without letting them know what the purpose was, in regard to what were the wages paid to laboring men in the mills in Canada and in our own mills. At our place we range from \$5, the highest wages per day, down to \$1.25, the lowest wages, paid to labor. In their mills they range from \$2.75 to \$3 a day down to 50 cents. That is my recollection of the figures. When we averaged it, we found that the wage was \$1.30 in this country as against \$1.20 in Canada. Now, the difference between \$1.30 and \$1.20 is 50 cents, and 50 cents is exactly 50 per cent of \$1.20, so that our wages were exactly 50 per cent higher in this country for the mill products at that time, and the wages were less than they had been, on account of the depression in the industry, but they were just exactly 50 per cent greater in this country than in Canada.

Now, what in regard to the wages of the laboring men in the woods? I have been recently informed, Mr. Chairman, that the wages in this country at the present time for men in the woods range from \$16 to \$24, and that the wages in Canada for men in the woods range from \$8 to \$18. There is the difference at the present time. Four years ago, in 1892, the lowest wage we paid in the woods was \$20 to men, and their board, and it ranged from that to \$40. There is the difference between the two conditions of 1892 and the trade conditions of 1896, the difference of from \$16 to \$24 as compared with \$20 to \$40. That is as to the wages in the woods in this country. Those are the labor conditions. Now, Mr. Chairman, after all, whether a man be for tariff for revenue only or a tariff for protection, they all say—at least they do up in our country; I do not know what they say in the balance of the country, as I have been kept pretty busy attending to my own affairs in my own country—but they all say, "We are perfectly willing to give you a discrimination."

These rank tariff-for-revenue-only men all say, "We are perfectly willing to give you a discrimination which will compensate for the difference in what we paid for wages and what the Canadians or anybody else pay for wages." When they want the laboring men's votes they talk just that way. If they be sincere, let us make a little computation about that. You take a ten-dollar plank—and I put it at even figures because it is easier to compute—you take a set of planks that are worth \$10 a thousand, and I am informed by the lumbermen in the Duluth district from \$6.50 to \$7—well, I will put it a little lower, say \$6 to \$6.50—of that represents the labor. Now, if the wages of this country be from 30 to 50 per cent higher than they are in Canada, if we

take 30 to 50 per cent of the \$6, you will find that it will be just about \$2; it will not be any less than that, and that is just exactly what we ask. That is just exactly the discrimination we ask, and we ask that, leaving out of consideration all these fixed charges about stumpage and fire risks and taxes, insurance, and all that.

Another reason for restricting the importation of Canadian lumber by the imposition of this duty is the fact that almost all of the lumber imported from that country is low-grade white pine. Every foot of this class of lumber imported displaces in our market not alone the lower grades of our white pine, but it also displaces our hemlock, yellow pine, cedar, fir, and other varieties of low-grade lumber with which it competes. So far as the higher grades of white pine are concerned, no duty whatever is necessary to preserve the American market for the American producer, as very little, if any, of it is imported. Canada exports all of her high-grade white-pine lumber in the form of deals and squared timber to Great Britain, where it is manufactured into the various varieties of lumber used for building purposes.

It is this low-grade lumber coming from Canada which, when added to our surplus stock of the same grade, depresses the market and demoralizes the lumbering business of this country. When the lumberman buys a tree, he buys all the different grades of lumber which that tree will produce. If he has a market for only the better grades, he will either not manufacture it at all, or if he does, he will be compelled to demand a price for that grade of lumber which he can dispose of that will not only pay for the cost of manufacturing it, but will also pay him for the cost of that part of the tree which he is unable to dispose of.

We sincerely believe, Mr. Speaker, that by the imposition of this duty upon rough lumber, which is the lowest duty imposed by this bill, that the importation of the Canadian product will be restricted; that the American market will be preserved for the American producer; that the consumption of American lumber will be increased, giving more employment and better wages to labor, and that in this way it will materially aid in the restoration of that prosperity which our people have always heretofore enjoyed under the policy of protection.

#### The Coal Strike—Reply to Democratic Exultation.

#### SPEECH

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration the conference report on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. GROSVENOR said:

Mr. SPEAKER: Among the other florid and luminous contributions that have been made to the debate on the Democratic side of this House has been an iterated and reiterated statement concerning the unfortunate condition of the coal miners of the West and Middle West at this time. There is a great strike on and many thousands of miners are protesting against the present rate of mining and are appealing for increased wages.

I shall not discuss at great length the real issue between the miners and the operators, nor enter into details of how this matter has progressed, but will content myself with briefly pointing out the cause of the strike and the only cure, in my judgment, that is valuable. I will venture, however, to say that the wages which were being earned and paid to the miners of the section of the country which I represent were insufficient and inadequate, and that, judged by any standard of human action, the miners of that section were justified in a strong and determined effort to procure higher wages and better conditions. The trouble is a complicated one, but more than any other single reason and all reasons put together, as the cause of this strike, is the enactment in August, 1894, of the Wilson tariff law.

At the time of the enactment of that measure the rates of mining in the western Pennsylvania fields, which are the present source of all our troubles, in thin-veined districts was 72 cents and in thick-veined districts 65 cents per ton. During the same period the rates in Ohio and Indiana were 70 and 75 cents, respectively. Now the rate is 51 cents, with a reduction proposed in Ohio to 45 cents per ton. You ask what has caused it. The operators in the coal fields are always willing to continue mining coal whenever they can sell it at a profit over and above its cost, and these conditions exist when the demand is equal or greater than the supply, and these conditions ceased to exist when the demand falls off and the supply continues. There is no business in this country

more completely governed by the inflexible law of supply and demand than is the business of coal mining.

Mr. Speaker, I am not going to elaborate. Everybody knows what it means. Everybody understands this proposition who knows anything about the business. Where is the market and what is the market for the bituminous coal of Ohio, Pennsylvania, Indiana, and Illinois? These markets lie in the great cities and small cities, in the large towns and small towns, of the Middle West and the points around the Great Lakes and way up into Canada. This answers the question, Where is the market?

Now, what is the market? The market is the household, the factory, the rolling mill, the forge, the foundry, the electric-light plant, the gas plant, the railroads, the steamships, all the mighty enginery of manufacture and commerce which are warmed, heated, put into motion, or driven by steam or electricity. The great power of progress, the mighty moving enginery of civilization, is in heat. As somebody has well said, the greatest controlling condition, the greatest differential proposition, between the brute and the man is that the man can set fire and control and utilize it and the brute can not. And these fires in every form are patrons and promoters of the industry of coal mining.

Now, then, having thus described the location of the market and what the market is, let us see what the Democratic party did. It destroyed one-half those fires by the repeal of the McKinley law and the enactment of the Wilson law. It shut up the glass works, it barred the door to the iron and steel manufactures, it closed up a large number of the gas works, and shut down electricity and drove it out of action; it curtailed the business of the railroads, the spindles ceased to hum, the smokestacks ceased to emit their volumes of smoke testifying that down below there were fires and the consumption of coal. This is what the Democratic party did. It is not worth while to discuss it any further. You all understand it. It paralyzed business, and the price of coal mining fell.

Fell why? Fell because there was no market for the coal; fell because the production was greater than the consumption; fell because out of the markets that I have described were driven the agents of the coal miner, who were selling his product. There was no call for his product, and the blight that began at the factory, at the rolling mill, the poisonous vermin of inaction, of indolence, of idleness, rolled in a deadly tide back over the business of trade and commerce, down to the railroad lines, down to the steamship lines, down until it paralyzed the pick of the miner in the coal mines of the country. I speak with feeling. I speak with interest. I speak because I have seen it. I have observed it. I have seen the coal miner who in 1893 and 1894 was mining the coal of the valleys where I live at 75 cents pieceously paying for labor at 45 cents a ton, and I have seen manhood blush and American sentiment pale before the inflictions of poverty that came upon that industrious people.

Do not tell me that the miner has committed indiscretions. That may be so, and you may condemn it, but I say the political power in this country that was hurled at him like an avenging Nemesis is to blame for his sufferings to-day. I am going to insert here, Mr. Speaker, some evidence. The chosen representative of the great mining industry of the United States is President Ratchford. He is the president of the United Mine Workers' Association of the United States. He is a man of good character, clear head, warm heart, and thoroughly devoted to the interests of his people. He has made a statement, which I reproduce, and which is as follows:

President Ratchford, of the United Mine Workers' Association, in a communication to the New York Herald dated July 3, says:  
"A miner's wages in the western Pennsylvania field range from 54 to 47 cents per ton in thin-veined districts, and from 30 to 28 cents per ton in the thick-veined. In 1893 the mining rate in thin-veined districts was 72 cents, and thick-veined 66 cents per ton. During the same year the rate in Ohio and Indiana was 70 and 75 cents, respectively. Now it is 51 cents, with a reduction proposed in Ohio to 45 cents per ton. This ratio holds good in a general way all along the line; Illinois, a portion of Iowa, eastern and central Pennsylvania, and the Virginias are all equally affected."

"These figures indicate a reduction in rates for mining of from 20 to 30 cents per ton since 1893. It was in August, 1893, that the Congress which framed the Wilson tariff law met and the work upon the bill which reduced the coal tariff 35 cents per ton was begun. It was promised that that bill would take the entire duty off coal, and the bill as framed by the Ways and Means Committee and passed by the House did remove the entire rate of 75 cents per ton and placed coal upon the free list. The Senate, however, restored a part of the duty on coal, making the rate 40 cents per ton, and the bill when it became a law reduced the tariff rates on bituminous coal 35 cents per ton, the rate under the McKinley law having been 75 cents per ton and the rate named by the Wilson law being 40 cents per ton."

#### LOW TARIFF, LOW WAGES.

"The fact that the entire reduction of wages which miners are complaining of has occurred since the beginning of work upon the Wilson tariff law, and that the reduction is nearly the same as the reduction made in the tariff by that act, is of itself a remarkable coincidence, and would probably warrant the assumption that the tariff reduction caused the reduction in wages."

"Before the passage of the Wilson tariff bill a visitor to Newport News, the seaboard terminal of the Chesapeake and Ohio Railway, might have seen at any time from four to a dozen coasting vessels lying at the docks awaiting the arrival of coal trains from Virginia and West Virginia loaded with coal destined to be shipped to New York and New England. No sooner had the Wilson tariff taken effect than all these vessels disappeared as completely as though they had been engulfed in mid-ocean. The reason for this transformation scene was simply this: The rate of duty on coal under the McKinley law was such as to exclude foreign coal from New England or Eastern ports, but

the reduction of rates to 40 cents per ton by the Wilson law permitted Nova Scotia coal to enter the Northeastern Atlantic ports at such low rates that the West Virginia coal could not compete with it. The Nova Scotia coals are cheaply mined, and as many of the mines extend under water, it is practicable to load the coal directly on vessels and thus place it in any of the Eastern United States ports at very low prices.

#### NOVA SCOTIA COAL COMES IN.

"The result of this reduction in the tariff was that the Nova Scotia coals took the place in the East of that from the West Virginia mines, and that the West Virginia mine owners and operators were compelled to seek a market elsewhere. Railroad rates to the West were reduced, and coal which had formerly gone to New England went West and came into competition with the coal of Ohio, Indiana, and Illinois. The price of coal in the Western markets tumbled; then followed a rate war between railroads and between mines and mine owners; a reduction in wages for mining at the East, followed by reductions in the West, until miners' wages became lower than they had ever been known under the protective policy of the Republicans."

"Other causes, also resulting from the Wilson law, have operated with equal certainty in keeping down the prices which it was possible to pay for mining."

"The suspension or reduction of work in factories in all parts of the country, resulting from the operations of the Wilson law, caused a great reduction in the demand for coal and combined with the depressing effect of importations to still further reduce the demand for the labor of the miners and the prices paid for their services. While the amount of coal actually imported is only about 4,000,000 tons a year, or sufficient to throw out of employment about 8,000 miners, the loss in markets to American mines by the suspension of manufacturing was much greater."

#### The New York Tribune adds:

The present strike of the coal miners is looked upon with great alarm by Democratic leaders here. It calls attention directly and pointedly to the fact that their legislation is beyond question responsible for the reductions of wages, all of which, according to President Ratchford, have occurred since the inception of that legislation. Not only is the Democratic party responsible for the reduction of 35 cents per ton, which caused this reduction in wages, but many of the men now most prominent in its councils and as its leaders urged and even demanded a removal of the entire duty on coal, placing it absolutely upon the free list, which would have undoubtedly still further reduced the wages of miners."

Mr. William J. Bryan was one of the most earnest and active members of the wing of his party which demanded the removal of the entire duty on coal, saying in a speech in Congress, January 13, 1894:

"The duty on coal is indefensible. \* \* \* The duty on coal is nothing but a subsidy, which the people along the seacoast are compelled to pay to the transportation companies. \* \* \* Take the tariff off coal, so that the New England manufacturers can buy it for less, and they can manufacture more cheaply; and then, by cutting down the tariff on the products of their factories, we can compel them to sell at a lower price to the people of the South and West."

Here is the whole of it. Here is the whole of it, Mr. Speaker, and no man can gainsay it. The evil lies right at the door of Democratic free trade, and this is a raw material. I am delighted that we have driven the Democratic leader of this House headlong in a precipitous flight away from the old doctrine of free raw material. He sees the rising storm of repudiation. He is talented and clear-headed in his observations, and seeing that one of the outposts of Democracy must be abandoned, with eloquent protest and ingeni us apology he has dismantled the guns upon the old wooden fort, he has blown up arsenal, wrecked the battlements, and withdrawn to what he deemed a more secure position.

But it is the death rattle in the throat. It is the quivering appeal of the dying victim. It is the stentorian breathing of the abandoned sufferer. Without the dogma of free raw material Democracy, upon this question, is a humbug. I point to the wool of Texas as being a powerful argument on the subject of free raw material; I point to the pine of Georgia; I point to the cotton of South Carolina; I point to the sugar of Louisiana; I point to the citrus fruit of California, as indicative of the decaying fortunes of Democratic dogma, and there are others.

I do not know what will be done by the Democratic party in 1900. They have an adjustable platform. They are unique in fitting themselves to any rising storm. The dweller upon the prairie of the far Northwest does not with greater facility and rapidly adjust himself to the dugout at the appearance of a cyclone than does the Democratic party readjust itself to the rising storms of public opinion.

Mr. Speaker, in this Hall in the contests gone by, and yet not very far gone by, we have listened with profound interest to the discussion of this free raw material question. I do not mean the recent division of time upon that question between the two distinguished leaders on this floor. I do not mean that; but I refer to the debates when the distinguished boy orator participated. If that distinguished and eloquent gentleman has one proposition in his political creed that is better settled in his own mind than any other proposition it is his untiring, zealous advocacy of free raw material.

His eloquence upon this floor in defense of that theory of tariff taxation was beautiful and impressive beyond my power to describe; and now, when he faces the declaration of the new departure, he will feel like retiring to some political convent and there forever abjuring the world and all its sins or else devoting himself to the task of meeting the progress of Democratic growth and evolution. But this is a matter in which the average Republican is not deeply interested, and for the present I transfer the controversy to the distinguished gentlemen who are the most nearly and deeply interested in the issue of the contest, merely suggesting to them not the cruel declaration of the fabled woman when her

husband and bruin were in a contest, but the more civilized and charitable motto of the English sporting world, "May the best man win."

And now, Mr. Speaker, in conclusion, the coal miner can see this. He may be hungry, but he is intelligent. His family may suffer, but he can read. His interest lies in the vast development of our industrial system, and he knows enough to know that the volume of the mining of coal depends upon the volume of the industrial development of the country, and he knows enough to know that the policy of that party which seeks to introduce the handiwork and production of foreign labor into this country is his enemy, and he knows enough to know that that party which demands the American market for the American producer is the party that will open the factory and start the fires of industry and prosperity; and as a member of the Republican party, jealous of its future, proud of its history, confident of its present position, I am ready to submit the issue to the laboring men of the United States.

### The Tariff.

### SPEECH

OF

HON. WILLIAM F. LOVE,

OF MISSISSIPPI.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. LOVE said:

Mr. SPEAKER: The question for our consideration is whether or not we will adopt the report of the conference committee.

This bill, after having been considered in the Senate for over two months, has been returned to the House with more than 800 amendments. But under parliamentary practices and usages in this body we are not permitted to sift the chaff from the wheat, retaining in the bill those amendments that meet our approval, but we must accept or reject the report of the conference committee as a whole. I would like to retain in the bill some of the Senate amendments that have been rejected by the committee. For instance, bagging and ties, gunny sacks, floor matting, burlaps, and paris green were again put on the free list by the Senate, which was about the only favoritism shown the Southern farmer in this bill. These are necessities that our people are compelled to buy, and the action of the committee in placing them on the taxable list puts an unjust burden on one class of the people, and those least able to bear it.

There can be no justification for this action. It is indefensible either from a protection or revenue standpoint. It will be a direct tax upon those who will receive no benefits, either directly or indirectly, from the measure. Binding twine still remains on the free list—to which we do not object—but why this discrimination? The sacks used for transporting grain and fertilizers alone will cost the farmer, by this increased duty, a half million dollars, while the increased cost on bagging and ties will add nearly a million more.

Agriculture for a century has been paying, through a tariff tax, special tribute to manufactures. Agriculture has been furnishing the great bulk of our exports. From 1820 to 1890 the average was 81.53 per cent; from 1880 to 1896, 71.98 per cent were the products of agriculture. Last year our exports amounted to \$275,000,000, the largest in our history; 66.6 per cent was from the farm. These large exports have gone abroad to settle the balance of trade, to sustain our credit, to supply the National Treasury, and give commercial standing to this great nation, which could not have lived one year without it.

A republic which practices injustice and discrimination against an interest so important as this, which increases their burdens until this great industry ceases to be profitable and the farms are covered with mortgages, driving the discontented occupants to the already crowded cities and towns, is sapping its foundation and will ultimately lead to its own destruction.

### COTTON.

A tariff of 20 per cent on raw cotton was also added by the Senate as a protection to the Southern planters, but it is a sham and delusion, like other agricultural schedules of the bill. The price of all cotton is fixed in Liverpool, where two-thirds of the American crop finds a market, just as the price of our corn and wheat is fixed abroad, and we can not raise the price by a tariff tax. Of the 55,000,000 pounds of cotton imported into the United States last year, 43,000,000 pounds did not and could not compete with

American cotton. The sea-island cotton is the only staple with which the Egyptian article is supposed to come into competition, because it is only in the manufacture of certain classes of goods that the Egyptian staple can be used.

Statistics show that just in proportion as American consumption of Egyptian cotton has increased, in the same proportion has the American consumption of sea-island cotton increased. Our importations of long-staple cotton last year were 57,000 bales. Our exportations of sea-island cotton were 49,651 bales. If there were any benefits whatever to be derived by the cotton planters from this cotton tax, they were more than offset by the compensatory duty of 10 per cent on cotton goods given the manufacturer at once in lieu of the cotton tax, and in addition to the 40 per cent already allowed in the House bill, enabling the manufacturer to advance the price of cotton goods to that extent, not only on the wares made from sea-island cotton, but on most of the fabrics in the cotton schedule which the farmer must buy, and likewise every other consumer. Instead of its being beneficial to the farmer, it would be an additional burden.

### WOOL AND HIDES.

The Senate increased the duty on wool and put a tax on hides, but the manufacturer of woolen goods and the manufacturer of leather were at once allowed in lieu a compensatory duty which the consumer pays.

The manufacturer of woolen goods is given 55 per cent for the sake of protection, and in lieu of 11 cents per pound protection given in this line on the better grades of wool, the manufacturer is given 44 per cent additional. It is estimated that the cost of woolen goods annually under this bill will amount to \$175,000,000 more than under the present law; \$50,000,000 of this will go into the Treasury, leaving \$125,000,000 to the manufacturer. The present law gives 10 per cent protection on leather and 30 per cent on harness. This bill doubles the protection on leather and gives harness a protection of 45 per cent, while raw hides have only 15 per cent, and an equal drawback is given on leather exported when manufactured from imported hides, which is calculated to increase the demand for foreign hides and lessen the demand and price for domestic hides.

So we have an object lesson that whenever raw material is put on the dutiable list in this bill, a corresponding increase is added to the manufactured article, which becomes an additional tax, pure and simple, upon consumption. This does not tend to equalize the burdens of taxation. No exchange is given. It is not a readjustment of existing benefits among the favored few "so as to operate equally throughout the country and not discriminate between classes or sections," but it is a direct increase to the burdens already borne by the masses.

### LAND PLASTER.

The Senate has also added to the dutiable list, at the rate of \$1 per ton, but which the committee fixes at 50 cents per ton, land plaster or gypsum, an article largely used by the farmers in their fertilizers, an article that has been on the free list for more than half a century. The fertility of our soil is being rapidly exhausted, and fertilizing is a necessity. This amendment will tax the farmer on the material used to produce bread and meat, and then he will be forced to sell that bread and meat at free-trade prices.

The farmers of the United States are taxed on all they buy and are forced to sell their staples in competition with the cheapest labor in the world's free-trade market.

### PARIS GREEN.

The tariff on paris green has been raised from 12½ to 25 per cent, which is another article of great importance to Southern planters.

### SUGAR.

The country has been led to believe that the Senate amendment to the sugar schedule had been greatly reduced by the committee and that a victory had been won over the trust; but such is not the case. There is a tax of \$1.95 on a hundred pounds of refined sugar that is fixed and absolute. Then, there is also a tax of 38.3 that is imposed upon sugar coming from countries giving a bounty equal to that. These exactions will amount to over \$75,000,000 per annum that must be paid by the consumers of sugar. The trust gets a differential of 66 cents on the hundred pounds of refined sugar, which brings to the trust over \$4,000,000 annually, while its net annual dividends, according to its own official report, amount to \$7,125,000, this being over 30 per cent on the actual capital invested.

Sugar stock has continued to advance since this bill has been in conference, and has advanced 11 points since the report was made. Shares are worth \$36 more than they were a week since. Could stronger evidence be produced than this to prove that the trust has won the victory?

With these facts before us, the Republican members have increased this enormous bounty to this gigantic trust, which, like the pestilential vampire, is sucking the very lifeblood of the nation and poisoning every artery of commerce.

Vast quantities of sugar, wool, and other articles have been

recently imported free, or at low-tariff rates, and the manufacturer will be permitted to sell them to the consumer at high-tariff prices, to advance the fortunes of those already immensely rich.

#### RATE OF DUTY AND NUMBER OF ARTICLES EMBRACED.

The tariff burden is greatly increasing both in the rate of its exactions and the number of articles protected. "Our infant industries," after a century of development, are unable to stand alone, and each year need additional nursing. Will we never reach the end? Will this iniquitous system with its increasing burdens be forever fastened upon us, and like the opium victim each day requiring larger doses to satisfy the morbid appetite.

The rate of duties of the first tariff bill, 1789, averaged about 5 per cent and included only about 75 articles. In 1840, under the Walker tariff, the rate was about 27 per cent and included about 1,200 articles. In 1865 the rate was about 47 per cent, including 2,000 articles. The McKinley tariff averaged about 50 per cent, including 4,000 articles. The Wilson tariff averaged 37 per cent, including a little less than 4,000 articles. And the Dingley bill averages over 57 per cent and includes 4,500 articles. The industries represented by these articles, which are expected to reap \$4,000,000 annually from this act, with a few exceptions, are located in a small area of this immense territory, and only about 8 per cent of our population is engaged in these industries that are really benefited by protection.

These favored industries furnish now only about 30 per cent of our export trade. Capital invested in the manufacturing industries increased 121 per cent from 1880 to 1890, while during that same period farm values shrunk from 30 per cent of the total wealth of the country to 20 per cent of the same. "The law can not make wealth, but the law can and does transfer wealth. Helpless to create, it is powerful to plunder."

#### REVENUE.

One of the main purposes of this bill as set forth in the title is to raise revenue, and yet we have over \$235,000,000 in the Treasury. The Democratic party believes that taxes should be levied for revenue only. The very object for a tax law is revenue, and a tax imposed on articles in such a way as to interfere with the compact between buyer and seller or that destroys honest competition, which is the life of trade (thereby increasing the price), unless it be for the benefit of the public Treasury, is unjust and unwarranted.

But this measure has a twofold purpose. It is also intended to protect the manufacturer and the trusts. And in order to do this successfully rates are fixed in many instances too high to produce revenue. The mere increase in the rates of duty does not necessarily increase revenues. High prohibitive duties bring no revenue, when importations are forbidden, competition barred, and the protected manufacturer controls the price of wares and wages.

The syndicates are allowed to impose taxes merely for their own aggrandizement. Pelf, not patriotism, dominates in many schedules of the bill.

#### COMMERCIAL WAR AGAINST FOREIGN COUNTRIES.

It is a declaration of commercial war against all foreign countries with whom we have trade relations, especially the Republics of South America, whose trade by this unwise policy is transferred to the countries of Europe, where it is sought and highly valued. This unfriendly policy is sure to arouse a spirit of revenge.

#### HIGHER PRICES AND LESS MONEY.

It is expected that the passage of this measure will increase the price of protected manufactured wares provided a home market can be found for them. How is the home market to be increased by tariff taxes when it is already supplied and an enormous surplus is going abroad? If our people are unable to buy at low values, how can they buy at high values? Should prices advance, more money will be needed for individual use and to facilitate trade. What increase of the volume of money have we to-day? Only that derived by the free coinage of gold, which is offset by the exports of gold. There is a certain demand for money, ever increasing as population grows. Our population is increasing rapidly, while our money per capita must be decreasing in proportion.

What is the remedy? Producing more money or by destroying one-half of that which we now have?

The bankers propose to remedy the condition by the retirement of all Government paper and the substitution of a bank currency under Government control, which no doubt would be good for the banks. More taxes and less money is expected to bring general prosperity. Can the American people be thus deceived?

#### ECONOMY.

Mr. Speaker, it has been well said that a most excellent source of revenue was to be found in economy and frugality in public expenditures, which are now enormous, and if they continue to grow in the future as in the past, we will be forced to resort to additional methods besides the tariff to raise the necessary revenue.

Our national expenditures have increased from 42 cents per capita in 1790 to \$1.36 in 1820, \$1.03 in 1830, \$1.41 in 1840, \$1.00 in 1850, \$3 in 1860, and about \$7.20 in 1896.

Tariff taxes are about to be largely increased on nearly everything the people eat, drink, wear, or use in production, and the public expenditures, instead of being diminished to meet the exigencies of the situation, are being increased and extended.

Let us seriously weigh the responsibility of our position, and with true allegiance to our trust dare to do our full duty, sacredly and patriotically, regardless of party affiliations or political spoils. Let us adopt the wise and patriotic utterances of the greatest of Englishmen, Mr. Gladstone: "Love of liberty for all, without distinction of class; creed, or country, and resolute preference for the interest of the whole people to any interest of narrower scope."

**Retrospective Legislation—This Performance will go down to the Future in the History of these Times as One of the Most Unpatriotic Acts with which the Country has been Afflicted.**

#### SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration the bill (H. R. 379) entitled "An act to provide revenue for the Government and to encourage the industries of the United States"—

Mr. GROSVENOR said:

Mr. SPEAKER: There is at this time coming to us from all the sources of information valuable knowledge of the fact that vast quantities of merchandise have been and are being imported into the United States in anticipation of the increased rates of duty to be levied and collected under the pending bill. It is estimated that \$40,000,000 which, under the ordinary course of business, would have come to the Treasury of the United States from imports has been anticipated under the lower rates of duty, and to that extent the Treasury will be defrauded.

Notably has there been an enormous incursion of free wool, enough, it is said by those who claim to know, to run the factories of the United States for two years and deprive the woolgrowers of any direct protection under the Dingley law; but still more notable and still more aggressive has been the action of the importers of sugar. By the process of flooding the country with their product and the delay in the passage of the tariff bill not less than \$16,000,000 worth of sugar will be added to that in the United States. Now, when the necessities of the Treasury are so great, the people of the country will be anxious to locate the responsibility for this result.

This bill was passed in the House of Representatives on the 31st day of March last, and is here to-day reported to this House for the first time after it has emerged from the grasp of the Senate, and it is the purpose of the managers here to pass this bill before we adjourn to-night, and thereby show to the country the deliberate purpose of the House of Representatives to stand by the interests of the people of the United States of America. There were in the month of April thirty days, in May thirty-one days, in June thirty days, and in July up to this time twenty days; in all, one hundred and eleven days since the House of Representatives passed this bill.

I am not complaining now of the length of time it took the Senate to present us with their views in the form of an amended bill. It was a gigantic work, which took long and arduous labor, and the committee of conference devoted itself with wonderful patience and industry to solving the differences between the two Houses; but in the meantime this importation has gone on. It was all foreseen by the House of Representatives.

Your Committee on Ways and Means understood perfectly that this rush of importation would occur, and so in order to protect the Government, in order that the Treasury might not be thus wronged and robbed, the House of Representatives placed in their bill section 27, which provided that the duties to be hereafter levied under this bill should take effect from the 1st day of April last, and provided a full and ample provision for the ascertainment and collection of such duties. Without waiting for discussion, at the demand of certain forceful influences, the Senate gave forth the proclamation to the importers that that section would be stricken out. They said in effect to the country, "We do not know what we shall levy as duties, but we do know that this retrospective legislation shall not be in the law when it is passed."

I do not complain of the Senate committee which struck out

this provision, for they did it for reasons that can not be answered, and I am not here in the spirit of fault-finding. Gentlemen who engaged in this effort and were successful doubtless believed that they were actuated by patriotic motives; but I have this to say: The effect of their motive has lessened the present revenues of the country \$40,000,000, and if there is a deficiency in the revenues of the Government for the fiscal year, the fault may properly be laid at this door.

And now that there may not be any misgiving on this subject by our friends, and that there may be no hesitation on the part of anybody to locate this wrong, and never forget it, I here present an argument in behalf of this legislation in a letter transmitted to me on the 28th day of April last by Hon. John Little, ex-attorney-general of the State of Ohio, and one of the best lawyers in the United States of America.

I add also that the substance of this argument was printed before the action of the Senate committee in the public press of the country, and I may add now that no lawyer ever said, so far as I heard or read, that this legislation was not perfectly proper so far as its constitutionality was concerned and so far as the power to pass it and to enforce it was concerned. It was a simple proposition easy of execution, and the argument is unanswerable. I will not indulge in absurd statements involving my opinion, as has been done by some passionate individuals, but I will say that this sort of legislation has been enacted over and over again by Congress and always upheld by the courts, and here is the argument:

APRIL 28, 1897.

DEAR GENERAL: I have examined, as you suggested, section 27 of the Dingley bill in respect to its constitutionality, with such care as my engagements allowed, and send you results.

Among the expressed powers granted to Congress is the power "to lay and collect taxes, duties, imposts, and excises." All the power of the people in this regard is delegated to Congress, subject only to such limitations as are prescribed in the Constitution itself. Within these limitations its legislative authority upon this subject is as ample and complete as that of the British Parliament, or as the people could possibly bestow. That the enactment of retrospective laws, both of a criminal and civil character, is the exercise of legislative power no one will deny.

The question then is, is the power given to lay and collect taxes, duties, etc., limited by that instrument so as to prevent retrospective enactments in reference thereto? The general power to tax is a sweeping one. It was said by the great Marshall in that mine of Constitution lore, *McCulloch vs. Maryland*, that the power to tax is the power to destroy, and the truism was repeated by Chief Justice Chase in the tax cases, I believe, and has been reiterated over and over again. Any legislation within this power not prohibited is allowable.

There are three classes of retrospective laws prohibited by the Constitution, namely: Bills of attainder, ex post facto laws, and laws impairing the obligations of contracts. All three are prohibited to the States, but only the first two to Congress. (*Miller, J., in Kring vs. Missouri*, 107 U. S., 227.)

There is no express and no implied inhibition against Congress passing laws impairing the obligations of contracts. (*Knox vs. Lee*, 12 Wall., 633; *Mitchell vs. Clark*, 110 U. S., 633.)

If Congress then has not the power to pass the retrospective provisions of section 27, it is not because it may result in the impairment of contracts express or implied, but because they are in their nature ex post facto. But they are not of this character. What are ex post facto laws, within the meaning of the prohibition, was settled by the Supreme Court of the United States a hundred years ago in the leading case of *Calder vs. Bull*, 3 Dall., 380, which has been unvaryingly adhered to and recognized ever since in repeated decisions of that court, among which are *Fletcher vs. Peck*, 6 Cranch, 128; *Watson vs. Mercer*, 5 Peters, 110; *Carpenter vs. Penn.*, 17 Howard, 461; *Lock vs. New Orleans*, 4 Wall., 172; *Kring vs. Missouri*, 107 U. S., 227; *In re Sawyer*, 124 U. S., 219; *Medley, petitioner*, 134 U. S., 171; *Duncan vs. Missouri*, 152 U. S., 382; *Gibson vs. Missouri*, 162 U. S., 590.

Justice Chase, delivering the opinion of the court in the *Calder-Bull* case, defined ex post facto and retrospective laws. He said:

"I will state what laws I consider ex post facto laws within the words and intent of the prohibition:

"First. Any law that makes an action done before the passing of the law, and which was innocent when done, criminal, and punishes such action.

"Second. That aggravates a crime or makes it greater than it was when committed.

"Third. Every law that changes the punishment and inflicts a greater punishment than the law annexed to the crime when committed.

"Fourth. Every law that alters the legal rules of evidence and receives less or different testimony than the law received at the time of the commission of the offense in order to convict the offender.

"All these and similar laws are manifestly unjust and oppressive. In my opinion the true distinction is between ex post facto laws and retrospective laws. Every ex post facto law must necessarily be retrospective, but every retrospective law is not an ex post facto law. The former only are prohibited.

"Every law that is to have an operation before the making thereof, as to commence at an antecedent time, or to save time from the statute of limitations, or to excuse acts which were unlawful and before committed, is retrospective."

This case went to the Supreme Court from Connecticut. In 1795 the legislature of that State by resolution set aside a decree of a probate court, entered two years before, disapproving and refusing record of a will, and allowed a new hearing after the time had elapsed for the same under the then existing law. The rehearing resulted in the probate of the will, and thereby changed the ownership in considerable degree of an estate. In other words, it divested vested rights—vested under laws in force before the retrospective act. Yet the latter was upheld by the Supreme Court, it being held that while the law was retrospective, it was not ex post facto, and therefore not prohibited.

The case of *Carpenter vs. Pennsylvania*, supra, originated in this way: In 1850 the legislature of that State passed a law construing and enlarging the scope of an act of 1825 relative to taxes on successions. By the latter act a succession tax was laid upon property as of the year 1849, not liable therefor under the former act. Still the law (1850) was upheld both by the supreme court of the State and by that of the United States on the doctrine announced in the *Calder* case. The latter court said:

"The act of 1850 in enlarging the operation of the act of 1825 and by extend-

ing the language of that act beyond its legal import is retrospective in its form; but its practical agency is to subject to assessment property liable to the taxation to answer an existing exigency of the State." And further: "But if the act of 1850 involved a change in the law of succession, and not as a fiscal imposition, this court could not pronounce it an ex post facto law."

Thus we have a retrospective law in effect divesting or making provision for divesting vested rights and one laying an additional back tax on property upheld as not within the prohibition of the Constitution of the United States.

The line of decisions under this head is unbroken. You, in my opinion, well stated in the House that the recent case of *United States vs. Burr* (139 U. S., 78) is in accord with it. All the cases hold that for a law to have a retrospective operation the intention of the legislature to that end must be clear, unmistakable, and imperative. Chief Justice Fuller in this case, quoting and adopting the language of the court in *United States vs. Heath* (3 Cranch, 413), says:

"Words in a statute ought not to have a retrospective operation unless they are so clear, strong, and imperative that no other meaning can be annexed to them, or unless the intention of the legislature can not be otherwise satisfied."

He then proceeds to show that it was not the intention of Congress that the Wilson bill should take effect August 1, it having become a law on the 28th, and that such a construction would make parts of the act inoperative and incongruous. But it stands out clearly on every page of the opinion that if such had been the manifest and unmistakable intention of Congress the law would have been held to take effect on the 1st instead of the 28th of August, except as to the sections imposing penalties. To have given them retrospective operation would be to sanction ex post facto legislation.

The Chief Justice, as to these sections, therefore (page 85), most significantly remarks: "Of course these sections can not be given a retroactive effect according to their terms," thereby implying that the others might, had such been the purpose. In fact, the court says in terms that "the question is not one of construction, but of intention as to the operative effect of this act;" not one of constitutional power so to legislate, but one as to how Congress intended to legislate, the power not being questioned.

While the power of Congress to enact retrospective legislation, not of an ex post facto or bill-of-attainder character, in respect of subjects falling unrestrictedly within its legislative cognizance, as the power to levy and collect duties, seems, therefore, so patent and well established as to make further discussion needless, it is interesting to note how completely the doctrine on which the decisions are based is embedded in our institutions. The important distinction between ex post facto and other retrospective laws, observed by the Constitutional Convention (see *Madison Papers*, 1300, 1450, 1579) and by all the leading law writers from Blackstone down, has been recognized from the colonial days to the present.

Maryland and North Carolina, in 1776—facts mentioned in the early cases—put this clause into their constitutions:

"That retrospective laws punishing facts committed before the existence of such laws, and by them declared criminal, are offensive, unjust, and incompatible with liberty; wherefore no ex post facto law ought to be made."

Tennessee carried this into her constitution in 1796, and Florida into hers in 1824, and all have since maintained it.

Massachusetts declared in her constitution, 1780:

"Laws made to punish actions done before the existence of such laws, and which have not been declared crimes by preceding laws, are unjust, oppressive, and inconsistent with the fundamental principles of a free government."

The first constitution of Ohio, 1802, simply forbade the enactment of ex post facto laws; but in that of 1851 the prohibition was broadened and the passage of "retroactive laws," with some qualifications, was forbidden.

The Missouri constitutions, from the first (1820), have provided—

"That no ex post facto law, nor law impairing the obligation of contract or retrospective in its operations, can be passed."

Texas, from her first constitution, 1845, has maintained a similar provision in all her fundamental laws, prohibiting in the same section both ex post facto and retrospective laws.

The first constitution of Georgia, 1796, simply prohibited ex post facto laws; that of 1865 forbade these and also "retroactive laws injuriously affecting any right of the citizen." This was significantly omitted in the revision of 1868.

The constitution of Colorado, 1876, provides "that no ex post facto law nor law . . . retrospective in its operation shall be passed by the general assembly."

While most of the State legislatures have the power to pass retrospective laws which are not ex post facto, they are far more restricted in the exercise of this power than is Congress, because of the inhibition against impairing the obligation of contracts applicable to them all, and sometimes also because of local preventive provisions.

Because of such restrictions not applicable to Congress, retrospective legislation, where allowed in the States, is largely confined to laws of a curative nature. There is a great multitude of decisions by the State courts, based upon such restrictions, which throw no light on the general question under consideration. We have a number and some variety in Ohio. We are inquiring not what may be done by the States under their several constitutions, but what can be done by the United States under its Constitution.

Not only has the power to pass retrospective laws been successfully exercised by the State legislatures, but the principle, as I conceive, was recognized and acted upon by Congress in the very beginning of the Government, and in respect of this very power of taxation.

An act for laying a duty on goods, wares, and merchandise imported into the United States" was introduced by Mr. Madison April 8, and was approved by Washington July 4, 1790. It was the second law passed by Congress. It went into effect generally August 1 following. Among other things it laid a duty on teas as follows:

On all teas imported from Europe in ships or vessels built in the United States and belonging wholly to a citizen or citizens thereof, or in ships or vessels built in foreign countries, and on the 16th day of May last wholly the property of a citizen or citizens of the United States and so continuing until the time of importation, as follows:

On bohea tea . . . . .	per pound..	8 Cents.
On all Souchang and other black teas . . . . .	do . . . . .	13
On all green teas . . . . .	do . . . . .	16

On all teas imported in any other manner than as above mentioned, as follows:

On bohea tea . . . . .	per pound..	15 Cents.
On Souchang and other black teas . . . . .	do . . . . .	22
On all green teas . . . . .	do . . . . .	27

It was also provided that on all goods, wares, and merchandise, other than teas, imported from China or India in other than American built and owned ships, or in foreign-built ships not owned by American citizens "on the 6th day of May last," should be subject to a duty of 12½ per cent ad valorem. By the fifth section a discount of 10 per cent on all duties imposed by the act was

allowed on all shipments in American-owned vessels, as above described—that is, owned May 16, 1789.

Bearing in mind the conditions then existing, that it took from five to eight weeks to cross the Atlantic, and nearly as many months to sail around the Horn to China and India; that more than 80 per cent of our imports then came in foreign-built and foreign-owned ships, the act, in effect, went largely into operation on the 16th of May, forty-eight days before its approval. The 16th day of May was the day it passed the House. On that day the amendment fixing the time from which to determine, under given conditions, what duties were to be paid, was adopted just as your amendment was introduced and adopted on the day (March 31) the Dingley bill passed the House.

But there was this difference in the two cases: You gave one day's notice of the conditions which would result in the imposition of the new back duties, quite sufficient for the importers and exporters of the world to be informed of them, whereas Mr. Madison gave no notice at all. On the evening the Dingley bill passed the House, as you will see from the inclosed letter clipped from the Commercial Tribune of April 11, and dated London, March 31, our consul-general, Mr. Collins, was besieged at his office in that city with exporters anxious to learn about the operation of your amendment; and the Leeds Mercury, on the same evening, hastens to reassure Yorkshire traders "that the retrospective clause is a bold Yankee bluff for the purpose of checking shipments and minimizing the loss to the revenues," etc.

Probably the marts of trade the world over were as speedily advised. On the other hand, it was out of the question for Asiatic or even European traders to know of the Madison amendment till long after the bill became a law. Doubtless many goods were imported in foreign vessels to America after May 16, and before the law became known, that did not arrive till after August 1, which might have been brought in American ships, or in foreign-built ships owned by Americans, had there been notice of the Madison amendment such as was given of yours. An additional duty had to be paid in consequence; on teas brought from Europe, 7, 9, or 11 cents a pound, owing to kind, and on merchandise from India or China 12½ per cent ad valorem.

Under the Madison bill whether certain imports were chargeable with such and such duties depended on conditions of ownership as to the vessels in which they were brought, as such conditions existed on the day the bill passed the House. Under the Dingley bill whether certain imports are to be made chargeable with such and such duties depends on conditions of ownership as to the imports themselves, as such conditions existed on the day after the bill passed the House. Where is the difference in principle? Save as to notice, and that does not pertain to constitutionality, it seems to me in effect there is none. The fathers gave no notice of the retrospective clause. You did. That is an important difference in policy, though not in law.

The feature that makes retrospective legislation objectionable is this very lack of notice, so that there is no opportunity to conform conduct thereto.

The Treasury was benefited by Mr. Madison's retrospective provision. But for it many a cargo of goods would have escaped the increased duties. But the condition of the public revenues, in the judgment of the fathers, it would seem, justified the exigent measure, and the Constitution sanctioned it.

Again, the same principle is embodied in the third law passed by the First Congress, "An act imposing duties on tonnage," approved by Washington July 20, 1790. That provides, among other things, "that the following duties shall be, and are hereby, imposed on all ships or vessels entered in the United States; that is to say, on all ships or vessels built within the said States and belonging wholly to a citizen or citizens thereof, or not built within the said States, but on the 29th day of May, 1790, belonging and during the time such ships shall continue to belong wholly to a citizen or citizens thereof, at the rate of 6 cents per ton; on all ships or vessels heretofore built in the United States belonging wholly or in part to subjects of foreign powers, at the rate of 20 cents per ton; on all other ships or vessels, at the rate of 50 cents per ton."

This act passed the House May 29, warmly supported by Mr. Madison. As in the other case, and doubtless for the same reasons, duties on vessels were made to depend upon conditions existing on the very day the bill passed the House, when such conditions were for the first time named, and of course without notice to persons concerned, and fifty-one days before the bill became a law. Had there been notice, by change of ownership or use of American instead of foreign vessels, much in tonnage would have been saved to individuals and diverted from the public Treasury.

It appears to me that under these statutes, considering the means of communication and transportation of that day, duties on both goods and ships were, in effect and to all intents and purposes, retrospectively imposed as completely as, and more effectually than, is done by your amendment as to goods.

The view is advanced that the amendment is unconstitutional because its result would be to impose two duties on the same articles—the second after the first had been paid. But additional duties have often been imposed. About 1812 duties were increased 100 per cent. That one duty is exacted at the custom-house and another, newly imposed, after delivery of goods, instead of both being collected together, is a necessary inconvenience, but surely not a fatality.

It is said no one can say before final passage what shape a bill may take, and therefore foreknowledge of its provisions is impossible. True; but on the other hand, the action of the House, the direct representative of the people, commissioned by them with the sole power to originate revenue bills, may be fairly said to put all on notice of what may be reasonably expected. Then everyone is charged with notice that Congress may in its own way and time exercise its constitutional power of taxation.

It is said again that a duty levied on imports after they leave the custom-house and pass into individual and often irresponsible hands, and in many instances consumed, is vain and impracticable. But other taxes are so imposed and collected. Why not duties?

Custom-houses are only a means to an end, created by statute. Congress could abolish them altogether and lay and collect all duties on imports after receipt by the importer or owner, if disposed to do so. Such legislation would present the question of expediency, not constitutionality.

Unless legislation can be had on the line of your amendment, the will of the people, whenever expressed in favor of increased duties on imports and the purpose of Congress, however determined to execute that will, can and will be, in a measure, forestalled and baffled, pending the passage of the required law, by excessive importations. No matter how pressing the exigency or grave the consequences, the same result will follow.

The proposed increased revenues for an indefinite time will be diverted from the Treasury into the pockets of importers. Other governments have the power to and do prevent this evil by their "budget speech" system, or other methods of legislation. Is ours powerless and without a remedy? Surely not. Section 27 indicates, if it does not fully embody, the remedy. It is not ex post facto, for it precludes the recovery of penalties on account of back duties, and it is, in my judgment, clearly within the power of Congress to enact.

If anything said or reference made in this unpardonably long letter shall prove of the slightest assistance to you, I shall be glad.

Very truly,

Hon. CHAS. H. GROSVENOR,  
Washington, D. C.

JOHN LITTLE.

## The Tariff.

### SPEECH

OF

HON. SYDNEY P. EPES,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. EPES said:

Mr. SPEAKER: The people of my State and district have borne the brunt of two of the most terrible wars with which this country has been scourged. Well-nigh every square inch of Virginia has felt the rude shock of arms. Every hillock has its history. Every mountain peak marks a prominence around whose base the crimson tide of battle has surged, while the valleys and plains have resounded to the martial tramp of hosts hurrying to the conflict or returning from the fray; and when I tell you that the district I have the honor to represent lies between Yorktown and Appomattox, I am sure you will agree I need adduce no additional evidence to sustain what I have asserted.

While all truthful, fair, and impartial history must ever encircle the name of Virginia with a halo of glory, still there is another and more suggestive phase in which I would like to present her—that is, the cost at which this history has been made. Every thoughtful reader and student of history must read between the lines in which this glorious record is written a story not only of death and suffering, but of devastation and destruction of property, which expressed in figures would be simply appalling. Every battle, every advance or retreat, whether of friend or foe, swept away in a single day the thrift and earnings of years, while the final result of our late war took from our people property to an amount almost incalculable.

In the face of all these disasters and losses, from the very ashes of our distress, we were called upon to pay our part of the enormous war debt consequent upon that long-protracted and exhaustive struggle. Without a murmur we responded, though our generosity to the General Government and the country at large after the war of the Revolution seemed to have been lost sight of, for upon us was placed, along with the country at large, not only an income tax and a tax in the shape of a stamp placed on every check or receipt for moneys, but in addition thereto there was placed upon our staple and only money product, tobacco, an exorbitant tax. There was also placed on cotton, the staple product of the States south of us, an onerous tax.

All of these were war measures, the two latter taxes exacted on cotton and tobacco being perhaps also of a penal character, placed upon the South because of secession. Still they were all war measures, and have all been removed except the tobacco tax, which affects my people and the people of a part of a few other States. The continuance of this tax is unfair and unjust in the extreme. The country at large has been relieved of the income and stamp tax. The States farther south have been relieved of the tax on cotton, and there has been given to the States producing it a bounty on sugar, and yet the people of my State and section are still burdened with a tax on their only staple and money product.

If class legislation is unjust, sectional legislation of this character is positively criminal. The war has left my section of Virginia with nothing but our lands, which are adapted peculiarly to the growth of tobacco. They have wheat and corn, gold and silver in the West; in Kentucky and the Middle States, grain, blue grass, and blooded stock; far South, cotton and sugar. On none of these are taxes, while on some are given bounties. But in old South Side Virginia, which is distinctively a tobacco-growing section, there is levied on tobacco a tax so heavy that it is daily bringing our people to bankruptcy and pauperism.

Still we ask no bounties or special favors; all we ask is that we be put on an equal footing with the people of other sections—that we be given a fair opportunity to make a livelihood. I know that it is claimed that by taxing the manufactured tobacco the tax is paid by the consumer. This is illogical and untrue, as is most manifest to anyone who will take the trouble to make an analysis of the situation.

At the present tax of 6 cents per pound on the manufactured article, a manufacturer, in pricing a pile of leaf from the farm, would conclude that to pay the farmer 8 cents and the Government 6 cents would make the tobacco cost him 14 cents, as it does; therefore you see that to drop this tax would enable the manufacturer to supply the consumer at the same price and to give the producer nearly double as much for his product, or, as he would

most likely do, he would divide this 6 cents between himself and the consumer and producer, giving the farmer 2 cents per pound more, which would make to him a difference of 25 per cent, to the manufacturer of 20 per cent, and to the consumer of about 16½ per cent, this being to all interested the difference between success and failure; giving to each a profit instead of, as at present, a loss, which means solvency instead of bankruptcy; and in thus stimulating this single industry the farmer, the laborer, and the manufacturer would be lifted from poverty, as at present, to prosperity for the future.

The great mass of the people of all parties, classes, and branches of the tobacco industry, in mine and all tobacco-growing sections of the country, are interested in the removal of this tax. It is the only vestige of a war tax remaining upon any section of the country; and in the name of justice and humanity the people so oppressed by this iniquitous and inequitable measure should be given relief.

Why should the Louisiana farmer be paid a bounty as an encouragement to produce sugar and the South Side Virginia farmer be compelled to pay a tax for the poor privilege of growing the crop to which his land is adaptable? Sugar is no more a necessity than tobacco, and with the proceeds derived from the sale of tobacco my people purchase the necessities of life.

I know it is held by many that tobacco is a luxury, but I maintain that in more ways than one it is an absolute necessity. Many governments, recognizing in it a necessity, issue tobacco as regular rations both to the navy and army, and England conspicuously is so particular in her tobacco supply to her army and navy as to regulate the formula by which it is manufactured.

I submit, in point of fact and from practical experience, that tobacco is as much a necessity as sugar, tea, or coffee. Then, too, in my section it is absolutely a necessary crop, because only by its production can our farmers procure the other necessities of life. We have long since ceased to be able to compete with the West in the production of corn and meat, and unless we grow tobacco and use the surplus time of our laborers in producing our bread and meat, the expense of raising bread and meat would be greater than if our people were to put the money in these products directly. In other words, my people must grow tobacco or starve; but with this tax upon tobacco, it looks very much as, if they do not grow it they will starve, and if they do grow it they will perish; so it is reduced to a mere choice of words, with about the same result.

Mr. Speaker, tobacco is the only farm product on which there is a tax; and why, I ask, should this Government persist in this unjust discrimination against the growers of this necessary article of human consumption? It is used all over the civilized world; and while you find it from the palace down to the very hovels of the perishing and poor, you more frequently find it in the homes of the laboring men, who lead steady, sober, useful lives. Its use is not regarded as vicious, but, on the contrary, as respectable, and a comfort of which no one who desires it should be deprived.

Mr. Speaker, I say that all laboring men, as a rule, use tobacco. Yes, I go further, and say most men throughout the civilized world use tobacco; but to the laborer in particular and the soldier, the sailor, and all classes exposed to the rigors of the seasons and climates, and who are engaged in long hours of labor, it is absolutely necessary; and yet, Mr. Speaker, by our present laws we are enabled to give this great staple to foreign governments at a lower price than to our own people; for on all export tobacco we have little or no tax, and this is done at the expense of the farmers of our country, because the tax imposed regulates the market price; and then the exporter either makes this difference or else gives it to his foreign customer, but all at the expense of poor growers of the weed.

By this unjust law our home consumers in general, and the farmers in particular, are discriminated against and the citizens of foreign countries given the benefit. I claim that such legislation is criminal; it is robbing our own people for the benefit of foreigners and a few privileged parties here. As an American citizen, a Virginia tobacco raiser, and as a Representative on this floor, I protest against this unjust tax, and shall continue so to do until they get that relief to which they are entitled by every consideration of equity and justice, by every law of God and man; yes, by the Constitution of this country, which proclaims equal rights to all and special privileges to none.

By this tax, I say, you are grossly violating the spirit of the Constitution and treading under foot every principle of democratic government; not only depriving our own people of their rights, the right of exemption from this unjust and iniquitous tax, but by imposing it you refuse them the equal rights to which, under the Constitution, they are entitled, and you grant special privileges to aliens, strangers, and foreigners. Against this unnatural treatment by our own Government I shall protest in behalf of my people until this evil is remedied.

Mr. Speaker, let us reflect for a moment and see how inconsistent this tax is with the principles both of the Democratic and

Republican parties. The Republicans profess to be great believers in the upbuilding and protection of the home market. For this reason, in the interests of certain manufacturers, they propose passing this tariff bill, and in the face of this profession they are imposing this tax upon tobacco, which discriminates against the home market in favor of foreign governments and combines.

You are practically cooperating with these governments to destroy our home market for one of our largest export farm products, and thus, by depriving the farmer of a healthy home competition for his tobacco, enabling foreign governments to further depress the price and rob our people, not for the direct benefit of their own people, but for the benefit of these greedy foreign governments and of the combinations or trusts to which they may see fit to farm out these privileges, as has been clearly shown here upon this floor by my colleague, Mr. SWANSON.

Tobacco is taken from our farmers at a price that is bringing them to penury and sold by these governments or their pets to their own people at a profit of 800 per cent, and I contend that the imposition of this iniquitous tax enables them the more easily to do this, because, as I have shown, by relieving the manufacturer of this tax he will be able to give the tobacco to the consumer at such a reduced price as will largely increase its consumption here at home, and when we increase the home demand we increase the price to these foreign purchasers.

As it is now, we make our manufacturer pay \$6 per hundred more for the tobacco he sells to the home trade than for that he sells his foreign trade, so that a manufacturer here at home who manufactures for the domestic trade is by our laws made to pay \$6 per hundred more for his tobacco than the foreigner who comes here and buys the same tobacco with which he supplies his customers. Is that wise, is that just, is it fair, is that consistent or constitutional? Then, too, by this legislation on our part, we set the example to the world of holding an unjust—yes, practically prohibitory—tax upon this, one of the most important farm products of our country, and one upon which the people of a large section of our country are absolutely dependent for their support and sustenance.

Instead of using our efforts to relieve this important American product of the well-nigh prohibitive duty imposed upon us by foreign governments, thereby enabling our people to supply the entire world at a remunerative price, as they can do under fair, just, and equitable treatment at home and abroad, our own Government sets the pernicious example of so oppressing this product at home as to strangle it on the start and foreign governments, quickly taking the cue, simply pocket the \$6 per hundred, which this Government filches from the starving farmers of its own people to put into the coffers of these foreign nations. These nations then turn and enact such laws against the same product before they allow their people to get it as to further depress the prices here and complete the wreck of our tobacco growers, which the ruinous policy of this Government has seen fit to inaugurate. Of this condition of affairs in the tobacco-growing section, brought about by cruel, criminal legislation, the mortgages upon the farms, the paralysis of business, and the impoverishment and poverty of the people speak more conclusively and forcibly than I can.

### The Tariff.

REMARKS  
OF  
HON. M. S. PETERS,  
OF KANSAS,  
IN THE HOUSE OF REPRESENTATIVES,  
Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 579) to provide revenue for the Government and to encourage the industries of the United States.

Mr. PETERS said:

Mr. SPEAKER: I am one of those who believe that when this bill, the Dingley bill, becomes a law, it will bring prosperity—prosperity to the sugar trust and other trusts, combines, and corporations that contributed so enormously to the last Republican Presidential campaign fund. I for one believe the Republican party is living up to its contracts—contracts made with the trusts which placed that party in power. Just now all eyes are turned toward the sugar trust. We do not need a calcium light or an X ray to see its fantastic tricks.

At the beginning of this extraordinary session of Congress sugar stock was quoted in the New York market at \$1.08. To-day it is worth \$1.44, and still booming. Millions were given to this trust by legislation alone. Besides this, every man, woman, and child

in the United States is taxed in addition for every pound of sugar they buy. A dollar-to-day buys several pounds less of sugar than it did a few days ago. This mysterious and complicated sugar schedule, with its "differential Dutch-standard polariscope," etc., that has required experts to explain here, seems simple and easy when the people go to buy sugar. And worst of all, the Government does not get a penny of this advance in sugar, but it all goes into the pockets of the already rich sugar men.

Mr. Speaker, but yesterday we received the glorious "sugar" news that the conferees of the House had gained a great victory over the conferees of the Senate. It was said the conflict was dreadful, but the country was safe. In the nick of time the big man from Maine appeared on the field, and the Senators were routed horse and dragon.

It appears now that the wires were tapped or the reports garbled. Since the smoke of battle cleared away, we see instead of victory a humiliating defeat. The wild, loud roar of the "bulls" at New York tells the tale. This is not the only victory the Senators gained. The House in a cowardly way surrendered to them the duty on lead in the ore. Why? Listen to the remarkable excuse given by the distinguished conferee and Representative from Ohio, Mr. GROSVENOR:

Mr. GROSVENOR. The tariff on lead in ore and upon pig lead is doubtless a little higher in this bill now than a great many members of the House would have fixed if they had had exactly their way about it. In the bill as passed by the House the duty on lead in the ore was 1 cent a pound, and the duty was correspondingly advanced upon the finished product. But if the gentleman will carefully examine the proceedings of the Senate, he will discover that at the demand of the representatives of the People's Party the increase was made in that body, and it was held in the bill by the vigorous protest and advocacy of the member of the People's Party on the conference committee.

Mr. KELLEY. I ask the gentleman to name from what State those members of the People's Party that he speaks of came?

Mr. GROSVENOR. From the Northwest.

Mr. KELLEY. Is that all one State?

Mr. GROSVENOR. No; there are several States up there.

Mr. KELLEY. Which of those States, then?

Mr. GROSVENOR. It was demanded by the two Populist Senators from Nevada.

Mr. KELLEY. If I understand the matter, Nevada has hardly one Populist Senator; certainly not more than one.

Mr. GROSVENOR. She has two.

Mr. KELLEY. As I understand it, a man who votes for the sugar trust is not a very good Populist; and one of those voted for the sugar schedule.

Mr. GROSVENOR. I think the gentleman will find that this increase is supported by the Senators from Montana, one of whom, I believe, has declared himself to be a Populist, or at least voting with that party.

Mr. KELLEY. I never heard it.

Mr. GROSVENOR. I wish to say in this connection that I do not hold myself responsible for what anybody is politically who is in this opposition.

Mr. KELLEY. Then you should not make accusations concerning something you know nothing about.

Mr. GROSVENOR. I have to place them somewhere. It is very easy to say that a man is not a Populist or is not anything. That is one of the easiest things to say. But you will find that the increase on lead ore was put into the bill originally on the demand of the Senators from the Northwestern States—the States now largely represented by Populist Senators—and was held in the bill at their demand in the conference committee. That is all I have to say about it.

In the face of this statement, is there any wonder the House conferees were buncoed on the sugar schedule? The gentleman from Ohio states that one man, the Senator from Nevada, controlled the nine Republicans on the conference committee, and that this wonderful Senator was a Populist. How did this Populist gain admission into this Republican "sanctum sanctorum"? Who gave him the password and the grip of a Republican conferee? How was he admitted? On this side of the Chamber no such privileges were extended to Democrats, much less to despised Populists.

At the beginning of this extraordinary session the Populists and Democrats were given to understand that they were entitled to no part whatever in the formation of the tariff bill. Every amendment offered by them was rejected with scorn and contempt. If any one of us presumed to ask a question for information, we frequently received an insult for an answer. And now he who was most active with his thrusts of derision and scorn comes fresh from the "sugar war" and tells the miraculous story of an English silver-shielded Populist putting to flight a whole army of Republicans. This is a Populist victory that has no parallel in history.

I suppose the gentleman will say, in case the Dingley bill fails to bring prosperity, it is the fault of the Populists.

Mr. Speaker, the Populists have been accused of doing a great many bad things—of being anarchists and repudiationists. They have survived it all. They can endure almost anything, but for heaven's sake do not accuse them of having anything to do with the making of the Dingley bill. It is Republican in every wool and fiber except the concessions given to the silver-plated Republicans.

The regular Republicans did not believe they could pass this nefarious bill without assistance. Their goldbug Democratic brethren, who assisted so nobly in electing President McKinley, refused to be a party to so great a wrong, so the regular Republicans finally bartered with some of the silver-plated Republicans

of the Northwest. Some of the Senators from the Northwest, to their honor be it said, refused to aid in legalizing this sectional robbery. Conspicuous among them was that grand old man, Senator TELLER, the Gladstone of America. Observe that this unholy alliance was between the Eastern and new Western States, the manufacturing States and the mineral States.

The three mineral States combined have a population which does not equal that of an ordinary Congressional district. The Senators who dictated the duty on certain schedules represent a State smaller in population than one of my counties. So we have the old East and the new West pooled against the West and South. This unholy and unnatural alliance may govern this great nation for a while, but as certain as fate it can not last long. In the course of natural events the people of the great Mississippi Valley will eventually govern this nation.

I know this idea is scoffed at by the leaders of the old parties, but it is written in the book of fate. What is more, it will be by a new party. This new party to-day controls some of the great Western States. The members of this new party are called anarchists and cranks. But really, who are they, and what are they? Illiterate foreigners? No; not one. Negroes? A few of the educated ones. Well, who are they? I will tell you. The farmers, the wage earners, the yeomanry of the country, most of whom are sons of Revolutionary sires. Honest, God-fearing people, and he who says otherwise, if informed, must know that his statement is false.

Mr. Speaker, the West expects better times in spite of the Dingley bill. With a failure of crops in large portions of Europe and South America and an abundant one at home, what can prevent better times? We have the richest and fairest land on the face of the earth. God has blessed us with an abundance of almost everything good that grows out of the ground, and why will we not have prosperity? Why, sir, under these favorable conditions we ought to have a veritable boom. In days gone by floods and droughts have damaged us; blizzards and cyclones have done their deadly work; chinch bugs and grasshoppers have mown our green fields and pastures until they were as barren as in winter time.

Corrupt State administrations and incompetent State officials have wasted and squandered our public money. Eastern loan companies have maligned and slandered our people and discriminated against our securities. Railroads that we built and gave to capitalists compelled us to pay unreasonable and sometimes extortionate rates. This bill, the Dingley bill, places upon us unjust burdens without any compensatory benefits, but all of these misfortunes combined are as a drop in the bucket compared to the damage in the shrinkage of values caused by the contraction of the currency.

On this issue the people will fight the next great battle, and hell nor HANNA can not prevail against them. "Sixteen to one" will be the battle cry, and the tariff bill will be as dead as Banquo's ghost. Our good President seems to be preparing for the coming storm. He has a committee chasing a rainbow and hobnobbing the crowned heads and courts of Europe asking for an international conference on bimetalism. Is it reasonable to suppose that the moneyed men of Europe would do something to injure themselves? The rich of this country nor any other country do not want bimetalism—international or otherwise.

It is an open secret that the President has been for some time anxious to gratify the bankers by sending a message to Congress asking the appointment of a monetary commission, but the powers back of the throne have prevailed upon him to wait until the tariff bill is passed. Recently the New York bankers read the riot act to the President in a set of resolutions demanding of him to send a message to Congress asking for the appointment of a monetary commission. Men in bankruptcy were refused legislation. Why should bankers be granted special privileges?

With an international bimetallic committee in Europe and a gold-standard monetary commission at home and a clamoring demand from the bankers to destroy the greenbacks, it seems to me "there are others" who believe that the money question will be the issue in the next campaign.

Mr. Speaker, as General Hancock said, the tariff is a local question. I desire to speak of it from a local standpoint. My district is not only one of the greatest agricultural sections of the West, and is discriminated against by this bill, as all agricultural sections are, but it has within its confines one of the largest smelters in the United States. The operators must procure their lead ore for fluxing purposes. The enormous duty on lead ore prohibits its importation, hence destroys this great industry, thereby materially injuring Argentine, the city in which this plant is located.

But, most of all, the damaging results fall mostly on the laboring men. As to the owners, it matters but little. They are rich, as most gold-standard leaders are. Their blind, deluded followers are the ones who are to be pitied. In my district are also located immense packing houses, with an annual business of over fifty millions; also, the best-equipped stock yards in the world. Last year the gross amount of live stock sold amounted to more than

\$100,000,000. More than 40,000 people are dependent for a livelihood on this industry alone.

All of this great army of workmen will not get an additional dollar for their labor, but will have to pay much more under this bill for the necessities of life. We have an immense trade with Mexico in live stock and provisions that this bill destroys. Time forbids that I should give a detailed statement of the disastrous effects upon the people of my district.

Mr. Speaker, if this bill will bring the glorious prosperity our Republican friends say it will, God speed the day for its passage. If it does, there will be rejoicing throughout the land. The laboring men with hungry wives and naked children, and whose leaders a short time ago begged this extraordinary session to try to do something in their behalf, will forgive you for ignoring them. The countless number of bankrupts whom the Senate passed a law to relieve may forget their slight. The thousands of old soldiers who have flooded this Congress with their pitiful petitions may forgive and forget their wrongs. The sympathizers of Cuban patriots may pardon your professed friendship and cruel desertion. All the people, irrespective of party, will say to you Republicans, "Well done, good and faithful servants!" The name of DINGLEY will live long in history. Monuments will be erected to his memory. Generations yet unborn will be taught to revere his name. At the next election we would have but one candidate for President, and Republicans will be elected by acclamation.

But if this Dingley bill should fail to bring prosperity, what then? I will tell you some of the consequences. In the language of the gentleman from Kansas, this beastly Republican majority in the lower House of Congress will be an insignificant minority. Instead of the mighty man from Maine occupying the Speaker's chair will be the young statesman from Texas or one of the gifted sons of old Tennessee, or possibly SIMPSON, our own Jerry, the "scrapper" from Kansas. Instead of our good President William McKinley occupying the White House will be America's greatest commoner, William J. Bryan.

#### The Advance Agent of Prosperity.

#### SPEECH

OF

HON. CHARLES H. GROSVENOR,  
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration the conference report on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. GROSVENOR said:

Mr. SPEAKER: All through this extra session of Congress, and coming over to us as a legacy of the past Congress, our Democratic friends have been filling the air with vociferous interrogation points, demanding to know what has become of the McKinley prosperity, and I propose to address myself very briefly to this aspect of the subject. I begin by saying that the declaration which we so often hear, that the Republicans last year and during the campaign promised the people of the country that the election of McKinley would at once bring prosperity, is simply absurd. Had any prominent Republican, occupying any prominent position toward the party, made such a declaration, he would have been rebuked at once by the intelligent people of the country.

The Republican platform of 1896 made no promise of the kind suggested, but it carefully said to the people of the country that if granted power, by their voice, the Republican party would enact a protective-tariff law going back to the principles of the McKinley law, and would, in this way, ultimately bring about a prosperous condition in the country. What we did say was this: "We renew and emphasize our allegiance to the policy of protection as the bulwark of American industrial independence and the foundation of American development and prosperity;" the foundation of American development and prosperity, not the bringing of prosperity by the mere election of McKinley.

No man said that; but, Mr. Speaker, we are on the eve at last of fulfilling our pledge. The vote which will be taken before we sleep to-night will be taken by the Republicans in fulfillment of their promise to so legislate as to give the people of the country an opportunity to again be prosperous.

Hurried as I am with the business of the closing hours of the session, I can not better fulfill the duties of the present moment than by reproducing the remarks which I had the honor to make at the Republican State convention in Ohio on the 22d day of June last. There may be some very small portions of that speech which are local in their application, but, as a whole, it will serve

a good purpose by reproducing it for the benefit of the House on this occasion. It is as follows:

"MR. CHAIRMAN AND GENTLEMEN OF THE REPUBLICAN CONVENTION OF OHIO: I highly appreciate the honor of addressing the representatives of the triumphant Republican party of this State. I congratulate the Republicans of Ohio that they are a union in opinion and harmonious in purpose. I congratulate you upon the position occupied by the Republicans of Ohio in the eyes and councils of the nation. It has been the sneering criticism of some that Ohio never has but one Republican representative in the Senate of the United States, but to-day Ohio is represented by two Republican Senators. They are the equal in ability to any two Senators of any of the States or of all of the States of the Union.

"That eloquent orator, gallant soldier, wise statesman, and splendid leader, FORAKER, occupies a seat in the Senate of the United States. That popular leader, matchless organizer of men, clear-headed financier, and tried and trusted Republican, MARCUS A. HANNA, occupies a seat in the Senate from Ohio. And in the councils of the party no two Senators wield a greater influence.

"But greatest of all, the peerless champion of Republicanism, the faithful son of the people, the arduous Republican, the faithful soldier, the splendid statesman, William McKinley, is President of the United States; and last but not least, John Sherman, the old war horse of the Republican party, gives the country the benefit of his great wisdom, conservatism, and towering leadership at the head of the State Department.

"Sometimes we hear it said that Ohio, in the years following a Presidential election, has often failed to elect the Republican ticket, and Democratic boastfulness just at this time is claiming with great enthusiasm that history in Ohio will again this year repeat itself. We are here to-day to notify the enemy that the pitcher which has so often gone to the well is to be broken in 1897. We met at Zanesville in 1893, and made an agreement with each other that all faction should cease, and that three great political results should be accomplished. McKinley should be President, FORAKER should be Senator, and Bushnell should be governor. Our Democratic brethren counted then without their hosts, and they said, 'You will not achieve the result, for you will not be faithful to each other; you will not redeem your pledges.' But we were faithful to each other; we did redeem our pledges, and every stipulation of the Zanesville treaty has been ratified, and the Republican party is ready in Ohio for new achievements.

"I am here to say to our Democratic brethren, 'You never were wider in your estimates than you were when you professed disloyalty and unfaithfulness to follow the Zanesville convention, and you never will be wider of the mark than you are now when you prophesy that you will carry Ohio in the November election.'

"I am not here to sound a 'keynote.' That duty has been assigned me by the comments of the Democratic press, but Republicans do not need keynotes. The music to which Republicans march and the battle flag under which Republicans fight are always the same, and we do not require keynotes. The convention of 1896 laid down the law for the Republicans of the United States, and that law has never been repealed, and there is no legislative power in the party to repeal that law until 1900. There is nobody in the party who wants to repeal that law. What is that law? We pledged ourselves in the St. Louis platform that we would 'renew and emphasize our allegiance to the policy of protection as the bulwark of American industrial independence and the foundation of American development and prosperity.'

"We pledged ourselves to favor legislation that would reopen the possibilities of reciprocity of trade with foreign nations. We declared we were 'unalterably opposed to every measure calculated to debase our currency or impair the credit of the country,' and we pledged ourselves to secure, if possible, an international agreement upon this vexed question of coinage. We promised fair treatment to the Union soldier, and pledged ourselves to an American policy in dealing with foreign countries, to reassert the Monroe doctrine, and to the use of the influence of the United States and its good offices to restore peace and give independence to Cuba. We promised to rebuild the Navy, to protect our country from the incursion of foreign immigration deleterious in character to the institutions of our country, and we said that we would honestly enforce the civil-service law while it remains the law; and there were other suggestions.

"This is the charter of the Republican party. It stands unrevoked, and no keynote is necessary to enforce its binding obligation upon the Republicans of the United States, and we are a unit to-day in the defense of every suggestion of that platform.

"How have we fulfilled our pledges? Our Democratic friends are shouting upon every stump and in every newspaper and all over the country demanding to know, 'Where is the prosperity that you promised?' We never promised prosperity. This is the language of our platform upon that subject: 'We renew and emphasize our allegiance to the policy of protection as the bulwark of American industrial independence and the foundation of American development and prosperity.' Every man who knew

anything knew that there must be first a foundation for future prosperity, and then a development upon the foundation.

"Let us turn aside now from following out the other planks of the platform, and see what there is in this cry of the Democrats. A Democrat is never happy when the country is prosperous. That is the one plank in the Democratic platform of principles which never changes. When the country is suffering, the Democratic party is happy. When there is misery and bankruptcy, the Democratic party is shouting triumphantly, and so they enumerate the number of failures in the country, and roll this morsel of consolation as a sweet morsel under their tongue.

"To-day we witness the remarkable spectacle of an exhibition made by Democratic leaders, from the greatest of them all down to the smallest of them all, from their greatest newspaper down to their smallest newspaper, peregrinating the country, hunting out cases of suffering, and jollifying over a condition that they themselves brought upon the country. The cry of the hungry, the wail of the starving, the dolefulness of discontent, from each and all of them, falls music on the ears of these men.

"They forget that it was the Democratic party that struck down the greatest development of prosperity that this country ever saw and brought humiliation, suffering, bankruptcy, and practical beggary upon the people of the United States.

"They forget that when Grover Cleveland was elected President of the United States there was prosperity of the highest order in every department of effort and production in the United States. There had been a period of depression and uncertainty at the date of the enactment of the McKinley law, but conditions had become so favorable that the entire country was prosperous beyond any former period in our history. In no nation of the world was there such distribution of wealth. In no nation of the world was there so much of general happiness. In no country of the world were wages so high and labor so generally employed. We never had experienced such prosperity in our foreign commerce. We had never builded so many railroads, started so many new industries, invested such an enormous amount of capital; and labor was absolutely receiving a beneficent reward in November, 1892.

"The advent of the Democratic party in power paralyzed every industrial institution in the country; wages fell and starvation advanced; foreign commerce was abridged and home industries were paralyzed; factories closed and farms faltered; shops were idle and ships unemployed; money sought shelter and misery stalked in the public places; the prices of property fell to an extent which is beyond estimation. The reduction in values of the real and personal property of the United States between the 1st day of November, 1892, and the like period of 1893, was more than four times the entire cost of the civil war. Fortunes faded like the dew upon the grass. Stagnation, misery, poverty, penury everywhere. No new condition presented itself as a means of escape, and the country stood still, shocked and then paralyzed. Great bodies of men traveled the country in search of food.

"The education of children was abandoned, and despair and the despotism of poverty stalked upon the highways of a once prosperous nation. And it was done by the Democratic party. It was done under their Administration. It happened because of their bad legislation. It came of their failure of duty. It came of their inconceivable incompetency. The most ingenious of all the Democratic apologetes has never been able to explain upon any tenable ground how it was that in a night these horrors came. That night was the night of the Presidential election of 1892.

"Now says the Democratic party two things:

"First. Have you restored prosperity by the election of McKinley? and

"Second. Come back to us; try us again; wade through another four years of sorrow and starvation; maneuver for misery; seek that sorrow in the vale of tears out of which you have emerged.

"There is not one intelligent man in the United States of America who can read and write who does not know, and who did not know when McKinley was elected, that the road to prosperity was a road of sorrow, a road of perseverance, of industry, and of wisdom, not to be suddenly traveled. A house that has been shaken by an earthquake until its walls have tottered and fallen can not be rebuilt by a resolution of the owner that the construction shall go forward. The fire that has swept across the plains and burned the property and devastated the fields can not be reinstated with green grass and waving fields in a moment. The curse of the Democratic Administration has been so implanted upon us that time will be required to extricate us. The brutal blow of Democracy fell so heavily that the reaction must come by scientific processes, by wise statesmanship in enactment, and by faithful perseverance in execution, by faith and patience and dependence upon the truth of our position and the rectitude of our purpose.

"Looking at the whole question from the standpoint of our experience of the last eight years, can it be possible that the Republicans of Ohio will go back to the beggarly elements of Democ-

rary? It could be imagined as possible that there might be dissatisfaction with Republican inaction or nonaction or action, but it can scarcely be imagined that the intelligent people of any country will for one moment even consider the proposition to seek relief by returning to the power of the Democratic party.

"What assurance have the people of the country of better times or better action by the Democratic party if now put in power than they received at the hands of the Democratic party when it was in power? That party has gone off into a condition of hopeless demoralization in the direction of cheap money and unsound currency, and to-day it is negotiating with the advocates of other false doctrines known to American politics to form fusions and combinations, and its divisions on the questions of protection leave it without one principal upon which it can unite. The ruin it brought upon the country during its struggle for administration ought to warn every intelligent man that however much he may differ with the Republican party, no good can come by a return of the Democrats to power. It will not rebuild the industries of the country which Democratic incompetency have destroyed by giving back to the same party any material support and encouragement, and placing it again in power.

"But it is coming. The prices of commodities produced in the United States from the topmost item of agricultural production to the lowest item of manufactured products, are higher in the markets of the world to-day than when the Democratic party went out of power by the blow that was dealt to it in November last. Time will not permit me to read to you a statement of the items, but there is no farmer in the State of Ohio who does not know that every item of production on his farm is worth more money by the pound, per capita, or by the yard to-day than it was last November.

"During the closing years of the Democratic Administration you could not sell a bond of a municipal corporation in the State of Ohio at any price whatever for cash. So thoroughly impregnated was the whole financial mind of the country with the possibilities of Democratic destruction that the bonds of our cities and villages went begging, and labor was paralyzed to a large extent by this cause alone. To-day there is not a municipal corporation in the State of Ohio with a population of 3,000 people which can not sell its bonds at a premium, with an interest rate of 4 per cent, in any of the markets of the country.

"Grant that the return to prosperity is slow. It is coming, and everybody knows it is, and that is why the Democratic calamity howler stands upon the street corners and preaches that McKinley's prosperity is not coming. It is coming, and its speed will be wonderfully accelerated when a Republican Congress, over the protest of a Democratic minority, and the howl of the Mugwump, and the utterances of the Mugwump press of the country, shall have passed a tariff bill under the pledge of the St. Louis convention.

"What next? We told the people of the United States that we would seek, by international agreement, to settle the vexed question of the currency, and President McKinley had not yet been sworn into office by two long months until plans have been perfected which afterwards were executed by a Republican Congress and a monetary commission was appointed, with a view to negotiations looking to securing an international agreement, if possible, to settle this question of the coinage of the world. No Administration of this Government, from Washington down to this time, has ever so fully and religiously observed the tenets of its platform as has the present Administration of the Republican party.

"The Republican party proceeded at once to carry out its pledge in regard to the framing and passage of a tariff bill. The President called Congress together on the 15th day of March, and on the 31st day of March the House of Representatives passed a protective-tariff measure. The bill had been carefully prepared by the laborious and self-sacrificing efforts of the Republican members of the Ways and Means Committee of the Fifty-fourth Congress.

"The bill went to the Senate, and received the careful attention of the Finance Committee of that body. The bill, as it came from the hands of the Senate committee, was amended in many important particulars, but the action of the Senate has been, so far, to justify the assertion which I now make, that the bill, when it is enacted into a law, will be one of the most valuable protective measures that has ever been passed in the United States, and one matter of singular and interesting importance is that some of the most energetic supporters of the various provisions of the bill have been time-tried Democrats of the Southern States, thus demonstrating that the leaven of a protective tariff has at last penetrated the judgment of the leading men of the South, and Democrats from Louisiana, South Carolina, and Georgia, and other States, have joined earnestly with the Republicans in perfecting a measure involving protective duties.

"Thus has the Republican party established a doctrine of protection, and the bill, when it becomes a law, will not only afford generous protection to the industries of the country to-day, but

the support given it by leading Democrats of the South foreshadows a permanency of this law which has appertained to no other tariff legislation.

"The Republicans in Congress have recognized the necessity for protection to agriculture. Fully appreciating that no country can prosper where the agricultural industry is depressed, the Republicans in Congress have provided more efficient protection for the farmer than was ever provided by any other tariff bill in the United States. There is not an important agricultural product of the North or the South that is not cared for. The grain, the hay, the tobacco, the cotton, the cattle, the vegetables, the fruits—everything which can be classed as agricultural products—has been carefully protected against the cheaper productions of foreign countries.

"Wool has received the special attention of Congress, and the woolgrowers of the country, although perhaps not receiving the highest rate of duty that they have anticipated, yet have a vastly better protection than was given in any of the former bills, not excepting the law of 1867. I know this may be disputed, and I will not stop here and now to discuss the question, but call attention to the important consideration, important, perhaps, above all the other considerations, that the duty on wool which, in the long run, will afford, in my judgment, generous protection to the wool-grower, is yet not so startling in its demands and figures as to array against the wool schedule the entire antiprotection forces of the United States, and we may trust now that should this bill become a law, its schedule upon wool and woollens will be the basis upon which the woolgrower may rely for many years, and not be annoyed and distracted by constantly threatening changes.

"It has been one of the purposes of the Republicans in Congress to secure a protective law that would stimulate and promote the cultivation of the sugar beet, to the end that we might cease sending our money abroad for the products of the labor of other countries, and at the same time open up to the cultivation of the sugar beet the vast area of territory in the United States which can be profitably employed in that direction, and thus lessen the competing forces in the production of grain and vegetables.

"While this has been going on the President has made extraordinary efforts to carry out the policy of the Government in the matter of the Cuban patriots. He sent a recommendation to Congress, and Congress responded with \$50,000 to feed the starving Americans. A special ambassador was dispatched to Cuba to learn the truth in regard to the situation there, and the most rapid exercise of just diplomatic authority consistent with our duty to Spain has been extended in every direction to aid the cause of liberating Cuba, and more than one-third of a hundred American citizens who had been languishing in Spanish dungeons and vainly appealing to the Democratic Administration have been set at liberty, and the trial of American citizens by court-martial is now a thing of the past.

"The American people sympathize with the struggling masses of downtrodden people in Cuba, and no man of the Republican party more deeply and sincerely sympathizes with them than does the President of the United States, but the President of the United States owes a duty to the laws and the Constitution of the country, and our treaties with foreign nations are a part of the law, and so the President, omitting no opportunity that could be justly reached and justly acted upon, will fail to respond to the cry of the suffering Cubans, but he will not plunge this country into war until the means of peace and diplomacy have all failed to vindicate the honor of the nation.

"The President found, upon coming into office, that the preceding Administration had debauched all the public offices of the country in the interest of plunder and the spoilsman to an extent that exceeded the greed for office of all the preceding Presidents of the United States. Forty thousand offices, under the specious and false cry of civil-service reform, had been seized upon and appropriated and a barrier placed over them by the President of the United States, with a view to forever guarding the avenues to public office from the approach of Republicans.

"The organization had been perfect and infamous. It had its first great development under that Administration when a civil-service reformer from Boston seized 80 per cent of the consular positions and turned them over to as inefficient and incompetent a crowd, with few exceptions, as ever fled from this country to bask in the sunshine of official position abroad. The soldier had been turned out of office. His place had been filled with untrained and inexperienced Democrats, and during this Administration, thus far, the soldiers who had been removed by the Democratic Administration have been replaced in the offices, by order of the President, through the various Departments of the Government, and steps are being taken to see to it that the civil-service law of the country, which is to be upheld and obeyed, shall not be prostituted and made an instrument for the promotion of a system of spoils unparalleled in the history of corrupt governments.

"Our friends far and wide are complaining of the infamous prostitution of the civil-service law to the base ends of spoilsmen

and the aggrandizement of partisan purposes, and criticism of the present Administration is heard in the land. It must be borne in mind, however, that the President of the United States is bound by the statutes of the country, and took a solemn oath to uphold and protect and execute the laws of Congress. While the orders of Grover Cleveland stand unrevoked and unrepealed by Congress the President of the United States must obey the law and enforce its orders. That the earlier friends of the civil-service law are disgusted with it is evident upon every hand.

"One of three great propositions has been developed by an examination of the conditions. Either the Civil Service Bureau in Washington is ignorant of what has been going on, or second, is corrupt—neither of which suggestions is tenable for a moment—or else that the law is of such a character that in the hands of bad men and partisans it can always be made to subserve directly opposite purposes from which it was intended. But notwithstanding the presence of the law and the orders of Mr. Cleveland, the Republican Administration has reinstated many hundreds of old soldiers who had been dishonestly and corruptly removed from office during the Cleveland Administration, and this work, we understand, will go forward as far as it is practicable to push it.

"The Democratic party held a convention in 1896; indeed, it held two, but I speak of the principal one. It took to its bosom every element of discord and inharmonious and bad politics that existed on the continent. It met at Chicago, was stampeded off its feet by the eloquence of an orator, and its platform was organized by an adroit politician, and among its other declarations was a denunciation of the right of the President of the United States to enforce the laws of the United States by the interference of Federal authority, backed by the Army of the country. It denounced the courts of the country, and threatened, by fair implication, resistance to the enforcement of the decrees of the courts of the United States. It declared in favor of the repeal or abrogation of the civil-service law of the country, and proclaimed its adherence to a new doctrine of Federal official tenure. That platform stands unrepealed to-day.

"A great mass of patriotic, wise, and intelligent Democrats refused to vote for that declaration of principles; refused to vote to debase the coinage; refused to scale the debt of the country to half; refused to Mexicanize our financial system; refused to follow the lead of China and the Cannibal Islands; refused to denounce the Supreme Court and uphold anarchy, and wheeled into line to overthrow the bastard Democracy of the Chicago platform. All honor to the men who severed the ties that bound together the corrupt organization of that party and brought its members together, if not directly, at least indirectly, in support of good government and wise legislation; and they have the consolation of having aided in the rescuing of their country from bad government, and the patriotism that impelled their action in 1896 will not fail of fruit in 1897.

"Our Democratic friends are to hold a convention in Ohio shortly, and they will proclaim their allegiance to the doctrine of the free and unlimited coinage of silver, taking their stand firmly upon the foundation of a 50-cent dollar and the depreciation and degradation of the coinage of the country. But what else will they do? Dare the Democratic party in Ohio to again announce itself in favor of anarchy? Will the Democratic party of Ohio dare to proclaim itself in favor of the overthrow of the authority of the courts, the repudiation of the theory of law and order? Will it? Or will it single out from the Chicago platform the specious cry of free silver and abandon those sections of the platform that shook and thrilled America with the belief that the Democratic party menaces the institutions of the country? Will they speak out plainly? The people of this country are opposed to anarchy. They are opposed to the reign of the commune. They believe in law and order. Let the Democratic party in its calamity-howling convention dare to indorse the Chicago heresy of anarchy and resistance of law and the people of Ohio will win a victory that will forever place Ohio in the front rank of law-abiding people.

"This is a State campaign; that is, it is a campaign for the election of a governor and members of the legislature, and it may be said with some force that national politics do not enter here, and were I a representative of the Democratic party, I would plead strenuously that national politics should be excluded from consideration; but national politics will enter the canvass. Whenever a United States Senator is to be elected, with the Senate in its present condition, national politics necessarily enter the arena.

"But what of Ohio? We are to reelect that tried, true, uncompromising and faithful Republican governor of Ohio. His administration will be an issue before the people. What has it been? Here upon the threshold of the contest I challenge the Democratic party to denounce or to successfully criticize it. Faithful to the platform of his party, Governor Bashnell has administered his great office loyally and with fidelity and success. His administration has been what he promised it should be, a business administration; that is to say, the public institutions of the State should

be put upon a business basis and administered with economy and integrity, and so it has been. The taxes of the people have not been increased in ratio, and the treasury has been protected from deficit. The institutions of the State are in a high condition of efficient administration.

"The honor of the State, the dignity of the office, and the high degree of administrative excellence which Governor Bushnell inherited from his distinguished predecessor have been maintained without diminution. Our Democratic brothers will waste time and effort if they attempt to assail the local administration. The legislature passed healthful and valuable laws, and we can safely defend its record. The details of the State administration and State legislation will be successfully maintained before the people of the State by gentlemen better acquainted with them than I can be.

"Men of Ohio, men of the country, the institutions of your country are safe and safely guarded in the hands of William McKinley, of Ohio. He never occupied a position in all his eventful and splendid career that he did not rise to the utmost round of possibility in the discharge of his duty. He has filled every place full to the brim, and in the present high position which he occupies he will not fall below the standard that he set before.

"Patriotic by birth, by the inspiration of his life; an American from intellect, an American full of the traditions of love and affection of his own country, his own home, his own family, he is a model American, a type of the best development of the American citizen, and coupling with his oath of obedience to the Constitution faithfulness to pledges, he will merit and will receive the unequalled, enthusiastic support of the men of his own State.

"The issues, then, upon which this contest is to be fought are the issues of the platform formed at St. Louis. Under it we followed our magnificent leader to a magnificent victory. Under it we were achieving the results which we promised. By it we will stand or fall. By it we will win victory or honorable defeat. Under its terms we will challenge the world, and under its terms we will march to victory in November."

Let us see what has already been the result of the election of McKinley and the proposed legislation. I hold in my hands Dun's Review for several weeks of the current spring and summer. I find in its issue of April 10, on the first page, the following:

Out of 4,006 failures, with liabilities of \$60,732,561, in the first quarter, 74 banking failures covered more than a fifth of the amount, \$12,744,650.

And I point to this simply to show that the banking business of the country has suffered at least equally to any of the other departments of business.

Coming to the issue of May 8, I find the following:

Nearly all will be astonished to learn that actual sales in April by leading houses in each line of business in the principal cities east of the Rocky Mountains averaged only about 10 per cent less than in April, 1892, the year of largest business hitherto, and were 6.1 per cent more than in the same month last year. Yet this is the summary of 357 reports, each covering actual sales of leading merchants in a line of business in 1 of 14 cities, which are given by cities and by different branches of trade in this issue.

Coming to May 22, the same authority says:

Unmistakable evidence of improvement comes in the general increase of commercial loans, mostly for Eastern merchants or companies, though some well-known houses in the Middle West appear, with considerable rediscounts from the South. Not for a long time have commercial loans been fully half the whole. The distinct change gives proof that new business has been larger than many have supposed. Receipts of money from the interior exceed shipments \$1,500,000, mostly from the Middle West.

Coming to June 12, we have—

Indications of the volume of business are seen in clearing-house exchanges, which for the week exceeded last year's 8.7 per cent, and in railroad earnings, which amount, in the United States alone, to \$24,708,987 on roads reported by Dun's Review for May 3, 3 per cent larger than last year and 0.3 per cent larger than 1892. The fourth week of May was the best, and the return is the best this year.

I cite this authority to show the steady growth of business, and to show that immediately upon the assembling of this extra session of Congress, under the call of the President, and when the American people realized that the Republican party was going straight forward to execute its promises, business at once began to revive; and now I come to a statement of the highest importance.

Certain of the leading newspapers of the country set about ascertaining if it were true that the farmers of the country were in the suffering condition it has been so often proclaimed upon this floor. They undertook to ascertain if it was true that the farms of the farmers were being swept away by the mortgage debts upon them. There is throughout the United States, and especially the West and Middle West, a system of business which reveals at once the condition of these affairs in the various States, and in the New York Sun of July 18, only yesterday, I find the following:

[From the New York Sun, July 18, 1896.]

IN PROSPERITY'S SWEEP—WESTERN STATES ON THE HIGH ROAD TO GOOD TIMES—UNPRECEDENTED SHOWING OF MORTGAGES CLEARED—MONEY GOING BEGGING—ECONOMY AND GOOD FARMING METHODS HAVE BROUGHT ABOUT A REVOLUTION—DAIRY AND CATTLE RAISING BRING RICH REWARDS—THIS YEAR'S CROPS LARGE.

SEATTLE, WASH., July 17.

For the first time in several years there is much idle money in Washington. This state of affairs is due in a great measure to the excellent crops of 1896

and to the prospects of still better crops in 1897. All the wheat belts of the State, including the Big Bend of the Columbia, the Palouse country, the southwestern part of the State, and Skagit and Whatcom counties, will produce, it is estimated, at least one-third more than ever before, and the first step of the farmers will be to raise the mortgages of their farms.

"The debt of the farmers of Washington," said C. E. Vilas, of the Washington National Building, Loan, and Investment Association of Washington, "will be decreased at least 25 per cent by this year's crop."

R. P. Latimer, of Dexter, Horton & Co., says that a reduction of 25 per cent on debts for the last three years is a low figure. The estimates are that the farmers will gain \$10,000,000 from the crops of 1897.

Jacob Furth, president of the Seattle National Bank, says a great number of mortgages on farms have been paid off, and he has advice from the Big Bend to the effect that this year's crop is of the very best quality. A like condition exists in the Palouse country.

Levi Ankeny, banker, of Walla Walla, was in Seattle a few days ago, and said that Walla Walla had too much idle money.

E. Cardin, of J. Adams & Co., says the wheat crop will be the largest ever produced in Washington, amounting conservatively to about 18,000,000 bushels. The farmers will probably get 55 cents in eastern Washington and 70 cents at this port.

Seattle, owing to the opening of the oriental trade, will handle six times as much grain as ever before. Mr. Cardin says there will be better times this fall than in five years. Last year an east Washington farmer went to the Northwestern Bank in Spokane.

"Take my farm," he said, "I can not pay the mortgage."

The bank not only declined to do so, but gave him seed wheat. This year he will clear himself of debt and have a snug balance.

PORTLAND, OREG., July 17.

The farmers of Oregon, Washington, and Idaho, owing to the good price of wheat, have been enabled to pay off most of their mortgages, and this year will get almost entirely out of debt.

The Washington loan agents find their business greatly restricted on account of Populist legislation. The late legislature passed an act increasing the amount of property exempt from execution, and abolishing the personal judgment clause in all mortgages, so that only the property mortgaged can be held for money loaned. In Oregon loan agents are not hindered in this manner, but they report a very slack demand for money at the present time.

BISMARCK, N. DAK., July 17.

Inquiry among leading agents of loan companies develops the fact that few applicants for farm loans exist in comparison to former years, and hundreds of farm mortgages have been paid recently. The exact reduction of the mortgaged debt of the State would be impossible to ascertain without investigation of the records of each county, but the aggregate decrease will be large. This improvement has come about through more scientific farming, greater attention to diversification of products, and the extension of the stock industry. The latter has assumed larger proportions among small farmers in the last few years than ever before. Applications for hundreds of new brands have been filed with the secretary of state. The raising and shipping of stock is the most profitable occupation of farmers, and not until recently has it been taken advantage of here.

The advance in the price of wool has been worth hundreds of thousands of dollars to the State, and nearly every farmer has a flock of sheep and receives part of the benefit. The new law allows the state board of school lands, which has the custody of \$1,000,000 of the permanent school fund, to make loans on farm lands at a very low rate of interest, and it has not yet had an application for a loan from any farmer.

HELENA, MONT., July 17.

Information obtained from loan agents and officials of this county is to the effect that the mortgage indebtedness is being gradually reduced, and that this process has been going on for some time. Farming settlements are so small and widely separated that it is difficult to give their condition, although it is believed to be improving slowly. In the regions where stock growing is the chief industry the improvement is decidedly noticeable. Three years of plenty have put the sheep and cattle men in prime financial condition. The advance in wool this year has been particularly helpful for the sheep men, who have had two years of favorable conditions on the ranges.

The copper, gold, and coal mining camps of the State are working to their limit, and indebtedness will be gradually lessening in these camps. On the whole, the conditions of the State are improved.

DENVER, COLO., July 17.

Colorado has paid off debts approximating \$2,000,000 since the first of the year, and bankers report more money in their vaults than they can possibly find any use for. The First National Bank of Denver on the 1st of the month had \$10,000,000 in deposits, the greatest in the history of the institution, which is the oldest in the State. The managers say that they find less demand for money than at any time since they embarked in business, and that the bank has simply become a place of deposit, owing to the prosperous condition of the city and State, which precludes a ready market for loans.

Never has there been so much loose money in the Western country, owing mainly to the introduction of feeding, which has superseded the old-fashioned range system in live-stock raising. Colorado farmers have embarked heavily in feeding of both beef and sheep, and have taken the place and the profits that formerly accrued to the corn growers. In the city there is a great deal of building going on through a desire to employ funds that would otherwise be idle. This takes away from the banks one of the most lucrative sources of loans, for building has always been carried on here on borrowed funds.

Fruit growers who have scored one of the most successful years in their history say that they do not want money, as the buyers are all too eager to get their crops to wait for the holders to move it. New York, Chicago, and St. Louis commission men are making advances that properly belong to the Colorado banks. They are taking the fruit on the ground, and as the value of that crop alone is estimated at \$6,000,000, the fact of the introduction of outside capital, it may be seen, is a serious handicap for the local holders of money.

The mining world is not taking any money, and the bank rate, which has usually been held in Denver from 10 to 12 per cent, has fallen to 5 and 6 per cent, with money begging for employment at those figures.

DES MOINES, IOWA, July 17.

Investigations made here through local agencies and financial institutions reveal the fact that Iowa farmers have been paying off rather than adding to their mortgages. Owners of unimproved lots are the principal borrowers. The farmers of Iowa had a hard time of it last winter, due to the softness of the corn crop and the death of \$25,000,000 worth of hogs of hog cholera. If

these hogs had been fed to sell, the surplus corn would be of much smaller bulk now and prices would probably rule higher. During the last few weeks corn in local stations has been quoted as high as 22 and 23 cents, this being in the places where farmers feed rather than sell their corn.

There are few farmers who are behind on interest payments on mortgages. Money was never more plentiful in Iowa than it is now for loaning purposes. The ruling prices for money are now 6 and 7 per cent, rarely 8 per cent, which is the legal rate. Some money in large quantities and on long time has been loaned on real-estate security for 5 per cent, which was unheard of until recently. There is a scramble among money lenders to pick up good loans. That Iowa mortgages are fewer now than they were a few years ago is admitted by all money lenders. The hard times have caused some people to go into debt, but there has been greater economy practiced and there has been a desire to settle up and begin even with the good times that are felt all over Iowa to-day.

#### SIoux FALLS, S. DAK., July 17.

The loan agents of Sioux Falls all agree that the last four years have been years of wonderful debt paying. D. L. McKinney said that \$50,000,000 would just about cover the aggregate of the debt liquidated in that time. When the hard times struck South Dakota four years ago, people stopped going into debt, because they could find no one of whom to borrow. Then came an era of close economy, followed by a superhuman effort to get out of debt. For the last two years crops have been good, and for the last year have sold for a good price. The creamery industry has brought into the State \$3,000,000 a year, and live stock \$25,000,000.

Loan agents here are unable to place one-half the amount they are willing to loan, even at a reduced rate of interest. Mark Russell, whose company has 1,500 loans in South Dakota, says that over 30 per cent are paying up in full at maturity of the loans and most of the rest are making partial payments.

Figures from several counties show that where one mortgage has been recorded five have been paid. Some of the liquidation has been enforced through foreclosure, but this is on city property which was mortgaged in the days of inflation. There have been very few foreclosures on farm lands.

It is estimated that in 1897 the product from the South Dakota farms, including the live-stock, and creamery industries, will aggregate \$103,000,000. This, distributed among 350,000 people, is enough to give a comfortable living and, in addition, to make a great inroad on their indebtedness.

#### ST. PAUL, MINN., July 17.

The mortgage and loan business on farm lands in Minnesota has fallen off more than 50 per cent during the last three years, principally in the last year and a half. Of all the loans that were in existence in Minnesota on farming lands three years ago the various concerns differ slightly on the percentage that has been paid. The lowest estimate places it at 10 per cent and the highest at 25 per cent, while the average seems to be 10 to 20 per cent. This is held by the mortgage and loan concerns to be a wonderful showing, when it is taken into consideration that a vast amount of money was loaned in Minnesota during the boom times. It means that that much has been paid back over and above what has been borrowed. There have been practically no foreclosures.

That the State has felt the pinch of hard times was one of the great factors that kept the farmers from going farther into debt. When the bottom fell out of the boom, the farmer was the first man to take to the woods. He immediately cut his expenses and practiced the closest economy. The farmer incurred no new debts.

Although diversified farming has gone a great way toward relieving the Minnesota farmer of his debt, by far the greatest factor has been the dairy interest. There are hundreds of creameries and half as many cheese factories in Minnesota, and the majority of them have been established since 1892. The effect of the establishment of these creameries has been almost electrical. It has been the principal cause of the large payments of mortgage loans. At the end of the month the farmers get returns from the creameries.

A great many of them, in fact almost all the larger creameries, are cooperative concerns, owned entirely by the farmers, who share the profits among themselves. In this manner they have always enough money to buy their groceries, clothing, and such necessary commodities of life, while on the farm they produce their own flour, vegetables, and meats. The result is that from the sale of their wheat, oats, corn, pork, and beef they realize a net profit, and it is this money that has been used to pay off the mortgages.

#### LITTLE ROCK, ARK., July 17.

Although the crops in part of Arkansas were cut short by drought last year, the people by economy are getting out of debt. The people look forward to an era of railroad building in the near future unparalleled in the history of the State, from which they confidently expect good results. The State debt is not large, and will be considerably reduced by the acts of the special session of the legislature. Governor Jones thinks very little of it will remain at the end of his administration. The loan companies are doing very little business in the State. Many of them have withdrawn recently.

#### LINCOLN, NEBR., July 17.

The report of the State banking board just issued contains much encouragement for business men. It shows the condition of the State and private banks at the close of business on May 20, 1897, as compared with that at the close on December 31, 1896. At present there are 400 banks, as compared with 414 on December 31. During the interval 23 banks have closed, 3 have reorganized, and 9 new banks have opened. Under the head of liabilities there is a general falling off in the amounts, with a notable exception in the item of deposits, which shows an increase of \$1,006,628.96. In resources there is an increase of \$1,227,123.40. These latter two items, resources and deposits, are regarded as especially encouraging by business men.

Here, then, is a complete refutation, clear, convincing, and sweeping, of the calamity howls that we have heard, and I point, gentlemen on the other side, to this record. I did not make it. Republicans did not make it. It was published in a Democratic newspaper, published as the result of a candid and fair nonpartisan investigation; and I point to it to answer the interrogatory which comes to us so often, "Where is the McKinley prosperity?"

The splendid speech of the President, made at the banquet of the manufacturing bodies at Philadelphia on the 2d day of June last, was the battle cry that rallied the people of the United States to a renewal of confidence in the future of the country. It sounded forth like the call to arms. It thrilled the nation from the East

to the West and from the North to the South. Its influence is yet to-day inspiring hope, credit, and confidence. He said:

DR. PEPPER, GENTLEMEN OF THE MANUFACTURERS' CLUB, DELEGATES TO THE INTERNATIONAL CONVENTION; LADIES AND GENTLEMEN: For the cordiality of your reception I am indeed grateful, although, from my recent experiences in this great city, not wholly and altogether surprising and unexpected. [Applause.] A recent visit to your city gave me an opportunity to feel the welcome heart touch of the people of Philadelphia and enjoy their splendid and boundless hospitality. [Great applause.]

I must tell you that from first to last I have been deeply impressed with the scenes witnessed in Philadelphia to-day, witnessing the remarkable spectacle of the representatives of all the American Republics, with the products of their skill and their soil in one common warehouse for comparison and observation, thanks to Dr. Pepper and the Philadelphia museums. [Great applause.]

The first great convention of these republics was organized by the matchless diplomacy of that splendid American, James G. Blaine. [Cheers and tremendous applause.]

Seven years ago he brought the Governments of this continent together and taught the doctrine that the genuine reciprocity in trade required reciprocity of information. [Great applause.] And it was the genius of the many gentlemen I see here around this board to-night that originated the Bureau of American Republics, located in the capital city, which has already done much good and which, I believe, will yet play an increasingly important part in our trade relations with the Governments supporting it. [Cheers and applause.]

My fellow-citizens, there is no use in making a product if you can not find somebody to take it. [Applause.] The maker must find a taker. [Applause.] You will not employ labor to make a product unless you can find a buyer for that product after you have made it. [Cheers and applause.]

Gentlemen, I am glad to meet the representatives of the American Republics here to-night. [Applause.] I am glad to meet the representatives of all the Governments of the world here to-night. [Applause.]

I have met the manufacturers of Philadelphia and the State of Pennsylvania before. [Applause and laughter.] I met you in the days of your highest prosperity. [Prolonged cheering.] I can not avoid meeting you if I want, and I would not if I could [great applause] in this, your hour of somewhat prolonged adversity. [Cheers and applause.]

But let me tell you, my countrymen, that resuscitation will not be promoted by recrimination. [Applause.] The distrust of the present will not be relieved by distrust of the future. [Applause.] A patriot makes a better citizen than a pessimist. [Great applause.] And we have got to be patient. [Applause.] Much as we want to move out of the old house, we can not do it until the new one is finished. [Cheers and applause.]

A tariff law half made is of no practical use, except to indicate that in a little while a whole tariff law will be done [applause], and it is making progress. It is reaching the end, and when the end comes we will have business confidence and industrial activity. [Renewed cheers and applause.] Let us keep steady heads and steady hearts. [Applause.] The country is not going backward, but forward. [Applause.] American energy has not been destroyed by the storms of the past. [Applause.] It will yet triumph through wise and beneficent legislation. [Great cheering.]

Philadelphians have in the past shown what busy industries and well-employed labor can do to make a great city and a contented population. [Applause.] They do not mean to accept present conditions as permanent and final. [Cheers.] They will meet embarrassments as they have bravely met them in the past, and in the end will restore the splendid industries and the magnificent labor to its former condition and prosperity. [Great cheering.] And, gentlemen, Philadelphia is but a type of American pluck and purpose everywhere. [Great and prolonged cheering and applause.]

Mr. Speaker, prosperity is coming. We hear the sound of the chariot wheels as they rumble over the mighty paths of commerce, trade, manufacture, agricultural productions, railroad enterprise, and all the various engines of industrial production and industrial prosperity. We see that the people have realized it. Even in the air the very spirit of hope flashes over the eye of the business man. The spirit of enterprise is seizing upon the industrial elements of the country.

The spirit of confidence is returning. We have had no business confidence in this country for many, many long months and years. Sadly we have waited, patiently we have tarried, earnestly we have hoped; but it came not, and the darkest hour, financially, commercially, industrially, this country ever saw was on the election day of last year. The air was full of panic and conditions were ripe for disaster, and it has been a miracle of recuperation that we have witnessed.

There have been more buildings projected in the cities and towns of the United States and finished or pushed toward completion since the election of William McKinley last November—five times more—than there were in the four years of Cleveland's last Administration. Look about you. You see it coming; you see the dawning of a better day. The fringes of the vast curtain that hides the commercial and financial future are all luminous with the glories of the coming day. It has been an awful struggle. Democratic incompetency and Democratic bad politics plunged the country into the vortex, and Democratic persistency and Democratic bad politics sought to hold it there, and the Democratic party has sought to discourage hope ever since the election of McKinley.

If the business men of the country believe the speeches that they have heard upon the floor of Congress in its two branches during the past four months, they would hoard their money in the banks and never touch an enterprise. If they had as much confidence in the Democratic party as they appear to have in the Republican party, the absolute destruction of the business interests would be just as certain as is the death of Napoleon Bonaparte. But the people remember the despair out of which they have emerged. They remember the toils which they experienced during the past four years. They remember the fruits and the flowers that they enjoyed in the past under Republican administration,

and looking about them they see in the present a morning star of hope, shining in the horizon in the east.

I say to them, McKinley prosperity, Republican prosperity, the prosperity of the industrial people of this country, is coming. It has been held back and held in check and distempered and disordered by the slow movement of legislation, but it can be held in check no longer. Like a mighty giant it has broken the fetters of Democracy, it has shaken its limbs free from the environments of bad legislation, and now comes the proof and evidence that industrial prosperity will move to the front.

### The Tariff.

### REMARKS

OF

HON. STEPHEN A. NORTHWAY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897,

On the conference report on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. NORTHWAY said:

Mr. SPEAKER: Among the arguments against the pending tariff bill which have been offered on the other side of this Chamber is that threadbare assertion that a tariff for the encouragement and protection of manufactures is unconstitutional. That idea has, perhaps, been more vigorously urged on this occasion than usual because the bill in question specifically declares the encouragement of the industries of the United States to be one of its purposes. While it is not my intention at this time to enter into an elaborate argument on constitutional questions, I do desire to call attention to the inconsistency of the attitude of the Democratic party, both in its relations regarding the constitutionality of a protective tariff and the equally grotesque and unfounded constitutional assertions of that other feature of the present Democratic faith, the free and unlimited coinage of silver.

Regarding the assertion that the protective tariff is unconstitutional I desire at this time to make a single observation. The first act framed and passed by the first Congress which assembled after the framing and adoption of the Constitution was a tariff bill. The Congress which framed and passed it was made up largely of men who either helped frame the Constitution or were familiar with the views and designs of the framers of that instrument. It goes without saying, then, that the first tariff bill framed under this Constitution must have reflected the views of the framers of the Constitution. If this assumption is admitted, and I think it will be by every reasonable man, it is easy to prove beyond question that the framers of the Constitution did not consider protection a violation of its provisions or intention, for the preamble of that first tariff act declared distinctly that it was levied "for the support of the Government and the encouragement and protection of manufactures."

This question of the real meaning of the Constitution and its interpretation is so closely allied to another feature of the present Democratic creed that I may be pardoned if I give some attention to it on this occasion. The subject to which I allude is the new doctrine of the Democracy that the Constitution requires coinage of silver concurrently with gold at the ratio of 16 to 1 without reference to the real ratio of comparative values of the two metals in the commerce and estimation of the world. This subject is so exhaustively discussed by Mr. O. P. Austin, of this city, a writer of long experience and careful research, that I have taken the liberty of quoting a statement recently prepared by him in which he discusses this question as asserted in the national Democratic platform of 1896 and reasserted in the Ohio Democratic platform of 1897. The statement is as follows:

A DISCUSSION OF THE ASSERTIONS OF THE OHIO DEMOCRATIC PLATFORM OF 1897.

"Recognizing that the money question is paramount to all others at this time, we invite attention to the fact that the Constitution names silver and gold together as the money metals of the United States."

This statement is inaccurate and intentionally misleading. The only place in which the Constitution "names silver and gold together" is where it declares that "no State shall make anything but gold and silver coin a tender in payment of debts." It does not say that silver and gold shall both be coined in an unlimited manner or that either one or both shall be coined at all, but specifically gives to Congress the power to determine what the coinage of the United States shall be, both as to the metals used and their relations, by saying in explicit terms, in section 8: "The Congress shall have power to coin money and regulate the value thereof." It does not "name silver and gold together" as the platform says, but names gold and silver together, pointing only giving the preference to gold by saying in section 10: "No State shall make anything but gold and silver coin a payment for debts." If anything is to be inferred as to the relation which it intended that the two metals should bear it is clearly that gold was to be the measure, since it is first named in the only place where the metals are mentioned, and if the framers

of the platform wanted to be frank, why did they not follow the wording of the Constitution in their statement and say "gold and silver" instead of reversing it and saying "silver and gold?"

"The first coinage law passed by Congress under the Constitution made the silver dollar the money unit and admitted gold to free coinage at a ratio based upon the silver-dollar unit."

The first coinage law clearly made gold a standard by first naming all the gold coins which, it said, should be of the value of a given number of units, and said that the unit should be "of the value of a Spanish milled dollar as the same is now current, and to contain 416 grains of standard silver." If the advocates of silver insist that this act interpreted the meaning of the Constitution and that this interpretation must be followed, why do they now insist upon a standard silver dollar with only 412 grains of silver instead of the 416 grains which the act specifically names? By their own proposition they demand a violation of what they claim is a constitutional requirement.

This act, which they claim is an interpretation of the Constitution on this question, provides "that every 15 pounds weight of pure silver shall be of equal value in all payments with 1 pound weight of pure gold." If this is an interpretation of the Constitution, why do these sticklers for its observance propose to violate it by saying that every 16 pounds weight of silver shall now be equal to 1 pound of gold? Would there not be equal authority for saying that every 17, or 18, or 20, or 30 pounds weight of silver shall be equal to 1 pound weight of gold? By their own proposition to change the ratio they admit that neither the Constitution nor the first act passed under it are binding as to the future relations of gold and silver as money.

The fact that this act specifically said "that every 15 pounds weight of pure silver shall be of equal value with 1 pound weight of pure gold" shows that gold was intended to be the measure of value, for had it intended that silver should be the measure it would have said that 1 pound of gold should be equal in value to 15 pounds of silver. Alexander Hamilton, who was one of the framers of the Constitution and whose report to Congress was the basis of this act, said of the alleged unit—the Spanish dollar—"that species of coin has never had any settled or standard value, \* \* \* while gold has a fixed price by weight, with an eye to its fineness. This greater stability of the value of gold coins is an argument of force for regarding the money unit as having been hitherto virtually attached to gold rather than silver."

If these gentlemen insist that the first coinage act passed under the Constitution is an exact interpretation of the meaning of that instrument, why have they and their party always insisted that a protective tariff is a violation of the Constitution when they know that the very first act passed under that Constitution declared that the tariff duties which it levied were "for the support of Government and the encouragement and protection of manufactures?"

"We declare that the act of 1873 demonetizing silver without the knowledge and approval of the American people," etc. The act itself says in specific terms that "this act shall not be construed to affect any act done, right accrued, or penalty incurred under former acts, but every such right is hereby saved," thus clearly stating that it did not demonetize any of the coins authorized prior to that date, while every one of the four hundred and fifty million standard silver dollars coined since the passage of that act is and has constantly been a full legal tender and none of them is or has been demonetized.

The act of 1873 was not passed "without the knowledge or approval of the American people." It was submitted to Congress in April, 1870, printed thirteen times, discussed at intervals until January 1, 1873 (nearly three years), the debates and discussions filling 144 pages of the CONGRESSIONAL RECORD, which was published daily during the session in which it was discussed. The American people had ample opportunity to know all of its provisions, and that there was no popular disapproval of it is shown by the fact that 112 of the members of the House which passed it were reelected, many of them continuing to serve in Congress to the end of their lives, while several are still members of that body, notably WILLIAM M. STEWART, of Nevada, who voted for the bill, and who in a speech delivered on June 12, 1874, said:

"The laboring man and the producer is entitled to have his product and his labor measured by the same standard of value that measures your national debt. You require from the laboring man gold to pay the interest on your national debt, which is right, which can not be avoided if you mean to save national honor; but then give him the same money with which to pay that debt. The question will never be decided until you determine the single question whether the laboring man is entitled to have a gold dollar if he earns it or whether you are going to cheat him with something else."

"We declare that the act of 1873 \* \* \* has resulted in the appreciation of gold."

It has not "resulted in the appreciation of gold," because gold has not appreciated. Any article "appreciates" in value only when there is an increased demand for it, either because of the reduction in the quantity or an enlarged need for it in the current affairs of life. The figures of the best statisticians show that the gold coin of the world and the total money of the world have increased much more rapidly than the population since 1873; hence the absurdity of the claim that it has "appreciated" in value, since the amount for each individual in the world has greatly increased since the passage of the act in question. The gold money of the world has more than doubled since 1873, the silver money of the world has nearly or quite trebled in that time, and the paper money has also increased largely, while the population of the world has increased only 25 per cent in the same period.

It is thus evident that the total amount of money for each individual in the world is much greater than in 1873, and that there can thus be no increased per capita demand for gold, and hence no "appreciation" in its value, while the fact that a large proportion of the business of the world is now performed with checks, drafts, and other forms of credit without the direct use of money further reduces the demand upon gold.

The mines of the world produce more gold to-day than they produced of gold and silver together in 1873; the silver production of to-day is nearly three times what it was in 1873, and the amount of silver now annually coined is more than was produced from the mines of the world in 1873. The number of silver dollars coined in the United States in the fiscal year just ended was two and a half times as many as in the entire history of the mints prior to 1873, and the total number of full legal-tender dollars coined in our mints since 1873 is fifty-six times as many as were coined in the entire history of the Mint prior to the act of 1873.

"We declare that the act of 1873 \* \* \* resulted in an appreciation of gold and a corresponding fall in prices."

Since it is shown from official statistics that there has been no appreciation of gold, but, on the contrary, a vast increase in its production and coinage and an increase in the other classes of money of the world, the cause of the fall in prices of commodities can not be successfully charged to a depreciation of gold, but must be looked for elsewhere. This fall in prices is due to the enormous increase in production and to the reduced cost of producing and transporting the products of the farm, factory, forest, and mine. Senator Peffer, in his report to the Senate in 1894 on the cause of the fall in agricultural prices, said:

"In Kansas it appears from the report of the secretary of the State board of agriculture that it costs 50 cents to raise a bushel of wheat. \* \* \* In

Pennsylvania the average cost of producing a bushel of wheat is about 65 cents. . . . Wheat in India costs but about 13 cents a bushel on the farm, 12 cents more puts it aboard ship, and 25 cents additional lands it on the wharves in Liverpool. This 50-cent wheat from India competes (in our best market, England) with wheat on American farms at an average cost of 60 cents per bushel. . . . Wages of India farm hands run from 6 to 10 cents of our money per day."

The same report shows that the cost of producing wheat on the great farms of California and the Dakotas is less than half the average cost in the Central Mississippi Valley, while similar conditions prevail in Argentina and Australia, which, through the extremely low ocean freights, are also competitors with us in all the markets of the world. The reduced cost of agricultural products, due to the combination of low freights and the use of machinery, finds a parallel in the reduced cost of manufacturing in all lines through similar causes, and also in a reduction in the cost of mining and the production of the precious metals, which thus supply the money of the world at a greatly reduced cost of that prime measure of value, labor.

"We declare that the act of 1873 . . . has resulted in . . . a heavy increase in the burdens of taxation."

The increase in the burdens of Federal taxation is mainly due to the increase in expenditures for pensions, public buildings, and river and harbor improvements, and any party which would specifically declare against a continuation of these would quickly find itself repudiated by the people.

"We declare that the act of 1873 . . . has resulted in . . . a heavy increase in the burden of all debts, public and private."

The census figures show that the increase in debts since 1873 has been, in a very large share of the cases, for the purchase of homes or the improvement of farms, and that the sections in which this increase in mortgage indebtedness has been greatest have been those which have shown as a result the greatest activity and the greatest increase in actual wealth and genuine prosperity.

"We declare that the act of 1873 . . . resulted in . . . the enrichment of the money-lending class at home and abroad."

The money-lending class can only "grow rich" by the interest which they get for their money loaned, and everybody knows that the rates of interest have greatly fallen since 1873 and that their opportunity for enrichment must consequently have been correspondingly reduced. The usurious rates of interest which were possible in many sections of the country prior to 1873 are now absolutely prohibited by State legislation.

"We declare that the act of 1873 . . . resulted in . . . the prostration of industry and the impoverishment of the people."

Industry was not "prostrated" or the people "impoverished" until the success of the Democratic party at the polls in 1892, and its free-trade legislation which followed, paralyzed industry in the United States and transformed its communities of busy workmen into idlers, this bringing a "prostration of industry and impoverishment of the people." There was never greater prosperity in the United States or any other country than that of the years immediately preceding the Democratic success of 1892, and never greater "prostration of industry and impoverishment of the people" than that which followed that Democratic success. It is because of the "prostration of industry and impoverishment of the people" through the operations of the Democratic party that its leaders now abandon their time-honored principles and ask a restoration to power on a currency proposition which has been discarded by the most progressive nations of the world and is being rejected by others as rapidly as possible.

"We are unalterably opposed to monometallism, which has locked fast the prosperity of an industrial people in the paralysis of hard times."

The adoption of the free coinage of silver at the ratio of 16 to 1 would result in true monometallism, with silver as the money metal. This is proven by the fact that every country which has attempted to retain the silver standard or the concurrent free coinage of both metals at a ratio so widely different from the commercial ratio of the two metals has lost all of its gold and retained only silver currency and true monometallism, while other nations making gold the standard and coining silver on government account circulate both metals in large quantities, approaching thus more nearly to true bimetalism than those which by the free and unlimited coinage of silver as a ratio widely different from the commercial ratio of the two metals obtain only silver monometallism. The condition of the people of the countries maintaining the gold standard, or what the framers of this platform term gold monometallism, is one of vastly greater prosperity than that of the people of the countries maintaining the silver standard.

There is vastly more money per capita, better wages, better homes, more comforts of life, and more education and more general intelligence among the people of the gold-standard countries than among those of any of the countries having the silver standard. Mexico, which is probably the most prosperous of the silver-standard countries, has a total of \$4.95 per capita for its people; the South American States a per capita of less than \$2, aside from the uncovered and depreciated paper; China, \$3.33; the Central American States, \$3.66; while Germany has \$17.50 per capita; Great Britain, \$30.78 per capita; United States, \$22.57 per capita; Netherlands, \$24.35 per capita, and France, \$35.77 per capita. "Monometallism" has indeed "locked fast the prosperity of an industrial people in the paralysis of hard times" wherever it has been established by the process proposed by this platform, viz, the unlimited coinage of both metals at a ratio widely differing from the relative commercial value of the two metals.

"Gold monometallism is a British policy, and has brought other nations into financial servitude to London."

It is also a German policy, a French policy, a Belgian policy, an Austro-Hungarian policy, a Netherland policy, a Danish policy, a Russian policy, a Chilean policy, a Peruvian policy, a Japanese policy, and, in fact, the policy of the most enlightened and progressive nations the world over; and if the United States were to abandon her present system and undertake a greatly enlarged use of silver without the cooperation of other nations, she would abandon the company of the most intelligent, enlightened, and prosperous nations of the world and join the ranks of the weakest and least intelligent nations, all of which are hastening to adopt the gold standard as rapidly as possible.

"It is not only un-American but anti-American, and it can be fastened on the United States only by the stifling of that spirit and love of liberty which proclaimed our political independence in 1776 and won it in the war of the Revolution."

The "spirit and love of liberty which proclaimed our independence in 1776," and which is still strong in the minds of the people of the United States, is not in favor of reducing the citizens of this country to the level of poverty, degradation, ignorance, and practical enslavement which characterizes the condition of the masses in the few remaining silver-standard countries of the world to-day. The only attempt to "stifle the spirit and love of liberty" ever made in the United States began in 1891 by the very party and the very leaders who are now proposing to degrade the working people of this country to a level of those of the least intelligent and prosperous on the face of the earth.

"We demand the free and unlimited coinage of both silver and gold at the present legal ratio of 16 to 1 without waiting for the aid or consent of any other nation."

A policy which all the intelligent nations of the world have abandoned since the enormous production of silver has brought it to a ratio of 94 to 1

with gold and the divergence still increasing. The product of the silver mines of the world since 1873 is practically one-half as much as that produced from the mines of the world in three hundred years preceding that date, as shown by the highest official authorities.

"We demand that the standard silver dollar shall be a full legal tender equally with gold for all debts, public and private."

It is now a full legal tender for all debts, public and private," except where such men as WILLIAM M. STEWART, JOHN P. JONES, Arthur Sewall, John F. Algeid, John R. McLean, and other silver leaders deprive it of its full legal tender value by making their contracts and loans and rents and interest payable by the poor in gold only. Every one of the 450,000,000 standard silver dollars which we now have is a full legal tender for all debts, public and private, and the party which asserts even by implication that this is not the fact intends either to discredit those dollars or to deceive the people, or both.

"We favor such legislation as will prevent for the future the demonetization of any kind of legal-tender money by private contract."

An excellent plan; but the fact that the leaders of the party proposing it now refuse to follow that plan in their private affairs casts a suspicion upon their good faith in this public assertion.

"We are opposed to the policy and practice of surrendering to the holders of the obligations of the United States the option reserved by law to the Government of redeeming such obligations in either silver coin or gold coin."

Every holder of obligations of the United States can receive his pay for them in silver if he desire or in gold if he desire. If the Government were to insist on paying in one metal to the exclusion of the other, it would immediately discredit its obligations and at the same time injure the standing of a large share of the money which it has itself issued and promised, by implication or in words, to keep as good as the best. While these obligations call for payment in "coin," that term, when the acts authorizing the bonds were passed, related only to that which was the equivalent to gold in value and purchasing power, and to attempt to take advantage of the fact that the metal of which a part of this coin is now made has depreciated in value and force coins of that particular class upon the holders of those obligations would be dishonest, and would lay the Government liable, as it does those who propose it, to the charge of taking advantage of a technicality to do a dishonest and treacherous act. It would bring upon the Government of the United States, as it does upon the men who make it, the contempt and condemnation of honest men the world over.

"We are opposed to the issuing of interest-bearing bonds of the United States in time of peace," etc.

So are we all of us, and but for the misfortune that the Government of the United States was placed under the control of the Democratic party in 1892 there would have been no necessity for issuing bonds "in time of peace." It is something new, however, to announce a general opposition to "issuing bonds in time of peace," as this has frequently happened with Democratic control of the Government, beginning with Jefferson and ending under Buchanan and Cleveland.

Congress alone has the power to coin and issue money, and President Jackson declared that this power could not be delegated to corporations or individuals. We therefore denounce the issuance of notes intended to circulate as money by national banks as in derogation of the Constitution, and demand that all paper which is made a legal tender for public and private debts or which is receivable for duties to the United States shall be issued by the Government of the United States and shall be redeemable in coin."

This means that all the paper money of the country shall be issued by the Government, and this must be either actual "flat money" or must be sustained by keeping in the Treasury an enormous metallic reserve, much larger than the one which now exists, and which causes so much dissatisfaction to the Democracy and their flat associates of Populistic and socialistic tendencies.

"In support of these principles we invite the cooperation of all men who love liberty and hate corruption, oppression, and tyranny."

A combination of high-sounding words, intended only to mislead and inflame unthinking people, and coming with poor taste from a party whose entire record up to the time of its removal from power in 1891 was directed against the "love of liberty" and in favor of "oppression and tyranny."

"We hereby declare all trusts and monopolies hostile and dangerous to the people's interests . . . and demand a vigorous enforcement of all antitrust laws," etc.

All of which sounds well. But the people are naturally suspicious of such declarations from a party which neglected during its four years of power to enforce the existing antitrust laws and which framed its tariff law in the interests of the greatest trust of the land, excepting the single one which it is now attempting to place in control of the nation, the silver trust.

"We demand the immediate recognition of the belligerent rights of the Republic of Cuba," etc.

Which it is generally conceded would be of little practical value to the Cubans and would probably destroy the opportunity of bringing about, through the peaceful and proper methods of diplomacy, the results for which the people of that island are now struggling.

## The Tariff.

## SPEECH

OF

HON. S. T. BAIRD,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. BAIRD said:

Mr. SPEAKER: Before entering upon a discussion of the pending measure, which has been called by its author "A bill to provide revenue for the Government and to encourage the industries of the United States," I desire to call attention to the indecent haste which has characterized the action of the majority in forcing the passage of this bill through this branch of the National Legislature.

Although it is the most important bill which this Congress will be called upon to consider, it passed this House in the first instance

without allowing a proper time for deliberation and consideration by the members.

The Ways and Means Committee considered this bill only four days, and reported it back to the House with the recommendation that it do pass. The Democratic minority were not even accorded the opportunity of considering this measure or even preparing a substitute, or presenting amendments to its most obnoxious features. After it had been reported to the House, a gag rule was adopted by the majority, and discussion of the bill was limited to nine days; and it is a fact that this bill was passed by the House of Representatives before one-tenth of the bill had been read by paragraphs, and no amendment was allowed to be offered excepting those prepared and indorsed by the Republican members of the Ways and Means Committee.

I contend that such haste and inconsiderate action on the part of the majority is extremely unjust to those members who would like to carefully study this measure in order that they can vote intelligently.

We are prepared to meet the champions of the Republican party in the arena of debate upon this and other measures and ask no favors of them, but we did desire and expected fair play.

We realize the fact that in order to raise the enormous corruption fund used by the Republican party in the last campaign promises were made to the "robber barons" of the East that if they furnished the necessary campaign funds the legislative functions of the country would be turned over to them in order that a protective tariff might be levied, out of which they could reimburse themselves.

We knew that Shylock would demand his pound of flesh, but we thought the matter would be conducted decently and in order. But the mortgage is being foreclosed in such hot haste as to bring the blush of shame to the cheek of every true patriot who values his country's honor and the welfare and happiness of his fellow-citizens.

When those gentlemen on the other side of the aisle who have shamelessly or ignorantly abandoned their rights as members of a deliberative body, contemplate their cowardly surrender of their high privileges, their consciences will lash them in after years.

We of the Democratic faith denounce the methods which you have adopted in order to force this bill through under whip and spur, and those methods are deserving of the condemnation and denunciation of every lover of constitutional liberty and freedom of legislative action.

It was charged by the minority at that time that this bill was hastily prepared and that there were many inequalities and crudities which should be corrected before it was crystallized into law. We only ask for an opportunity in this House to point out these defects and to call attention of the country to them, but we are denied that poor privilege.

Although this House has surrendered its high privileges as a deliberative body, it is a happy thing for the perpetuity of our institutions that at least one branch of the National Legislature is still a deliberative body in its fullest sense, and the charges made by the minority as to the defects of this bill have been clearly demonstrated to be correct from the fact that the Senate, after careful and deliberate examination, have added no less than 874 amendments to this measure.

But the action of the Senate in thus carefully deliberating and considering this measure has had no weight or influence upon the minds of the majority of this House.

We have asked for only two days in which to discuss the many important amendments and changes which the Senate has made in this bill, and even that short time has been denied us by the majority, and a vote is to be forced upon this important proposition after only a few hours' debate.

We have had no desire or intention to adopt any filibustering tactics or to unnecessarily obstruct the final passage of this bill. We only desire reasonable time to discuss its important features and to point out its inequalities and inequities.

This Congress was called in special session by President McKinley for the avowed purpose of passing a protective-tariff bill. The promises which were made by the Republican candidate and campaign orators of last fall to restore prosperity to the country were to be fulfilled by the passage of a law which would increase the burden of taxation without increasing the volume of our currency. It is a fact which no one will deny that there has been great distress throughout the agricultural regions of our country as well as in the industrial centers. To restore prosperity to the country, to give labor an opportunity to earn an honest wage, to set the wheels of industry in motion, is a consummation devoutly to be wished for; but we of the Democratic faith do not believe that this can be accomplished by imposing greater burdens of taxation upon the people.

The advance agent of prosperity, as you have fondly called your chosen leader, has now been piloting the ship of state since the 4th of March, and it seems to the ordinary mortal that your advance agent is a long way ahead of the show.

It was promised that upon the election of the Republican candidate the glorious sunshine of prosperity would immediately burst upon our vision, but after election it failed to materialize, and the gloom in which our country had been enveloped grew darker and denser.

Seeing that "this bird of beautiful plumage" did not return upon schedule time, it was then loudly and confidently asserted that prosperity would surely be with us as soon as the Republican President had been inaugurated and the Republican party in full control of the Government. But the 4th of March has come and gone, and many moons have waxed and waned, and still prosperity is not with us, and the industrial stagnation and depression in agricultural sections are still pronounced as ever. Distress and discontent are everywhere, and even while the sweet-toned voices of Republican orators are singing their siren songs 300,000 miners are out of work and are striking for living wages.

The last campaign was not fought upon the tariff issue. The great and paramount question discussed before the people was that of finance, and the Democratic party pledged itself to restore prosperity by returning to the constitutional money of the country.

While we are still earnest advocates of that system of bimetalism as enunciated by the Chicago convention, we are ready and willing to meet the Republican party upon the issue of the tariff which they have presented.

This tariff bill has been prepared with the purpose of encouraging a few of the favored industries of the United States, although the excuse for calling this Congress in extra session was the deficit in the finances of the Government.

The bill is prepared upon strictly protective lines, and the revenue feature, which should be the main object of all tariff legislation, is made subsidiary to the protection of certain special and favored industries.

It is charged by the chairman of the Ways and Means Committee in the majority report that the total deficiency for the four years ending June 30, 1897, will amount to over \$203,000,000. This deficiency is charged to the inadequate provisions of the Wilson bill as a revenue-producing measure, yet the two principal items of this deficiency are erroneous. It is a fact that for the fiscal year ending June 30, 1894, the expenditures of the Government exceeded the revenues by \$69,803,240, but it is certainly not candid on the part of the chairman of the Ways and Means Committee to charge this deficiency against the operation of the Wilson bill, for during this entire year the McKinley bill was upon the statute books, and this enormous deficiency occurred before the existing law had ever been put upon the statute books.

The chairman, [Mr. DINGLEY] also estimated that the deficiency for the fiscal year ending June 30, 1897, would be \$65,000,000, yet the statistics show that the real deficiency for this time amounted to only \$18,623,107.

And to see that the Government was in no immediate danger of bankruptcy, one has only to examine the report of the Secretary of the Treasury, which shows that there is an available cash balance on hand above the one hundred million-dollar gold reserve of more than \$130,000,000.

From these facts any intelligent man will see that the avowed purpose of the Republican party was not a true one, and the real motive which has actuated the majority in the passage of this bill has been to protect certain favored industries by giving them the right to prey upon the people under the system of taxation which was inaugurated by the Republican party and sought to be revived by the provisions of the pending bill.

Even admitting that there is a large deficit, has it ever dawned upon the minds of the majority that there are two different ways of meeting and curing this evil?

One is by increasing revenue; the other, and the better way, is to decrease expenses.

You can not increase the revenues of the Government except by imposing additional burdens of taxation upon the people; but you can reduce expenditures without crippling the public service, and you should make an honest and faithful effort to do so.

But if any of us had indulged in the vain hope that this Congress would make any efforts to curtail expenses, that expectation was most assuredly demolished by the action of this House when, after less than three hours' discussion, the following bills were passed without ever having been referred to or acted upon by any committee:

Contingent expenses Indian Department .....	\$7, 670, 220. 89
Deficiency bill .....	8, 166, 214. 74
Agricultural bill .....	3, 182, 902. 00
Sundry civil bill .....	53, 147, 551. 58

Total .....	72, 166, 889. 21
-------------	------------------

This reckless and criminal expenditure of the people's money has demonstrated beyond a doubt that this Congress will not attempt to reduce the expenditures of the Government so that the

present revenue could be ample to meet all legitimate demands upon it.

The Republican party has looked upon the prostrate condition of the country, and has promised to restore prosperity if intrusted with power, and this bill is presented as a panacea for the ills which now afflict the body politic.

The McKinley law, which has been denounced by the Democratic party as a culminating atrocity of class legislation, has been overshadowed in its injustice and inequalities by the present bill.

The average rate of taxation under the McKinley law was 49.58 per cent, whereas the rate of taxation under the proposed bill is 57.03 per cent, and this enormous increase in the burden of taxation is done under the plea of restoring prosperity to the impoverished people and stricken industries of our country.

The national taxes under the McKinley law amounted to \$198,000,000, and the able and astute chairman of the Ways and Means Committee estimates that the national taxes under this bill will amount to over \$273,000,000. This enormous sum of money must be taken from the pockets of the consumers of this country, and it is impossible for the great agricultural classes of the South and the West to reap any benefit from the imposition of this taxation.

It is a fact which the protectionists can not deny that the imposition of the tariff duty increases the price of the article upon which the duty is levied by the amount of the rate imposed, and as every article which the farmers of the South and West use in planting, gathering, and harvesting their crops is placed upon the dutiable list and the cost thereof increased to him, there is nothing in this bill which can by any possibility increase the price of the commodities which he has to sell.

The farmer of the South has to pay a tax upon every implement used in the cultivation of his crop; he pays a tax upon the machinery used in preparing his crop for market, and the cotton planter pays a tax upon the bagging and the ties with which his cotton is wrapped. The same is true of the great wheat-producing class of the West, and while these burdens of taxation are placed upon the cotton planter and wheat grower, he can not participate in any of the benefits or advantages which are the incidents of a protective tariff.

How are you going to make the great wheat grower prosperous by adding to the price of everything he consumes and can not possibly by the taxing power add anything to the price of his product?

What benefit will the cotton planter derive from this bill which increases the tax upon almost every article used in the production of cotton and you can not possibly add one cent to the price of his product?

What industries are you seeking to encourage by the operation of this bill?

Certainly not the interests of the agriculturists, who compose the backbone and the muscle and a large part of the brain of the Republic.

No. You intend to encourage and protect the interests of the Eastern manufacturers and the iron trusts of Pennsylvania and Ohio at the expense of the great agricultural interests of the country, and the gigantic sugar trust has more influence in shaping legislation than the people have.

You can not restore prosperity by increased taxation. You can enrich a few at the expense of many, but you must do so by a system of legalized robbery which enables a favored few to prey upon the masses, who have been rendered powerless by the operation of your outrageous system of a robber tariff.

The people have demanded bread, and you will give them a stone; and for meat you will give them a serpent.

Do not pass this bill under the pretext that you are doing so in the interest of the great body of the American people.

Be candid and honest and say to the world that your party has contracted a debt with the trusts and corporations and combines of the country and that you are going to discharge these obligations at the expense of the people.

In return for the substantial aid which you received from these sources in the last campaign you are to give them further and greater opportunity to plunder and pillage the people. You have not the manhood and courage to proclaim this truth to the people, but they will know it, and at the first opportunity which presents itself they will revenge themselves upon you for the base betrayal of their interests.

The Republican party has made the most solemn promises of restoring prosperity to the country, and the enactment of this iniquitous measure is the fulfillment of that promise.

The idea that by a perversion of the legitimate power of Congress to levy taxes the people can be made rich seems to have taken possession of the Republican party, and it is endeavoring to restore prosperity by adding to the burden of taxation.

The great question of financial reform, which was the issue upon which the last campaign was fought, has been completely ignored.

If you are honest and earnest in your desire to restore prosperity to our people, why not open our mints to the free coinage of both our precious metals? Why do you not endeavor to give the people an opportunity to obtain sufficient money to pay the taxes with which they are already burdened, rather than to add to that burden and deny them any increase in the volume of the money of our country?

You will not do this; we do not expect you to do it. You are content to leave the great financial interests of your country in the hands of the bankers, and you are making indecent haste to deliver the taxing power into the hands of the favored few.

The people of this country will realize the fact that this measure is not designed to promote the welfare of the great majority of the masses. It is class legislation run mad. The iron industry is protected, the lumber industry is protected, the sugar trust is taken care of, and the great manufacturers who have contributed so liberally to the Republican campaign fund receive abundant protection at the hands of the majority of this House. But the great agricultural interests of our country, the wheat of the West and the cotton of the South, will receive no benefit from the passage of this bill.

They are not only left without any provision for their benefit, but the increase of taxation, direct and indirect, which is contemplated by this measure, will add to the burdens which they already bear.

No measure looking to the betterment of our financial system has or will be considered by the Republicans in this Chamber.

The party having as its chief adherents the banking influence and the great money corporations of this country and England will attempt in no measure to change the existing currency laws without the consent of this oligarchy.

The gold standard must be preserved if the support of these institutions is to be retained; and when the Republican party loses these elements of strength, it is bound to go down in defeat before an outraged and indignant people.

It is not at all surprising with one who is familiar with the purpose and the history of the Republican party that its most strenuous efforts should be put forth to secure the passage of this bill. A party which had its birth in sectionalism and which grew to strength by keeping alive sectional animosities, and a party which has always championed the special and favored few, is only consistent when it advocates a bill of this character.

That class of statesmen who subordinate principle to expediency may excuse a vote of a Democrat for this bill, upon the false ground that in the general division of the spoils it is nothing more than right that everyone should scramble for his share.

With this school of political economy I have no sympathy whatever. But it is a matter which addresses itself to the judgment and conscience of each individual.

As for those Democrats who have voted for this bill upon the ground of expediency, I leave them to settle it with their consciences and their constituents, but I most solemnly and earnestly protest against any Democrat justifying a vote for this bill upon the specious reasoning that it embodies in a single line the real principles and policies of the Democratic party upon the question of Federal taxation.

The fundamental difference between the two great parties upon the question of taxation is not so much in the methods of levying the tax as it is in the objects for which legitimate taxation may be levied.

The Democratic party has ever held that taxation was a high and sacred power, and should be used only in the interest of the general public. From the foundation of the Government even until the present time we had battled for a system of taxes which shall fall equally upon all the people of this country.

We have held, and we now hold, that taxes should be limited to the needs of the General Government, economically and honestly administered, and when taxation was levied for any other purpose, it was unjust and unconstitutional.

Our opponents, on the other hand, have contended that the strong hand of the Government, through a false system of taxation, should lend its aid to the protected industries of the North and East, and, under the plea of protecting infant industries, the great mass of the people have ever been compelled to pay tribute, under the guise of taxation, to the favored few.

In support of the claim which I make that protection is un-Democratic and has never received the indorsement of the public, I will insert extracts from the various platforms from the foundation of the party until the present time.

From the foundation of the Democratic party it has been opposed to all restrictions upon commerce. It has strenuously opposed the idea of protection, and in no Democratic platform can anyone find justification or excuse for a vote for the pending bill.

In the early political history of our country Thomas Jefferson, who was the founder of the Democratic party and the greatest exponent of its principles, declared himself in a letter to Elbridge Gerry as being in favor of free commerce with all nations. At that

time he was Vice-President of the United States; and in 1800, when the first political convention was held for the purpose of making a Presidential nomination, Jefferson was nominated upon a platform which declared in specific terms for free commerce with all nations.

This convention was held in Philadelphia, and was composed of those members of Congress who adopted and indorsed the views of Mr. Jefferson.

At that time Mr. Jefferson and his followers were known as Republicans and their opponents were the Federalists, who were led by that great statesman, Alexander Hamilton. Upon this and other measures Mr. Jefferson was elected to the Presidency, and from that day until this no Democratic platform has contained an indorsement of protective principles.

In 1840 the Democratic platform declared that—

Justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another, or to cherish the interest of one portion to the injury of another portion of our common country.

This plank was reaffirmed in the platform of 1844 and also in 1848.

In 1852 and 1856 the same plank was inserted, and the Democratic idea of raising revenue was exemplified by the addition of the following statement of principles, that—

No more revenue ought to be raised than is required to pay the necessary expenses of the Government and the gradual but certain extinction of the public debt.

In 1876 the Democratic platform contained the following language in reference to taxation:

Reform is necessary in the sense and modes of Federal taxation, to the end that capital may be set free from distrust and labor lightly burdened.

We denounce the present tariff levied upon nearly 4,000 articles as a masterpiece of injustice, inequality, and false pretenses.

It prohibits imports that might purchase the products of American labor. It costs the people five times more than it produces to the Treasury, obstructs the processes of production, and wastes the fruits of labor.

In 1880 the party declared unequivocally for a "tariff for revenue only."

In 1884 the party declared "that unnecessary taxation was unjust taxation," and denounced the Republican party for not having relieved the people from the crushing war taxes which were charged with having paralyzed business, crippled industry, and deprived labor of employment and just rewards.

It further declared "that all taxation must be limited to the requirements of an economical government," and the party pledged itself to a reduction of tariff taxation upon these lines.

In 1888 the platform denounced the unjust and unequal tax laws which had outlasted the necessities of the war. Repeating that "unnecessary taxation was unjust taxation," and further declared "that it is repugnant to the creed of Democracy that by such taxation the cost of the necessities of life should be unjustifiably increased to all our people."

It pointed out the demoralizing effects of a large surplus accumulated in the Treasury from taxes wrung from the people, and said that "the Democratic policy is to enforce frugality in public expense and abolish unnecessary taxation."

The Democratic platform of 1892 contained the following emphatic language upon this important subject:

We denounce Republican protection as a fraud, a robbery of the great majority of the American people for the benefit of the few.

We declare it to be a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties except for revenue only, and we demand that the collection of such taxes shall be limited to the necessities of the Government when honestly and economically administered.

The McKinley law was denounced as the "culminating atrocity of class legislation."

In 1896 the Democratic platform declared:

We hold that tariff duties shall be levied for the purpose of revenue, such duties to be so adjusted as to operate equally throughout the country and not discriminate between class or section, and that taxation should be limited by the needs of the Government honestly and economically administered.

In the face of these utterances it is passing strange that any Democrat can justify his vote for this highly protective measure upon the assumption that the protection theory is now or ever has been a policy of the Democratic party.

The Democratic party stands committed against special legislation in favor of any class.

We believe in the equality of all before the law, and he who advocates the passage of this bill, saturated and reeking as it is with inequalities and unjust burdens, abandons for the time being his fealty to the Democratic party and gives his vote and influence to the enemies of the people.

It is true that in the past those who stood high in Democratic councils have advocated the theory of protection and have combated the efforts of the Democratic party to reduce the burden of taxation and to equalize the levying of tariff duties.

Notably among these men who claimed allegiance to the Democratic party was Samuel J. Randall, upon whose memory as an upright and honest statesman I would be last to cast a slur. He

had been frequently trusted and honored by his party, but when the time came when the Democratic party must desert the principles of equal taxation and opposition to class legislation, or to depose its trusted leader, Mr. Randall suffered his first defeat at the hands of the party whose principles upon this subject he did not indorse.

Mr. Carlisle, who at that time was a champion of Democratic principles, defeated Mr. Randall for the Speakership of the Forty-eighth Congress, and the old leader was relegated to the ranks because he failed and refused to carry out the doctrines and policy of his party; and it is ever a dangerous thing for the reputation and the political future of any man, no matter how good or how great he may be, to put himself in opposition to the expressed will of the party to which he owes allegiance.

This is forcibly illustrated by the career of Mr. Carlisle himself, who for so many years was an able and faithful leader of his party; but when in 1896 he deserted the great body of the political organization to which he belonged and failed to give adherence to the principles of the party as enunciated by the Chicago convention, he was repudiated by all true Democrats in the country, and to-day there is none so poor as to do him reverence.

Let those who imitate these great men in their opposition to their party's well-defined principles take warning by the ignominious fate which overtook them in the end.

Although the question of Federal taxation is one of vast importance to the people of our country and the best efforts of our wisest statesmen should be used in the just and correct solution of this problem, the Democratic party does not consider that this is the only issue between it and the Republican party.

When the Chicago convention unfurled the banner of the regenerated and rejuvenated Democracy, it proclaimed to the world in no uncertain tones that it was dedicated to the grand purpose of restoring to the people of the United States the money of the Constitution.

It declared for the free coinage of both metals upon terms of justice and equality. It denounced the present single gold standard which has impoverished our people, crippled our commerce, and paralyzed our industries; and upon this issue the memorable battle of 1896 was fought.

As our champion we had one of the grandest and most eloquent statesmen this country has ever produced, and he engaged in what seemed to be a forlorn hope against the money power of the country.

How gallantly that battle was fought and with what anxiety the plutocracy contemplated the result is a matter of history, and although we went down in defeat, we went down with our colors flying and the honor and integrity of our party organization maintained.

This battle was but a preliminary skirmish in that great warfare for the emancipation of the masses from industrial and financial slavery. Upon the issue we presented to our opponents in the last campaign we shall ultimately triumph, for soldiers engaged in battle for truth and justice can never be dismayed by one defeat.

For freedom's battle, once begun,  
Bequeath'd by bleeding sire to son,  
Tho' baffled oft, is ever won.

### The Tariff—The Price of Wheat.

#### SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States, and the question being upon agreeing to the report of the committee of conference on the disagreeing votes of the two Houses—

Mr. GROSVENOR said:

Mr. SPEAKER: We have had a great deal of talk in the House in regard to the interests of the farming community, and have been told over and over again that the fall in the price of wheat which prevailed for a number of years, since the Democratic party went into power, was caused by the demonetization of silver. We now have the remarkable fact that since the nomination of Mr. Bryan on a free-silver platform wheat has advanced, in round numbers, a little over 20 cents a bushel. During the same time silver has decreased to the lowest point ever known in the history of this country.

I shall place in the RECORD, in this connection, a statement showing how the McKinley law and the Wilson law have affected farmers as exhibited by the exports and imports of farm products,

and in that connection I will show that the more rapid the increase of silver dollars the more rapid the decline of wheat.

**WHY WHEAT FELL—A FEW FACTS FOR FARMERS—INDIA WHEAT AT 13 CENTS A BUSHEL DID IT—THERE IS A REMEDY—READ THIS AND FIND IT.**

What is the cause of the low price of wheat?  
Has the use or misuse of silver had anything to do with it?  
Let us see.

In 1871 we had \$52,000,000 in silver currency in the United States. Wheat was then worth \$1.25 per bushel.

In 1895 we had \$625,000,000 in silver currency in the United States. Wheat was then worth 50 cents a bushel.

These are official figures. The books of the Treasury Department show that we have twelve times as much silver currency now as we had in 1871. The figures of the Department of Agriculture show that the price of wheat to-day is only two-fifths of what it was in 1871.

If the quantity of silver circulation has any relation to the price of wheat, it would seem to have a bad effect rather than a good one, for wheat has steadily fallen, while the silver money in the country has steadily increased.

Do you believe this?

If not, just run your eye over the following table. It is made up of official figures from the Treasury Department as to the quantity of silver money in the country and the official figures from the Department of Agriculture as to the price of wheat.

Do you see how the silver money has increased and how the price of wheat has decreased?

Run your eye down the silver column and see how it steadily increased. Then run your eye down the column of wheat prices and see how it steadily decreased just as evenly and steadily as the silver column increased:

Year.	Silver currency in the United States.	Average price of wheat.	Year.	Silver currency in the United States.	Average price of wheat.
1871	\$52,000,000	\$1.258	1884	\$269,000,000	\$0.645
1872	55,000,000	1.241	1885	297,000,000	.771
1873	58,000,000	1.151	1886	329,000,000	.687
1874	61,000,000	.945	1887	369,000,000	.681
1875	63,000,000	1.008	1888	402,000,000	.626
1876	72,000,000	1.057	1889	437,000,000	.608
1877	90,000,000	1.084	1890	485,000,000	.838
1878	105,000,000	.777	1891	542,000,000	.839
1879	132,000,000	1.108	1892	582,000,000	.624
1880	163,000,000	.951	1893	623,000,000	.538
1881	199,000,000	1.192	1894	624,000,000	.401
1882	218,000,000	.882	1895	625,000,000	.500
1893	244,000,000	.911			

Strange, isn't it?

Now, let us apply the usual argument of the politicians and silver advocates.

If an increase of 1,100 per cent in our silver money in twenty-five years' time has been accompanied by a fall of 60 per cent in the price of wheat, at the same rate of increase in the silver supply and decrease of the value of wheat the price of wheat will go to 1 cent a bushel in twenty more years of additions to our silver currency.

It is just as logical to argue it that way as it is to try by any other means to show that the fall in the price of wheat is due to any silver legislation in regard to silver as a currency. What, then, is the cause of the fall in the price of wheat?

Simple enough, if you stop and think it out.

The price of wheat is dependent on the demand for it. If the markets of Europe are supplied with wheat produced at one-third what it costs to raise it here, is it to be expected that you will get a living price for your wheat here?

Certainly not.

Senator Peffer, of Kansas, the Populist leader, in his report on the cause of the fall in agricultural prices made to the Senate in 1894, said:

"Our home prices for wheat are largely controlled by the foreign wheat market; and that is regulated by those who supply the greater part of the demand. The effect on our wheat market is to bring down prices. \* \* \* Our strongest rival is now India, whose farmers, during the past seven years, furnished nearly one-half as much as we did of the wheat requirement of our best customer, England. \* \* \* Wages of India farm hands run from 1 to 10 cents of our money per day and wheat costs about 13 cents per bushel on the farm there."

Please read that again, slowly.

India, which only entered the wheat markets of Europe after England opened the Suez Canal and gave quick transportation from India to Liverpool, is now supplying a large share of the wheat markets of Europe, and doing it with wheat which she produces at 13 cents a bushel. The official figures show that other wheat fields of the world are now able to even drive India out of that market.

Is it any wonder that we get low prices for our wheat which goes abroad? Remember, too, that India, where labor is 10 cents a day and wheat is produced at 13 cents a bushel, is a silver-using country. Keep this fact in mind, and look back again at that table showing the steady decrease in the price of wheat while our silver coinage has been increasing.

Now, let us have a little more of Senator Peffer on the price of wheat. He is interesting. He says in the same report quoted above:

"In Kansas it appears from the report of the secretary of the state board of agriculture that it costs 50 cents to raise a bushel of wheat. \* \* \* In Pennsylvania and New York the average cost of producing a bushel of wheat is about 65 cents. \* \* \* In Illinois it costs \$10.20 to produce an acre of wheat, and the average yield since 1873 has been a little less than 14 bushels. \* \* \* Wheat in India costs but about 13 cents a bushel on the farm, 12 cents more puts it aboard ship, and 25 cents additional lands it on the wharves in Liverpool. This 50-cent wheat from India competes (in our best market, England) with wheat on American farms at an average cost of 60 cents a bushel."

Not a pleasing picture, is it?

We used to supply two-thirds of the world's wheat market. Now we supply but one-third, and do it in competition with 13-cent wheat laid down in the London markets at a cost of 50 cents a bushel, all told. Is it surprising that wheat is low?

What is the remedy?

Two things.

First. Create a home market for your wheat.

Second. Vary your production.

How are you to do this?

First. Create a home market by supporting a protective tariff, which will bring business to manufacturers and employment to idle millions, who will thus have money to spend freely for your farm products.

Second. Support the party which gave you reciprocity on farm products, protection for wool, and a bounty on sugar produced by farmers.

Under the reciprocity of the McKinley law our exports of flour, wheat, and other farm products increased steadily and enormously, because we were able to get them into foreign countries at a lower tariff rate than the grain and flour from other parts of the world had to pay for entering those countries. So we could get better prices for our grain and flour under reciprocity than other countries were getting at the same time.

Under the sugar bounty of the McKinley law beet-sugar factories were springing up throughout the Mississippi Valley and on the Pacific Coast, and there was reason to believe we should soon give to our farmers the \$100,000,000 per annum which we now send abroad for sugar.

The repeal of the McKinley tariff law caused the importation of foreign wool to increase from 55,000,000 pounds to 206,000,000 pounds in a single year, an increase of about 300 per cent. Besides this enormous increase in raw wool, the importation of manufactured wool increased from \$19,000,000 in value under the McKinley law to \$36,000,000 in value under the present or Wilson law. Under the McKinley law the importation of rags was only about 100,000 pounds, while the Wilson law in its first year brought in 14,000,000 pounds of woolen rags and shoddy from the hovels and hospitals of Europe to be worked into clothes for our people, and displacing good, clean American wool. The result of all this was a decrease in the value of the flocks from \$126,000,000 under the McKinley law to \$65,000,000 under the Wilson law.

Think what a return of McKinley principles means to the farmer:

(1) Better prices abroad for his wheat by means of reciprocity, which reduces foreign tariffs on his grain while other wheat growers of the world still pay high rates of duty in the countries to which our grain would obtain access at low rates.

(2) The distribution of \$100,000,000 a year among the farmers of the Mississippi Valley and on the Pacific Coast for the sugar which they can produce from beets, if assisted by the Republican policy, which inaugurated the beginning of the beet-sugar industry.

(3) An increase in home demand for grain and other farm products by such a protective tariff as will enable the manufacturers to start their mills and their employees to begin spending their money freely for a comfortable living.

(4) Such a protective tariff on wool and other farm products as will shut out from this country the farm products of other parts of the world.

Do you realize what the effect of the Wilson tariff was on the farmers?

Read the following table and see the enormous increase in the importation of all farm products in the first year of the Wilson law as compared with the last year of the McKinley law. Then look at the table which follows it and see the decrease in the exports of farm products which followed the destruction of reciprocity by the repeal of the McKinley law and the adoption of the Wilson law.

**THE OFFICIAL FIGURES.**

The following tables show, from official reports of the Treasury Department, the imports and exports of farm products in the last fiscal year under the McKinley law, compared with the first calendar year under the Wilson law. These two periods—the fiscal year ended June 30, 1894, and the calendar year beginning January 1, 1895—most nearly touch the date at which the change was made from the old to the new law of any annual periods covered by the official statements of the Treasury Department. The fiscal year 1894 closed two months before the end of the operations of the McKinley law, and the calendar year 1895 began four months after the Wilson law had begun its work. Each year's figures may therefore be assumed to present a fairly normal picture of the workings of the two laws, and thus to give for the first time since the enactment of the Wilson law an absolutely accurate official comparison of their operations as affecting the great class of citizens of the United States dependent on agriculture.

**Imports of farm products.**

	McKinley law, fiscal year 1894.	Wilson law, calendar year 1895.
Tobacco	\$11,001,796	\$15,235,739
Wines	6,729,425	7,222,102
Wool	6,107,438	33,770,159
Leather	4,508,330	7,745,092

Hay.....	890,593	698,934
Broom corn.....	210,742	179,856
Eye.....	129,532	721

Now you know how to remedy the present unsatisfactory condition on the farm.

Go back to protection, reciprocity, encouragement of the beet-sugar industry, encouragement of the wool industry, encouragement to manufacturers, encouragement to home industries of all kinds, and thus give the home market a consuming power which it had under Republican protection. Do this and we shall again see happy homes and good prices which we had under protection.

Do not listen to the man who tells you that the price of silver makes the price of farm products.

Look up market records, turn to your own account books, and you will find that corn and oats, and hogs and cattle, the staples you have to sell, brought you as good prices in 1890 as in 1873, and the money you got would buy more of your necessities, because protection had resulted in the cheapening of all manufactured articles.

Why did you get good prices in 1890? Because under Republican protection the country was prosperous, workmen were employed at good wages, and they were able to buy what you had to sell.

The men who talked free trade to you four years ago, and whose legislation in 1894 ruined your home market, made tramps out of your best customers and sent them to soup houses instead of their own well-filled dinner pails, are afraid to come back this year and talk tariff to you.

They are responsible for the present affliction you are suffering, and in order to draw your attention away from what they have done and make you forget what happened when you trusted them before, they are now offering you the free coinage of silver as another quick remedy for the disease they themselves created.

Can the same men fool you twice in four years?

We produce in this country perhaps 450,000,000 bushels of wheat; this year probably 500,000,000 bushels of wheat. An advance of 20 cents a bushel has given to the producers of wheat in this country \$100,000,000. Do the farmers of the country desire to return to the Wilson law and Wilson rates and Wilson conditions? If so, the opportunity will be afforded them in the fall elections this year.

There is no better statement of why the farmer suffers than is contained in the speech of Major McKinley, after his nomination for President, to a delegation of farmers from Knox County, Ohio, in which he said:

It gives me very great pleasure to meet and greet the citizens of Knox County in the city of Canton and at my home. I am glad to welcome my old comrades of the Grand Army, my fellow-citizens who are engaged in agricultural industries, and my fellow-citizens of all occupations who are here assembled this morning. Your meeting demonstrates that you have a keen interest in the public questions which are now engaging the people of the United States, and that you want this year, as you have always wanted in the past, to vote for those principles and those policies which will achieve the greatest good and the highest welfare to the country.

I am glad especially to meet the farmers of Knox County, for the farmers of the United States are the most conservative force in our citizenship and in our civilization, a force that has always stood for good government, for country, for liberty, and for honesty.

## WHAT THE WILSON LAW DID.

Whatever the farmer is suffering to-day is because his competitors have increased in numbers, and because his best customers are out of work. I do not know that we can decrease the number of your competitors, but with the adoption of a true American protective policy we can set your best customers to work.

We have suffered in our foreign trade and we have suffered in our domestic trade. The farmers have suffered in their export trade and they have likewise suffered in the home market. Under the Republican tariff law of 1890 we imported in the calendar year 1890 over 111,000,000 pounds of wool, valued at over \$13,000,000.

In 1895, under the Democratic tariff law, we imported 248,000,000 pounds of wool, valued at \$31,770,000. Nearly \$20,000,000 worth more of wool was imported under the Democratic tariff law than under the Republican tariff law in 1890. The imports of woolen goods in 1894 amounted to \$16,882,000, and in 1895 to \$37,494,000. From the reports of the Department of Agriculture, at Washington, we find that there were 47,273,000 sheep in the United States in 1892, valued at \$125,000,000. On the 1st of January, 1896, there were 38,558,000 sheep in the United States, valued at \$55,000,000—a decrease of 9,000,000 in the number of sheep, and of \$70,000,000 in value.

Two million two hundred thousand dollars' worth more of shoddy was imported under the Democratic tariff law than under the Republican tariff law. In woolen goods the difference is more than \$40,000,000 in favor of the foreign manufacturer and against the domestic producer. The total loss in these three items to the American woolgrower and the wage earners in American woolen factories is more than \$62,000,000.

Is it any wonder, my fellow-citizens, that sheep husbandry is no longer profitable? So with other agricultural products. During the last seventeen months of the Republican tariff law there were imported into this country 140,000 tons of hay, and during the first seventeen months of the Democratic tariff law there were imported 363,000 tons. The Wilson law gave the foreign producers a market for 223,000 tons more than they had enjoyed in the last seventeen months under the Republican tariff law. This loss exceeds \$2,000,000.

The total wheat, rye, barley, oats, and corn crops for 1895 amounted to 3,558,000,000 bushels. The total of this product exported was 182,000,000 bushels, or a little more than 5 per cent of the total product annually. The great

bulk was consumed by your own fellow-citizens, your own natural consumers and customers. In 1891-92 we exported \$1,442,000,000 worth of agricultural products. In 1890-96, the first two years under the Democratic tariff law, we exported \$1,123,000,000 worth. We exported, therefore, \$319,000,000 worth less in the two years under the Democratic tariff law than in the two years under the Republican tariff law.

## LOW TARIFFS ALWAYS BRING HARD TIMES.

Depression in agriculture has always followed low-tariff legislation. It was so after the tariff of 1846; and it has been so under the tariff of 1894.

On December 2, 1851, President Fillmore, in his message to Congress of that date, affirming the condition of the country, and especially the effect of the tariff legislation upon the interests of the American farmer, said:

"The values of our domestic exports for the last fiscal year as compared with those of the previous year exhibit an increase of \$43,646,322. At first view this condition of our trade with foreign nations would seem to present the most flattering hope of its future prosperity. An examination of the details of our exports, however, will show that the increased value of our exports for the last fiscal year is to be found in the high price of cotton which prevailed during the last half of that year, which price has since declined about one-half. The value of our exports of breadstuffs and provisions, which it was supposed the incentive of a low tariff and large importations from abroad would have greatly augmented, has fallen from \$8,701,921 in 1847 to \$3,051,373 in 1850, and to \$1,848,653 in 1851, with a strong probability, amounting almost to a certainty, of a still further reduction in the current year. The aggregate value of rice exported during the last fiscal year, as compared with the previous year, also exhibits a decrease amounting to \$160,917, which, with a decline in the values of the exports of tobacco for the same period, made an aggregate decrease in these two articles of \$1,156,751."

The policy which dictated a low rate of duties on foreign merchandise, it was thought by those who promoted and established it, would tend to benefit the farming population of this country by increasing the demand and raising the price of agricultural products in foreign markets. The foregoing facts, however, seem to show incontestably that no such result has followed the adoption of this policy.

Then in his message a year later he said:

"The prosperity and wealth of every nation must depend upon its productive industry. The farmer is stimulated to exertion by finding a ready market for his surplus products and benefited by being able to exchange them, without loss of time or expense, for transportation, for the manufactures which his comfort or convenience requires. This is always done to the best advantage where a portion of the community in which he lives is engaged in other pursuits."

Mr. Buchanan, in his message to the Thirty-fifth Congress, speaking on the same subject, said:

"In the midst of unsurpassed plenty in all the productions and in all the elements of national wealth we find our manufactures suspended, our public works retarded, our private enterprises of different kinds abandoned, and thousands of useful laborers thrown out of employment and reduced to want. The revenue of the Government, which is chiefly derived from duties on imports from abroad, has been greatly reduced, while the appropriations made by Congress at its last session for the current fiscal year are very large in amount."

## FREE COINAGE OF SILVER WILL BRING NO RELIEF.

This is a description of the condition of the country under the low-tariff law of 1846, and no better description could be written of the condition of the country under the tariff law of 1894. Can the farmer be helped by free coinage of silver? No, forever no, my fellow-citizens. He can not be helped, because if the nominal price of grain were to rise through an inflation of the currency, the price of everything else would rise also, and the farmer would be relatively no better off than he was before. He would not get any more real value for his grain than he gets now, and would suffer from the general demoralization which would follow the free coinage of silver. You can not help the farmer by more coinage of silver; he can only be helped by more consumers for his products. You can not help him by free trade, but, as I have shown, he can be hurt, and seriously hurt, by the free introduction of competing products into this country. Better a thousand times enlarge the markets for American products than to enlarge the mints for the silver product of the world.

You might just as well understand now that you can not add value to anything by diminishing the measure of the value with which the thing is sold or exchanged. If you can increase the value by lowering the measure of value and you want to benefit the farmer, then make the bushel smaller, the pound lighter, and declare a legal dozen less than twelve.

## A HOME MARKET IS WHAT IS NEEDED.

The home market is the best friend of the farmer. It is his best market. It is his only reliable market. It is his own natural market. He should be protected in its enjoyment by wise tariff legislation, and this home market should not be permitted to be destroyed by lessening the demand for American labor and diminishing the pay of American workmen, and thereby diminishing the demand for agricultural products.

The sugar industry should be cultivated and encouraged in the United States. Diversify the products of agriculture, and thus you will have additional employment for your land. The only way to help the farmer is to increase the demand for his farm products. This can be done by preserving a home market to him and by extending our markets, which we did in 1892, 1893, and 1894, under the reciprocity provisions of the tariff law of 1890. The best consumers for the American farmer are these at home. They consume eighteen times as much of the products of the American farm as the foreign consumer. Their earning power has been cut off in the past two years so that it makes our home market less desirable.

Prosperity of manufactures is inseparable from the prosperity of agriculture. Set all our wheels in motion, set all our spindles whirling, set all our men at work on full time, start up the idle workshops of the country, bring back confidence and business, and the farmer will at once feel the influence of the greater demand for his products in the better prices he would receive. He wants to be protected by wise tariff legislation from the competition of the other side; and then he wants the mowers and mills and factories of his own country humming with busy industry, employing well-paid workmen, who can buy and consume his products. When he has got consumers he wants his pay for what he sells in such unquestioned coin that he will know it is good, not only to-day, but will be certain to be good every day of the year and in all countries of the world.

## MILLS, NOT MINTS, WILL FURNISH CUSTOMERS.

Free silver will not cure overproduction nor underconsumption. Free silver will not remove the competition of Russia, India, and the Argentine Republic. This competition would remain if you would coin all the silver of the world. Free silver will not increase the demand for your wheat or make a single new consumer. You don't get consumers through the mints. You get them through the factories. You will not get them by increasing the circulation of money in the United States. You will only get them by increasing the manufacturing establishments in the United States. "Plant the factory

by the farm," said Jackson; and that is as wise now, and as applicable now, as when the hero of New Orleans said it years ago. The best thing now is for the farmer to have a factory for his neighbor. It would be better to have a factory alongside of you than to have another farm alongside of you.

I have no fear of the farmers—the most conservative, the most considerate, and the most sturdy of our splendid civilization. They are not easily misled. They have no aim in politics but an honest one. In 1862, when free trade was the battle cry of our opponents, it was said then that the farmers would follow this heresy, but it was not so. It was the cities which followed the free-trade heresy in this country. The country voted for protection, while the great cities did not. So this year they will vote against free trade and free silver; they will vote for a home market and for a dollar as good as gold in every mart and market of the world.

I thank you, my fellow-citizens, for this call. It is a great compliment to have you travel this long distance to bring me messages of good will and congratulations. Old Knox County, in every contest in which I have been engaged, has been firmly and unflinchingly my friend, and it will give me sincere pleasure to meet you all personally.

### The Tariff.

### REMARKS

OF

HON. DANIEL ERMENTROUT,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. ERMENTROUT said:

Mr. SPEAKER: It goes without saying, sir, that at no time since the assembling of this present extraordinary session of the Fifty-fifth Congress was there ever a moment that the minority party of this House could have or did have any opportunity to influence or shape in any way the far-reaching legislation about to be consummated by the passage of the Dingley bill. This, too, though the minority are the duly accredited representatives of nearly 6,500,000 American voters. All our arguments, therefore, must be made by way of appeal to those same voters, who will review the action of this session and pass final judgment on it at the polls.

No proposition, no argument, no reason, no fact presented by the minority, even though upon petitions and memorials innumerable from the people, availed to ingraft a single amendment proposed by this side of the House.

PREPARED BY A DYING COMMITTEE OF A FORMER CONGRESS.

Prepared also by a body whose life would soon end, and preordained for passage by a body not yet called into existence.

If the people have any respect for their institutions, they will remember this notable event in American legislative history; they will remember that the representatives of one political party, a portion of the Committee on Ways and Means in one Congress—the Fifty-fourth—undertook to frame, and did frame, in the expiring hours of that Congress this highly drastic measure, thus anticipating an extra session, which in due time was called; that immediately upon the assembling of this new body, composed in large measure of new men, without opportunity given to the members of that committee representing the minority in Congress, for examination, discussion, or amendment, this bill was reported to this body, together with an ironclad rule by means of which the representatives of nearly half the voters of the country were rendered powerless to influence legislation affecting all their interests, and that this legislation so concocted was forced to successful consummation almost without dotting an "i" or crossing a "t."

#### TYRANNICAL METHODS OF HOUSE MANAGERS.

In years to come, when the impartial historian shall come to analyze and write the annals of this extraordinary session of the Fifty-fifth Congress, it does not require the gift of prophecy to foretell that he will declare that this result was accomplished by methods as tyrannical and as arbitrary as ever characterized the administration of the most despotic government on the face of the earth. When we reflect that the 150 Representatives constituting the minority came fresh from the people, and are supposed to have the best information as to their wishes, these methods rise to the grade of an insult to half the nation.

The further reflection that the people are entitled to the best thought of their representatives on all public measures properly applied in the regular and orderly manner, through the regular and ordinary means established by our Constitution and law and parliamentary rules, the regular committees, they amount substantially to a denial of representation. The criticism has been made that the legislatures of this Republic would finally end in being what those of ancient Rome became—instruments to register the decrees of some single tyrant. We have not advanced so far as that as yet, but have we not fallen even lower?

It might be very respectable, if not beneficial, to register the decrees of some large-minded, able, intelligent despot. But with us it is different. Some few people who, by reason of their large wealth and by reason of their association with large corporate enterprises, trusts, and monopolies, assume to control the whole country meet in the director's room, or in the back room of some great banking house, and take measures for the direction of Government. This bill, or its principal schedules, was thus formulated. Then the Committee on Rules stepped in and the country wakes up to find the work of the trusts formulated into law.

I challenge contradiction of the statement that as far as this House is concerned the passage of this bill merely registers the will and orders of a score or so of gentlemen in and out of Congress. No amendment except such as was dictated and sanctioned by them was allowed, and the bill as a whole was swallowed by the other side, without more than twelve pages having been considered, without protest and without attempting to understand its provisions. The majority of the Committee on Rules deliberately prepared a rule to fit each and every emergency, looking always to immediate action, throttling debate and amendment, and the House simply registered its decrees.

It is only the soldier who goes into battle knowing that certain defeat is impending who can ever sufficiently appreciate the devotion of the gallant minority in this Congress, who have so vainly and often tried to make an impression on the Republican scheme. It is a disheartening, a humiliating thing to know in advance that any argument or reason you may offer on behalf of those whom you represent will receive no consideration from those to whom they are addressed, and yet be compelled by a sense of duty to offer them.

My loyal and earnest brethren must console themselves with the reflection that they have done their whole duty and with a further knowledge that this House under its present administration has added one more parliamentary precedent to those heretofore furnished which may prove valuable and useful in future contests. Our distinguished and able Speaker taught you how to count a quorum with members sitting silent and in their seats. He has shown us how a majority of the Committee on Rules, backed by a quorum of one political party, may be practically the whole House. On some former occasions he has taught us how to compel legislation, and on others how to defer it—for instance, the Union Pacific, bankruptcy, currency, and Cuba.

#### OUR CRUEL NEGLECT OF CUBA.

Just a word about Cuba. What is that gallant nation asking? She is not asking us to fight for her, to go to war with Spain for her, to loan her money, or to in any manner intervene on her behalf. She is simply asking for recognition as a belligerent. That does not mean war with Spain at all. Recognition of belligerency would do for the Cubans just this, it would enable them to buy supplies in this country. And what could she lawfully buy? Why, everything except guns and munitions, for under our treaty with Spain only guns and munitions are contraband. Long ago, realizing that in case of war in Cuba she could not provide sufficient supplies of food and other necessities without access to our market, Spain agreed with us by treaty that arms and ammunition alone should be contraband. So that, practically, Cuba, fighting for freedom, only asks the right to stand up at the same counter in the markets of the United States by the side of her cruel Spanish oppressor and buy food, provisions, clothing, and medical supplies for her sick, her wounded, her starving, and for her poor, ragged, wretched, suffering men, women, and children. Weyler, the butcher, now has this right. Recognition of belligerent rights would give it to Gomez, the father of his country.

Such, Mr. Speaker, are my views, and I believe they are shared by nine-tenths of the people of the country. By what influence, through whose instrumentality, has this House been prevented from giving voice to the will of the American people in this matter?

We repeat, such methods are revolutionary and contrary to and subversive of the genius and spirit of our institutions. Should they be adopted also by the Senate, it is easy to perceive that our Congress, under the forms of popular government, would become as arbitrary, as tyrannical, and as despotic as any deliberative body could be under monarchical forms or absolutism.

However much those profiting by them may first delight in their fruits, eventually such methods will neither stand the test of reason nor receive the approval of thoughtful minds. It is a dangerous precedent, one that may result, and has in this instance resulted, in a most pronounced absolutism in relation to the action of a deliberative body on a purely economic question in this proud Republic; a precedent which should not be invoked save in the presence of foreign invasion or armed treason. Amid the clash of arms the laws are silent; the security of the people becomes the supreme law.

#### TARIFF LEGISLATION UNNECESSARY.

Was there pressing demand for tariff legislation? The events of the campaign of 1896 and the issues then discussed, fresh in the

minds of all, answer the question. The world knows that tariff was overshadowed by the currency question. Tariff was relegated to the background. The very mention of tariff sent cold shivers down the backs of Republican managers. Time and again tariff orators were called off and repeated warning was sent to Canton.

Many Republican orators of high standing announced that no disturbance of tariff legislation was contemplated, that no general tariff upheaval was necessary. Thus the fears of a large section of the Republican party who no longer believe in excessive duties were laid to sleep, and thus were also hypnotized those revenue reformers who, headed by the great free-wool advocate, the late President, went over to the camp of the enemy. This latter body of patriots hugged the sweet delusion to their souls that the tariff agitation was passed, and, encouraged by the declaration of the Republican managers, they proclaimed their belief in this delusion. They deserted the good old Democratic party that had nourished them into prominence and position these many years to save, as they said, true Democracy and the honor of the country. They left old friends for new.

Cajoled by the promises, blarneyed by the persuasion, abject before the influence of the gold standard, they handed the Government over to their and our ancient enemy. How rude must be their awakening! How shocked, how horrified, must be the late President now that he finds that the first act of the successor for whom all gold idolaters labored so zealously was to proceed to overturn the chief monument on which rested our late President's chief fame as a tariff reformer, to wit, free wool. His plight reminds us of the fabled Midas, whose worship of gold ultimately culminated in the decoration of asses' ears.

Not all the degrees which all the great universities of the world may shower upon his head will ever hide those well-deserved appendages. Not all the holes, however deep, that well-merited oblivion may dig will ever silence the whisper that will go resounding through all times, "King Midas hath asses' ears." The modern Midas surpasses the ancient in pitifulness of aspect. He exhibits the superadded ornament of "wool pulled over his eyes." Truly a humiliating spectacle; but, alas, to such wretched level does the worship of the "communism of pelf" degrade its miserable disciples!

But was there anything in the necessities of the nation for the purposes for which this extra session was called? Our friends say, "Yes; there was a deficit." As to this word "deficit," whatever the scientific meaning of the term may be, to the average man it means inability to pay his debts, dead loss, insolvency, ruin. As applied to our Government, it means that the daily, monthly, or yearly expenditures exceed its revenues. When the average man of means finds this to be the case, while he may give him some concern, he does not at once root up things and turn everything topsy-turvy, but falls back upon his accumulations. He allows something to time and natural causes, which sooner or later frequently bring relief. It is only when that fails that he begins to modify his plans.

In the present case, while it is true that, owing to the decision of the Supreme Court on the constitutionality of the income-tax clause of the Wilson bill, the Government was deprived of \$30,000,000 revenue, yet notwithstanding that fact there was in March, 1897, in the Treasury a cash balance of exceeding \$150,000,000 (over and above the \$100,000,000 gold reserve). This money remains there available for the uses of the Government.

We can see a stronger reason in the case of a private individual, when his expenditures exceed his income, at once to endeavor to meet the deficiency by imposing more burden on those from whom he derives his revenues, by lowering the wages of those he employs, by lessening his expenses, or, at the last, by developing additional sources of income. This a private individual would do, because he is mortal; and there comes a time to us all when our escapes, if we have any, must be adjusted, and a natural instinct to provide for those dependent on us would be likely to prompt speedy action.

But the Government is immortal—at least we hope so—and while it should be provident for the future, yet no government should wantonly change its system or unnecessarily add to the burdens of the people by resorting to extraordinary measures so long as it is possible to get along without so doing. The money in the Treasury is the people's money, and there would have been and is enough there over and above the gold reserve to meet the necessary expenditures of the Government economically administered until the meeting of the regular session. On June 30, 1897, the net cash balance in the Treasury was \$230,113,812.87, or \$130,113,812.87 over and above the gold reserve. No one can justly contend, with this knowledge before him, that there was any public necessity for this extra session.

If, however, it was necessary to meet the alleged deficit, why was it necessary, setting aside the more important question on which the last campaign hinged, to undertake so radical a revision of the entire tariff system? A few slight changes would have met the difficulty.

We must note here that little or no attention has been given in the direction of lessening expenditures. Back in 1873 there was also a serious falling off of the revenue. The remedy then applied was cutting down expenditures. No effort whatever of this nature has been attempted. We submit also that when an administration looks around to raise revenue it should make taxation as little burdensome as possible. Especially should it be careful to discriminate as to persons engaged in unprosperous pursuits. The burden ought not to be laid on the farmer, nor the manufacturer, nor the merchant, for they have not been prospering.

The reason is obvious. The farmer has no cash to carry to the merchants for goods; the merchant in his turn can not give orders to the manufacturer, and so the wheels of industry do not hum. But how about the other industry, the industry in watered stocks and kindred occupations that have been prosperous? Our lawmakers tell us that a tax on these present insurmountable difficulties in their collection. But the lands, tenements, and hereditaments of the country—property that is visible and can not be concealed—are being rapidly confiscated, while these occupations and transactions are making millions in the twinkling of an eye, and the millions thus made skip and escape their just share of the common burdens. This is radically wrong. It can not be justified.

#### THE CONSEQUENCES OF GOVERNMENT BY THE TRUSTS.

The President in his message says that he is not one of those who regards tariff legislation as detrimental or hurtful to business. This is not the commonly received doctrine. It is not the doctrine he has proclaimed on some other occasions, nor is it borne out by the facts. Everyone knows that from the very instant that it was announced that he would call an extra session of Congress to revise the tariff—from that very instant extreme caution pervaded the whole business community, paralyzed its efforts and energies. In fact, it held up the country. It deeply affected the conditions of trade. Tariff agitation must and always will.

We must not forget likewise the large expense always incident to the assembling of Congress. The House has been in session, as a rule, since the 31st day of March two or three hours every week. Not for business, and yet important matters before mentioned have urgently needed attention. Inasmuch as the session was called, these might have been profitably discussed and investigated. The omnipotent power controlling legislation willed otherwise. The question again recurs, Why this session? Was there some covert understanding had previously to the election of 1896 "with others" which controlled the situation and forced the President to bring on the country the hardships which have already ensued and which are likely to continue.

When you ascertain who the chief beneficiaries of this legislation are, the question is answered. The stock board and the millions made by the sugar trusts of New York while the bill was in the throes of conference tell the tale. A word about this conference, this celebrated conference. It makes one smile to recall the dramatic setting thrown around it. If it had been the last day, it could not have been more impressive. The conferees worked day and night. Even the Sabbath was not sacred. The affair was enveloped in the profoundest secrecy. From time to time word was given out that the Senate and House conferees were very far apart—their differences almost irreconcilable. Finally it transpired that a battle royal was on between the House and Senate conferees on sugar—on the differential.

The "friends of the bill" in the House became excited and flew to the rescue. One of their number, the recognized autocrat of the House, labored to put backbone into "our conferees"—the great bulwark of the House. The right to originate revenue measures was to be preserved to the House. "Stand firm," they said, "we will not accept the Senate rates on sugar. The House rate must prevail." And when this battle of the giants was over, behold what a trifle was at stake! The only matter of difference was a tiny fraction of the differential. It was a victory over the sugar trust, they said; but somehow, when the result was announced, sugar stock moved up 10 cents, and the sugar trust pocketed \$8,000,000. Truly Brother DINGLEY was more than right when he said that delay in the passage of the bill was costing the people \$100,000 daily. From this one example learn all. The trusts formulated this bill, and of course the sugar trust was the most powerful influence and secured the largest share of the swag. It was aided, abetted, and assisted by numerous other grabs and grabbers, large and small, all built and based on greed and grasp, with no regard to the comfort, happiness, and well-being of the great body of the people and indifferent to the needs of the Treasury.

#### TARIFF LEGISLATION IN GENERAL.

It is not my purpose to go over in detail the provisions of the bill, nor to discuss the true principles of tariff legislation. It is a world-wide and never-ending theme. This bill proceeds upon no consistent principle or reason whatever. It was to have been a scientific bill and an ideal revenue measure, something stable and lasting. It reminds me of the remark once made by a very eminent Republican, who was asked what reasons he could give for

voting for a certain measure then pending. His reply was: "Vote as you like, and seek the reason afterwards."

A result already flowing from the anticipation of this legislation has been to compel persons engaged in many occupations depending on foreign importations to squeeze and strain and load themselves with obligations which they would not otherwise have incurred to stock up with raw material and goods in order to avoid paying the enhanced price. The discount list of the banks and the heavy returns for duty on importation prove the fact. Two motives compelled these results. The large capitalists saw a heavy profit on goods imported before the imposition of a higher duty and the sale of the same goods after its imposition. The small dealer, between the upper and nether millstones, saw that he must either strain his credit as a borrower to the utmost to stock up or be at the mercy of the larger dealer afterwards.

We are advised that on most commodities prices have already advanced. So that, after business has been held up by the proposal of this unnecessary legislation and after its natural order and condition have been interfered with, changed, and disturbed by its now certain consummation, a new order now follows. The next likely result will be that heavy holders of commodities will not bother about the market till the smaller holdings are consumed. Then these in their turn must pay such prices as the heavy holders may exact under the higher duty or go under. Or it may be, as has happened before under similar conditions, large numbers of dealers, not being able to hold their commodities, and being forced to realize immediately in order to meet their obligations, may be compelled to let go and sacrifice their products. This means a glutted market in flat times at unprofitable and ruinous prices. Unwise laws thus always carry with them their own punishment.

#### A PLEA FOR THE TAXPAYER.

The people suffer all the same. But in all this legislation, in which it is easy to figure out large profits for certain classes and a few occupations, what of the men upon whom the burden of the country rests, and upon whom more largely than any other class, or than all other classes together, the welfare and real prosperity of the country depend? I mean the workingmen and the farming class. What is there in this bill for them? Well, there is the duty on wool, on hides, on potatoes and grain, and various agricultural products, including the protection to beet sugar.

The number of farmers who raise a few sheep compared with the owners of large herds is very small indeed. The ordinary farmer as we know him depends very little on his sheep as wool bearers. Whatever benefit there may be in the duty on wool is of little or no account. It is more than counterbalanced by the enhanced price of the garments and household goods which he must buy for himself and those dependent upon him.

The duty of 25 cents a bushel on potatoes does not help the farmer except perhaps on the border line. The fact is, that in recent years, in many places, potatoes have been almost given away. Sometimes they could not even be given away. They constitute a large and always satisfactory article of food. In times of scarcity or potato famine, when their price would be naturally high, it would be a great hardship on the working classes to put a duty of 25 cents a bushel on the price of their potatoes.

In all seriousness, what proportion does the beet and maple sugar bear to cane? It is given out as 1 to 50. Therefore, in order to give the beet and maple sugar producer \$1 we must pay the sugar trust \$50, and in doing so we give that shameful trust a monopoly. We make it the arbiter of the price of sugar to the consumer. Truly, as Claus Spreckels was reported to have said, "the beet-sugar industry is only a side show of the sugar trust."

And there is the duty on hides. The importation of hides free of duty unquestionably built up a leather and shoe industry in this country and has enabled it to export millions of this product. There is no benefit in it for the farmer or workingman. Whatever benefit might be in it is more than four times swallowed up by the enhanced price of harness, shoes, and other manufactures of leather which they must buy. The great packers will pocket the benefits of the tax on hides, as the sugar trust will pocket the profits of the tariff on sugar.

Again, in order to save the foreign trade, as they say, they have allowed a rebate on all hides imported which go out as manufactured leather equal to the duty on hides. This is rubbing it in. It results in our own countrymen paying the enhanced price of the manufactured article, while it is made cheaper to the foreigner, or the difference goes into the pockets of the manufacturer. It is robbing Peter to pay Paul. Charity should begin at home. And what becomes of the revenue, which revenue, the title of the bill says, it is intended to provide?

How ridiculous the denunciations of free trade with which our opponents are accustomed to treat us in the face of the result, which brings no revenue to the Government and favors the alien or the manufacturer at the expense of our own citizens. This applies to every article on which there is a rebate or which comes within the purview of the provisions of the bill relating to reciprocity. No wonder that the farmers of the country, seeing

that they are the main recipients not of the Government's bounty, but of its burdens, are now asking the Government for an export bounty as their only hope of relief. If we are to proceed upon the rules laid down by the fathers of protection, the weaker industries, languishing industries, unprofitable industries should awaken our solicitude and receive our help.

Is it not true that of all our industries, agriculture has been for more than a decade the least profitable? Farm lands are being abandoned, farm buildings are going to a state of dilapidation, and the farming population is rapidly congesting in the cities. If for no other reason than because it is perishing, agriculture should be first relieved. I can see no hope of relief in this bill. Fundamentally agriculture is of the first importance. Wealth springs from the land. All other industries lean upon it for support. In peace it is the bulwark of our industrial system; in war, the pillar of the nation.

How unjust, then, for lawmakers to turn their backs upon the tiller of the soil and multiply statutes to add to the profits of classes already opulent. Without an independent, landowning farming population the perpetuation of this Republic is not possible. If we are to go on impoverishing the men who till the soil until tenant farmers take the places of the sturdy yeomanry, so long the pride and glory of this Union, we must bid farewell to the hope of perpetuating self-government among men. It is not surprising that large bodies of workingmen under present conditions are looking to the founding of separate communities as a means of keeping body and soul together, and that large bodies of starved and ragged miners are marching to the music of life and drum to demand living wages for the toil of their hands.

It is not true that the prosperity of the farmer depends solely on laws guaranteeing exorbitant profits to the manufacturer. It is true that in the long run all interests rest upon agriculture, the foundation of all genuine prosperity. And yet the farmer has been sacrificed for the benefit of the classes by whose influence the enactment of this iniquitous law is being accomplished.

Believing that this measure was uncalled for; that it will not yield the revenue claimed, if such revenue be necessary; that it will not increase our trade abroad or our prosperity at home; that it is not equal in its operations; that it will afford no relief to that class of our citizens who need it most; that it is most in the interest of greed and of the monopolies and trusts that have been and are now absorbing the great bulk of the earnings of the industrial classes, and that it is a part of the scheme to divert the people from the real malady under which the body politic is suffering and to delay the application of the proper remedy, I can not approve this bill, and have deemed it my duty to make public some of my reasons for this course.

#### The Tariff.

#### REMARKS

OF

HON. ROMULUS Z. LINNEY,  
OF NORTH CAROLINA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. LINNEY said:

Mr. SPEAKER: This discussion has been a one-sided affair largely. The Republicans have in a large measure refrained from speaking and allowed our Democratic brethren to do most of the talking, because we wanted to reach a vote at the earliest possible time. The most interesting speech, probably, made on the Democratic side is that of the distinguished gentleman from Texas [Mr. BAILEY]—certainly the most elaborate one. As it was a masterly effort to convince his party associates that they have been in error touching the tariff on raw materials, the speech was enjoyed by many Republicans.

It is always a source of gratification to any patriot to witness even the partial conversion of any great man from a dangerous heresy to the paths of truth. Still, while he repudiates the doctrines of his party in part, and criticises with some severity many of the most influential men of his party associates, he still sticks to some positions which I think should not be allowed to go unanswered. The leading thought of this remarkable speech is stated to be "An elementary principle of political economy," to wit: "Absolute freedom of exchange of products;" "The right and opportunity of buying and selling, and the salutary and indispensable motives to produce; and it is the consummation of folly to

teach the people of this country that their industries can be encouraged by abridging their right to exchange the products of their labor with the people of other countries."

That is the plausible statement of the elementary principle of political economy which constitutes the text of the elaborate argument of the leader of the Democracy in this House. The principle contended for possessed an infirmity which men of less intelligence than the distinguished gentleman can readily discover. The speech itself contradicts the principle stated and destroys it. The enforcement of absolute freedom of exchange with all the nations of the earth makes his pet theory of protection to the raw-material production of these United States a mere empty declaration, because as long as there are to be any custom-houses to collect any tariff duties either upon raw materials or other foreign productions, there must to that extent be restraint upon absolute freedom of exchange among the nations of the earth.

Apart from this glaring inconsistency in the gentleman's argument, it loses its supposed force by reason of the existence of another patent fallacy therein contained. Exchange of products alone does not add anything to the sum total of human production. A simple illustration will prove this almost to a mathematical certainty. Suppose the most enterprising citizen of the great State of Texas is the owner of an ox worth \$100, and the most enterprising citizen of London is the owner of 100 pairs of shoes. The Texas gentleman, having a surplus ox, exchanges this ox for the 100 pairs of shoes made in London. Has anything been added to the production of either nation? The Texas ox has gone to London and the London shoes have come to Texas.

Each nation has \$100, not in cash, but of human labor production. That is all there is in the transaction, except possibly the wants of the British subject and the little American king may have been to some extent accommodated. In this statement we have proceeded upon the idea of absolute free trade—absolute freedom of exchange. That is the Democratic idea. Exchange an ox of America for English shoes. Now, why did the Texas gentleman swap his ox for the shoes? Because English shoes are made by English vassals, English paupers, and can be made cheaper than the little American kings can make them. The English cow whose hide made the leather out of which the shoes were made was raised on grass sown in English soil and cultivated by English paupers.

This is what Democracy teaches on the tariff. The Republicans deny that absolute freedom of exchange is best for the United States. Suppose we put a tariff on shoes of 25 per cent. In that condition of affairs the muscle of the little American kings would make the shoes, sow the grass on American soil to support American cattle, and out of the hides of American cattle the American shoes would be made to suit the taste of the enterprising Texan. Hence something would be added to American production. The Texan ox and the shoes would both be the product of the labor of the American citizen.

The labor necessary to make the shoes, as well as that necessary to cultivate the grass to grow the cattle, would all be American. So where, in the face of this simple illustration, is the beauty and value of the boasted economic principle of absolute freedom of exchange among all the nations of the earth? If the laws, institutions, measure of liberty, moral conditions, and type of manhood of all nations of the earth were the same, then there would be more force in the contention for unrestricted and universal freedom of exchange.

But the average American citizen is foolish enough yet to indulge the hope that this American system is "the world's best hope." They believe, and vote in that belief, that the blood and treasure sacrificed in the Revolutionary struggle by our Revolutionary sires entitles them to a larger share of liberty, more dignity and ease and leisure than the serfs of monarchical oppression know of. The little American king is prouder when he is depositing his ballot in behalf of his own dignity and ease than in the performance of any other duty. He may make a mistake sometimes, but he is quick to correct it. This is the history of the past of these United States, and will in all probability continue for centuries to come.

Mr. Speaker, there are two systems of laws on our statute books which threaten the progress and happiness of our people more than all things else: One is the present tariff system, which is so soon to be repealed; the other is the system of civil-service laws.

I can not allow this special session to end without having my earnest protest entered against both systems. I beg indulgence of the House in giving my reasons why both evils should be destroyed. The best way to get the meaning of a statute, certainly so when there is any ambiguity in it, is to consider the old law, the alleged mischief, and the remedy. So that the best way to determine whether a statute which has been passed and tried should be repealed is to ascertain if possible whether the statute itself has not been the parent of greater mischief than that which it was intended to remedy. What, then, was the old law? It is embraced in subsection 2, Article II, of the Constitution.

He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur; and he shall nominate, and, by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers, and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not herein otherwise provided for and which shall be established by law; but the Congress may by law vest the appointment of such inferior officers as they think proper in the President alone, in the courts of law, or in the heads of Departments.

3. The President shall have power to fill up all vacancies that may happen during the recess of the Senate by granting commissions which shall expire at the end of their next session.

It will be seen that the President has the appointing power, by and with the consent of the Senate, of all officers of the United States whose appointments are not provided for in the Constitution, and which shall be established by law, but Congress may vest the appointing power of a certain class in the President alone. No civil-service commission or other aid to the President and Senate is here recognized, and no officer with a life tenure is recognized in the Constitution, except in Article III, section 1, which makes the terms of all judges therein enumerated during good behavior. The act approved January 16, 1883, does in no way limit or fix the term of office of the commissioners called the Civil Service Commissioners.

The power of the President to remove any commissioner simply amounts to giving them a life tenure, as the judges now have; the term being during good behavior, the latter may be removed by the President. The President is presumed not to remove a commissioner during his good behavior. So the effect and purpose of this statute is to give them a life-tenure office, a thing abhorred by the common people and sparingly recognized by the great Magna Charta of American liberty, the Constitution. The debates on this statute of 1883 show that grave doubts existed as to the constitutionality of the act, and the only ground upon which it can be sustained is that the exercise of the powers conferred on the commission is not an unreasonable restriction upon the constitutional right of the President to select from the great body of American citizens instead of the number who passed a successful examination.

It was contended by some of the best thinkers of Congress at the time that as the President himself participates in the preparation of the rules for carrying the act into effect, he in some way is estopped to disregard such rules as he has, with the commission, established. There is room to doubt whether this can be done by the law of the land. Suppose the commission and the President should adopt a rule that none but fat men shall be examined by the commission, or that no one who is as large and handsome as the presiding officer of the House should ever be so examined.

The people, I imagine, would have a right to complain of a palpable violation of the Constitution, the palladium of our liberties. But it has been contended that the question may never arise, because the President makes the appointment, and he may confine himself to these rules. The people can not be a party to any litigation touching it. The people through their chosen Representatives here on this floor now are parties to an investigation of all questions pertaining to its constitutionality, its propriety, its safety, and every possible view that can be taken of it.

Yes, the people have a day in court here now to have the question determined whether it is competent under the Constitution to confer life-tenure office upon any but the judicial officers of the Government; whether their servant, the President of these United States, shall be governed by rules in making appointments which exclude 90 per cent at least of the good and lawful citizens of the United States who pay taxes, bear arms in public danger, serve as jurors, occupy seats in the legislative branches of our State and National Governments and the gubernatorial chairs, and even the Presidency of the Republic; whether, I say, the President may, even of his own consent or obstinacy, or for other reasons, be governed by such rules. The people whom I have the honor to represent desire their verdict to be recorded in letters of living light against the whole civil-service humbuggery. How do I know it? I know it because I criticised it upon all the grounds I have stated before that great assemblage of 35,000 men, with ballots in their hands, in the Eighth district of North Carolina in the last campaign, and I got over 1,500 votes in the district more than the President, whom I supported.

But, Mr. Speaker, there are other reasons, in my opinion, omnipotent in their force against this law. It can be collected from the recorded thoughts of the friends of the bill in 1883 that they were looking out for something that would cause the public work to be done more efficiently and with the greatest safety to the country and with the least expense. Now, the best possible test of any theory or proposed legislation is an actual trial thereof. One actual experiment is worth all the theorizing in the world. The evidence of Captain Pratt, taken before the Senate committee of the Fifty-fifth Congress, tends to prove that a greater per cent of those who had passed a civil-service examination, and were selected under the rules adopted by the President and said commission, proved to be inefficient than those selected without this civil-service

examination. It is an irresistible inference from this evidence of Captain Pratt that the appointment of this Civil Service Commission has not answered any good purpose in aiding the President in procuring more competent or efficient officers. And why is it that such is the case?

Mr. Speaker, the question may be asked, and has its force: How can the application of this test of competing examinations injure the service? Let us see. In the first place, the best and most deserving citizens are among the most modest. They are engaged in fighting the battles of life valiantly in the industrial lines. They have seen many excellent men and men of much learning fail of success before the board of Commissioners. They shrink from this ordeal as Captain Pratt, with many years of experience, says he would now do.

There never has been but one incorruptible human tribunal, even under the very best possible conditions. That is the grand and petit juries. They are so because of the short tenure of their existence. Not more than one jury ever appeared at the same court of the same individuals. They perform the work of the term, and then dissolve and are lost in the great body of the people, never to act together in that capacity again. Should one jury be corrupted, its dissolution wipes out the leprous touch that corrupted them. Not so with this board of Civil Service Commissioners. They were impeached in 1883, and God's final dissolution of the personnel of the board or the mind of the President is the only power on this earth while this law exists that can dissolve this board, except resignation.

Now, I will concede that the individual members of the present board are excellent gentlemen, as free from the infirmities that press poor humanity as the very best and strongest American citizens. Still they are but great men. They can only be kept great and pure by shielding themselves from temptation to do wrong. This an officer with such vast powers can not do if he holds a lifetime office. The commissioner may be tempted surreptitiously to smuggle a set of questions and answers into the pocket of an incompetent applicant with the hope of obtaining compensation therefor.

Thus schoolboy lessons or superficial cramming from the books may pass for character and practical ability. The dude who stands appalled at the thought of fighting the battle of life for success and supremacy in the industrial lines, that man to whom the crooked plow and pitchfork are certain agencies of degradation and disgrace, and all who lack the elements of true manhood to make success of life in the sunshine will find here a strong temptation to make a specialty of that course of training which will fit or enable them to pass a civil-service examination. By "manuring in the hill," as the late lamented Judge Pearson used to say of the case lawyer, they may make a much better show, cut a much prettier figure before a thoroughly classic board of commissioners, than their more meritorious and deserving fellow-travelers.

Public duties, like the manly toil that makes glorious a nation's life, can not always be well performed by those possessing education and nothing else. Besides, it often happens that the best informed men, the men of deeds rather than those of pretensions, are those to whom an appointment to some important post operates as a sort of inspiration. Some of the greatest lives with which God has ever blessed this world were poor men in the humblest walks of life who would never think of appearing in the presence of the high places of science and literature—men like *Æsop* and President Lincoln—the one a slave, the other too poor to pay his expenses to Washington after the love and admiration of his fellow-citizens had called him to the Presidency.

*Æsop* was born a slave at Ammonius, in Phrygia the Greater, about the year 623 B. C. His head was long, nose short and flat, lips thick, a humpback, dark complexion, a large belly, and bow legs. His still greater infirmity was that his speech was slow and inarticulate and very obscure. He was a slave, and when *Zenas* offered to sell him to a merchant, the merchant burst into laughter, saying, "Had I not been convinced by his voice I should have taken him for a blown bladder." This merchant, however, afterwards, in Ephesus, offered three slaves for sale, *Cantor*, *Grammaticus*, and *Æsop*. In order to sell his slaves well, he dressed *Cantor* and *Grammaticus* in fine clothing; but supposing that no art could improve *Æsop*, he dressed him in sackcloth.

The eminent philosopher, *Zanthus*, accompanied by his scholars, attended this slave market. Looking at the two fine-looking slaves, he found the price marked upon *Grammaticus* to be 3,000 half pence. The philosopher said, "I will not buy a slave rated at so high a price." But finding the price of *Æsop* to be almost nothing, at the earnest solicitation of his scholars, who wanted a plaything, he bought *Æsop*, and the boys paid for him. The first question put to *Æsop* was, "Of what place are you a native?" "I am a negro," said *Æsop*. "Where were you born?" "Of my mother." "I did not ask that," said *Zanthus*, "but what place were you born in?" "My mother never informed me." "What can you perform?" "Nothing," replied *Æsop*.

This was all a civil-service examination could have brought out of *Æsop*. Yet, after a few years, contact with the students of philosophy, this inarticulate negro possessed both eloquence and elocution. Yes, in this deformed body was set the largest soul, within which the most refulgent gems glittered and sparkled far beyond anything the philosopher *Zanthus* or his scholars ever knew. What did it? Contact with others mainly. He could not stand a competitive examination and was bought to gratify the curiosity of the schoolboys. Take also the Rev. William Pool, whose modesty influenced him to offer his resignation, and who in a few months developed into a thoroughly equipped court officer.

Another mischief the system breeds which was unknown to the constitutional methods of selecting these officials before 1883 is this: The system tends to the selection of a large body of young citizens as fit for office eligibles, and the very act of being thus marked or designated as eligibles unfits them for practical life should they not succeed in getting an appointment. By way of illustration, suppose that out of the great body of American citizenship 500,000 should be selected under the rules of the civil service as eligibles. Now, there would necessarily be a large column, larger than any army that ever engaged in battle on any field of carnage in this Republic, unemployed. They would remain as so many able-bodied beggars in idleness. They could not undertake any scientific or professional work, because this is a business of a lifetime. Neither could they engage in any of the industrial lines of business, because they would be constantly awaiting and expecting a call to the public service.

Still another one of the reasons of the passage of the Civil Service Commission law was this: It will destroy the iron rule of party despotism, said its advocates. If that was a mischief to be dreaded, the remedy of civil service is totally ineffectual. Any law that puts it into the hands of any officer of this Republic, as the President has under this law, to expand its operations when his party friends are to be the beneficiaries and contract it when a new state of things exists is both unjust and would make a despot of a Christian patriot President. Besides this, a mischief springs out of the idea of having an enforced nonpartisan service more to be dreaded than the imagined evil of the iron rule of party despotism.

There are two duties and two high prerogatives that no man can afford to disregard or surrender and no just government can lawfully attempt to enforce. The one is man's duty to his Maker, religion; the other, man's duty to his country, patriotism. No man has a right to be merely passive touching either of these great duties. No government that is not a despotism can attempt to enforce such a policy. Suppose a statute was introduced requiring the Commission to select none who pray and actively participate in the promulgation of Christian truth. No man but a hideous, deformed moral idiot would advocate it.

The individual light before God must not be put under a bushel. Equally so touching one's duty to his country. If he sees, or honestly believes he sees, an evil, error, or mischief lurking in any proposed government policy, he has no right to be passive. It is his duty to cry aloud and employ all the forces of patriotism in resisting, exposing, and cutting from the body politic, any error as eagerly as the physician of the soul would cry out against moral leprosy. No man can be a respected or valuable sentinel upon the watchtowers of liberty who surrenders his rights to cry out against government abuses. The truth is there is no such thing as "the iron rule of party despotism." Associated political action is the only force in a republic that can enforce a principle, or check or remove an abuse or mischief. Political parties are essential to this great work.

Without parties a republic can not exist. When by the efforts of one party or organization an Administration has changed and new parties and principles are to be enforced, the agencies of the Government should likewise change. There should be no life tenure, except those expressly mentioned in the Constitution, the judges. To say that the thousands of employees now in the service are all good and worthy citizens and have done their duty is no reason why they should remain in office all their lives, for there are tens of thousands just as worthy and competent in the fields of industry to whom a participation in the emoluments, and especially the honors, of holding office are just as sweet. Besides this, disguise it as you may, there is to some extent selfishness in all our conduct.

Men pray because it benefits them. They become religions because they expect a reward to come. The citizen labors for good government because he is to be benefited. He becomes a patriot often in order that he himself, as well as his neighbors, may enjoy the benefits of good government. This Republic is in need of the intelligent exercise by every citizen in it of his best intelligence on all political questions. The man in office as a clerk even has a better opportunity to inform himself than the equally patriotic plowman at home. Just there in the library I saw an employee here poring over his books. He told me his habit was to put in every spare moment there.

When an Administration is in, it needs the service of the most intelligent and efficient men of the Republic who at least desire that Administration to succeed. Seventy-five per cent of the employees and appointees of this Administration are unfriendly to it, and no doubt pray for the restoration to power of the party just defeated, and no way to get them out. Great political fortunes may and often do hang upon the action of those in power touching any great political question.

The 15,000,000 men with ballot in hand will demand the overthrow of the system. How can a member of Congress refuse to help in this great work? Each member owes his promotion to the ballots cast by good legal electors. How can he insist logically on the right to hold his office, enjoy its honor, without being marked by a commission as an "eligible," and deny the right to hold by appointment to those who elected him? It is easy to make chin music at home to the elector for his vote—that is all right, it is free, and freely given. But when the modest, active patriot whose services elected him asks for an appointment, "Oh, you must submit to a civil-service examination. The law is a good one; it saves us the worry and trouble of office hunters."

The story of the selfish worshiper fitly illustrates his position. A dying man said, "Read to me some comforting portions of Scripture;" this done, "What next can I do for you?" inquired the zealous Christian. "Why, will you not pray for me?" "Certainly," he replied. Prayer being over, "What next, my dear suffering brother?" "Please give me a small drink of brandy from the little bottle of yours, it will stimulate me." "No, no, sir; the Scripture I read and the prayer I made were all free, they cost me nothing. This brandy cost me \$1 a quart. I can not afford it." When the Congressman made elaborate addresses, it was all freely done; so freely given that it taxed his modesty to ask a vote in return therefor. But when the elector now asks to be recognized as an eligible, "Oh, no; it will cost me a little worry and trouble." My Republican brother, great political fortunes hang upon our action touching this great question. The system is of doubtful constitutionality—un-American. It is at war with the life of the Republic. I would resist its continuance as earnestly as I would an attempt of a British fleet to bombard this Capitol.

With the business life of the country revived by the wise tariff legislation which has been the work of this special session, it is to be hoped that the Republican party will assail this greater evil—this civil-service humbuggery—at the beginning of the regular session with more vigor than it has displayed even in destroying the free-trade heresy which has humiliated our citizens and robbed us, in a large measure, of the dignity of American citizenship.

#### Tariff and Bonds—McKinley Tariff a Bond Producer.

Ample revenues for the wants of the Government are provided for by this [McKinley] bill.—*McKinley*, in reporting McKinley bill to House (1890).

I should say the next fiscal year would show a deficit. I think an annual increase of \$50,000,000 would make the Treasury easy, and if I were going to manage it, I would want to have it.—*Secretary Charles Foster*, testifying before House Ways and Means Committee (1893).

#### SPEECH

OF

HON. JOHN W. GAINES,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 359) to provide revenue for the Government and to encourage the industries of the United States.

Mr. GAINES said:

Mr. SPEAKER: Every few days I am asked by letter and otherwise, by people from many States, and especially Ohio, this question: "Is it true that while the McKinley tariff was the law Mr. Secretary Charles Foster ordered plates to be made for the purpose of issuing fifty millions of bonds to replenish the revenues of the Government?" In my former speech on the tariff, published in the RECORD of March 31, 1897, I proved, I thought, beyond all question, that Mr. Secretary Foster did issue such an order on February 20, 1893, just ten days before the end of President Harrison's term.

The gentleman from Ohio [Mr. GROSVENOR] had flatly disputed the existence of this order while the Dingley bill was under discussion this session, using these words:

I hope the gentleman [Mr. McMILLIN] will not again put that old story in circulation. It was false in its origin and is false to-day.

Soon after he disputed the existence of this order, I procured a certified copy of it from Mr. Secretary Gage, which I hold in my

hand, and will again make a part of my remarks. It reads as follows:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,  
Washington, D. C., March 25, 1897.

SIR: I have the honor to acknowledge the receipt of your letter of this date, requesting the original letter, or a certified copy thereof, written by Mr. Secretary Foster February 20, 1893, addressed to the Chief of the Bureau of Engraving and Printing, authorizing the preparation of certain plates. In compliance with said request, I submit below a correct copy of the letter in question, also a copy of the text of the proposed bond.

[Copy of letter.]

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,  
Washington, D. C., February 20, 1893.

SIR: You are hereby authorized and directed to prepare designs for the 3 per cent bonds provided in a Senate amendment to the sundry civil bill now pending. The denominations which should first receive attention are 100s and 1,000s of the coupon bonds, and 10s, 1,000s, and 10,000s of the registered bonds. This authority is given in advance of the enactment, in view of pressing contingencies, and you are directed to hasten the preparation of the designs and plates in every possible manner. I inclose a memorandum for your guidance in preparing the script for the body of the bond.

Respectfully, yours,

CHARLES FOSTER, Secretary.

THE CHIEF OF THE BUREAU OF ENGRAVING AND PRINTING.

TEXT OF THE BOND.

"WASHINGTON, April 1, 1895.

"This bond is issued in accordance with the provisions of section — of an act entitled 'An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1894, and for other purposes,' approved March 3, 1893, and is redeemable at the pleasure of the United States after the last day of April, A. D. 1898, in coin of the standard value of the United States on said March 3, 1893, with interest in such coin from the day of the date hereof at the rate of 3 per cent per annum, payable semi-annually on the last days of October and April in each year. The principal and interest are exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form, by or under State, municipal, or local authority."

Respectfully, yours,

L. J. GAGE,  
Secretary.

HON. JOHN W. GAINES,  
House of Representatives.

I desire to add that I had in my hands, March 25 last, and read the original order of Mr. Secretary Foster, which is on file at the Bureau of Engraving and Printing.

In discussing this point in the House last March, I said what I now repeat.

I desire to call special attention to what Mr. Secretary Foster says in this mysterious order of February 20, 1893:

This authority is given in advance of the enactment.

Think of this, gentlemen! Fifty million dollars of indebtedness to be created in time of peace, and that, too, "in advance" of the enactment of the law which was to be approved "March 3, 1893," the last day of the Harrison Administration. Why "in advance"? Why at all? "In view of the pressing contingencies," says Mr. Secretary Foster. What "contingencies"? Was the National Treasury plethoric? Was it overflowing? Or did Wall street want the bonds? Why such haste, if the condition of the Treasury was "overflowing" or easy? Why, Mr. Foster, did you not wait for the incoming Administration to issue these bonds to disgrace itself, as it did do? Why precipitate this bond odium on Harrison's Administration? Certainly the Government would not have made an assignment in eleven days, from February 20, 1893, to March 4, 1893. There is something "dark and dreary" about this. Senator Sherman was the author of an amendment to the sundry civil bill in the Senate authorizing the issuance of these bonds. We are not surprised. He was at his old tricks, doing business at the same old stand.

MR. MCKINLEY A FALSE PROPHET.

When Mr. McKinley in 1890 reported the McKinley bill to the House, he prophesied as to the virtues of that measure in these words:

Ample revenues for the wants of the Government are provided by this bill, and every reasonable encouragement is given to productive enterprises and to the labor employed therein.

Mr. McKinley, however, proved to be a false prophet. We find, before the end of President Harrison's Administration and while the McKinley tariff was the law of the land, that plates for the issuance of fifty millions of bonds were ordered by Mr. Secretary Foster.

We further find, on February 25, Mr. Secretary Foster stating to the Ways and Means Committee of the House that a deficit would occur within the next fiscal year; that the revenues of the Government should be increased fifty millions annually, and this increase made permanent. We find further that while the McKinley tariff bill was still the law of the land and being enforced by Mr. Cleveland's gold-standard Administration, bonds were issued, whether rightfully or wrongfully; and the fact remains that they were issued and that this issuance was indorsed by the Republican party.

Mr. Speaker, the McKinley tariff not only paralyzed our home trade, but our international commerce, which necessarily caused a falling off in imports and equally as necessarily a diminution in the amount of taxes collected upon imports.

Unable to shed more light upon this subject now than I did in my former speech, and in view of the importance of this disputation, I will ask to add what I said formerly on the subject without further comment.

In addition to this testimony, I will now read you the evidence given by Mr. Secretary Foster before the Ways and Means Committee of the House, February 25, 1893, touching upon the condition of the Treasury:

Secretary FOSTER. Now, I want to say to you these estimates are based upon conditions existing prior to the late election [1892]. What effect the expectations of the public will have upon the revenues I do not undertake to estimate. For the first time, this month begins to show that effect. The revenues for the present month [February, 1893] will be about what they were last year [1892].

That is, Mr. Chairman, these estimates were based upon conditions existing "prior to the late [1892] election." Hence the election could not and did not cause or mold these estimates in any way whatever. They were made upon conditions existing and brought about under the McKinley bill, exclusive of the effects of the election altogether.

No one knew "prior to the election" in 1892 who would be elected; hence it is untrue when the Republicans say that the issuance of these bonds, or rather their proposed issuance, was brought about by the threatened election of Mr. Cleveland. In fact, as stated, their issuance or the estimates of Mr. Foster were based exclusively on conditions existing "prior" to the election.

The testimony continues:

Mr. TURNER. Taking into consideration all these conditions which you anticipate, what, in your judgment, would be a fair conjecture of the condition of the Treasury at the end of the next fiscal year?

Mr. Secretary FOSTER. I should say the next fiscal year would show a deficit.

Mr. TURNER. Can you give an approximate estimate, according to all the data accessible to you?

Mr. Secretary FOSTER. I will only say this, that if I was to have the management of the Treasury, I should insist upon an increase of revenue to the extent of \$50,000,000.

Mr. TURNER. In order to meet those conditions which you anticipate?

Mr. Secretary FOSTER. Not only those conditions, but the gold conditions as well.

Mr. Chairman, it is a little strange that Mr. Foster did not tell this committee there and then, "February 25, 1893," that he had already, on "February 20, 1893," ordered the bond plates for "\$50,000,000" of bonds. Yet we see he had ordered them, and yet failed to state all the truth, and certainly he could not have well overlooked a little thing like ordering or issuing "\$50,000,000 of bonds" for the people, the plain people of this country, to pay. "Millions" are small things to the Republican party, even when they are administering a public trust.

The examination continued:

Mr. WILSON. Did I understand you to express a general opinion a while ago that in addition to the present sources of revenue the revenues of the Treasury Department ought to be advanced \$50,000,000 more a year?

Secretary FOSTER. Yes, sir.

Mr. McMILLIN. Would you make that for one year or a permanent increase of revenue?

Secretary FOSTER. As things are going now, a permanent revenue, for two reasons. I would increase the gold reserve at least \$25,000,000 if I had the money to do it with.

Mr. TURNER. But your answer just now seemed to contemplate an annual increase?

Secretary FOSTER. I think an annual increase of \$50,000,000 would make the Treasury easy, and if I were going to manage it I would want to have it.

Another thing, Mr. Chairman, I notice—that Mr. Foster, in so many words, says that there would be a "deficit." I repeat his words, "I should say the next fiscal year would show a deficit." He had already said, as the report shows on the same page, "The revenues for the present month [March, 1893] will be about what they were last year" (1892).

Mr. Chairman, the McKinley bill was in full force a year previous, "last year" (1892), and was then in effect. Mr. Foster virtually admits that even "last year" (1892) the revenues were insufficient for the needs of the Government, because he says:

The revenues for the present month [February, 1893] were about what they were last year (1892).

At the same period we find in the "present month" (February, 1893) he is preparing to issue bonds to the amount of \$50,000,000, to do what? To meet this "deficit and the gold conditions then existing."

"Two things which are equal to the same thing are equal to each other." If the revenue at the two periods, February, 1892, and February, 1893, were the same, as Mr. Foster says they were, then we must conclude that there was a deficit at both periods.

The majority report of this committee, after fully hearing Mr. Foster, said:

DEFICIT OF \$25,000,000 TO \$50,000,000.

Under the most careful estimates that can now be made it is apparent that at the end of the ensuing fiscal year there will be a deficit amounting to from \$20,000,000 to \$50,000,000. In these calculations no account whatever has been taken of the requirements of the sinking fund.

Secretary Foster stated that in his opinion the annual receipts of the Government should be at once increased. He also stated that in his opinion there would be a deficit at the end of the fiscal year 1894, and said that if he had the management of the Treasury in the future he should insist upon an increase of the annual revenue to the extent of \$50,000,000. This increase, he stated, should be made to meet the conditions to which reference has been

made in this report, and also for the purpose of increasing to the extent of \$25,000,000 the gold reserve fund of \$100,000,000, which increase he earnestly recommended.

I challenge the correctness of the contention on the other side of this Chamber that a low tariff brought about the financial depression from which we are yet suffering, because the Wilson bill itself is an intensified protective measure and out-herods all other tariff measures except the McKinley bill, and even rivals that infamous law. I challenge the opposition to refute the testimony of their own witness, Mr. Secretary Foster, when he establishes beyond all peradventure that the causes that made bond issues necessary and bred panic and disaster were created away back in Mr. Harrison's Administration.

I call the country to witness that under this indisputable proof it was not low tariff that did it; it was not the fear of Democratic accession that did it; it was not the dread of Democratic misrule that did it, but that it had its origin while the Republican party was in full swing and the McKinley tariff in full force.

I am not here, Mr. Chairman, to defend Mr. Cleveland on any part of the ground. Time was when he sang a clear note to the country on the evils of protection, and so intense were his convictions that he blazed out a new course, in that he subordinated all things else to that question and made it the sole topic of an annual message. But he forgot all that. He heard the siren's voice after that and was captivated by the sweet strains that were twanged upon the golden lyre in Wall street.

He proclaimed the true Democratic doctrine upon this vital question, and his words were verified, that protection is destructive to trade and commerce and to general prosperity, only designed for the enrichment of the few and the impoverishment of the many, and he held these supreme truths paramount, and declared upon their correct solution depended the rights and interests of the people and the integrity of constitutional free government; but he forgot all that when the siren twanged, and he permitted another issue to crowd it into the background, and he deliberately made it possible for the Republican party to be foisted again into power where it could work out the schemes of tariff destruction that he once decried so valiantly. He deliberately surrendered the right of the Government under the law and expressed in the face of the contract to pay its obligations in both or either coins, in the face of his party platform, and in spite of his party creed, and thus he helped to fan the flames that were kindled away back yonder in 1893 under his Republican predecessor, and finish the degradation and financial enslavement of his people that he might please those who enriched him. He was a Jonah in the Democratic ship; but, thank God, he is where he belongs, aboard the Republican craft, and may the Lord have mercy on the Republican party's soul.

IS TRUSTEE AND AGENT FOR THE PEOPLE, NOT OF THE CREDITOR.

Senator Beck, in a speech in the Senate in 1879, condemned paying in gold these coin obligations, and said they should be paid in silver. He said:

The position taken by the Secretary, that the creditor should be allowed to determine what character of coin he prefers to be paid in, when the United States have the right to pay in either, can not be maintained. The Secretary is the agent and trustee of the people, not of the creditor. The option is for the benefit of the people, and the right is absolute in their agent to pay silver coin without consulting the creditor, if the interest of his *costui que trust* requires payment to be so made. Not to pay in the manner most advantageous to the taxpayers of the country is a plain violation of the known duty of the Secretary. It seems to me to be an obvious fact that it is the interest of the people to utilize the silver dollar by requiring the Secretary to pay the interest we owe with it.

Again, Mr. Beck said:

It is the clear duty of the Secretary to pay the interest we owe in the coin that costs us least. It is our option, not the creditor's, and Congress ought to see to it that the laws are executed in the interest of the people.

And yet Mr. Carlisle disregarded such pertinent and patriotic advice and turned over the option to the creditor, and then was compelled to sell him bonds to get the gold to pay back to him.

As early as 1836 Mr. Webster said the option was with the payer and not the payee—the man in debt and not the man to whom it is to be paid. He said:

It (the law) enumerates four kinds of money, or other means of payment; and can anything be plainer than that he who has to pay may have his choice out of all four? All being equally lawful, the choice is with the payer and not with the receiver. This would seem to be too plain to be either argued or denied. Other laws of the United States have made both gold and silver coins a tender in the payment of private debts. Did any man ever imagine that in that case the choice between the coins to be tendered was to lie with the party receiving? No one could ever be guilty of such an absurdity.

In these latter days there have arisen wiser men and greater patriots than Mr. Webster to set his profound opinions at naught and barter away a right that was founded in law, predicated in immutable principle, sustained by the unvarying judgment of statesmen and law writers, and expressed in the face of the contract itself, and allowed the creditor to choose to be paid in that coin that was hardest to obtain, and to do this was forced to sell bonds to provide the means to meet the demands of unjust greed.

And yet, in face of all this, there are those on the other side of this Chamber who have the temerity to say, and the hardihood to pretend to believe what they say, that it was the bogus low-tariff Wilson bill that made the sale of bonds necessary.

## The Disintegration of the Democratic Party.

## SPEECH

OF

HON. CHARLES H. GROSVENOR,  
OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States, and the question being upon agreeing to the report of the committee of conference on the disagreeing votes of the two Houses—

Mr. GROSVENOR said:

Mr. SPEAKER: I want to introduce at this time an extract from the speech recently delivered at Sumter, S. C., by Senator McLAURIN, of that State, who is now making a canvass for his reelection to the Senate, after having given several votes in favor of a protective tariff.

The Senator, in defending his position, said:

With the advent of the present Administration came a determination to repeal the present tariff law and enact one more protective in its features and more certain, it is alleged, to bring sufficient revenue. The question of how to meet this Republican onslaught has given rise to much discussion among Democrats in Congress and quite a difference of opinion on some particular points. Some, like Senators VEST, JONES, MILLS, and others, favored a propaganda of revenue principles by showing up the iniquities of the measure, so that in future these discussions might be used as political capital.

We assumed that without an income tax the entire contention, aside from a desire to make political capital, was one of schedules. There is not a man before us who would listen to the tariff debate one single day and not come to the same conclusion. Let me give you a few instances among Democrats to sustain this contention. Senator RAWLINS demanded a duty on wool and gilsonite for Utah. Senator WHITE demanded a duty on borax and fruit for California. Senator MORGAN wanted a duty on iron for Alabama. Senator PASCO wanted higher duties on cigar wrappers for Florida. Senator BACON wanted a duty on cotton and lumber for Georgia. Senator TILLMAN and myself wanted what we could get for rice, cotton, lumber, bauxite, and monasite for South Carolina. Congressmen LOVE and WILLIAMS wanted a duty on pyrites and bauxite for Georgia, while FOWLER, of North Carolina, joined in for it all.

Senator ALLEN, after condemning a duty on lumber, of which his State produced none, asked for a duty on chicory, of which his people were large producers.

Senator CAFFERY, of Louisiana, after expending days denouncing a protective tariff, wound up with a demand for a duty on sugar.

I might tell you how some would denounce protection on the floor of the House and then come quietly into our committee room and ask for a duty on some product of their own district.

I became disgusted with such double dealing, and, with TILLMAN, BACON, RAWLINS, and others, began the fight on the sectional features of the bill, and demanded equal privileges for the South and her industries. The result of our efforts has been a duty on cotton, equal privileges for Southern pine and Southern railroad ties, higher duties on rice, and duty on bauxite.

We have also compelled the Republican managers to recognize the injustice of taxed jute bagging for the planter and on binding twine for the wheat raiser, and have put this bagging on the free list. Not a single one of us believes in the doctrine of protection, and so declared repeatedly, but made the fight under that part of the Democratic tariff plank which declares that "duties shall be so adjusted as to operate equally throughout the country and not discriminate between class and section." I declared on the floor of the Senate that the South asked for no advantage, but demanded simple justice. If protection was beneficial, as alleged, the South was selfish enough to want her share; if the policy proved disastrous, we were patriotic enough to stand our portion.

Thus it will be seen that the last stand of Democracy at which a united party has gathered has been abandoned. No political party could stand up against the overwhelming exhibition of the failure of free trade during the last four years, and Democratic statesmen are as acute to see the handwriting on the wall as anybody. They have seen that one by one their followers have abandoned the tenets of their political faith, one by one, making the pretense of supporting a tariff upon certain local products, have in fact gone over with substantial unity to the doctrine of protective tariff.

Here we have the leading Democrats of the Senate, with few exceptions, voting, as declared by Senator McLAURIN, in favor of protective duties. Look at the list: RAWLINS, on wool and gilsonite; WHITE, on borax and fruit; even Senator MORGAN, the old-time faithful apostle of Bourbon Democracy, wanted a duty on iron; PASCO, on cigar wrappers; BACON, on cotton and lumber; TILLMAN and McLAURIN, on rice, cotton, lumber, bauxite, and monasite; Congressmen LOVE and WILLIAMS wanted a duty on pyrites and bauxite; FOWLER of North Carolina joined in for it all, and Senator ALLEN—think of that, the Populist apostle—voted for a high duty on chicory, wherewith the coffee of the people may be adulterated; CAFFERY, at the end of his few brief suggestions, wanted a protective duty on sugar, and so the brethren are all in line, and it simply means the ultimate abandonment of the whole doctrine of free trade.

Mr. Speaker, pass this bill, and if it benefits the country, as I predict it will, we will never have a Democratic convention denouncing protection as a robbery.

## The Advance of Plutocracy, and Menace to American Liberty.

## SPEECH

OF

HON. ALBERT M. TODD,  
OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. TODD said:

Mr. SPEAKER: After four months' session of a Congress which will go into history noted for its revolutionary disregard of constitutional procedure, the Republican majority have voted to pass a bill for the plunder and taxation of the American people unequaled in severity in the history of any free nation.

This extraordinary session was convened by the President in unseemingly haste, immediately upon his accession to power, in compliance with a bargain made by the leaders of his party with the trusts and money power, which furnished in the recent campaign a corruption fund hitherto unparalleled in magnitude for the deception and coercion of American citizens.

You of the majority have, many of you, voted to pass this bill against your better judgment, and against the judgment and protest of those overtaxed and overburdened people whom you represent, because your leaders sold the influence of your once glorious party to the usurers and trusts who now dictate its policy; and under the party lash and the rule of your caucus you have been driven, at the loss of your independence and manhood, like lambs to the slaughter for the banquet of princes.

Should this criticism of the majority seem too severe, I call attention to the opinion recently published in the July Forum of a man whose opinion should be respected by Republicans, because he was a "bright and shining light" in the recent campaign for "McKinley, prosperity, and honest money." J. Laurence Laughlin, who holds the position of professor of political economy in Chicago University by the grace and dispensation of that influential statesman, John D. Rockefeller. He says:

It may not be a pleasant thing to say, but never before—at least in this generation—has there been such widespread loss of confidence in the honor and integrity of our public servants in Congress. One almost hesitates to put into words the frequent admissions of thoughtful men that national legislation is to-day bargained for, if not actually bought and sold. So far has suspicion gone that it is even bruited about as matter of common report that while the President himself may not have made election promises, yet his agents have engaged for him, in the form of a tariff bill, to allow numerous interests to recoup themselves from the country for advances made to secure the nomination and election of their candidate. The audacity, the unblinking "grab," displayed in Washington gives color to such reports. \* \* \* When one sees how much basis there is for this distrust, one does not feel surprised at much of the blind hatred of political corruption expressed by some honest supporters of Mr. Bryan. If we faced the matter squarely, we should find much to justify the existence of Bryanism.

The bill, now under discussion in the Senate, will undoubtedly soon become law with all of its monstrous provisions, and there is now no hope that you who fear your party lash more than you regard the pleadings of humanity can be induced to retrace your steps. But as much information has come recently to light regarding the corruption with which the bill has been forced upon us, and regarding further outrages upon the people of this nation, I desire to speak briefly in reference to them.

## FAILURE OF THE BILL TO MEET ITS PRETENDED PURPOSE.

The promoters of this bill were, by their own admissions, well aware weeks ago that it would utterly fail in its avowed object, viz, "To provide revenue for the Government and to encourage the industries of the United States." Why? First, because the great manufacturing corporations, such as the sugar trust and the woolen manufacturers, although clamoring in campaigns, and through their lobbyists who throng the Capitol, for "protection to American labor and industries," have been, ever since this extra session of Congress was planned by them, loading down every ship to the water's edge with foreign wool, sugar, and products of every description from foreign lands, so that they could enjoy an enhanced value on this foreign raw material and on the finished products, and let the products of the American farms and workshops go untouched except at such prices as their combines were willing to pay.

The distinguished leader of the Republican party from Ohio [Mr. GROSVENOR], in his speech in this House recently, said:

Mr. Speaker, there is at this time [July 19] coming to us from all the sources of information valuable knowledge of the fact that vast quantities of merchandise have been and are being imported into the United States in anticipation of the increased rates of duty to be levied and collected under the pending bill. It is estimated that \$40,000,000 which under the ordinary course

of business would have come to the Treasury of the United States from imports has been anticipated under the lower rates of duty, and to that extent the Treasury will be defrauded.

Notably there has been an enormous incursion of free wool, enough, it is said by those who claim to know, to run the factories of the United States for two years and deprive the woolgrowers of any direct protection under the Dingley law; but still more notable and still more aggressive has been the action of the importers of sugar.—*Congressional Record*, page 3105.

So, according to this very truthful admission, the effect of this present tariff agitation is to force an enormous importation of foreign products, purchased by those who ask the votes of American labor, under the pretense of helping the American workmen.

And that American producers may rightly judge the motives of the men who have promoted this bill, they should know that the Republican majority, in full cognizance of the atrocious methods by which the sugar trust corrupted a former Senate, and had boasted that "they owned it body, boots, and breeches," and the unblushing manner in which it has paraded itself through the corridors and committee rooms of the Capitol in this Congress; and after the recent trial of the officers of the trust had been shown to be a farce in the District court, yet the Republican majority stands solidly for this tax in the favor of the trust, increased at the last moment by a further deception claimed to be in the interest of American producers, while refusing to adopt the suggestion of the Republican Secretary of the Treasury to lay an internal tax of 1 cent a pound upon the amount of sugar on hand thus imported by such sugar trust free of the increased duty, and on which they will obtain an unjust advantage, which would have added upward of \$12,000,000 to the public Treasury without any possible injustice to the trust.

#### HOW "PRIVATE OWNERSHIP" OF THE GOVERNMENT IS SECURED.

The manner in which this trust and the other trusts have secured fraudulent "ownership" not only of a majority of the Senate, but now of the House as well, is shown in the sworn testimony given by the president of the trust before the Senate investigation committee. I quote from the official report:

Senator ALLEN. Had you or the Sugar Refining Company contributed anything to the campaign fund in New York last year—the Democratic State campaign fund of last year?

Mr. HAVEMEYER. I will have to answer that in the affirmative. Senator ALLEN. Did you also contribute something to the Republican campaign fund; that is, for the State campaign?

Mr. HAVEMEYER. We always do that. I have not the amount in my mind. Senator ALLEN. In 1892 did you contribute to either party?

Mr. HAVEMEYER. The local parties?

Senator ALLEN. The national parties.

Mr. HAVEMEYER. No, sir; but always to the local parties. Let that be distinct.

Senator ALLEN. And you contribute to both parties with the expectation that, whichever party succeeds, your interests will be guarded?

Mr. HAVEMEYER. We have a good deal of protection for our contribution. Senator ALLEN. Therefore you feel at liberty to contribute to both parties?

Mr. HAVEMEYER. It depends. In the State of New York, where the Democratic majority is between 40,000 and 50,000, we throw it their way. In the State of Massachusetts, where the Republican majority is doubtful, they probably have the call.

Senator ALLEN. However, in the State of New York you contribute to the Democratic party, and in the Commonwealth of Massachusetts you contribute to the Republican party?

Mr. HAVEMEYER. It is my impression that wherever there is a dominant party, wherever the majority is very large, that is the party that gets the contribution, because it is the party that controls local matters.

Senator ALLEN. Then the sugar trust is a Democrat in a Democratic State and a Republican in a Republican State?

Mr. HAVEMEYER. As far as local matters are concerned, I think that is about it.

Senator ALLEN. In the State of Maine you control the refineries at Portland, do you not?

Mr. HAVEMEYER. That is defunct. We would not give anything to the State of Maine.

Senator ALLEN. In the State of Pennsylvania where do your contributions go?

Mr. HAVEMEYER. I will have to look that up.

Senator ALLEN. In the State of your nativity, or the nativity of your corporation, New Jersey, where do your contributions go?

Mr. HAVEMEYER. I will have to look that up.

Senator ALLEN. I understand that New Jersey is invariably a Democratic State. It would probably go to the Democratic party?

Mr. HAVEMEYER. Under the theory I have suggested, if they were there, it would naturally go to them.

Senator ALLEN. And this money that you contribute to these different parties for campaign purposes, local campaign purposes—that money comes out of the corporation of the sugar refining company?

Mr. HAVEMEYER. Yes, sir.

Senator ALLEN. And is a part of the expenses of that company?

Mr. HAVEMEYER. Yes, sir.

Senator ALLEN. Charged up on your books as expenses?

Mr. HAVEMEYER. Yes, sir.

Senator ALLEN. How would it show—as so much money?

Mr. HAVEMEYER. It would show that a payment was made, and that payment would have to be explained by the party who made it.

Senator ALLEN. The manner in which he did explain it actually would not appear upon your books?

Mr. HAVEMEYER. No, sir.

#### HOW THE RAILROAD AND TELEGRAPH TRUSTS SECURE THEIR SHARE OF "PRIVATE OWNERSHIP" OF THE PEOPLE'S GOVERNMENT.

A pernicious practice has for many years been permitted in this country, that of giving free passes and free telegraph service by the railroad and telegraph companies to Senators, Representatives,

the judges of United States courts, and other prominent officials connected with the General Government, as well as to like officials of our State governments. So long as this system of bribery is allowed, how can we expect legislation or judicial decisions free from prejudice?

I say "bribery" advisedly, for wherein lies the difference between the giving of money and that which costs these corporations money to supply? So long as these corporations do your service free, that which costs them money, they must of necessity recoup themselves from the people by maintaining the present unjust rates. Why do they offer you passes and telegraph franks as soon as you are elected to a high office, when they had not done so before? Because you now hold a position of trust, sworn to protect and advance the interests of the people, and they wish to disarm you by placing you under personal obligations to them.

How well they have succeeded in their plan of seduction is evidenced by the failure of the nation to provide a postal telegraph (although various Postmaster-Generals have recommended it in special reports) and to break the power of the great railroad pool. It is even a matter of common report that the present Vice-President of the United States is a director of one branch of the pool, and left his duties as President of the Senate during the present session to attend a meeting of the board in New York.

During the present session of Congress the Supreme Court of the United States, in the famous transmissouri case, decided that these railroad pools, or traffic associations as they style themselves, were violators of law, and are within the scope of the antitrust act. The railroads have already commenced planning to "procure" through Congress a repeal of the provisions of that law, or an amendment granting them immunity from its provisions, and are sending through the Trunk Line Association appeals to Senators and Congressmen to come to their aid.

How, then, could the Republican majority of this House, who have absolute control of this bill to do what they wish, vote for its passage after having admitted that it would fail to provide either of the beneficial results for which it was pretended to be enacted? The answer can be found in the fact that these gentlemen have received too much education by contact with the trusts not to know that this bill was never intended for any other purpose than to foster combines for the plunder of the common people. And how can Republican leaders face their constituents in the great woolgrowing States, when the very effect of this legislation, even before the bill is passed, has been to bring in, as they admit, a supply of foreign wool sufficient to last two years, and at the same time they have given the woolen manufacturers, in addition to the rate for a protective duty, a further tariff as a compensatory duty equal to the duty herein levied upon wool and which they are permitted to evade paying on this two years' supply? Numerous antitrust amendments, varying in their scope and provisions, have been proposed by the minority for the purpose of controlling and limiting the power of these trusts to rob the people, and yet all these propositions have been rejected by the majority, thus leaving the combines free to enjoy the present and future benefits of this bill—the consummation of their covetous desires.

#### DECEIVING THE FARMERS.

You of the majority are found practicing deception upon the great farming interests by fixing rates of tariff pretended to increase the value of their products, when you knew you could not thus aid them, since we export rather than import these products, except as to wool, the latter of which decreased every year in price under the operation of the McKinley bill in my State, and has increased under the Wilson bill.

As a remedy for this unjust condition, the honorable Senator from Utah [Mr. CANNON], very consistently with his record as a protectionist, offered an amendment providing an export bounty on American farm products to compensate for the increased tax you are about to levy on the farmer in the interest of manufacturers. But no! Your ears became deaf and your tongues silent as the Sphinx, as usual, whenever any humane amendment has been offered you which was not "favorably reported" by the trusts.

#### STOCK GAMBLERS AND BOND DEALERS GREATER THAN THE LAW.

Another amendment was offered, and unanimously passed the Senate, providing that the stocks and bonds of corporations hereafter issued or transferred should bear a slight share of the burden of taxation, but this was also rejected. But the Republican conferees, without consulting the other members of the conference committee at all, decided it was too much in the interest of the common people and against the interest of stockjobbers and speculators, and out it had to go, and out it did go.

When the honorable chairman of the Ways and Means Committee, whose name the bill bears, placed before the House the joint conference report, he said that this provision was omitted "because the committee did not think it could be enforced." I asked him, "Is it possible, then, that you admit what we have long contended, that the stock gamblers, corporations, and trusts are not

amenable to law under the present régime—that corporate wealth is above the law and the Constitution?” I quote from the RECORD:

Mr. TODD. May I ask the gentleman a question?

Mr. DINGLEY. Certainly.

Mr. TODD. You have said that the Senate amendment was receded from because you found it impossible to regulate the collection of revenues on stock and bond transactions. You admit, then, that the laws of the United States are inoperative against the stock gamblers of Wall street, and that they can not be enforced.

Mr. DINGLEY. I admit nothing of the sort. I say this: There must be a record of these transactions for it to be effective, and there appears to be no record in such cases, and they can be easily avoided.

Mr. TODD. But Congress has the power to make legislation which will bring out these records.

Mr. DINGLEY. Oh, the great trouble is, there is no record.

Mr. TODD. It would be as easy to perfect machinery for that purpose as it is for the custom-house regulations and internal revenue.

I believe the honorable gentleman spoke truly. For the perversion of justice and law in their behalf by venal courts and the ease with which great corporations can escape taxation has long been a matter of common knowledge.

THE TRIUMPH OF THE TIMBER THIEVES AND “LOG ROLLERS” OVER “HOME BUILDERS.”

While every page of this act teems with injustice, there is one schedule besides the sugar schedule of so revolting a nature that I can not pass it by, especially as it is exploited as a triumph for the people of my State and the honorable Senator who labored so industriously for its passage. I refer to the tax of \$3 per thousand on pine lumber, which every farmer, wage earner, and business man must pay to the speculators in pine lands when they wish to build a home or a shelter for their stock.

It is well known that this tax can not in the slightest degree benefit a single workingman or industry, because the pine lands are mostly owned by less than a dozen men, who do not operate mills, but who will now sell the trees to the mill owners at the enhanced tariff value. On the contrary, the mill owners, being thus compelled to pay more for their trees, can not afford to pay their laborers the usual wages, and thus every person of every rank and station pays tribute to a few multimillionaire speculators, and the glory of “protection” and the fame of my State and its statesman are spread!

How much longer will the people of Michigan and the country at large allow their interests to be thus misrepresented under this sham of “protection” when they learn who it is that dictates the policy of Senatorial servants of the timber trust?

An exceedingly interesting bit of testimony from one of the men who assisted in fixing the lumber schedule, Mr. Winchester, was by him thoughtlessly published in the Northwestern Lumberman of February 27, 1897. And as the junior Senator from my State [Mr. BURROWS] has quoted him as a man of great reliability and truthfulness, I will quote what his friend, Mr. Winchester, says:

Now, you take our average cut of the United States, and \$1 a thousand advance means what? It means \$35,000,000 to the lumbermen of the United States in a year. So, if we carry out this idea, \$1 duty does not take it to that. Lumber in Canada would come down a whole dollar, and it would not help us any. Get it up to about \$2 and then it would begin to have its effect. To illustrate a little further: There was a lot of gentlemen from the Northwest, up Minnesota way, in Washington the other day, and they were sitting in Senator BURROWS's committee room. An interesting incident occurred there. Senator BURROWS is chairman of the committee. The committee had not had a meeting for a long time. We happened to be sitting in that room, and one of the gentlemen from Minnesota had an envelope and a lead pencil. He walked around the room and he ciphered out a little bit, and he said: “Mr. BURROWS, do you know what \$1 a thousand would mean to this little crowd of men in here?” There were not as many in the room as there are here. He said the advance of \$1 a thousand on lumber meant \$6,125,000 on last year's product.

Now, note what he says, that at \$1 per thousand Canadian lumber would be imported, as the Canadians would lower their price and pay the import duty, or, as the Republicans claim, “the foreigner would pay the tax for the privilege of doing business in this country.” The American people would also have the benefits of cheaper lumber. But under the two-dollar rate every legitimate industry of my State, as well as other States, will be “discouraged” rather than “encouraged.”

So now the American people are to pay an annual tribute of not only \$35,000,000 to these timber barons, but at your doubled rate of \$2 per thousand will pay \$70,000,000 of trust “protection,” which goes into the pockets of the little group of millionaires who dictate the election of Senators in the lumber States and who have their headquarters in our Senator's committee room.

Is it any wonder, then, that the honorable Senator from Michigan, who owes his election to these greedy combines and the money power, which control the policy of his party in my State, should say in an address in the city of Kalamazoo, in the campaign of 1894, as reported in the Republican press of the city (he being a candidate for the Senate at the time), “I once thought I was in favor of electing United States Senators by direct vote of the people, but I could not vote for it now, because the people can not be trusted.”

THE FRAUDULENT METHODS OF THE LUMBER BARONS.

But how do these lumber barons obtain their vast holdings of timber lands? Mr. Speaker, there is on record the fullest evi-

dence that it is largely through frauds upon the General Government and the States. And a further gigantic scheme of plunder of this kind has been incorporated by this Congress into an appropriation bill, which was already thought so questionable that the retiring President refused his signature, and was passed by this Congress after attention had been called to its outrageous provisions. I refer to the following amendment to the sundry civil bill (H. R. 16), and ask the House to specially note its contradictions, where, under the pretense of “preserving” living timber, it allows the destruction of every tree of value:

For the purpose of preserving the living and growing timber and promoting the younger growth on forest reservations, the Secretary of the Interior, under such rules and regulations as he shall prescribe, may cause to be designated and appraised so much of the dead, matured, or large growth of trees found upon such forest reservations as may be compatible with the utilization of the forests thereon, and may sell the same for not less than the appraised value in such quantities to each purchaser as he shall prescribe.

When this amendment was favorably reported by the honorable gentleman from Illinois [Mr. CANNON], I objected to its provisions, as it opened the way for gross frauds on the Government by dishonest appraisers, who would undervalue it in the interest of the lumber trust, and asked that if private citizens were willing to pay more they should have an opportunity to buy. I quote from the CONGRESSIONAL RECORD of June 1, page 1723:

Mr. TODD. I should like to inquire why this report does not embrace some provision that the timber be sold to the highest bidder? Will not the provision in the report operate in the interest of some great lumber trust by enabling them to come in and purchase the timber at merely the appraised price?

Mr. CANNON. I think there is in the report such a provision as the gentleman intimates should be adopted.

Mr. TODD. I think not. It is provided that the timber shall be sold at not less than the appraised value, but the appraised value may be only 50 per cent of the real valuation; and if there are persons willing to pay the real value of the timber, why should not the Government get the benefit of such an arrangement instead of allowing some lumber combine to get the timber at half its value?

Mr. CANNON. I think this provision, when you come to examine it, will be found correct:

“For the purpose of preserving the living and growing timber and promoting the younger growth on forest reservations, the Secretary of the Interior, under such rules and regulations as he shall prescribe, may cause to be designated and appraised so much of the dead, matured, or large growth of trees found upon such forest reservations as may be compatible with the utilization of the forests thereon, and may sell the same for not less than the appraised value in such quantities to each purchaser as he shall prescribe, to be used in the State or Territory in which such timber reservation may be situated, respectively, but not for export therefrom.”

Then provision is made for the giving of notice, etc. Plenary power is given to the Secretary of the Interior to make regulations for the sale of timber at not less than the appraised value, the object being to utilize the dead timber.

Mr. TODD. But under the provision to which the gentleman refers all the valuable timber may be disposed of.

Mr. CANNON. It is dead timber that is to be sold, and when sold it is only to be used in the State or Territory in which the reservation is situated.

Mr. TODD. I would withdraw my objection if the language of the provision were so modified that all valuable timber might not be disposed of in this way.

Mr. CANNON. The gentleman, as I understand, objects because provision is not made for selling timber to the highest bidder.

Mr. TODD. My suggestion is that if the timber is to be sold, the Government should get the real value of it.

All that I want is that the Government shall be entitled to receive all it legitimately can receive when that timber is sold.

Mr. CANNON. Oh, well, in my judgment, this so provides; but the gentleman's criticism comes now for the first time. I never even noticed the want of the provision which he refers to. In two days' discussion we had of this matter, when the House was under the lead of the gentleman from Iowa [Mr. LACEY] and the gentleman from Arkansas [Mr. McRAE], our friend did not even make his objection.

Mr. TODD. “The gentleman” was not here at the time.

The honorable gentleman in charge of the bill acknowledged, it will be seen, that my contention was just, and stated that it was in the bill; but when it was shown not to be in the bill, and it was his duty to then and there ask leave to recommit it for such amendment, he refused to do so, and insisted upon its adoption, which a subservient House readily agreed to.

Referring to the gentleman's statement that there were two days' discussion in this House, when I could have made my objection, he must know that the bill was under discussion less than two hours in this Congress, instead of two days, when first brought before this Congress, a rule of the Committee on Rules being adopted by the majority that this very important bill should occupy the attention of this House only forty minutes, and the actual debate covering only three pages of the RECORD (pages 82-85).

Afterwards, on May 10 and 11, when the bill was under discussion upon the Senate amendments, I was not present, and so could not call attention to this want of security, and even at that time, by a similar rule of the Committee on Rules, only two hours were granted for the general debate on the whole Senate amendments.

I did not at the time, Mr. Speaker, press my objections unseemly, because I did not wish to speak distrustfully of the appraisers whom the Administration should appoint to a position of such high trust. But I shall now refer to gross violations of such trusts and to frauds upon the Government and the people of a most infamous nature by former official appraisers, who, it appears, were in collusion with the same lumber barons who have secured

in the Dingley bill the privilege of legally robbing the people—from "up Minnesota way."

In the report to the Senate of the honorable Secretary of the Interior Bliss upon the examinations on timber, transmitted May 13 (Senate Document No. 83), it is shown by valid evidence that these Government "appraisers" made false returns of the amount of timber, sometimes less than one-tenth of the true amount, keeping two sets of books, the false one for the Government and the correct one for the private use of themselves and their friends (the same as the Carnegie works kept of the tests of the worthless armor plate they were selling the Government).

I quote from the report referred to two or three out of the many returns from Minnesota which were found to be false by the Government inspector who reviewed the work (page 6):

SW. of SE. sec. 32, T. 150, R. 33, reported at 11 M. all Norway, was found to contain by Ayres 222 M., and by McGuigan 206 M., almost all white pine.

All trees on this tract were subsequently measured with calipers and tallied by myself, and found to contain 308 trees, which it was computed would make 236 M. feet of lumber.

SE. of SE. of same section, reported at 135 M. Ayres found 381 M. and McGuigan 383 M. Each tree on this tract was subsequently measured with calipers, tallied by Special Agent Parke; found to contain 513 trees, which it was computed would make 421 M. feet of lumber.

Sec. 24, T. 150, R. 35, SW. of NW., reported at 85 M., was found to contain by one examiner (Ayres) 865 M., and by the other (McGuigan) 700 M. (the difference being due to the difference of opinion in regard to defective timber). Subsequently with two men I personally tallied the calipering and measuring of each tree on this tract, and found 1,611 trees, which it was computed would make 902 M. feet of lumber, as shown on the list submitted herewith marked "A."

I also quote from a letter printed in the report on page 141, which explains itself:

TOWER, MINN., December 25, 1896.

DEAR SIR: I see by the papers you are putting up a fight against the estimators from Red Lake. I have some information that may be of value to you; but first of all I had better explain who I am. I am deputy sheriff and game warden at Tower, and accompanied you on your trip to the Indian council at Gheen's, and also you went with me to the land office in Duluth to get an Indian's patent, so you will remember me by that. I know a special agent in the employ of the Government now who invested \$1,250 in Red Lake pine. I saw him hand the draft to a noted pine-land man around Duluth land office, and he told me himself that he was on the inside; that estimators had two sets of books, one official and one of their own for private use; and he had a list of good land that would go cheap; and they had formed a pool in Duluth to buy it up, and he had put in all the money he could scrape up.

Very truly, yours,

ARCHIE PHILIP.

Major Baldwin, White Earth, Minn.

It was also shown in this report that the average price paid for pine timber by the lumber barons was less than 85 cents per thousand feet, yet when they were recently lobbying here for the \$2 per thousand "protection," they urged that they were paying many dollars per thousand instead.

The attention of Congress was duly called to the frauds by the honorable Senator from Arkansas [Mr. JONES] when the lumber schedule was under debate in the Senate. Yet, in spite of the disclosures, the Republican House insisted afterwards upon having the two-dollar tax favorably reported by the conference committee.

This, then, is the class of legislation that this Congress is enacting under force rule, which was summoned to inaugurate "confidence" in the nation. But, sir, until we can have a Congress that will legislate honestly and intelligently to promote justice and equity for all citizens alike, the people both of our own and foreign countries can not have "confidence" in our Government; and the only way in which our nation can ever enjoy a return either of confidence or prosperity is to lay the only true foundation for a prosperous commonwealth—an honest and patriotic government, which shall encourage unselfishness, morality, education, and temperance, thus securing to all citizens alike the blessings of liberty, justice, and equality before the law.

But while Congress has been convened in extraordinary session, at great expense to the people, for over four months, over three-fourths of that time has been wasted in cowardly idleness. The subservient Republican majority of the House has turned a deaf ear to the Cuban patriots who have been for over two years struggling for liberty from the cruel nation which was the home of the inquisition. Why? Because the holders of Spanish bonds would suffer loss, and the bonds of shysters are more precious than the blood of patriots. And you closed your eyes and ears, as did the bondholding and so-called Christian nations of Europe, to the appeals of the brave little band of Greeks who were struggling against fearful odds to preserve Hellenic liberty and the standard of the cross from the aggressions of barbarism. But not even the claims of the land of Homer and Hesiod, nor the memories of Marathon and Thermopylae, of Plato and Socrates, could move your hearts, and the bondholding nations sent their generals to aid the Turk in planning his battles, and the bond was again triumphant over liberty, and thus was Greece repaid by modern civilization for giving to the world philosophy, literature, and art.

THE NEXT GREAT ONSLAUGHT ON THE PEOPLE BY THE MONEY KINGS.

Mr. Speaker, we are informed that the President has for some time had ready to present to Congress, and will probably yet present to this Congress, a message calling on us to authorize him to

commence the fulfillment of the second provision of the secret compact made by the "business manager" of his party with corporate wealth, viz, to still further assail the money of the people. I say "secret," Mr. Speaker, because the President is reported as expressing a desire for this authority to appoint a commission "of experts" to devise ways and means of "reforming the currency" on the line suggested by the "business interests," because he claims it to be a fulfillment of "the promises of the party in the last campaign."

Certainly no such promises were made publicly, either in platform, by Mr. McKinley in his speeches, or by the speeches of the party politicians, or by the party press. So if there is any "promise" of the party to give recognition to the demands of the money power, as represented at their convention held at Indianapolis shortly after the election, it must have been a secret one made by the "business manager" of "the advance agent of prosperity" in his Eastern tour for campaign contributions to his sixteen-million-dollar corruption fund.

The celebrated utterances of the honorable Secretary of the Treasury at the dinner recently tendered him by the commercial interests of Cincinnati, as well as a statement published in the Republican press by the honorable author of this tariff bill [Mr. DINGLEY], are that it is the purpose of the present Administration, and one of the intents of the tariff bill, to provide means for the retirement of the greenbacks, which the latter admitted is the most loved money of the people.

Mr. Speaker, we have every evidence that every possible force used in the last campaign and in this House will be brought into requisition between this time and the assembling of Congress in December to further poison public opinion on the money question.

DEGRADING OUR UNIVERSITIES, AND THROTTLING LIBERTY OF SPEECH.

The advocates of the British gold standard are attempting to throttle liberty of thought and of utterance even in our great universities. The action of the Chicago University, in discharging one professor of humane opinions while retaining one who was most "offensively partisan" in his abuse of the advocates of silver in the last campaign was yesterday followed by the enforced resignation of the honored president, E. Benjamin Andrews, of Brown University, who also had humane convictions and the courage to utter them, but not in an offensive or partisan manner. The college corporation addressed him a letter through a special committee in which, after expressing their high regard for him personally and his fitness for the office, the committee said:

They [the corporation] signified a wish for a change in only one particular, having reference to his views upon a question which constituted a leading issue in the recent Presidential election, and which is still predominant in national politics, namely, that of the free coinage of silver as legal tender at a ratio of 16 ounces of silver to 1 of gold.

They considered that the views of the president, as made public by him from time to time, favored a resumption of such coinage, and expressed the belief that these views were contrary to the views generally held by the friends of the university; that the university had already lost gifts and legacies which otherwise would have come or have been assured to it, and that, without change, it would in the future fail to receive the pecuniary support which is requisite to enable it to prosecute with success the grand work on which it has entered.

WILLIAM GODDARD.  
THOMAS DUFFEE.  
FRANCIS WAYLAND.

PRESIDENT ANDREWS'S REPLY.

To the executive committee of the corporation of Brown University.

GENTLEMEN: Believing that, however much I might desire to do so, I should find myself unable to meet the wishes of the corporation as explained by the special committee officially appointed to confer with me on the interests of the university without surrendering that reasonable liberty of utterance which my predecessors, my faculty colleagues, and myself have hitherto enjoyed, and in the absence of which the most ample endowment for an educational institution would have but little worth, I respectfully resign the presidency of the university, and also my professorship therein, to take effect not later than the 1st of the approaching September. I regret the brevity of the intervening time, but am acting at the earliest possible moment after securing an interview with the committee.

Thanking you, gentlemen, and all the other members of the corporation, for the good will toward me personally, which has been expressed in so many ways, and cherishing the best wishes for the prosperity of the university, I am,

Yours, with sincere esteem,

E. BENJAMIN ANDREWS.

So, then, it must be known by the American people that institutions of learning that dare teach the supremacy of humanity over greed can not have further financial support. It is now in order for Mr. Rockefeller, the Standard Oil magnate, to generously donate to this university a million dollars, and raise it in a few weeks by increasing the price of oil to the people a few cents per gallon.

Has it come to this, that liberal education is a thing of the past, and that the dark ages of persecution, Galileo and Copernicus, are again upon us? That the shackles which required a thousand years to unloose from bondage to the church hierarchy in those dark ages must now be reformed by the money power? The voices of 70,000,000 American citizens answer, No!

Mr. Speaker, it has been my pleasure and privilege to read for

many years a magazine of renown for the fearlessness and intelligence with which it has championed the cause of human liberty—the Arena. It was also my privilege recently to meet its gifted editor, who stands foremost among the historians and philosophers of to-day, Prof. John Clark Ridpath, LL. D.

To know this man is to respect him for his intellectual endowments and to love him for his humanity. Besides his History of the World and The Great Races of Mankind, he wrote for the Arena an article entitled "The bond and the dollar," which is famed over the land, and considered by many as the ablest review ever written of the financial history of our country. In view of the prospective battle to come over "financial reform," by his consent I offer it as a part of my remarks under the special rule governing this debate.

THE BOND AND THE DOLLAR—GENESIS OF THE BOND MONSTER; HOW HE BECAME KING AND WHAT HE PURPOSES TO DO—AN APPEAL TO AMERICAN PATRIOTS AND FREEMEN.

[By John Clark Ridpath, LL. D.]

TO THE MEMORY OF A WORKINGMAN.

He was my father, and is dead. He was a pioneer, a patriot, a humble farmer. He helped to hew down the forest of my native State—the jewel of the Ohio Valley. He cut away the thickets, and joined with his neighbors in casting up a highway and gathering out the stones for the coming day. For companionship he had *Her*—and the children. I stood beside him when he died. I folded his arms across his honest breast, and made a vow.

The long and fatal fever had burned up everything but his hands; they were as big and unconquerable as ever. I said, "He was a toiler—I will take up the task of his hands and the purposes of his heart. He was one of the common people. I also will be one of the common people. I will love them, and honor them, and defend them. I will believe in them as he did, and will trust them. If they ever have a cause, that cause shall be mine. If they have a hope or an aspiration, I will share it. Whoever attempts to injure them, to take away their rights, to oppress them, to enslave them, shall be my enemy—not because I hate him or would do him hurt, but because he is unjust and cruel."

JOHN CLARK RIDPATH.

NEW YORK, September, 1896.

THE BOND AND THE DOLLAR.

I. GENESIS OF A MONSTER.

Thirty-one years ago the American Republic found itself at the end of a great civil war. During that conflict conditions had arisen in the United States out of which the present alarming contest of the people with the money power has sprung. The civil war was the beginning of what we have now inherited. That war was not indeed the cause but rather the occasion and excuse of the great struggle which has begun in earnest in America for the preservation of popular liberty and the restoration of the rights of man.

War preys on two things, life and property; but he preys with a partial appetite. Feasting on life, he licks his jaws and says, "More, by your leave!" Devouring property, he says, between grin and glut, "This is so good that it ought to be paid for!" Into the vacuum of the wasted life rush the moaning winds of grief and desolation; into the vacuum of the wasted property rushes the goblin of debt. The wasted life is transformed at length into a reminiscent glory; the wasted property becomes a hideous nightmare. The heroes fallen rise from their bloody cerements into everlasting fame; the property destroyed rises from the red and flame-swept field as a spectral vampire, sucking the still warm blood of the heroic dead and their posthumous babes, to the tenth generation.

The name of the vampire is Bond. The vampire is a beast that survives and flourishes by sucking the breath and blood of nobler creatures.

On the 1st of March, 1866, the national debt of the United States, entailed by the civil war, reached the appalling maximum of nearly three thousand millions of dollars. In exact figures the sum total was \$2,827,863,959.46. The American people were inexperienced in such business. They had never known the incubus before. Europe had known it, but not America. For a long time the public debt of the nation had been so small as to be disregarded. Now, all of a sudden, with the terrible exigencies of the war, the debt expanded and settled over the landscape like a cloud from Vesuvius, darkening from shore to shore.

So far as the people and the Government were concerned, it was an honest debt. The method and intent of Lincoln and the great men around him in 1862-63 were as sincere and just as they were humane and patriotic. As for the American people, they were always honest. The nation was in deadly peril, and must be rescued at whatever cost. The war was a devouring demon.

With the explosion of every shell the product of a hundred toiling hands was instantly vaporized; for the bomb is not filled, as many suppose, with only powder and iron and death, but with the potatoes and milk and biscuit of mankind. At intervals the expenditure was more than a million, and sometimes more than

two millions of dollars a day. The Government had nothing of its own, did not venture to take anything as its own, and must therefore support itself by loans or perish. Conforming to the method of the age, the nation borrowed from the accumulations of the people, and gave them therefor its promises to pay.

The promises to pay got themselves into a bond.

It is the order of modern society that he who has may lend to him who has not, and receive his own with usury. This principle was adopted by the American Republic in the day of trial. The means necessary for the prosecution of the war were not taken—as the life was taken—but were borrowed. The quadrennium was an epoch of prodigious borrowing. A great part of the lending was patriotic; but much of it, even at the first, was interested, and was mixed with contrivance and ulterior designs.

The currency which had to be provided to meet the startling emergency that had overtaken the American people was, in the nature of the case, made to be a legal tender in the payment of debts. The Government must needs have such a money. All metallic money—as is its invariable habit under such circumstances—slunk away and hid itself in dark coffers, mostly beyond the sea. What did the dealers in gold care for liberty, for the waste of human life, for the Republic, for the Union made sacred by the sacrifices and blood of our fathers?

The merit of the country marched and filled the Union ranks.  
The money of the country marched and filled the English banks;  
At last the war was over—the soldiers ceased to roam—  
They came with bugles playing; the specie sneaked back home!

It was intended by those who first contrived the legal-tender currency that it should be absolute money in the payment of all debts of whatever kind. Thaddeus Stevens, chairman of the Committee of Ways and Means, declared this to be the purpose and intent of the legal-tender act.

The Supreme Court of the United States has since decided by a voice of 8 to 1 that Congress possessed—and possesses—the right and power to make such a money, whether in war or in peace. The validity of the legal-tender act is now as much a part of the constitutional history of the United States as is the abolition of African slavery. But they who were skillful in watching their own interests, even in the throes of our national break-up and impending catastrophe, adroitly contrived that the national currency should have an exception in it in favor of those who should lend their means to the Government. They who should rake such loan should receive therefor a bond; and the interest on the bond—as also the duties on imports of foreign goods—was exempt from the legal tender of paper and reserved for coin.

Thus came the bonded debt of the United States. The debt grew with the progress of the war until it seemed to approach infinity. The nation swayed and struggled through the bloody sea and came at last to the shore. The process of debt making, however, had acquired so great momentum that it was difficult to get it checked and reversed. In the summer of 1865 the soldiers of the Union Army were mustered out and remanded to their homes. By August the work was done; the grand Army was no more; but such was the confusion that for fully six months longer the expenditure rolled on without abatement.

The great question which confronted the nation at the beginning of 1866 was the management of the debt. There were bonds galore; a seven-thirty series of two hundred and fifty millions, by act of July 17, 1861; then five hundred and fifteen millions of five-twenties, by the act of February 25, 1862, becoming more than twelve hundred millions by subsequent issues; then ten-forties in several series—7.3 percents, 6 percents, 4.5 percents, 4 percents; plain bonds at the first and coin bonds finally; short loans and long loans and longer loans, but always becoming longer, until a measure of calm ensued, and the nation found opportunity to take account of its losses and consider the question of payment.

2. GOVERNMENTS PREFER PROPERTY TO LIFE.

If governments had the same care for the life of the people as for the property of those who possess property, then national debts would not be made, or at least not perpetuated, by the event of war. It had been an act of infinite mercy on the part of the Government of the United States in that day to take directly whatever was necessary, as it did take whatever men were necessary, for the suppression of the rebellion. That course would have ended it. Had that almost unprecedented policy been temperately and successfully pursued, the cost of the war would hardly have been one-fifth of what it has become; the bond would never have existed; the wealth of the people would not have been concentrated in the hands of a few; the present harrowing and dangerous conditions of American life would not have supervened, and the victorious defense of the Union would long ere this have become a glorious and unclouded reminiscence.

Neither shall anyone truthfully aver that making war without making a national debt is an absurd vagary. That would be to condemn as a financial quack no less a personage than William E. Gladstone. Mr. Gladstone is, without a doubt, the greatest

statesman in finance that England has produced within the present century. It has been the one ruling and undeviating principle of his policy, alike in peace and in war, to make the annual revenues under all circumstances meet the annual expenditures of the Empire. He began to battle for this principle in 1853, when, as chancellor of the exchequer, he had to provide the means for the prosecution of the Crimean war. On this question he and Disraeli divided forever. The former proposed to provide the means of war by increasing the annual revenues; the latter proposed to borrow.

Mr. Gladstone did adopt the method of paying as he went, and held to it until the overthrow of the Aberdeen ministry. He stoutly affirmed in presenting his first budget that, war or no war, the national debt of Great Britain should not be increased, but that the cost of supporting the British army in Asia should be met year by year by an increase in the income taxes and excises. This policy was supported by the Prince Consort, who declared it to be "manly, statesmanlike, and honest;" the policy of borrowing the Prince characterized as "convenient, cowardly, and perhaps popular." He ought to have added suicidal. As long as Gladstone remained in office, he forced the revenues to meet the expenditures within the year. His principle through life has been, in every emergency, not to borrow, but to tax—that is, to take.

Strange it is, however, that our vaunted and vaunting civilization, even to the present day, prefers property to man. It exalts the one and tramples on the other. In this particular we have been even as the rest. Judging by the facts, there is no government on earth to which its mules are not dearer than its men. Strange, too, that whoever appeals on behalf of the man as against the mule, and urges the protection of the one at the expense of the other, is held to be an enemy of society. Property in this particular having no conscience, or only the conscience of being always in the wrong, fortifies itself with every casuistical and fallacious argument known to the category of self-interest, and puts down both the man and his advocates.

The "sacred rights of property," meaning the right of something that belongs to life to seize that life by the throat and strangle it, are promulgated and upheld with constitution and statute and bayonet; while the "rights of man," so much in vogue in the great epoch of regeneration at the close of the eighteenth century, are, at the close of the nineteenth, positively under the ban in every civilized state of the world. According to the plutocratic lexicons of at least two continents, the "rights of man" have come to signify merely anarchy.

#### 3. THE BOND MAKES A POLICY.

Our staggering nation arose and stood. The horizon cleared. The Government of the Republic was preserved for posterity. It found itself, however, in the grip of a python, from which, after thirty-one years of writhing, it is less able to free itself than ever before since the close of the conflict. In the course of the war and just afterwards, it was discerned by those who held the national debt, as it had been discerned by some of them from the beginning, that it was a good thing for the possessors. A great interest had been created by the battle of the National Union for its life—the interest of the bond.

It were vain to conjecture how many sincere patriots found themselves possessors of the interest-bearing obligations of the nation. For all such there is no animadversion, but rather praise. It were equally vain to conjecture how many held those obligations simply for the profit and advantage and power that were in them, and with no concern about the welfare of the Government or of the people of the United States; but the latter class, whether many or few, increased, and the former class decreased, until the fund-holding interest was consolidated in the hands of a party having its bifurcations in New York and London.

The party of the bond became skillful and adroit. It began immediately to fortify itself. It took advantage of the inexperience of the American people and of their legislators. It profited by the mistakes and misplaced confidence of both. They who held the bonds were wise by ages of training in the Old World and the New. They understood the situation perfectly, and adopted as their method a policy embracing two intentions: First, to perpetuate the bond and make it everlasting by the postponement and prevention of payment; second, to increase the value of the currency in which all payments were to be made; that is, to increase the value of the units of such payments as the payments should become due, so that whatever might be the efforts of the people to discharge the debt, it should increase in value as rapidly as they could reduce it. And the honest people, abused to the soul by the politician and by Shylock, knew not that it was so.

#### 4. BEGINNING OF THE GREAT GAME.

For thirty-one years this game has been persistently, skillfully, and successfully carried out. It has been a play worthy of the greatest gamblers that ever lived. We do not call to mind any other such stake among the nations as that placed upon the issue;

and the bond players have won on every deal. They have succeeded on both counts of their policy. They have turned over the debt into new forms of bond, and these again into newer, under the name of refunding, persuading the people that the process was wise and needful, and cajoling them with the belief that the rate of interest was each time reduced for the benefit of the nation. It was done "in the interest of the people." We, the holders of the bond, being patriots, labor only for the interest of the people.

It is true that each act of refunding and transforming the national debt has lowered somewhat the nominal rate of interest; but at the same time it has lengthened the period of payment. At the beginning the date of payment was at the option of the Government. Then it was at five years from the making of the bond; then it was at ten years; then at twenty years; then at thirty years. Now the period of possible payment has been extended until the second decade of the next century can not witness the end of the game. If the Treasury should have to-day, or in the year 1900, a surplus of six billions of gold, the Government could not call and cancel its bonds. They were not made to be called and canceled, but to be refunded and perpetuated.

Besides, the reduction of interest has been a reduction only in name. In no case has the reduction been made until the value of the dollar of the payment has been so enlarged as more than to balance the reduction. The same thing is true of the payment of principal as well as the payment of coupon. For thirty years the American people have been pouring into that horrid maelstrom the volume of their great resources. They have paid on their debt, or at least they have paid, in this long period, such a prodigious sum that arithmetic can hardly express it. The imagination can not embrace it.

The people have never known, never realized, the incalculable sums which have been paid out of their Treasury in the ostensible work of discharging the interest and principal of the war debt of the nation. Some time, perhaps, the final aggregate may be made up and historically recorded. Within the first ten years after the conclusion of the war—that is, at the close of the fiscal year 1874-75—the Government had already paid, in interest only, on the public debt \$1,442,057,577. And this was but the beginning. At the close of the year 1895 the interest account has reached the prodigious total of more than \$2,635,000,000.

#### 5. THE NATIONAL DEBT IS WORTH MORE THAN EVER.

We thus come to a conclusion that is appalling. It is the truth of the living God that in the year 1896, at the close of summer, the national debt of the United States, in its bonded and unbonded forms, will purchase as its equivalent in value as much of the average of twenty-five of the leading commodities of the American market, including real estate and labor, as the same debt would purchase at its maximum on the 1st of March, 1865. The people have paid and paid for thirty years, and at the end have paid just this—nothing!

We shall not omit the proof. The verification of the astounding truth that the people have paid and paid and paid nothing is as plain and irrefragable as any other arithmetical result.

On the 1st of March, 1866, the national debt (being then at its maximum) was, in exact figures.....	\$2,827,848,959.46
For the sake of easy computation, the same may be stated.....	2,825,000,000.00
The debt at the end of July, 1896, was.....	1,222,312,984.40
For convenience of counting, the same may be given in round numbers as.....	1,122,000,000.00
To this add 10 per cent (a very low estimate) for the present average premium on the debt (interest bearing and non-interest bearing) above the par of gold.....	122,000,000.00
Total present gold value of the debt.....	1,344,000,000.00

On the 1st of March, 1866, the prices current of nine leading staples of the American market, selected broadly from the whole, were as follows:

Wheat, per bushel, from \$1.75 to \$2; average.....	\$1.90
Flour, per barrel, \$10.50 to \$11; average.....	10.75
Cotton, per pound.....	.48
Mess pork, per barrel.....	28.37
Sugar, per pound.....	.1125
Wool, per pound, 50 cents to 55 cents; average.....	.53
Beef, per hundredweight, \$12 to \$18.50; average.....	15.25
Bar iron, per pound, 6 cents to 7 cents; average.....	.0675
Superior farming lands in Ohio and Mississippi valleys (approximately), per acre.....	75.00

At the close of summer, 1896 (figures for August 20), the prices current for the same staples were as follows:

Wheat, per bushel.....	\$0.55
Flour, per barrel.....	3.25
Cotton, per pound.....	.075
Mess pork, per barrel.....	6.25
Sugar, per pound.....	.1225
Wool, per pound.....	.15
Beef, per hundredweight.....	7.50
Bar iron, per pound.....	.02925
Superior farming lands, same as above, in Ohio and Mississippi valleys (approximately), per acre.....	35.00

The national debt on the 1st of March, 1866, would therefore purchase of the above staples as follows:

Of wheat.....	bushels.....	1,486,842,105
Of flour.....	barrels.....	262,790,697
Of cotton.....	pounds.....	5,885,416,666
Of mutton.....	barrels.....	90,576,313
Of sugar.....	pounds.....	25,383,348,314
Of wool.....	do.....	5,330,188,679
Of beef.....	hundredweight.....	181,967,213
Of bar iron.....	pounds.....	41,851,851,851
Of superior farming lands as above (approximately).....	acres.....	37,696,096

The national debt at the end of August, 1896, will purchase of the above staples as follows:

Of wheat.....	bushels.....	2,443,691,639
Of flour.....	barrels.....	413,538,461
Of cotton.....	pounds.....	17,629,000,000
Of mutton.....	barrels.....	215,040,000
Of sugar.....	pounds.....	41,353,846,154
Of wool.....	do.....	8,960,000,000
Of beef.....	hundredweight.....	179,200,000
Of bar iron.....	pounds.....	45,948,717,417
Of superior farming lands as above (approximately).....	acres.....	38,400,000

The purchasing power of the national debt at the close of 1896 is therefore greater than was that of the national debt on March 1, 1866, as follows:

In the case of wheat by.....	bushels.....	956,794,231
In the case of flour by.....	barrels.....	150,748,164
In the case of cotton by.....	pounds.....	12,034,583,533
In the case of mutton by.....	barrels.....	115,463,587
In the case of sugar by.....	pounds.....	14,550,497,840
In the case of wool by.....	do.....	3,620,817,321
In the case of bar iron by.....	do.....	4,006,865,566
In the case of farming lands as above by (approximately).....	acres.....	733,333

The purchasing power of the national debt at the end of summer, 1896, is less than it was on the 1st of March, 1866, as follows:

In the case of beef by.....	hundredweight.....	2,767,213
-----------------------------	--------------------	-----------

From the calculation it is seen that the purchasing power of the debt at the end of summer, 1896, is far greater than it was on March 1, 1866, on eight of the nine great staples enumerated, and that it is less by a comparatively small per cent on only one of the articles enumerated. There is an overwhelming preponderance on the average of the whole list in favor of the debt as it stands at the close of the current summer. That debt, in a word, is worth more to the holders than it was at its nominal maximum more than thirty years ago. There is no kind of sophistical argument or doctored statistics in the world that can overcome or seriously modify the conclusions here drawn from premises that are incontrovertible. Let all men know it.

Let the world know it. Let the common man ponder this appalling statement of an undeniable truth. Let our national authorities know it. Let the leaders of every political party have it shouted in their ears. Let every Administration that has been in power from the first of Grant to the last of Cleveland be told in trumpet voice that the publications put forth from month to month as statements from the Treasury about the reduction of the national debt by the payment of three millions or seven millions or ten millions have been essentially and utterly false. True it is that the debt has been nominally reduced according to the publications; but it has never been so reduced until, by the contrivance of those who possess it, the purchasing power of the currency in which the debt was to be paid has been augmented fully as much as the equivalent of the payment!

Thus from month to month and from year to year the astounding process has gone on. And thus from year to year the judgment of the American people has been abused with the iteration and belief that they were paying their debt, when in truth all the multiplied millions on millions and thousands of millions (literally, more than five thousand millions) which they have paid have been simply contributed to the fund-holding class, whose claim, after a lifetime, is worth as much as it was at the beginning. The resources of a great people have been poured, like a roaring river, into a sinkhole that has swallowed all; and the golden streams of the contribution have issued silently through a thousand unseen spouts into the private reservoirs of the holders of the debt.

#### 6. FAR-REACHING SCHEME OF THE FUND-HOLDING INTEREST.

The policy of the fund-holding interest has thus simplified itself into (1) the indefinite extension of the bond, and (2) the manipulation of the dollar. To the extent that the first part of this policy has prevailed, the United States has been remanded to the same category with the nations of western Europe having their perpetual bonded debts. To the extent that the second part of the policy has prevailed, the people of the United States have been continuously robbed of their resources for nearly the full period of a human life. In the meantime the people have been familiarized with the proposition—put forth timidly at first—that a national debt is a national blessing. It furnishes the cement—so runs the patriot song—whereby the moneyed classes are bound in devotion to the Government and become a part of it as in England; thus the Government is made strong and enduring.

Meanwhile the various refundings have been celebrated in political psalm as marvels of finance. By the organs of the party in

power one-half of the people have been led to believe that the national honor is preserved, the national faith made good, and great economy manifested in those manipulations of the bonds by which, series after series, the longer have been substituted for the shorter. The other half of the people, who would have discovered the bottom intent in the process and thwarted the scheme at the next election, have been prevented from doing so by the fact that their organs and leaders have had a common interest with them of the dominant faction. Several Secretaries of the Treasury have been made into great financiers by becoming the willing clerks of the fund-holding class in these delicate and beautiful processes by which the national debt is to be made everlasting, with the accompaniment of popular applause.

But the extension of the bonded debt and the hope of its eternal life were not the principal concern of those who obtained possession of it. Their imaginations were not, indeed, much dazzled with the prospect of having the bond merely perpetuated, because men who are engaged in such schemes rarely look beyond the limits of their own lives. It sufficed, therefore, that the bonded debt should be lifelong, with the hope of another avatar. That secured, the undivided energy of those who had secured it might be directed to the manipulation of the dollar; and it is safe to assert that the skill developed in this part of the bondholding policy has never been elsewhere shown by men.

The complete history of the processes by which, with contraction and substitution, the dollar to be employed as the standard of payment in the discharge of the private and public debts of the people of the United States has been gradually and adroitly lifted from one valuation to another, until within thirty-one years (1865–1896) its purchasing power has been increased to the ratio of more than 3 to 1, could never be written or recited. It surpasses human credulity. It goes beyond the average range of mortal invention and fixes itself in the category of the diabolical.

#### 7. TO CHANGE THE CONTRACT IS A CRIME.

To change a contract has always been regarded as a crime. The nations of antiquity legislated strongly against the principle and practice of altering the existing agreements of men. Even savages perceive the utter immorality of tampering with a pledge or promise. To change a contract is perfidious. To do so is a gross violation of the bottom condition on which human society exists, or can exist. What is left when good faith disappears from the conduct and purposes of men? When the individual alters a note and writes in more or less, the law calls it forgery, and the forger is sent to prison. This is true even in the small personal violations of contract between man and man.

The contract is sacred and must be fulfilled, else there is an end of the social compact. What, therefore, shall we say of the fraudulent and covert alteration of all contracts by changing the units in which such contracts are to be fulfilled, substituting, by national authority, a new unit or counter worth more than three times the unit or counter agreed upon and promised? Such a process is, as Lincoln declared it to be, "a heinous crime against the people," a sin against mankind.

For a long time the subtle work of extending and transforming the bond and at the same time of raising the value of the dollar of payment was so easily and noiselessly effected that the people did not awake to the realization of the thing done until it was done. The class in whose interest the various changes have been made have been enabled to coddle some, to hoodwink others, to corrupt many, and to terrorize a multitude. We have seen those who have been aroused to the pitch of denouncing and exposing the giant fraud of the century, turn about and decry as repudiators, enemies of the national credit, and disturbers of "the business interests" of the nation, the true friends of public honesty and good faith among men. At least two Secretaries of the Treasury have exhibited to mankind that species of tergiversation which, in the administration of a high office, can hardly be distinguished from treason to the human race.

Let us then for a moment trace the principal changes that have been effected in the dollar of account and payment under the dictation and management of the money power and with the cheerful acquiescence of several conniving Administrations. In the first place, the great body of the bonded debt of the nation was purchased in the time of the war with the legal-tender paper money to which the Government had been obliged to resort. It was not purchased with gold, for gold had fled to covert. There has been no other traitor to the American Union and to the liberties of the people comparable in his perfidy with gold.

#### 8. COWARDICE AND PERFDY OF GOLD.

With the rising portent of war specie fled like a coward before the first blast of battle. Within ten days after the secession of South Carolina and ten days before the *Star of the West* was fired on in the harbor of Charleston every bank in New York suspended specie payments, leaving both people and nation to their fate. If we had been obliged in that day to rely upon metallic money of any kind to carry forward the tremendous work of saving the

Union, then of a certainty the American Republic would have been blown to fragments and the residue of our liberties would have been cast out on the ash heap of history.

This undeniable truth was recognized then as it is undisputed now. The efficiency of the greenback currency in the suppression of the rebellion has never been, can never be, denied or overestimated. Twelve years after the war, Hon. William D. Kelley, of Pennsylvania, addressing an assemblage of ex-Confederate officers at Macon, Ga., said: "Your leaders were mistaken in their financial theory. They believed that the United States could use nothing but gold and silver as money, and that as we had none of these metals, we could not put armies in the field to overwhelm you or fleets upon the ocean to blockade your coasts. Your leaders had not studied the Constitution to see that the Government has control of the question of what shall be money. We discovered that it had, and when we could not get gold or silver we made the greenback, and it was that that whipped you." "Yes," said one of the officers with enthusiasm, "Judge Kelley, you are right; it was the greenback that whipped us." This is the currency that Shylock is now trying to have canceled because it is so great a menace to the interests of the people. He desires to have the legal-tender currency destroyed in order that money sharks may be prevented from using that currency to deplete the National Treasury of its gold and in order that his own patriotic hands may be restrained from further robbery. Shylock is excited and wants to be held. The hypocrisy of such a pretense is beyond the reach of satire.

It is literally true that the great rebellion was suppressed and the Union upheld by the expedient of the noninterest-bearing paper money devised in the presence of the overwhelming exigency of war and dismemberment. The precious metals dived out of sight. The world knows the story. The United States went upon a basis of paper. For four years of war and fourteen years of peace the finances of the nation and of the people in their private capacities were conducted on a legal tender of paper. Metallic money and the money metals rose rapidly in value, or at least in price. Now gold was at a premium of 30 per cent; now 50 per cent; now 100 per cent; and finally 185 per cent above par. Gold and silver money became a tradition and a myth. The people neither knew nor cared what had become of them.

Owing to the nefarious exception in the legal-tender currency in favor of the interest on the public debt and duties on imports, a gold exchange was organized in New York, and gold was bought with which to pay the semiannual coupons of the bonds and the duties on imported goods. Trading in gold and in the speculative margins of gold became a business, in some sense the greatest of all the businesses; certainly it was the most picturesque.

#### 9. THE WAR DEBT MADE ON A BASIS OF LEGAL TENDER.

It was under these conditions that the great bulk of the national debt was put into the form of bonds. The bonds were purchased with the legal money of the country. They were purchased at par according to the standard of the greenback currency. The advantage in purchasing them was generally given by the Government to the purchasers. Already the bondholder was a lord and the Government a serf and beggar. Inducements were freely offered to stimulate the sale of the bonds. Payments were made easy; slight discounts were not unusual; interest was sometimes advanced to purchasers, and many other methods were adopted to make the sale of the national securities free and copious. Finally, the purchaser of bonds to the value of \$50,000 might receive as a gratuity \$45,000 in paper money, and with that establish a bank of issue, discount, and loan.

In this manner the national debt became a bond, and out of the bond sprouted a thousand banks.

From that day to the present the bond industry has been the one ever-flourishing, permanent, and deep-down industry, not, indeed, of the American people, but of the class who hold the national securities and live by them. This industry has combined with the leading political parties, and until recently has made and kept them a unit for more than twenty years. This industry has insinuated itself into the Government and has become the energizing and controlling force in the public life of the nation; and before it all other industries have been compelled to stagger and bend and break until the bond not only rules but reigns.

#### 10. WHAT THE BONDS COST.

No one has ever calculated with certainty the average cost of the Government bonds to the original purchasers. To do so is a complicated problem. They were of many series, extending over a span of years, and were bought at different crises, when the premium on gold was rising or falling. The higher that premium rose, the cheaper the bonds were, as tested by the measurement of gold.

The debt-making epoch of the civil war covered a period of four years ten months and nineteen days. The middle date of this period was September 9, 1863, but by far the greater part of the debt was incurred after that date. The premium on gold

reached 50 per cent on December 14, 1863, and remained above that figure for one year three months and twenty-seven days, covering the period of greatest debt making. Gold reached 200 on the 21st of June, 1864, and remained above 200 until February 22, 1865. It reached the topmost figure of 285 on the 12th of July, 1864. The dealers in bonds called it a "flurry in gold." This was the period of the maximum debt making. The legal-tender currency, with which the bonds at that crisis were purchased, was worth 35 cents by the gold standard. It was the very heyday when the bond nest was feathered for the laying of the golden egg.

By the measurement of gold it is probable that the average cost of the "five-twenties" to the purchasers was not more than 55, or certainly not more than 65 cents to the gold dollar. Nearly all the other series were purchased at a like enormous discount, as tested by the standard of coin. In the sale of the bonds, before the debt reached its maximum in March of 1866, the standard of the legal-tender paper was uniformly observed. It was by the common measure of the money of the country that the whole original debt was sold, and mostly by that measure that it was funded and refunded for at least fourteen years after Appomattox. But the mythical gold barometer kept in the safe in Lombard street, in London, showed that the purchases of the bonds were actually made at prices ranging from about 46 to 70 cents to the coin dollar.

#### 11. PROFOUND INTRIGUE OF THE BONDHOLDERS.

By the close of the war the seven-thirty bonds were already falling due. The "five-twenties" would be due in a short time. That is, in a short time the Government would have the option, but not the necessity, of redeeming them. And now it was that the fund-holding interest put itself in antagonism to the national welfare, and conceived the project of doubling its investment at one stroke by compelling the payment of all the bonds in coin. They had been purchased on the basis of one currency. That currency was worth only about half as much, unit for unit, as the mythical metallic currency which had now become only a reminiscence. Or, to put it the other way, the phantom metallic currency was worth at least two for one of the currency of all business, of all manufacture, of all production, of all accounting; that is, two for one of the currency of the people and the nation. The holders of the bonds perceived that if, under these conditions, they could secure a statutory declaration of the payment of both principal and interest of the 5-20 bonds in coin, then they would have gained, at the expense of the overburdened nation, not only the principal and the legitimate interest to which they were entitled and which ought to have satisfied, but also about two for one on their whole investment.

The stake was worthy of the trial. The game might well be played with all the skill and intrigue and specious formality of which human nature is capable. On one side of the table sat the representatives of the bond; on the other side sat the American people, and the bond won. By the act of March 18, 1869, entitled "An act to strengthen the public credit," etc., but which ought to have been entitled "An act to transfer the resources of the American people to the hands of a few under sanction of law," it was decreed that the bondholder should have his two for one; that the five-twenties and all like obligations of the Government, whether they were or were not by their own terms payable in coin, should now be made so payable; that the national credit required that a bond which had been purchased in one currency should be paid in another currency worth twice as much; that the property loaned to the Republic for the suppression of the rebellion should be returned twofold, besides the interest; that the holder of the national obligation, in addition to being preserved whole and harmless, should be enriched by law at the expense of the people; but that the widow who had given her four sons to her country, and had followed them one by one to their last resting places under the apple trees in the orchard, should receive back nothing but weeds and that celestial sorrow which transfigured her face evermore into the face of an angel.

At the time when the "act to strengthen the public credit" was passed many leading statesmen knew what it was calculated and designed to accomplish. Among these was Senator John Sherman, of Ohio. Addressing the Senate on the 27th of January, 1869, just before the passage of the act, and speaking of the prospective legislation, he said:

Sir, it is not possible to take this voyage without sore distress. To every person except the capitalist out of debt, or the salaried officer or annuitant, it is a period of loss, danger, prostration of trade, fall of wages, suspension of enterprise, bankruptcy, and disaster. \* \* \* It means the ruin of all dealers whose debts are twice their capital, though one-third less than their property. It means the fall of all agricultural productions, without any very great reduction of taxes.

Even so. The Senator was right. This cold-blooded proposition of Sherman means, when reduced to an example, simply this: Every young and aspiring man in the United States, just beginning life with wife and child and home, having \$500 in money (his

pay for service in the army), a home worth \$1,500 dollars, and a debt of a thousand dollars, will be inevitably bankrupted! The calculation of the Senator was correct.

#### 12. FIRST LEAGUE OF THE GOVERNMENT WITH THE MONEY POWER.

Thus it was that on the 18th of March, 1869, the Government of the United States made its first league and covenant with the fund-holding interests against the people. By the terms of that league the millionaire who had given a hundred thousand dollars for a bond of the same denomination should receive back, true enough, a hundred thousand dollars, but should receive it in units of another kind worth about two for one.

From that day, distant from the present by more than twenty-seven years, there has been no deviation or shadow of turning on the part of entrenched intrigue to carry out the compact. Year by year the bolts and bars have been driven ever further and deeper with blow on blow of the sledge of the money power, until the national fraud has been glorified under the name of honor and the wholesome truth nailed in the coffin of contempt. Each succeeding Administration has been even as its predecessor, but more so in its devotion to the bondholding interest at the expense of all besides.

The fact that the interest on the 5-20 bonds was by specification payable in coin shows conclusively that the body of the bond was payable in the lawful money of the country. Else why the specification as to how the interest should be paid? If the body of the bonds were payable in coin, it had been the sublimated absurdity of the century to specify that the coupons should be paid in coin also. What kind of bond would that have been the principal of which was payable in coin and the coupons in legal tender? And besides the reason and very nature of the thing, authority abounds to show that the five-twenties were by the sense and intent of the contract payable in the lawful money of the country. John Sherman himself is one of the witnesses of the general understanding, which was the only understanding consistent with truth and common sense. In a letter to Hon. A. Mann, of Brooklyn, N. Y., written on the 20th of March, 1868, Senator Sherman said:

DEAR SIR: I was pleased to receive your letter. My personal interests are the same as yours, but, like you, I do not intend to be influenced by them. My construction of the law is the result of careful examination, and I feel quite sure that an impartial court would confirm it if the case could be tried before a court. I send you my views as fully stated in a speech. Your idea is that we propose to repudiate or violate a promise when we offer to redeem the principal in legal tender.

I think the bondholder violates his promise when he refuses to take the same kind of money he pays for the bonds. If the case is to be tested by law, I am right. If it is to be tested by Jay Cooke's advertisement, I am wrong. I hate repudiation or anything like it; but we ought not to be deterred from doing what is right by the fear of undeserved epithets. If under the law as it stands the holders of the five-twenties can only be paid in gold, then we are repudiators if we propose to pay otherwise. If the bondholder can legally demand only the kind of money he paid, then he is a repudiator and extortioner to demand money more valuable than he gave.

Yours, truly,

JOHN SHERMAN.

Having by the act of 1869 secured the declaration of the payment of the national debt in a currency different from the currency of the contract, the next step was that of lengthening and perpetuating the bonds. If the bonds, now payable in coin, were good for ten years or twenty years, then they would be better for thirty years or forty years to run. Nor will the Government now be so eager to pay when payment in coin is impossible. The people can now be made to believe, what is true, that the Government can not for the present pay our bonds. They must therefore be extended. Great financiers will be who can sell us a 5 per cent bond with an extension of ten years, and take up a 6 per cent bond which is falling due. That is the process of refunding in a nutshell, and that requires the gigantic intellect of some great Secretary to do it. We, the beneficiaries, may hold out to him the impossible prospect of being President—if he will do the work well.

#### 13. THE BUSINESS OF REFUNDING BEGINS.

The history of the various refunding operations by which the short high-rate bonds of the Government sold during the war period were translated into long lower-rate bonds is but the record of a scheme which was contrived by the bondholders themselves, ratified by an undiscerning Congress, and carried into execution by the Treasury Department of the United States, with the ulterior design of preventing payment by lengthening the time to run, and with the still further hope of making a perpetual interest-bearing fund, in the European manner.

The first measure passed by Congress with this intent was the act of July 14, 1870, entitled "An act to authorize the refunding of the national debt." This act reaffirmed the proposition that all the bonds of the United States were redeemable, both principal and interest, in coin, and authorized the Secretary of the Treasury, as such bonds, series after series, should fall due—that is, reach the date at which the Government had the option of redeeming them—to prepare and sell new bonds, extending the time to run and lowering the nominal rate of interest. Under this act the process of refunding was carried on by those interested in it as

actively and earnestly as though it were a manufacturing industry, until all the bonds were extended and most were made as long as the current lives of men. Then the work abated, partly because of the weakness of all posthumous inducements, and partly because by this time certain symptoms of alarm and jealousy were noted among the people.

As much as two years before the passage of this refunding act, the people began to show signs of distrust at the maneuvers of the fund-holding classes. The popular suspicion was manifested in the declarations of the political platforms of both parties in 1868 in the greater part of the country. The sentiment of the people, always true, even when overborne by their masters, was overwhelmingly in favor of the honest payment of the five-twenty bonds; that is, in favor of paying them in the same currency with which they were purchased. That currency had already appreciated in its purchasing power about 30 per cent. In the central United States the Republican platforms in the year just named were generally unequivocal in indorsement of the proposition to pay the five-twenties in the legal-tender money of the country. In the writer's own State in that year, the platform, written and reported by the veteran Republican platform maker, Hon. Richard W. Thompson, afterward Secretary of the Navy in the Cabinet of President Hayes, was as follows:

The public debt made necessary by the rebellion should be honestly paid; and all bonds issued therefor should be paid in legal tenders, commonly called greenbacks, except where, by their express terms, they provide otherwise.

On this platform Senator Oliver P. Morton, of great fame and equal honesty, carried the State by a heavy majority for himself and General Grant in the fall of 1868. Within six months from that time, however, he yielded or was conquered; and in yielding lost the ambition of his life. The titanic knees of that great and resolute man, little acquainted with the common use of pregnant hinges, were broken, not, as the people supposed, by paralysis, but by the bludgeon of the money power.

The national bonds had by this time become the most profitable of all investments. Of all the forms of property, they were the most exempt from hazard, most convenient, and most strongly fortified by law. They offered themselves, however, only to the surplus accumulations of capital. The man of moderate means must needs employ his whole resources in the business to which he devotes his energies. When capital accumulates in large amounts, and there is no such thing as a national bond in which it may ensconce itself and begin to grow, such capital must of necessity offer itself for the promotion of legitimate, productive manufacturing and commercial enterprises. It must under such conditions do something useful for mankind; but where the bond exists, surplus capital takes the form of the bond by preference of all other enterprises, and to that extent all other enterprises languish and weaken for their wonted stimulus.

#### 14. CONCEPTION AND EVOLUTION OF THE GREAT CRIME.

By the beginning of the eighth decade thus much had been accomplished: The fund-holding interest had confirmed itself to the extent of getting a long bond for a short one, with the guaranty of payment of both principal and interest in coin. The next point attained by the bondholding power—for it had now become a power—can hardly be touched upon with equanimity. The coin of the United States existed in two kinds, silver and gold. Should the Government ever again reach the basis of specie payments, the debtor would have the option of paying in the one coin or the other, according to his convenience and the plentifulness of the given kind.

This option constitutes the essential element of bimetalism. That it could be taken away from the debtor seems in the retrospect a thing so monstrous as to be incredible. It was a valuable option which the debtor in the United States had held unchallenged from the foundation of the Government. No creditor had ever tried to take it from him. It had never been denied or questioned by any. It had always been cheerfully conceded down to the time of the civil war, when an unforeseen condition removed all coin and put the country, as we have seen, on the basis of a legal-tender paper money.

Now that coin was again in sight, or was supposed to be coming in sight; now that the Government had declared its purpose to pay the national debt in coin, though that debt had been contracted on a basis of paper, it might reasonably have been supposed that the bondholding interest would be contented with that enormous concession, and, being thus glutted to repletion, would seek no further extortion from the American people. But, on the contrary, the monstrous scheme was conceived of destroying the option of the debtor to pay in silver by destroying the coin unit of that metal, thus reducing the debtor—all debtors, including the Government of the United States—to the necessity of paying in gold only.

This scheme was not only conceived, but was contemplated with equanimity, not indeed by the people, but by those whose interests were so profoundly concerned. In the last session of the Forty-second Congress the question was insinuated into legislation, but was housed from the public with a skill worthy of the

noblest cause. It was already the plan of the conspirators to have an act passed by Congress as soon as possible, declaring a date at which specie payments should be resumed in the United States. But, preliminary to such declaration and as an antecedent thereof, it was seen to be advantageous to tamper with the coin dollar in which payment was to be resumed.

For the time being and for some years to come—so ran the bondholders' dream in 1873—the Government of the United States and the people alike must continue to prosecute their business on the basis of the paper legal tender; but in the future, as we, the financiers, clearly perceive, another dollar—that is, a metallic dollar—is to be substituted for this legal tender of paper, and it is to our interest to have that other dollar as valuable as possible. We will not only go to the length of substituting a metallic dollar still worth a premium of from 30 to 50 per cent for the current dollar of the country, but we will go further than that, and tamper with the metallic dollar itself, so that that also may ultimately, in some twenty years, be worth two for one! We will take away, if we can, by some process, the optional dollar now constitutional for eighty-one years in the United States, and will place in its stead a dollar in one metal only—a metal that we know, from its scarcity and from our ability to corner it in the markets of the world, must rapidly, under such conditions, appreciate in its purchasing power, all the time hiding its own fallacy, while at the same time the discarded metal, being disparaged and abolished, must lose its quality as primary money and be driven gradually into the relation of subsidiary coin and mere merchandise.

Words are inadequate to describe the profundity and criminality of this scheme. It was carried into effect by the act of February 12, 1873. It was done by a turn of Shylock's wrist, so adroit, and one might say devilish, as to be indescribable in the phraseology of this world. It was an act on which no king of the seventeenth century would have ventured without incurring the risk of revolution. It was an act which, instead of being misrepresented by those who have found it out and nailed it to the gibbet of public contempt, has never been adequately denounced. It was an act which has positively blackened the honor of the American Republic. It was an act which, though subsequently defended even to the present day by the ingenuity of great men and by all the purchasable ability of the world, is nevertheless condemned by the conscience and common sense of mankind as the most cold-blooded, unjust, uncalled-for, unmitigated, and damnable outrage ever done in this century to the rights and interests of a great people.

Already in Europe the nefarious work had been begun. The bimetallic system of currency in use in the States of the Latin Union had been sapped and mined and the free coinage of silver in those States suspended before the like result was reached in America. But the intrigue involving both Europe and America was on, and the managers in the United States went carefully forward to success.

#### 15. WHAT DID THEY DO IT FOR?

What did they do it for? That is the question. The men who engineered the act of February 12, 1873, from which such disastrous consequences have flowed, had some motive in view. What was it? The scheme did not engender itself, but was contrived with some end in view. Nobody demanded or expected or imagined the possibility of the passage of such a measure as the demonetization of silver. To say that the managers had no end in view is to say what the American people do not believe and what history, being rational, will not record.

As to the bottom motive; then, of this act of 1873, let it be written in black. The promoters of the iniquitous measure have seen fit to complain of the estimate in which their work is held by the American people. They complain that they themselves are harshly and unjustly judged. They complain that millions of men who have lost their homes and had their prospects in life blasted by the act of 1873 persist in calling it a crime. They try to laugh it away by repeating in mockery the words with which the infamous measure is stigmatized by the roused-up nation.

But why do they complain and wince? It is because the act of which they are the authors can not be explained away by any reasonable or even plausible hypothesis of honesty and good faith on the part of its inventors. There is no interpretation of the thing done that will satisfy the common sense of the American people. What reason or motive or explanation can the authors of that act ever make as an apology to the world? They have had twenty-three years in which to find or invent an answer; but no studied reflection or ingenious afterthought has been able to suggest a plausible, to say nothing of an honest, motive for the act of 1873. What did they do it for? That is the question which they must answer.

Here lies the world weltering in industrial and commercial ruin. Here are the sorrows of a great nation unassuaged. Here is tremendous America prostrate under the invented and purposed curse of men. What have the authors and inventors of the curse

to say in justification of their deed? Virtually nothing. They say that the demonetization of silver was not a crime. They say it was innocent. They say it was not demonetization at all, but only a little amendment of the coinage. They say that the act was only incidental—a sort of half-playful circumstance of patriotic legislation, harmless in its conception and pure in delivery. They say that the measure was understood, that it was debated, that it was sent back to committee and born again, that some men voted for it and others against it. They say every irrelevant and inconsequential thing imaginable about the act of 1873, but they avoid the one essential question, and that is, What was the bottom reason or motive for such legislation? What did they do it for? They say not for this and not for that. Well, then, what for?

The truth is that the authors and promoters of the act of demonetization can offer no explanation or reason for it except an explanation that does not explain or a reason which admits the crime. The real motive of that act was the ulterior purpose—the covert design—of destroying one-half of the primary money of the world. It was a project filmed over with intrigue to reduce silver—the old-time money of mankind—from its place as a precious metal to common merchandise. The gold-producing nations were in the scheme, and America was hoodwinked.

The authors of the measure planned to destroy one-half of the money resource of the world, and thus to double the purchasing power of the other half. The intrigue was to put upon gold the entire monetary office; to change every contract in the United States; to make every debt worth twice its face, and to divide by two the resources and strength of every workingman under the circle of the sun. It was a far-reaching and profound scheme to halve the price of every gift of nature and every product of human industry in the world and to compel the payment of every debt with a measure of two for one.

The real authors of this scheme understood it perfectly well. They knew what they were about with their "harmless accident of legislation!" But Congress as a body did not know the thing intended; the country, the nation, knew it not; and the President who signed the act did not know that he was signing a warrant for the bankruptcy of the nation. Nor were the plan and motive of the thing done ever revealed until it began to declare itself in the industrial and commercial ruin of the nation.

#### 16. THE CRIME WAS KNOWN ONLY TO THE PERPETRATORS.

The secret history of the act of demonetization has never been, and perhaps never will be, fully exposed to the light of day. Thus much is certain, that when the bill for the revision of the coinage was brought into the House by the Hon. William D. Kelley, chairman of the Committee on Coinage, Weights, and Measures, it contained a provision for the standard silver dollar as well as for the other coins of our system. Thus much is certain also, namely, that in some manner and by some hand that provision was stricken out, and then the emasculated bill was in some way worked through both House and Senate without the knowledge of either body, or any considerable number of the members, as to the nature and intended effect of the measure that was passed.

The President's signature was obtained to the bill without his knowledge that thereby silver was demonetized. Nearly eight months afterwards, namely, on the 6th of October, 1873, General Grant wrote a letter to his friend, Mr. Cowdrey, a bank president of Brooklyn, in which he expressed his surprise that silver money was not making its appearance as a means of aiding in the resumption of specie payments. The General did not know that his own signature had made it impossible that a single silver dollar should be coined for purposes of resumption or for any other purpose whatsoever. In the letter to Cowdrey he said:

The panic has brought greenbacks about to a par with silver. I wonder that silver is not already coming into the market to supply the deficiency in the circulating medium. When it does come—and I predict it will soon—we will have made a rapid stride toward specie payments. Currency will never go below silver after that. \* \* \* The circulation of silver will have other beneficial effects. \* \* \* Silver will become the standard of value and will be hoarded in a small way. \* \* \* I confess a desire to see a limited hoarding of money.

On the 10th of May, 1879, William D. Kelley, father of the House of Representatives, speaking indignantly and in retrospect of the act of 1873, said:

The Committee of Coinage, Weights, and Measures, who reported the original bill [act of 1873], were faithful and able, and scanned its provisions closely. As their organ I reported it. It contained provision for both the standard dollar and the trade dollar. Never having heard until long after its enactment of the substitution in the Senate of the section which dropped the standard dollar, I profess to know nothing of its history; but I am prepared to say that in all the legislation of this country there is no mystery equal to the demonetization of the standard silver dollar of the United States. I have never found a man who could tell just how it came about, or why.

If William D. Kelley, after more than six years of mingling with the foremost men of the nation, had never found one who could tell him how or why silver was demonetized, what shall we say of those who, twenty-three years after date, are trying, under pressure of public condemnation, to explain it—and can not?

Testimony to prove the ignorance of Congress with respect to the nature and intent of the act of demonetization can be adduced to the extent of a volume. On the 15th of February, 1878, Senator ALLISON, of Iowa, said in the Senate:

When the secret history [mark—the secret history!] of this bill of 1873 comes to be told it will disclose the fact that the House of Representatives intended to coin both gold and silver, and to place both metals upon the French ratio (15 to 1) instead of our own, \* \* \* but that the bill afterwards was doctored.

On the same day when this was uttered, Senator D. W. Voorhees, of Indiana, challenged Senator James G. Blaine, who had been Speaker of the House when the act of demonetization was passed, as follows:

I want to ask my friend from Maine [Mr. Blaine] \* \* \* whether I may call him as one more witness to the fact that it was not generally known whether silver was demonetized? Did he know, as Speaker of the House presiding at that time, that the silver dollar was demonetized in the bill?

To this Senator Blaine replied:

I did not know anything that was in the bill. \* \* \* And now I should like to exchange questions with the Senator from Indiana, who was then on the floor (of the House), and whose business it was far more than mine to know. \* \* \* Did he know?

Senator Voorhees replied:

I very frankly say that I did not.

General Garfield, afterwards President of the United States, speaking at Springfield, Ohio, in the fall of 1877, said:

Perhaps I ought to be ashamed to say so, but it is the truth to say that I, at that time being chairman of the Committee on Appropriations, and having my hands overfull during all that time with work, never read the bill [act of 1873]. It was put through, as dozens of bills are \* \* \* in Congress, on the faith of the report of the chairman of the committee; therefore I tell you, because it is the truth, that I have no knowledge about it.

This extract seems to raise a question between the dead Garfield and the living Sherman.

On the 10th of January, 1878, Senator Beck, of Kentucky, speaking to the proposed measure of remonetizing silver, said:

What I complain of is \* \* \* that the House never knew what was in that bill. \* \* \* Will any sane man believe that they [Senators] deliberately consented to strike down silver coinage? Mr. Sherman says they all did. I do not believe him.

This is a question between the dead Beck and the living Sherman.

In this same debate Senator WILLIAM M. STEWART, of Nevada, new charged with inconsistency and false motives by orators great and little, said in a colloquy with Senator Sherman:

Whatever may be your construction of their meaning now, the words you used then induced me to vote with you, because you made me believe that you were sending out a bona fide dollar, as good as any in the world.

The Hon. William S. Holman, of Indiana, at that time father of the House of Representatives, speaking from his desk, July 13, 1876, said:

I have before me the record of the proceedings of this House on the passage of that measure, a record which no man can read without being convinced that the measure and the method of its passage through the House was a "colossal swindle." I assert that the measure never had the sanction of the House, and does not possess the moral force of law. \* \* \* I myself asked the question of Mr. Hooper, who stood near where I am now standing, whether he changed the law in regard to coinage. And the answer of Mr. Hooper certainly left the impression upon the whole House that the subject of the coinage was not affected by that bill.

On the 15th of February, 1878, Senator Thurman, of Ohio, said:

I can not say what took place in the House, but know when the bill was pending in the Senate we thought it was simply a bill to reform the mint, regulate coinage, and fix up one thing and another, and there is not a single man in the Senate, I think, unless a member of the committee from which the bill came, who had the slightest idea that it was even a squint toward demonetization.

Finally, Senator Roscoe Conkling, of New York, speaking on the subject on the 30th of March, 1876, said in indignant inquiry:

Will the Senator allow me to ask him or some other Senator a question? Is it true that there is now by law no American dollar? And if so, is it true that the effect of this bill is to be to make half dollars and quarter dollars the only silver coin which can be used as a legal tender?

Here the question is between the dead Conkling and the living Sherman.

The authors of the act of 1873 can well afford to be content. If they are condemned by the judgment and whipped by the scorn of the American people, they can still afford to smile; for they made their game and won it. For twenty-three years they have watched the wreck as disinterested spectators. Their own strong ships are filled with the treasure-trove of land and sea. Surely they have little occasion to worry! True, the floods are filled with the wrecks of poor men's earnings and the broken symbols of hope. The fortunes of the humble millions are in the sea. The lifeless bodies of young husbands are floating there. Wives and mothers, with despairing faces, are clinging to masts and spars. I saw a wooden cradle with two babies in it going down the flood, and the white fin of a shark was flung up where it sank! Oh, be sure the authors of the act of 1873 have nothing to answer! Why should they? Their only reply to the indignant question of mankind is a good-natured guffaw and some pleasant levity about the terrors of the Mexican dollar.

## II. TRUE HISTORY OF OUR COINAGE.

The act of 1873 abolished the standard unit of money and account in the United States. Until that time all other coins in use under our Constitution and statute had been made to do obedience to the silver dollar as the unit of money and account. That dollar had never been altered by the fraction of 1 grain in the quantity of pure metal composing it from the time when it was ordained, in 1792, to the time when it was abolished from the list of coins to be henceforth struck at the mints of the United States. Every other coin, whether of gold or silver, had been altered and altered again; the silver unit never.

To that unit all the rest, both gold and silver, had from the first been conformed. The eagle of the original statute and of all subsequent statutes was not made to be \$10, but to be of the value of \$10. The half eagle was not made to be \$5, but to be of the value of \$5. The quarter eagle was of the value of \$2.50, and the subsequent double eagle was of the value of \$20. Even the gold dollar of 1849, marvelous to say, was not a dollar, but was made to be of the value of a dollar. The subsidiary coins were all fractions of the dollar, and the dollar was of silver only.

In a recently published book called *A Coin Catechism*, by J. K. Upton, three times Assistant Secretary of the Treasury and financial statistician of the Eleventh Census, the following remarkable interpretation of the coinage act of April 2, 1792, is given:

The First Congress of the United States provided for the coinage of "silver dollars or units, each to be of the value of a Spanish milled dollar as the same is now current, and to contain 371.25 grains of pure silver," and fractional pieces of the same fineness and proportional weight, and gold pieces to contain 24.75 grains of pure gold to a dollar, etc.

The last clause of this exposition by Mr. Upton is so cunningly false as to be amusing. It is a logical and literary curiosity that ought to be remanded to the text-books as the finest existing example of sophism. Why did not the author go on with his quotation from the statute of 1792 and give the clause relative to the coinage of gold? He knew that to do so would be ruinous to the special plea which he was making. The First Congress of the United States did not provide for any such coinage of gold as that described by Mr. Upton.

Mr. Upton either knows it or else he does not know it. The "gold pieces" to which he refers in his carefully covered expression were precisely as given in the text above; namely, an eagle, a half eagle, and a quarter eagle, and afterwards a double eagle, and the coins each and several are defined in the statute as being of the value of so many dollars, or units, and the dollar, or unit, is defined as being 371.25 grains of pure silver.

The conformity of gold to silver by the same statute at 15 to 1 made the gold coins to be multiples of 24.75 grains of gold, a proportion which was afterwards twice altered to preserve the conformity. This simply showed the amount of gold which at the time should be, not a dollar, but of the value of a dollar. Senator Sherman says in a published note relative to Upton's book:

His statements on financial matters may be implicitly relied on.

Of course. As a matter of fact, Mr. Upton's whole book is tainted with the same species of false interpretation shown in the quotation given above. From one example judge the whole. Thus from the beginning of our national history was the American silver dollar the sole statutory and constitutional unit of money and account.

Not a single dictionary or cyclopedia in the English language before the year 1878 ever, to our knowledge, defined "dollar" in any terms other than of silver. In that year the administrators of the estate of Noah Webster, deceased, cut the plates of our standard lexicon and inserted a new definition that had become necessary in order to make the bond intrigue, in Congress and out of it, consist.

True it is that by the statute of 1792 the dollar was made to exist in the gold coin also; but that dollar was a dollar only by its conformity in value to the silver coin, which was the one standard unit of money and account. Our metal money existed in both kinds, and the system was bimetallic to this extent, that the debtor might pay in either; but the unit existed in silver only.

To abolish that unit, to strike it down, to cancel it, and to substitute another therefor was a crime. It has been rightly so branded by the American people, and it will be so written in history. It makes no difference whether it was done secretly or openly, whether in the day or in the night, whether by a committee or by the House in full debate, whether Congress understood it or did not understand it, it was a crime all the same against the rights and interests of the American people; aye, against the American people themselves and against all the people of the world, for it was done against justice, against truth, against the law of both man and God. Nevertheless it was done.

## III. CONDITIONS OF THE RESUMPTION OF SPECIE PAYMENTS.

Again the bondholding interest had played a great game with the American people, and had won as before. The next event of the programme was already rising above the horizon. That was the formal declaration of a date when the gold dollar, instead of

the alternative bimetallic dollar of the contract made by the American people with the bondholders, should begin to be paid in discharge of the debts of the nation. The act fixing that date was passed on the 14th of January, 1875, and the 1st of January, 1879, was named as the day when specie payments should be resumed at the Treasury of the United States, and if there, then everywhere.

In the interim, about the year 1877, the American people made a discovery—not a pleasing discovery. They found that they were ginned in a trap which had been set for them without their knowledge four years previously. The date for the resumption of specie payments was near at hand. The means for such resumption had to be provided. The National Treasury could not resume on nothing, but must be supplied in advance with the coin necessary for such an enormous transaction and for keeping up the work when it should be once begun. The people had been supposing that both gold and silver would be gathered without discrimination for the discharge of the debts of the Government. To their amazement they found that they had been beaten by a game. Not a silver dollar was coining or could be legally coined at the mints to meet the coming emergency.

Only a few years before the enormous treasures of the Rocky Mountains had been laid bare. The discovery of new deposits of silver and gold at this juncture seemed providential. The patriot Lincoln heard of it with delight. On the afternoon before the assassination, when Vice-President Schuyler Colfax was on the eve of departing for the West to examine into the condition and prospects of the proposed Pacific railway, the President said to him, measuring his words:

Mr. Colfax, I want you to take a message from me to the miners whom you visit. I have very large ideas of the mineral wealth of our nation. . . . Now that the rebellion is overthrown and we know pretty nearly the amount of our national debt, the more gold and silver we mine makes the payment of that debt so much the easier. Now, I am going to encourage that in every possible way.

Even so, O Lincoln!

We shall have hundreds of thousands of disbanded soldiers, and many have feared that their return home in such great numbers might paralyze industry by furnishing suddenly a greater supply of labor than there will be a demand for. I am going to try and attract them to the hidden wealth of our mountain ranges, where there is room enough for all. Immigration, which even the war has not stopped, will land upon our shores hundreds of thousands more per year from overcrowded Europe. I intend to point them to the gold and silver that waits for them in the West. Tell the miners from me that I shall promote their interests to the utmost of my ability, because their prosperity is the prosperity of the nation; and we shall prove in a very few years that we are the treasury of the world.

These are the last glorious words of Lincoln. Oh, thou immortal! In thy stanch and capacious heart there was a place even for the miners and mining interests of our country. Thy last thoughts of public concern in this world were how the war debt was about to be paid with the gold and silver of the mountains.

It were hard to say whether there was greater cause for amazement or rage when the people found that the very resource to which Lincoln had pointed in his last public utterance as the means of paying the war debt had been purposely cut off. When the reason of this was inquired, Shylock pointed his benevolent finger to the act of 1873. It was unlawful to coin silver dollars. The debt must be paid in gold. When the inquiry was pressed as to whether the silver dollar had not always been the dollar of the Constitution and the statute, whether it had not been in particular the dollar of primary money when the bonded debt was incurred, Shylock shuffled and lied and made an affidavit that he was an honest man.

#### 19. THE ACT FOR REMONETIZING SILVER.

Hereupon a clamor—first of many—arose in the country. The people broke into insurrection against the money power. There was a wrestle between them and their oppressors. For the time being their Representatives in Congress, less awayed than afterwards by the tremendous influences around them, stood fast for truth and right. A battle was fought in the second session of the Forty-fifth Congress, and on the 21st of February, 1878, the act was triumphantly passed for the restoration of the silver dollar and for the compulsory coinage of that unit at the minimum rate of \$2,000,000 a month.

We need not here recount how the act of remonetization was sent to the President of the United States to meet at his hands the puny rebuff of a veto. Nor need we refer to the other fact that the veto itself was buried, without a word of debate, under a majority of 46 to 19 in the Senate, and of 196 to 73 in the House of Representatives. So perish all similar documents evermore!

It was by means of the act of 1878 that the Government of the United States was enabled to make good its declaration of specie payments at the appointed time. Within eleven months the ordeal came and was passed. The premium on gold was obliterated. Both money metals stood side by side in the accomplishment of this work. The first metallic money that reappeared in the channels of ordinary trade was the old silver dollar, restored, not, indeed, to its unlimited and equal rank, but to a measure of efficiency.

The act of remonetization was in force for twelve years and five months. In this period at the mints of the United States were coined more than 400,000,000 silver dollars. These were added to the volume of the currency, in spite of the grimaces and gripings of Shylock. It was the people's primary money.

The law of 1878 was very far short of perfection. It left silver exposed to the intrigues of the enemy, and placed gold in such a situation that the price of it might be gradually advanced at the option of the holders. It made silver to be merchandise, coinable into dollars that were to be buoyed up by coinage from the bullion value, which the goldites might measure in terms of gold, and depress as much as they pleased. This actually occurred. Gold began steadily to appreciate. Its purchasing power, as measured by the average of all other commodities, rose higher and higher. The supposition that the average of all other commodities declined in value is absurd. They only declined in price—price as measured by gold. Gold as measured by silver advanced in price and purchasing power. The price of silver bullion declined, or was forced down by the standard of gold; but the value of silver—raw silver—did not decline more rapidly than the average of the great products of America and Europe—that is, it did not decline at all.

The whole situation was so contrived as to produce a divergence, a disparity, in the bullion values of silver and gold; but gold was able to conceal its fallacy, just as any other metal, from iron to iridium, would conceal its fallacy if it were the sole standard of values. So much gold, namely, 23.23 grains, was stamped as the standard dollar, and if the treacherous metal had risen until its purchasing power was 500 per cent of what it had been previously, until 1 unit of it would purchase a thousand bushels of wheat or 50 acres of farming land, it would not have revealed the lie that was in it. It would still have been "the honest dollar!" As matter of fact, gold bullion rose higher and higher, and all things else, including silver bullion, were correspondingly depressed in price.

#### 20. SILVER HAS NOT DEPRECIATED.

The effects of partisan degeneration are nowhere more strikingly seen than in the unscrupulous or ignorant assertions of the goldites about the "depreciation of silver." They continue to speak and to write of the "fall of silver" just as though the purchasing power of that metal had really declined. Not once, or a hundred times, but a thousand times the friends of truth in this controversy have demonstrated the falsity of the assertion and common belief that silver has greatly declined in value. It seems necessary to iterate and reiterate the undeniable truth that, except as measured by gold, the value of silver has not in the last twenty years declined at all. I therefore append, once for all, a simple demonstration, which ought to suffice, of the real facts about the purchasing power of silver.

At the end of August 5, 1875, gold and silver were practically at a commercial parity of values. Silver had been at a premium, but gold had risen after the act of demonetization in 1873, and in 1875 the two metals stood on a level of 16 to 1. That was twenty-one years ago. At that time a gold eagle or its equivalent, 3.712½ ounces of silver—gold being still at a premium of 14 per cent above legal-tender paper—would purchase as follows:

Of wheat, at \$1.24 per bushel.....	bushels..	9.2
Of flour, at \$6.75 per barrel.....	barrels..	1.6
Of cotton, at 15 cents per pound.....	pounds..	75
Of mess pork, at \$30.00 per barrel.....	barrels..	.53
Of sugar, at 10 cents per pound.....	pounds..	114
Of wool, at 45 cents per pound.....	do.....	25.3
Of beef, at 14½ cents per pound.....	do.....	80
Of bar iron, at 2.9½ cents per pound.....	do.....	390

At the present time (calculating for August 20, 1896) a gold eagle will buy of the above staples as follows:

Of wheat, at 55 cents per bushel.....	bushels..	18.2
Of flour, at \$3.25 per barrel.....	barrels..	3.1
Of cotton, at 7½ cents per pound.....	pounds..	131
Of mess pork, at \$6.25 per barrel.....	barrels..	1.6
Of sugar, at 3½ cents per pound.....	pounds..	231
Of wool, at 15 cents per pound.....	do.....	65.6
Of beef, at 7 cents per pound.....	do.....	143
Of bar iron, at 1.3 cents per pound.....	do.....	290

A comparison of these two tables will show exactly the appreciation in the purchasing power of gold since the time (1875) when that metal and silver were at a commercial parity—an appreciation which is the direct result of the insidious influences of demonetization.

At the present time (August 20, 1896) the raw silver in ten silver dollars—that is, 3.712½ grains of uncoined silver—will purchase of the above staples as follows:

Of wheat, at 55 cents per bushel.....	bushels..	9.8
Of flour, at \$3.25 per barrel.....	barrels..	1.7
Of cotton, at 7½ cents per pound.....	pounds..	71.8
Of mess pork, at \$6.25 per barrel.....	barrels..	.89
Of sugar, at 3½ cents per pound.....	pounds..	173
Of wool, at 15 cents per pound.....	do.....	35.9
Of beef, at 7 cents per pound.....	do.....	77
Of bar iron, at 1.3 cents per pound.....	do.....	415

A comparison of Tables 1 and 3 will show beyond controversy that in the case of the eight staples examined the raw silver in 10

silver dollars will now buy more of all but two (cotton and beef) than a gold eagle would buy in 1875. In the case of cotton there has been the loss of a fraction, and in the case of beef, of 3 pounds in a hundredweight. Therefore the purchasing power of uncoined silver as measured by the average of the great staples of the American market has not depreciated, but actually appreciated, since that date when silver and gold were last at a commercial parity. The demonstration is as certain as any other mathematical result.

#### 21. "GOLD NEVER FLUCTUATES."

Incidentally, also, it is demonstrated that gold is not, as the goldites say, an undeviating measure of values. On the contrary, it is a deviating measure. Nothing is more certain than that silver is the steadier and more honest measure of the two. It keeps pace more truly in its movements with the market values of the world; and these market values, derived from the labor that produces them, are the real criterion of measurement always and everywhere. On the other hand, gold climbs up the column higher and higher under conditions to which it is more sensitive than silver.

If any one economic truth is demonstrable, it is the sensitiveness of gold in the market. The comparative steadiness of gold in its production is admitted—that is, the supply of gold is comparatively an undeviating element of value—but the demand for gold is one of the most variable forces in the markets of the world. The effects of this varying demand are intensified by the relatively small quantity of existing gold, to the degree that the resulting fluctuations in the price are among the most striking phenomena ever witnessed in the marts of commerce.

Time was when, under the conspiracy of two men, commercial gold in the United States was cornered more completely than ever wheat was cornered in the Chicago pit. In September of 1869 Jay Gould and James Fisk, jr., with the aid of their brokers and a few other subordinates, drove gold into a corner, and in the course of a fortnight forced the price of "the undeviating standard" from 130 to 165 cents to the dollar. On the 24th of the month (memorable as Black Friday) the corner was broken by the action of the Government of the United States. The Treasury was opened, and a stream of Government gold was poured on the heads of the conspirators until they fled from the scene of their glory. As they went out of the gold room the index hand on the gold clock went backward, and "the undeviating standard" fell 30 per cent in twenty-five minutes. No other such memorable collapse in the price of a great commodity was ever witnessed under the sun.

The advantage which the antisilver legislation of the eighth decade, carefully contrived by the money power with machinations and intrigues extending back to the close of the war, would give, and did give, to the owners of gold and those to whom gold had been promised in payment can not well be described. It was incalculable. The spectral nightmare of Debt built him a throne on the ruins of a million homes—just as Sherman had said he would—and plumed himself all summer. The goldites became, by the possession of augmented power, the autocrats of the world.

Strange, indeed, to see the prices of all the products and industries of men sinking, sinking, under the pressure of so small and diabolical an instrument as a gold dollar. The thing has seemed to be possessed of a veritable devil. Its action has been like that of a manikin 3 miles out at sea, submerged to his chin, but by some infernal self-pressure able to lift himself out of the water to the horizon of his waist. Looking around over the vast deep, he cries in glee, "Great heavens, how the ocean has sunk away!"

#### 22. WEAKNESS OF THE BLAND-ALLISON LAW.

The act of remonetization was weak in this—that it permitted a fatal discrimination against silver. It limited the coinage and theoretically reduced silver to the rank of merchandise. At length the people came to understand the flaw in the Bland-Allison law, and by the year 1890 they determined to renew the struggle for the complete restoration of silver money.

By the same date Shylock concluded that a favorable crisis had arrived for him to get undone in toto the legislation of 1878. He had succeeded in the interim, by means of the discrimination against silver as primary money and by availing himself of the results of the stoppage of free coinage in the Latin Union, in raising the price of gold about 30 per cent. This fact, taken the other way, gave opportunity to Shylock to deplore the existence of a 70-cent silver dollar. He was grieved beyond measure at the dishonesty of such a dollar—not on his own account, but for the credit of his country!

The purchasing power of raw silver had not, according to the average prices of the other great commodities of the world's market, declined at all in the twelve intervening years; but the fundholding interests had contrived a condition of values and prices that enabled them, by jugglery and falsehood, to denounce the silver dollar as a depreciated and dishonest coin, and thus to force a disparity in the bullion values of the two metals.

#### 23. STORY OF THE SHERMAN ACT.

The people and their representatives, however, smiled at the ravings of the goldites, and went forward to complete the legislation of 1878. At this time, namely, in 1890, there was a firm majority in both Houses of Congress in favor of the free coinage of silver. The nation as such was in favor of that measure. The Administration was against it. The question was introduced into Congress in several forms. Motions and bills were multiplied. At length on the 17th of June, 1890, the Senate, which body has never appeared to a better advantage in our history, boldly took the initiative, without giving the enemy a chance to adopt his usual tactics, and suddenly prepared and passed an act for the absolute restoration of silver to its old-time constitutional place in the currency system of the United States.

The Senate at this date was strongly Republican, and the majority in favor of the free-coinage bill was 17. In the House of Representatives there was an unequivocal majority in favor of the measure; but before this majority could declare itself and force upon the President the (to him) dangerous alternative of either accepting the will of the country or of obeying the behest of the money power with a veto, the bill was arrested by the Speaker, THOMAS B. REED, and then, under the dictation of the Administration and Senator John Sherman, a new bill was prepared, which took the name of its author, and is known as the Sherman law.

This measure, a shuffling and ingenious compromise, was injected into the monetary legislation of the country merely to prevent the adoption of free coinage by Congress and to gain time for the conspirators. It was conceived in intrigue and stigmatized by its own inventors from the day of its inception. The bill was insinuated into the House in place of the free-coinage bill of the Senate, and was forced upon that body, whose members could not bear the whip of party and the loss of patronage. The act thus adopted by the House was taken back to the Senate, and that body was thrown upon its haunches by the same power that had prevailed in the House. The majority of 17 yielded, and the Sherman law, so called, became a fact with the signature of the President.

This law pretended to be a bill in the interest of silver money and for the preservation of bimetalism in the United States. To a certain extent it was so; but at the same time it was a cunningly devised expedient of the goldites, by which they ultimately gained in the contest with the majority ten times more than they lost.

For a short time after the passage of the law there seemed to be a distinct gain for the cause of silver. Notwithstanding the fact that the Sherman law was not a genuine silver law, the first effect of it—energized by the popular misapprehension on the subject—was a marked decline in the premium on gold. This was shown in a corresponding rise in the bullion price of silver. The silver rate was advanced from day to day, according to the London quotations, through a period of eight or ten weeks. Then the advance was checked. The quotations stood for a brief period at the crest, and then began that steady and long-continued decline which reached the depths in 1893-94.

This phenomenon was caused in large part by the shrewd action of Great Britain. That power was alarmed at the results which seemed to follow the Sherman law. For many years Great Britain had been purchasing American and Mexican silver at the rate of about fifty millions annually. These purchases she made at bullion rates, and the bullion she coined and sent out at coin rates to her more than 300,000,000 of East Indian subjects. It was a harvest bountiful and easy. The United States and Mexico paid the reapers, and Great Britain gathered the sheaves.

Seeing the advance in the price of silver in the latter part of 1890, Great Britain boldly and unscrupulously during the remainder of that year and the first half of 1891 cut down her purchases of American silver by fully 10,000,000 ounces, with a view to glutting the market, reducing the price, and influencing American legislation. She succeeded in all three points. That she nearly ruined her industries in India and brought millions of her subjects to beggary was nothing; she was playing for a larger stake!

By the act of 1890 the gold monometallists succeeded once more in preparing a situation of which they could avail themselves in the future. The law was so framed that when, through the abuse of it by the Secretary of the Treasury, it should prove a failure—as from the first it was intended by its makers to be—the only thing required on the part of the money power was to raise a clamor against a single clause of the law and secure the repeal of that clause. By so doing the whole fabric of the silver legislation of the country, extending at broken intervals from the foundation of the Republic to the year 1890, would be dissolved like a fiction, and gold monometallism would reign supreme.

The United States now entered upon the era of silver purchasing. The metal which the men of the constitutional era had chosen whereby to measure all other values (gold included) was degraded to merchandise. The Sherman bill provided for the

coinage of silver dollars "at the discretion of the Secretary of the Treasury." It might as well have provided that the directors of the Bank of England should, at their discretion, hold their sittings in Mozambique! It was never intended to coin the purchased silver, but to treat it as merchandise. It was intended to accumulate it, and then to raise an alarm about the accumulation.

The law continued in force for three years and four months. During that period the Secretary of the Treasury purchased monthly 4,500,000 ounces of silver and issued therefor legal-tender Treasury notes redeemable in either silver or gold at the option of the Secretary. In this instance the option was cunningly restored to the payer, with the full knowledge that the payer would use that option in a manner further to depress the relative price of silver bullion and to make gold the dearer coin. This provision of the law was said to be an expedient for preserving the parity of the two metals, but in reality it was an expedient to exaggerate their disparity by enabling the holders of the Treasury notes, with the connivance of the Secretary, to draw therefor the gold of the Treasury, leaving the silver to accumulate.

We need not here enter at length into the beauties of the Sherman law. The people of the United States now understand it. They now know what it was intended for and what it was made to accomplish. They perceive clearly enough—all intelligent men perceive—that the act of 1890 was, in the purpose of its inventors, but another adroit step in the processes by which silver was to be ultimately discarded as primary money and the United States placed in firm monetary league with Great Britain on the single basis of gold. In the short space of three years matters had gone so far that the gold party, then in firm possession of the Administration which it had created in 1892 for its own purposes, alarmed lest the country should actually reach free coinage by means of the Sherman law, and triumphant by its power over the House of Representatives, felt sufficiently emboldened to attack the purchasing clause of the law and by annulling that destroy the whole.

#### M. THE MÊLÉE AND MOCKERY OF 1893.

It is scarcely worth while to recite the story of the contest of 1893. The miserable mêlée is still fresh in the minds of men. It may be that the Sherman law ought to have been abrogated, but not without the condition of free coinage. It was not intended to be a silver law, but a law in the interest of gold. Certain it is that nothing could have been devised more suitable to the ultimate interests of the gold party. That power, then in active control of the leading political parties, was able to work its will.

The repeal of the purchasing clause of the act of 1890 was effected without conditions; and with the passage of that repeal on the 1st of November, 1893, the legislation against silver, which was begun in silence in 1873 against the interests of honest money in the United States, and in favor of substituting a long dollar worth fully a hundred and ninety cents for the dollar of the law and the contract, was bolsterously and triumphantly completed. By that act the will of the people of the United States was prostrated. The people themselves were gagged and manacled. Both Houses of Congress were thrown down, and Juggernaut was pulled over them by the minions of a power having its head center in Lombard street, London.

#### N. THE BOND IS THE SPINAL CORD OF OUR FINANCIAL SYSTEM.

Around the bonded debt of the United States all the other bonds and debts of the American people have clustered. The national bond has been the spinal cord of the whole financial life. The bond has set the pace for the whole business movement of the United States. To the Government bond all the other bonds have conformed; by it all manner of indebtedness has been shaped and measured and controlled. The manipulation of the national bond and of the dollar of payment has been the manipulation of every other bond and every other dollar of the American people.

The stupendous frauds by which the obligation of the nation has been doubled and trebled and almost quadrupled in value have been but the sign and index to the like process going on in every branch of business and every form of obligation in the United States. The criminal forces which have played upon the bonded debt of the nation in its aggregate capacity have played in like manner and with equally disastrous results upon every obligation between man and man under the canopy of the American sky.

Thus, beginning with the bonded debt of the United States, all forms of debt have been infected. As the bonded debt has increased in its purchasing power, so every other form of debt has increased in magnitude and burden, until not only has the nation groaned under the ever-increasing load, but each individual man who has purchased anything with deferred payment, from a basket of potatoes in the market to a transcontinental railway, has staggered away under the ever-growing burden of his debt, until his limbs have broken under him and he himself has been crushed to the earth.

#### O. RUIN OF INDUSTRIES BY THE GOLD INTRIGUE.

Under the ruinous régime of the International Gold League—begun in 1873 and completed in 1893—the prices of all the products

of human industry and enterprise have shriveled and shrunk away until the American people have found the near approach to pauperism. When the products of labor become worthless, the laborer becomes first a peasant and then a pauper. One has only to note the prices now current, and to compare them with the prices which prevailed a quarter of a century ago, to see at a glance how far down the slope we have slipped and how near we are to the precipice and the plunge.

In many parts of the great and abundant West—a glorious country favored of God and redeemed by man—the people are burning corn for fuel! The coal barons have cornered the coal, and the goldites have cornered the farmers! That great army of noble, cool-headed men, whose weapons are plow and spade and reaper, whose treasure-houses are barns, and whose sole wealth is taken from the holy ground—that mighty army of toilers is driven down into a strait place between the devil and the sea; and unless they break through the surrounding camps of myrmidons they will all be taken, subjugated, and reduced to serfdom. Now, if ever, is the farmer's time to rise and recover his liberties and his rights!

#### P. THIS IS THE FARMERS' WAR.

In fact, the present contest in America is, first of all, the farmers' war. Being the ultimate producers of whatever is and not the intermediate producers of whatever may be, they, more than any others, are oppressed and shaken over the brink of ruin. The pressure of plutocracy is heaviest at the bottom, and the bottom is the ground. The bottom is the pasture, the field, the orchard, the garden. It is the river valley and the prairie where the people dwell. It is the meadow land and the rich bottom, the upland and the field of cotton that lie under the curse. The money power has cursed the people's homes; and as the shingles decay and the gates begin to swing on broken hinges the minions of that power set up not a cry of sympathy, but a shout of derision.

#### Q. WHAT CAUSED THE "DECLINE IN SILVER."

For the money jobbers of the world the year 1893 was a memorable epoch. They were busy in the Old World and the New. In Great Britain Shylock lifted his hand and the mints of India were shut against silver. For ages that metal had been the money metal of the people. Before Great Britain had emerged from savagery the teeming millions of the valleys of the Indus and the Ganges had made their domestic exchanges and carried on their foreign trade by the measure of silver money.

From the days of the Buddha, aye, from the days when the old poets of Brahma first chanted the hymns of the Veda, silver had been the known and honored coin and standard of the historic kingdoms and empires of opulent India. But the conqueror put his foot on the Hindu nations, and in the fullness of cupidity and the recklessness of unbridled power the British mandate was sent across 10,000 miles of land and sea, "No more coinage of your time-honored money. Shut up your mints and accept commercial degradation. Starve if you will, but shut them up."

This enabled the money conspirators of western Europe and America to point prophetically to "the rapid decline of silver." It was at this juncture that the called session of Congress under the dictation of Government was pretentiously striving to avert the panic. The panic was about to come, said the money jobbers, as though the production of the panic was not the very task at which they were laboring.

If the President in issuing his call for the special session had said: "The Chief Executive is anxious to produce a panic, to wreck the remaining business of the United States, to prostrate trade, and to bring an added curse and blight on American industry," he would have been strictly within the historical verities. The repeal of the Sherman law was not an act to avert a panic, but to produce one. It was not to strengthen the National Treasury and to buttress the finances of the United States, but to scuttle the Treasury as literally as ever a ship was scuttled by pirates bold, and to disorder the finances until even the atrocity of selling bonds to the extent of hundreds of millions should be declared to be necessary "in order to preserve the national honor."

#### R. THE PANIC AND THE CARLISLE BONDS.

Thus came the panic, with devastation and ruin in its train. The panic was but an incident of the programme. Down went the business of the nation. The repeal of the Sherman law, instead of producing confidence, brought only distrust and disaster. The mortgage of Shylock on the American people was foreclosed, and he had himself appointed receiver. For more than three years he has been engaged in settling up the estate and in watching the interests of the preferred creditors! The business is not yet completed, and many years will be consumed before it is completed, unless, in the pending trial of the People vs. Plutocracy, the receiver shall be discharged and his cause thrown out of court.

Two hundred and sixty-two millions of added debt! Interest on the same, for thirty years, more than \$275,000,000! Total of added debt more than \$337,000,000! In a time of peace more than a half billion laid upon the people for nothing! This prodigious

sum is to be sucked up by the vampire of bonded power out of the breath and blood of the toiling masses. The leech mouth of that vampire is fastened for thirty years on the right arm of every laborer who drives a plane or wields a sledge or guides a plow!

For thirty years that leech mouth is fastened on the bosom of every mother and sister and bride in America whose son or brother or husband is not a capitalist. For thirty years that leech mouth, red with cherry blood, is fastened on the rosy cheek of every workingman's baby in America. And this is what comes of refusing to use and pay out, without discrimination, the legal and honest silver money heaped up in the Treasury vaults of the United States. Shylock preferred gold, and the treasurer bowed himself down and said, "Yea, my lord!"

Congress in 1893, floundering through muck and ooze, striving to do much but doing little, did one thing in the cause of truth and right. It passed a law for the taxation of incomes. This measure, however, was suggested by expediency rather than by a sense of justice. The passage of the Wilson bill made certain a great reduction in the revenues of the United States. The removal of the high-protective duties on imports must, in the nature of the case, lessen the resources of the Treasury by an enormous aggregate, and this at a time when the Treasury had already, by the policy of the preceding Administration, been brought to the crumbling edge of bankruptcy. The tariffs removed must be counterbalanced in some way, and an income tax suggested itself as a just and rational part of the remedy.

#### 30. THE INCOME TAX AND THE SUPREME COURT.

A bill was accordingly passed, laying a tax of 2 per cent on the excess of all incomes above \$4,000 a year. The measure rested on the simple principle that the opulent ought to be taxed as well as the poor—that the rich and great, whose revenues are derived from investments, ought to pay to the Government a percentage on their incomes as well as the humble producers—farmers, mechanics, tradesmen, artisans, laborers—whose wages and modest profits are derived from daily toil.

But against this principle the money power arrayed itself in solid phalanx. Plutocracy filled all the trenches with its mercenaries for the defense of its citadel. In Congress and out of Congress it shouted its epithets and vented its sophistries. They who favored the income tax were communists, robbers, anarchists! It was class legislation directed against the honest accumulations of industrious men. It was robbery of the rich because they were rich to fill the ragged pockets of the poor because they were poor. It was everything odious, and its promoters were everything dishonest and rapacious.

But the law was passed and the war had to be carried to another part of the field. There stood the Supreme Court. Against that fortress the money power threw itself with the greatest violence, and the fortress went down! We do not say—and do not believe—that the Supreme Court, in annulling the tax on incomes, in pronouncing the law unconstitutional, was corrupted. It was not. But the members of the court are men; they breathe the air of the age, and they become saturated with the spirit and influences that are around them. Washington City is near the great seats of the money power. It is remote from the nation, from the people. The Supreme Court is the most remote of all of our institutions from democratic sympathies.

It was so in 1859. It was so in 1893. The decision rendered in the former year became memorable in American history as an example of what the Supreme Court could do in shoring up and fortifying the system of human bondage. The decision rendered in the latter year was, of the two, less meritorious in law and on the whole more hurtful to civilization. Judge Taney's decision was a judgment against the negro; Judge Fuller's decision was a verdict against mankind! The latter was also less respectable, for it was rendered in a way to make the judgment of the court at once distrusted and odious. The decision did not come forth in clear tones. The court was almost equally divided.

Part of the law was at first upheld and part of it condemned. Then a justice reversed his own decision, and it was only in this way that the law was declared unconstitutional. It may have been unconstitutional, but it was right; and as surely as the American people retain their liberties and patriotism—as surely as the Republic stands for what its name implies and what it was created for by the fathers—so surely will an income tax be made that will be both constitutional and right. The people will have justice sooner or later; it is only a question of time.

Let it be remembered, too, that the stand of the money power against the income tax and the successful assault of that power on the law before the Supreme Court were only a manifestation and incident in the long-existing purpose of plutocracy not to be taxed at all. Nothing short of absolute exemption from the necessary burdens of government will ever satisfy the soulless rapacity of those who have gathered the wealth produced by the laborers of America. Here again it is the millionaires on one side and the millions on the other. If the millionaires had ever shown a

reasonable disposition to bear even a respectable fraction of the public load, that fact would go far toward allaying the distrust of the honest many against the intolerable selfishness of the dishonest few.

On the contrary, the plutocracy considers one question only, and that is how to evade everything. The evasion of taxation by the money lords is perhaps the most shameless manifestation of greed ever witnessed among men, and the shamelessness of the evasion is only equaled by its success. It is literally true that the upper one-half of American wealth refuses to be taxed and that it almost wholly escapes, either by unjust law or by dishonesty, craft, and perjury, the burden of the nation, rolling it over by intrigue and pressure on the courts upon the bent and breaking shoulders of the poor. The tax administration in the United States has thus come to this: A system of discrimination by which the general burdens of society are laid without mercy or compunction on the toiling many to the end that wealth and its progeny may go unburdened on summer cruises around the world.

#### 31. SEEMING SUCCESS OF THE GOLD CONSPIRACY.

The conspiracy of the international gold trust thus seemed to triumph in 1893. The indignation of the people against it appeared to be of no avail. That power which became organic as a bondholding interest in America just after the close of the civil war had now, by its league with the financial system of Great Britain, succeeded in trampling down truth and justice, in choking the protests of a mighty people, in destroying their industries, in reducing them from proprietors to tenants, in taking away the rewards of labor and enterprise, and in establishing a condition which tends inevitably to the early and permanent institution in the United States of a peasantry subordinated to the will and purpose of their masters. It remains to be seen whether the people will bear it.

The visible gold in the world amounts to about 393 cubic yards. The greater part of this, nearly all of it indeed, is owned by private parties. The Rothschilds alone own more than sixteen hundred millions of the whole. The gold supply of the world is controlled finally by a few men who hate free institutions and care nothing for the rights of man or the interests of civilization.

On the basis of these 393 cubic yards of gold it is proposed to conduct the business of all the world. It is the most monstrous scheme ever known in history. The public and private debts of the American people amount to about \$45,000,000,000. Of this debt, less than 10 per cent is held abroad. Most of the foreign holding is in Great Britain. Yet, by the bond of this 10 per cent, the United States has become an appanage of Great Britain. The independence which we thought we had achieved a hundred and twenty years ago, and which we supposed we had confirmed four-score years ago, has been reconverted into a miserable dependency which might suggest to a pessimist that it would have been better never to break with our good mother at all.

#### 32. THE GOLD PROPAGANDA AND ITS AGENTS.

This crushing indebtedness of the people has alarmed the money power, and its emissaries are trying to explain it away. In the spring of 1893 the gold propaganda sent out from New York a number of distinguished advocates to teach the people how business is reviving; how the financial question is solved; how silver is dead, and in particular how easy and admirable has been the change from the bimetallic basis of currency to gold monometallism.

In this interest one eminent orator appeared at Detroit and delivered an oration in which it were hard to say whether the wit were more stale or the facts more false. He showed that it was easy for the American people to extricate themselves from debt by the standard of gold, for the reason that the public and private indebtedness of the people is only \$14,000,000,000. One might regard this statement as being interested and excoagitated from the prejudice of the orator but for the suspicion that he may have obtained his figures from Upton's financial statistics in the census of 1890.

The present aspect of the world is that of one centralized power, having its seat in London, with outlying dependencies. India, with nearly 400,000,000, is one dependency; Australia, with 4,000,000, is another dependency; Canada, with 6,000,000, is a third; the United States, with 70,000,000, is a fourth; the States of the Latin Union are the fifth. Germany and Russia are flattered with the belief that they are members of the league; but as a matter of fact they are only Cambacérès and Lebrun in the consulate. The first consul—and the only one of any importance—has his headquarters in the Bank of England.

#### 33. FANCIES AND FALLACIES OF THE GOLDDITES.

It is now only a question how the robbers who have despoiled mankind in the two civilized continents by means of the gold conspiracy are going to get off with their booty. They must have a little time and opportunity. In order to secure these, they cajole the nations with pleasing delusions and fancies. One of these fancies is impending universal war. War is an exciting

circumstance, and the prospect of war serves to distract the attention of peoples from the wrongs which they have suffered. The rumor of world-wide war is the substance of the daily news. People read it and believe it; Shylock is in ecstasies over the success of his ruse, and if he thought he could sell more bonds he would plunge all nations into a bloody and exterminating conflict.

Another one of the current delusions is the factitious discovery of gold. The propaganda having its headquarters in London and its American branch in William street, New York, has been engaged during the years 1895-96 in the dissemination of the news of gold discoveries in all parts of the world. South Africa is teeming with gold; the mountains of South America are founded on gold, and the outcroppings of it are seen in many parts; the Australian hills are made of gold; California is nothing but gold; the Alaskan mines are also rich in gold; the very sea bottom on several coasts reaching out for leagues is a mire of gold; new discoveries are made in Colorado and Arizona and New Mexico and Georgia. Added finds are heralded with every mail.

Soon it will be that gold shall be a drug in the streets; it shall be heaped in crates, from which the passer-by may help himself and his friends. The price of gold will thus be brought down, and we, the managers of the enterprise, will have to adopt strenuous measures to prevent the overcoinage of gold as money.

Of the gold propaganda the London Bankers' Magazine is the principal organ. One of the last articles in this magazine on the subject of gold production is entitled "A flood of gold coming." According to this disinterested organ the danger at present is not a scarcity of gold, but the peril that the commercial and industrial world will soon be overwhelmed with an avalanche of that metal. All the mines of the world are spouting streams of it. It is doubtful whether coinage can absorb the output; there is cause for alarm lest the fall in the precious stuff shall make it necessary for "the business interests of the world" to place rigorous limits on its coinage.

To-day—

Says the Magazine—

It is not a scramble for gold, but a coming glut of gold, that gives cause for anxiety. \* \* \* The golden stream has but just started to flow in on us, and the full force of its rising tide is yet far off. Year by year it will swell in volume, as the mining mania, which is being let loose in every part of the world, becomes more and more prolific. The world's production of gold has almost doubled itself within the short period of seven years. \* \* \* Recent progress is nothing compared with what has been predicted for the next few years.

Strangely enough, the article then goes on to show that a large part of "the golden flood" is derived from tailings. "In some cases," says the article, "as much as a fourth of the gross income is derived from tailings." Miraculous it is that while the outpouring flood of gold from all the world is about to deluge the commerce and industries of mankind and entail a depreciated gold dollar the miners of South Africa, even in the Randt, are represented as toiling with cyanide among the tailings to get "a fourth of the gross income." As a matter of fact, this article in the Bankers' Magazine was written for American consumption. It was intended to be copied, as it has been copied, by the metropolitan press, and thence diffused to all American newspapers, gratis, for their encouragement. The chairman of the county committee is thus enabled, just before the fall elections, to tell his followers that a flood of gold is coming.

So, also, is the device of reshipping gold from England. It is very opportune at this particular juncture to reship a few millions as an aid to political oratory. The strange thing is that Messrs. Lazard Frères and other distinguished money traders, whose native American names are so powerful a guaranty of the patriotic business in which they are engaged, should consider the American people such fools as not to know what they are about. As soon as the Presidential election is passed, the tribe of Lazard Frères will discover that "owing to the low rate of exchange," the exportation of gold must be resumed.

#### M. HOW "BUSINESS IS REVIVING."

Still another pleasing fancy of the goldites is the great and prosperous revival of business. Why, here is a marvelous paradox. Business, according to the great disinterested organs of public opinion, revives and does not revive. Manufacturers flourish again and do not flourish again. Enterprise once more goes forward with a bound, and enterprise does not bound forward at all, but remains inert and dead.

The farmer, with his fat-lean kine, rejoices and weeps. The collapsed bins of 10,000 farmyards are bursting with high-low wheat.

The gold organ performs this paradox for the reason that it must. According to the organ, the adoption of the Wilson bill in 1894, in place of the war-tariff schedule that had been aggravated to an inflammation by the McKinley law, prostrated all enterprises, ruined all industries; and neither can the one revive nor the other ever flourish again until the flamboyant protective scheme shall be restored. Therefore, saith the capitalistic press,

business does not flourish and can not flourish again until the wrong shall be righted, after the next Presidential election.

But, on the other hand, crieth the organ, the adoption of the single gold standard, instead of the bimetallic standard of the Constitution, has restored confidence, and with the restoration of confidence behold how business revives! All enterprises rise from the dust; all manufactories rekindle their fires and pour forth their treasures. Hence business, in the same act and by the same token, both revives and does not revive! The proclamation of prosperity and of industrial despair goes forth from the same gold organ on the same day!

The fact that the alleged ruin of American industry by the passage of the Wilson bill and the alleged revival of all American industries by the coincident passage of the gold bill of 1893 do not consist seems not at all to trouble the advocates and owners of the honest dollar! All this furnishes instruction for the people and amusement for the few whose understandings can not be darkened with the lying obfuscations of a goldite newspaper.

#### 35. DEGRADATION OF THE CAPITALISTIC PRESS.

It is amazing to note the degree to which the capitalistic press has abandoned the people and embarked in the slavish services of the money power.

In the sancta of the ribald organs of unscrupulous power truth is a commodity, humanity a word, and principle a reminiscence! The metropolitan press, with a few recent and honorable exceptions, is the subsidized agent of Europe in America, fighting ever on the side of organized greed and the cruel aggressions of despotism, and fighting never on the side of freedom and progress and the rights of man.

Woe to truth and innocence in such a court! Woe to the weak and the poor! Woe to the humble man and all the children of distress and want! Woe to every enterprise and to every cause that is not the enterprise of plutocracy and the cause of cent per cent!

The newspaper press of New York City, in particular, presents a spectacle the like of which has never hitherto been witnessed in the world. It has combined of its own motion in a crusade against democracy. I do not mean the democracy of a party, but the democracy of man.

Never before has there been a motive sufficiently powerful to force these hostile evangels of power and pessimism into union. Not even in the civil war, when the nation reeled and quaked, did the newspapers of this great metropolis, that might be the pride of America, but is not, agree on anything. They have been in lifelong antagonism and deadly hostility. Now behold the scene; they are all as one in the service of that street whose name has become a byword throughout the continent!

No stronger argument could be afforded of the extreme peril of the people and of the necessity that is upon them to go diametrically against every monition and plea of the metropolitan press.

#### 36. PLUTOCRACY AND POLITICAL PARTIES.

The possession of the press, however, does not satisfy the plutocratic powers. They must also purchase and own the political organizations in every country where such organizations exist. It is a supreme point in the intrigue of the international gold trust to create an international political trust as the agent and propagandist of the great conspiracy. In this way it is hoped that the beneficiaries may be able to gather in peace the full fruits of their financial and industrial crimes against the people and the nation.

Until recently this policy of owning the political organizations has been highly successful in America. The leading political parties have differed from one another chiefly in the degree of their subserviency to the money power. It always comes to this in the last stage of partisan degeneration. The partisan logic of the epoch has been this: If we offend plutocracy, who shall pay our bills and load our caissons with the munitions of war?

The elections held in the United States from 1890 to 1894 have had no other significance than that of a blind attempt of the disorganized and confused people to punish the authors of their distresses, first one and then the other. The people have been groping in this manner, and have apparently been afraid to rise in political insurrection against their masters. They have followed their local leaders and the monitions of a political press that has been almost wholly in the possession of the enemy. Until the present year scarcely a single great newspaper could be found that in its tone has been heartily friendly to the common people.

#### 37. HOW "OUR GOLD WILL FLY AWAY."

The goldites have, in the meantime, invented a long list of arguments in terror. They are trying with bugbears to scare the people into submission. They declare that under free coinage our gold would take to flight. It would wing its way to foreign shores, they say. Gold coins, under the action of Gresham's law, would rise awing and fly away. The United States would be drained of gold and the nation left floundering and drowning in a sea of silver. A panic would ensue the like of which the world has never witnessed.

Than this nothing is further from the truth. If under free coinage our gold should begin to fly abroad, it would not, could not, continue to fly. For observe with care what the result would be. To simplify the argument, let us limit the supposed case to the United States and Great Britain. Suppose that in the United States we have an aggregate of two thousand millions of money. Suppose that one-third of this amount is gold, one-third silver, and one-third paper. Suppose that we have free coinage, and that under the working of Gresham's law our gold begins to flow to England. What will be the result on the price of gold at that point to which it flows? Manifestly gold will there decline, and it will continue to decline as long as the process goes on.

But what will be the result at the point from which the gold goes abroad? There the two thousand millions of money will be reduced, let us say, to fifteen hundred millions by the exportation of five hundred millions of gold. What will be the effect on the price of all the remaining money? Silver, being a large part of the remainder, necessarily begins to appreciate under the increased demand and the diminished supply of money, and it will continue to appreciate as long as the exportation of the dearer metal continues.

The price of that metal declines in London, and continues to decline. The price of silver rises in New York, and continues to rise. The process goes on until the action of Gresham's law is inevitably reversed. It goes on until the question solves itself by the certain and tolerably speedy equalization of the price of the two money metals in the market of the world.

#### 28. QUESTION OF THE DUMPING GROUND.

They tell us also that in case of the restoration of our coinage to the condition which it held prior to 1873, America, that is the United States, will become the dumping ground for all the silver in the world. Trainloads, boatloads, shiploads of silver will be seen coming from every direction. The country will thus be overwhelmed with a debased currency worth intrinsically but little more than copper or iron. This bugbear of the goldite imagination has been exhibited to the people in every place with the accompaniment of declamation and calcium light.

But where is this imported silver to come from? What country is to produce it? Where, for example, would England or France get the silver to send to us? Would they buy it of the United States in order to bankrupt us by returning us our own product? As for Germany, would she pull down the mediæval plate from her feudal castles and ship it as bullion to America? Russia has barely her own supply and must frequently resort to the American market to get what she needs for coinage and the arts. Great Britain has been obliged, for a long time, to buy in the American market from forty to fifty million ounces of silver annually.

The American mines virtually supply the demand of the world for silver; and yet under free coinage we are told that our country would be flooded with foreign importations! There might be such a thing as the importation of Russian lumber into Wisconsin, or East Indian cotton into Georgia, or Egyptian corn into Iowa; but a serious importation of silver into the United States is an unthinkable absurdity.

#### 29. WICKEDNESS OF THE "SILVER BARONS."

The minions of the money power, in their frantic efforts to blind and pervert the judgment of the American people, seek also to prejudice and enrage them against the "silver barons." Miners and mine owners, if it chance that their mines are of silver, not of gold, are held up to the scorn and contumely of the world. The people are asked to believe that there is an organized coterie of wealthy speculators in silver, and that they are combined in a nefarious scheme for promoting their own interests at the expense of the people and nation.

These "silver barons" are to send their 53-cent bullion to the mints of the United States and compel its coinage into 100 cent dollars, thus enriching themselves at the expense of the nation. At the same time the nation is to impoverish the people by returning to them only 53-cent dollars. Miraculous is this, that the dollars thus dropping from the national mints are to signify 100 cents each to the silver barons, in whose interest they are coined, and only 53 cents each to the rest of the people.

But what about the gold barons? Why should they be virtuous and patriotic while the silver barons are so base? Are not the gold speculators, if such there be, even as the others? Is it honorable to be a gold miner and dishonorable to be a silver miner? Do not the two pursuits stand upon precisely the same merits? Is it not as just and true to charge the owners of our gold mines with conspiracy and desperate intrigue against the Government and national honor as it is to rail against the "silver barons?" Why should we hold gold miners in one estimation and silver miners in another?

The fact is that the American people are not concerned in this controversy with the fortunes of either silver producers or gold producers. The American people wish well to the silver-mining

interest, and will promote it as much as may be without favoritism or injustice. The American people wish well to the gold-mining interest, and will promote that also as much as may be, without subservency or prejudice to other forms of human industry. They will promote and favor all mining as much as they will promote and favor any of the other primary pursuits by which the world is made richer, by which commerce is impelled, by which manufacture is suggested and the agricultural life inspired. But beyond this, the American people care nothing for the "silver barons" or for the gold barons—for either or for both.

The question before the American people is not a question of mining. It is not a question of getting silver bars or gold bars out of the caverns of earth, and their conversion into merchandise or coin by combinations of interested men. The American people consider this question from the national point of view. The special interest is disregarded. The cry of "silver baron" is no argument against the production of silver and its use as money. The charge that the demand for the restoration of complete and impartial bimetalism in the United States is a measure to favor the silver barons is as false as it is absurd.

#### 30. SHALL WE WAIT ON FOREIGN NATIONS?

Another point in the policy of the gold jobbers of the world is their pitiful plea that we should conform our financial policy or rather our monetary system to that of "the great commercial nations." This phrase, "great commercial nations," means, in the concrete, England. Our financial policy should be English. If we attempt an American policy, all the woes are predicted. Every calamity from local disorder to national bankruptcy will come down on us like night. This they tell us we must do, namely, await the consent of England before undertaking a policy of our own.

Bimetalism, if it is to be reached at all, says plutocracy, must be reached by "international agreement." So dependent are we! True, England has thirty-seven millions, and we are seventy millions of people; but we are younglings, weaklings! We are in the infantile stage! How should we know what kind of monetary system we desire? True, we are naturally a bimetallic nation. Nature provided this for us before the world was. Great Britain is a monometallic nation. She produces gold, but does not produce silver. She has to buy her silver of us. She wants a dear market for gold and a cheap market for silver. But we, according to the dictum of the money gamblers, must wait for bimetalism until Great Britain assents to it.

We have the spectacle in 1896 of a political platform, carefully excogitated by one of the great parties, in which is written this supreme absurdity: "We favor a gold standard, but we also favor bimetalism; we favor both. We favor the gold standard because we must. We favor the bimetallic standard because we would. We let 'I can not' wait upon 'I would.' We would have bimetalism if England would consent. We will have monometallism because England will not consent. If she would only consent, we would favor free coinage. Since she does not consent, we favor gold coinage only." On this preposterous, abject, and wholly un-American platform a great party calls for the support of an intelligent people!

#### 31. FALSE CHARGES OF THE PLUTOCRATS.

Aye, more, the creators of this extraordinary platform turn upon the genuine American patriots, who stand up for their own country and will have nothing of foreign dictation and foreign domination in our financial system, and denounce them in a storm of epithets and oburgations the like of which have never hitherto been heard in party warfare. Because men favor American bimetalism and will have it, the churlish opposition of Great Britain to the contrary notwithstanding, they are denounced as enemies of their country. We are called "repudiators," "defilers of the national honor," "robbers," "lunatics," "communists," "anarchists," and, indeed, everything which the vocabulary of vituperation can furnish.

The idea that the masses of the American people, who have rallied by the million to the standard of free coinage, are repudiators, communists, anarchists, and robbers is too absurd to require refutation. To it all we answer with one argument—contempt. There is only one kind of anarchy in this country, and that is the high-up anarchy of the millionaires. They it is, and not others, who defy the law and consider themselves above both law and law-makers. They it is who regard the Constitution as a rag. They it is who regard the Government as their possession and even the Army as their agent for enforcing a plutocratic despotism upon the masses.

These men are few but powerful. They are said to number in all between four and five thousand in the United States, though they are probably twice that number. They are combined in a common cause. Among them there are many honorable exceptions. To the credit of humanity be it said that there are millionaires who are as great as they are wealthy. Others are as noble as they are strong. Some of them have gone so far as to

renounce their kind and to espouse the cause of the people; but the great majority are bound together in an effort to put the people down and to stamp upon the residue of popular liberty.

In the United States there is no prejudice against the rich. There may be some natural jealousy among the poor directed to those who are in abundance and ease, but there is no deep or settled prejudice toward them. It is not because the millionaires are millionaires that they are disliked and dreaded by the masses of the American people, but because they are tyrants and spoilers. They are, we repeat, the only practical anarchists in the United States. They believe in no government but their own. They trust nothing to the good will and justice of their fellow-men. They wholly despise and condemn free institutions. They look with supreme contempt upon democratic government. They think popular elections the means of perpetuating the bad and of engendering mobocracy. They heartily, in their souls, disbelieve in democracy in all of its moods and forms, and squint ever at monarchy and the restoration of monarchy and the spread of it into America as the greatest good.

Than these men no human beings could be further removed from the standard of true American manhood. They are wholly un-American. They are unpatriotic. They are untrue to society. They are true to nothing but themselves and their own selfish interests. They regard life as a battle to preserve and increase the millions which they have heaped up by the spoliation of society. They concede nothing to the masses. They regard the masses as no more than the concrete of clay and sand on which their own superb palaces are reared. For men as men they care nothing. Humanity to them is dirt. Human rights they disregard. Liberty they trample on.

By them the great public is openly damned. Government they try to destroy, except in so far as government will serve them. They conform, in a word, to the exact definition of anarchists. They will have no government at all—no control, no supreme authority over them—unless, forsooth, they can construct such authority by their own agents and be sure that when it is constructed it will operate only for the promotion of their interests and the further destruction of the interests of the people at large.

#### 42. HATEFULNESS OF THE MONEY DESPOTISM.

All forms of despotism are repulsive and inhuman; but nearly all of them have some redeeming traits. Every kind of slavery is degrading to the human race, but even slavery is sometimes touched with the pencilings of humanity that excuse, if they do not redeem it. The oriental tyrant of antiquity put men and nations under the wheels of his war car and dragged them along, but he sometimes encouraged enlightenment and promoted peace.

The Roman emperor was the bloated and conscienceless exponent of a cruel race whose bloody passions were untempered by any of the softer and more serene virtues; but he had great strength of character and was sometimes magnanimous. Marcus Aurelius was a poet, philosopher, philanthropist—a gentle and humane ruler, the latchet of whose sandal the age was not worthy to unloose. The feudal lords of the Middle Ages were cruel and ferocious chieftains; but they brought chivalry into Europe and scattered the germs of politeness and literature wherever they built their castles.

The average European king has been an ignorant and arbitrary wretch; but he has, in many instances, shown true courage and a praiseworthy devotion to his subjects. The old, proud devotee of African slavery in the United States, the owner of a thousand human chattels, was not infrequently humane and good. Mark well the character of George Shelby, the friend and avenger of poor Tom. The great generals of the Confederate army (and they were great generals) were nursed, not a few of them, on the bosoms of old mothers as black as their souls were white. But the money power—the plutocracy—what shall we say of that?

Other kinds of wrong and oppression have been redeemed with something so like the virtues of life as to make them tolerable, but the money power, the imperial plutocracy which is now intrenching itself in every quarter of the world and planting its batteries for the defense of a colossal despotism built on the ruins of human liberty, is untouched by any gleam of discoverable goodness! It is unredeemed by a solitary trait that history may record in its favor. It is the coldest, cruelest, coarsest, and most irrational tyranny that ever had mankind under its heel. It is the most calculating, Mephistophelian, low-flying form of power that ever triumphed over the rights and hopes and aspirations of man.

Princes, nabobs, tyrants of all kinds and degrees, have been wont to relent sometimes and display themselves in better mood, but not so plutocracy. They are sometimes generous and kind, but the money power never! Plutocracy, once victorious over man, will bind him, as it is now attempting to do, cast him down, and sit on his breast, smoking cheroots and sipping absinthe, while the crows pick out his eyes and premature worms wriggle in the sockets!

Plutocracy in America will be even as it is in Ireland. Here

also, as there, it awaits its opportunity to evict the humble toiler and his wife and children from their hovel, and to fling broken chairs and straw mattresses after them into the night. Here, too, as in Russia, it is ready to seize upon the insurgent patriot of the field or village and send him whirling into Siberian exile. Here, too, as in India, the nabob and begum are waiting their opportunity to build up ivory palaces and tombs out of the proceeds of the toil of American peasants. Here, too, as in every land under the sky where it has gained the victory, plutocracy only awaits its opportunity to laugh freedom to scorn, to put democracy under foot, and to hale civil liberty to prison and to death.

#### 43. THE NATION AT LAST AWAKE.

To the alarming aggressions of the money power, the nation is at last awake. The common people are in revolt. Their instincts and reason and sense of justice have led them at last to break through the meshes of falsehood that self-interest and unscrupulous power have woven around them and to rise in political insurrection.

Once on a time the tocsins sounded in France to the answering shout of "the people risen against tyrants." That great uprising was flecked with blood upon a background of flame and devastation. The American revolt is not of this frightful kind. It is the indignant but quiet uprising of the new democracy. It is a political revolt which portends a peaceable revolution in the administration of government. It portends simply this: The restoration of the government to the people and its conduct in the people's interest. It signifies the revival of the old patriotic and uncorrupted theory of our Republic—namely, that it is a Republic resting upon the consent of the masses and administered in their interest. It is a revolt against the new and spurious theory of the Republic, that it rests upon the support of special interests and is administered for the good of the classes only.

#### 44. IT IS A REVOLT OF THE PRODUCERS.

The political insurrection of 1896 is, first of all, an uprising of the producers against those powers that have for thirty years planned to take and consume the products of labor without just or adequate compensation. It is a revolt of the farmers, of the merchants, of the humble artisans, of the tradespeople, of all who labor in field or shop or market to create the resources of life or to distribute them to consumers. It is a revolt of all the primary industries, and of the secondary industries involved therewith, against those high-up industries which, under the false and arrogant pretense of being functions of the "business interests" of the United States, are, in reality, only variations in the great sport of gold gambling.

Be assured that these methods of getting gain which prevail around the bourses and in the exchanges of great cities, both American and European, are not business at all. They are refined and dishonest methods invented by the ingenuity of the beneficiaries for getting something for nothing; for appropriating the proceeds of the labor of the millions without even the semblance of an equivalent; for grabbing by sleight of hand the wealth of others without incurring the dangers of the law.

#### 45. WHAT ARE THE "BUSINESS INTERESTS?"

What are, in fact, the "business interests" of America? The business interests are production as well as merchandising. They are manufacturing as well as trade. They are all the honest and rational industries of the people, applied first to the soil, secondly to the shops, thirdly to the stores and streets; last of all and highest of all, to the intellectual and moral resources of the nation. The idea that business is that high-up, occult, and shadowy fact which we see in spectral outline behind the bond, behind the stock exchange, behind the secret conclave of millionaires banqueting at night is one of the false and pernicious aphorisms which the enemies of public liberty have promulgated by a subsidized press to delude the people and lead them to their own destruction.

Nay, nay; business is not speculation. It is not gambling. It is not bond selling and bond holding and bond jobbing; but it is something better than these. Business is the garden and the orchard. Business is the humble potato patch and turnip field. Business is the plowed land, the fallow land, and the barnyard with its cackle, its bleat, and its clatter of incoming wagons, with its neigh of horse and answering low of bullock and cow and ox. Business is the meadow and the oat field; it is the cornfield and the field of golden wheat; it is the cotton field bursting into a field of snowflakes, and the dark, waving sea of sugar cane; it is rice and flour and hominy and bacon and beef; it is all the resources of life taken from the ground and from the animal kingdom by the industries and energies of the free and patriotic laborers of America.

Business is also the dark mine of coal and iron, of copper and lead, and silver and gold. It is the deep shaft into which free men go down, not to become slaves, but to remain free men in the dark caverns below, and to rise with their carloads of carbon and heavy heaps of ore free as they were before. Business is the riches of the underground as well as of the soil. The miner shall not be counted out from the list of business men, for a business is his

more important to the interests of the world than is the business of the speculator in stocks or the wrecker of railways.

Business also is the shop. It is the place of the bench and the forge. It is the plank wall where the carpenter's planes and saws and hammers are hung. It is the blacksmith's anvil and his glowing fire and his ponderous sledge. It is the wagon shop and the shop of the plow. It is the manufactory where implements of husbandry and the industrial arts are made by thousands; where men are gathered by hundreds and by thousands; where the sawdust makes misty the air, and the shavings of wood and iron and steel spin with singing noise from a hundred lathes; where the tires are welded and the wheels are made and wagons and carriages and reapers spring up under the industrious hands of free men. It is every establishment which enterprise has created, which genius has developed, which industry and invention have perfected for the good of the human race.

Business also is trade. Commerce is one of the honorable pursuits of men. Business is the store. It is the mart. It is the street and the lumbering vehicle. It is the wharf and the boat and the ship. It is the flying train traversing the land of the free with its cargo of life and its burden of merchandise. Business, in a word, is not gambling, but honest work. The "business interests" are the interests of the laboring people of America, and not the special interests of stock jobbers and money kings, of speculators and manipulators and bond gamblers on two sides of the sea.

But business is more than this; more than all of these. It rises still higher. There is a business of the mind and heart. The schoolhouse is business, and the academy and the college. Every place where human beings are taught the elements of a nobler life is business. The mother's knee and yearning heart are business, without which the world would be a blasted desert. Invention, too, is business, and so are art and learning and literature. Every upward impulse of the human soul seeking for noble things is business, and woe be to him who chokes it. Woe to him who strangles the mind and denies to the opening intellect the blessing of the sunshine and the day!

Type and composing stone and revolving cylinder of Hoe, and printed leaf, on its flying mission of truth to men, are business. The book and the map are business as well as the shovel and the saw. There is one business of the body and another business of the mind. It is business to labor with the hands and it is also business to labor with the thought. To speak and to write in the cause of truth is business as well as to turn the soil or wield the sledge or drive the flying train.

#### 46. ATTEMPT TO CREATE FICTITIOUS ISSUES.

Meanwhile the attorneys of the international gold trust are striving hard to create fictitious issues upon which to induce the people to divide and agitate. One boss says, lo, here, and another boss says, lo, there. Now it is the revival of the tariff question; now it is the mythical Monroe doctrine; now it is the annexation of Hawaii or Cuba; now it is Venezuela; now it is Armenia; now it is this, and now it is that, in the hope that the people may be deluded therewith and lose sight of the fundamental question of their wrongs until what time they shall be completely bound and translated out of the character of free men.

How much further this malevolent and ruinous work can be carried on before the end comes no man may well foretell. Summer and winter come and go, and the distress of the country continues unabated. A measure of forced activity has been produced in the business world. After the horrors of a three years prostration the haggard workman returns downhearted to his tasks. A crippled tenant husks the corn in a field that was his own. He is an old soldier. The farmer and the mechanic labor on in hope deferred that a better day is coming. Whether it will ever come depends upon the people themselves.

In one of the inspired passions of the French Revolution, the Democrats made a statue like a Titan, and set it up near where the Bastille had stood. They called it *Le Peuple Hercule*. It was the People Hercules. It represented the great ideal in its strength and majesty. Whenever the spirit of such an ideal shall repossess our American citizenship, the end will come, and the people will recover their own.

#### 47. WHAT IS IT TO BE AN AMERICAN PATRIOT?

What is it, then, in this year 1896, to be a true American? What is it to be a patriot? It is to stand under the broad folds of the Stars and Stripes and defy the world. It is to be an independent man, afraid of nothing. It is not to taunt the Old World nations or to denounce them; for they, too, are composed of peoples who toil and wait. They are as human as we.

To be an American, a patriot, is to love mankind and to try to serve the human race. It is not to strut and parade; but it is to love our country and to honor our country more than all else in the world. It is to revere the memory of our fathers. It is to glorify the Revolution that made us free and independent. It is to believe the Declaration of Independence the greatest and best polit-

ical document, the noblest charter of freedom and equality, that was ever traced by the pen of man. It is to love American things because they are American. It is to defend our free institutions at every challenge, even with the life.

To be a true American is not to fawn or creep in the presence of any power or combination of powers in the world. It is to stand up. It is to demand and have our own. It is to be above the blandishments of authority and the corruptions of money. It is to despise the mercenary spirit, and to look at human life as something nobler than merchandise. It is to walk abroad "with malice toward none, with charity for all." It is to look with compassion rather than hatred even on the truckling un-American hordes of plutocracy cringing at the knees of foreign states and daring not to step or breathe without the consent of the directors of the Bank of England.

#### 48. SHAMEFUL SUBSERVIENCY OF A POLITICAL PARTY.

The spectacle of a great political party in America awaiting the beck of England! The spectacle of a party submitting its platform, after publication, to a syndicate of Anglo-American bankers, whose hearts are in one country, while their brains are in another! The spectacle of such a party parading itself as the patriotic party, as the American party par excellence, as the embodiment of pure purpose and political virtue! Surely the day of impudent mendacity has risen on the world, and the two-faced giant of Sham has usurped the throne of truth.

The standard bearer of this party of subservency bows down with his followers and leads them in prayer before a foreign throne. In accepting his nomination to be President of the United States—the greatest and highest station in the world—he says:

Until international agreement, it is the plain duty of the United States to maintain the gold standard.

He further says:

The Republican party has declared in favor of international agreement, and if elected President, it will be my duty to employ all proper means to promote it.

This is humiliating. Bimetallism is either right or wrong. It is either a good policy for the United States or it is a bad policy. If it is good, the Republican candidate wants to postpone the good until Great Britain will let us have it. If it is bad, he is in favor of it unless Great Britain will not let us have it. If the gold standard is good, he will uphold it only so long as Great Britain is for it. If the gold standard is bad, he will stand for it always until Great Britain consents to bimetallism. Good or bad, he and his party are in favor of the one or the other just as Great Britain shall dictate. Political shame and humiliation can go no further.

The writer of this claims to be an American. He claims to be a patriot. The venerated dust of his Revolutionary great-grandfather is at rest in a humble grave on the crest of an old Virginia mountain. I shall not go back on the graves of my ancestors. Many of them have fought the battles of freedom. Their blood is fresh and hot in the veins of their descendant, and, by the stars on high, he will stand by their memory and glorify their deeds and honor their record to the end of his days. I believe in independent America and in her institutions; the one shall live and the other shall be defended by true hearts and brave voices while the world endures.

#### 49. WHAT FOLLOWS?

If plutocracy wins the impending battle, what follows? We do not venture on prophecy, but only point out the logical and historical tendency of a present victory of the money power over the people. Such a victory tends to bring in a long train of disastrous results to the American people, and if to them, then to the whole civilized world. If the battle goes against the people, plutocracy will become not only triumphant, but rampant and riotous in its triumph. It will turn victory into license. It will at once proceed to fortify itself and to make sure of all that it has won. It will recompense itself liberally for all its arm and expenditure. It will laugh to scorn all protest and moderation.

In the first place, the gold standard will be fixed and fortified, and under it all the values of the world will be bolted down as if in an iron sarcophagus. All legal tender paper money will be canceled and destroyed. This part of the programme is already openly declared. The existing silver coinage will next be attacked, and not a dollar of it will be spared as primary money. It will be sent to the silversmiths, to the smelting pots of two continents, to the bullion shops of every mart, to the mints for subsidiary coinage, to every place where it may be consumed, until not one dollar of our old constitutional money shall remain.

The vacuum thus produced in the money supply of the people will be filled with bank bills, issued and loaned, expanded and contracted, at the pleasure of the owners. The banks, with a small stock of gold, will send out their own notes ad libitum till the country is filled to plethora. Money will be wonderfully "easy," and for the day the false verdict against the people will be glorified. But in another day, the first day of alarm, this great nation will fall prostrate before the banks.

Then will come a panic in comparison with which all preceding financial storms that have swept the country will be as zephyrs to the awful hurricane. Such will be the ruin that the fragments of exploded enterprises will not be worth the gathering. Before such a storm not a single legitimate business can survive. He who wishes to contribute to this catastrophe, and to hasten its coming, has only to follow his leaders until the victory of the money power over the people shall be confirmed by a majority of votes.

And in the twentieth century, what? For the ominous shadow of the present reaches far into the future. It requires no prophetic eye to discern the consolidation of political power following hard after the consolidation of wealth. With that comes a great standing army, and then the total suppression of popular liberties. Then the masses in the cities will become the hotbeds of sedition, and the masses in the country will subside into a peasantry without hope. The commercial and social league with Great Britain will be made organic and perpetual. Bondholding will be the one honored and profitable enterprise of men. Production will get a servile reputation and labor will become the vocation of serfs. The European condition, in a word, will come and prevail, and free American citizenship will be a thing of tradition.

On the other hand, if the people shall win the fight, a new era of freedom and progress will open to the people of our country. The success of the popular cause will signify the beginning, but not the completion, of a work upon which nearly all that is good in civilization depends. If the people win, it will be the triumph of men over things. It will be the lifting up of American manhood. It will be the assurance that no form of slavery shall exist under the Stars and Stripes.

It will be the confirmation of the work of Washington, of Jefferson, and of all the patriots of the Revolution. It will be the ratification of the life and work of Lincoln and of the great statesmen and warriors who surrounded him in the dark but heroic days of our national trial. It will be the victory of truth over falsehood; of right over wrong; of justice over injustice; of republican virtue and democratic simplicity over aristocratic arrogance and the hollow pride and tinsel of an artificial life.

Such a victory will bring back the nation and people to the straight ways and modest ambitions of the fathers. It will check the license of wealth and put a bit in the mouth of plutocratic lawlessness. It will be the proclamation of justice among men and the subjection of all the combinations of greed to the rights of the individual. It will reestablish local self-government; decree equal burdens to the rich and the poor; foreshadow the adequate reward of labor; give assurance of protection to all alike in the enjoyment of the blessings of life and liberty.

It will make impossible the further cunning and fraudulent manipulation of our currency—the further substitution of a long and dishonest dollar for the honest dollar of the law and the contract. It will save to us a portion, at least, of the people's money. It will rescue from destruction the remnant of our old national greenbacks, made sacred with the memories of the Union war. It will make certain not only the preservation of our existing supply of silver money, but will open the mints to both metals alike.

It will break the corner on gold, and reduce the exaggerated purchasing power of that metal to the normal standard. It will restore and maintain the commercial parity of the money metals, and compel other nations to follow our lead in the cause of universal bimetalism, which is simply the option of the debtor to pay in the cheaper and more convenient standard unit of either, according to his preference and the terms of the contract.

It will destroy a hundred prevailing monetary and financial fallacies which have been invented, always in the interest of the fund holders of the world and never in the interest of the people. It will bring back the Government, in all its departments, to the noble manners and pure practices which, during the first century of our existence, made us the pride and envy of the nations. It will put in authority men of the people. It will present a President, a Congress, and a Supreme Court to whom the welfare of the people is the first great concern and to whom syndicates and trusts and all special interests are either unknown or of no concern at all.

It will open the way for the great and salutary reforms to which the attention of the people is already turned, but which have thus far been postponed or defeated by the ruling powers in our Government. It will restore to honor the agricultural life. It will make a coal mine as respectable as a bank. It will decree the honor and respectability of all honest labor, and turn the sarcasm of prostituted art against the gamblers of the stock pit and the arrogant progeny of idle wealth.

If the nineteenth century closes in the United States with an unequivocal victory of the people, it will be the fitting counterpart of the great battle which was fought and won at the close of the eighteenth century. That heroic epoch was called the age of revolution; this shall be called the age of humanity.

## The Tariff.

Agriculture, Manufacturing, Commerce—These Three, but the Greatest of These Is Agriculture.

Our agricultural is our greatest interest. It ought to be predominant—all others should bend to it.—*Clay*.

Agriculture feeds us; to a great degree it clothes us; without it we could not have manufactures and we should not have a commerce. These all stand together, but they stand together like pillars in a cluster, the largest in the center, and that largest is agriculture. \* \* \* When tillage begins, other arts follow. Farmers, therefore, are the founders of human civilization.—*Weber*.

I know of my own observation that the farms of Ohio are worth not much more to-day (June, 1894) than they were thirty or forty years ago.—*Senator Sherman* (Senate).

New York: Farm lands have depreciated 31 per cent in value in ten years. Thirty per cent of the farms in the State are mortgaged averaging 66 per cent of their estimated valuation.—*United States Agricultural Report*, 1894 (Dodge).

We find general depreciation of farming lands. \* \* \* City property is increasing in value, while farm property is growing less and less valuable.—*New York Tribune*, August, 1889.

The manufacturers and the trusts get the protection and the profits of the tariff, the farmer the husk and the humbug.—*Butterworth* (Republican), House, May 14, 1890.

The policy of protection is a wrong on labor. The laboring classes are not protected—only the manufacturers. The rich receive the protection.—*Grand Master Powderly*, November, 1889.

## SPEECH

OF

HON. JOHN W. GAINES,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

MR. GAINES said:

MR. SPEAKER: When the tariff bill was being skyrocketed through this House in the first few days of this session of Congress, I had the honor to demonstrate upon this floor, by incontrovertible facts and figures taken from official records and established authority, that this country enjoyed its highest periods of general prosperity during the times that tariff was lowest and levied purely for revenue, and silver, like gold, was open to free coinage at the ratio of 16 to 1. If that is true, Mr. Speaker, and I challenge gentlemen on the other side to disprove it, it should be conclusive inducement to Congress speedily to return to the practices that yielded so richly in benefits to all the people.

No man dare rise in his seat here and assert that the protective system has benefited the body of the people, unless he does it in ignorance of the facts, or in mere brazen disputation in the face of the facts, as was done upon this floor this session, when it was asserted upon this side that the necessity for the issuance of bonds originated under a Republican Administration and an order was issued by the Secretary of the Treasury to prepare the plates to print them.

When the assertion was made, a gentleman of the opposition [MR. GROSVENOR], presuming upon the popular ignorance, or else wrapped in his own lack of information, in blind, partisan impertinency, openly denied the fact, and then when I brought the official proof before this House that the deficit which exists to day, and which has been charged with so much persistency and rancor to Democratic inefficiency, was created under Republican mismanagement, and the bond issues in time of peace, which have been so lustily charged to Democratic incompetency, were made necessary by Republican maladministration—I say, when I proved these facts conclusively, that member had not the grace to admit his error nor to apologize for an attempt to mislead the country by denying the truth.

I say, sir, that the facts and figures which I submitted in my former speech demonstrate incontestably that the protective system does not benefit the body of the people. It is asserted, and I believe it, that the tariff bill before this House was not conceived in any such narrow purpose as the benefit of the body of the people. It has been asserted, and I believe it, that the Republican party agreed to pay this price to the trusts and the money lords for their aid in the late canvass wherein the will of the body of the American people was subverted by the power subscribed to betray them.

Gentlemen of the opposition, pretending to be zealous champions of the common people, are engaged to-day in an effort to foist upon the country a system that has been indisputably proven to be unconstitutional in its announced purpose, damaging to commerce,

ruinous to the people, and infamous in that it was conceived for the benefit of the rich and favored to the detriment of the many.

I deny their impertinent assumption of the sole custodianship of the rights and interests of the people. I deny that in the spirit that conceived this desperate measure there is one single generous impulse or purpose to befriend the people upon whom these Judas kisses are so liberally bestowed. The people are not to be so easily deceived when you seek to cover up the sinister purpose that underlies this measure by shouting lusty protestations of undying concern for the poor wage earner, whose pockets are being picked as he is fondled.

I desire now, Mr. Speaker, to supplement what I have already said in substantiation of these charges by further citation of proofs. I have no hope, of course, to change the course of the current that has swept down like a Gulf Stream from the other end of the Avenue, bearing threatening admonitions of wrath to come to hungry slobberers at the pie counter unless this bill is speedily passed, but I have confidence in the ultimate triumph of truth and in the integrity and patriotism of the American people, and I appeal my remarks from this presence, where the question is already prejudged, to the people who are the real parties in interest, and I would show to them that even while you were passing this ruinous bill the proofs were at hand that it was wrong in principle, unconstitutional, and damaging.

Gentlemen base their contention that they may invoke the powers of government to aid classes of people upon the "public welfare" clause of the Constitution, that has been stretched and warped by greed and ignorance and selfishness until it is made to stand sentinel while robbers are at work, and stand sponsor at the grannying of all manner of infamous jobs and schemes. They falsely assume that they are legislating for the body of the people, believing that they have the wool safely over the public eye.

They falsely assume that they are the especial champions of wage earners and that this measure is designed to benefit them, and they pretend to imagine that the people are gulled by such false friendliness as that. They falsely assume that the wage earners, whom they pretend to be so solicitously troubled about, constitute a majority of the people whose interests are at stake, and it is to this last false assumption that I desire to call the attention of the country.

I deny that this bill is either designed to or will really promote the public welfare. I deny that it will promote the welfare of the wage earners, and I deny, even were I to admit that it would benefit them, that the wage earners to be affected constitute a majority of the people whose interests are in jeopardy.

Mr. Speaker, I arraign the Republican party at the bar of public opinion upon indictment preferred by an outraged people, and charge it with the foul murder of the agricultural interests of this country. I call upon that party in the name of the millions who toil between the plow handles to give an account of the interests committed to it and which it has basely betrayed. I arraign the Republican party for that it has, by prostituting the powers and benefits of Government to the selfish uses of its masters and owners, the trusts and money lords who paid for it with a price, reversed, or seeks to reverse, the order of creation and repeal the mandate of the Most High when he decreed that man should earn his bread in the sweat of his face.

In sustaining this indictment for the foul assassination of the farming interests of the country, I am not called upon to prove the corpus delicti, for the corpse lies stretched and mangled before the jury. Time was that agriculture was a profitable vocation and men found both profit and pleasure in following it. It has been the boast of our greatest men that they came from the farm. But now, after the Republican party has gotten in its devastating work, the man who comes from a farm may indeed boast that he got away from it before he starved.

I call upon the Republican party to answer for the desolation and penury that obtain in the rural homes in this fair land where once was plenty and contentment; and in the name of this people, who constitute the bone and blood and brain of the country, I

demand that legislation in this Chamber be directed in their behalf.

Accepting the challenge based on the assertion that this bill is justified under the "public welfare" clause, I deny that the public welfare is promoted, even if it is admitted that every single person engaged in manufacturing and mechanical pursuits is benefited by it, and I appeal to the official records for proof.

There are 22,735,641 people engaged in all occupations (census). Out of these, 9,013,201 are engaged in agriculture and only 5,691,669 in manufacturing; that is, 39.20 per cent of all the people are farming, while only 22.39 per cent are in the manufacturing industries. Gentlemen will seek to evade this showing by the bald, bare assertion that the tariff bill will help the farmer; but I challenge them to the proof, and they dare not attempt to demonstrate it. The wreckage strewn pell-mell throughout this broad land and the cries of distress that are heard coming from farms and homes in every direction are mournful refutations of the assertion.

By the unutterably destructive policy of the Republican party it has brought the great armies of sweaters and toilers engaged in agriculture on the one hand and manufacturing on the other into antagonism, arraying them against each other. That party falsely assumes to be the friend and champion of the manufacturing wage earner, because by such assumption it can cover up its designs to manipulate Government for the sole behoof of the trusts. In its heart it has no concern for these wage earners, and if it suited its purposes as well, it would as readily pose as the champion of the toilers.

Even taking it upon its own ground, however, and assuming that its false pretenses are holy convictions, the argument by which it hopes to deceive the country into believing that this bill is justified under the Constitution by the public-welfare clause falls to the ground in the light of the figures that demonstrate that the public welfare is being impeded and checkmated by the act.

Already the mutterings of the wrathful condemnation of the people are heard, but it is a warning that the party of spoils dare not heed, for it has agreed to deliver the goods and has taken the price for them. It dare not even permit the organization of this House lest it can not hold its own members in leash and prevent some of them from joining with the Democrats to do some kind of legislative service for the people.

And now, Mr. Speaker, I desire to submit, that the country may know the facts, and that it may know that this House acted with full knowledge of the facts that demonstrate the illegality, inutility, and inexcusability of such legislation, some figures culled from official sources in direct substantiation of the positions I have assumed. I desire to show that this policy of alleged protection has been the ruin of agriculture. It is a great fundamental fact that everything for the benefit and sustenance of man comes out of the ground, and there can be no possible wealth accretion that comes not from this source.

Whatever, therefore, tends to dam up this source of supplies, or impede the free exercise of the right to delve for nature's bounties, strikes at the foundation of popular ease and happiness. Here in the ground nature hides her benefits and invites man freely to delve for them, and when any man or party deliberately lays an embargo upon the natural, God-given right freely to exact from nature the sustenance which she liberally provides for her children, and seeks to make it tributary and secondary to something else, that man or party is sinning in the sight of God and committing atrocious treason against the people of the land.

In order that the argument and the figures may not even seem to be prejudiced in favor of my contention, I have selected for investigation and comparison the ten manufacturing States of Delaware, Massachusetts, Maine, New Hampshire, New Jersey, Ohio, Vermont, Pennsylvania, Connecticut, and New York, which States have enjoyed most the benefits, if any, of protective tariffs, and then I aggregate the whole United States, and I invite a study of its comparisons which I can not fully make manifest by the mere reading of its figures.

Table showing a comparative statement of the growth and product of farming and manufacturing.

[From census reports.]

I call the earnest and considerate attention of the honorable members upon the other side of this Chamber to the vast difference that is manifest between the growth of the product and value of farms and the growth of the product and value of manufacturing and mechanical industries, and I call particular attention to this, that neither keep pace with the growth in population, but that agriculture lags far behind and is still receding, while manufacturing spurts away out ahead and is proceeding with continued accelerated ratio.

These should bear some kind of relationship; keep at least in sight of each other, and the fact that there is such a vast difference conclusively shows that there is some kind of undue stimulating influences used in the one case and unwarranted depressing causes brought to bear in the other. We do not have to search far to find the pernicious influences that are creating this unhealthy and damaging state of affairs. The cause proceeds from that policy, inaugurated in Republican councils and expressed in Republican legislation, that seeks to take from the people and give to the favored classes that undertake to keep that party in power for the price of these things.

The figures are not to be accurately had back to 1830-1840, but it will be observed that the value of farm products has been on the decrease ever since protection was instituted, that the value of farms has also decreased, and the figures as far as they go back abundantly sustain the contention which I elaborated when I last addressed the House upon this bill, that everything grew and prospered most when the antewar-tariff-for-revenue policy prevailed.

I have arranged another table which deals in percentage, and shows with more exactness how agriculture had been strangled and not allowed to keep pace with other industries and with the increase in population; and if this is true in these States that have been the conspicuous beneficiaries of protection, how much more are the other States damaged that are forced thus to suffer in their farming operations and get less of alleged compensating benefits of protection.

Table showing percentage of increase or decrease in farm products, value of farms, manufactured products, value of manufacturing plants, and population.

	Decade ending—			
	1860.	1870.	1880.	1890.
Farm products:				
Ten States.....	Per cent.	Per cent.	Per cent.	Per cent.
Whole United States.....	Dec. 28+	Dec. 9+	Dec. 7.53	Inc. 11+
Value of farms:				
Ten States.....	Inc. 54+	Inc. 29+	Dec. 8.10	Dec. 6.28
Whole United States.....	Inc. 101+	Inc. 34+	Dec. 8.8	Inc. 32

Table showing percentage of increase or decrease in farm products, etc.—Ct'd.

	Decade ending—			
	1860.	1870.	1880.	1890.
Manufactured products:				
Ten States.....	Per cent. Inc. 71+	Per cent. Inc. 118+	Per cent. Inc. 20.9	Per cent. Inc. 48+
Whole United States.....	Inc. 84	Inc. 124+	Inc. 27+	Inc. 74+
Value of plants:				
Ten States.....	Inc. 74.24	Inc. 104+	Inc. 29+	Inc. 108+
Whole United States.....	Inc. 80+	Inc. 100+	Inc. 31+	Inc. 119+
Population:				
Ten States.....	Inc. 21.9	Inc. 15.5	Inc. 21	Inc. 19
Whole United States.....	Inc. 35.58	Inc. 22.63	Inc. 30.08	Inc. 24.80

Table showing wages paid in manufacturing enterprises for the whole United States, the product per man, with adjoining column showing per cent of entire wealth owned by farmers and its astonishing decrease.

Year.	Wages per annum.	Product per man.	Entire wealth of farmers.
1850.....	\$247.37	\$1,062	Per cent. 62
1860.....	288.95	1,438	75
1870.....	367.86	2,060	36
1880.....	346.09	1,968	15
1890.....	480.67	2,023	14

And now I present a table showing the number of persons engaged in the two pursuits and the ratio they bear to the whole army of wage earners, with a view to showing with entire accuracy that the main fact upon which my argument is based is literally and absolutely true, to wit, that the class for which the Republican party pretends to be legislating is not the body of the people, and that, upon the other hand, the class they are legislating so assiduously against is the body of the people:

Table showing population by occupations in the United States.

Occupations.	Number of persons engaged in—		
	1870.	1880.	1890.
Agriculture.....	6,141,393	8,004,624	9,013,301
Manufacturing.....	2,450,872	3,414,349	5,601,669
All occupations.....	12,505,923	17,392,099	22,735,661

Observe how the ratio in agricultural pursuits is diminishing as the decades go by, and that in manufacturing and mechanical pursuits is increasing. I am aware that this is an age of invention, and that this country has made great and commendable strides in manufacturing, and I must not be understood in any sense as decrying all legitimate effort and aid in stimulating production and building up the industries; but I call these figures to witness that this disparity is too gross and that these industries, as meritorious as they are and fraught with wealth, should not be permitted to strangle everything else and monopolize all the fortuitous aids that Government may afford.

This illegitimate state of things is the fruit of Republican protection. It is driving men out of agricultural pursuits because they are not permitted to prosper at them; it is drying up the source of wealth increment ordained by nature, crowding the cities with men driven from the farms, who go to seek employment under the hot-house policy that pretends to foster manufacturing; and finding it not, they go to help the armies of tramps

marching on to the pale realms of the poorhouse, the malcontents, strikers, beggars, and criminals that are the brood hatched out by Republican misrule as it ministers to inordinate greed, the legitimate outcroppings of pernicious legislation instituted in total disregard for the public welfare, and designed only to pay a party's debt with the people's money.

Table showing totals and percentage of increase and decrease in farm products, farm values, manufacturing products, and manufacturing plants in the ten States, by decades.

	1850.		1860.		1870.		1880.		1890.	
	Value.	Change.	Value.	Change.	Value.	Change.	Value.	Change.	Value.	Change.
Farm products.....		Per cent.		Per cent.		Per cent.		Per cent.		Per cent.
Farms.....	\$2,162,567,500		\$3,243,338,074	Inc. 54+	\$35,801,098		\$600,207,855	Dec. 28+	\$553,804,814	Dec. 7.73
Manufacturing products.....	761,080,049		1,304,770,063	Inc. 71+	4,911,455,345	Inc. 29+	4,470,009,013	Dec. 8.10	4,100,121,139	Dec. 6.28
Manufacturing plants*.....	401,400,579		609,420,290	Inc. 74.24	2,854,530,137	Inc. 118+	3,450,802,877	Inc. 20.9	5,433,502,937	Inc. 48+
					1,420,294,041	Inc. 104+	1,848,241,715	Inc. 29+	3,838,293,571	Inc. 108+

\* These figures do not include the property hired for use, amounting to many millions, and which would very largely increase the percentage of gains in value of plants.

Mr. Chairman, I must not be understood, I repeat, as in the least remote degree decrying manufacturing, and neither would I withhold one legitimate help to enable America to make everything that the people of all the nations need and push her commerce to the uttermost corners of the earth. What I do desire to be clearly understood as contending is that it is not all of life to live the life of a manufacturer in this great country, and that it does mean the death of all things when agriculture dies; that even admitting, as I do not, that the public welfare may be promoted by protection, these figures indisputably show that the great body of the American people are engaged in other pursuits and that the policy and design of this bill is to their detriment, so announced in its very caption and proclaimed in all its schedules.

The persons engaged in manufacturing constitute only 22.39 per cent of the whole; and shall the interests of this one-fifth dominate and destroy all others? The people who till and delve in the ground have a right to demand their full, even share of the benefits of government. They do not ask to be permitted to ride roughshod over all things else and greedily crowd every other interest away from the board, but they deny the right of the Republican party to trade them off to pay its debts and make them subservient to interests that belong to the rich and greedy.

It is proper to state that the tables I have prepared are based upon figures furnished by the Commissioner of Labor at my instance, and are accurate only for comparisons. That is to say, some items were omitted in one census and included in another, and it is estimated that while the figures may not be strictly exact, the totals are sufficiently accurate to make reliable comparisons.

I had designed, Mr. Speaker, to construct an argument upon another and grosser feature of this bill, to wit, the unequal distribution of wealth that it has brought about. The facts are well known and have been so vigorously exploited on so many occasions that it is unnecessary now to adduce the statistics to show that the country is falling a prey to hastening ills because of the factitious aids vouchsafed by legislation to favored classes to accumulate all wealth in a few coffers.

Protection, sir, is a monster and a monstrous churn, wherein is deposited all the prime elements of commercial and industrial wealth, to be churned until they yield up their fat, to be skimmed off and appropriated by the lords high proprietors, leaving the whey and curds for the rabble to scramble for. It is the incarnation of false pretense; a misnomer; a lie upon its face; the embodiment of sophistry and vicious deception, in that it holds out to wage earners the fallacious promise of benefits and entices them into lending their aid to the great scheme of grab that is the foundation principle of Republican policy and the end and aim of its existence, that is piling up Ossas of wealth upon Pelions of fortunes, building up a narrowed circle of potentates into royal squads of "four hundreds," who by the power of their aggregated wealth dominate and direct the business of the country for their own special behoof, and have even acquired such proprietary interest in Government that they pull out their wads and buy a Presidency and then sit at the committee tables in this forum of the people and write out the schedules and the rates by which they seek to tax the people to add more gold to their bursting coffers.

Mr. Speaker, could I invoke the ghost of the murdered ocean commerce of this great country and have it shake its gory locks in this Chamber, what affrighted scampering there would be upon the other side of that aisle. I can imagine the frightful specter as it alights from a phantom ship at the portals of this House and stalks into this presence clad in the somber cerements that ill conceal the ghastly wounds that brought it to its cruel death, barring these red-jawed scars to the startled gaze of gentlemen descendants of its murderers and themselves conspirators after the fact, and I can see it make gruesome obeisance before that awful ros-

Observe these ten favored States, how farming has been sacrificed. I present yet another table setting out with clearer distinctness the inequality upon which these two great factors of wealth are made to stand—how the one goes up and the other down with ratios that tally obversely with an exactness that indicates that the one prospers at the expense of the other. I beg you to study it.

trum where sat the director-general of the lords high executioners who presided at the wake, and floating on beyond that awful desk it passes without that door, and pointing its skeleton finger straight in upon our honorable Committee on Ways and Means it squeaks, "Thou didst it!"

Anchored at the portals of this Chamber rocks the phantom ship that bore this spectral visitor from the pale realms of shade, stranded and rattling in its timbers, with broken spars and shredded sails, with dripping seaweed tangled in its rotting ropes, matted with clinging barnacles, careening and squeaking, dismantled and disjointed, the pitiful wreck of a once royal merchant marine, stranded upon the rocks of rapacious greed and swept to destruction beneath the waves of a vicious protective policy.

The Republican party, forgetful of all things else except the interests of those who keep it up for their uses, has wiped from the face of the earth our home-owned merchant service and now lays its unholy hands upon the great agricultural interests, and is dragging it down and down to its destruction, sacrificing to the insatiate Moloch of protection the most sacred trust committed to it. The country has its eye upon you, gentlemen, and I warn you that a long-suffering people will turn and rend you when it fully realizes the full measure of the perfidy that inspired this bill.

The toilers at the plow handles are the body of the people, and in their name I charge you with the foul assaults this bill makes upon their interests, and demand that their affairs have some consideration. You will not heed it. You dare not disobey your masters. You have tied yourselves up in bonds that can not be severed, and you have entered upon a career that must be pursued to the end. You will realize the full measure of the enormity of this bill when the people arise and smite you in their wrath. Already they are speaking, and the thunders of their condemnation are heard even in the State that furnished the idol at the other end of the Avenue and of him who held the money bags that wrought out the big majority that sits in this Chamber. I offer you the proofs of your wrong. You will reject them, but the country will receive them.

I desire now to submit as a part of my remarks the great argument made by Daniel Webster and his distinguished associates early in the history of tariffs, which lays down fundamental doctrine as sound to-day as it was then and which never has and never will be shaken.

#### THE TARIFF IN 1821.

At a meeting of merchants and others interested in commerce and agriculture, at Boston, August 17, a subcommittee of seven, consisting of Messrs. Perkins, Gardner, Webster, Welles, Shilmin, Sturgis, and Door, were appointed and submitted a report to an adjourned meeting at Faneuil Hall, October 2, on the tariff act then pending, as follows:

#### RESOLUTIONS AND REPORT.

"We therefore recommend the adoption of the following resolutions:

"Resolved, That we have regarded with pleasure the establishment and success of manufactures among us, and consider their growth, when natural and spontaneous and not the effect of a system of bounties and protection, as an evidence of general wealth and prosperity.

"Resolved, That, relying on the ingenuity, enterprise, and skill of our fellow-citizens, we believe that all manufactures adapted to our character and circumstances will be introduced and extended as soon and as far as will promote the public interests, without any further protection than they now receive.

"Resolved, That no objection ought ever to be made to any amount of taxes equally apportioned and imposed for the purpose of raising revenue necessary for the support of government, but that taxes imposed on the people for the sole benefit of any one class of men are equally inconsistent with the principles of our Constitution and with sound policy.

"Resolved, That the supposition that until the proposed tariff or some similar measure be adopted we are and shall be dependent on foreigners for the means of subsistence and defense is, in our opinion, altogether fallacious and faulciful and derogatory to the character of the nation.

"Resolved, That high bounties on such domestic manufactures as are principally benefited by that tariff favor great capitalists rather than personal

industry or the owners of small capital, and, therefore, that we do not perceive its tendency to promote national industry.

*Resolved*, That we are equally incapable of discovering its beneficial effects on agriculture, since the obvious consequence of its adoption would be that the farmer must give more than he now does for all he buys and receive less for all he sells.

*Resolved*, That the imposition of duties which are enormous and deemed by a large portion of the people to be unequal and unjust is dangerous, as it encourages the practice of smuggling.

*Resolved*, That the proposed tariff and the principles on which it is avowedly founded, would, if adopted, have a tendency, however different may be the motives of those who recommend them, to diminish the industry, impede the prosperity, and corrupt the morals of the people.

Your committee beg leave to report that we have examined the proposed tariff and submit to you some remarks relating to its probable operation on the community and to the principles on which it is professedly founded. We shall not enter into a minute discussion of its details, as the imposts which ought to be laid depend in every case on a variety of considerations peculiar to itself, and as we do not consider it any part of the duty assigned to us to digest a code of revenue laws. Neither shall we invite your attention particularly to the effects of the measure on commerce, because we presume you wish to have it distinctly understood that the merchants in this vicinity neither expect nor desire any peculiar favors, nor any protection or encouragement whatever which is not required by the interests of the public. They were not forward, therefore, to oppose the duties recently recommended, however pernicious to themselves as individuals, believing it was their duty to acquiesce in them, if the public good required it, and that they would not be imposed if it did not.

But the influence which has been obtained by the zeal of private interests admonishes us that those whose situation and experience enable them to judge of the operation of this new system should exert themselves to diffuse such information as may tend to make its consequences rightly and generally understood. Its avowed object is to direct and control the occupations of men by granting special privileges to those engaged in particular pursuits. This can be done (waiving the important question whether it can be done at all without violating the spirit of the Constitution) only at the expense of the community for it is evident that

#### LEGISLATION DOES NOT CREATE WEALTH,

but simply transfers it from hand to hand, and can enrich one class only by impoverishing the others. It would surely be surprising that a system of restriction so unequal and so repugnant to all sound theory should be adopted by a free and enlightened people at a time when the greatest statesmen of Europe, after a long trial of it, are openly acknowledging its incorrectness, and whole nations suffering and lamenting the consequences of its adoption, and when our own unexampled success, under a more liberal policy, has given the sanction of experience to the deductions of reason.

#### PROHIBITORY DUTIES DEPRECATED.

This tariff would impose on certain foreign manufactures duties professedly and effectually prohibitory; and the question involved in its adoption is, not whether the consumer of those goods shall pay a higher price for them, but whether he shall be prevented from purchasing them at all; not whether the duty now levied on the importation of them shall be a little increased or diminished, but whether they shall be totally excluded. In one case this is already done. From the most accurate information, founded chiefly on official documents, it appears that from the year 1800 until the year 1812, both inclusive, the duties received on the importation of the coarse cottons of India amounted to more than \$2,938,000. But in 1816 the duty was raised to 6 cents on every square yard, about 84 per cent on their average cost, which, added to the necessary charges, equal 27 per cent more, has utterly excluded them, and the whole revenue once derived from this source is lost. Hence the organization of our Government there have been paid into the Treasury of the United States from the customs alone nearly \$350,000,000, while the whole amount of internal-revenue and direct taxes has been little more than \$34,000,000.

To prevent the importation of manufactures would of course deprive the Treasury of the imposts now levied on them, and an equal sum must therefore, in order to support the necessary expenses of the Government, be raised by some other direct or indirect tax on the people.

#### CONSUMER PAYS THE TAX.

The Committee on Manufactures who prepared the tariff did not overlook nor deny this consequence of its adoption, and in order to remedy it provided that an additional impost should be laid on all articles of general consumption or necessary use which are not raised in our own country, such as spices, coffee, and many others, forming a large part of our imports. A new impost on such articles, by increasing their price, would have some tendency to diminish their consumption, and thus prevent an increase of the revenue proportionate to the increase of duty; but making no allowance for this diminution, the additional duty on them would not nearly supply the deficiency occasioned by the loss of the imposts on manufactures. The chairman of the committee just mentioned appeared to be well aware of this fact, and declared it to be another inevitable consequence of their system that an excise should be imposed on domestic manufactures; and this, if our manufacturers are to have a monopoly secured to them, as seems to be contemplated, will be a new tax on the consumer. The first consequence, then, of excluding foreign manufactures by high duties is to create a necessity for some other tax equal to the whole sum now levied on them, and which will necessarily be lost by their exclusion. Another consequence, and the only one which benefits the American manufacturer, is to enable him to raise the price of his productions in our market by adding to it a sum equal to the difference between the present and the proposed prohibitory duty, which addition must be paid entirely by domestic consumers.

#### DUTY PAID BY THE CONSUMER.

No duty could enable him to manufacture for exportation; for if he can not at home enter into competition with foreigners without being protected by an impost, it is obvious that he can not rival them abroad where there is no such discrimination in his favor, and where he is burdened, as well as they, with the expense of transportation. Duties imposed for the mere purpose of revenue give an advantage equal to their whole amount to our manufacturers.

#### REVENUE DUTY RAISED IS DOUBLY INJURIOUS.

But by increasing duties until they become prohibitory the people suffer a twofold injury—the price of the goods prohibited is raised, and the revenue formerly collected from them is lost. With the sole motive, then, of empowering the manufacturer to raise his price, and thus tax the public in this way for his emolument, another tax from which he can derive no advantage is at once to be laid on the articles of general use which we can not produce, and hereafter still a third, either on the consumption of domestic manufactures or directly on property and labor. We should not object to any burden equally apportioned to raise the revenue necessary for administering the

Government; but to impose one tax for no other purpose but to facilitate the imposition of another seems to us to be a policy as whimsical as it is alarming.

#### TARIFF BURDEN FALLS ON THE POOR.

The burden occasioned by most of the particular duties recommended would fall on all the community, but chiefly on those least able to bear it. In this country the poor man personally consumes as much tea, sugar, and coffee as the rich, and though his clothing is not so fine, yet its cost constitutes a much greater proportion of his whole expense. Besides, this new tariff is so nicely adjusted as to lay a far heavier impost on coarse cottons and linens than on those of finer texture. It is obvious that an additional duty can have no effect except in so far as it increases the price or diminishes the quantity here of the foreign merchandise on which it is imposed, and consequently can be of no service to any manufacturers but those with our own market. All who have no foreign rivals here at present who now carry on their business successfully and supply the country with the fruits of their labor, can derive no advantage, direct or indirect, from a further duty on such articles as they manufacture, since they have already the exclusive possession of the market, and their prices are regulated not by foreign but by domestic competition. An additional impost on such articles as are made by these would be merely nominal and would have no effect, unless it were to blind them to their true interests and induce them, by the offer of protection, at once needless and futile, to bear, together with the rest of the community, a great and real burden for the sole benefit of those classes who now have foreign competitors.

#### FREE RAW MATERIALS.

Some manufacturers, as those of chocolate and refined sugar, would be greatly injured, and those of cordage, and so of iron, and distillers of molasses still more so, by the duties proposed to be laid on the raw materials of their manufactures, the price of which must thus be increased and their consumption lessened. The impost on iron is particularly injurious to industry. It is required for the machines of manufacturers themselves, for all the implements of agriculture and all the tools of the mechanic arts; and nails, of which 6,000 tons are annually made, and chiefly from foreign iron, are one of the very few of our manufactures now actually exported. A far greater number of men is employed in converting this material into articles of use than in extracting it from the ore, and surely the interests of the many ought not to be sacrificed to that of the few. The contemplated excise on domestic manufactures will not be confined to those to which alone this tariff affords a real and efficient protection, but extend to all. Let the manufacturers, then, who now carry on their business untaxed and those who buy their productions look to the end and mark the double effect of such excise in at once raising the cost and diminishing the consumption of them.

#### WAGE EARNERS GET NO BENEFIT.

The manufacturers above mentioned must immediately suffer, together with the farmers and all other citizens, the double burden of a new tax to supply the deficiency of the revenue, and an increase in the price of clothing and of those little, innocent, social luxuries which have hitherto been so greatly enjoyed among us. And for whose emolument? Principally, in effect, for that of the manufacturers of cotton, wool, iron ore, and glass, men whose business requires considerable capital. We have no means of determining exactly the number of workmen engaged in these pursuits, but those employed on cotton are far the more numerous; and the greatest establishment for working this material, that at Waltham, which has a capital of nearly a half million, and which makes its own machinery, and does not pay a man beyond its own walls except the vendors of its goods, requires 300 persons, men, women, and children, to carry on its work. But however the number thus employed be estimated, it is manifest that it must bear so small a proportion to our population that the rate of wages throughout the country would not be perceptibly increased, and therefore these workmen would receive no more than the present price of labor. The gain, then, would accrue to the capitalists who own the factories, and to them alone.

#### BURDEN FALLS ON THE POORER CLASSES.

Thus according to this new scheme a great, certain, and immediate burden falls on the public, most heavily on the poorer classes, and redounds to the exclusive emolument of a few, and those few the wealthy. Surely such a scheme can only be justified by showing clearly that some definite ultimate national benefit will result from it fully equal to the present burden; and its advocates attempt to do this by urging, in the first place, that it is necessary for national independence. How is it necessary for national independence? In the elaborate defense of the system by the chairman of the committee who invented it we find it repeatedly asserted that "we must command our own consumption." Happily for us, this phrase is interpreted in the same speech, and it means, as it seems, that we must have neither imposts nor importation—in plain English, that we must use nothing but our own production.

#### FICTITIOUS AIDS UNNECESSARY.

In a certain sense we may be said to depend on foreign nations for whatever we receive from them. But they equally depend on us for the equivalent which we pay them for it, and this dependence is voluntary and mutual. Nor is it any derogation from national dignity. A sovereign who receives tribute from a foreign country depends on it for that tribute, yet he is not therefore its servant, but its master. If one country produces only labor and exports only manufactures, and another, in return for these, provides it with the raw materials composing them, the former may with most propriety be called dependent, for since every country has necessarily the capacity to labor in proportion to its population, that which produces the raw material may manufacture it whenever it chooses to do so; but the ability of the other to labor would be worthless if it could not procure the material to which that labor may be applied. The exchange of raw cotton, then, for manufactures, makes Europe dependent on America, rather than America on Europe. Ask the planter of the South which of the two is the dependent, himself or the Manchester spinner.

The farmer is the most independent man because he produces the means of subsistence and the materials for the labor, and the nation which does this holds, like him, in its own hands the means of commanding the exertions of others. The capacity of providing for our own support constitutes independence, and this is not diminished by exchanging our superfluous productions for those of other countries. If the goods we receive are comforts, or mere luxuries, we can subsist without them, but this is no reason for depriving ourselves of them unnecessarily. If they are manufactures of materials raised by us, and we might, by prohibiting their importation, make them ourselves, at a higher price than they actually cost us, is it not equally true that if the hostility of the nation which supplies us, or any other cause, should prevent their importation hereafter, we may make them at the same additional expense then? If so, we are not dependent. And why should we assume a burden now because it may fall on us hereafter, or how does it remedy a future and contingent evil to make it immediate and certain?

A wise nation, indeed, will not permit itself to be surprised by hostilities without the means of defense, and will beforehand, therefore, accumulate those munitions which are little needed in peace, but immediately requisite

in war, or at least provide the means of obtaining them. Food and clothing are also necessary for subsistence, and of course for defense; but the demand for these, being constant at all times, affords of itself a constant encouragement to their production without the special aid of government. With regard to all the means of defense, however, it is enough for independence and security if we have the ability to produce or procure them when they are wanted.

As to munitions of war, they should receive whatever encouragement is necessary; as to food, we are burdened with it; as to clothing, the very proposal to prohibit immediately the importation of foreign manufactures used for this purpose implies of itself a conviction that we are already competent to supply our own wants. The quantity of naval stores required in peace being even greater than in war, the stock on hand for commercial purposes would, on a sudden eruption of hostilities, afford the means of protection until we could raise them. In thus considering the subject as it affects our means of defense we have taken the case assumed by manufacturers as most favorable to their pretensions—that of a war with all mankind. It is obvious that if there were any neutrals most of our wants would be supplied as certainly, though not as cheaply, as at present. We have found this to be true in our own wars, and all history confirms it.

But, so far would the enormous tax proposed on hemp and iron be from contributing to national independence that it would strike a severe blow at our freedom and security. By the existing treaty American and British ships are placed on the same footing, and it is a subject of gratulation that our countrymen now sustain the competition. The imposition of new and heavy burdens on our own shipping would tend to give the British the monopoly of our trade and to make them our sole carriers. When this is accomplished, there will be no lack of orders in council to regulate the trade of America, and the dependence which we shall suffer, unlike that of which we now complain, will be neither mutual, voluntary, nor terminable.

#### FREE MANUFACTURING BENEFITS MORE PEOPLE.

Another favorite phrase for the advocates of this system is that it would promote national industry. What is national industry but the industry of individuals? And what encourages it like high wages? And what sustains the price of wages but the demand for labor? And what tends so much to increase and support this demand as the employment of our whole capital in those pursuits in which the most labor is required? The occupations, then, in which a given capital demands and maintains the greatest quantity of human labor are most promotive of industry, and this is eminently true in a country where everything else is more abundant than capital.

The price of manufactures involves the cost of the raw material, the sum paid the owner of the capital employed in working it, and the wages of the workmen. It is when the wages are greatest in proportion to the whole price that industry is best paid and most encouraged. Machines for multiplying the effects of labor may indeed produce a great profit, but it accrues to the owners of them and not to those employed in managing them. Should anyone construct a machine so perfect that it would enable a single hand, by merely turning a crank, to supply the country with broadcloth, the possessor of this curious piece of mechanism would certainly make a fortune; but the laborer who put it in motion would receive not a cent more than the regular wages for turning a crank. The occupations in which money is laid out for complicated machinery for lands, buildings, and fixtures, to accumulate the raw material, or the means of converting it to use, or keep on hand a great quantity of the articles manufactured, so as to dispose of them most beneficially in the market, may afford a profitable investment for capital, but have no exclusive nor peculiar tendency to increase the price or the amount of labor.

The factory at Waltham tends to raise wages no more than every other establishment, however small its capital, which employs the same number of hands, and it is difficult to conceive a case in which industry or its reward can be increased by turning any number of men from one pursuit to another. The machines and implements for the aid of labor, which can be profitably employed with a very small capital, such as the tools of the mechanic, are most useful to the poor; those which require a large capital, to the rich. The former tend to diffuse wealth, the latter to concentrate it. Which is the most consonant to our institutions and character?

Those employments, such as household manufactures, which do not interfere with other business, but only occupy its intervals, do, indeed, increase the quantity of industry in a country. But these need the least encouragement. The labor devoted to them is an absolute gain to the individual, as well as to the public, and may be deemed to cost him nothing; hence he is in no danger from the competition of those who must derive the means of support, however small, from making similar articles. The same may be said of those which afford occupation to children and to the other classes who now subsist with little or no occupation. The subsistence of these persons being already provided for, their wages in such new employment would be clear profit. They can really afford to work for nothing, and will be induced to do so for next to nothing.

#### PROTECTION RUINOUS TO SHIPPING.

It is incumbent on those who would give aid to one class of men to be satisfied by clear proof that they shall not materially injure another class, who deserve at least protection. In the year 1810 the United States possessed 1,628,827 tons of shipping, and as 1 seaman is required on an average for every 20 tons, more than 81,000 men must have been employed in that capacity. For every hundred tons of iron are consumed, the price of working which is 4 cents a pound; hence the very labor of the blacksmith on the iron used in constructing these vessels, independently of subsequent repairs, was worth above four millions and a half of dollars. Among how many was this divided? The ship carpenters, valuing their labor at \$10 per ton, one-third less than has sometimes been paid, received for building these vessels more than \$14,000,000. It is a given rule that for every ton of shipping a ton of timber is necessary, and for this, at \$9 a ton, the farmer must have received nearly thirteen millions.

The average duration of our vessels, including losses at sea, is estimated at seven years; but suppose it ten, then, in order to maintain the same quantity of shipping, these supplies must every ten years be repeated, and this in addition to the whole amount necessary for repairs. Estimate the number of men thus supported and add to them the ship joiners, the boat builders, the mast makers, the block and pump makers, the painters, glaziers, and plumbers, the anchor smiths, the copper smiths, the carvers, sailmakers, riggers, rope makers, the bakers, butchers, packers, grocers, chandlers, coopers, lightermen, truckmen, stevedores, and laborers, the gunsmiths, the mathematical instrument makers, wharfingers, owners of wharves and warehouses, and all others who derive a subsistence from navigation, and their wives and children and all dependent on them, and see how wide a rain would follow the attempt to do what we are pleased to call "commanding our own consumption."

The coasting trade, it may be said, will be left. But to what will this amount after deducting all that portion of it which is employed in transmitting the goods received from other countries, or those destined to them, and in the vast traffic which ultimately results from commerce?

#### PROTECTION RUINOUS TO AGRICULTURE.

It has been asserted that this new project will be beneficial to agriculture; that though the farmer will pay a higher price for all he buys and be taxed more than ever for the support of the Government, yet he will be compensated for this by the creation of a better or better market for the produce of the soil. Is this true? That produce consists of articles of food or of the raw materials of manufactures. How is it possible that manufactures should extend the demand for food? Surely it will not be pretended, in spite of our own experience and that of all mankind, that manufacturing countries increase most rapidly in population or that they require greater means of subsistence than others. The farmer feeds all the inhabitants of the country now, and here he can do no more.

If, then, the demand for food can not be increased, the price can be raised only by diminishing the supply. If many now engaged in cultivating the soil are forced to quit the pursuit, the quantity of food raised may become less, and the price, of course, greater. Thus farmers are to be driven from their present employment to seek subsistence in another, and fields now under culture and laden with plenty are to be abandoned to desolation; and all this for the extension and encouragement of agriculture. Yet, though the domestic market for food could not thus be increased, the foreign might and would be diminished; for we can not afford to export our productions to other countries unless we will take what they can give us in return. Now, our farmer understands very well that a foreign demand for his produce benefits him by advancing the price, not only of that which is exported but of the whole quantity raised; he obtains more money for all that he sells, whether it is to be consumed at home or abroad.

The establishment of domestic manufactures would indeed create a demand at home for the materials of which they are composed, but at the same time would lessen the foreign demand to the same extent, because the nation which now supplies would cease to want that quantity of the raw material which it converts into manufactures for our market. And besides, to increase the price of such manufactures tends to diminish their consumption and consequently the demand for them and for their materials. It is the direct interest of the farmer that the raw material raised by him should be manufactured as cheaply as possible in order to increase this consumption and demand. It is also his direct interest, for this reason, that the smaller the portion of the price paid by the consumer the larger the proportion which the cultivator receives for his.

The extent to which his productions are manufactured and used is all that affects him, no matter by whom it is done or where. Some appear to imagine that our soil must always produce the same quantity, and that we have only to determine whether it shall be made use of at home or abroad. But this is not so. The productions of agriculture are created by the call for them. The existence of more grain and cotton than we actually use is only the consequence of the demand for exportation. Destroy the cause (as would be done by prohibiting importation) and what will become of the effect?

#### INFANT INDUSTRIES SHOULD BE WEANED.

There is, however, an argument in favor of encouraging particular employments by bounties or taxes which merits a different consideration. It has been justly urged that there may be occupations peculiarly adapted to our situation and character, and which, if once established, might be carried on here better than elsewhere, so as to afford their productions at a cheaper rate than is now paid for them. And yet habit and indolence and the natural attachment of men to the pursuits in which they have been educated, and the immediate expense of commencing the business, and the want of that skill which only time and experience can give, and a doubt how soon or how certainly the profit will be realized, may deter individuals from engaging in these occupations and induce them to persist in others less profitable to themselves and to the public; and that if these difficulties can be overcome by a present tax which will be more than compensated by the reduction of prices hereafter, it is good policy to impose it. On this principle encouragement has always been given by our Government to particular pursuits, and it should always be given to the full extent that this principle will warrant. By its adoption the whole subject is made a question of economy—of economy to consumers, who are all the people—and it becomes our duty not how to make manufactures dear, but how to make them on the whole cheap and abundant. The best and perhaps the only effectual mode of doing it is to promote competition at the lowest prices.

There is a difference in this respect between navigation and manufactures. Our ships engaged in foreign trade derive no advantage even in our own market from being near it; for all vessels must make two passages in order to carry goods from one country to another and bring back the returns, and it makes no difference which country is the first starting place. Our ships, too, when in the port of a foreign nation, are liable to have a tax imposed on them which shall prevent their entering into a fair competition with those of that nation in the trade between us. But our manufactures used at home (and these only are benefited by an impost) have an advantage over all foreign goods equal both to the expense of transporting the latter, estimated by Mr. Hamilton at between 15 and 30 per cent, and to the duty imposed on their importation here for the purpose of revenue.

Besides, no other nation can tax our manufactures so as to prevent their entering into competition with its own in our market, or can give its own any advantage over ours, but by granting a bounty on their exportation from its dominions. This bounty is never in fact equal to the cost of transportation and the impost here; and should it in any instance be greater, an equality would be produced by laying an additional duty, equal to the difference, on importations from the single country which granted the bounty. The policy of producing equality by such means—of raising prices to produce competition at high rates, when competition is useful only as it lessens them—may well be doubted. But on any ground, by what train of reasoning can it be shown that because a bounty is granted on the exportation of linens from England it would promote a free and general competition to prohibit or tax those brought from Germany? Yet this is the motive assigned for imposing a duty of 6½ cents on every yard of German linen costing 10 cents.

#### A USELESS SACRIFICE.

According to the principle above laid down, the reason for a tax increasing the price of goods for a time being to lessen it afterwards, and the only motive for a present monopoly to create future competition, it follows as an invariable rule that such tax or monopoly ought never to be perpetual, for this would be sacrificing the end to the means. As the burden thus imposed upon the public is certain and immediate, it follows also that those who call for it must show that a full equivalent will ultimately be received in the reduction of prices; otherwise the bargain is a bad one. Again, since every benefit ought to be purchased as cheaply as possible, it follows still further that they must prove the present tax to be the smallest which is competent to effect their professed object, for all beyond this is a useless sacrifice. It is, in our opinion, an insuperable objection to the proposed bill that its advocates make no attempt to show to what the advantage they expect will amount, or what amount of taxes is requisite for its attainment.

#### NATURAL AND UNNATURAL PURSUIT.

As a general rule, the employments which need the smallest encouragement are best fitted to our actual condition and most conducive to our

prosperity, and those which can be supported only by great bounties or taxes are shown by that very fact to be least adapted to our character and circumstances, and least likely to occasion a reduction of prices hereafter, by sustaining a free and general competition at the lowest rates. The enterprise and activity of our citizens leave little doubt that the pursuits most appropriate to our situation will ultimately be established without any extravagant aid from government, so that the only effect of assisting them would be to hasten their establishment. Is this an advantage worth the price we are called on to pay for it? Those who assert the fact are bound to prove it clearly.

It is only in a very clear case that this principle should be put in practice, since in the experience of nations the failure of such attempts has been much more frequent than their success, and has always produced mischiefs not easily remedied. The encouragement of silk manufacture in England is a source of great distress among the people and great embarrassment to the Government.

#### OBJECT OF PROTECTION IS CHEAPER GOODS.

The other question is equally important. Is the immense tax proposed to be laid in favor of particular manufactures necessary for their protection? Since true economy requires the expense of protecting those articles only which become cheaper hereafter in consequence of the protection, no manufactures should be encouraged from this motive but such as can be afforded by the market at a lower price after the difficulties of establishing them are surmounted; and these, of course, so long as they continue to maintain the price at which they can be sold at first, afford him a profit constantly increasing.

Whenever, therefore, the encouragement granted to any manufacture is sufficient to occasion its establishment and existence, its extension and the further emolument of those engaged in it may safely be left, and ought to be left, to time, skill, and industry. Can, then, the manufacturers, for whose benefit the new tariff is chiefly designed, exist under our present system? Do they in fact exist? Their zeal, activity, and almost success in the attempt to render their fellow-citizens tributary to their wealth seem to leave no room for that question. The necessity of supporting cotton factories is most strongly urged. Now, the price at which the manufacturers in our vicinity can go and take the cotton from the wharf and bring it back manufactured to the warehouse is little more than the mere imposts on the cottons of India, the only goods which would otherwise come into competition with it.

Though the advocates of the bill under consideration assume the name and the authority of the manufacturers of the United States, the great majority of our manufacturers would be directly and severely injured by its enactment. In this part of the country those most deeply interested in the pursuits to which it gives the greatest aid desire, as we believe, no further encouragement, but understand their true interests and are well aware that exorbitant taxes imposed for their profit could not be long in operation before their effect on other manufacturers and on the community would be known and felt; the natural consequence of which would be to cause a reaction in public opinion and induce the people in their indignation to withdraw the protection now afforded to our manufacturers and to leave them to contend at once with foreigners in our market, without any other superiority than that derived from being near the consumer and from duties laid for the sole purpose of revenue.

We rejoice to see manufactures flourish, and deem their spontaneous growth an evidence of wealth and prosperity; but to them and to all pursuits the best protection is that which is permanent. The great excellence of laws, and especially of such as affect the employments of men, is stability. By this only individuals are enabled to regulate their conduct beforehand and to calculate the chance of success in the occupations which they may select, without danger of having the bread of their industry snatched from their mouths by nice experiments and novelties in legislation.

The bill which we are now considering bristles with bounty and largess from caption to finish, distributing with most wasteful hand benefactions and gratuities, subsidies and cessions, to private enterprises. It avails nothing to talk of it in this presence and to tell members who are consenting to this foul wrong that it is unconstitutional, as I have already amply proven on another occasion, and so I summon the courts to appear against this monstrous illegality and against those who are committing this assault upon the people's rights without and within our sacred Constitution, and I lay it before the bar of the people and ask judgment upon the great iniquity.

THE OPINIONS OF MR. JUSTICE SHEPARD AND COMPTROLLER BOWLER HOLDING SUGAR-BOUNTY LEGISLATION UNCONSTITUTIONAL.

#### I.

Court of appeals of the District of Columbia.

The United States, ex rel. The Miles Planting and Manufacturing Company, appellant, vs. John G. Carlisle and Joseph S. Miller, respondents.

Appeal from judgment of special term of supreme court of District of Columbia, at law, No. 38835, McComas, J., dismissing petition for writ of mandamus.

Mr. Justice Shepard delivered the opinion of the court:

This is an appeal from a judgment dismissing a petition for a writ of mandamus. The petition was filed September 19, 1894, by the Miles Planting and Manufacturing Company, a corporation of the State of Louisiana, against John G. Carlisle, Secretary of the Treasury, and Joseph S. Miller, Commissioner of Internal Revenue of the United States.

Relator alleges that it is the owner of five different places in the State of Louisiana for the production of sugar; that under the inducement offered by the bounty provisions of the revenue act of October 1, 1890, commonly called the McKinley bill, it met all the requirements necessary to make itself a licensed producer of sugar thereunder; and that in compliance with the requirements of the law it gave the notice, filed the application, and executed a bond for \$251,000, as required by the law, and on July 2, 1894, received the necessary licenses for the production of sugar at each of its said places for the current year.

The petition sets out the provisions of the said act, which provide that the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe rules and regulations for the production of sugar, and, under the direction of the Secretary, shall exercise supervision and inspection of the licensed producers, and shall certify to the Secretary, after such supervision and inspection, the amount of money earned by each licensed producer, who shall have complied with the regulations, preliminary to payment under the appropriation made in the act.

It is further alleged that the required rules and regulations were made and published August 18, 1892, and have never been altered or abolished; that in accordance with its licenses aforesaid, relator gave notice and made application for inspection and supervision, as prescribed at each of its said places of production, for the sugar-making season then about to begin, and that respondents refused to obey the law and denied the demand.

The prayer of the petition is for a rule to respondents to show cause why a peremptory writ of mandamus shall not issue commanding them to carry out their said regulations, and the law, by exercising supervision and inspection as therein directed and provided for.

By way of return to the rule to show cause, the respondents filed an answer in which they did not deny the facts alleged in the petition, but based their refusal to comply upon the grounds that the act required was not ministerial; that the law had been repealed by the revenue act of August 23, 1894, and that, if unrepealed, it was not a valid law.

Relator moved to quash the return as insufficient; but the court, holding to the contrary, overruled the motion and dismissed the petition.

1. The first question to be considered is, Is this a case (conceding the validity of the act in question) in which a mandamus can be ordered?

The circumstances under which an executive officer may be compelled to perform an official act, and the principles applicable thereto, have been considered by us in two cases recently decided, *Seymour vs. South Carolina*, 2 App. Cas. D. C., 240 (22 Wash. L. Rep., 111); *International Con. Co. vs. Lamont*, id., 532, the last of which has been affirmed on appeal to the Supreme Court of the United States (December 10, 1894, 23 Wash. L. Rep., 1). Further discussion would add nothing new.

In the view that we have taken of the repealing clauses of the act of August 23, 1894, and their effect upon the claims of relator, we think it unnecessary to consume time in an examination of the details of the old law and the regulations made thereunder, with a view to determine whether the acts required of respondents call for the exercise of discretion or are purely ministerial. If the act has been repealed, and the rights of the relator have fallen therewith, there remains no duty which the respondents could lawfully perform.

2. This brings us to the question whether the repealing clauses of the law now in force had the effect to at once repeal the bounty clauses of the act of October 1, 1890, and to take away all claims thereunder.

The repealing clause, specially directed to the sugar-bounty provisions of the old law, reads as follows:

"Paragraph 182. That so much of the act entitled 'An act to reduce revenue, equalize duties, and for other purposes,' approved October 1, 1890, as provides for and authorizes the issue of licenses to produce sugar, and for the payment of a bounty to the producers of sugar from beets, sorghum, or sugar cane grown in the United States, or from maple sap produced within the United States, be, and the same is hereby, repealed, and hereafter it shall be unlawful to issue any license to produce sugar or to pay any bounty for the production of sugar of any kind under the said act."

This is not only a direct repeal of that part of the act, but also an express prohibition of any further payment of bounty.

It is contended, on behalf of the appellant, that the words following the repeal, "and hereafter it shall be unlawful to issue any license to produce sugar," must be held to show that "this repeal has reference only to licenses to be granted in the future, and not to licenses granted and existing at the passage of the act."

The meaning of the word "hereafter" must be controlled by the apparent general intent. Considering the length of time that the bill was on its passage and the changes that were made from time to time in this repealing clause before its final passage, it is not strange that the phrase, as finally worded, should lack something of precision. But without recurring to the proceedings in the House and Senate, or the debates therein, which are often unsafe guides to interpretation, we think it perfectly plain that the mere choice of this word and its collocation can not be given the effect contended for.

The repealing clause is one complete sentence, and the words quoted above are followed by these: "or to pay any bounty for the production of sugar of any kind under the said act." If it had been contemplated that the rights of holders of licenses taken out before the repeal should be respected and recognized as lawful, this intention would have been manifested also in an exception to the sweeping prohibition of the payment of any further bounties after that date.

It is an undoubted rule of construction that the special meaning or purpose that might, under some circumstances, be found to lurk in a single word or part of a sentence must yield to the plain intention disclosed by the whole.

The contention that by the use of the word "hereafter" the plain intent of the clause is to cut off the bounty only as to licenses thereafter issued seems far-fetched and untenable. The clause making it unlawful to pay "any bounty" under the act then and there repealed could only have application to licenses taken out by parties under the old law while the passage of the new one was delayed. No new license could be issued, and consequently no payment of bounty could be made thereunder after the repeal of the old law; hence the express prohibition of payment could only apply to claims made under the licenses that had been previously issued.

It is further contended that the relator, by reason of its compliance with the law then in force, is not a mere licensee, but must be considered as a party to a contract who has acquired a vested right and property interest. Then, assuming this contractual relation and the existence of a vested right, it is claimed that it is expressly protected and exempted from the operation of the repeal by the saving clause in paragraph 72 of the new law, as follows:

"Paragraph 72. All acts and parts of acts inconsistent with the provisions of this act are hereby repealed; but the repeal of existing laws or modifications thereof embraced in this act shall not affect any act done, or any right accruing or accrued, or any suit or proceeding had or commenced in any civil case before the said repeal or modifications; but all rights and liabilities under said laws shall continue and may be enforced in the same manner as if said repeal or modifications had not been made."

This clause is substantially like the repealing clauses of former tariff or revenue acts, and was not intended to embrace or to refer to the provisions of the act relating to the bounty.

"These different parts of the act, in respect to their operation, have no legal connection whatever with each other. They are entirely separable in their nature, and in law are wholly independent of each other. One relates to the imposition of duties upon imported articles; the other to the appropriation of money from the Treasury for bounties on articles produced in this country." (*Field vs. Clark*, 143 U. S., 698.)

For the foregoing reason, it was proper, if not necessary, to enact separate repealing clauses adapted to the nature of these two separate and distinct objects; besides, the revenue part of the law was not abrogated, but substituted merely by another for the same general purpose.

In view of the special repealing clause relating to the bounty provisions of the act, paragraph 72 must be referred to the provisions of the tariff act alone. The saving of rights and liabilities thereunder was rendered proper and necessary by the enormous volume of business done under the act and the difficulties and litigation attending upon its construction. An unconditional repeal of its provisions, thereby terminating rights and destroying liabilities accrued thereunder, would have been attended with great confusion and probable loss of revenue to the Government, as well as injustice to individuals.

Conceding the constitutionality of the bounty law, for the sake of argument, it is clear that the claim of petitioner, by virtue of its licenses, even if it might be considered property as between third persons claiming the expectancy, constitutes but a step in the process of securing a mere bounty or gratuity offered by one Congress which another had the undoubted right to

recall. The authority for this view is overwhelming, and it is too plain to admit of question. (*Salt Co. vs. East Saginaw*, 13 Wall., 373; *Welch vs. Cook*, 97 U. S., 541; *Newton vs. Commissioners*, 100 U. S., 548; *United States vs. Teller*, 107 U. S., 64; *Ponnie vs. Reis*, 122 U. S., 464; *Crenshaw vs. United States*, 134 U. S., 99.)

The claim under such an act is but a mere inchoate interest or right, at the best, and no more a contractual or vested right than has uniformly been held with respect to the right of an informer or an officer in penalties and forfeitures under revenue or penal laws. (*United States vs. Morris*, 10 Wheat., 246; *Norris vs. Crocker*, 13 How., 429; *Dorshelmer vs. United States*, 7 Wall., 116.)

Our conclusion, therefore, is that the repeal of the bounty provisions of the act of October 1, 1890, was immediate and complete, without excepting or protecting any such right as relator claims thereunder, and consequently there remains no duty with respect thereto that the respondents might or could lawfully perform.

3. The constitutionality of the bounty law has been raised by the respondents and fully argued. While its decision might be evaded under our conclusion with respect to the repeal of the law, we think the question one that should be met and determined.

The situation is very different from that presented to the Supreme Court in *Field vs. Clark*. There the question was not distinctly involved in nor necessarily incidental to the matter in controversy. Congress had enacted the law, the Executive had approved it, and the executive officers recognized its validity and were engaged in its execution. The great pecuniary interests to be affected were not before the court and might have been injured without a hearing. Here the question is raised by the officers of the Government and its decision invited. The party at interest is the actor in the litigation, and began its suit with the knowledge that if correct in its other contention, this question lay directly in the path of its prayer for relief.

The power of Congress to pay bounties to manufacturers or producers in order to encourage the manufacture or production of any article has never been passed upon by the courts. By the very nature of Federal taxation and appropriations of public money, questions respecting their validity are very difficult to be raised. There is no simple mode of challenge, as is the case in the States, where the taxpayer, having a direct interest, can invoke relief through injunction, if need be.

We have already referred to the case of *Field vs. Clark*, and the manner in which the question there arose and the reasons for which it was not decided. *Calder vs. Henderson* (2 U. S. App., 627) has been cited as upholding the power, but the question was not involved in the case. The question there was simply whether the inchoate right to the bounty of a licensee recognized by the law and the executive officers of the Government passed to his assignee for the benefit of his creditors, and it was held that it did. As between the parties, it was held to be an expectancy which could be assigned as property under the authority of *Williams vs. Heard* (140 U. S., 529), *Comegys vs. Vasse* (1 Pet., 196), and other cases.

The principle, however, which underlies the question, and upon which its solution depends, has, in our opinion, been time and again asserted and applied in the court of last resort in such cases, beginning with *Calder vs. Bull* (3 Dall., 366). In that case Mr. Justice Chase announced a sound doctrine as regards the construction of legislative powers in this country in vigorous language, from which we quote:

"I can not subscribe to the omnipotence of a State legislature, or that it is absolute and without control, although its authority should not be expressly restrained by the constitution or fundamental law of the State. The people of the United States erected their constitutions or forms of government to establish justice, to promote the general welfare, to secure the blessings of liberty, and to protect their persons and property from violence."

"The purposes for which men enter into society will determine the nature and terms of the social compact; and as they are the foundation of the legislative power, they will decide what are the proper objects of it. The nature and ends of legislative power will limit the exercise of it. . . . There are acts which the Federal or State legislature can not do without exceeding authority. There are certain vital principles in our free republican governments which will determine and overrule an apparent and flagrant abuse of legislative power, as to authorize manifest injustice by positive law, or to take away that security for personal liberty or private property for the protection whereof the government was established. An act of the legislature (for I can not call it a law) contrary to the great first principles of the social compact can not be considered a rightful exercise of legislative authority. The obligation of a law in governments established on express compact and on republican principles must be determined by the nature of the power on which it is founded."

The learned justice then proceeds to enumerate certain laws that might be enacted, and among them "a law that takes property from A and gives it to B," and says again:

"The genius, the nature, and the spirit of our State governments amount to a prohibition of such acts of legislation, and the general principles of law and reason forbid them. . . . To maintain that our Federal or State legislatures possess such powers, if they had not been expressly restrained, would, in my opinion, be a political heresy altogether inadmissible in our free republican governments."

The impressive declaration of the limitations upon legislative power pronounced in 1798 has lost none of its force or vitality through lapse of time, but has been substantially affirmed and reaffirmed in cases before the same high tribunal and others. (*Loan Association vs. Topeka*, 20 Wall., 655.) The point decided in that case was that an act of the legislature of Kansas authorizing and empowering cities and towns to encourage the establishment of manufactures and such other enterprises as may tend to develop and improve such cities, either by direct appropriation from the general fund or by the issuance of bonds, was beyond the power of the legislature, and therefore void.

The truly great opinion of Mr. Justice Miller therein affirms the doctrine of Justice Chase in *Calder vs. Bull*, and advances it further in application to the great power of taxation. He says:

"It must be conceded that there are rights in every free government beyond the control of the State. A government which recognized no such rights, which held the lives, the liberty, and the property of its citizens subject at all times to the absolute disposition and unlimited control of even the most demerited depositary of power, is after all but a despotism. The consent of the majority, if you choose to call it so, but it is nevertheless a despotism."

"The theory of our governments, State and national, is opposed to the deposit of unlimited power anywhere. The executive, the legislative, and the judicial branches of these governments are all of limited and defined powers. There are limitations on such power which grow out of the essential nature of all free governments. Implied reservations of individual rights, without which the social compact could not exist, and which are respected by all governments entitled to the name. . . . To lay with one hand the power of the government on the property of the citizen and with the other to bestow it upon favored individuals to aid private enterprises and build up private fortunes is none the less a robbery because it is done under the forms of law and is called taxation. This is not legislation; it is a decree under legislative forms. Nor is it taxation. . . ."

"We have established, we think, beyond cavil, that there can be no lawful tax which is not laid for a public purpose. It may not be easy to draw

the line in all cases so as to decide what is a public purpose in this sense and what is not. . . . But in the case before us, in which the towns are authorized to contribute aid by way of taxation to any class of manufacturers, there is no difficulty in holding that this is not such a public purpose as we have been considering. If it be said that a benefit results to the local public of a town by establishing manufactures, the same may be said of any other business or pursuit which employs capital or labor. The merchant, the mechanic, the innkeeper, the banker, the builder, the steamboat owner are equally promoters of the public good and equally deserving the aid of citizens by forced contributions. No line can be drawn in favor of the manufacturer which would not open the coffers of the public Treasury to the importunities of two-thirds of the business men of the city or town."

The only dissent from the judgment and the opinion in that case was by Mr. Justice Clifford, who maintained the absolute power of the legislature of the State, save when restrained by the provisions of its own or of the Federal Constitution. The doctrine of the case has been sustained and followed by a unanimous court in two later cases, presenting substantially the same issues. (*Parkersburg vs. Brown*, 106 U. S., 487; *Cole vs. La Grange*, 113 U. S., 1.)

In the second of those cases Mr. Justice Gray, speaking for the whole court, said:

"The general grant of legislative power in the constitution of a State does not enable the legislature, in the exercise either of the right of eminent domain or of the right of taxation, to take private property without the owner's consent for any but a public object. Nor can the legislature authorize counties, cities, or towns to contract for private objects debts which must be paid by taxes. It can not, therefore, authorize them to issue bonds to assist merchants or manufacturers, whether natural persons or corporations, in their private business. These limits of the legislative power are now too firmly established by judicial decisions to require extended arguments upon the subject."

After citing *Loan Association vs. Topeka* and *Parkersburg vs. Brown*, he adds:

"The decisions in the courts of the States are to the same effect" (citing a number of them), and "We have been referred to no opposing decision."

To the cases cited by Mr. Justice Gray may be added the following, some of which were cited in *Loan Association vs. Topeka*: *Opinions of the Judges*, 58 Me., 590; *Curtis vs. Whipple*, 24 Wis., 359; *People vs. Salem*, 20 Mich., 432; *Hanson vs. Vernon*, 27 Iowa, 28; *Matter of Niagara Falls and Whirlpool R. R. Co.*, 108 N. Y., 375; *Deal vs. Mississippi Co.*, 107 Mo., 464. The last case cited is directly in point here, the court holding therein that an act of the legislature authorizing the payment of bounties for the planting of trees upon private lands was an unconstitutional exercise of legislative power.

*Lowell vs. Boston* (111 Mass., 451), which was cited with express approval in both *Loan Association vs. Topeka* and *Cole vs. La Grange*, is one of the best-considered cases upon the question of the power of the legislature to impose taxes in aid of private enterprises for the promotion of the general welfare. The act under consideration was enacted by the legislature of Massachusetts after the great Boston fire of 1872, and authorized the city to issue bonds to raise money to be lent to landowners for the purpose of rebuilding in the burned district. In one sense in which this loan might be considered for the general welfare, and in the same sense in which the subsidy to sugar producers is contended to be therefore, the purposes of the loan act were for the good not only of the city of Boston, but also of the State, and, in a measure, of all New England, of which Boston is the commercial metropolis. This ground of support for the act was presented in a masterly manner on the argument by Mr. Benjamin R. Curtis, from whose brief we quote the following:

"The primary object of the statute is not to benefit and aid private persons. Its purpose and ends are strictly of a public nature—to restore and increase the taxable property and resources of the State; to prevent and guard against the great evils and losses arising from so great and general a calamity, in embarrassing business, deranging finance, and seriously lessening the wealth and prosperity of a large and most important part of the whole people, and interfering with their comfort, happiness, and progress."

To this argument Mr. Justice Wells, who delivered the opinion of the court, made the conclusive reply:

"The power to levy taxes is founded on the right, duty, and responsibility to maintain and administer all the governmental functions of the State and to provide for the general welfare. To justify any exercise of the power requires that the expenditure which it is intended to meet shall be for some public service or some object which concerns the public welfare. The promotion of the interests of individuals, either in respect of property or business, although it may result incidentally in the advancement of the public welfare, is, in its essential character, a private and not a public object. However certain and great the resulting good to the general public, it does not, by reason of its comparative importance, cease to be incidental."

"The incidental advantage to the public or to the State which results from the promotion of private interests and the prosperity of private enterprises or business does not justify their aid by the use of public money raised by taxation or for which taxation may become necessary. It is the essential character of the direct object of the expenditure which must determine its validity as justifying a tax, and not the magnitude of the interests to be affected, nor the degree to which the general advantage of the community, and thus the public welfare, may be ultimately benefited by their promotion. The principle of this distinction is fundamental. It underlies all government that is based upon reason rather than upon force."

In an analogous case Mr. Justice Brewer, speaking for the supreme court of Kansas, of which he was then a member, said:

"Public aid to private purposes can not be secured by yoking them to a public purpose. And where the public and private purposes are attempted to be aided by a single concession, the latter vitiate rather than the former uphold the grant." (*Central Branch U. P. R. Co. vs. Smith*, 23 Kans., 745, 755.)

Nor was the decision of either of those cases made to turn upon a mere question of "municipal authority," but instead upon the broad question of "legislative power." As said by Wells, justice:

"The point of difficulty is not as to the distribution of the burden by allowing it to be imposed upon a limited district within the State, but as to the right of the legislature to impose or authorize any tax for the object contemplated by this statute."

The power here involved is one of taxation. The annual bounty for sugar production has necessarily come out of the revenues raised by general taxation for the support of the Government. The gross sum required each year had to be included in the estimates for annual expenses and considered in the imposition of taxes to raise the revenue to meet them. Call the subsidy offered by the law to the producers of sugar a contract if you will; still it is necessarily one where "the right to contract must be limited by the right to tax, and if in the given case no tax can lawfully be levied to pay the debt, the contract itself is void for want of authority to make it. . . . The validity of a contract which can only be fulfilled by a resort to taxation depends on the power to levy the tax for that purpose." (*Miller, J.*, 20 Wall., 660.)

In *Field vs. Clark* (143 U. S., 655) Mr. Justice Harlan, referring to the question therein raised as to the validity of the sugar bounty provisions of the act under consideration, said:

"The question of constitutional power thus raised depends principally, if not altogether, upon the scope and effect of that clause of the Constitution giving Congress the power 'to lay and collect taxes, duties, imposts, and

excises, to pay the debts and provide for the common defense and general welfare of the United States."

To avoid any misunderstanding as to the scope of this decision, it is proper to add here that there are other delegations of power in the Constitution which expressly or impliedly permit the expenditure of the public moneys. Some of these have been mentioned by Mr. Justice Gray in his opinion in *Cole v. La Grange* (113 U. S., 1), and others might be added, as, by general consent, arising under the war power, the powers to regulate commerce, coin money, establish post-offices and post-roads, etc. No one of these is involved in this case, and with their construction we have nothing to do.

The power to give the bounty to producers of sugar must, as we have seen, be referred to, and determined by, the general grant in the first clause of section 8 of Article I. That there is no pretense of any other authority for the grant is further shown by this proposition, quoted from the brief of Mr. Brent, of counsel for appellant:

"The able men who enacted this bounty law never justified it upon the ground that a gratuity was intended to the licensees; but, realizing, with the statesmen of Europe, that the prosperity of the commonwealth would be advanced by an increased production of domestic sugar which, while giving an increased stimulus to agriculture, would, by avoiding the necessity of sending abroad a hundred millions in gold annually to pay for foreign sugar, give an increased stability to our national finances, determined, in pursuance of a national policy analogous to that adopted in Germany and France, to stimulate the production of American sugar by offering to parties special inducements to invest capital and labor in the effort to develop the domestic sugar production in furtherance of such a national policy."

The power to levy taxes is one of the greatest, and to the citizen one of the most directly important, powers that can be exercised by any government. Within certain conceded boundaries it is absolute and unlimited save by the discretion of the lawmaking power. It may be used to cripple or even destroy an industry or a business. The only refuge from its inordinate exercise in this country is by the peaceful revolution of popular elections. In our judgment, the true limitation of the power to impose taxes, conferred by the foregoing clause, is that the purpose must be public, that is to say, governmental.

"All definitions of taxation imply that it is to be imposed only for public purposes." (Cooley on Taxation, 67.)

"If there is any proposition about which there is an entire and uniform weight of judicial authority, it is that taxes are to be imposed for the use of the people of the State in the varied and manifold purposes of the Government, and not for private objects or the special benefit of individuals. Taxation originates from and is imposed by and for the State." (Allen vs. Jay, 90 Me., 128; *Hanson vs. Vernon*, 27 Iowa, 28, 47; *Matter of Washington Ave.*, 66 Pa. St., 252, 263; *Sharpless vs. Mayor*, etc., 21 Pa. St., 147.)

"Vast as is the power of the government to levy taxes upon its citizens, there are, nevertheless, limitations upon it of a very distinct and positive character which inhere in the very nature of the power itself. Some of these limitations are commonly declared in the written constitutions, but the declaration is rather from abundant caution than from any necessity, as the limitations are equally imperative whether thus declared or not." (Cooley on Taxation, 41.)

The authorities from which we have so freely quoted refer directly to the power to tax as exercised by the legislatures of the several States; but the doctrine which they establish is plainly applicable to the taxing power of Congress.

A commonly accepted doctrine with respect to the legislative powers of the States has been that they are general in their nature and to a degree absolute, except where restrained by the provisions of their own and the Federal Constitution, and the necessary implications therefrom. On the other hand, it has been uniformly held that the Government of the United States is one of "delegated, limited, and enumerated powers." (*United States vs. Harris*, 106 U. S., 690.) In that case it was said, "Therefore every valid act of Congress must find in the Constitution some warrant for its passage. This is apparent by reference to the following provisions of the Constitution" (quoting section 1, Article I, Article X, Amendments). Mr. Justice Story, in his Commentaries on the Constitution, says:

"Whenever, therefore, a question arises concerning the constitutionality of a particular power, the first question is whether the power be expressed in the Constitution. If it be, the question is decided. If it be not expressed, the next inquiry must be whether it is properly an incident to an express power and necessary to its execution. If it be, then it may be exercised by Congress. If not, Congress can not exercise it."

This distinction between the taxing powers of the General and the State governments is well described by the late Mr. Justice Miller in the following words:

"The United States being a limited form of government, one of the restrictions to which it is subject is in regard to its power to levy taxes. The States may levy them for a great many purposes for which Congress can not, because to the States belong all the powers not delegated to Congress. Hence, while the Constitution of the United States has nowhere been amended by any limitations of its taxing power, there has scarcely been a State constitutional convention in half a century that has not imposed some restrictions upon the power of the State to levy taxes." (Lectures on Constitution, page 247.)

If, then, as we have seen from the cases cited, the legislature of a State has no implied power to grant subsidies or bounties to individuals, though, in a sense, the general welfare may be promoted thereby, a fortiori the Congress of the United States has no such power.

It would be a useless consumption of time to enter upon a discussion of the interpretation of the language contained in the first clause of section 8, Article I, of the Constitution; nor is it necessary to do so. Several theories have been indulged in that regard. Mr. Madison, in No. 41 of the *Federalist*, denounces the assumption that this clause "amounts to an unlimited commission to exercise every power which may be alleged to be necessary for the common defense and general welfare," and says: "No stronger proof could be given of the distress under which these writers labor for objections than their stooping to such misconstruction." He evidently regarded it as a mere general expression and fraught with no special meaning as a substantive delegation of power. He says:

"Nothing is more natural or common than first to use a general phrase, and then to explain and qualify it by particulars; and then refers to the fact that this language is 'a copy from the Articles of Confederation.'"

It may be remarked here, too, that many of the State constitutions contain similar general declarations; notably is this the case with Massachusetts and Maine, in both of which it has been held, as we have seen, that bounties can not be given to individuals in promotion of the general welfare. Let it be conceded, however, that the words "to pay the debts and to provide for the common defense and general welfare of the United States" are to be construed, according to the opinion of Mr. Justice Story, as a qualification of the preceding tax clause and as limiting "the taxing power to objects for the common defense and general welfare" (1 Story Const., 911); still the question remains, Is the grant of a bounty to producers of sugar a constitutional exercise of the power of taxation as so understood?

We think the authorities cited above establish beyond question that the power of taxation, in all free governments like ours, is limited to public ob-

jects and purposes governmental in their nature. No amount of incidental public good or benefit will render valid taxation, or the appropriation of revenues to be derived therefrom, for a private purpose.

Although we have quoted liberally from authorities cited in support of these propositions, the importance of the question is such that we can not refrain from quoting from the opinions of the judges of the supreme court of Maine, in response to the inquiry of the legislature of that State, language which expresses our views perfectly:

"Taxation, by the very meaning of the words, is for public purposes, and for those the right of the Government is unlimited. . . . The general benefit of the community resulting from any description of well-directed labor is of the same character, whatever may be the branch of industry upon which it is expended. All useful laborers, no matter what the field of labor, serve the State by increasing the aggregate of its products—its wealth. There is nothing of a public nature any more entitling the manufacturer to public gifts than the sailor, the mechanic, the lumberman, or the farmer."

"Our Government is based upon equality of rights. All honest employments are honorable. The State can not rightfully discriminate among occupations, for a discrimination in favor of one branch of industry is a discrimination adverse to all other branches. The State is equally bound to protect all, giving no undue advantages or special and exclusive preferences to any." (59 Me., 590.) Again it was said: "But the subtle and sophistical argument of those who are seeking their own private advantage by the use of the public purse is that the successful establishment of a manufacturing business, though the profits of it inure to private individuals, is indirectly a benefit to the community. But this is not an answer; it is simply a pretext for an invasion of the fundamental principle above stated." (Id., 600.)

If it may be for "the general welfare of the United States" to encourage the production of sugar by the grant of a bounty, it is hard to conceive why the producers of corn, wheat, cotton, wool, coal, iron, silver ore, etc., might not be paid a bounty also.

If Congress be conceded the power to grant subsidies from the public revenues to all objects it may deem to be for the general welfare, then it follows that this discretion, like all admitted powers of taxation, is absolute. Such a doctrine would destroy the idea that this is a Government of "delegated, limited, and enumerated powers," render superfluous all the special delegations of power contained in the Constitution, and open the way for a flood of socialistic legislation, the specious plea for all of which has ever been "the general welfare." It is a doctrine that we can not subscribe to.

Still less are we able to subscribe to a doctrine that legislation may be enacted by Congress "in pursuance of a national policy analogous to that adopted by Germany and France," or any other government on the face of the earth. There is no inherent sovereignty in the General or in the State governments. The people are sovereign. Certain powers of sovereignty they have delegated with a free hand; others have been reserved. Legislation by the Assembly of France, the Reichstag of Imperial Germany, or the Parliament of Great Britain, where power is unlimited, furnishes no proper precedent for legislation in this country.

Our Revolution began in a protest against the arbitrary power of legislation, especially with respect to taxation. The successful result of that revolution gave us our written constitutions, State and Federal, wherein the people, to guard against dangers to life, liberty, and property, reserved to themselves powers that formerly had been exercised by government.

"A written constitution is in every instance a limitation upon the powers of government in the hands of agents; for there never was written a republican constitution which delegated to functionaries all the latent powers which lie dormant in every nation, are boundless in extent, and incapable of definition."

Instead of furnishing analogies by which our national policy ought to be guided, and the powers of our legislative bodies interpreted, the legislation of even the freest nations in the Old World serves better to illustrate the wisdom of our written constitutions and to warn against their violation either in letter or in spirit.

We have been referred to certain acts of Congress in the past as affording a practical construction of the Constitution in this regard and furnishing a rule for our guidance. The rule is well established that, in case of doubt, the court will never declare a law unconstitutional. It is also well settled that long and frequent exercise of a power by Congress is entitled to the most respectful consideration and is not to be disregarded except for cogent and most persuasive reasons. But at the same time, to have this great weight, the practical construction must have been long continued, repeated, and generally unquestioned, and it can not then be followed against "a conviction that such legislation is clearly incompatible with the supreme law of the land." (Field vs. Clark, 143 U. S., 649, 691; *Merritt vs. Cameron*, 137 U. S., 542, 552.)

It would extend this already too long opinion to a most unreasonable length to review the various acts and appropriations of Congress which are claimed to be in exercise of the same power invoked to support the sugar-bounty act.

In his Commentaries on the Constitution (section 991) Mr. Justice Story refers to acts of which the most important and the nearest in approach to this act are the several acts relating to drawbacks and bounties to persons engaged in the cod fisheries, beginning in 1790. He refers to the debates published by Elliot, and declares this a recognition of the power of Congress to give bounties. The history of these acts shows that the first was expressly enacted as a "drawback" of the duty upon the salt used in curing the fish. The full debates are reported in the Annals of the Second Congress (pages 362, 401), and show that the second bill could hardly have been passed except upon the view, strenuously contended for, that the money appropriated was the equivalent of a drawback of the salt duty, as before, and acted substantially in that way. Upon this view Mr. Madison finally gave the bill his support.

All such acts, however, however worded or devised, have met with determined opposition and denial of power at all times; and it can not be said that they have ever received general consent or acquiescence. The fact that moneys have often been paid out under acts of doubtful or questionable validity can have no great weight under a system where the question, by reason of difficulties before alluded to, is so hard to be raised in an effective manner.

But if there had been a practice by Congress uniform and generally acquiesced in, our opinion is so clearly against the validity of this act that we could not be controlled by it in the performance of our duty. No time, no acquiescence, no estoppel runs against the people under the protection of our written Constitution.

From what has been said it follows that the judgment below must be in all things affirmed; and it is so ordered, with costs to the appellees.

Judgment affirmed.

Morris, J., concurs.

Alvey, C. J.: I fully concur with my brothers in the affirmation of the judgment appealed from in this case. But I do so upon the distinct grounds that the statute authorizing the payment of the sugar bounty has been expressly repealed by the recent tariff act of 1894, and thereby all right to bounty has been canceled; and even if that were not so, the case as here presented shows no sufficient foundation for the issuing of a mandamus against the Secretary of the Treasury and the Commissioner of Internal Revenue. I do not.

however, deem it necessary for any purpose of this case to discuss and decide the constitutional question of the power of Congress to provide for the payment of bounties in such case as that provided for by the late tariff act of 1890. I prefer to express no opinion upon that subject.

## II.

## OPINION OF THE COMPTROLLER OF THE TREASURY.

TREASURY DEPARTMENT,  
OFFICE OF COMPTROLLER OF THE TREASURY,  
September 4, 1895.

The Auditor for the Treasury Department, having before him the claim of the Oxnard Beet Sugar Company, of Grand Island, Nebr., for \$11,782.50, being the first claim allowed by the Commissioner of Internal Revenue under the appropriation in the sugar civil appropriation act of March 2, 1895, for the payment of bounty on sugar, decided that said claim was one of the character provided for by the appropriation of \$238,280.08 contained in said act, and proposed to allow the same and certify the amount thereof for payment from said appropriation. In accordance with the provisions of section 8 of the act of July 31, 1894 (28 Stat., 206), he certified his decision to the Comptroller as an original construction of the statute making that appropriation. The appropriation above referred to reads as follows:

[Here follows copy.]

The Comptroller, on account of the decision of the court of appeals of the District of Columbia in the case of The United States ex rel The Miles Plant and Manufacturing Company vs. John G. Carlisle and Joseph S. Miller (23 Wash. Law. Rep., 30), holding the sugar-bounty provisions of the tariff act of 1890, generally known as the McKinley Act, unconstitutional, called upon the Oxnard Beet Sugar Company and other claimants for the bounty provided in the act of March 2, 1895, for arguments to show why it was not the duty of the Comptroller to follow that decision and refuse payment of these bounties on the ground of the unconstitutionality of said appropriation.

At the hearing the jurisdiction of the Comptroller in the premises was seriously attacked, and it therefore becomes necessary to dispose of the jurisdictional question before considering the main issue.

This brings up, therefore, for consideration the question whether the Comptroller has any power or authority under any circumstances whatever to question the constitutionality of a statute passed by Congress with all the legal formalities. It was most vigorously contended that he had not, and that any attempt upon his part to do so would constitute a dangerous usurpation of power; that the question of the constitutionality of an act of Congress could only be decided by the courts, and that until so decided by the Supreme Court it was the duty of every executive officer to obey the act, although himself convinced of its unconstitutionality.

By Article VI of the Constitution, the "Constitution, and the laws of the United States which shall be made in pursuance thereof," shall be the supreme law of the land. Laws not made in pursuance of the Constitution are not, therefore, the law of the land. The Constitution is supreme. Laws made in pursuance thereof are as binding as is the Constitution itself, but when a law transcends the Constitution it is not binding, because in conflict therewith, and the Constitution and not the act must prevail and be followed by executive officers as well as by the courts, and in fact by all individuals. This is well brought out by Mr. Justice Field in *Huntington vs. Worthen* (130 U. S., 101), wherein, after showing the unconstitutionality of the act then under consideration by the court, he said:

"When, therefore, under the advice of the Attorney-General, the board of railroad commissioners treated as invalid the direction of the statute, that the value of embankments, tunnels, cuts, ties, trestles, and bridges should not be included in the estimate of the railroad track, it obeyed the Constitution, rather than the legislature. It may not be a wise thing, as a rule, for subordinate executive or ministerial officers to undertake to pass upon the constitutionality of legislation prescribing their duties, and to disregard it if in their judgment it is invalid. This may be a hazardous proceeding to themselves, and productive of great inconvenience to the public; but still the determination of the judicial tribunals can alone settle the legality of their action. An unconstitutional act is not a law; it binds no one, and protects no one."

To which may be added the following brief quotation from the opinion of that same able judge in *Norton vs. Shelby County* (118 U. S., 429):

"An unconstitutional act is not a law; it confers no rights; it imposes no duties; it affords no protection; it creates no office; it is, in legal contemplation, as inoperative as though it had never been passed."

And this from the opinion of Attorney-General Speed (11 Opin. A. G., 214), where, referring to the case of *Marbury vs. Madison* (1 Cranch, 130), wherein Chief Justice Marshall had said, "A law repugnant to the Constitution is void, and courts, as well as other departments, are bound by that instrument." He said:

"The Constitution is the supreme law—a law superior and paramount to every other. If any law be repugnant to the Constitution, it is void; in other words, it is no law. It is the peculiar province and duty of the judicial department to say what the law is in particular cases. But before such cases arise, and in the absence of authoritative exposition of the law by that department, it is equally the duty of the officer holding the executive power of the Government to determine, for the purposes of his own conduct and action, as well the operation of conflicting laws as the constitutionality of any one." (See also opinion of Attorney-General Bates, 10 Opin. A. G., 56-61, and *State vs. Buchanan*, 24 W. Va., 382.)

To the same effect are necessarily the decisions in all that well-established line of cases, holding that an executive officer can not justify himself for the doing of a wrongful act by relying upon the power conferred upon him under an unconstitutional statute. (Pointexter vs. Greenhow, 114 U. S., 270; *Sumner vs. Beiler*, 50 Ind., 341; *Fisher vs. McGirr et al.*, 1 Gray, 1-46; *Woolsey vs. Dodge*, 6 McLean, 142-148; *Lynn vs. Polk*, 8 Lea (Tenn.), 131; see also *Board of Liquidation vs. McComb*, 12 U. S., 531-541.)

Much reliance was placed upon the following cases: *People vs. Salomon*, 54 Ill., 40; *Smythe vs. Titcomb*, 51 Me., 272; *Sessums vs. Botts*, 34 Tex., 335; *State vs. Carroll*, 38 Conn., 449, and *State vs. Moore*, 40 Nebr., 334, particular reliance being placed upon the case of *People vs. Salomon*. Of that case nothing more need be said than is contained in the following note by Judge Cooley in his work on Constitutional Limitations, page 188:

"In *People vs. Salomon* (54 Ill., 40), a ministerial officer was severely censured for presuming to disregard a law as unconstitutional. The court found it to be valid, but if they had held the contrary, the officer certainly would not have been punished for anticipating their decision in his own action."

The case of *State vs. Carroll* was vigorously pressed upon the Supreme Court in *Norton vs. Shelby County* (118 U. S., 445), where that case is fully explained in the opinion of the court. The case of *State vs. Moore*, so far from being an authority in favor of the contention that an executive officer must obey an unconstitutional statute, is rather one to the contrary, for while the act then under consideration was held by the court to be constitutional, the auditor was commended for seeking the determination of the

court upon that question in a case in which he was justified in having serious doubts. The court said:

"The Auditor is an able and conscientious officer and deserving of the highest commendation for the jealous care with which he guards the public Treasury, and he acts wisely in shielding himself from liability by the decisions of the courts in cases where he is in doubt; but in the case at bar he may not only legally draw the warrant demanded by the relator, but it is his duty to do so."

And therefore a mandamus was issued to compel him to act. The other two cases relied on, viz, *Smythe vs. Titcomb* and *Sessums vs. Botts*, are contrary to the doctrine established by the Supreme Court of the United States in the cases above cited and to the weight of State authority.

From all these cases the conclusion is irresistible that it is the duty of the executive officer to obey the law; that the Constitution is the supreme law, and so are statutes passed in pursuance thereof; that statutes which do not conform to the Constitution are not law, and therefore when a statute is in apparent conflict with the Constitution it becomes the duty of the executive officer to determine for himself as between the statute and the Constitution whether the statute is the law. It is true that the statute is to be considered *prima facie* constitutional and should be followed unless it is clearly unconstitutional. It is also true that the officer acts at his peril if he does not execute a constitutional statute, but it is none the less true that he acts at his peril if he executes an unconstitutional statute.

The fact that in the one case the consequences of a mistaken judgment may be greater than in the other does not affect the question, for the penalties which may attach to the failure to execute what is finally determined to be a constitutional statute can not change the officer's duty, although they may greatly increase his responsibilities. While in theory every executive officer, however subordinate, is obliged to obey the law, whether the Constitution or the statute, yet practically a mere subordinate officer who acts under the orders of a superior who is bound to determine what the law is, may be justified in following the directions of his superior. In deciding questions upon the settlement of public accounts, the Comptroller is not subject to the direction of any superior upon whom he can throw the responsibility of determining what the law is. That question was finally settled by the act of March 30, 1888 (15 Stat., 54), incorporated in section 191 of the Revised Statutes, which, modified to meet the changes in the accounting system made in the Dockery Act, still remains the law.

As the Comptroller does not act under the directions of the Secretary of the Treasury or the President, his decisions within the sphere of his jurisdiction being final and conclusive upon the executive branch of the Government, it followed that the power to resist the execution of an unconstitutional statute was denied to any executive officer whatever. Some of the counsel at the hearing went to the extreme limit that under no circumstances whatever could even the President refuse to obey an act of Congress until the same had been declared unconstitutional by the Supreme Court of the United States; that the decision of no inferior tribunal would justify him in refusing obedience to the statute. If the Comptroller was compelled to obey an unconstitutional act, the logic of this position was irresistible. The conclusion, therefore, if that contention be right, necessarily is that the legislative department of the Government is supreme, as the executive can not resist the statute.

It was furthermore claimed that no executive officer had the right to raise the point of the unconstitutionality of a statute, even in a case in court, in order to finally determine its validity by the only branch of the Government conceded to have the power to settle such question. This contention can not be sound, as shown by the quotations from the decisions of the Supreme Court of the United States and those of the State courts above cited. Applied to the question of the payment of money from the Treasury of the United States by an officer sworn to support the Constitution, the argument amounts to this, that while any individual whose rights are invaded even in the slightest degree by an unconstitutional act of Congress may seek his remedy in the courts, and if a trustee would be required to do so in order to protect his trust, as did the trust companies in the recent income-tax cases, the officer of the executive department of the Government, bound to protect the Treasury of the United States against the payment of unlawful claims, and to that extent being in the position of a trustee for the people, would be without power to protect the Treasury against such unlawful claims for the largest possible amount. That position can not possibly be tenable.

The Comptroller, when acting within his jurisdiction, must determine whether claims made against the United States are proper charges against the Treasury. A claim founded upon a statute passed under an erroneous construction of the Constitution, although having apparently greater sanction, has no more real validity than a claim founded upon an erroneous construction of a concededly constitutional act. The one should not be paid any more than the other, and it is clearly the duty of the Comptroller when called upon to pass judgment on such claims to prevent the payment of both.

The Comptroller has never claimed to be invested with any judicial power by virtue of which he is authorized to hold and treat an act as unconstitutional otherwise than in any superior executive officer charged with the responsibility of ascertaining what the law is in order to guide his actions. The Comptroller is an executive officer whose duties require the exercise of judicial functions in the highest degree. This, however, does not in any way change his character from an executive to a judicial officer. The exercise of the power by the Comptroller to treat an act as unconstitutional is no new thing. It has been acted on upon at least two different occasions—first, when the income tax levied upon the salaries of the Federal judges was returned, under the opinion of Attorney-General Hoar that such taxes could not be constitutionally collected (13 Opin. A. G., 161); second, when payments were made to persons who had promoted, encouraged, or sustained the rebellion, on claims which occurred prior to the 13th day of April, 1861, in violation of the provisions of the joint resolution of March 2, 1867 (section 3490, Rev. Stat.), under the opinion of Secretary Delano that the provisions of that joint resolution were unconstitutional. (Copp's Public Land Laws, 1882, volume 2, page 1490.)

As neither the opinion of Attorney-General Hoar nor that of Secretary Delano was binding upon the Comptroller, his action in allowing the payments, notwithstanding the statutes, was taken upon his own responsibility that these opinions were correct expressions of the law. The Comptroller would certainly be as much justified in following the opinion of the court of appeals of the District of Columbia, if that opinion convinced his mind, as he was in following the opinion of an Attorney-General or that of a Secretary of the Interior. It is interesting to note that in the first case the opinion of the Attorney-General was approved by the Court of Claims in the case of *Wayne vs. United States* (25 C. Cl. R., 274), while the opinion of Secretary Delano, although not directly drawn in question, was in fact disapproved by the determination of the Supreme Court in *Hart vs. United States* (118 U. S., 62). Therefore in the one case the Comptroller was right, while in the other he was wrong.

It is true that the present Comptroller did pass without question claims for large amounts under the bounty provisions of the McKinley Act. Although having strong personal views upon the constitutionality of that bounty appropriation, he felt bound to obey the statute on the ground of its *prima facie* validity. Since the appropriation in the McKinley Act was

repealed, the court of appeals of the District of Columbia, in the case above referred to, has held the bounty provision of the McKinley Act unconstitutional. This decision of the court seemed to require a full examination of the question; hence the present inquiry.

2. That decision (*United States ex rel. The Miles, etc., Company vs. Carlisle and Miller*, 23 Wash. Law Rep., 33) was upon a petition for a writ of mandamus to compel the Secretary of the Treasury and the Commissioner of Internal Revenue to carry out the rules and regulations made for the execution of the sugar-bounty provisions of the McKinley Act.

It was held, first, that the bounty clause of the McKinley Act had been repealed by the act of August 28, 1894, known as the Wilson Act, and, second, that the sugar-bounty clause was unconstitutional. This latter point was principally founded upon the decisions of the Supreme Court of the United States in *Loan Association vs. Topeka* (20 Wall., 655), *Parkersburg vs. Brown* (106 U. S., 487), *Cole vs. La Grange* (113 U. S., 1), and numerous opinions of various State courts upon questions analogous to those decided in the three cases above cited, many of which had been approved by the Supreme Court of the United States in the opinions rendered in those cases.

The principle decided in all these cases is, succinctly stated, that taxation must be for a public purpose; that an attempt to take money from the people by the forms of taxation for a purpose other than a public one is not an exercise of legislative power, and therefore that an attempt to do so is a mere nullity, as an effort by the legislature to exercise power not granted by the Constitution.

While this principle was not controverted by the counsel of the sugar claimants, it was contended that this bounty could be sustained under paragraph 1, section 8, Article I, of the Constitution, which is as follows:

"The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States."

The extent of this clause was the subject of considerable discussion for the first few decades under the Constitution, and its scope does not ever seem to have been determined by the Supreme Court, for no case has been found upon which an act has been sustained exclusively under that clause.

While it is generally conceded that the words "to pay the debts and provide for the common defense and general welfare of the United States" do not constitute an independent, substantive grant of power, but are simply qualifications upon the previous grant "to lay and collect taxes, duties, imposts, and excises," yet it has been claimed, on the one hand, that the power to tax for the purposes thus specified is limited to raising the means to carry out the other powers subsequently enumerated, and does not authorize the levying of taxes for any other purposes; on the other hand, it is claimed that the power to tax is not so limited, but extends to any purposes which are for the general welfare.

The words "common defense" and "general welfare" are not found in any other clause of the Constitution, but are contained in the preamble as some of the objects to accomplish which the Constitution was established. As the objects to be accomplished by the Constitution can only be carried out by the exercise of the powers therein granted, a like construction would require these words, as used in the clause "to lay and collect taxes," to be considered as referring to the powers subsequently enumerated and to be limited to the carrying out of those powers by means of taxation. Such undoubtedly was the view once generally held. It is claimed, however, that it became subsequently modified, reliance being placed upon certain acts of Congress and the opinion of Mr. Justice Story (Const., section 911), President Jackson's veto of the Maysville road bill (4 Elliott's Debates, 2d ed., Wash., 1854, pages 525, 526), where he reviews this question quite fully, and other public documents.

But whatever may be the correct view of this clause, it can not confer a broader power upon Congress than a similar clause would confer upon a State legislature, nor greater power than that which a State legislature would have under a constitution containing no prohibition upon the legislative power. The constitutions of Maine and Massachusetts both contain clauses similar to this clause of the Federal Constitution, and in cases decided by the courts of those States, as well as States having general legislative power, it has been held, as will be shown hereafter, that bounties similar to the sugar bounties can not be sustained as a proper exercise of the taxing power for a public purpose. To show that taxation must be exclusively for public purposes, a few quotations from decided cases may not be inappropriate.

Mr. Justice Miller, in *Loan Association vs. Topeka* (20 Wall., 655), said (on pages 664, 665):

"To lay with one hand the power of government on the property of the citizen and with the other to bestow it upon favored individuals to aid private enterprises and build up private fortunes is none the less a robbery because it is done under the forms of law and is called taxation. This is not legislation; it is a decree under legislative forms. Nor is it taxation. . . . We have established, we think, beyond cavil that there can be no lawful tax which is not laid for a public purpose. It may not be easy to draw the line in all cases so as to decide what is a public purpose in this sense and what is not. . . . But in the case before us, in which the towns are authorized to contribute aid by way of taxation to any class of manufacturers, there is no difficulty in holding that this is not such a public purpose as we have been considering."

"If it is said that a benefit results to the local public of a town by establishing manufactures, the same may be said of any other business or pursuit which employs capital or labor. The merchant, the mechanic, the innkeeper, the banker, the builder, the steamboat owner are equally promoters of the public good and equally deserving the aid of citizens by forced contributions. No line can be drawn in favor of the manufacturer which would not open the coffers of the public Treasury to the importunities of two-thirds of the business men of the city or town."

In *Cole vs. La Grange* (113 U. S., 1) Mr. Justice Gray said (on page 6): "The general grant of legislative power in the constitution of a State does not enable the legislature, in the exercise either of the right of eminent domain or of the right of taxation, to take private property, without the owner's consent, for any but a public object. Nor can the legislature authorize counties, cities, or towns to contract, for private objects, debts which must be paid by taxes. It can not, therefore, authorize them to issue bonds to assist merchants or manufacturers, whether natural persons or corporations, in their private businesses. These limits of the legislative power are now too firmly established by judicial decisions to require extended argument upon the subject."

Numerous other quotations might be made, but they are unnecessary, for, as stated by Mr. Justice Gray in *Cole vs. La Grange* (supra), "We have been referred to no opposing decision," and it is believed that no such decision can be furnished.

From these cases, and others referred to by Judge Shepard in the opinion in the Miles case, the court reached the following conclusion:

"We think the authorities cited above establish beyond question that the power of taxation, in all free governments like ours, is limited to public objects and purposes governmental in their nature. No amount of incidental public good or benefit will render valid taxation, or the appropriation of revenues to be derived therefrom, for a private purpose."

The last sentence of this quotation was severely criticised by the counsel of

the sugar-bounty claimants, and was put in contrast with the language of Judge Black in *Sharpless vs. Mayor, etc.* (21 Pa. St., 147), that

"The tax laid must be held valid unless it be for a purpose in which the people taxed have palpably no interest; where it is clearly apparent that the burden imposed is for the benefit of others, and where it would be so pronounced at first blush."

And the language of Judge Dixon in the case of *Brodhead vs. Milwaukee* (10 Wis., 624-652), that—

"The object for which money is raised by taxation must be public and such as subserves the common interest and well-being of the community required to contribute. To justify the court in arresting the proceedings and declaring the tax void the absence of all possible public interest in the purposes for which the funds are raised must be clear and palpable—so clear and palpable as to be perceptible to every mind at the first blush."

Rightly understood, Judge Shepard's language does not conflict with that above quoted from the opinions of Judge Black and Judge Dixon.

The distinction between a public interest or benefit and a public purpose, and between a private interest or benefit and a private purpose, must be kept in mind. No degree of public interest or benefit, no matter how large, will justify a tax for a private purpose, while the highest degree of private interest or benefit will not defeat a tax for a public purpose. This distinction is clearly drawn out in numerous cases.

In *Lowell vs. City of Boston* (111 Mass., 454) it is said (on page 461):

"The promotion of the interests of individuals, either in respect of property or business, although it may result incidentally in the advancement of the public welfare, is, in its essential character, a private and not a public object. However certain and great the resulting good to the general public, it does not, by reason of its comparative importance, cease to be incidental. The incidental advantage to the public or to the State which results from the promotion of private interests, and the prosperity of private enterprises or business, does not justify their aid by the use of public money raised by taxation, or for which taxes may become necessary. It is the essential character of the direct object of the expenditure which must determine its validity, as justifying a tax, and not the magnitude of the interest to be effected, nor the degree to which the general advantage of the community, and thus the public welfare, may be ultimately benefited by their promotion. The principle of this distinction is fundamental. It underlies all government that is based upon reason rather than upon force."

In *Curtis's Administrators vs. Whipple* (24 Wis., 350) it was said by Judge Dixon, the same judge who delivered the opinion in *Brodhead vs. Milwaukee* (supra, page 355):

"Any direct public benefit or interest of this nature, no matter how slight, as distinguished from those public benefits or interests incidentally arising from the employment or business of private individuals or corporations, will undoubtedly sustain a tax."

In *Niagara Falls and Whirlpool Railroad Company* (103 N. Y., 375) it was said (on page 385):

"What is a public use is incapable of exact definition. The expressions 'public interest' and 'public use' are not synonymous. The establishment of furnaces, mills, and manufactures, the building of churches and hotels, and other similar enterprises, are more or less matters of public concern, and promote, in a general sense, the public welfare. But they lie without the domain of public uses for which private ownership may be displaced by compulsory proceedings."

The case was one where the exercise of the right of eminent domain was sought to be enforced.

The whole matter is admirably summed up by Judge Cooley in the *The People vs. Salem* (20 Mich., 452, on page 485):

"We perceive, therefore, that the term 'public purpose,' as employed to denote the objects for which taxes may be levied, has no relation to the urgency of the public need or to the extent of the public benefit which is to follow. It is, on the other hand, merely a term of classification, to distinguish the objects for which, according to settled usage, the Government is to provide, from those which, by the like usage, are left to private incitation, interest, or liberty."

What is a public purpose is not always easy of ascertainment, the line between a public and a private purpose not always being clear. Attempts to aid, by gifts of the public funds, enterprises of various kinds have been defeated by the courts in cases holding such gifts not to be for a public but for a private purpose. Manufacturing establishments have been uniformly treated as private rather than public enterprises. Manufactories generally were so treated in opinions of the Judges (38 Maine, 500); a sawmill and box factory in *Allen vs. Inhabitants of Jay* (60 Maine, 121).

In *Loan Association vs. Topeka* (20 Wall., 655) aid was attempted to be given by the city of Topeka to an iron bridge and iron works company; a foundry and machine works and marine railway was attempted to be aided by the city of Parkersburg in *Parkersburg vs. Brown* (106 U. S., 487); a rolling mill in *Cole vs. La Grange* (113 U. S., 1), and establishments of a similar nature in various State cases. The creation of a fund to loan to those whose buildings had been burned by a disastrous fire, destroying a large portion of a city, was held not to be a public purpose in *Lowell vs. Boston* (111 Mass., 454) and *Friedman & Co. vs. The City Council of Charleston* (23 S. C., 57).

Directly aiding agriculture by the issuing of township bonds for the relief of farmers within the township who had lost by failure of the crops the seed necessary to be planted for the next season was held to be a private and not a public purpose of the township in *State vs. Osawkee Township* (14 Kans., 418). An act authorizing a bounty for planting, protecting, and cultivating forest trees on prairie lands was held not to be for a public purpose in *Deit vs. Mississippi County* (107 Mo., 464). In *Central Branch vs. Smith* (23 Kans., 745) erecting and maintaining a dam and mills in a township was held to be a private and not a public purpose.

In *Burlington vs. Beasley* (91 U. S., 310) and *Blair vs. Cumming County* (111 U. S., 333) gristmills were held to be works of internal improvement, to aid in constructing which a town might issue bonds, only because the mills were declared by the statute to be public mills which were obliged to grind for toll for all customers upon regulations prescribed by governmental authority, as explained by Mr. Justice Gray in *Cole vs. La Grange* (supra). It can not be claimed that any such authority has been exerted over the sugar plants to which the bounty has been given by Congress. The rules and regulations which the Commissioner of Internal Revenue and the Secretary of the Treasury were authorized to make are simply rules for the protection of the Treasury in order that it may be ascertained that the bounty has been in fact earned.

A fair test of the question of public purpose might be the power to exercise the right of eminent domain. If a law had been passed conferring the right upon the Oxnard Beet Sugar Company to condemn lands for the erection of its factory, could such an act have been sustained by the courts as a proper exercise of the right of eminent domain for a public purpose? In *Eureka Basin and Warehouse Manufacturing Company* (96 N. Y., 42) such a right was denied in a case where a corporation was authorized to condemn property for the purpose of constructing and maintaining docks, basins, piers, wharves, and warehouses, on the ground that such an enterprise was a private one, and the pretense that it was for a public purpose was merely colorable and illusory so long as the property and other structures were to remain under private ownership and control with no right to their use or

to direct their management conferred upon the public. And even the right to condemn property for a railroad has been denied when the sole purpose to which the railroad could be put was to transport pleasure seekers to obtain a view of Niagara Falls and River, the situation of the railroad being such that it could not be used by the general public as a means of transportation. (*Niagara Falls and Whirlpool Company*, 108 N. Y., 375.)

The only cases cited as apparently justifying bounties of a character similar to the sugar bounties were the Michigan salt cases—*People ex rel. Salt Company vs. State Auditors* (9 Mich., 327); *Salt Company vs. East Saginaw* (19 Mich., 230, s. c., 13 Wall., 373). In none of these cases was the constitutionality of the Michigan statutes drawn in question, and therefore no decision was rendered by the supreme court of Michigan or the Supreme Court of the United States upon that question. The decisions in 19 Mich. and 13 Wall. were not upon the bounty provision of the Michigan act, but upon that part of it creating an exemption from taxation. The decisions amount simply to this, that, conceding the constitutionality of the act providing for the salt bounty, the amounts earned thereunder before its repeal or modification were valid claims, which should be paid.

The case of *Calder vs. Henderson* (54 Fed. Rep., 802) was also relied upon as holding the sugar bounties of the McKinley Act constitutional. The constitutional question, however, was not involved in that case, but simply whether the amount to be collected from the Government under the sugar-bounty provisions of the McKinley Act passed to an assignee in insolvency under the laws of Louisiana. It was held that the interest did so pass, and the statements made by the judges who delivered that opinion were to the same effect as the salt-bounty decision in 9 Mich., that the bounty act created a contract to the extent of the interest actually vested thereunder, provided the bounty act was constitutional, a question not discussed nor decided.

This review of these cases seems clearly to sustain the conclusion reached in the Miles case, that the payment of these sugar bounties is not one for a public purpose of the Federal Government. For, as shown by Judge Shepard, the principle of these cases is as applicable to the State and Federal governments as it is to the towns, cities, townships, and other subordinate political divisions of the State. He said:

"Nor was the decision of either of those cases made to turn upon a mere question of 'municipal authority,' but instead upon the broad question of 'legislative power.' As said by Wells, Justice: 'The point of difficulty is not as to the distribution of the burden by allowing it to be imposed upon a limited district within the State, but as to the right of the legislature to impose or authorize any tax for the object contemplated by this statute.'"

If establishing manufacturing enterprises in a town or city or aiding the reerection of private business buildings destroyed by a disastrous conflagration devastating a city are not public purposes of such town or city, or aiding a large class of farmers of a township who have lost their seed by failure of crops to obtain a sufficient amount for the next season's planting is not a public purpose of the township, or giving a bounty to those in a prairie county who would plant trees on their own lands is not a public purpose of such county, how can the giving of a bounty for the production of sugar from cane, beets, or sorghum grown in the United States be a public purpose of the Federal Government? The difference seems to be one of degree and not one of kind. As was said in the opinion in the Miles case:

"If it may be for 'the general welfare of the United States' to encourage the production of sugar by the grant of a bounty, it is hard to conceive why the producers of corn, wheat, cotton, wool, coal, iron, silver ore, etc., might not be paid a bounty also.

"If Congress be conceded the power to grant subsidies from the public revenues to all objects it may deem to be for the general welfare, then it follows that this discretion, like all admitted powers of taxation, is absolute. Such a doctrine would destroy the idea that this is a government of 'delegated, limited, and enumerated powers,' render superfluous all the special delegations of power contained in the Constitution, and open the way for a flood of socialistic legislation, the specious plea for all of which has ever been 'the general welfare.' It is a doctrine that we can not subscribe to."

In other words, a complete change from the self-dependence and local self-government in which it has been conceded lies the strength of our institutions to a system of socialistic paternalism by the Federal Government might be brought about, and we might soon reach a point where, instead of the people supporting the Government, the Government would support the people, as suggested in President Cleveland's veto of the Texas seed bill (*State Papers of Grover Cleveland*, Government Printing Office, 1899, page 238), wherein he disapproved of that bill upon the ground of its doubtful constitutionality.

It is claimed, however, that a century's construction of the Constitution by Congress in practical legislation has sanctioned both direct and indirect bounties, and that such a practical construction is binding upon the courts as determining that industrial bounties are for a public purpose. To sustain that proposition, in addition to certain acts of Congress, statements made in early tariff debates that bounties might be given in lieu of certain taxes as a means of aiding industries, and similar statements made in the reports of high executive officers, were cited, reliance being especially placed upon tariff acts as passed not only for the raising of revenue, but for the protection of industries, the claim being made that a direct bounty by way of subsidy from the Treasury is not different from an indirect benefit derived from a high customs duty. Particular reliance was also placed upon the acts providing for what are generally known as the cod-fishery bounties.

Expressions of the kind stated were undoubtedly made by prominent statesmen in the debate on the first tariff act, and by prominent executive officers in official reports. These expressions related rather to the question of policy than to the question of constitutionality, which does not seem to have been directly considered. It is a strange fact, however, that unless the so-called cod-fishery bounties can be considered as bounties in fact, which is seriously doubted, no direct money-bounty act has ever been passed by Congress until the sugar bounties of the McKinley Act. While economically the effect on industries may be the same, whether a high protective duty is laid or a direct bounty given, it is not necessarily true that both methods may be legally sustainable.

Levying a tax is the exercise of legislative power whatever may be the motive which actuates its levy. The motive can not be inquired into by the courts. (*Veazie Bank vs. Fanno*, 8 Wall., 533.) Even if no revenue should be derived from the tax, the possibility that such revenue might be obtained is sufficient to sustain the legality of the statute. That a direct bounty may not be sustained as constitutional although a tariff tax is valid seems to result from the decision in *Field vs. Clark* (143 U. S., 849).

In regard to the so-called cod-fishery bounty, an examination of the debates indicates clearly that it was originally passed as granting a drawback upon the duty on the salt used in curing the fish and not as a bounty to the fisheries. It was furthermore justified as an aid to the "fishing trade as being a nursery for seamen and serving as a kind of naval militia for the United States," this latter being undoubtedly a governmental purpose. The whole question seems to have been tersely summed up by Senator Chandler, of Michigan, in the debate on the act of July 28, 1864, when he said:

"The Committee on Finance propose to give cod fishermen all they want—a remittal of the duty on foreign salt. All that they pretended they ever asked was a remittal of that duty." (*Congressional Globe*, page 4070.)

But if the same was considered by some as a bounty, it "was strenuously resisted on constitutional grounds," as stated by Story. (*Constitution*, section 91.) In 1838 there was passed "An act to encourage the production and promote the cultivation of tropical plants in the United States" (5 Stat., 302), which granted a township of land in southern Florida to Dr. Henry Perrine and his associates for the purpose stated in the caption of the act. This act, when before the House of Representatives, was also vigorously attacked on constitutional grounds as a mere bounty not within the power of Congress to confer. In answering this objection it was pointed out that the Constitution provided:

"Congress shall have power to dispose of . . . the territory and other property of the United States." (Paragraph 2, section 3, Article IV.)

And therefore that they had by express grant absolute power over the public lands. This view seems to be confirmed by Story (section 1327):

"The constitutional objection to the appropriation of the other revenues of the Government to such objects (internal improvements, education, etc.) has not been supposed to apply to an appropriation of the proceeds of the public lands. The cessions of that territory were expressly made for the common benefit of the United States, and therefore constitute a fund which may be expressly devoted to any objects which are for the common benefit of the Union."

The bounty provision of the McKinley Act was also vigorously fought in Congress as unconstitutional and as an entirely new departure in Federal legislation. When it became a law, the whole act was attacked in the courts on the ground that the unconstitutionality of the bounty provision vitiated the entire act (*Field vs. Clark*, 143 U. S., 849), where, however, it was held that the bounty provision was separable from the tariff portion of the act, and the constitutionality of the bounty provision was not decided. When the first case directly based upon the bounty clause reached the courts, it was held to be unconstitutional.

When it is seen that no act granting a bounty in aid of industries has ever been passed without being severely criticised by members of the legislative body as unconstitutional, and when the only act passed in early days which can by any possibility be claimed to be a money-bounty act was only justified by those who were then members of Congress as a drawback and an encouragement to the formation of a naval militia, it can not be said that such a practical legislative construction of the Constitution has been made as will require or justify the courts in holding bounties constitutional. On the contrary, the absence of all such legislation is, under the circumstances, rather a practical construction that bounties are unconstitutional.

A practical construction of the Constitution by Congress has only been treated by the courts as making the true construction in cases where the proper construction was not clear and the construction by Congress had been early adopted and uniformly adhered to. (*The Laura*, 114 U. S., 411; *Field vs. Clark*, 143 U. S., 849-601; *McPherson vs. Blacker*, 140 U. S., 1.) In the recent income-tax cases counsel for the Government pressed upon the court without effect the legislative practice during and since the war.

Nor can such a construction fairly be inferred from the other acts cited to sustain this proposition. Most of these acts may be classed under the general designation of "charities." Before 1863, or for three-quarters of a century after the formation of the Constitution, but three of such acts appropriating money have been found. They are the act of February 12, 1791, "for the relief of the inhabitants of San Domingo, resident within the United States, as may be found in want of support" (6 Stat., 13); the act of May 8, 1812, "for the relief of the citizens of Venezuela" (2 Stat., 730), and the act of January 24, 1827, "for the relief of indigent sufferers by the fire at Alexandria" (4 Stat., 356). Of these acts it may be said that that for the relief of the Alexandria fire sufferers was one passed while Alexandria was a part of the District of Columbia, and therefore directly within the jurisdiction of Congress, while the other two acts seem to have had some direct connection with our diplomatic relations, a subject solely cognizable by the Federal Government.

In the act of 1791 for the relief of the San Domingo sufferers it was provided that the amount of the relief should "be provisionally charged to the debt of the French Republic, subject to such future arrangements as shall be made thereon between the Government of the United States and the said Republic," with a further proviso that unless such arrangement were made within six months the relief should cease; while in the act of May 8, 1812, the relief was tendered "in the name of the Government of the United States to that of Venezuela." But on the subject of these two acts, as well as all the acts of charity passed since 1863, the remark made by Mr. Cambreleng, when the act for the relief of the Alexandria sufferers was being debated, may be quoted: "This was not the time nor the occasion to fight the battles of the Constitution. . . . God grant that it may never be surrendered to an enemy more formidable and dangerous than charity."

Of these so-called bounty and charity acts Judge Shepard said:

"All such acts, however worded or devised, have met with determined opposition and denial of power at all times, and it can not be said that they have ever received general consent or acquiescence. The fact that moneys have often been paid out under acts of doubtful or questionable validity can have no great weight under a system where the question, by reason of difficulties before alluded to, is so hard to be raised in an effective manner.

"But if there had been a practice by Congress uniform and generally acquiesced in, our opinion is so clearly against the validity of this act that we could not be controlled by it in the performance of our duty. No time, no acquiescence, no estoppel runs against the people under the protection of our written Constitution."

In which conclusion the Comptroller concurs.

It is furthermore suggested rather than urged that these bounties, being given to stimulate agriculture, whereby production, and as a result commerce, would be increased, might be sustained under the power "to regulate commerce with foreign nations and among the several States and with the Indian tribes." (*Constitution*, paragraph 3, section 8, Article I.) That contention seems to be conclusively settled by the opinions of the Supreme Court in *Veazie vs. Moore* (14 How., 568); *Kidd vs. Pearson* (128 U. S., 1), and *United States vs. E. C. Knight Company* (156 U. S., 1), wherein it was distinctly held that agriculture and manufacture were not commerce, and could not be regulated as an incident to the power to regulate commerce.

These cases seem also to dispose of the suggestion that the reciprocity feature of the McKinley Act might sustain the bounties; besides, the tariff and reciprocity features of the McKinley Act are independent of the bounty provision, as specifically held in *Field vs. Clark* (*supra*).

It is contended, however, that the power to appropriate is absolute in Congress, that it is a political power not cognizable by the courts, and that the correction lies with the people at the polls if its use exceeds constitutional limits. No authorities are advanced to sustain this proposition. The power to appropriate is coextensive with the power to lay taxes. The appropriation is the means by which the purpose for which the tax is levied is carried out. Unless, therefore, there is the power to tax, there can not be the power to appropriate. Whether a tax is laid for a public purpose may be inquired into by the courts, as shown by the cases already cited. In *Allen vs. The Inhabitants of Jay* (60 Mo., 124) the question was elaborately discussed and the conclusiveness of the legislative decision denied.

These various arguments were considered in the opinion of the court of appeals of the District of Columbia in the Miles case as not justifying the

sugar bounty of the McKinley Act as a constitutional exercise of the taxing power. It is sought to discredit that opinion on the ground that it is not a decision upon the merits of a question actually before the court necessary for determination, and therefore is a mere dictum; and also that that court is not a constitutional court of the United States, its opinion being of no more force than that of any inferior State court or Territorial court of the United States. The constitutional point, if not absolutely involved, was in fact raised and discussed by counsel because it could not be known that the court would decide the case on other points. Even if it be a dictum, it is entitled to the highest weight as the opinion of the judges who concurred in the same after argument and due consideration.

As to the character of that court, it need only be said that it is an appellate court created by Congress, whose opinions are entitled to as much weight as the opinions of the circuit courts of appeals of the United States. If the Comptroller is ever justified in following the opinion of an inferior Federal court which is founded upon the application of cases decided by the Supreme Court of the United States, and the reasoning of which is convincing to his own mind, certainly the Comptroller is justified in following this opinion of Judge Shepard, concurred in by Judge Morris and not dissented from by Chief Justice Alvey, the other judge who sat in the case.

But it is claimed that the case of *Calder vs. Henderson* (54 Fed. Rep., 802) is a dictum contrary to that in the *Miles* case. The *Calder* case was one between private individuals, and the constitutionality of the bounty was not drawn in question or argued and the opinion does not even refer to it. Even if that opinion be a dictum, holding the bounty constitutional, and be entitled to as much weight as the so-called dictum of Judge Shepard, there would then be two dicta, the one offsetting the other, by courts of equal standing. Under such circumstances, a private individual would unquestionably wait for a final decision by the court of last resort before irrevocably paying out his money. It would seem that the Government, as the agent of the people and the custodian of their funds, should do no less.

3. If the present claim were founded upon the provisions of the bounty clause of the McKinley Act, upon which the opinion in the *Miles* case was given, it would not be necessary to say anything more upon the subject; but it is founded upon an appropriation made in the act of March 2, 1895; and it is claimed that even if the original bounty provisions of the McKinley Act are unconstitutional, the appropriation now under consideration may be sustained upon the ground that Congress have the power to make appropriations founded on a moral obligation, and that such considerations exist for the payment of the claims covered by the appropriation in the act of 1895.

This contention is largely based upon the statement of Judge Cooley in his work on *Taxation*, on page 91, and the numerous cases cited in the notes thereto, and other cases of similar purport, that taxes may be levied to pay equitable claims. It is not to be denied that Congress has the power to make many appropriations based exclusively upon equitable considerations and for claims which are not legal obligations of the Government, and much legislation of that character has been passed.

An examination of all the authorities cited shows that the power has been sustained only in cases which were within the constitutional limits of the legislative power, and generally to pay equitable claims which would have been legal demands but for the failure to comply with some formality of law, or claims founded upon services voluntarily rendered or money voluntarily loaned, in cases where the legislature might have originally provided for the employment of the services or the borrowing of the money.

No single case has been presented in which it was held, or even suggested, that, if a matter had been originally beyond the power of the legislative body because in violation of the Constitution, the legislature by a subsequent act could have made it valid.

The contention that a moral obligation existed authorizing Congress to make the present bounty appropriation rests upon the alleged fact that by the sudden repeal of the bounty provision of the McKinley Act an injury was done to the sugar producers, who believed they would receive the benefits of that bounty, if not for the full period of time therein named, at least for all that had been earned under its provisions prior to its repeal and for the crop which, at the time of the repeal, was actually grown, but not yet manufactured. But it must not be overlooked that if the McKinley bounty was unconstitutional a wrong was done to the people whose money was paid out of the Treasury without their authority.

The theory which rests at the basis of this moral obligation is the repeal of a constitutional act. If the original act was null and void because unconstitutional, the cessation of payments thereunder because of its repeal would be no different from the cessation of payments because the act had been held unconstitutional by the Supreme Court. If the court should have held the act unconstitutional upon the same day that it was in fact repealed, no payments could have been made thereafter under the original act, and it can not be contended that Congress could by another act continue the unconstitutional provision because people at their peril had relied upon the original act as constitutional.

Such view would involve the result that a constitutional prohibition against a given expenditure could always be evaded simply by passing two acts, the first unconstitutional, the second valid because passed to compensate the disappointment arising from the unconstitutionality of the first, but both accomplishing the same original purpose of paying out the people's money to a beneficiary for a purpose forbidden by the organic law. This would be to continue the original wrong and to perpetuate the original usurpation. The justice and equity of the present bounty upon the theory of the repeal of a constitutional statute may be conceded. The question is not one of policy, but of power. If the power exists, the extent of its exercise is solely for Congress to determine, and no executive officer or court can question its conclusions. But if the power does not exist, no degree of natural justice and equity or moral obligation can justify Congress in assuming it or make its action valid.

Congress is the agent and representative of the people when it acts within its power, but when it does not act within its power, it does not act for the people, and having once exceeded its power, it can not, by its own act, ratify so as to make valid its own wrongful action. That can only be done by the people, whose representative it is, and by an amendment to the Constitution in the manner prescribed therein.

This is well illustrated by the forcible language of Mr. Justice Matthews in the opinion in *Pollock vs. Greenhow* (114 U. S., 270-280):

"The Government is an agent, and within the sphere of the agency a perfect representative, but outside of that it is a lawless usurpation. The constitution of the State is the limit of the authority of its government, and both Government and State are subject to the supremacy of the Constitution of the United States and of the laws made in pursuance thereof. So that, while it is true in respect to the government of a State, as was said in *Langford vs. United States* (101 U. S., 341), that the maxim that the king can do no wrong has no place in our system of government; yet it is also true in respect to the State itself that whatever wrong is attempted in its name is imputable to its government and not to the State, for, as it can speak and act only by law, whatever it does say and do must be lawful. That which, therefore, is unlawful because made so by the supreme law, the Constitution of the United States, is not the word or deed of the State, but is the mere wrong and trespass of those individual persons who falsely speak and act in its name."

This language, although spoken of a State, is equally applicable to the United States, and therefore a statute which transgresses the power conferred upon Congress by the Constitution is not the act of the people by their agents as perfect representatives or their word and deed, but the wrong "of those individual persons who falsely speak an act in (their) name"—an act of "lawless usurpation."

Therefore, if the McKinley bounty act was unconstitutional, the promise to pay the bounty was not the promise of the United States, or even the promise of their agents or representatives as such, which should be fulfilled. No moral obligation to fulfill this promise, for the making of which the people are not responsible, can arise from the wrongful assertion by their representatives, while acting beyond their power, that the promise is the promise of the people because made in their name.

It was suggested, however, that the people had got the benefit of their agents' act, and should therefore make good the promise. But if the bounty was not given for a public purpose, no such benefit was received. In all the above-cited cases where gifts were held to be unauthorized because for private purposes, that which was expected from the gift had been obtained, and yet none of the cases was upheld on this ground. In *Parkersburg vs. Brown* (supra) this suggestion was made without effect. It was said in that case (page 509):

"But it is contended by the appellees that independently of the original validity of the bonds the city is liable to pay them because it misled and prejudiced their holders and prevented them from resorting to the security, or because it received the full value of the bonds in consideration of paying them."

To which Mr. Justice Blatchford, who delivered the opinion of the court, answered:

"The only misleading or prejudice was that the holders of the bonds, mistaking the law, supposed them to be valid obligations of the city."

It is also suggested that when Congress gets out of the domain of law and into the realm of justice and equity its power is unlimited. That would no doubt be true if Congress could get out of the domain of law, but it can not do so. The limit of the domain of law to Congress is the extent of the legislative power conferred upon it in the Constitution, and its power to do equity and justice is restricted by its limitations.

As the courts can not declare any act of the legislature unconstitutional on the ground that it is contrary to the principles of natural justice and equity, neither can the legislature make an act constitutional which otherwise would not be so simply because in passing the same they were actuated by motives founded upon the principles of natural justice and equity.

The bounty of the act of 1895 is not limited to those who may have suffered an injury by failure to receive the bounty of the McKinley Act, but is given to all alike, whether they suffered loss or not. There is nothing which indicates that it was intended to make compensation for such injury, and that can not be implied. The provision now under consideration is simply the continuation in full of the bounty provision of the McKinley Act for the benefit of those who failed to receive that which they had already earned under the McKinley Act up to August 23, the date of its repeal. It is a mere continuance of the original provision, and if the original provision was invalid, it is inconceivable that the present provision can be any more valid.

4. Having reached the conclusion that the present bounty provision has no more constitutional validity than the original McKinley bounty had, it follows that the same action should be taken under the present appropriation as would be taken if the original bounty appropriation were still unrepaid and were held unconstitutional. If the Comptroller should pass the claims, the Government would be absolutely concluded and the money of the people be taken from the Treasury in payment of demands not authorized by law, if the appropriation is in fact unconstitutional. By a refusal to pass the claims the ultimate rights of the claimants are in no way affected, for they have a perfect remedy in court to test the validity of their claims and obtain payment thereof after a final determination of the constitutionality of the law, if it be held constitutional.

If the Comptroller had no other alternative than to pass or reject the claims for the reasons above given, his duty to the whole people, who can not bring their rights into court, would require him to reject them, leaving the claimants to their recourse to the courts, but Congress has provided another means of escape, apparently with the intention of relieving an officer who finds himself obliged to differ with the legislative branch of the Government or violate his oath to support the Constitution.

The papers in the present case will therefore be returned to the Auditor for transmission by him, through the Secretary of the Treasury, to the Court of Claims, under section 1093, for the rendition of a judgment, as required by the provisions of section 1094 of the Revised Statutes, in order that there may be furnished "a precedent for the future action of (the) Executive Department in the adjustment of (the) class of cases" involved in these sugar bounties.

R. B. BOWLER, Comptroller.

## The Tariff.

## SPEECH

OF

HON. IRVING P. WANGER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 30, 1897.

The House being in Committee of the Whole on the state of the Union and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. WANGER said:

Mr. CHAIRMAN: The caustic and brilliant criticism by the present distinguished Speaker of this House delivered in the Fifty-third Congress, that the mightiest and most successful effort of the Democratic President and Congress at that time was in the direction of the cessation of effort, of labor, and of industry, was, in my judgment, no less true and well founded than is the universal

hope of the tolling masses of this country, as well as of the people having capital for investment, that the excellent measure now under consideration, when perfected, will be a grand inspiration to effort, and will lead this country out of the slough of despond into the highlands of prosperity and contentment.

And it is gratifying to us all that there is a substantial basis for the conviction that the four years' blight which has sent sorrow into so many homes and dissipated so many fortunes will so pass from our land and be succeeded by the brightness and joy coming from expanding, prosperous industries.

Much as we may rejoice over this prospect of material improvement and prosperity, we can, as patriots yearning for the most perfect unity of loyal devotion to our common country, find no less occasion for delight in the just expectations for equally significant and fruitful harvests in that phase of the problem; and if there is any more favorable sign of the entire wiping out of all sectional feeling among the people of our country than is to be found within the provisions of this bill I fail to know where to look for it, because it is not simply the industries of one section of our country or one class of people, but of all sections and of all people that are to be subverted.

The sugar plantations of the South and their pineapple orchards receive as favorable attention as do the grass fields and potato gardens of the North, while the lumber, lead, and coal interests are promoted with special view to the prosperity of the forester and miner.

The gentleman from Georgia, my personal friend [Mr. BARTLETT], grew very eloquent and indignant yesterday afternoon, repudiating the idea that Georgia, or the South generally, or the Democracy, were to be bought by a mess of pottage. I do not suppose that they are to be bought by anything, Mr. Chairman, but I observed in the early part of yesterday's discussion that when a mess of bauxite was offered to them, they were very content to accept that, and no division was called upon the question of raising the duties upon that product of the South.

When they are so solicitous that the seats we occupy in the House may be occupied by our political opponents in future Congresses, I beg to call their attention to the propriety of looking to themselves and seeing whether their intelligent constituencies will not discriminate between their fiery philippics and denunciations and that condition of prosperity always at hand under a Republican Administration as compared with the condition of want and despair under a Democratic Administration. And when they realize that mighty difference, there is probably far greater danger that many of the estimable gentlemen on this side of the Chamber (by which side, of course, I mean the Democratic side) will find successors in other persons than there is of such a consequence prevailing upon the Republican side.

Rhetoric, however lurid, will not be weighed as of equal advantage to legislative provisions which tend to a development of resources; and the industrial progress of Georgia, Louisiana, and the rest of the South, under the provisions of this measure after it becomes a law, will menace the official tenure of our opponents far more than of ourselves. But be that as it may, we can justly content ourselves in serving our country according to the best lights of experience and highest impulse of patriots, and leave personal results to the future with confidence and content.

While generally approving this measure, I hope to see amendment in certain particulars, one of which is seed culture. It is the highest form of agriculture, and engages the most intelligent farmers, and conduces most to our independence. Think of dependence upon foreign countries for seeds! With farming unprofitable, the whole country languishes; with it prosperous, the nation is happy, and with a diversion of many producers of staples into growers of seeds much of overproduction of farm products may be avoided. I trust that the rates of duty on seeds in the bill as pending, although double what they have ever been before, will be still further advanced, and shall print in the RECORD an intelligent showing by a practical farmer and seed grower of the reasons and propriety for such increase.

Another subject which I trust for amendment is in making dutiable by name the articles known as catheters and bougies. The manufacture of these may seem trifling, but the reverse is really the case, and I allude to them particularly because of the conceded superiority of those made in this country, and shall print an article upon the subject by a distinguished surgeon. The policy of encouraging every display of skill and enterprise in the production of articles of utility, however trifling in size, will tend to promote the production of all similar articles and greatly diversify our manufactures.

A feature of the measure deserving special commendation is the limitation upon the value of articles purchased abroad which tourists may enter free when returning. It has been the cause of much just criticism that the American spending the summer abroad could bring his year's supply of clothing and many other articles home untaxed, to the disadvantage of our artisans, manufacturers, and general consumers, and every true American will

rejoice that the curb is to be applied, and the only fair criticism will be whether it is as closely applied as should be. A great gain will be made, and if experience shows the margin to be too great, the amount can be halved or quartered.

Appreciating that the most effective service toward the passage of this measure, which the country is so earnestly demanding, is the avoidance of prolonged discussion, I shall conclude with grateful acknowledgments for the opportunity to submit these few observations and for the kind attention of the House.

## APPENDIX A.

## TARIFF CATECHISM; OR, QUESTIONS AND ANSWERS UPON THE TARIFF ON SEEDS.

[By D. Landreth & Sons, Philadelphia, seed farmers for one hundred and fourteen years. Established 1784.]

Question 1. What have been the various tariff rates on garden seeds?

Answer. Our knowledge of the seed business goes back to 1784, from which date up to 1861 there was no duty upon garden seeds, all revenue bills classifying seeds on the free list. Subsequently, 30 per cent under the bill of 1861, 30 per cent under the bill of 1862, 20 per cent under the bill of 1874, 10 per cent under the bill of 1894, now in force.

2. Q. How many systems are there under which tariff is collectible?

A. There are two distinct systems: First, the ad valorem, which is at present in operation as applied to seeds, and under which system a fixed percentage is assessed on the value of the merchandise as shown on the invoice; for instance, if the invoice value of the goods is \$1 per pound and the duty 25 per cent, the amount collectible is 25 cents. Second, the specific system, under which a fixed number of cents is laid upon a fixed quantity, as by the pound, the bushel, or the yard; for instance, on pease, it might be, and should be, 40 cents on each bushel, irrespective of the value of the bushel.

3. Q. Why do you recommend specific duties instead of ad valorem?

A. To prevent fraud, as under the ad valorem system the invoices under which the foreign goods are entered may be fraudulent; that is, made out at less than the actual prices agreed to be paid to the foreigner. At the Treasury Department at Washington is a record of a case of an American seedsmen who paid duty upon false invoices and subsequently had to pay a penalty of about \$5,000, the estimated amount of deficient duty. Again, the firm issuing this circular was a few years ago asked by a foreign firm of seed dealers if they should make out for this firm two invoices, the first invoice showing the actual prices to be paid for the seed; the second invoice made out at low prices to be presented to the custom-house officials. The foreign firm said they frequently did this for American importers.

4. Q. When there are some seeds on the free list of similar appearance to others on the dutiable list, are the dutiable varieties ever passed off as the free-list varieties?

A. Often; for example, for some years sugar-beet seed has had free entry, consequently dutiable beet seeds have been entered free of duty as sugar beet. Ruta-baga seed is dutiable, but it has been entered free as rape seed.

5. Q. Is it necessary that protection should be given to the American grower of all garden seeds?

A. Yes; at one time seed farmers and merchants thought to the contrary. They thought that in this country we possessed, by reason of our soil and climate, a monopoly upon the growth of the seeds of some semitropical plants, as tomato, eggplant, and melon, but even these are now grown in quantity and offered at ruinous prices, from southern Europe, Algeria, Tunis, and Egypt. The conditions bearing upon Egyptian cotton as competing against the product of the Southern States are repeated in the growth of seeds. Egyptian onion seed is now sold in London at 6 cents per pound, the normal price for past years being 40 to 50 cents per pound. The competition then was bad enough from the grower who wore wooden shoes and lived in a cabin with an earthen floor, but competition now is from the "fellah" of Egypt, who goes barelegged all the year round.

6. Q. What was the influence in 1894 which caused the reduction of the duty on seeds from 30 to 10 per cent ad valorem?

A. The influence upon the committee dealing with the subject of the tariff of certain parties largely engaged in the importation of European seeds. Seed farmers had no influence whatever with the Congressional committee, their representatives being ignored in favor of these seed merchant importers, who pressed their claims to a successful issue.

7. Q. Is not the 3,000 miles distance of foreign seedmen a serious barrier to the free importation of foreign seeds?

A. No barrier whatever, the freight from London and Paris being only one-half cent per pound; less than freight from Philadelphia or New York to Cincinnati.

8. Q. Do foreign seed establishments have agents in this country?

A. Yes; a dozen seed firms have resident agents, and, in addition, they send over every year commercial travelers who scour the whole country, and at the expense only of railway fares and hotel bills, come into intense competition with American taxpayers, who certainly have claims to protection.

9. Q. If cheap foreign seeds are allowed to continue in competition with American seeds, what will be the result upon American productions?

A. Ultimately a final stoppage of the growth of American seeds, preceded by a lowering of quality of American seeds, the natural result of an effort to cheapen their cost. Under exceedingly low prices the grower is not warranted in expending cash for the necessary labor in taking mixtures out of his crop, which removal of individual plants reduces the quantity of the crop harvested.

10. Q. What is the view among Europeans as to the value of the United States as a seed market?

A. They look upon this country as a gold mine, no other country in the world offering them such large, constant, and good-paying customers. At present they have a cinch on every seed farm in the Union.

11. Q. Name the European countries in their relative order as respects the amount of their seeds sent to America.

A. France, Germany, England, Holland, Italy, and Denmark.

12. Q. Why are European seeds cheaper than American?

A. Because of cheap European labor, farm labor on the continent ranging from 30 to 50 cents per day for fourteen hours. Still less on the north coast of Africa and in Egypt.

13. Q. What have the domestic, social, and educational conditions of European seed farmers to do with the tariff question?

A. Everything to do with it; for, under the conditions in which they exist, they do not know one want in five of the family of the American seed farmer. They have none of the aspirations of an American. They do not conceive of such wants existing; consequently their labor is cheap and they are content to just vegetate. The low-down condition of continental seed farmers is so sad as to elicit the deep sympathy of every American, but that is no reason why Americans should open their ports to cheap European competition unless

they are satisfied that their sons shall in the next generation be brought down to the European conditions.

14. Q. Do many American merchants deal in foreign-grown vegetable seeds?

A. Nearly all. They are obliged to; and the number is increasing every year, because they have to sell as cheaply one as another, or have their trade taken from them by those merchants who do sell the low-priced foreign seeds. The commercial travelers of foreign establishments cover this country every summer like partridges. No merchant is too small for them to visit and offer their temptingly low prices. The consequence is foreign seeds are fast supplanting the American. Low prices influence the orders without regard to source of origin.

15. Q. Are the imported seeds which are sold to American gardeners passed off as of American origin?

A. Nothing is said of their origin to the gardener unless he insists upon an explanation, and then often he is deceived.

16. Q. Are foreign seeds of good quality?

A. Often very excellent, but not better than American. Those which are best adapted to our climate and to our wants are grown from American stock seed developed here and sent abroad to be grown for a crop to be returned. Thus the crops which should cover tens of thousands of acres belonging to our own people are cultivated by the foreigner, while our own people cry out for something to do besides growing corn, wheat, and potatoes.

17. Q. From whom does the American seed merchant who desires to purchase foreign seed get his supplies?

A. From some of the many well-known seed establishments in England or on the Continent. Firms of the highest degree of technical intelligence and of rare business capacity. Few of these establishments cultivate their own land to a broad extent, but contract for their supplies with small peasant farmers. It is these peasant farmers, with their simple wants, who compete with American seed farmers.

18. Q. Are the transatlantic mails used by foreign seedsmen for the distribution of their seeds free of United States duty?

A. Yes; more and more every day. Flower seeds, which under the present law are on the free list, are largely sent from Europe in that way to seed merchants in this country, 2 or 3 ounces or 4 or 5 ounces in each packet. By the ounce these seeds are often worth three or four dollars, sometimes twice that value. Some seeds are worth \$20 an ounce. Retail packages are also sent direct to retail buyers, to whom the foreign establishments send their retail catalogue. It is quite possible that in the future an immense business may be developed by the foreign establishments with consumers in this country, and the producers of seeds in this country suffer to that extent.

19. Q. What is the annual value of garden seeds imported?

A. About \$2,000,000.

20. Q. To what extent do American seed farmers want the duty raised?

A. They want a duty on seeds which, placed on top of the cost of importing seed, will raise the total cost here to the normal cost of the same variety grown on American farms. Farmers do not ask prohibitive rates, but just fair play and no favor on either side. Now the favor is all on the side of the foreigner, and that certainly is wrong.

21. Q. To what extent must foreign seeds be taxed to help American seed farmers?

A. Five cents per pound on all low-priced seeds, 10 cents per pound on all intermediate-priced sorts, 20 cents per pound on all high-priced sorts.

22. Q. If the duty on seeds should be raised from the present rate of 10 per cent to an equivalent of 30 per cent, would not that be protection?

A. No protection whatever. No tariff rate protects unless it raises the cost of the foreign article up to the cost of the American. Certainly, seeds are as worthy of protection as sugar, which has 40 per cent; rice, which has 75 cents a bushel; potatoes, which have an equivalent of 40 per cent; apples, an equivalent of 50 per cent. If the intention is to foster the most technical, the most intense branch of agriculture, then the American producer of seeds must be given an equal chance with the foreign competitor.

23. Q. Estimated in the cost of raising seeds, what proportion represents labor?

A. Fully 80 per cent. Everything is labor except the natural growth consequent upon physical conditions of soil and climate.

24. Q. Will not the market gardener have to pay more for his seed if foreign seed is subject to duty?

A. Yes; a little; but only a few cents per acre, as, for example, with beet seed, sowing 8 pounds to the acre, under a duty of 5 cents per pound, the extra cost would only be 40 cents per acre. With cabbage seed under a duty of 20 cents per pound, one-fourth pound being sufficient for an acre, the increased cost to the market gardener would only be 5 cents per acre. Besides, nearly all market gardeners are seed growers, and would profit by the tariff protection.

25. Q. How are garden seeds developed to a high standard of quality, and how are they retained at that standard?

A. By processes of selection extending over years, the removal, season after season, of all individual plants not up to the theoretical standard as respects shape, size, color, and period of maturity. All this costs money, and can not be done except under prices that will pay the cost.

26. Q. Why was sugar beet put upon the free list?

A. To lighten the costs of experiments in making beet sugar; but now, the sugar manufacturer being on a firm basis, should no longer need that bonus at the expense of the American seed grower. It is demonstrated that good sugar beet seed can be grown in this country, and the 700,000 pounds annually imported should be grown here and the seed farmer now encouraged to grow seed the same as the sugar manufacturer was encouraged to make sugar.

27. Q. If good seeds can be raised in America, why do American seed merchants buy European seeds?

A. Because of business necessities. Because some seed merchants are dealers alone in European seeds, which they get at a cheap rate, and other merchants, even while they may be American seed growers, are forced to import many of their supplies if they expect to compete with the importer. It is evident that they must obtain their supplies as cheap as the importer if they expect to hold their business. They must either become importers or shave down the price paid the American grower.

28. Q. How many seed farms are there in the United States?

A. The agricultural census shows a record of 596 seed farms, of a total of 170,000 acres. The number of farms reported certainly does not comprehend one-half of those existent.

29. Q. What is the amount of investment in seed farming?

A. According to the last census \$18,000,000 invested in farms, buildings, and implements.

30. Q. What is the amount of investment in market-garden farms?

A. According to the last census \$70,000,000.

31. Q. What is the estimated value of the seed business of the United States?

A. About \$15,000,000 as done by first hands, largely increased by jobbing the seeds.

32. Q. Do the facts prove that European seedsmen are organized to capture the American market for seeds?

A. Yes; they will certainly capture the entire American seed trade, even if

they have to reduce their present prices 40 per cent. They can reduce them, and will do so unless barred by a duty so high as to give the American seed farmers a chance to continue in business.

33. Q. What is the quantity of leading sorts of seeds imported free of duty per annum?

A. Clover seed.....	pounds.....	4,115,000
Grass seed.....	do.....	2,900,000
Hemp seed.....	do.....	2,700,000
Mustard seed.....	do.....	1,600,000
Rape seed.....	do.....	1,100,000
Sugar-beet seed.....	do.....	700,000
Canary seed.....	bushels.....	101,000

34. Q. How many bushels of Canadian peas are annually imported?

A. Two hundred and eighty-five thousand six hundred any seventy-eight bushels, according to a special report obtained from the Treasury Department, every bushel of which could be grown in the State of New York, Michigan, or Wisconsin if the tariff rate was higher. A cessation of the American orders to Canadian farmers would be a most serious loss to them, but self-preservation is the first law of nature. Something has got to be done to revive all our drooping agricultural interests and to diversify them.

35. Q. What is the present duty on peas?

A. Twenty cents a bushel. It should be 40 cents; this would put the American pea grower on a competitive base—not more.

36. Q. What very practical course in addition to a good stiff tariff can be adopted to prevent European seed establishments from absorbing the American seed trade?

A. By requiring both foreign and American salesmen representing European establishments to take out a five-hundred-dollar license to sell in every revenue district which they enter. American seedsmen, both seed growers and seed merchants, pay taxes; so should foreign seed merchants who expect to do business in the United States. Under the international-commerce act it has been pronounced unconstitutional to require salesmen of American houses to take out selling licenses, as commerce between the States must be free; but this does not apply to salesmen of foreign establishments whose employers do not contribute to the support of this Government as does every American farmer.

37. Q. Such a license law as this would entirely stop the coming to this country of the commercial travelers of foreign establishments.

A. Exactly; that's just what the seed farmers desire. They want the salesmen of the foreign establishments to stay at home. Seed merchants here who want to purchase foreign seeds can get all they want by correspondence.

38. Q. Who are the seed farmers of the United States?

A. The very best class of farmers, men who want to diversify the operations of agriculture, leading spirits in their respective communities.

39. Q. In what respects do the American seed farmers differ from the European growers of seed?

A. Here the seed farmer lives in a good house, he educates his children and dresses in good clothes. On the Continent the seed farmer lives in a cabin with a stone, if not earthen, floor. He wears wooden shoes. He has no aspirations above those which his grandfather had. It is this kind of a man who raises seed so cheaply that the American farmer has to surrender to him the growing of seeds, which work should be the most elevated work an American farmer could do.

40. Q. If the tariff protection to garden-seed farmers should be made stronger, should not the same rule apply to all other farmers?

A. Under the Wilson bill, grain farmers, while they do not have sufficient protection, are far better protected than seed farmers. For example: 10 per cent is the rate on garden seeds, but grain farmers are protected by 20 per cent on corn, buckwheat, barley, wheat, oats, rye, beans, apples; 15 cents per bushel on potatoes, 75 cents per bushel on rice. While these rates on the cereals are not high enough, is it not ridiculous that garden seeds should only have one-half the protection of a common crop like oats? Or compare the costs of a crop of commercial beans harvested in ninety days from planting, a crop which can be grown by any inexperienced farmer and under an ad valorem protection of 20 per cent, with a crop of cabbage seed which has only 10 per cent protection—a crop taking fifteen months from planting to harvest, and only successfully grown on high priced land, because the crop requires the best soil, a crop requiring expensive and diligent culture, and subject to many reverses. It is a sad commentary upon the intelligence of our lawmakers.

41. Q. If the farmer is the most independent among men, why does he want an increased tariff?

A. He is no longer the most independent, as everything he grows brings him far less than ever before. His products are the shuttlecocks of all other commercial interests. Every manufacturing interest is first looked after and well protected, while the farmers' interests are knocked about from side to side. Men of fixed salaries, in many instances the same now as twenty years ago, can with the same money buy nearly twice as much of everything as then; but the farmer's income is not fixed, but on the contrary has been steadily decreasing for twenty years, until now it is half of what it was then, while the salaries and incomes of men of other pursuits are about the same, often higher. If the farmers were put into a position to buy freely, their expenditures would create a fabulous demand for every article of trade, but so long as the farmer languishes, so will general business, as agriculture is the foundation of all prosperity.

42. Q. What part of the United States is interested in the protection of garden seeds?

A. All portions. Garden seeds are grown from Maine to Louisiana, from Jersey to California. California is now one of the leading States in this most important branch of agriculture. According to last census the seed farms were divided as follows:

North Atlantic division.....	258
North Central division.....	137
South Atlantic division.....	29
South Central division.....	57
Western division.....	25

43. Q. What amount of garden seeds does California and Oregon produce annually?

A. The product of 7,000 acres in seed crops, amounting to about 60 tons of seed of lettuce, 500 tons of seed of onion, 60 tons of seed of celery, 50 tons of seed of carrot, 200 tons of seed of other vegetables, 100 tons of seed of sweet peas.

44. Q. Should not seed farming be protected and fostered equally with other interests?

A. Undoubtedly, for seed farmers widely scattered over the country do not belong to trade unions or protective associations as do the manufacturers and their employees, consequently seed farmers have not been able to bring upon Congress, especially upon tariff committees, the required influence to gain their close attention, seed farming compared with many far more extensive pursuits having been completely eclipsed—pushed aside—by matters considered of far greater importance. The manufacturer, on the other hand, is always on dock to plead his cause, and he gets attention, even if the products of the farm go unprotected.

45. Q. How do the prices paid by gardeners for seeds in the United States compare with prices paid by gardeners in European countries?

A. Under low or practically no duties the American gardener buys his seed at prices 50 per cent lower than the English, French, or German gardeners pay. This is because the European seed merchants wholesale their seeds to American merchants at lower prices than they wholesale in their own countries, America affording an outlet for surplus stocks, speculative crops, and contract crops, which, under the circumstances, the foreign merchant is glad to sell or contract to supply. All such sales or contracts he is glad to add to his normal business. This assertion as to the difference in retail prices paid by European and American gardeners can be proven in a moment by a comparison of American and European catalogues.

46. Q. How does seed growing rank with general agriculture?

A. It is the most intense effort of agriculture, all success in the growing of crops depending upon the purity and merit of the seed stock. If agriculture is the basis of our national prosperity, good seed certainly is the beginning of all wealth. American seed farmers can not raise good seeds unless encouraged to do so by protection against the competition of seeds from abroad, which are landed here, duty and freight paid, 50 per cent below our cost of production.

47. Q. Are there any kinds of garden vegetable seeds which can not be grown in the United States?

A. None. At one time it was thought cauliflower seed could not be grown within our borders, but now California produces it in very large quantities and of excellent quality.

48. Q. As all these arguments are in the interests of the American farmer, an inquiry is in order if there is any movement among importers to influence Congress in favor of keeping the tariff where it is?

A. Yes; a very earnest effort, both public and private. Foreign agents resident in New York and representing European nurserymen and seedsmen have had meetings this January to discuss the subject. What they did is not known, but they have had experience, while the American seed farmers, widely scattered, are without organization. In addition to the influence of the agents of foreign nursery and seed establishments, there is the far stronger influence of some American seed merchants, large importers, who always have been prominent in opposing any tariff on seeds.

49. Q. Should garden seeds be considered a crude or finished product?

A. They are finished, because the work can be carried no further. They are developed from a crude product of nature—the vegetable—and only obtained after a season of culture, and a process of selection extending beyond that given to vegetables cultivated by market gardeners. The risks of insect depredations and climatic injuries are extended far beyond the risks of the vegetable grower.

50. Q. What is the difference, as understood at the present day, between garden seeds and field seeds?

A. By the term "garden seeds" is understood seeds producing plants of edible tissue, either above or below ground; esculent plants used without process of manufacture. Garden seeds are not necessarily planted alone in gardens, for, under the present vast extent of market gardening in the States, garden seeds are planted on as broad fields as corn, wheat, or grass. Seeds of ornamental flowers are also garden seeds. By "field seeds" are meant those of wheat, corn, sorghum, clover, and grass, all, excepting forage plants, requiring processes of manufacture to fit them for use.

51. Q. Are American seeds of better vitality than foreign seeds?

A. Most decidedly of better vitality, being ripened thoroughly under our hot sun, and during our dry summer. American seeds are more vital two years old than foreign seeds are one year old—a very important quality—and yet foreign seeds by their low prices supplant the better article.

52. Q. Give an example of the results of a 5-cent specific duty per pound on turnip seed.

A. Foreign turnip seed costs to import under the present duty 8 cents per pound. Now, 5 cents per pound on this would make it cost 13 cents. The American farmer can not grow turnip seed to make any profit at less than 15 cents; thus, 5 cents per pound will not even protect him.

53. Q. Give an example of the results of a duty of 30 cents per pound on cabbage seed.

A. Foreign cabbage seed is now landed under the present duty at from 18 to 25 cents per pound; 30 cents per pound duty on this would raise the cost to 33 and 45 cents per pound. American seed farmers can not grow cabbage at any profit at less than 40 cents per pound.

54. Q. What duty does the German nation levy upon seeds entering that empire?

A. On wheat, 22 cents per bushel; on oats and buckwheat, 12 cents; on barley, 13 cents per bushel; on Indian corn, 15 cents per bushel.

55. Q. What duty does the French nation, for the purpose of stimulating agriculture, levy upon seeds entering France?

A. On wheat, 25 cents per bushel.  
On peas, beans, Indian corn, barley, rye, rice, 15 cents per bushel.  
On buckwheat, 12 cents per bushel.  
On oats, 10 cents per bushel.  
On sugar-beet seed, 3 cents per pound.  
On clover, \$1.50 per bushel.

56. Q. How does the French tariff bear upon tobacco as an agricultural product, which the French people desire to protect?

A. Under penalty, if sold in trade. The French law permits an individual to import for his personal use 25 pounds per annum of cigars or cigarettes under a duty of \$1.50 per pound, or to import 25 pounds of snuff under a duty of \$1.40 per pound.

There is existing in France a tobacco monopoly in which the Government is a partner, which monopoly is permitted to import tobacco in all forms free of duty; but any and every other corporation, firm, or individual in France is absolutely prohibited from importing a single pound of leaves, stalk, juice, or tobacco in any form whatever.

57. Q. Is there in foreign countries a disposition to remove or reduce their tariff rates?

A. No disposition of the kind, but, to the contrary, a determined effort to increase them. In the summer of 1896 an international convention was held in Budapest at which it was decided to advise the governments of central Europe to lay heavy duties upon every kind of seed and grain from America.

58. Q. Why do the authors of this catechism so strongly advocate protection against the free entry of foreign seeds?

A. Because they are practical seed growers on 1,800 acres which they hold in fee simple, and on which they have expended vast sums in buildings, machinery, and appliances, and because they have seeds grown on contract by American farmers on still larger areas. What they say in this catechism they say not for themselves, but for all American seed farmers.

NOTE.—Since the above fifty-eight questions and answers were printed the authors have been informed that the House Committee on Ways and Means has decided upon the agricultural schedule as follows:

Hay, \$4 per ton. This is designed to protect the farmers of the border States, where the normal value of hay is \$6; consequently the duty on hay will be equivalent to 66 per cent.

Hops, 15 cents per pound, equal to 100 per cent.

Corn, oats, buckwheat, all at 15 cents per bushel, which is equal to 50 per cent.

Wheat, 15 cents per bushel, which is equal to 33 per cent.

Rice, 75 cents per bushel, which is equal to 50 per cent.

Potatoes, 25 cents per bushel, which is equal to 50 per cent.

Cabbage heads, 3 cents each, which is equal to 100 per cent.

The members of the committee do not know that cabbage heads have first to be grown to full perfection, and afterwards be stimulated by fertilizers, and subject to favorable or unfavorable climatic influences covering a second season of eight months' additional time, in order to produce seed. These gentlemen propose 100 per cent on the unfinished product, the cabbage head produced the first season, and 50 per cent on the seed product obtained from it the succeeding summer.

The committee propose 40 per cent on vegetables, but only 20 per cent on their subsequent product. This can easily be understood in the case of onions, where the proposed duty is to be 40 cents a bushel on an article seldom worth 40 cents, therefore 100 per cent, but the seed subsequently produced from the onion to have only 20 per cent protection.

The authors of this catechism do not object to the increased duties on farm products. They highly approve of the changes; have advocated them earnestly as absolutely necessary for the protection of the agricultural interests of the nation; but they ask that the most advanced branch of agriculture be given protection equal to the lowest branches. What is required, indeed absolutely necessary, is indicated under paragraphs No. 20, 21, and 22. Anything less will not afford any relief.

## APPENDIX B.

[Reprinted from the New York Medical Journal for July 23, 1893.]

NOTES ON AMERICAN CATHETERS AND BOUGIES.

[By J. W. S. Gouley, M. D., Surgeon to Bellevue Hospital.]

The necessity of resorting to artificial means for relief of the distended urinary bladder must have compelled primitive man to improvise hollow cylinders sufficiently long and slender to enable him to pass them into the urethra and thus reach and empty the bladder. These original tubes of many ages past were probably straight, rigid, and nonmetallic, but there are abundant proofs that two thousand years ago catheters were straight and curved, rigid and metallic; witness those found in the ruins of Pompeii. The employment of flexible nonmetallic instruments appears to be of comparatively recent date.

Soft, pliable catheters of animal tissue seem to have been made during the eleventh century, but their use did not become general until the latter part of the last century, when they were constructed of woven-silk cylinders coated with an elastic varnish. Apparently the first of these elastic instruments were manufactured by the jeweler Bernard, of Paris, in the year 1779, the suggestion respecting the varnish having been made by Herissant. Afterwards Thedn, of Berlin, carried out Herissant's idea of using india rubber dissolved in ether; but Bernard had already omitted the india rubber from the component parts of his varnish. In 1785 Pickel, of Würzburg, published the formula for a new varnish, into whose composition no india rubber entered, and gave a detailed account of the manner of coating the instruments. Since then many improvements in the details of manufacture have been made, and the so-called gum catheters have gradually replaced metallic instruments in most cases requiring frequent catheterism. Bougies of the same materials were used and are still made to be used instead of the metallic, emplastie, and wax bougies.

Until recently France, Germany, and England seem to have supplied the greater part of the gum catheters and bougies used in different parts of the world. The first large manufactory of catheters in England was established many years ago by a German, Mr. Eschmann, whose successors are still engaged in the extensive manufacture of these instruments. About fifty years ago, says Mr. Stohmann, soft catheters and bougies were manufactured in the United States by a Frenchman, Mr. Petrie, who had established himself in Philadelphia, but soon gave up the business because the demand for his instruments was too limited, on account, perhaps, of their being inferior to those imported from France.

From that time it does not appear that any attempt was made to manufacture gum catheters in this country until the year 1879, when Mr. Roy, son-in-law of Mr. Bénas, of Paris, established a catheter factory in one of the suburbs of New York, and continued to supply, to a limited extent, the demand for gum catheters until 1890, when his establishment was closed. Thus far the home manufacture of these catheters had affected but little the importation of French, English, and German catheters.

It has not been possible to obtain strictly accurate information relating to the importation, home manufacture, and consumption of soft catheters and bougies, but some of the merchants and manufacturers assert that the annual sale is about 1,000,000 soft catheters, of which 200,000 are of india rubber and 110,000 bougies. In 1887 the importations of flexible web catheters were about as follows:

From England, 550,000; from France, 150,000; from Germany, 50,000. During the year 1887 the J. Ellwood Lee Company, of Conshohocken, Pa., began to manufacture web catheters on a small scale; but, having improved the necessary machinery, soon obtained excellent results and so extended their establishment, which is perhaps the largest catheter factory known, as now to be able to manufacture 375,000 web catheters and 50,000 bougies annually. Until the end of 1875 nearly all the soft vulcanized india-rubber catheters used in this country were imported. In 1876 the firm of George Tiemann & Co., of New York, began the manufacture of india-rubber catheters with countersunk blunt-edged eyes, under the name of velvet-eyed catheters, and also some catheters of the same material with no lateral eye, but open at the vesical end.

The following-named firms have since been engaged in the manufacture of soft-rubber catheters: The Davidson Rubber Company; Parker, Stearns & Sutton; the Akron Rubber Company; the Tyler Rubber Company, and several other companies. At present, of the 200,000 india-rubber catheters sold annually in the United States, only 30,000 are imported. In 1891 the importation and the home manufacture of soft catheters and bougies bore the following proportions:

Cheap commercial catheters, English	200,000
Better qualities of catheters, English	40,000
Better qualities of catheters, French	35,000
Better qualities of catheters, German	10,000
Soft india-rubber catheters, English	30,000
Cheap commercial bougies, English	45,000
Better qualities of bougies—English, French, and German	15,000

Total imported..... 475,000

Cheap commercial catheters, American	100,000
Better qualities of catheters, American	275,000
Soft india-rubber catheters, American	170,000
Cheap commercial bougies, American	30,000
Better qualities of bougies, American	20,000

Total home manufactured..... 595,000

Thus in the lapse of a few years this industry has been developed to a degree which has already permitted in a year the exportation of 100,000 web

catheters to England, Ireland, Scotland, France, Germany, Spain, South America, Australia, and India. There is also a large export trade in rubber catheters. These American catheters and bougies are fully equal to those manufactured in foreign countries, and some of them are even superior, notably the commercial and the best woven-eye silk catheters, as will be seen by a comparison of the tensile strength and of the quality of the varnish of the different instruments in use.

The American (Biemann's) India-rubber catheters are superior to those of foreign importation in the construction of the eye, in the high polish of their surface, and in the smoothness of their interior.

The substances used for the framework of American web catheters are cotton, flax, ramie, and silk. The labor of weaving the cylinders is nearly the same in all qualities of web catheters, and the same varnishes are used for coating the different grades. The cost of the raw materials and the labor in finishing make the difference in price of the several qualities. In the higher grades of catheters the eye is woven, while in the lower grades the eye is punched.

Within the past few months a new catheter factory has been established in the city of New York, under the firm name of C. F. Kingstone, formerly of Roy & Co. The managers are C. Bénas and C. Roy. The quality of catheters and bougies manufactured at the Kingstone establishment is fully equal to that of the best instruments ever made in Paris.

The properties of good web catheters may be stated as follows:

1. They are thoroughly, but not too thickly, coated with varnish inside as well as outside, and highly polished. The varnish is pliable, not apt to crack, and resists the action of moist heat up to 212° F.
2. In length they do not exceed 33 centimeters (about 13 inches).
3. In diameter they vary from 2 to 9 millimeters.
4. The distal extremity of their single oval eye is 1 centimeter from the point, which is smooth and rounded. This eye, in curved, elbowed, and double-elbowed catheters, is generally lateral; but in some of these instruments the eye is superior, corresponding to the concavity of the bend, and in other cases the eye is omitted, the catheter being open at both ends, or, in addition to the eye, the vesical end is open for catheterism upon a whalebone conductor.

Good web catheters are firm but pliable, never rigid, from the proximal to the distal end. A web catheter with a rigid vesical extremity is a dangerous instrument, liable to cause false passages in the deeper regions of the urethra.

6. The form of the vesical extremity is in accord with its intended uses. Straight web catheters are not so safely and easily used as the curved, elbowed, or double-elbowed, the curved form being the most easily introduced into strictured urethra and in the majority of cases of enlargement of the prostate.

7. The tensile strength of the different qualities of web catheters was ascertained by experiment to be as follows:

The breaking strain of an English commercial catheter was 42 pounds, the breaking strain of an American commercial catheter was 54 pounds, the breaking strain of an American lisle-thread catheter was 56 pounds, the breaking strain of an American silken-linen catheter was 60 pounds, the breaking strain of an English silk-web catheter was 85 pounds, and an American silk-web catheter of best quality was then tested to 115 pounds without breaking, but the varnish was stripped off at each end.

When it is necessary to retain a catheter in the urethra and bladder, the physician should select one which has not been too thickly coated with varnish. The highest grade of catheter is not always the best for this purpose, because in the course of twenty-four hours the urine filters through the internal wall of the catheter, the silk webbing is saturated, swells irregularly, and uplifts here and there the coating of varnish, which soon scales off, while the lisle-thread, silken-linen, and those silk catheters with thin external coating resist longer the action of the urine, and do not lose their smoothness after being retained forty-eight hours in the bladder. If, however, the interior of all web catheters were thoroughly varnished, and thus rendered impervious to moisture, there would be no irregular uplifting of the surface and no scaling.

The American commercial catheters have lately been much improved in quality, and they may be found very useful in hospital as well as in private practice. Their cost is little as compared to that of the higher grades. A catheter of this kind may be used for a single day and thrown away, or may be repeatedly boiled without injury, and used as long as the surface of the instrument retains its smoothness. These improved instruments are known as "10-cent catheters."

No catheter whose surface is fissured or otherwise roughened should be passed into the human urethra, because it would not only irritate this canal, but convey therein septic germs. For general use physicians will find it advantageous to purchase the higher grades of web catheter, because, with proper care, they last long and retain their suppleness and smoothness. After having used an American silk-web catheter 300 times, its surface was found to be as smooth as in the beginning.

The instrument was then retired from active service to be preserved as an illustration of the excellence of home manufacture. Another American silk catheter was used 1,200 times by a patient, and was set aside only because its surface had become irregular, although it was not cracked.

It may now be proper to make a few suggestions respecting the kind of care web and soft-rubber catheters require to render their employment safe to patients and easy to physicians:

1. All web catheters should be kept at full length and never coiled; otherwise the varnish will surely crack.

2. Web catheters should be loosely wrapped in dry antiseptic gauze and preserved in tightly closed metal cases until wanted for use. After they have been used they should be carefully cleaned, thoroughly dried inside and outside, then replaced in the gauze and case, or they may be carried in hollow walking sticks.

3. Soft-rubber catheters should be kept at full length, never coiled, and should be wrapped in moist antiseptic gauze and preserved in tightly corked glass tubes capable of containing three or four catheters, because exposure to the air leads to rapid oxidation, which causes the instruments to become hard and brittle.

Before using a rubber or a web catheter it should be dipped for a minute in a 1 per cent carbolic-acid solution, but not longer, as carbolic acid, even in such a weak solution, acts injuriously upon the varnish of web catheters, as well as upon rubber catheters, by prolonged contact.

4. Before using a web catheter it should be slightly warmed by friction in the hands and by a momentary immersion in warm 1 per cent carbolic-acid solution to prevent cracking of the varnish, particularly during cold weather.

5. Web and rubber catheters are much injured by fats of all kinds, by glycerin, by saliva, and by vaseline, which, however, seems to be the least hurtful of these lubricants. If used at all, it should be in the smallest quantity—just enough to very thinly coat the catheter. Some physicians reject not only the fatty but all other lubricants, and think it sufficient to moisten the catheter with warm water. More soft catheters are destroyed by the excessive use of fatty substances than by any of the many other abuses to which they are subjected. Therefore there is need of a lubricant which shall not be irritating to the urethra, and which shall contain no fat and no free alkali to deteriorate the varnish of web catheters and soften rubber catheters.

After examining different substances it was thought that a watery solu-

tion of dry soap, with the introduction of some ingredient to add lubricity to its viscosity, would be likely to answer the purpose. On consultation with Dr. Charles Rice, the chemist of the department of public charities, the following formula for a saponic lubricant was agreed upon:

White castile soap, powdered ..... 300 grains.  
Tincture of quillaja (1 in 5) ..... 4 fluid ounces.

Water, a sufficient quantity.  
(Product, about 1,420 grains.)

*Mode of preparation.*—Pour 2 fluid ounces of water into a tared capsule, heat the water to boiling, and add the soap. Continue the heat and stir until a homogeneous jelly is produced, then add enough hot water to make the contents of the capsule weigh two troy ounces and a half (1,200 grains), after which strain the mixture through cotton gauze. Lastly, pour in the quillaja tincture. This mixture when cool has the consistency of thick honey, possesses both viscosity and lubricity in a sufficient degree, and is free from any agent likely to be deleterious to the urethra or to the catheter. It may be preserved in an aseptic state in small collapsible tubes. The lubricant may be perfumed, or 1 per cent of pure carbolic acid may be added. Among the experiments tried was an addition to the mixture of 2 drachms of Chondrus crispus jelly (National Formulary). This slightly increased the lubricity, while it greatly increased the fluidity of the mixture. It is likely that the *Cetraria islandica* will yield similar results.

7. All web catheters are liable to harden and to be unfit for use in the course of a few years, especially when they have not been in daily use. On the first appearance of the hardening process the instruments should be cast aside.

8. Rubber catheters harden and are brittle in about two years, or even sooner, if unused and exposed to the air. But when daily lubricated with fatty substances they seldom last more than three or four weeks, then swell, lengthen, and undergo a process of softening which renders them liable to be torn across during withdrawal, so that often several inches of this deteriorated rubber remain in the bladder.

9. After using a web catheter it should be well washed by forcing a stream of water through the instrument, which should then be dipped for a minute into a 1 per cent carbolic-acid solution, thoroughly dried, wrapped in dry antiseptic gauze, and inclosed in a metal case. The drying process is begun by shaking off briskly the last drops of water from the interior of the catheter, which may then be exposed to 120° F. of heat in a dry sterilizer or in any other way that may be safe and convenient.

10. Web catheters, even "10-cent catheters," may be rendered aseptic also by boiling for ten or fifteen minutes, then drying thoroughly in a sterilizer, when they will be ready for use. During ebullition the catheters should not be coiled, but kept at full length and away from the bottom of the boiler. Dry sterilization may be accomplished as well just before using the catheter, but care should be taken to prevent the instrument from sticking to the metal.

11. Inasmuch as some time is necessarily consumed in the drying process, it is more convenient to a patient who is obliged to catheterize his bladder five or six times every twenty-four hours to be supplied with ten or twelve web catheters (No. 9 or 10 of the English scale), and to use two catheters each day, so that the same catheters may be used only once every five or six days. This plan has been pursued by a number of patients who have all fully appreciated its advantages. In one of these cases, the patient relieving himself eight times daily, the catheters so used were carefully examined seven months after and found unaltered and in the best condition, each instrument having been used about a hundred and forty times.

American web bougies are made of the same materials as those of catheters. They are, therefore, of the same grades—cheap commercial cotton, flax, and ramie.

A cotton olivary bougie made by the Lee Company happens to be the best for general use. It is solid, slender in the first 3 inches of its shaft, and consists of a number of layers braided one upon another and coated with the same varnishes as the catheters, but it is distinguished from other bougies by its vermilion color.

It has no ivory tip, is completely coated, and therefore easily rendered aseptic. The care of wrapping in gauze and inclosing in a metal tube is needed to preserve the instrument, which should be cast aside if it becomes fissured. It should be slightly warmed before introduction. No fats should be used as lubricants.

Whalebone bougies were used in France early in this century, and also in the United States. Dr. H. G. Jameson (Medical Recorder, 1827) spoke well of the utility of whalebone bougies of "the size of a small knitting needle" in the treatment of urethral strictures. Whalebone bougies are of two kinds—those with olivary point and elbowed, about one millimeter in diameter, to serve as conductors for larger instruments, and those for the dilatation of narrow strictures.

The second, also elbowed and olive pointed, are not over 1 millimeter in diameter for the first 3 inches, thence increasing gradually in diameter so that at 5 inches they are equal to Nos. 2, 3, 4, 5, 6, and 7, English scale, the set comprising six bougies, as indicated by these numbers. All whalebone bougies require to be thinly coated with carbolic vaseline and preserved in metal tubes; otherwise they become dry and brittle and are soon destroyed by parasites.

## The Tariff—The Dingley Bill.

### SPEECH

OF

HON. CHARLES H. GROSVENOR,  
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 15, 1897.

The House having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States, and the question being upon agreeing to the report of the committee of conference upon the disagreeing votes of the two Houses—

Mr. GROSVENOR said:

Mr. SPEAKER: I shall not weary the House by a discussion of the details of this most important measure, but will confine myself to a general discussion of the necessity for this legislation and for the general features of the same. It is an oft-told tale, but can not be repeated too often, that the Democratic party came into power with a solvent Treasury and a satisfactory credit, and how,

In a very brief period, an enormous deficit made its appearance; two hundred and sixty-odd million dollars were borrowed upon the bonds of the Government, largely to pay the running expenses of the same.

In this connection, I want to turn aside and answer or explain a circumstance which occurred during the closing months of the Administration of President Harrison, which has been seized upon so often and distorted in a manner well calculated to deceive the people of the country. The discovery has been made recently of a supposed long-lost brother in the form of an order given by Mr. Secretary Foster, of the Treasury Department, to the Bureau of Engraving and Printing, in the winter of 1893, directing that a plate for the printing of a 3 per cent bond should be prepared by that Bureau; and thereupon a shout has been sent up that they have proved that the Republican Treasury was bankrupt and had to borrow money to carry on the Government.

The silliness of this whole business has been exploited and exploded so often that it is painful to have to return to it now. The facts are briefly these:

Mr. Carlisle, then a Senator, but shortly to become the Secretary of the Treasury, anxious for the solvency of the institution to which he was to be promoted, had a conversation with the Secretary of the Treasury, as that gentleman has more than once asserted, and Secretary Carlisle either said to Senator Sherman, or Senator Sherman so understood him, that he would like to have a provision by which he could borrow money or issue Treasury certificates therefor in case of the trouble which seemed to be close at hand.

The Democratic party had won in the election; they had won upon a platform denouncing the McKinley law, asserting their intention to repeal it, and the common judgment of mankind was that the fact would be to at once destroy public confidence and practically bankrupt the Treasury, and so Senator Sherman placed the provision authorizing the issue of a 3 per cent bond upon an appropriation bill. Bear in mind now that this was not any bond that had already been authorized, and when you look into the recent discovery hereafter of the Secretary of the Treasury, you find to your astonishment, after what the Democrats have been saying, that it was an order to prepare a plate for a bond which at that time was not authorized by any act of Congress and could not be issued except by special legislation for that purpose.

So we establish the fact that the order suggested and which was made by Mr. Secretary Foster was an order for a bond which was to be a different bond and to be hereafter authorized by law. It would seem that this was a statement so plain that everybody could understand it; but of course it will be disputed again and another discovery made some of these days. Mr. Carlisle changed his mind, unless Mr. Sherman misunderstood him in the beginning, and went to Mr. Sherman and advised him that he did not want that legislation, and inasmuch as he was to be the responsible head of the fiscal department of the Government, Mr. Sherman at once withdrew the amendment, or the amendment was withdrawn, as the case may have been, and thereupon there was no plate made. There was no necessity for it, because there was no law authorizing the issue of the particular bond that was described in the order of the Secretary. It was done, the whole proceeding had its inception and its execution, so far as the execution went, in the interest of aiding the incoming Secretary of the Treasury to meet the deficit which Democratic success in the election had absolutely assured.

Now, that is the whole of this wonderful discovery. No man can make any more out of it. The coming of that deficit made its appearance very shortly following the election of Grover Cleveland. There never was a deficit under Harrison's Administration, and, more than that, he paid off the Government bonded debt two hundred and fifty-odd million dollars. That is a plain, unmistakable fact, and weighs more than all the nonsense of this modern discovery.

The simple difference between the two Administrations in this regard was that the Harrison Administration reduced the public debt two hundred and fifty-odd million dollars and the Cleveland Administration increased the public debt, including the outstanding bonded obligations of the Government, nearly \$500,000,000. There was a difference in the financial performances of the two Administrations of about \$750,000,000. That is all there is of it; that is very plain language, and everybody can understand it.

Finding the Treasury in this condition, tariff legislation was imperative. The Republican party carried the country last year upon the pledge of a protective tariff. Our Democratic friends who supported Bryan admit or claim that the country was not carried upon the protective-tariff issue. Then they admit that the free-liver dogma of Bryan and his leaders was repudiated by the people of the country. If, upon the other hand, they recognize that which I assume to be within the knowledge of all intelligent men, that the country was carried in large part upon the issue of a protective-tariff system, then they admit the duty of the hour to be the passage of a protective-tariff law.

It is the duty of the Republican party to enact this legislation.

It is its duty because of the extreme necessity for the legislation, and it is its duty because it is a part of the platform of the party and was one of the pledges by which it gained power. It is the duty of the Republican party to enact tariff legislation because without it the industries of the country can not revive.

We are told now by the Democratic press, admitting that there are signs of coming improvement, that that improvement has been made under the Wilson law. That is true, but it has been made at a time when the death of the Wilson law has been demanded by the people of the country and the demand of the people is being carried into execution by the political party in power. So that from every standpoint our duty is to obey the demands of the people and pass tariff legislation. And here, Mr. Speaker, is the embodiment; here is the law. What is it? It does not propose radical or unreasonable enactment. It proposes to proceed along the line of Republican policy so often proclaimed and so universally approved, to wit, by taxes upon import articles the like of which we produce in this country, to the end that we may have revenue and protection. It proposes a duty on articles the like of which we do not produce in this country, and which are articles of luxury, used largely and principally by the rich, for the purpose of revenue, and not for protection. It proposes that articles of mere necessity used by the people of the country in general, and not produced in this country, shall be admitted free of duty.

These are the leading general suggestions of this law. It treats as coming within the scope of this great principle the products of this country of every description, whether they be such as have usually been denominated finished products or raw material. The Republican party knows no distinction between that article or commodity produced by the labor of man or by the expenditure of his capital, which some call raw material, and that product of man which is a finished product.

In other words, we take the ground that the product of the shepherd, the flock master, who produces the wool in a finished condition, has just the same right to be protected against the competition of the cheap labor of the wool producer of Australia as has the manufacturer of the finished product of the looms of our country to be protected against the competition of the Bradford and other English looms. This is the doctrine of protection to raw material. It is an original doctrine with the Republican party. It has been a cardinal doctrine of the Democratic party that no tariff should be levied upon what they are pleased to term "raw material." Hence the Democratic party is now and always has been uncompromising in its hostility to a tariff upon wool, iron, coal, and other articles which enter into our manufactures and which they call raw material.

It is true that in the act of 1894, the lamented Wilson law, a low duty was forced upon the Wilson law in the Senate upon coal and iron, but the great agricultural industry of wool was left absolutely without protection. So it may be settled as a fact in the politics of the country that there is no one principle, no one dogma, no one suggestion, in regard to the tariff legislation of the country more unqualified than the position of the Democratic party in favor of free raw material. It was the battle cry of a Presidential message; it was declared upon the stump and in the platform and principles of the party throughout the country in the last two Presidential campaigns. It has been just as much a part of the life of real Democracy in the United States to-day as is hostility to Republicanism in any of its phases of development.

This being the case, and we being so schooled and educated in that, the attitude of the Democratic party being so long established and oft repeated, it does sound strange to us to hear the clarion voice of one of the leaders of the Democracy on this floor advocating a duty on raw material. It does not sound like any of the utterances of our earlier and better days coming from the Democratic party, and those of us who have been fighting these battles for forty years, as I have, listen with intense wonder at the startling statements of the gentleman. Tax raw material, advocated by a Democrat, a duty on wool, iron, coal, cotton—is it possible? Have we had a Rip Van Winkle sleep while a new departure has been inaugurated by the Democrats and a new platform has been written? Can that be true? If so, who authorized the writing of a new departure? When and where was it that the lifelong declarations of the Democratic party were repudiated by competent authority and a new evangel sent for?

Well, Mr. Speaker, the difference between a Democrat who favors a duty on free raw material by protection and a Republican is just about the difference between tweedledum and tweedledee—that is to say, so far as the tariff question is concerned. I admit he may be a Populist; he may favor the free and unlimited coinage of silver; he may favor the overthrow of the authority of the President to protect the property and lives of citizens; he may be all that and be a Populist, but how he can be a Democrat and undertake to rewrite the Democratic platform is something that I am going to leave to the Democratic party to settle, and I invoke patience and perseverance and calmness of mind and judicial

temper to the able gentleman from Tennessee while he searches to learn whether or not in some moment of his inadvertence some authority has surreptitiously assaulted the platform of his party.

New platforms require new candidates, and inasmuch as Mr. Bryan is nothing upon this question unless he is in favor of free raw material, and having devoted almost a lifetime thus far to the propagation of the doctrine, it would seem to me that this new platform should have a new candidate. It would be unreasonable to Mr. Bryan to have to proclaim himself in favor of protection for free raw material from the rear end of a palace car and have the air around him filled with slips of paper containing his powerful appeals for free raw material and his denunciations of taxation for revenue purposes, if not of the free raw material that enters into the manufacturing industries of our country.

But, Mr. Speaker, there is a cheerful side to this question, and one which I contemplate with great joy. The falling of the scales from the eyes of the person who journeyed to Damascus was miraculous, for there was no outward, visible proof of the truth of the religion which he so hastily espoused; but the falling of the scales from the eyes of Democratic statesmen has nothing of the miraculous about it. It is easily accounted for and needs no explanation but to point to the condition of the country, and you will see that the election in the United States repudiated the doctrine of free raw material.

The coal miners of ten great States repudiated the doctrine. The workers in the shops and factories denounced the doctrine, and there are indications in the great State of Louisiana that even the devotion of the Pelicans to the doctrine of Democracy has been shaken, and from the Lone Star State there comes the sound of rushing and mighty winds that the flock masters of that magnificent State realize that there should be protection upon wool. The time is coming when it can contribute a product sufficient for the wants of the people of this country and export to foreign lands the output of their magnificent flocks, and so free raw material is a poor platform to build the future structure of political success upon even in the State of Texas.

During the pendency of this bill in the Senate, Mr. Speaker, protective duties were voted for by Democratic Representatives from California, from Louisiana, from Georgia, from South Carolina, and I may have omitted some of the States. So we find the citadel of Democracy, hitherto its strongest outpost, abandoned and blown up by its garrison.

Mr. Speaker, we are entering upon a new era. Pass this bill, as we will, and there is no human power that will repeal it for four years to come. What joy to the miner, the farmer, the laborer, in all the lines of production, the husbandman, with his market hitherto contracted by the stopping of the wheels of industry. What joy to the common masses of a great country is the fact that for four long years, no matter what may be the exigencies of politics, this tariff law can not be repealed or impaired. There ought to be a celebration of its birth in every industrial center of the United States. There ought to be a flag of liberty and freedom and independence hoisted upon every farm in the United States.

You talk about protection to the farmer, and we hear the voice of mortified disaffection declaring to us that there is nothing in this bill that protects the farmer. Does a man forget in this country so quickly, because he has betrayed his party, the teachings of the past? Does he so quickly forget to realize that every farmer in this country is benefited beyond description by any legislation that benefits the mechanic, the laborer, the producer in the shop, in the mine, and in the factory? Does he forget his old argument when he was in the line of truth and fairness? No protection to the farmer. No protection to anybody out of all the commodities which come into competition with the products of this country during the operation of the Wilson law. No protection in the high rate of duty that excludes the wheat product of Winnipeg.

No protection that they must compete in our markets after having paid a great price for the privilege. No protection upon the fruits and vegetables of the farmer, and no protection that they have to pay 11 and 12 cents on wool to compete with that produced by the farmer in this country. Oh, consistency!

But I was congratulating the country that this bill would stand; this law could not be repealed for four years. It will not have the brief existence of the McKinley law and be struck down. It can demonstrate to the people of the country its value. What, then, is the duty and privilege of the American people? It is to adjust all our business to the present condition of the Dingley law, adjust our production and manufacture to existing conditions during its permanency, at least to the extent which I have said—four years.

Four years of halcyon times; four years of prosperity; four years when labor shall be rewarded; four years when industry and energy shall be recognized; four years during which our 40,000,000 sheep may be duplicated to 80,000,000 sheep, and our wool product of 250,000,000 pounds reach 500,000,000 pounds, and the day in sight, four years from now, when every pound of wool

which the American consumer desires will be produced in our own country, and the money that largely goes abroad shall be paid out at home. Four years, in which time the great sugar industry shall have supplied the American people with a product that will cause the expenditure of \$125,000,000 at home, instead of sending it to the labor abroad; the occupation of vast tracts of land now occupied for cereals, to be used hereafter in part, and in large part, for sheep husbandry and sugar producing. Will the American people turn their backs upon this legislation now without a trial, and burden our country again with tariff legislation? Will they? Will the farmer and manufacturer enter into the conspiracy now being contrived in Ohio, Iowa, Massachusetts, New York, Virginia, and Kentucky, with a view to again open up the question of tariff legislation and the prostitution of the industries of the country?

The question is one of mighty importance, and its settlement will be looked to with the greatest possible interest by the people of the whole country. If Ohio turns its back upon its record and drifts again into Bourbon Democracy, and makes it possible to elect a Democratic Senator, it would be one great step toward the reopening of tariff agitation and the unsettling of the business of the whole country. The same is true of Iowa, of Massachusetts, of New York, of Virginia, and of Kentucky, so that the people of this country have their votes in their own hands, and if they desire that agitation shall cease and business shall proceed along legitimate lines under existing legislation it will be necessary for them to see to it that the fall elections shall indicate, not reaction, but approval of the record the Republican party has made in this Congress. It may be that this act is not all that some of the business interests of the country demanded and expected, but this act is vastly better than agitation. Permanence is more necessary than that every man's opinion should be adjusted to his satisfaction.

To reopen the tariff question now would endanger the industries of the country forever, and yet the result of every vote in every State will be seized upon, if unfriendly to the Republican party, by the friends of free trade as indicating another reaction, just as we had at the time of the McKinley law.

So, my countrymen, we may congratulate the country upon the wonderful achievements of the Fifty-fifth Congress. Called together in extraordinary session, it has made a complete revision of the tariff in less time than the like was ever done by any Congress hitherto, and its support and passage in the Senate of the United States has demonstrated the breaking up of party lines among our opponents and the forced recognition of the benefits of protection. Well may we rejoice, well may we appeal to the people of these voting States to stand by the party that in Congress has redeemed its greatest pledge by their votes in the elections, and not only not revoke what we have done, but give assurance to the people of the whole country that we are going forward upon a highway of prosperity to the achievements of commercial and financial and industrial results such as the country never experienced before.

### The Dingley Bill.

"It is not in a splendid government supported by monopolists and armies that they will find happiness or their liberties protected, but in a plain system, void of pomp, protecting all and granting favors to none, dispensing its blessings like the dews of heaven unseen, unfelt, save in the freedom and beauty they contribute to produce. It is such a government that the genius of the people require; such a one only under which our States may remain for ages to come united, prosperous, and free."

### SPEECH

OF

HON. CHARLES L. BARTLETT,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 29, 1897.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. BARTLETT said:

Mr. CHAIRMAN: I regret exceedingly that when the general debate was in progress I was physically unable to discuss this bill. I can not undertake, of course, in the brief time allowed for debate upon this amendment to discuss this amendment as I should desire and intended to do; but, following the almost universal custom of this as well as former Houses, I shall not undertake to discuss this particular amendment, but some sections of the bill.

At the outset, Mr. Chairman, I desire to reply to a suggestion made by some of the members of the Ways and Means Committee in their remarks a few days ago, in which it was said that the agricultural interests of the South had not been as well provided for in this bill as those of other sections and would not be until the South had promised loyalty to the Republican doctrine of protection. In other words, that in order to have protection by tariff legislation upon the products of the South the South should embrace the Republican doctrine of protection.

Speaking for one locality and one State of the South, I desire to say to those gentlemen and to the Republican party that we have not at any time in the past been ready, nor are we yet ready, to be purchased and lured away from the Democratic principles of our fathers by the offer of any such miserable mess of pottage. [Applause on the Democratic side.] We have not arrived at that period in our history, and God forbid that we should ever arrive at that time, when we are ready to join the Republican party in its raid of robbery by taxation upon the balance of our country in order that we might perhaps get a small portion of the plunder. [Applause on the Democratic side.]

Mr. Chairman, the Democrats of the South have heard this Republican voice before urging them to accept and pledge loyalty to the Republican principles. We heard it during the years immediately succeeding the civil war, when we were invited to accept reconstruction, and were promised that if we did so we should have peace; but instead of peace we had a continuation of war—war revived after we thought the war had ended. The Republican administration of the various States made a "desert" and waste of our country, and they called it "peace."

When we remember the promises made to us then and how they were fulfilled, when we remember that Republican administration resulted in a contamination of our State government by carpet-baggers and scallawags, in the presence of bayonets at the polls, in the disfranchisement of our best citizens, and remember the long history of wrong and outrage perpetrated upon us, representing in part the Democracy of the South, I say to you gentlemen who have made such suggestions that the white people of the South are not to be purchased by any such offer to embrace the pernicious doctrine of Republicanism or Republican protection. [Applause on the Democratic side.]

Mr. Chairman, so far as I am concerned, representing in part one of the great cotton-producing States of the South, a State that produced last year one-seventh of the entire product of the United States, I desire to say that the producers of this great staple of the South do not desire or need any tariff protection from the Government to enable them to raise it and to compete successfully with the world. The people I represent are opposed to taxation by tariff on any article of consumption by the American people except for the purpose of raising revenue for the Government, and that tariff shall be justly and equally imposed. Except for the purpose of revenue to meet the expenses of the Government "economically administered," a tax by tariff should not be imposed at all. [Applause on the Democratic side.] Any increase of taxation under this bill, when the Treasury has one hundred and thirty millions surplus, can not be for revenue, but solely for protection.

When we examine this bill as it is sought to be passed, it will be found that its purpose is not to raise revenue so much as to provide protection for a few favored classes, and to enable them by means of such taxation to add to their already immense wealth by laying additional burdens upon the great masses of the American people, the producers of the wealth; not to aid the laborers who produce the articles of consumption, but to aid the already nourished corporations and manufacturers of the North and the East. In fact, I find that this bill contains "more tariff abominations" than any bill that has ever been introduced or considered since the foundation of the Government.

The Republican party, brought back into power by the election of November, 1896 (by this bill), ignoring all other interests except that of those who furnished the sinews of war in the last campaign, propose to restore prosperity to the country by "frying the fat" out of the masses of the people to restore to the manufacturers and trusts and corporations the "fat" they "fried out of them" before the election.

In December, 1896, on the eve of the Christmas holidays, when the gold reserve was daily being drained by a tax upon it from organized capital and the concerted money power in London and New York, the late President appealed to the Fifty-fourth Congress, then containing 150 Republican majority in the House, to relieve the Treasury, not for the purpose of paying the ordinary expenses of the Government, but to provide a means of stopping the drain upon the gold reserve, and in that way to restore confidence to the country. The Republican majority of the Ways and Means Committee, composed of the same gentlemen who reported this bill, on December 26, 1895, reported a bill to temporarily increase the revenue and to meet the expenses of the Government and to provide against a deficiency; and they proposed to do this

by increasing the tariff duties 15 per cent on all articles except upon wool, woolen goods, and lumber. In the report submitted by the majority of the committee it is stated that they had not undertaken a general revision of the tariff on protection lines, because they knew that "such tariff legislation would not stand any chance of becoming law, and also because a general tariff revision would require many months," and "the need is for more revenue at once."

The other effort of the Fifty-fourth Congress to relieve the Treasury was to authorize the issuance of bonds, so that the Republican party in the Fifty-fourth Congress sought to bring relief to the people and the Treasury first by increasing the tax and next by issuing bonds in times of peace.

The chairman of the Ways and Means Committee of the Fifty-fourth Congress, occupying the same position in the present Congress, in a report upon a bill prohibiting the further issuance of United States interest-bearing bonds, stated that "the House had sent to the Senate a bill providing for sufficient additional revenue to prevent a deficiency." And he further says that instead of concurring with the House in the passage of this bill, which would have effectually prevented any recurrence of the matters complained of, the Senate refused to do so.

The campaign of 1896 was fought out between the Republicans and their opponents mainly upon the issue whether this country would remain upon the single standard or whether it would adopt the free coinage of silver at the present ratio without waiting for the concurrence of other nations. The tariff and all other questions were sunk out of sight, apparently at least, by the Republicans, and the Fifty-fifth Congress assembled in special session at the instance of the President, and on the first day of its convening we are offered a bill which completely revises and increases the tariff duties, and which had never been submitted to a committee, except the Republican members of the Ways and Means Committee, and this it is proposed to pass under whip and spur, at the dictation of the bosses of the House and of the Republican party.

With the gold reserve down to less than \$50,000,000 in 1895 a general tariff revision could not be passed, because "it would require many months," in the language of the distinguished chairman, but with the gold reserve above \$100,000,000 and nearly \$134,000,000 additional in the Treasury it is demanded that we pass a general revision of the tariff, not in "many months," but in a few days. There is some consolation in the reflection that, however successfully the representatives of the people may be throttled by the despotic rule of the majority and its few bosses, that despotism will meet with rebuff in the Senate and that this bill will there have full investigation and careful consideration. It has been stated time and time again by gentlemen in this discussion that the deficiencies in revenue and the distress of the country were due to the Wilson bill in its failure to yield sufficient revenue.

The late Secretary of the Treasury in his report to the first session of the Fifty-fourth Congress stated the various amounts of revenue received since 1898 to and including June 30, 1895, and declared that there would be a surplus in the Treasury under the present law in 1898; and doubtless this would be so but for the prodigal expenditures provided for by the Republican majority of the Fifty-fourth Congress. Both he and the last President asserted distinctly that none of the gold reserve had been used for the purpose of paying the ordinary expenses of the Government.

I can not give my support to this bill, because I do not believe in the doctrine of protecting by the agency of the Government any business or any class by the imposition of tax that must be borne by the consumers of the country. I am not opposed to the levying of tariff upon imports sufficient to raise the revenues of the Government to carry it on and to pay the expenses when economically administered, but in imposing the duty it should be fairly and justly imposed, and not, as is contained in this bill, discriminating in favor of classes and sections.

I have no desire to learn any new lessons with reference to the Democratic doctrine on the subject of the tariff. I am content to still follow the doctrine as laid down and upheld by the founders of the party, and by that great apostle of Democracy, Andrew Jackson. In his first message to Congress he said:

With regard to a proper selection of the subjects of impost with a view to revenue, it would seem to me that the spirit of equity, caution, and compromise in which the Constitution was formed requires that the great interests of agriculture, commerce, and manufactures should be equally favored, and that perhaps the only exception to this rule should consist in the peculiar encouragement of any products of either of them that may be found essential to our national independence.

I fully repudiate the doctrine of the Republican party that because it sees fit in the interest of the sections of the country that supported it and its candidates they will lay tax upon the people, nor am I to be converted to this doctrine, nor acquiesce in it, in order that my section shall share in the robbery. But this bill goes beyond the demands even of the protected manufacturer.

On January 27, 1897, in Philadelphia, at a meeting of the National

Association of Manufacturers, when it was known that the Republican majority of the Ways and Means Committee were in daily conclave preparing a tariff bill, a committee was appointed to draft resolutions and they presented the following report on the subject:

*Resolved*, That the tariff duties should be made as low as possible consistent with adequate protection for our agricultural and manufacturing industries and the labor they employ.

The president of that association, on February 1, in his annual report, declared that "these resolutions correctly voice the sentiment of the association and of the country at large." It is to protect the farmer, who has always been the subject of the tender consideration of the Republican party, if we are to believe the statements of gentlemen who have spoken, that this bill was framed.

The four staple farm products produced by this country are cotton, wheat, corn, and oats. There is no effort to protect this great industry of the people in this bill by putting a tax upon the importation of foreign cotton. It is grown in a section of the country that does not commend itself by its vote as entitled to the protectingegis of the framers of this bill. Representing in part the section of the country that produces this great staple article, I desire to say that we do not wish that the Government shall pretend to protect us in this industry by a tax which would not increase the price, but would tend more to put us further into the power and hands of Eastern and foreign speculators.

We are willing and anxious to compete with the world in its production of this staple, and all we ask of the Government of the United States is to return to the coinage of the money of the Constitution and enlarge the currency medium to our people and stop the falling prices that have been in progress for twenty-odd years. Give us an opportunity to pay off our debt by the sale of our products in the open markets of the world at reasonable prices, and we do not need any protection. The pretext that the farmer of the West is protected by the import tax on wheat, corn, and oats is too thin to deceive the most credulous. The tariff, when levied on these articles for a year, will not exceed \$340,000, while we have exported in the seven months ending January, 1897, \$127,000,000 worth of the same goods. For the twelve months ending January, 1897, the cotton imports were 55,000,000 pounds, while in the same time the exports amounted to nearly 3,000,000,000 pounds.

The injustice of this tariff, so far as the interest of the farmer is concerned, is seen in the tax which it places on cotton ties which the farmers of the South use, while the binding twine of the Western farmer is to be admitted free. The Western farmer, for his support of the Republican party, gets free binding twine, while hoop and band iron for baling cotton or any other commodity shall pay one-tenth cent per pound more duty than is imposed on the hoop or band iron or steel from which they are made. Such is the theory and practice of Republican protection, which robs one section in order to benefit another.

The farmers of the South remember the enormous increase in the price of cotton ties last fall, which the "cotton-tie trust" forced. In order to escape the grasp and impositions of this monopoly, the farmers resorted to the use of a small wire for baling cotton. Yet these generous nonpartisan gentlemen who framed this bill have taxed all wire or hoop iron made or used for the purpose of baling cotton. Not only that, but every piece of hoop iron or wire used for baling cotton is taxed one-tenth of a cent a pound extra. Yet you tell us that if we will embrace your doctrines, you will take care of us. The voice may be the voice of Jacob, but it is still the Republican hand of Esau.

The solicitude for the interest of the farmer is manifested in the high tax which will be levied upon everything he wears or uses in the cultivation of his products. Agricultural and farming implements were admitted free of duty in the Wilson bill, and if we are to take the testimony of one of the largest manufacturers of farming implements in the State of Pennsylvania, they do not need protection.

On page 2084 of the Tariff Hearings before the present Committee on Ways and Means, while they were considering this bill, I find the following:

AGAINST A CHANGE—A. B. FARQUHAR, OF YORK, PA., WANTS THE COUNTRY LEFT IN ITS PRESENT CONDITION OF PROSPERITY.

YORK, PA., January 1, 1897.

Committee on Ways and Means:

You have naturally, in your public hearings of testimony and recommendations and pleas for amendments to the revenue laws, had far more to do with those desirous of increased duties than with those in opposition. The interest of people in quest of favors is always more intense, as well as more definite, than that of people who have simply to protest against granting favors to others at their expense. Though the former may be few and the latter 70,000,000, yet your committee may easily hear much from the small number and nothing from the great.

Easy as it is for all concerned only as individuals of the 70,000,000 to be silent, thinking that where no peculiar interest exists no peculiar exertion is called for, yet the easy course is sometimes the wrong course. Personally I have nothing to ask of your committee except that you will refrain from putting obstacles in the way of my business and from strengthening the arms that

are aiming a blow at my interests; otherwise my cause is merely identical with that of the great mass of your fellow citizens. What is best for them is best for me, and might be asked as well in their name as in my own.

The great practical problem before us, as before all nations and peoples, is how to apply the force and opportunity at our command so as to derive from them the greatest net result in comforts and conveniences of life. That application of human labor, direct or indirect, which brings the largest total result in these comforts and conveniences is the one that best serves the body politic, and thereby raises to the highest point the demand for labor, and hence the reward of the laborer. Since the best paid labor is therefore the kind that produces most, it may easily follow that such labor is of exceptionally low cost in proportion to product.

We know that this is true in some instances. The wheat of our Western States must necessarily be produced at a lower labor cost than that of Egypt or India, because it sells freely in the same British market, to which the cost of transporting it is higher. And yet our lower cost is made up of payments at the rate of \$1 a day, while their higher cost is paid at a rate not far from 10 cents a day. This is possible partly because the Western laborer furnishes labor of higher quality than can the ryot or fellah; partly because it is more ably directed by improved machinery and better methods. A similar state of facts exists in all production that meets foreign competition on equal terms. No labor in the country receives better pay than that employed on exportable goods in direct competition with foreign labor, wages running high, though the price of the product is low, and proving really cheaper because directed by higher brain power.

Some years ago I visited a large agricultural-implement factory in England, at the invitation of its owner, a member of Parliament. I found plow handles and beams produced in that factory at a labor cost of more than \$1, while similar work cost us but 10 cents at our factory in York, owing to our superior machinery and methods; so that our cheaper labor (at considerably higher wages) fully made up for the disadvantage at which we were put by greater cost of raw material. I then and there told the proprietor that the trade would all come to us unless he improved his methods—and, to make a long story short, it has all come to us. Our works manufacture practically all of that description of plow now sold—perhaps 20,000 a year.

Now, see what must necessarily be true if our plows sell in South Africa, my side by side with those of English make, as I have shown they easily do; if our transportation charge is higher, as it must be where we have to ship by way of England; if our raw materials, lumber excepted, are more costly, as any inspection of comparative prices will instantly prove; then our firm must either be drawing no profit whatever or be at less expense for labor. No other conclusion is possible, unless some way can be found for making larger subtractions from the same sum, and not leaving smaller remainders.

Since our business affords enough profit to justify continuance in it, and the profits of our English rivals are not inordinate, the only possible conclusion is that there is less labor cost in our plows than in theirs. This fact of cheaper labor, which is demonstrated by actual observation in my business, supported by similar observation in many other businesses enjoying like advantage of more efficient machinery and superintendence, must necessarily apply to all labor employed on exportable products.

Work on merchandise for export, as I have already said, is especially highly paid, by the day, and it is exactly this high-paid labor that is really the cheapest labor. What is called "pauper" labor—the kind that is ill compensated—is practically a very dear kind. Every sagacious manufacturer having a piece of work which brings him particularly low profit, on which economy in every kind of cost is particularly necessary, puts his best-paid workmen on just that piece; if he dreams of sparing labor cost by doing otherwise, he simply converts his margin of profit into a net loss.

The fact that we are exporting steel rails to Canada, Japan, and elsewhere in the face of English competition, and iron to England itself—something we never could do until the approaching exhaustion of England's iron supply put us less at a disadvantage for raw material—and the further fact that never in its history has the country made anything like so large an export of manufactured goods and machinery as during the last year, aided by the cheaper raw material allowed us in the Wilson bill, show what we could do with raw material free; show, indeed, that very many if not even the majority of manufacturers would have no use for protection if we could go to work on that basis.

Again and again I have declared, distinctly and publicly, that I desired no import duty on agricultural implements. The duty was swept away in the Wilson Act with my cordial approval. The harm that such duties do to producers who can export is that they suggest and encourage retaliatory duties in the countries that buy of us. The only possible good they could do is to enable manufacturers by combination to extort higher prices from their fellow-countrymen than from foreign customers.

It is with just that motive that many a man asks Government assistance in charging more for his goods than he sells them for in Europe or beyond the Tropics. It is just that motive that you cherish and hold up as worthy of praise when you allow drawbacks of duty on goods exported. By that piece of legislation you declare, as plainly as words can put it, that foreign customers are the ones you select for favor, while home customers are entitled only to be fleeced.

You wish to aid the American workman. So do I. But when I observe, as I do, that he never before received so large a proportion of earnings as he has under recent legislation, and that all possible increase in exported manufactures constitutes additional demand for his labor, I conclude that what he wants is a larger export business. There can not be an increase of importations, demand for money on both sides continuing unchanged, without creating a demand for exported products of agricultural and mechanical labor, as is plainly proved by all the statistics of trade.

If absolute free trade were decreed to-day, American needs and desires could only be met by use of the product of American workmen, as they have been met in the past. If those workmen should be employed a little less in making things that go directly to the consumer and a little more in making things that go abroad to be exchanged for the things the consumer wants, his labor would be none the less demanded, while its application to something it can produce to better economical advantage would insure its being better rather than worse paid after business had adjusted itself to the new conditions.

If I did not believe that I could carry on my manufacturing for what the public would pay freely, without Government interference to force fictitious profits, I ought to close up and go at something fitted to my size. I am ready to say the like for my brother manufacturers. If they are not lost to all sense of shame, they must blush to come whining before Congressional committees for a chance to extort extra profits, like a cur for a bone, especially when with this is associated the hypocrisy of pretending that what they seek thus to draw into their own pockets is all taken in trust for the sole benefit of the poor workman, even if we disbelieve all rumors and disregard all suspicions of campaign contributions and other forms of more or less disguised bribery. And then to think that this craven fear of foreign competition, this cringing dependence on the work of the lobby and on legislative Congresses, is so unnecessary!

But for this huge confidence game, for this blighting curse on our industrial independence, the country could step forward at once and become the

great source of the world's supply. The predominance in the iron business, in spite of our carefully calculated and persistent efforts to leave it in British hands by oppressing our export trade, has at last come to us. The mines of Britain will not long repay working, while ours are practically inexhaustible.

The chief object I have in addressing you is to make the most earnest possible protest against the calling of an extra session in the spring. I hear that this proposed extra session for the purpose of pulling our revenue laws to pieces is usually advocated as necessary, not because some favorites of Government, large campaign contributors perhaps, need to have their profits enhanced at the public expense, but because, forsooth, the country needs more revenue.

The country would not need more revenue if it would judiciously spend what it has. If its lawgivers and law administrators would cut down the list of pensioners to those who have an honest claim, and thereby make that list a true roll of honor, if they would frown on public building and river and harbor demands, if they would abstain from waste of public money in useless military defenses and naval armaments, the revenue now provided would more than suffice them.

But, entirely apart from these considerations, the association of increased revenues with such an overhauling of the tariff as you are asked to make and are supposed to contemplate is a sham and a swindle, and you know it. You have no certainty—in fact, no good reason—for believing that an increase of protective duties will bring more revenue. The country's income diminished greatly under the McKinley Act, and was actually considerably less during the last year that act was in operation than it has been since duties were reduced.

You are perfectly certain, on the other hand, that revenues would be considerably increased by a slightly higher internal tax on beer and tobacco, with moderate duties on tea and coffee. In fact, a higher rate on beer alone, one of which the consumer would be insensible, would quite counterbalance the deficit in the Treasury. If you sincerely wanted more revenue, you would recommend such a measure as this at once, and your recommendation could be made into law in a week.

This extra session is evidently desired for a very different purpose than to increase the public revenues. It is desired because those who are moving for it would rather increase the cost of the workingman's clothing than that of his beer. It is desired because they would rather tax the lumber that goes to build his house than the luxuries he would be better off without.

It is superfluous to remind you that the talk of an extra session is unsettling business—is locking up capital that would go at once into productive enterprise if assured of the continuance of present conditions, is depriving labor of employment by repressing enterprise, is only welcome to those who in one way or another prey upon the public—because you know it and you see it. You know it by your reason; you see it in the backset which reviving business, after the forward start that followed the national election, has so disastrously met. Leave the tariff alone; let business be undisturbed and enterprise assured of some degree of permanence; give us security instead of a legislative earthquake, and you will be surprised to see the prosperity that will follow your patriotic abstinence.

A. B. FARQUHAR,

President of the A. B. Farquhar Company.

The farmers themselves have protested against an increase of tariff rates and have sent to the Committee on Ways and Means resolutions in which they declare that an increase of tariff will not aid the farmer, and these resolutions came from the farmers of the great protected State of Pennsylvania. At a meeting of the State Grange of that State, held on December 8 and 11, 1896, the following resolution, among others, was adopted:

That we can not deceive ourselves with the idea that any measure of protection to our industries offered by a tariff on imports can avail in the slightest degree to benefit the grower of those crops of which he produces a surplus for export and whose price is necessarily made in the world's market where they are and must continue to be disposed of.

If we are to take the voice of the honest manufacturers as stated in the evidence of Mr. Farquhar, as well as that of the farmer as in the resolution quoted, we must conclude that this bill is prompted not for the purpose of protecting alike the interests of the farmer, the laborer, and the manufacturer, but for the purpose of aiding certain manufacturers and certain interests that they may still grow rich and powerful through the means of Republican laws and protection. The doctrines of such Republicans as James G. Blaine and James A. Garfield are forgotten and abandoned by those who would carry out the outrages embraced in this bill. This bill taxes every article of consumption, breadstuffs, salt and lumber, and all the necessities of life, and it will do well to call attention to what the Hon. James G. Blaine said upon these subjects, on June 10, 1868:

In the first place, let me say that during the war, when we were seeking everything on the earth out of which taxation could be wrung, it never entered into the conception of Congress to tax breadstuffs—never during the most pressing exigencies of the terrible contest in which we were engaged. Neither breadstuffs or lumber ever became the subject of one penny of taxation. It was not because of the influence of the rich grain dealers of Chicago or Toledo or Milwaukee. It was because if anything is universal, breadstuffs are universal, for they constitute literally the staff of life.

If you impose upon them a tax ever so small in amount, it will be made a pretext by the very speculators of whom gentlemen talk for adding an appreciable amount to the cost of a barrel of flour. Now, as to the article of lumber, I again remind this House that there never has been a tax on this article. The gentleman from Ohio may talk of this question as he pleases; but I say that whenever the Western frontiersman undertakes to make for himself a home, to till the soil, to carry on the business of life, he needs lumber for his cabin, he needs lumber for his fences, he needs lumber for his wagon or carts, he needs lumber for his plow; he needs lumber for almost every purpose in his daily life.

During this debate this side has been taunted with the term "free traders." On this subject I desire to call attention to what James A. Garfield said in reference to the tariff on April 1, 1870:

We have seen that one extreme school of economists would place the price of all manufactured articles in the hands of foreign producers by rendering it impossible for our manufacturers to compete with them, while the other extreme school, by making it impossible for the foreigner to sell his competing wares in our market, would give the people no immediate check upon the prices our manufacturers might fix for their products. I disagree with both extremes.

I hold that properly adjusted competition between home and foreign producers is the best gauge by which to regulate industrial trade. Duties should be so high that any man can fairly compete with the foreign product, but not so high as to enable him to drive out the foreign article, enjoy a monopoly of trade, and regulate the prices as he pleases. This is my doctrine of protection.

If Congress pursues this policy steadily, we shall year by year approach more nearly to the basis of free trade, because we shall be more nearly able to compete with other nations on equal terms. I am for protection which leads to ultimate free trade, which can only be achieved through a reasonable protection.

Mr. Chairman, examining the true course for the possibilities of the situation, I believe the true course for the friends of protection to pursue is to reduce the rates on imports wherever we can justly and safely do so and, accepting neither of the extreme doctrines urged on this floor, endeavor to establish a stable policy that will commend itself to all patriotic and thoughtful people.

Modern scholarship is on the side of free trade.

#### TRUSTS.

A protective tariff like this one is but a hotbed that breeds trusts, combinations, and monopolies. Monopolies have always been obnoxious and objected to by the English and American people. It raises prices and persecutes those who refuse to come into the combination, crushes competition, restricts production, and forces bargains with railroads and tampers with legislative bodies and renders fair competition impossible. Already trusts almost beyond number have been organized to control all the necessities of life, and recent disclosures show that they are the most cruel, harsh, and detestable of monopolies receiving encouragement under this bill, and unless the people awaken to the dangers threatened the trusts will bring blight upon the nation.

Our English ancestors had the same struggle to undergo; the same battles were fought between the people and the monopolies granted by the Crown on the necessities of life; struggles which the English people successfully waged when Elizabeth, and again when Charles I. ruled. Elizabeth's reign was in danger of a shameful and disgraceful end and it cost Charles his head. It was in England that the first battle for civil liberty had been made. Macanlay thus describes it:

It was in the Parliament of 1601 that the opposition which had, during forty years, been silently gathering and husbanding strength, fought its first great battle and won its first victory. The ground was well chosen. The English sovereigns had always been intrusted with the supreme direction of commercial policies. It was their undoubted prerogative to regulate coins, weights, and measures, and to appoint fairs, markets, and ports. The line which bounded their authority over trade had, as usual, been but loosely drawn. They therefore, as usual, encroached on the province which rightfully belonged to the legislature.

The encroachment was, as usual, patiently borne till it became serious. But at length the Queen took upon herself to grant patents and monopolies by scores. There was scarcely a family in the realm that did not feel itself aggrieved by the oppression and extortion which the abuse naturally caused. Iron, oil, vinegar, coal, lead, starch, yarn, leather, glass, could be bought only at exorbitant prices. The House of Commons met in angry and determined mood. It was in vain that a courtly minority blamed the speaker for suffering the acts of the Queen's highness to be called in question. The language of the discontented party was high and menacing, and was echoed by the voice of the whole nation. The coach of the chief minister of the Crown was surrounded by an indignant populace, who cursed monopolies and exclaimed that the prerogative should not be allowed to touch the old liberties of England.

Macanlay proceeded to say that—

The Queen's reign was in danger of a shameful and disgraceful end, but that she, with admirable judgment, declined the contest and redressed the grievance, and in touching language thanked the Commons for their care of the common weal.

In the Long Parliament Sir John Culpepper thus spoke of these monopolies and oppressors of the people:

They are a nest of wasps—a swarm or vermin which have overcrept the land. Like the frogs of Egypt, they have gotten possession of our dwellings, and we have scarce a room free from them. They sup in our cup; they dip in our dish; they sit by our fire. We find them in the dye vat, washbowl, and powdering tub. They share with the butler in his box. They will not bait us a pin. We may not buy our clothes without their brokerage. These are the leeches that have sucked the commonwealth so hard that it is almost hectical. Mr. Spenker, I have echoed to you the cries of the Kingdom. I will tell you their hopes. They look to heaven for a blessing on this Parliament.

So were the American people induced to believe that Republican success in 1896 meant a blessing to the people in the return of prosperity, and now when they look for prosperity at the hands of this Congress, they receive this iniquitous tariff bill, framed not in the interest of the people but of the few who furnished the Republican party with the means to buy the Republican victory of 1896.

In the contest in England the monopolies went down before the people. That contest is to be repeated in America, and in the battle, as has always been the case, the Republican party allies itself on the side of monopoly and trusts; the Democratic party stands in the fight for the rights of the people. The trusts may overcome competition, they may overcome legislative bodies and the courts, but there yet remains an antagonist much more formidable than all others. They will go down in the struggle against the instinct, self-reliance, and fertile intellect of a race of men who for more than five hundred years have come to no compromise with monopoly.

It has been truly said that the most of the great English struggles for constitutional liberty have grown out of unjust exactions of money from the people. The mutterings of discontent started

to grow not from the rich but from among the yeomen—the mechanics and the laboring men. The same causes were at work in England then that are at work here now. The storm is brewing, and when it rises it will sweep the trusts and its allies, the Republican party, out of its pathway. The same conditions which existed in the day of Jackson, which sustained him in his overthrow of the old United States Bank, can be relied upon to deal with these modern trusts.

The American people will make no compromise with the monopoly or trust. Trusts can spring into power and high position, and they may, like the Standard Oil Company, accumulate millions of money and destroy hundreds of competitors, and defy the press, or the legislature, or Congress; they may endeavor to buy their right to feed upon the people by campaign contributions to the Republican party, which sooner or later, and in the near future, if the laws of the country can be enforced, will feel the hand of the people laid upon them; and when that time comes, it will come with a power that can not be withstood. The trusts must yield, and the party which supports them will be destroyed by the people, together with the trusts. In fact, the effort made in this bill by the Republican party is to tax the people for the benefit of a few and thus create a powerful monopoly and an aristocracy.

I call attention to what the great Republican, Justice Miller, said with reference to this part of the discussion (20 Wallace, 604):

To lay with one hand the power of the government on the property of the citizen and with the other to bestow it upon favored individuals to aid private enterprise, to build up private fortunes, is none the less robbery because it is done under the forms of law and called taxation.

This is not legislation. It is a decree under legislative forms. If it be said that a benefit results to a local public by assisting manufacturers, the same may be said of any other business or pursuit which employs capital or labor; the merchant, mechanic, banker, and the builder are as equally deserving of aid from the citizens by thus contributing. No lines can be drawn in favor of the manufacturer which would not open the coffers of the public treasury to the importunities of two-thirds of the business men of the country.

It will be well to remind this House and the country of what was said by President Andrew Jackson in his protest to the resolution of the Senate censuring him, and that is:

It is not in a splendid government supported by monopolies and armies that they will find happiness or their liberties protected, but in a plain system, void of pomp, protecting all and granting favors to none, dispensing its blessings like the dews of heaven, unseen, unfelt, save in the freshness and beauty they contribute to produce. It is such a government that the genius of the people require; such a one only under which our States may remain for ages to come united, prosperous, and free.

Gentlemen on the other side have frequently asserted that all the financial distress and evils that have lately befallen the country were due to the operation of the Wilson-Gorman bill. We are told that more failures have occurred than under any other bill. The gentleman from Illinois [Mr. HOPKINS] the other day undertook especially to detail the loss in the railroad property, of the number of railroads that have gone into the hands of receivers, and to charge them up as losses that have occurred as a result of the Wilson bill. Upon an examination of the facts as contained in the statistics of railways in the United States, published by the Interstate Commerce Commission, it will be found that during the period in which the McKinley bill was in force there went into the hands of receivers 83,478 miles of railroads, and during the time of the Wilson bill and up to June 30, 1895, 2,932 miles.

The great trunk lines of railroads that failed and went into the hands of receivers failed while the McKinley bill was on the statute books.

The history of the other industries than railroads shows that the greatest number of failures occurred and far the largest amounts of liabilities during the years in which the McKinley bill was in force. So that the statistics do not support the assertion of the gentleman that the failures and business depressions that have befallen the country in the last few years were greater under the Wilson-Gorman bill than under the McKinley bill.

When the truth of history is written, it will be found that it is not the tariff, either a high tariff or a low tariff, that has produced the distress which the people have suffered; but the evil, the disease, is something other than the tariff. It is the failure of the Government to provide for a sufficient amount of primary money for the use of the people, and no legislation which imposes tariff taxation by increasing or reducing the rates will cure the trouble. It will not be cured eventually, nor will prosperity be restored, until the demands of the people and of the business of the country for enough primary money to do the business of the country upon shall have been heeded and complied with. An increase of tariff rates may open a few mills, but until the mints are opened to the free coinage of silver and gold alike, prosperity will not come to us.

When we shall return to the doctrines of the founders of this Government; when we shall "economically administer" the Government; when the lawmaking power shall remember that the agricultural interest of our country is essentially connected with every other and is superior in importance to them all; that as the

business of manufacture and commerce tend to increase the value of agricultural products and to extend their application to the wants and comforts of society, they deserve the fostering care of the Government; when all classes and all sections of this country shall be alike regarded when laws are passed that affect all alike, that lay the burdens of government equally, and grant special privileges to none; when the farmer and the producer shall have a sufficient and just return for their products and their labor, then we may expect a return of prosperity, and not before; then we may say to the world:

Survey our empire, and behold our home!  
These are our realms, no limit to their sway,—  
Our flag the scepter all who meet obey.

[Applause on the Democratic side.]

## Tariff and Currency.

### SPEECH

OF

HON. JOHN F. LACEY,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 24, 1897.

On House joint resolution No. 81, authorizing the appointment of a monetary commission and providing for its expenses.

Mr. LACEY said:

Mr. SPEAKER: The election of 1896 removed from the sky one great cloud which hung over the industries of this country. The threat of a sweeping and radical change in the long-prevailing standard of value passed by, and the acute stage of financial distress was over.

Business since then has slowly but steadily improved, but there could be no settled and permanent revival until the completion of the proposed remodeling and readjusting of the tariff along American lines, with the elimination of the frauds of the Wilson ad valorem system, and the establishment of specific duties which could be easily understood and which could not be evaded, and so adjusted as to avoid a deficit.

Much of the delay in the Senate was unavoidable, constituted as that body is, with no method of bringing on a vote until mental and physical exhaustion has rendered further debate impossible. And when we further realize that the Republican party has no majority in that Chamber, we must look with admiration on the skill with which Senators ALLISON and ALDRICH have piloted the bill through so dangerous a sea.

The delay, though, has given time for the accumulation of vast stocks of foreign goods, and the importers have profited by the dilatory tactics used in the debates. A single speech on the tariff, which would have been dear at \$2.50, cost the Government more than \$100,000 by holding back the bill until additional cargoes of goods should reach our ports.

Gentlemen who thus delayed this necessary and inevitable bill will be called on by the people to show whether their speeches were worth a hundred thousand dollars apiece. The loss to the revenues was not the greatest injury caused by this delay. The wheels of industry were waiting for the basis of resumption to be adjusted, and now the accumulated stocks of foreign goods must be in a measure reduced before the full benefits of the new law will be enjoyed.

But the better times are coming, and our opponents will soon be compelled to remodel all their campaign oratory.

Mr. Bryan has set the pace with his post-campaign declarations that general prosperity is not here, and can not come until the free coinage of silver at the sacred ratio of 16 to 1 has been commenced. His example has been followed in Congress, and his supporters have stoutly maintained that nothing but adversity can exist until we adopt the Mexican and Asiatic standard of values. All their speeches will rise up to meet them in the campaign of 1897, and the whole question will disappear by the year 1900.

In 1892 these same gentlemen said on every stump in America that the McKinley bill was an "atrocious" because it attempted to build up the "impossible tin-plate industry." They insisted that there was not a tin-plate factory in America. To answer this claim I visited tin-plate factories in person; but our opponents asserted on the stump that these mills were merely imaginary. But in 1894 the same men reduced the duty on tin plate in the Wilson bill on the ground that the "protection was no longer needed, as our tin-plate industry was fully established." Mr. Wilson called it a "bogus industry," but they all conceded that it was in active operation.

As business revives and prosperity returns we may watch these

versatile gentlemen with profound interest. When they can no longer console themselves with the existence of distress, and can no longer safely deny the return of prosperity, what will be the keynote then to be sounded?

Mr. Bryan has already begun to hedge. In his recent trip to the West, when he spoke in a town where business was so evidently looking up that denial was in vain, he called attention to the evidences of revival, but assured his hearers that it was "local;" that other places were different.

The next two years will be spent by them in explaining how good times shall have come without the silver cure, and I venture at random the prediction that Republican laws and methods will be denied all credit, and the whole blessed change will be credited to another old-time Republican act—the purchase of Alaska.

If times continue hard, they will say it is because of Republican ascendancy. If they become good, the Yukon will receive all the praise.

Of one thing we may rest assured, the American people can not again be deceived on this question. They will recognize good times when they see them, and the voice of the croaker will be the most distasteful of all sounds.

We have all shared in the hard times, whether we were to blame for their occurrence or not. The better times that are coming will be enjoyed by those who have opposed the passage of the necessary laws to bring them about. Politicians may cavil and partisanship may rage, but the great American people are ready to say with honest Sancho Panza, "God bless the giver, and don't look the gift horse in the mouth."

The legislation of the extra session of the Fifty-fifth Congress is now on the statute books. The people of America will give it a fair trial. It will now speak for itself.

#### Tariff, Money, and History of Financial Legislation in the United States.

#### SPEECH

OF

HON. J. W. BABCOCK,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration the conference report on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. BABCOCK said:

Mr. SPEAKER: Something over a year ago I ventured the prediction in this place that free coinage, except by international agreement, when properly understood by the people, would be unable to maintain itself in a fair contest of American intelligence at the polls, and I furthermore ventured to predict that the advocates of this interest could not bar the Fifty-fifth Congress from enacting such wise protective-tariff laws as would furnish ample revenue for the needs of the Government and protection to all the great agricultural, laboring, and industrial interests. Both of these predictions have been realized, and I am now here to add to my forecast of events the further predictions that the era of prosperity, so long delayed by the result of four years of maladministration by the Democratic party in all branches of the Government, will soon be upon us in all its fullness, and will be felt in every home and hamlet of the United States.

None but those selfishly or constitutionally organized to find fault and to obscure the clear vision of the American people as to the future can deny that the pulse strokes of a healthy revival of confidence and business energy have already manifested themselves, and that the vigorous constitution of the country is rapidly shaking off the effects of the past four years of free trade, free-coinage agitation, and bond sales, which fastened a new taxation of \$362,330,692 upon the workingmen and business interests of the country.

#### AN ERA OF CHEAP THINGS.

It has been a typical era of "cheap things," putting the farmer and the laborer, the mechanic and the small business man, in the condition of being hardly able to provide the comforts, often the necessities, of life with the cheapened proceeds of their industry. We have learned the bitter lesson, I think, that cheap goods mean cheap labor. We have tried four years of Democratic tariff policy, and it has nearly put our workingmen on a par with the pauper labor of Europe.

Under Republican tariff laws, during the period from the 1st of September, 1865, up to the time President Cleveland was inaugurated in 1893—twenty-seven and one-half years—the Government debt and obligations were reduced \$1,881,367,873, or an

average of \$68,632,000 per year. The per capita debt in 1865 was \$78. In 1893 it had been reduced to \$12.55. This is certainly a fair showing, for it covers the whole period from the close of the war until the Democrats secured full control of all branches of the Government. Notice the great difference between the financial policies of the two parties. Since the 1st of March, 1893, until the 1st of March, 1896—a period of three years—the interest-bearing debt increased over \$262,000,000, or an average of more than \$87,000,000 per year, against a decrease of nearly \$69,000,000 per year under a Republican Administration for the previous twenty-seven years.

#### THE EFFECT OF DEMOCRATIC LEGISLATION.

The proceeds of these bond transactions were used to pay the running expenses of the Government; to cover deficits which the famous Wilson bill had created. Not all the Democratic leaders were so frank as Representative DOCKERY, of the Appropriations Committee of the House, when he admitted, in a speech April 29, 1896, that—

During the last fiscal year the current income was inadequate to meet current liabilities by \$42,895,223.18, and it is now estimated that the deficiency in current revenues for the present fiscal year will not be less than \$23,000,000.

Such has been the admitted effect of Democratic legislation as exposed by its own friends, while the prostrate condition of labor-emplying industries throughout the United States has been a sad reminder of the truthfulness of their admissions.

Its enemies, Mr. Speaker, will attempt again to blind the vision of the people to the blessings of the bill which the Fifty-fifth Congress has enacted into law; but Republicans everywhere may be proud of the first substantial step in four years to disperse the black vapors of misery and to bring back the era of universal industry and prosperity which has marked Republican administrations almost unbrokenly for thirty years. This bill has commanded the full strength of the Republican representation in Congress, and 33 votes from the South were cast for it at different stages of its career. For the first time in the history of Republican tariff legislation Democrats have broken away from their party creed to vote for protection, convinced that thereby only can they hope to restore living wages, fair returns for capital and industry, and better times for the farming class.

#### THE BLESSINGS OF TARIFF LAWS.

The bill may not be a perfect measure; perfection can not be achieved at one stroke; but it was designed to fit the conditions that exist to-day, and is a great stride in the direction of a tangible and substantial betterment of the condition of all classes of producers. If left to work out its own salvation it will soon increase the revenues of the Government, so that no more bonds will have to be issued to pay our current expenses, while at the same time it will reopen industrial channels long closed to honest toil and put our workingmen back on the pay rolls of the shops and factories that were closed by the Wilson bill.

In my opinion, Mr. Speaker, we must look for our greatest blessings to judicious tariff legislation, and not allow ourselves to be misled by specious arguments of financial revolution. What shall it benefit the farmer, the mechanic, and the laboring man if we open to him the opportunities to earn wages and, on the other hand, disturb our hitherto unassailable system of finance and pay him in a depreciated money? In this connection I propose to review briefly the financial history of the United States, so that he who runs may read for himself the fallacy of many of the popular arguments employed to convert the unwary to free coinage, and also to show how its advocates have perverted facts and history to strengthen their cause.

#### A REVIEW OF OUR FINANCIAL LEGISLATION.

Thirty-five years ago the Republican party, confronted by the gravest exigency in our national life, originated and adopted a system of currency and credit.

This system was subjected to the severest of all tests—civil war in its most tremendous form—but achieved a success and earned a place among the monetary systems of the world far greater than any ever instituted by any government on the face of the earth.

The Republican party has steadfastly maintained the high standing of this system through all the years of its ascendancy; has held firmly to an interchangeable currency based upon coin, every dollar of which has been maintained and redeemed according to the original pledge.

The same party is to-day, as ever, in favor of the same sound money, and will continue to maintain, by prudent legislation, the same wide use of gold, silver, and paper with profit and security to all the people.

#### OUR METALLIC MONEY.

Under the Confederation of 1778 Congress was given the sole and exclusive right and power to regulate the alloy and value of the coin struck by their own authority, or by that of the respective States; but, having no power to enforce its laws in the States and no revenues with which to carry out its own right of coinage, nothing was done.

Under the Constitution, Congress was given the exclusive power

to coin money, to regulate the value thereof and of foreign coins. It was expressly provided that no State shall coin money, and Congress exercised this power by the passage of the act of April 2, 1792, establishing a mint and regulating the coins of the United States.

In this act the "dollar" of gold or silver was adopted as the unit money of account, with the dollar coin of 371.25 grains of pure silver as the base.

#### FROM SILVER TO GOLD BASIS.

Between 1792 and 1834 we were under a bimetallic system, with the silver dollar as the actual unit on a basis of 15 to 1. Spanish dollars until 1816, and other foreign coins of both metals until a later date, were also a legal tender, but, as our lighter-weight silver dollars were exported to the West Indies, where they passed at par, we were without a sufficient national currency of either or both metals.

Legislation was therefore necessary, and by the laws of 1834 and 1837 the weight and fineness of the gold coin—and by the latter act the weight and fineness of both coins—were changed so as to make the ratio 16 (15.98) to 1, and to establish the double unit, viz, the eagle of gold and the dollar of silver.

#### COINAGE AND EXPORT OF SILVER TO 1853.

This change undervalued silver, as the act of 1792 had undervalued gold, and as a result silver went out of the United States to countries where it was worth more than with us.

In 1847 our coinage of gold was \$30,202,325, which fell to \$3,775,513 in 1848; while silver in 1847 was \$2,374,450, and \$2,040,050 in 1848.

The effects of the California gold output were felt in 1850 and its coinage increased, while that of silver decreased.

In 1850 the gold coinage was \$31,981,739; in 1851, \$62,614,493; in 1852, \$56,846,188; while silver in 1850 was \$1,866,100; in 1851, \$774,397, and in 1852, \$990,410.

#### CONDITIONS IN 1853.

By 1853 (in spite of an annual coinage of over a million dollars in halves, quarters, etc.) there was not enough subsidiary silver for small change, and we were practically on a gold basis. By the act of this year the values of the minor silver coins were reduced so as to stop their exportation, and what was a still more important act, these were made a limited legal tender for all amounts not exceeding \$5. This was the first step in the impairment of the double standard, established by the gold act of 1834.

#### CAUSES.

There were good reasons for this action. Silver was scarce, gold was plentiful, and it had been found necessary to coin silver in small denominations and with smaller proportionate values than the standard dollars to keep them at home for domestic use.

#### INCREASED GOLD OUTPUT.

The world's supply of gold had suddenly increased because of the California and Australian output. From an annual product of about \$13,482,000 in the period from 1831 to 1840 it reached \$132,500,000 after 1850. The natural result was to raise the value of silver and to lower that of gold.

#### NO SILVER IN CIRCULATION.

Then, too, we had no silver dollars in the country, or at least not in sufficient quantities to figure largely as a circulating medium. We had coined none from 1806 to 1836. In 1806 President Jefferson, the demigod of the silver Democracy of the present day, stopped the coinage of the silver dollar at the mints of the United States, and from 1836 to 1853 we had only coined of dollars 1,067,373, all the other silver coinage in this period being of minor money.

#### GOLD THE ACTUAL STANDARD.

While, therefore, after 1853, except for the minor coins, the double standard was the law, yet the actual condition was that of a single gold standard.

#### RÉSUMÉ.

Let us briefly review.

The act of 1792 made the silver dollar the unit, at 15 to 1; those of 1834 and 1837 changed the ratio to 16 to 1; that of 1853 reduced the value of the minor silver coins and limited their legal tender to \$5.

While the acts of 1834 and 1837 made the eagle of gold a co-unit with silver, they did not repeal the act of 1792, which based the unit of a bimetallic money on the silver dollar.

But from the causes already named 1853 found us practically with a single gold standard, with gold as the cheaper and more plentiful metal. While silver dollars were a full legal tender, they were not greatly used, because they were usually worth more abroad than at home, and were exported. Gold was the chief and sole base for coin currency.

#### SILVER DOLLARS COINED UP TO 1853.

We could not, indeed, have had many silver dollars then, because the total coinage of these up to 1853 had been only \$2,506,990. This condition obtained until the exigencies of the civil war

drove all coin money out and gave place to bonds, greenbacks and national-bank notes.

#### GOLD STANDARD INTENDED.

There is no doubt as to the intention of the lawmakers at that time on this point. They were legislating for a single gold standard, although they left the silver dollar as a co-unit. That this was the end sought is shown by the remarks made by the chairman of the Committee on Ways and Means:

We mean to make gold the standard coin, and make these new coins—

The subsidiary silver of proportionately less value—applicable and convenient, not for large but for small transactions.

Another member of the same committee said:

We have had but a single standard for the last three or four years; that has been and now is gold. We propose to let it remain so, to adapt silver to it, to regulate it by it.

In 1861 came the civil war, the tremendous expense account of the Government, the exhaustion of our current money, and later the issues of paper money in Treasury notes and bonds and national-bank notes.

#### HISTORY OF THE ACT OF 1873.

This act, concerning which so much has been said, was introduced in the Senate April 25, 1870; was considered through five sessions of Congress, and became a law February 12, 1873.

It has been charged that this bill demonetized silver, not openly, but by means of an amendment not fully known or understood except by a few. Let us follow the course of this bill.

#### THE ORIGINAL BILL.

As originally presented, April 25, 1870, section 14 made the gold dollar of 25.8 grains the standard of value, the unit of computation.

Section 15 provided that the weight of the silver coins should be for the half dollar 192 grains (the dollar was not mentioned), with proportionate values for the quarter, 25-cent piece, and dime; and that these should be legal tender for \$1.

Section 18 enacted that no coins other than those mentioned (that is, gold and minor silver) should be thereafter coined.

#### SILVER DOLLAR PIECE DISCONTINUED.

On page 11 of the report which accompanied this original bill are the following words:

The coinage of the silver dollar piece is discontinued.

The discontinuance of the silver dollar piece is pointed out by the committee three times in other places in this report. In all the discussions and in every form of the bill these two features, making the gold dollar the standard unit of value and the omission of the silver dollar (of 412½ grains), remain unchanged. Indeed, sections 14 and 18 (afterwards section 17) were never changed, but passed absolutely as first presented in the original bill.

#### SILVER SECTION.

Section 15 passed through enough changes to warrant the idea that its every provision was understood by all fully. In the Senate it first went through unmodified—36 to 14—(January 10, 1871) Senator Sherman voting against and Senator STEWART, of Nevada, voting for it.

#### LEGAL-TENDER \$3.

In the House committee this section was amended to make the legal tender \$5; but owing to lack of time, the bill went over.

On March 9, 1871, Mr. Kelley, in the House, reported the same bill as amended by the previous House committee; that is, with the legal tender raised to \$5; and, except for the 5-cent piece, it was an exact reproduction of the law of 1853. No silver dollars were to be coined, and this minor coinage was to be a legal tender for \$5 only.

#### A 25-GRAIN DOLLAR.

In the discussion it was shown that some desired to have a silver dollar included, although all agreed that its legal tender should be limited, and that its contents should be not 412½ grains, but twice that of the proposed half dollar, or 384 grains.

On February 13, 1872, Mr. Hooper reported it back as H. R. 1497, with these provisions:

SEC. 16. That the silver coins of the United States shall be a dollar, a half dollar, a quarter dollar, and a 10-cent piece, and that the weight of the dollar shall be 384 grains, the half and other coins in proportion, and that these shall be legal tender for \$5.

This passed the House May 27, 1872. It will be noted that this is not the old standard dollar of 412½ grains, but a subsidiary coin for change and of limited legal tender.

#### TRADE DOLLAR.

There were some who desired to attempt a competition in the East Indies with the Mexican dollar, and through these the bill was still further modified. As it was finally passed, in the Senate January 17, 1873, and House, February 7, 1873, the silver clauses were as follows:

A trade dollar of 420 grains for this export trade, although it was made a legal tender and so remained until July 23, 1876, for

\$5 at home; a half dollar of 12½ grains (on the basis of a silver dollar of 386 grains), and minor coins of proportionate value. All these were made legal tender for \$5 only. A 5-cent piece was included in the copper and nickel coins.

#### 412½-GRAIN DOLLAR NEVER IN THE BILL.

From the foregoing it is plain that the silver dollar of 412½ grains, "the dollar of the fathers," was not dropped out surreptitiously, because it was never in the bill to be dropped out. No one wanted it there. First they had a half dollar (no dollar), then a dollar of 384 grains, then a trade dollar for the Pacific Coast trade to the East Indies, and a half dollar of 12½ grains, or 192.9 grains (at the rate of 386 grains for a dollar), and all this silver was, from first to last, a limited legal tender for from one to five dollars.

#### WHY WAS SILVER DROPPED OUT?

In his speech (House, April 9, 1873, Congressional Globe, pages 2906-2908, volume 103), one of ten columns, by the way, Mr. Hooper, for the committee, said:

#### SILVER DOLLARS NOT A CIRCULATING COIN.

Section 16 reenacts the provisions of the existing laws defining the silver coins and their weights, respectively, except in relation to the silver dollar, which is reduced in weight from 412½ to 384 grains, thus making it a subsidiary coin in harmony with the silver coins of less denomination to secure its concurrent circulation with them. The silver dollar of 412½ grains, by reason of its bullion or intrinsic value being greater than its nominal value, long since ceased to be a coin of circulation, and is melted by manufacturers of silverware.

#### MR. STOUTINGTON SAYS SILVER DOLLAR IS TOO VALUABLE.

On the same day Mr. Stoughton, of Michigan, made a speech of seven columns, in which he said (same volume, page 2908):

The silver dollar as now issued is worth for bullion 3½ cents more than the gold dollar, and 7½ cents more than two half dollars. Having a greater intrinsic and nominal value, it is certain to be withdrawn from circulation whenever we return to specie payment, and to be used only for manufacture and exportation as bullion.

#### MR. POTTER DECLARES LEGAL TENDER SHOULD BE GOLD.

Mr. Potter, in discussing this part of the bill, said:

This bill provides for the making of changes in the legal-tender coin of the country and for substituting as legal-tender coin of only one metal, instead, as heretofore, of two. I think myself this would be a wise provision, and that legal-tender coins, except subsidiary coin, should be of gold alone. (Page 2910, volume 103.)

#### MR. KELLEY FAVORS GOLD AS STANDARD AND SILVER AS SUBSIDIARY MONEY.

And Mr. Kelley, who is reported as having said afterwards that he "did not know that the bill omitted the standard silver dollar," said on this same day (Globe, volume 103, page 2916):

I wish to ask the gentleman who has just spoken (Mr. Potter) if he knows of any government in the world which makes its subsidiary coinage of full value? The silver coin of England is 10 per cent below the value of gold coin, and, acting under the advice of the experts of this country and of England and France, Japan has made her silver coinage within the last year 12 per cent below the value of her gold coin, and for this reason it is impossible to retain the double standard. The values of gold and silver continually fluctuate. You can not determine this year what will be the relative values of gold and silver next year. They were 15 to 1 a short time ago; they are 16 to 1 now.

Hence all experience has shown that you must have one standard coin which shall be a legal tender for all others, and then you may promote your domestic convenience by having a subsidiary coinage of silver, which shall circulate in all parts of your country as legal tender for a limited amount and be redeemable at its face value by your Government. But, sir, I again call the attention of the House to the fact that the gentlemen who oppose this bill insist upon maintaining a silver dollar worth 3½ cents more than the gold dollar and worth 7 cents more than two half dollars, and that so long as those provisions remain you can not keep silver coin in the country.

In another place in the same speech Mr. Kelley said:

Every coin that is not gold is subsidiary. I repeat it, sir. Every coin that is not gold is subsidiary.

#### SENATOR STEWART DECLARES FOR GOLD.

Speaking on another subject a few months afterwards, Mr. STEWART, then, as now, a Senator from Nevada, said (page 1392, volume 2, part 2, CONGRESSIONAL RECORD):

I want the standard gold, and no paper money not redeemable in gold.

About two weeks later, on February 20, 1874, the same gentleman said (same volume, page 1677):

By this process we shall come to a specie basis; and when the laboring man receives a dollar, it will have the purchasing power of a dollar, and he will not be called upon to do what is impossible for him or the producing classes to do, figure upon the exchanges, figure upon the fluctuations, figure upon the gambling in New York; but he will know what his money is worth. Gold is the universal standard of the world. Everybody knows what a dollar in gold is worth.

These are the words of Senator STEWART before he became simply the representative of a special interest.

#### SENATOR JONES EXTOLS GOLD.

Senator JONES of Nevada took the same position. In the Senate April 1, 1874, he said:

Does this Congress mean now to leave entirely out of view and to discard forever a standard of value? Did any country ever accumulate wealth, achieve greatness, or attain a high civilization without such standard? And what but gold can be that standard? What other thing on earth possesses the requisite qualities?

#### PUBLIC DISCUSSION OF ACT OF 1873.

It has been charged that very little was said in the public press about this legislation. To this the answer is that in 1873 neither metal was in circulation; and it was also simply a reiteration of what had been a commercial condition for more than twenty years. The bill itself had been before Congress three years. From the date of its introduction in the Senate it was printed, by order of Congress, with amendments, thirteen times, and was considered during five different sessions by the Senate and House. The debates on the bill in the Senate covered 66 pages and in the House 78 pages of the Congressional Globe. It was finally passed with only the addition of the trade dollar, and there was not much worthy of extended comment.

#### THE PRODUCTION OF GOLD AND SILVER.

The legislation of 1853 and 1873 was based on commercial conditions, which in turn were largely caused by the variation in the output of the two metals both in the United States and in the world. Let us briefly study these and see why from 1853 to 1873, and even for a few years afterwards, gold was the more plentiful and cheaper; why later the price of silver fell so that the two were on a parity; why it kept on falling to far below this limit; and finally why in recent years the change in the ratio of production has tended and still tends strongly to induce the belief that a few years more will see them near the former parity.

#### GOLD IN THE UNITED STATES.

Up to the year 1848 our annual output of gold had never exceeded a million, except a trifle in two years. In that year it suddenly rose to ten millions (an amount equal to the total annual world product up to 1840); in 1849, to forty millions; in 1850, to fifty millions, and ranged from that figure to sixty-five millions up to 1860. Then for five years it ranged from forty to forty-six, and from 1865 to 1870 averaged over fifty millions. For the next five years it averaged under forty to go to fifty-one millions in 1878, and ranged from thirty in 1883 to \$39,500,000 in 1894. It did not touch the forty-million mark after 1871, except \$51,300,000 in 1878.

The recent increase dates from 1892, when it was at the low-water mark of \$33,000,000. In 1893 it went to \$35,900,000; in 1894 it reached \$39,500,000; in 1895 it went to \$46,610,000, and in 1896 to \$53,088,000. The Director of the Mint estimates that but for the great strikes at Leadville, Cœur d'Alene, and Cripple Creek the output for 1897 would have been greatly in excess of what the figures for that year are likely to show.

#### GOLD IN THE WORLD.

The gold product of the world had averaged for many years before 1840 a little over ten millions per year. In the ten years from 1841 to 1850 this suddenly rose to the then unprecedented figure of \$36,393,000. Despite this enormous gain, the next five years, 1851 to 1855, showed a product of more than three and a half times as great, \$132,513,000, or the immense sum of \$662,586,000 for the five years.

From 1856 to 1860 it averaged \$134,083,000; fell off eleven millions in the next five years; rose to \$129,614,000, 1866 to 1870; fell to \$115,577,000, 1871 to 1875; to \$114,585,000, 1876 to 1880, and to \$99,110,000, 1881 to 1885.

This was the gold low-water mark for the world for the past forty years. Since that time it has steadily increased, until for the year 1892 it reached a sum higher than ever before known—to the enormous total of \$146,815,100. For 1893 there was a further increase of nearly eleven millions, to \$157,287,000, while the amount for 1894 was twenty-three millions more—to the vast quantity of \$180,626,100. The product for 1895 was \$200,406,000; that of 1896, as computed by Rothwell, \$220,600,000; while conservative estimates put the world's gold product within five years at \$300,000,000 per annum.

#### COUNTRIES OF INCREASE.

It may be well to see whence this great increase has come. It will also enable us to estimate as to the future. The principal gold-producing countries for the years 1894, 1895, and 1896 were, in order and amounts, as follows:

Country.	1894.	1895.	1896.
United States.....	\$69,500,000	\$46,610,000	\$53,088,000
Australasia.....	41,700,800	44,798,300	45,182,000
Africa.....	40,271,000	44,554,900	44,000,000
Russia.....	34,138,400	38,894,400	* 22,000,000
Mexico.....	4,500,000	6,000,000	6,513,000
China.....	8,556,800	3,521,000	* 5,000,000
Total from 6 countries.....	158,722,000	174,378,000	184,783,000

The figures marked with an \* are those of Mr. Rothwell, of Mineral Industry, who estimates the gold product of the world for 1896 to have been \$220,600,000.

Of the above China shows a small increase; it of all other nations remains about the same year by year. The recent and future increases are to be found and expected in Africa, Australasia, United States, Russia, and Mexico. These increases have been as follows:

Country.	1893 over 1892.	1894 over 1893.	1895 over 1894.
United States.....	\$2,900,000	\$3,545,000	\$7,110,000
Australasia.....	1,829,600	6,072,200	3,087,500
Africa.....	4,711,500	11,328,500	4,283,900
Mexico.....	176,100	3,194,700	1,500,000
Russia.....			4,761,000
Increase.....	9,317,200	24,140,400	20,662,400

The Director of the Mint and leading European authorities agree in ascribing the comparatively small increase in Africa to the political disturbances in the Transvaal, which were brewing some time prior to their actual eruption in an attempt at revolution.

#### SILVER IN THE UNITED STATES.

From 1792 to 1834 the product of silver was insignificant; from 1834 to 1844 it is estimated at a total of \$250,000; from 1845 to 1857, both inclusive, it is given at \$50,000 per year. In 1858 it went to \$500,000; in 1859, fell to \$100,000; 1860, \$150,000; in 1861 it rose suddenly to \$2,000,000; went to \$4,500,000 for 1862; \$3,500,000 in 1863, and ranged from eleven millions to sixteen millions up to 1871. In that year it reached twenty-three, and varied from twenty-eight to forty-eight millions up to 1885.

Demonetization, so called, took place in 1873; resumption and the use of coin money took place in 1876. From 1874 to 1884 there was only a slight increase, the highest figure, in 1884, being \$48,800,000. In 1885 it reached \$51,600,000; rose to fifty-three in 1887; to fifty-nine in 1888; to sixty-four in 1889, and touched seventy millions in 1890. In 1891 it went to \$75,417,000; in 1892 it reached the high-water mark—the highest ever known, \$82,101,000—only to fall off in 1893 to \$77,576,000, and to \$64,000,000 in 1894, increasing to \$72,056,000 in 1895 and to \$76,069,000 in 1896.

#### COMPARATIVE INCREASE.

From 1874 to 1895 silver increased \$34,751,000; in the same time gold increased a little more than thirteen millions, but there was no appreciable increase in silver until 1885.

#### SILVER IN THE WORLD.

The annual average coinage value of the silver produced in the world has been: From 1545 to 1761, \$12,450,000 to \$22,162,000; from 1761 to 1860 it ranged from \$19,144,000 to \$37,618,000; 1861 to 1865 it was \$45,772,000; 1866 to 1870, \$55,663,000; 1871 to 1875, \$81,864,000; while from 1876 to 1890 it rose to an annual average of \$101,851,000, and from 1891 to 1895 to \$118,955,000.

The value for 1896 was \$120,626,800, and for 1897 it was \$124,281,000. It continued to rise steadily some twelve millions per year to 1893, when it was \$213,944,400. The year 1894 only showed a slight decrease, a trifle over \$1,114,800 for that period. The returns for 1895 again show an increase of \$4,781,200.

#### COINAGE VS. COMMERCIAL VALUE.

The foregoing figures as to silver, being based on the United States coinage value, are not a true guide as to the actual market value. From 1833 to 1850 the average price of a fine ounce of silver was about \$1.31, or 60 pence. In 1850 and up to 1873 it ranged at about \$1.33, or 61 pence, only touching \$1.36, or 62 pence, in 1859.

#### AVERAGE BULLION VALUE.

In 1873 the average bullion value of a silver dollar was \$1.004, making it more valuable than a gold dollar. For 1874 it was \$0.988; 1875, \$0.964; 1876, \$0.894; 1877, \$0.929, and has not reached the \$0.90 mark since. In 1886 it got into the seventies, rose to \$0.81 in 1890, to fall to \$0.764 in 1891, to \$0.674 in 1892, to \$0.604 in 1893, to \$0.491 in 1894, rising to \$0.505 in 1895, and to \$0.523 in 1896, falling again to \$0.044 in July, 1897. In other words, in 1873 the ratio was 1 to 15.92; in 1896 it was 1 to 30.66.

#### 1873 AND 1896.

In 1873 a silver dollar containing 371.25 grains of pure silver would purchase only 300.77 grains of the same silver. The coined value was 1½ grains less than its commercial value.

In 1894 this same dollar would purchase 756.04 grains, or twice itself and 5½ grains over; in 1895 it would purchase 733.87, and in 1896 711.93 grains, showing a rise in silver due to the decrease in the output of white and the increase in that of yellow metal during the last three years, an increase that is sure to assist in absorbing the surplus of white metal in the world.

#### WHY WHITE METAL FELL IN VALUE.

Did silver fall or did gold get scarcer and grow dearer? I have shown that in the United States the gold product held steadily at over thirty and (except in 1877-78) under forty millions from 1874

to 1894, going from \$39,500,000 in the latter year to \$46,610,000 in 1895; that in the world for this same period it had steadily increased from \$115,577,000 to \$200,406,000. Evidently during this period gold did its full duty and earned the repute of a metal of stable and sufficient increase in output.

Silver first came to be a factor in the United States in 1861, when \$2,000,000 was produced; in 1864 it was \$11,000,000; in 1874, \$37,300,000; in 1894, \$48,800,000, with from fifty-one to eighty-one millions per year thereafter.

The world product had gone from an annual average coinage value of \$81,864,000 in 1874 to \$118,955,000 in 1894, and \$212,829,600 in 1894.

From 1874 to 1894 silver did not make nearly so great a proportional gain as did gold from 1841-1850 to 1851-1855.

#### PROPORTION OF METALS.

For three hundred years, 1545-1840, during which time Spain had poured the wealth of her American silver mines into the markets of the world, the general average proportion of the value of the two metals produced had been about 33 per cent for gold and 67 per cent for silver. From the period 1841-1850 up to that of 1876-1880 this proportion was about 66 per cent for gold and 34 per cent for silver—much greater than the three-century average. From 1881 to 1894 gold was still 44 per cent, while for 1894 it was 46.3, and in 1895 it had increased to 47.7 per cent. It is interesting to note that the percentage of production by value from 1492 to 1895, inclusive, was 45.9 of gold to 54.1 of silver.

#### SILVER LEGISLATION IN THE UNITED STATES.

##### Kelley-Bland bills.

In 1876 Mr. Kelley (Pennsylvania) introduced a bill for the coinage of standard (412½ grains) dollars, and to make them an unlimited legal tender. The same year Mr. Bland (Missouri) introduced a bill for the unlimited issue of Treasury notes in exchange for gold and silver bullion.

Both these measures were considered, and in March, 1877, a commission of Senators and Representatives made a report on the relations of gold and silver.

The Kelley bill, as modified and championed by Mr. Bland, passed the House November 5, 1877. It provided, with the Bland amendment, for the free and unlimited coinage of 412½-grain dollars, and made these an unlimited legal tender, except where otherwise specified by contract.

##### Bland-Allison Act.

The Kelley-Bland bill was modified in the Senate, and became known as the Bland-Allison bill. As modified in the Senate and as finally passed it restricted the coinage to the 4,000,000 ounces per month which the Secretary of the Treasury was to purchase, and it gave to the public Treasury the seigniorage or profit on these purchases and coinages. The silver thus to be coined was made an unlimited legal tender except for certificates of deposit of gold and silver bullion under the act of 1863 and in cases where other money had been stipulated by contract. Section 3 authorized the deposit of these dollars and the issuance of (silver) certificates therefor. It became a law over the President's veto February 28, 1878.

##### Bland and Conger bills.

In 1886 Mr. Bland again introduced a bill for the free and unlimited coinage of silver—that is, giving to the mine owner and bullion producer the whole profit of the seigniorage or difference between the actual cost and the legal-tender value of the dollar when coined.

Mr. Conger introduced another bill, embodying the views of Secretary Windom, allowing owners of silver to deposit it and receive Treasury notes to the amount of its then market value, these to be redeemed when presented at its then value.

##### The Sherman law of 1890.

The Conger bill, as modified, was finally passed, and became a law July 14, 1890, and is known as the Sherman law.

It directed the purchase of 4,500,000 fine ounces of silver each month at not to exceed \$1 for 371.25 grains of pure silver, and the issue of Treasury notes therefor. These notes were to be redeemable on demand in coin, and could be reissued. They were made legal tender for all debts, public or private, except where otherwise expressly stipulated, and for customs, taxes, etc., and when so received could be reissued. They could also be counted as part of the lawful money reserve of national banks.

The act further provided that upon demand of holder the Secretary of the Treasury should redeem such notes in gold or silver, at his discretion, it being (says the act) the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such ratio as may be provided by law.

Section 3 provided for the coinage until July 1, 1891, of \$2,000,000 per month; after that date as much as needed to redeem Treasury notes issued under this act.

Any gains or seigniorage arising from such coinage was to be accounted for and paid into the Treasury.

#### WHAT IS GAIN OR SEIGNIORAGE?

The Bland bill as it passed the House November 5, 1877 (it did not become a law), allowed any owner of silver bullion to deposit it and receive for every 371.25 grains of pure silver (412½ grains of standard silver) a coined dollar which should be an unlimited legal tender. He was only to pay the half per cent mint charge for this great privilege. All the profit in this transaction was to go not to the Government, not to the people through the Government, but to the mine owner, the bullion producer. In 1886 Mr. BLAND introduced another bill with the same provisions. Mr. Plumb's amendment to the Conger bill, adopted by the Senate June 10, but which also failed to become a law, had the same provisions.

#### SENATOR STEWART'S FREE COINAGE AMENDMENT.

Another attempt was made in January, 1891, when Senator STEWART, of Nevada, offered a free-coinage amendment providing that at the "owner's option he may receive therefor (silver bullion) an equivalent in such standard dollars or Treasury notes," having "the same legal qualities as the notes provided for by the act approved July 14, 1890." This was designed to leave the Government no option as to the mode of payment for this bullion, and to enable the silver mine owners to take the most valuable mode of payment, which would probably be Treasury notes redeemable in "coin." July 1, 1892, Mr. STEWART offered another measure in the Senate, providing for free coinage and making the standard silver dollar legal tender for all debts and dues, public and private, "provided that foreign silver coins, or silver coins bearing the impress of foreign mints, and bullion formed by melting down such coin, shall be excluded from the provision of this act."

In this measure Senator STEWART sought to fasten legislation upon the country by which it would have been obliged to take the product of the Western silver barons as it was offered for free coinage. Commenting upon this purpose, Senator VEST, of Missouri, declared that he was for free coinage, "not to give a market to the mine owners of the West, but because it is a money metal," and the foreign clause was stricken out.

All of these measures were in the direct interest and to the sole advantage of the mine owners. All profits or gains in the business went not to the Government to help to lighten the burden of the people, but for the profit and gain of a particular class.

#### PROFITS OF SEIGNIORAGE.

Let us see what these profits were. Under free coinage, on an average, in 1878 bullion worth 89.1 cents when deposited by the mine owner would have entitled him to receive from the mint a legal-tender dollar worth 100 cents in silver or in gold. He would have made a net profit, not counting the small charge for coinage, of 10 cents—a profit gained at the expense of the whole people.

In 1886 this same bullion was worth only 76.9 cents, giving to this same class a net profit of 23 cents and making a net cost to all the people of 23 cents for the inestimable privilege of allowing the mine owners the chance of using the Government and people of the United States as a stalking horse. It would make their dollars cheaper to the mine owners, of course. How would it help those who had to buy these same silver dollars by the sweat of their brows and at the full price of 100 cents on the dollar?

Had this provision, so beneficent to the mine owner, been in operation in 1894, the dear people would have been giving the mining men a 100-cent dollar coined from silver bullion which had cost the same mining people just 49.1 cents. The people of the United States may be lying awake of nights sighing for more silver, which, by the way, they will not accept when given them if they can help it, preferring the paper equivalent, but they should not be compelled to subsidize any class of our citizens, however meritorious they may be, to the extent of taking 49 cents' worth of silver and stamping it a dollar and handing it back to them. This may, indeed, make more money, but it makes it into the wrong pockets, into the pockets of the mine owners, from which the people will have to get them out by a well-known system of purchase at full price.

#### WHAT FREE COINAGE WOULD HAVE COST.

Let us calculate the result of such financial legislation; let us see what it would have cost the people of the United States to have given the free coinage at the dates stated.

In 1878 the average cost of silver bullion, enough to make a standard silver dollar, was 89 cents. In that year we coined 22,495,550 of these dollars. At 11 cents on the dollar it would have cost the country just \$2,474,510.50 to have thus accommodated the silver-mining interests of the country.

In 1896 we coined 31,423,886 of these dollars out of bullion which cost only 77 cents for each coined dollar, and which, had this been done under the free-coinage provisions, would have cost the people the considerable sum of \$7,227,493.78, and which would have

been a direct contribution on the part of Congress of the public funds to the profits of the silver-producing interests of the country. A more monstrous instance of attempted diversion of public money was never attempted.

#### THE SHERMAN LAW.

Under the operation of the Sherman law of 1890 it was found that the Government was purchasing 54,000,000 ounces of silver per year, or nearly all that was produced in the United States. This silver was stored in the Treasury vaults, and Treasury notes issued for the same, which were redeemable in gold on demand. It can be readily seen that it would be only a question of time when the Government would be obliged to suspend gold payments and reach a silver basis if this were continued.

#### REPEAL OF THE SHERMAN LAW.

At a special session of the Fifty-third Congress, called in August, 1893, after a long and spirited debate, the so-called Sherman law, on November 1, was repealed.

#### AMOUNT OF SILVER IN USE AS MONEY.

There is a widespread misunderstanding as to the actual amount of silver in use as money by the Government. According to the statistics of the Director of the Mint for 1896, there was coined into silver dollars, which are either in circulation or lodged in the Treasury vaults, silver bullion to secure Treasury notes, and subsidiary silver the enormous amount of \$628,728,071, all of which is in actual use as money. The total amount of gold in use in the United States July 1, 1896, was \$599,597,964, and of greenbacks \$346,681,016.

So it will be seen that there is more silver in use than any other kind of money, and I believe it would be greatly to the interest of the Government and of the people if all paper money under \$5 could be retired and the silver dollar put in its place to do its work, instead of being stored in the Government vaults. This is the case in France, Germany, and England, where but very little, if any, paper or gold can be found of a less denomination than £1 in England, 20 marks in Germany and 20 francs in France, practically approximating \$5 of American money.

A statement prepared at the Mint Bureau shows that the number of silver dollars coined at the United States mints during the fiscal year ended June 30, 1897, was 21,203,701, on which the seigniorage or profit to the Government amounted to \$6,336,104.25. This profit was turned into the Treasury from time to time as the coinage progressed, and was used to reduce taxation instead of wandering into the pockets of the silver producers, as would have been the case under free coinage.

#### REPUBLICANS TRUE TO THEIR PRINCIPLES.

These are authentic facts and official figures, from which every intelligent citizen should be able to draw his own conclusions without further comment. They embody to a great extent the record of the Republican party on the wisest legislation now on our statute books dealing with our finances and the elements of permanent prosperity. The Republican party has again taken the initiative in bringing order out of chaos, and, under the leadership of an able, patriotic, and statesmanlike Chief Executive, President McKinley, is loyally carrying out the principles of the platform adopted by the St. Louis convention in 1896.

In harmony with the spirit of that platform, and in response to the demands of nine-tenths of the suffering business interests of the United States, the President called Congress together in special session to repeal the Wilson bill. Senate and House enacted into law the Dingley bill, which is now in full force and effect, and its beneficial influence is already making itself felt in every section of the country.

The President, as one of the first acts of his Administration, appointed a commission to go to Europe to seek the establishment of an equitable arrangement with the leading commercial powers of the world for the use of both silver and gold within the limits of a safe and stable international policy, while he has also sent to Congress a message urging the appointment of a nonpartisan monetary commission to recommend supplementary legislation for the improvement of our banking and currency system along necessary and expedient lines. The House of Representatives promptly adopted a resolution in harmony with this message. Thus the Republican party is loyally and fearlessly living up to its principles.

#### SUMMARY.

I have endeavored, Mr. Speaker, in these few remarks to give a history of the finances of this Government since the war; also showing the production of silver and gold for the past three hundred and fifty years, believing that the enormous production of silver during the past twelve years has had much to do with its present bullion value, and also believing, Mr. Speaker, that the great increase in the production of gold and decrease in the production of silver since 1892, if continued for a few years, will do much to bring these metals more nearly together in bullion value.

Give Us an Abundant Circulating Medium—Give the People more Money, and it will Start the Spindles in the Idle Factories, it will Light the Furnace Fires, it will Put the Coal Miners to Work at Increased Wages, it will End the Strikes, Stop Business Failures, and it will Send over the Land that Long-Promised Wave of Prosperity.

SPEECH  
OF  
**HON. JAMES GUNN,**  
OF IDAHO,  
IN THE HOUSE OF REPRESENTATIVES,  
Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. GUNN said:

MR. SPEAKER: The bill before the House was first presented to this body the 15th of last March. It was designated by its friends at times as a revenue measure, and at other times as a protective measure; but whether protection or revenue, we were assured that it would flood the nation with the sunshine of better days; that hid away somewhere between its covers was a magic talisman, a magician's wand, that would drive poverty from the land and deluge us with a tidal wave of prosperity. It is now nearly four months since this bantling was launched on the House, and as we approach its final passage after these months of agony there seems to be general distrust manifested everywhere.

Tramps were never as numerous as they are now. The St. Louis Republic, under date of July 3, reported that an army of 15,000 were crossing the State of Kansas. Strikes and lockouts are the order of the day, and a continuous wail of poverty and distress comes up to this Chamber from all portions of the country. The coal miners, to whom you promised such glorious times if they would only vote for McKinley and prosperity, have been forced to strike against the starvation wages they have been compelled to work for. Business men are going into bankruptcy and industrial plants are being locked up by the sheriffs. From the surroundings we are forced to the conclusion that if the people have any confidence in this bill, as yet they have not made it manifest.

Whatever I may say against this bill is not from the standpoint of a free trader or a tariff-for-revenue follower, for I am neither one nor the other. I have always believed in the protective idea, and I believe in it yet. A tariff adjusted to protect infant industries, perfectly fair toward all classes of our people and all sections of our country, and that will aid in upholding the standard of wages, can always count on my support. On the other hand, a tariff that is designed to build up monopolies, destroy legitimate competition, and which is intended to levy an unjust burden of taxation on an impoverished people that extravagant appropriations in the conduct of the Government may be maintained, can never count on my support.

At this time an increase of the tariff rate, or of taxation, they being synonymous terms, is a positive injustice. We have contracted the volume of money and measure all commodities by the single gold standard. The people are now too poor to buy arid woolen goods. Put on a heavier tax and raise the price and the amount purchased will be still less, and they must seek a cheaper material with which to clothe themselves. The point I wish to make is this: A protective tariff without an ample supply of money in circulation will prove to be a curse, and not a blessing.

Give us an abundant circulating medium; give the people more money, and it will start the spindles in the idle factories; it will light the furnace fires; it will put the coal miners to work at increased wages; it will end the strikes, stop business failures, and it will send over the land that long-promised wave of prosperity. Then you can increase the tariff tax, and though even under these circumstances it would be uncalled for, yet it would be excusable on the ground that the people could bear the burden.

TARIFF DECEPTION.

There is a great deal of deception connected with this tariff legislation. Let me see if I can point out some of it. In certain countries they call a tax a tax, just as an ordinary individual would call a spade a spade or a plow a plow. We resort to a more skillful method than that in the United States when we levy a tax on the people. We tell them we are going to protect them; when we raise the tax, we tell them that we are giving them more protection. If we did not do this, the citizens might complain of the excessive tax rate. When we tell them that we are simply protecting them, they throw their hats in the air and hurrah for more taxes under the name of protection. While favoring a protective theory, excuse me for declining to enter into this game of deception. We can give the people of this nation all the protection they desire, and do it without increasing the present excessive tax rate.

To me one of the amusing features of this tariff discussion is to hear a Democrat take the floor and announce that he is a free trader or a tariff-for-revenue man, and then advocate a protective tariff on sugar, rice, white pine, or some other commodity that is produced in his section. This is only offset by the Republican who shouts for protection at the top of his voice, and then advocates free lead, free wool, free hides, free nickel, and free manganese, because the manufacturers in his district demand it.

This reminds me of the truth of the unfortunate remark made by Hancock—unfortunate because it lost him the Presidency: "The tariff is a local issue." Let us be honest in the discussion of this question, and if a Democrat advocates protection on a certain line of commodities under any guise, let us call him a protectionist. If, on the other hand, a Republican advocates free trade on another line of commodities, let us designate him as a free trader.

The bill under consideration is something more than a protective measure—it is intended to be a revenue producer. Both systems of taxation—direct and indirect—are resorted to, but this fact is kept well in the background. While the trusts, the monopolists, and their paid emissaries fill the day and the night with loud acclaim over the prospect of more protection, nothing is said about the certainty of more taxation.

In speaking of the deception practiced in this bill, attention should be directed to Schedule G, agricultural products and provisions. Cattle and hogs are on the protected list. This sop has been thrown out to appease the farmer, but it is doubtful if it will accomplish its mission. We are moving heaven and earth to hold the European market for our meats. The question will naturally present itself to our agriculturists: How will a protective tariff of from \$4 to \$6 per head benefit them, when they must market their surplus cattle in Germany, France, or England? In looking this schedule over it will be noticed that valuable horses are protected, but the "bucking broncho," or the wild-eyed cayuse of the distant West, so dear to the cowboy's heart, is not recognized by even a faint trace of protection.

In this connection attention might be called to the fact that Oregon's new industry has been overlooked. There is no protection for canned horse. It is the product of the single-standard prosperity, and it seems ungrateful not to recognize it. We see hogs protected at \$1.50 per head, and when we acknowledge the fact that we are straining heaven and earth to hold a market for our pork in Europe, the thin disguise is torn from this fraud. Corn is so abundant that in certain States it is used for fuel, but it is protected with a rate of 15 cents per bushel. Republicans on the floor of this House, when this bill was up the first time, maintained that a protective tariff cheapened a commodity. This doctrine was asserted over and over again. It seems to be a recognized tenet in the faith of the high protective tariff men. If this doctrine applies to corn, one might respectfully suggest that the farmers believe that corn is too cheap now.

Following corn comes wheat; and as every man, woman, and child in the United States who has arrived at the age of reason knows that our surplus wheat is sold every year in the English market, we may with propriety ask, How will this protection protect? Is it not apparent to every person that these rates are used for purposes of deception, in a vain endeavor to make the farmers believe that you are solicitous for their welfare, that you are anxious to deal justly with them in framing this tariff measure, when every page of the bill, every sentence, and every line is in the interest of trusts? If we were importing hogs, corn, and wheat to support our surplus population, as they are doing in some European countries, then a tariff on these articles might help our farmers; but when we are exporting them, the folly, the mockery, and the hollow deception of this tariff legislation become apparent.

The People's Party has ever characterized the strife over the tariff rates as a sham battle. It has told the voters over and over again that it was merely a ruse, this clashing of cymbals, beating tom-toms, and roll of drums, to attract their attention from the real, live issues of the day.

The fact that trusts and monopolies are exerting their baneful influence to destroy competition is never alluded to; that the transportation monopoly is an octopus of vast proportions, with its tentacles in every hamlet in the land, sapping the energies and drawing the lifeblood from our people; that the money monopoly has destroyed one of the twin metals—silver—and cornered gold, and they absolutely have all mankind at their mercy, as they can expand or contract values at their pleasure; that the land is passing from the control of the American people, and we are becoming a nation of tenants, living on the earth on such terms and conditions as some landlord may dictate.

While these evils are growing and sending their roots into the vitals of the nation, we are told morning, noon, and night that we can remedy all defects in our governmental machinery by raising or lowering the tariff. I believe that there is an Almighty Providence that watches over the destinies of this great nation.

His guiding hand was manifest in our Revolutionary struggle and on a hundred battlefields during the great rebellion. Under His ever-watchful care we have reason to hope that the tariff fraud has been worked on our people for the last time; that from this hour forward attention will be directed to more vital questions and to the preservation of our liberties.

#### THE TARIFF HAS ALWAYS FAILED TO PRODUCE PROSPERITY.

We had a protective tariff for over thirty years, and we can now take a review of the past and ascertain what the result has been. It can not be said that the Wilson bill is not a protective measure, for under its workings we collected during the fiscal year ending June 30, 1894, \$131,807,753.88; during the year ending June 30, 1895, \$151,907,588.94; for the year ending June 30, 1896, \$159,516,275.50, and for the year just closed, \$176,273,740.76.

All will admit that a tariff tax that yields a revenue of over \$175,000,000 a year must protect somewhere. Without going into an elaborate discussion of this question, let us revert to the original proposition, that a tariff has always failed to produce prosperity. It makes no difference how it may be adjusted—raise it or lower it—the condition of the people will not be materially improved. In order to cure existing evils we must work on other lines and abandon the sham battle that we have been waging these many years. We should commence with the financial question, and give the people more money by coining the gold and silver that a kind Providence stored up in our mountains in such generous quantities, and the use of which would have prevented so much poverty and distress in the land.

In order to show that a tariff, no matter how adjusted, will not bring prosperity to the land, the following list of failures for the years commencing with 1879 and ending with 1896 are submitted:

Years.	Number of failures.	Number of business concerns.	Per cent of failures.	Liabilities.
1879	6,059	702,157	0.85	\$98,149,053
1880	4,735	746,823	.63	95,732,000
1881	5,582	781,689	.71	81,155,932
1882	6,736	822,256	.82	101,547,546
1883	9,184	863,903	1.06	172,874,172
1884	10,908	904,730	1.21	226,343,427
1885	10,637	919,000	1.16	124,230,321
1886	9,834	969,841	1.01	114,644,119
1887	9,634	994,281	.90	167,560,944
1888	10,679	1,046,002	1.02	123,829,973
1889	10,862	1,057,140	1.04	148,784,337
1890	10,907	1,110,590	.98	189,856,964
1891	12,273	1,142,951	1.07	169,898,638
1892	10,344	1,172,705	.88	114,044,167
1893	15,242	1,163,113	1.28	346,779,889
1894	13,865	1,114,174	1.25	172,992,856
1895	13,197	1,200,282	1.09	173,196,000
1896	15,066	1,161,570	1.31	230,096,534

Here we have a period of eighteen years, during which time we tried the Morrill tariff, the McKinley tariff, the Wilson tariff, and are promised the Dingley tariff, the very mention of which we were told would produce prosperity; and note that the business failures for the quarter just ended amount to \$48,000,000—a sum that has been exceeded but seldom in our long list of financial wrecks. See the land covered with striking laborers, the evidences of poverty multiplying everywhere; it becomes more and more apparent that the Dingley bill, like its predecessors, will be a failure. What a difference there is between before election and after election. Before election, the dead walls from the Atlantic to the Pacific were covered with posters telling us that a vote for McKinley meant more work and more wages. After the election we find out that it means less work and no wages.

The Democrats tried their hands at this tariff tinkering four years ago. In the campaign that occurred at that time they told the voters that they had a tariff measure that would restore confidence in business channels, put the idle laborers to work, and increase the wage scale for those who were employed. After the election the man whom they had just elevated to the Presidency hastily convened Congress in special session—for what purpose? To enact into law his tariff views? Why, bless you, no. It was another case of before taking and after taking. He said the tariff would keep; that the financial question needed immediate attention.

In this he was right; but he was wrong in his method of procedure. He advocated and had carried out a contraction of the currency when we needed an expansion. The party of which I have the honor of being a member said then that the President's policy would only aggravate the distress that reigned around us. What we needed was a return to the use of gold and silver as money, full legal tender, and not a restriction of one of the metals. Events have proven that we were right. You tariff people and you single-standard people have had things your way in the Government since 1873, and before. You changed the tariff bill from the Morrill rates to the McKinley rates, then to the Wilson

schedule. Now, look at the list of failures and tell me, are you proud of your effort? You also tried your hand at a contraction of the currency, and your effort again has been a failure. The men who stood on the outward bulwarks, as faithful watchmen, and warned the nation of impending danger ought to receive some recognition; their warnings should ultimately receive attention.

At this point I desire making an explanation. Whatever I have said by way of adverse criticism of the Democratic party has not been said for the purpose of wounding the sensibilities of any Democrat who stands by that patriotic declaration of principles known as the Chicago platform. In the last campaign I supported their great leader, W. J. Bryan, on that platform, and under similar circumstances stand ready to support him again. When this tariff trash, this old thrashed straw, is thrown into the waste heap and a union is perfected between the patriotic elements in the nation, Populist, Silver Republican, and Silver Democrat, we will have an American financial system, and a man will not be jeered at anywhere in this land for advocating financial independence and severance of the bonds that shackle us to the money lords on the other side of the Atlantic Ocean. When that happy day comes, as come I believe it will, we will have contentment and prosperity everywhere in this mighty nation.

#### OUR EVER-SWELLING VOLUME OF DEBT.

The advocates of this tariff measure at times fall back on the census and tell us that we are a rich people. That we are reveling in wealth, all of which was acquired under a protective tariff. They never allude to the business failures. They are much like the mule that boasts that his father was a horse, without calling attention to the other side of the family. To me it is somewhat amusing to hear these fellows get up and proclaim that when the last census was taken we had 62,000,000 of people, \$62,000,000,000 worth of property; that our property valuation amounted to \$1,000 per capita of our population; that since 1860 we have doubled our wealth; and all this was done under a protective tariff. Once more let it be said that I am not attacking the protective-tariff theory; I am only assailing its misapplication, its perversion, as exemplified in the bill before the House. If all other conditions were favorable, a protective tariff is an aid to prosperity. With an ample supply of money it can be turned to a good purpose, but with a restricted volume it is certain to be a positive injury.

But to return to the question of our wealth. The Republican statement relative to our wealth reminds me of an incident that came under my observation but a short time ago. In traveling through the country my attention was attracted to a farmhouse and its surroundings. A neat structure, roomy, substantial barn, well-kept fences, and an abundant crop waved and nodded in the summer sun to gladden the heart of the husbandman. I remarked to my companion that the owner of that place was evidently in good circumstances, and was startled with the gruff reply: "If that property was sold to-morrow, it would not bring enough to pay that man's debts." "It is true," my informant added, "that the place is worth some \$12,000 or \$15,000, but it is mortgaged for \$5,000, and at forced sale it would not bring any more." Let us see what we owe; let us apply the same rule to the nation.

Like the farmer, if the property of the nation was put up at forced sale it would not bring any more than we owe. We can take either one of two views of this situation. If the indebtedness is owed to home capitalists, it is still a part of our assets, but who will not condemn that governmental policy that concentrates the wealth of the nation in the hands of a few money changers, that mortgages the States, counties, cities, transportation lines, industrial enterprises, and individuals to a handful of brokers. The fact is this: Our indebtedness is not held at home. The amount of the holdings in the hands of the capitalists on the other side of the Atlantic is counted by the billions of dollars. When we look at our great country and its magnificent resources and then at the load of debt pressing our people down to death and slavery, we are forced to the conclusion that the thirty years we have spent in fostering tariff legislation has been a failure.

The conclusion is pressed home on us irresistibly that we need something more than tariff legislation to quicken and protect the energies of our people. If we are told that we need European capital, we can truthfully answer that the thing called European capital was dug out of our mines, was the product of our rich metal-bearing mountain ranges. From 1792 down to the year 1895 we extracted from our precious-metal mines a total of \$6,000,000,000 worth of gold and silver bullion. At the close of business on the 1st day of this month, according to the Treasury statement, we had an aggregate of gold and silver in the United States locked up in the Treasury vaults and in various banking institutions of \$1,199,108,876. This leaves a balance of \$4,800,891,124 not accounted for.

What became of all this coin, or of coin metal? It must be admitted that a certain per cent of it was used in the arts. During the year 1895 the various civilized nations consumed in the

arts \$99,967,212, practically \$100,000,000. Of this amount the United States consumed \$25,706,109. During that year the world's production of gold and silver amounted to \$418,016,800. The world used one-quarter of its output in the arts, but if an account is taken of the gold and silver that is lost, worn by abrasion, and the large amount not covered by Government statistics, at least one-half of the precious metals is used for other purposes than coin.

If one-half of the output of gold and silver in the United States was used for commercial or manufacturing purposes there should still be left with us \$3,000,000,000 in gold and silver which we could turn into coin. It is not in the country when we want it; we must go to the other side of the Atlantic and borrow it. In fact, we have no coin that we can call our own. Whenever European capitalists see fit to unload our securities on us they can take every dollar out of the country. They raid our Treasury and our banks for coin whenever they need it.

After these long years of tariff legislation the nation that has fed the world with its wheat, clothed it with its cotton, and supplied it with the precious metals for coining purposes, presents to us to-day, in the fifth month of this prosperity Administration, thousands of striking workmen, starving, naked, and penniless. During Cleveland's Administration the Republicans talked calamity, and with ridicule pointed to the patch on the workman's pants which they called a Cleveland badge. Perhaps they were justified in this. I believe they were. They are now in power; they promised us an immediate return to prosperity, but instead we see the patch still on the workman's pants, and it is impossible to tell the difference between a McKinley badge and a Cleveland badge. One is just as conspicuous as the other.

Following this line of thought, let us take up the condition of the industrial masses. The census of 1890 is a Republican document, though rarely referred to by members of that party. It was taken under a Republican Administration and by Republicans. It is the best showing they could make of thirty years of Republican laws and Republican policy. When it was taken it placed the population of the nation in the neighborhood of 62,000,000 souls, or, to put it another way, 12,690,152 families. This represented that many homes rented, mortgaged, or unencumbered. Out of this number, there were 2,250,800 mortgaged homes or farms, while 8,250,000 occupied rented homes or farms. This left 2,190,152 persons who occupied their own homes and farms and who owned their own homes and farms free of incumbrances.

From this we see that 2,250,000 residences and farms were mortgaged and 2,190,152 were unencumbered. In these times, with the single standard as our sole money dependence and with higher taxes, it is hardly proper to say that a family with a mortgage on the premises is the owner of a home. In order that this statement may be not only fair but generous, let us put both classes, the encumbered and the unencumbered, in the same category as home owners, and it gives us 4,440,152 families—home and farm owners. This leaves 8,250,000 families, or 41,250,000 people, who own neither homes nor farms.

A frightful picture; and yet it does not tell the truth, for the fact still remains that but a small percentage of those who are mortgaged succeed in paying out. Then, if we deduct the encumbered homes from the total of home owners, the account stands this way: Mortgaged homes or farms, 2,250,000; rented homes or farms, 8,250,000; total, 10,500,000, and, with 5 persons to the family, a population of 52,500,000 persons, who have neither homes nor farms. With thirty years of tariff protection and the single standard, it does seem as though the men who have advocated a policy which has produced such disastrous results would, under the promptings of patriotism, consent to a trial of some other system with a hope that some better result might be obtained.

Pursuing this line of reasoning further, we find the census gives additional information, and not of a very agreeable character. Let us take up the condition of the people of a few of the States, commencing with Kansas. We find that there were in 1890 mortgages amounting to 298,880, representing the vast sum of \$243,146,826, showing a per capita debt of \$170. This is one mortgage to every family in the State. Of course there are property holders in Kansas free of incumbrances; but they are offset by those who have two mortgages on their holdings. The neighboring State of Iowa made a showing very little better. If we leave the Western States and take a look at the older-settled communities in the East, we find that conditions are not improved. In fact they are worse. The longer a person lives under a faulty system, the worse his condition becomes.

Take the State of Connecticut, and no one will deny but what the inhabitants of that State are both frugal and industrious, yet we find that in 1890 17.18 per cent of the agriculturists occupied rented farms and 25.60 were mortgaged. With propriety we can count these two elements in the same category, and this gives us 43.28 per cent tenants. Of the population who live in towns 71.30 per cent are tenants. Massachusetts in 1890 had of tenant farmers 15.06; mortgaged, 25.93, making 40.93 per cent of her farmers who

were virtually tenants. The inhabitants of the towns made even a poorer showing; 67.28 per cent lived in rented houses; 12.87 per cent were mortgaged, making 80.15 per cent of her town population who were really tenants.

Taking these two States as showing the conditions prevailing in New England, let us turn and take a look at the Southern States. Tennessee had of hired farms 41.88 per cent and 1.89 per cent mortgaged, giving 43.75 per cent tenants. South Carolina, 61.49 per cent were hired and 3.08 per cent mortgaged, a total of 64.57 per cent tenants. If we summarize the situation, the result is startling. Aggregate wealth of the nation, estimated by the Census Bureau, \$65,037,091,197; population, 63,450,760; number of families, 12,690,152; number mortgaged, 2,250,000; number who occupy their own homes unencumbered, 2,190,152; number of tenants, 8,250,000; taking five as the average American family, it gives us 10,440,152 persons home owners, and leaves 52,200,760 persons who are tenants or tramps. That is, they are not home owners.

This vast aggregate, 52,200,760 persons, controls not more than 10 per cent of land values, or about \$3,954,454,434, while the 2,190,152 families, representing a population of 10,550,760, control \$35,590,089,899. This shows the rapidity with which property is passing into the hands of the few. In the United States 65.57 per cent of the population are tenants. This does not include the mortgagees. The percentage of tenantry in several of the leading nations is given to show that, aside from Great Britain, we have more tenants and fewer property owners than any other modern nation:

Australia	10.17	France	38.94
Belgium	33.62	Holland	24.17
Denmark	63.09	Sweden	17.32

This condition of affairs has come on us when we were living under the most favorable conditions. We have had thirty-two years of peace, during which period neither famine nor pestilence has invaded our domain. On the contrary, we have been blessed with abundant harvests. Free homesteads have been given from the bounty of the Government to those who wished to avail themselves of this generous offer. Our farmers have had advantage of a rich virgin soil, not worn-out land that needed fertilizing. The forest that covered the earth was abundant and at the disposal of the settler. We had the advantage of our mines from the surface; that is, we did not have to conduct operations at a great depth to obtain such minerals and mineral substances as we needed for coin or for commercial or manufacturing purposes.

Under these favorable conditions the wealth of the nation is passing into the hands of a few speculators, while poverty and distress prevail everywhere. A burthen of debt rests heavily on our industrial masses, and we are resorting to every known expedient in the bill now under consideration to wring more taxes from an already impoverished constituency. He who contemplates the situation has reason to fear that the future has nothing very encouraging for mankind.

The next generation can not hope to live under as favorable conditions as the present. The free lands which are now being dispensed to all applicants will be occupied. The forest will be largely consumed. The surface-ore bodies will be worked out and mining operations can only be conducted by incurring considerable expense and not under as favorable conditions as we enjoy. If we have made a failure under the advantageous circumstances surrounding us, the outlook for those who come after is not very bright.

The advocates of this bill do not want to discuss this phase of the situation. They content themselves by shouting "Calamity howler!" During the past four years they were incessant calamity howlers; in fact, they monopolized the business. They were justified in doing so by existing conditions. The situation has not improved. There is no prospect for an improvement in sight, and instead of shouting calamity, it would be more seemly for the advocates of the present order of things to endeavor to defend their position or apply themselves to remedying existing evils.

If the figures herein submitted are indicative of a calamity, neither myself nor the party of which I am a member is to blame. We did not compile them, and we had no part in producing the disastrous result which they undeniably indicate. Thirty years of tariff legislation finds the country in this deplorable condition. The People's Party now, as ever in the past, sounds a warning. The Dingley tariff bill will only intensify the conditions that now prevail.

#### LEGISLATION FOR THE SUGAR TRUST.

During the long sultry summer days that this tariff bill dragged its slow length along, we were told that there was a contest being waged between the House and the Senate over the sugar schedule; that the Senate was dominated by the sugar trust, and that the House was making a stand for the people. As these charges and countercharges came from the Republicans and were leveled at

each other, it is fair to assume that the contending parties knew what they were talking about and that they were both familiar with the workings of this giant association. The fact of the matter is both Houses worked in the interest of the trust. While this crimination and recrimination was being indulged in, the sugar men sugared their way through Congress. They will hereafter sugar the nation on such terms as they may dictate. A duty levied to encourage the growing of cane and beets and the production of sugar should receive general support, but this bill is constructed on such lines as will be most burdensome to the consumer and most advantageous to the monopolist.

A few years ago if a duty was levied on a commodity and home production stimulated, the field was open for any person to manufacture the article. In those days we had legitimate competition. This is all changed now; the tariff duty only aids the monopolist. No man or set of men in the United States can hope to go into the business of refining sugar unless they acknowledge the supremacy of the sugar trust. It is a lamentable fact that this industry can not be stimulated without building up a monopoly to oppress and rob the people. For over a year, in anticipation of this tariff, the trust has been laying in a supply of sugar. It is an easy task to determine the amount of sugar imported for home consumption. The following table, compiled from official sources, gives the importations for the year 1895:

Month.	Pounds.	Value.
January.....	180,301,830	\$3,542,059
February.....	235,488,605	4,608,702
March.....	306,020,254	7,438,728
April.....	377,937,290	6,976,230
May.....	538,064,910	10,484,230
June.....	388,808,648	7,750,751
July.....	304,712,608	7,211,960
August.....	255,778,388	4,867,103
September.....	204,519,984	4,000,296
October.....	285,563,135	5,711,000
November.....	159,638,142	3,406,344
December.....	182,470,911	3,739,460
Total.....	3,579,924,754	69,767,873

The following are the sugar importations for 1896:

Month.	Pounds.	Value.
January.....	263,905,129	\$5,807,178
February.....	337,982,690	7,895,441
March.....	435,501,882	10,807,738
April.....	388,381,830	9,991,876
May.....	544,106,432	13,817,477
June.....	472,637,376	11,863,068
July.....	320,175,291	7,304,079
August.....	292,507,454	6,341,541
September.....	387,747,806	8,385,641
October.....	308,094,309	6,524,904
November.....	172,312,018	3,625,180
December.....	184,122,514	3,700,432
Total.....	4,108,174,901	86,213,555

This is an excess of 528,350,147 pounds over the importations for 1895.

The importations for the six months commencing with January and ending with June 30, 1897, are as follows:

Month.	Pounds.	Value.
January.....	208,480,753	\$3,097,937
February.....	286,605,450	5,653,513
March.....	485,525,990	9,413,910
April.....	773,527,477	15,125,409
May.....	790,653,995	15,054,777
June.....	708,532,496	13,889,890
Total.....	3,253,346,161	63,115,406

Attention should be directed to the enormous importations for 1897. The surplus sugar was bought up in all lands, and it is now stored in the warehouses of the American Sugar Refining Company. Add the surplus for 1896 to the six months' importations for 1897, and it will be seen that the trust has a year's supply on hand. It gives them an aggregate of 3,731,696,308 pounds, and this is more than the total importations for 1895. It follows that the duty on sugar for the ensuing twelve months will be paid to the trust and not to the Government. It has the sugar in its possession, and the consumers can not use it without paying the trust the duty and as much more as it may see fit to exact. Aside from the legitimate profits on this business, they will exact from our

citizens not less than \$25,000,000 in this one direction, overcharge on sugar. This is only a small part of its gains since the 4th day of last March. Its stock has advanced \$40 per share. This represents an advance on their stock, common and preferred, of \$1,880,000,000. No corporation ever designed by man has held such a merciless grip as the sugar trust now has on the citizens of the United States.

#### IMPORTATIONS OF WOOL.

The manufacturing trust has not failed to take advantage of the situation. For the year 1896 their importations of wool amounted to 155,313,705 pounds of all grades. For the six months ending June 30, 1897, it rose to the unprecedented figure of 282,260,839 pounds. This being nearly twice the amount entered in 1890, it shows that they have on hand a two-years supply. Like the sugar trust, the duty will be charged up against all lines of woolen goods, but the impost will be paid to the trust, not to the Government. There is something in this talk about the tidal wave of prosperity that is to inundate the land. It has come; it is here; but the trusts, the combines, the monopolists are the beneficiaries, not the plain, common people. It never was intended for them, and they never will share in its benefits. The work of building up an aristocratic class and of making a poor and a dependent class will go on with accelerated speed.

#### INDUSTRIES DESTROYED.

We hear a great deal about the tariff act of 1890, and are frequently reminded of the fact that it built up the tin industry in the United States. As far as it went in that direction, let us give the bill full credit. Yet the tin industry was established merely in the interest of the manufacturers. It put no miners to work. After a close search we failed to find tin in paying quantities. The tin that we now manufacture we are compelled to import. While all this hurrah is made over our home-made tin, there is nothing said about the industries that the act of 1890 destroyed or at least seriously crippled.

The mining of manganese ore had grown to extensive proportions under the protection afforded by the Morrill tariff. The year 1890 we produced 25,684 tons, valued at \$219,050. That was the last year it remained on the protected list. It was placed on the free list under the McKinley tariff, retained there under the Wilson bill, and is still on the free list in the Dingley bill. The production has fallen off until last year the output amounted to but 9,979 tons, valued at \$88,812. Russia and South America are our chief competitors. Our American miners could not work against the serfs and the peons. Why is this? Why not build up the manganese industry? It will open up mines, put miners at work, and give employment to thousands of our own people. Ah, the manufacturers say they want cheap manganese. Then down with the American miner and up with the serf and the peon. This mineral is found in paying quantities in Alabama, California, Colorado, Georgia, Indian Territory, Missouri, Montana, New Jersey, North Carolina, Pennsylvania, South Carolina, Tennessee, Vermont, Virginia, and West Virginia.

The Seventeenth Annual Report on the Mineral Resources of the United States has this to say of our manganese deposits:

Georgia is again the largest manganese-producing State in the Union. Indian Territory: There seems to be little doubt of the existence of a large body of manganese ore of good quality at the locality named [Lehigh].

Missouri: Though deposits of both manganese and manganiferous iron ores are known to exist, but little of any of either grade has been produced in this State since 1881.

South Carolina: Quite extensive operations were undertaken in 1895 by the Southern Manganese Company. This property was carefully examined by Mr. H. B. C. Nitz, the well-known geologist of Baltimore. On Gold's place a shaft 28 feet in depth had been sunk on the vein. In descending, the black shales seem to grow richer in manganese, small streaks of ore appearing between the same until at a depth of 25 feet solid ore is reached in a matrix of shale and some quartzite, the foot-wall of hard yellow shale appearing on one side. That character of the ore was hard, crystalline, and very pure.

Tennessee: Manganese ore occurs in considerable quantities in Shady Valley, in the eastern part of Johnson County, Tenn., and near the Virginia line. At what is known as the Heberlin mine an opening was made some years ago and about 800 tons of a superior quality taken out, which still remains piled near the mouth of the mine. When work was stopped, the ore apparently continued in about the same quantity.

Next to the Heberlin the most important showing of manganese in Shady Valley is at the Wright property. During the past summer, 1895, an opening was made on the ore and about 150 tons taken out. The ore here is in massive form, about 6 feet under ground and about the same number of feet in thickness, and at a distance has somewhat the appearance of a seam of coal. When work on it was stopped, the ore showed no sign of exhaustion.

Virginia is in some respects the most important manganese-producing State in the Union. There are more known deposits of this mineral in Virginia; they are spread over a greater extent of territory, more localities have been worked, and more manganese has been raised than in any other State; and yet in 1895 it was the third State in rank as a manganese producer.

The foregoing are but a few of the many quotations that could be made from the last report on our mineral resources. Sufficient is copied to show that manganese is one of our abundant minerals; that it is found over a vast extent of country; that the mines are closed down and the ore lays on the dump. This paralysis

fell on the industry after the passage of the McKinley bill. What makes the contrast the more strange, the McKinley bill sought to establish the manufacture of tin, a metal we did not have, and destroyed the mining of manganese, a metal we had in the greatest abundance. Manganese mining is not the only mining industry destroyed by present tariff systems. It must be apparent to all if a miner produces a mineral which he must sell on the market, and while he is engaged in the occupation of extracting it compelled to pay a tariff tax on all the necessities of life, he is placed at a serious disadvantage if the output of his mine is not also protected.

If two men work side by side, one refining sugar, the other extracting ore from the earth, the sugar refiner has a protection on his commodity of almost 2 cents a pound, which the mines must pay. The miner receives no protection on the result of his labor. It requires no elucidation to make it apparent that the miner is at a disadvantage. When this runs through the whole list of commodities that the miner consumes or uses, his food, clothing, and the tools that he works with, the injustice of the situation becomes more evident. When the McKinley bill went into effect, nickel mining was becoming an established industry. It had been protected under the Morrill tariff, and the product of our mines in 1890 amounted to 223,488 tons, valued at \$134,093. Last year it declined to 17,000 tons, valued at \$4,000. The McKinley bill put the metal on the free list, and since that time the production has been falling off.

Of late years nickel has acquired a prominent place in the arts. Since the discovery was made that it would unite with iron and that this composition would harden the latter metal, it has been used very extensively in the manufacture of plates for our new battle ships. Our entire supply is drawn from Canada, a British possession. In case of war with England this source would be cut off, and as our own mines are not developed, we would have serious trouble in order to finish a modern man-of-war. The promptings of patriotism, if through no other motive, should demand an extension of the protective principle to the nickel miner. A syndicate in Ohio controls the Canadian mines. It is said of them that they contribute liberally to the Republican campaign fund and in turn for their benefit nickel mining in the United States is discouraged. Nickel is found in Nevada, Arkansas, North Carolina, Missouri, South Dakota, Minnesota, Oregon, Washington, and California. Missouri last year produced 10,302 pounds of nickel from one mine, the La Motte. The deposits in Oregon and Nevada are known to be very extensive.

#### THE LEAD SCHEDULE.

The lead schedule was framed for the express purpose of encouraging fraud on the Government. Let us take a look at the queer provisions of this act. The duties shall be estimated at the port of entry. Every lead miner in the United States knows that it will be impossible to determine in that manner the quantity of lead in what is known as the hard lead ores of the mountainous regions in Mexico or the United States. Besides, an estimate is an irresponsible method of determining quantity. This is inexcusable, in view of the fact that there is a safe and reliable method of determining the quantity—by means of an assay, as is done now, though the law is not enforced. After the ore is estimated it is shipped to the smelters and passes into the control of the lead trust. Here it is sampled, and on this sample made by the smelter people the duty is adjusted. If it is set forth that the lead is intended for shipment out of the country, the duty is remitted. If a statement is made that it is manufactured into articles intended for shipment out of the country, no duty is paid. That it is used in competition with American lead when it arrives at the furnace as a flux and for other purposes has never been denied.

Thus we see that, notwithstanding the fact that the law gives us a duty of 1½ cents a pound, it is hedged round with so many conditions that we really have free lead. Manufactured lead pays a duty of 2½ cents a pound at the port of entry. Spot cash, no bonded warehouse foolishness, no rebate on exportation. The manufacturer is protected; the miner is not. For the benefit of the manufacturer the lead-mining industry is being sorely crippled, just as nickel and manganese mining has been almost completely destroyed. The Dingley bill is not fair in its provisions; it protects the Eastern manufacturer, but the farmer, the people of the West and South, receive no adequate recognition. While it builds a protective wall around some industries, it is designed to destroy others. For these reasons this bill is not worthy of support, but to this can be added even, if possible, the more powerful reason that we want bimetalism before we can hope to accomplish anything by means of a tariff revision. It may be time to point out the inconsistencies in our tariff legislation, and to show that it is manipulated in the interest of certain favored classes, but the fact should ever be pressed home that a return to the gold and silver coinage of the better days of the Republic is the first essential to prosperity.

#### The Tariff and Silver.

#### SPEECH

OF

HON. HENRY R. GIBSON,

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897,

On the report of the committee of conference on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. GIBSON said:

Mr. SPEAKER: The charge that this bill is advantageous to the sugar trust is so easily disproven that I am astonished that men who profess to be accurate in their statements, and desire the public to accept their assertions as reasonable and truthful, should make the charges against it which they are making. It has been clearly shown by men in this House, whose experience and study of the subject justify us in accepting their judgment and conclusions, that the bill, as completed by the conference committee, destroys the advantages which the sugar trusts gained under the Wilson tariff law, and does not give to the sugar refiners or to the trusts any advantages in excess of the absolute cost of refining.

This statement is made by men whose judgment on this subject can not be called in question, and whose high reputation as men of honor precludes absolutely a question or a doubt as to the truthfulness of their assertions. The charge that the bill is advantageous to the sugar trust is made for purely partisan purposes, the object being to discredit, with people, who do not understand this complex subject, the reputation of a bill which will be more satisfactory to the masses of the United States than any tariff law which has been placed upon the statute books in the memory of the present generation.

#### WHY SUGAR-TRUST STOCK ADVANCED.

The men who are charging that the bill is still advantageous to the sugar trust, even under the changes made by the conference, which are confessedly disadvantageous to the refiners, base their charge upon the fact that sugar-trust stock advanced in price during the closing days of the consideration of the bill, and especially during the days immediately following the public announcement of the agreement of the conference committee, by which the final rates named by the bill were fixed. This charge, while seeming plausible to those who do not understand the facts, is easily shown to be untrue when the facts are known; and the cause of the advance in the price of sugar-trust stock is as easily shown to be entirely foreign to the action of the conference committee.

That the advance in the price of sugar-trust stock which followed the action of the conference committee was due to causes over which that committee had no control is so clearly shown by a Washington dispatch published in the Cincinnati Commercial Tribune that I take the liberty of inserting it as a part of my speech, in the belief that it will show clearly to every intelligent man who reads it, first, that the Dingley bill is not advantageous to the sugar trust, and second, that the advance in sugar-trust stock was not due to advantages which the bill gives to the trust or to refiners. That article is as follows:

SUGAR WENT UP—EXPLANATION OF THE RISE IN TRUST STOCK—NOT DUE TO THE TARIFF, BUT TO HEAVY IMPORTATIONS MADE PREVIOUSLY—REVENUE TAX SUGGESTED—THIS SCARE DISPOSED OF, THERE WAS A SUDDEN RISE, WITH BIG PROFITS CERTAIN.

[Special dispatch to Commercial Tribune.]

Why has the sugar-trust stock advanced so enormously during the past fortnight, and especially since the action of the tariff conference on this subject became known?

Does the tariff bill give to the sugar trust any undue advantages; and if not, is there any other cause for the advance in the stock of the trust?

These are inquiries which every citizen is making, and properly. They are pertinent to the occasion. It is right that he should make them, and it is right that they should be answered, and answered frankly.

That sugar stock has advanced as it became apparent that the tariff bill was approaching completion is undeniable. That it did advance with leaps and bounds when the action of the conference became known is equally true.

Now, what is the cause? Does the bill give the trust any secret and mysterious advantages of which the public does not know in detail? Are Chairman DINGLEY, Representative PAYNE, Senator ALLISON, and others mistaken when they say that it does not? The people will not believe that these men, in whose long public career there has been no suspicion of dishonesty, are willfully and knowingly mistating the facts or making assertions that are not based upon facts, or at least what they believe to be facts.

These men assert that the tariff rates of the bill give the refiners no more protection than the actual cost of refining, viz, one-eighth of a cent per pound. Nobody who knows the men making this assertion will believe that they are stating other than what they believe to be truth. The question, then, is whether they are mistaken—whether, to use the term of the day, they have been "buncoed" by the sugar trust or by experts upon whom they have to rely for their information? If not, is there any other cause which would legitimately result in the advance in sugar-trust stock, as has been the case?

It was generally conceded when the bill passed the House that it was not in any way advantageous to the trust, but that, on the contrary, it took away from it the advantage which it had under the Wilson law.

#### HOUSE DIFFERENTIAL.

As the bill left the House, the rates on refined sugar were 12½ cents per 100 pounds higher than the rates on raw sugar. Of course the rates on different grades of raw sugar are different, but taking the number of pounds of any grade which were required to make 100 pounds of refined sugar, it was found that the rates were on an average 12½ cents per 100 pounds less than those on refined sugar, or one-eighth of a cent per pound difference between raw sugar when imported and refined sugar when imported, thus giving them an opportunity to import raw sugar at one-eighth of a cent a pound less than the rates at which refined sugar can be imported. Since it is generally conceded that the cost of refining sugar is not less than about one-eighth of a cent a pound, it is apparent that the rates really given to the sugar refiners are simply the bare difference between refined and unrefined sugars, or the cost of refining.

While the rates adopted by the Senate were undoubtedly more advantageous to the sugar refiners, those finally agreed upon by the conferees made precisely the same difference between raw and refined sugars that the House bill made when it was passed by that body. The conference report did increase the rates on refined sugar slightly, but it also increased the rates on raw sugar, thus making the difference in the rate of duty between raw and refined, or the "differential," as it is called, precisely what the House bill made it originally.

If, however, the conference report really gave the sugar trust no advantage, why was it that sugar-trust stock advanced during the time that the bill was in consideration by the conferees and after it was made public? This is a pertinent and proper question.

#### EASY TO ANSWER.

The answer to this is simple enough. The sugar trust, knowing that the new bill would certainly advance the rate of duty on sugar as a protection to American producers, has been bringing into the country as rapidly as possible sugar in enormous quantities, getting it in, of course, under the comparatively low rates of the Wilson law. It has scoured the world for sugar, and had in stock by the time the conference report was presented to the public over 70,000 tons of raw sugar, or, in round numbers, 1,500,000,000 pounds, enough sugar with which to load 70,000 cars or 3,500 freight trains of 20 cars each.

It was thus perfectly apparent that the trust would make whatever profit there was between the tariff rates of the Wilson law and the increased tariff rates named by the Dingley law, or an aggregate profit calculated at about \$12,000,000. Is it surprising that sugar-trust stock went up in view of the fact that this organization would make upon sugar which it had brought into the country \$12,000,000 by the mere advance which it could make on its stock of sugar after the final passage of the bill?

The explanation of the general advance in the stocks of the trust, while good as far as it goes, does not account fully for this remarkable advance as soon as the action of the conferees became known. This advance is, however, as readily and plainly accounted for. Secretary Gage had recommended to Congress the placing of an internal-revenue tax of 1 cent per pound on all unrefined sugars in the United States when the new tariff law should go into effect, the object being to compel the trust to pay the Government a tax of 1 cent per pound on all this 1,500,000,000 pounds of sugar which it had accumulated waiting for the advance which it could make by the new tariff. Had Secretary Gage's recommendation been accepted by Congress, it would have compelled the trust to pay in internal-revenue taxes probably \$15,000,000 upon the sugar which it had piled up in its warehouses. That it was possible that it might be inserted by the conferees, even though not adopted by the House or Senate, is shown by the fact that the House and Senate have since accepted the retaliatory amendment which was inserted by the conferees, although not prepared by the House or Senate.

#### REASONS APPARENT.

That the uncertainty as to whether this proposed tax on the sugar in the hands of the trust would or would not be imposed made many investors hesitate is apparent, and that the certainty that it would not be imposed assured them of the prospective ability of the trust to pay large dividends during the coming year is equally apparent. This assurance of course came when the action of the conferees was made public and it was known that Secretary Gage's recommendation had not been heeded. This knowledge showed fully and conclusively to those following the subject closely, first, that the sugar trust would make this large profit by reason of the increased duty on sugar, and, second, that it would not be compelled to pay out any of that profit in the proposed internal-revenue tax upon its sugar in stock, and those who had calculated the profits which it would make during the coming year on this great accumulation of sugar saw that the profits would be great and the dividends large.

The result was that the advance in sugar stock, about which there has been so much talk and denunciation, was not due to any permanent advantage which the new tariff gives to the trust, for, on the contrary, the difference between raw and refined sugars under the new bill, as already indicated, is 12½ cents per 100 pounds, while under the Wilson law it is 22½ cents per 100 pounds.

This statement so clearly answers the charge that the advance in sugar-trust stock is due to any advantages given by the rates named in the bill that I do not think it necessary to comment further on the subject. I do desire to add, however, that had the retrospective features of the bill as it passed the House been retained by the Senate and made a law, it doubtless would have prevented these enormous importations of sugar, made to avoid the increased tariff rates, and upon which the trust must profit, as do all other importers who have brought in other stocks of goods since the retrospective clause was stricken out of the bill by the Senate.

I regret very much, Mr. Speaker, that this wholesome feature of the bill as it passed the House was stricken out, because its retention would have prevented much of the anticipatory importations and would not have given to the importers an opportunity to rob this bill of its legitimate revenues during the first few months of its work, or have given to its opponents this flimsy excuse for an attack upon it. The very men who are now making this attack are the ones who opposed the retrospective clause, which, if passed, would have deprived them of this very objection.

#### TARIFF PLEDGES PROMPTLY REDEEMED.

I am gratified, Mr. Speaker, that the Republican party in this Congress has been able to complete and put upon the statute books a thoroughly protective tariff measure more promptly than any other party. No President since George Washington has had an opportunity to attach his signature to a general tariff measure within as brief a period from the date of his inauguration as will William McKinley. The Republican party has thus carried out one of the pledges of its platform made in St. Louis just a year ago, and done so more promptly than ever before in the history of political parties in the United States.

There were other pledges in that platform, Mr. Speaker, of equal importance, and those the Republican party is carrying out with as much attention, faithfulness, and promptness as it has the tariff pledge. Recent dispatches from abroad show that the representatives of this Administration, who are seeking to redeem another of the pledges of that Republican platform by bringing about an international conference on the silver question, are likely to be successful. The rapid developments in all parts of the world upon this subject since the adoption of that platform and its endorsement by the people of the United States in November last have fully justified the belief that international action can furnish the only road to the rehabilitation of silver, and that the views of the Republicans on this subject, as expressed in the last campaign, were fully justified.

Despite the assertions of the friends of the free and unlimited coinage of silver that the prices of agricultural products were governed by the price of silver, and that free coinage was the only hope for the farmer, prices of farm products, since these assertions were so freely made last fall, have steadily advanced while the price of silver has just as steadily declined. Despite the fact that the country refused to give free coinage to silver at a ratio widely different from the commercial ratio of silver, and despite the fact that the commercial value of the silver contained in a dollar has now fallen below 45 cents, wheat, corn, tobacco, wool, sheep, cattle, and other farm products have meantime advanced very materially in price.

#### REPUBLICAN CONTENTION ON THE SILVER QUESTION FULLY CONFIRMED.

This shows that the judgment of the Republican party, which has framed the tariff bill we are now about to pass, and which, in conjunction with this tariff plank, expressed equally clear convictions upon the currency question, was right, and that the people of the United States made no mistake in supporting that platform, and the party which framed it, and which is now carrying out its pledges.

That the views of the Republican party on the silver question were fully justified is shown not only by the fact that the arguments of the friends of silver have been proved false in our own experience of the past few months, but also by the fact that the nations of the world which at that time were upon a silver basis are rapidly hastening to adopt the gold standard. Russia, Peru, and Japan, which were classed during the discussion last fall as silver countries, have, even in the few months since that discussion, abandoned free silver and adopted the gold standard. And now advices from Mexico show that the recent fall in the price of silver and the fluctuations in its value are so seriously affecting business there that it may be necessary for Mexico to follow the example which Japan set in the present year and also adopt the gold standard.

In that connection I desire to insert in the RECORD a brief dispatch from the City of Mexico, published in the Washington Post, and to follow it with a discussion of this question by one of the most distinguished adopted citizens of this country, a man whose career as a member of Congress and a Cabinet officer, and whose constant interest in the affairs of the nation entitle his utterances upon this subject to the most careful consideration. I refer to the Hon. Carl Schurz, whose masterly address upon this subject delivered at Chicago a few months since attracted wide attention and fully justifies its reproduction at the present time, in view of the recent developments upon the subject which it then discussed. I also add certain other brief statements bearing upon this subject:

**SILVER IS WORRYING MEXICO—DROP IN WHITE METAL'S VALUE SENDS EXCHANGE KETING UPWARD—LOSS TO GOVERNMENT CORPORATIONS HAVING GOLD INTEREST TO MEET ABROAD WILL BE LARGE—DOES MORE HARM THAN LOW PRICES.**

The drop in silver announced to-day created much comment here in financial and business circles. The exchange on New York rose to 118, and even on the street to 120, and London exchange was quoted at 22 pence. If silver remains down, the loss to corporations having gold interest to meet abroad will be large, and at the present basis gold interest on Government loans abroad will require \$1,000,000 more in silver per annum. Many orders for goods abroad have been canceled, merchants desiring to see how the exchange is going.

It is generally believed that the sudden fall in silver is due to the unloading by large bullion holders, coupled with new gold discoveries and the continued small demand in India for silver. The fluctuation in exchange does more harm than low prices, as it makes impossible all calculations. The continued low price of silver will revive the talk of adopting the gold standard,

which would be ruinous to the new manufacturing industries. Bankers while anticipating even lower prices for silver, believe there will be a reaction to a price that will permit something like steadiness in exchange and stability in business operations.

**SPEECH OF THE HON. CARL SCHURZ, DELIVERED AT CENTRAL MUSIC HALL, SEPTEMBER 5, 1896, UNDER THE AUSPICES OF THE AMERICAN HONEST-MONEY LEAGUE OF CHICAGO, ILL.**

**FELLOW-CITIZENS:** I have come from the East to the West to speak to you for honest money. I do not imagine myself to be in an "enemy's country." There is to me no enemy's country within the boundaries of this Republic. Wherever I am among Americans I am among fellow-citizens and friends, bound together by common interests and a common patriotism. In this spirit I shall discuss the question of the day. I shall not deal in financial philosophy, but in hard and dry facts.

#### DISCONTENT AND ITS CAUSES.

There are sporadic discontents in the country, partly genuine, partly produced by artificial agitation. They may be specified thus: There are farmers who complain of the low prices of agricultural products; laboring men complaining of a lack of remunerative employment; men in all sorts of pursuits complaining of a general business stagnation and of a scarcity of money. In some parts of the country, especially the South and West, there are many people complaining of a want of capital and a too high rate of interest. The cry for more money is the favorite cry. These are the principal and the most definite complaints. Beyond them, however, an impression has been spread by agitators that an organized conspiracy of moneyed men, mainly great bankers, in America and in Europe, backed by the monarchs and aristocracies of the Old World, is seeking the general establishment of the gold standard of value to monopolize or "corner" the world's money, to the general detriment.

#### THE CHARGE OF CONSPIRACY.

All this has found definite expression in the following declaration of the Chicago platform:

"We declare that the act of 1873, demonetizing silver without the knowledge or approval of the American people, has resulted in the appreciation of gold and a corresponding fall in the price of commodities produced by the people; a heavy increase in the burden of taxation and of all debts, public and private; the enrichment of the money-lending class at home and abroad, prostration of industry and impoverishment of the people."

Mark well that all these evil consequences are ascribed to the demonetization of silver in the United States alone—not to its demonetization anywhere else. This is to justify the presentation, as a sufficient remedy, of the free coinage of silver in the United States alone, "without waiting for the aid or consent of any other nation." This platform is amplified by free-coinage orators, who tell us that the act of 1873, called "the crime of 1873," has surreptitiously "wiped out" one-half of the people's money, namely, silver; that in consequence the remaining half of our metallic money, namely, gold, as a basis of the whole financial structure, has to do the same business that formerly was done by gold and silver together; that thereby gold has risen to about double its former purchasing power, the gold dollar being virtually a 200-cent dollar; that the man who produces things for sale is thus being robbed of half the price, while debts payable on the gold basis have become twice as heavy, and that this fall of prices and increase of burdens are enriching the money changers and oppressing the people.

#### FALL OF PRICES BEFORE 1873.

Are these complaints well founded? Look at facts which nobody disputes. That there has been a considerable fall in the prices of many articles since 1873 is certainly true. But was this fall caused by the so-called demonetization of silver through the act of 1873? Now, not to speak of other periods of our history, such as the period from 1846 to 1851, everybody knows that there was a considerable fall of prices, not only as to agricultural products—cotton, for instance, dropped from \$1 a pound in 1864 to 17 cents in 1871—but in many kinds of industrial products before 1873. What happened before 1873 can not have been caused by what happened in 1873. This is clear. The shrinkage after 1873 may therefore have been caused by something else.

Another thing is equally clear. Whenever a change in the prices of commodities is caused by a change in supply or demand, or both, then it may affect different articles differently. Thus wheat may rise in price, the supply being proportionately short, while at the same time cotton may decline in price, the supply being proportionately abundant. But when a change of prices takes place in consequence of a great change in the purchasing power of the money of the country, especially when that change is sudden, then the effect must be equal, or at least approximately so, as to all articles that are bought or sold with that money. If by the so-called demonetization of silver in 1873 the gold dollar, or the dollar on the gold basis, became a 200-cent dollar at all, then it became a 200-cent dollar at once and for everything. It could not possibly be at the same time a 200-cent dollar for wheat and a 150-cent dollar for coal, and a 150-cent dollar for cotton, and a 100-cent dollar for corn or for shovels. I challenge anyone to gainsay this.

#### MARKETS AFTER 1873.

Now for the facts. The act of 1873 in question became a law on the 12th of February. What was the effect? Wheat, rye, oats, and corn rose above the price of 1872, while cotton declined. In 1874 wheat dropped a little; corn made a jump upward; cotton declined; oats and rye rose. In 1875 there was a general decline. In 1876 there was a rise in wheat and a decline in corn, oats, rye, and cotton. In 1877 there was another rise in wheat, carrying the price above that of 1870 and up to that of 1871, years preceding the act of 1873. Evidently so far the 200-cent dollar had not made its mark at all. But I will admit the possible plea that, as they say, the act of 1873 having been passed in secret, people did not know anything about it, and prices remained measurably steady, in ignorance of what dreadful things had happened. If so, then it would appear that, if the knowing ones had only kept still about it, the gold dollar would have modestly remained a 100-cent dollar and nobody would have been hurt.

But, seriously speaking, it may be said that when the act of 1873 was passed we were still using exclusively paper money; that neither gold nor silver was in circulation, and that therefore the demonetization would not be felt. Very well. But, then, in 1870 specie payments were resumed, metallic money circulated again, and, more than that, the cry about "the crime of 1873" resounded in Congress and in the country. Then, at last, the 200-cent gold dollar had its opportunity. Prices could no longer plead ignorance. What happened? In 1880 wheat rose above the price of 1870; likewise corn, cotton, and oats. In 1881 wheat rose again; also corn, oats, and cotton. In 1882 wheat and cotton declined, while corn and oats rose. The reports here given are those of the New York market. They may vary somewhat from the reports of farm prices, but they present the rises and declines of prices with substantial correctness.

#### NO TRACE OF EFFECT CLAIMED.

These facts prove conclusively to every sane mind that for nine years after the act of 1873—six years before and three years after the resumption of specie payments—the prices of the agricultural staples mentioned, being in most

instances considerably above 1860, show absolutely no trace of any such effect as would have been produced upon them had a great and sudden change in the purchasing power of the money of the country taken place; that it would be childish to pretend that but for the act of 1873 those prices would be 100, or 50, or 25, or 10 per cent higher, and that therefore all this talk about the gold dollar having become a 200-cent dollar, or a 150-cent dollar, or a 125-cent dollar, is—pardon the expression—arrant nonsense. Since 1882 the price of wheat has indeed very much declined, although in 1891 it reached once more in New York \$1.00, while corn sold, in 1891, 2, 3, and 4 cents higher than in 1879. But if the act of 1873, which had it really enhanced the purchasing power of the dollar, would have done so promptly and uniformly, produced no such effect for nine years after its enactment, it would be absurd to say that it produces it twenty years after its enactment. Is not this clear?

If, however, there be somebody believing that in spite of these facts the demonetization of silver by the act of 1873 must in some mysterious way have done something to depress prices, I meet him with the affirmation that the silver dollar was practically demonetized long before 1873. To judge from the speeches of our free-coinage orators, the American people must before 1873 have fairly wallowed in silver dollars. What is the fact? President Jefferson stopped the coinage of silver dollars in 1806. From 1793 to 1878, aside from fractional currency—which since 1853 was only limited legal tender—only about 8,000,000 silver dollars were coined. They were so scarce that you would hardly ever see one except in a curiosity shop as a rare coin.

#### CONSTANT TROUBLE WITH RATIO.

There was constant trouble with the legal ratio between gold and silver, which could not be so fixed as to keep the two metals together in circulation. First one of them would be driven out of the country and then the other. Meanwhile, over \$1,000,000,000 of gold coin was coined, and since 1853 gold was substantially the only full legal-tender money in actual circulation. And those were exceptionally prosperous times. Then the civil war came and swept all our metallic money out of sight. Paper money took its place, and in that condition we were in 1873, when the famous act of 1873 was passed.

What, then, was in reality that law that has since been so fiercely denounced as "the crime of 1873"? To judge by the declarations of the free-coinage orators, it must have been a law annihilating at one fell swoop one-half of the money circulating among the people. Did it do that? Why, it was simply an act revising our coinage laws and providing, among other things, that certain silver coins should be struck to be legal tender in the payment of debts only to a small amount. The standard silver dollar, that had practically been out of use since President Jefferson, in 1806, had stopped its coinage, was simply not mentioned in the enumeration. That is all. The act of 1873, therefore, did not create a new state of things, but simply recognized a state of things which had existed for many, many years. It did thereby not only not destroy half the money of the country, but not a single dollar of it.

#### WAS IT SECRETLY PASSED?

But, I hear myself asked, if this is so, why was this act of 1873 passed secretly, surreptitiously, stealthily? For silver orators have been persistently dining into the popular ear for many years, until millions believed it, the story that the silver dollar was "assassinated" through the law of 1873 by some dark, corrupt plot. This fable has been so often and so authoritatively disproved that I am unwilling to take it up again in detail. Senator Sherman did that recently in a most conclusive manner. I will only add that I was a member of the Senate at the time and know whereof I affirm; and I emphatically pronounce all the stories about the act of 1873 being passed surreptitiously; about Senators and members being somehow hypnotized, so that they did not know what they were doing; about some Englishman being on the ground with much money to promote the demonetization of silver, and so on, as wholly and unqualifiedly false. I wish to be scrupulously courteous to my opponents. But as a conscientious student of contemporaneous history, I am bound to say that in the forty years during which I have been an attentive observer of public affairs I have never witnessed or heard of such unscrupulous, shameless, persistent, audacious, cumulative, gigantic lying as has been and is now being done with regard to the act of 1873, its origin, its nature, and its consequences.

#### WHY IT WAS NOT TALKED ABOUT.

How did it happen that the act of 1873 did not attract more popular attention at the time? Simply because the dropping of the obsolete silver dollar from the coinage was regarded by everybody taking an interest in such matters as the mere recording of an accomplished fact, as a matter of course, just as much so as a law would have been providing that the old flintlock should no longer be used in the Army. And how did it happen that a few years afterwards such an uproar arose about it? The reason for that, too, was very simple. In 1873 the market value of silver, although already yielding, was still high. The silver in the silver dollar was worth \$1.02. The silver mine owner did not care to take \$1.02 to the mint and get only \$1 back for it. He was then enthusiastic for gold. But a few years later silver had declined in market value considerably, and when the silver miner might have taken 90 cents' worth of silver to the mint and got for it \$1, he was enthusiastic for silver, and he grew more and more enthusiastic the more silver declined in the market, and the more profit free coinage would have given him.

The silver mine owner is no doubt a great and good man, but he is not the most disinterested of philanthropists. He knows on which side his bread is buttered. Finding the act of 1873 in his way, he discovered that act to have been a heinous crime, not against the mining millionaires, but against the common people. Another class of persons joined in the cry, namely, those who had worked for an inflation of our irredeemable paper money, who had opposed the resumption of specie payments, and now favored the silver dollar, because the silver in it was worth in the market less than a gold dollar, and its coinage would therefore furnish what they called "cheap money." And then began that campaign of falsehood, which in shamelessness of imposture has, within my knowledge, never had its equal.

#### INCREASE IN CIRCULATION FOLLOWS THE "CRIME."

Now, mark what followed. Cowed by the uproarious outcry which was started by the silver miners and taken up by the "cheap-money" men, Congress passed two laws, one in 1878, the other in 1890, in pursuance of which over 420,000,000 silver dollars were added to our currency, more than fifty times as many dollars as had ever been coined before, besides a large addition to our subsidiary silver coins. Our paper money was largely increased, so that while in 1873, the year in which the American people were said to have been robbed of half their money—while in 1873, I say, we had \$74,000,000 of money in the United States, we had \$237,000,000 in 1890, nearly three times as much; and while in 1873 the circulation was \$18.94 per capita, it was \$28.96 per capita in 1890—fifty times as many silver dollars, and many times more money of all kinds than this country had ever had in its most prosperous days; and yet the price of silver in the market kept on falling, and the prices of many commodities, agricultural staples included, continued in their declining tendency.

Now analyze this case. Upon what ground do the silver advocates assert that the so-called demonetization of silver depressed prices? According to their own reasoning, because there has not been sufficient money to sustain prices. Sustain what prices? Those prevailing before 1873. But there is now three times as much money as there was in 1873, and a much higher per

capita circulation. Well, what becomes of their argument? Some of the silver philosophers have invented a more mysterious phrase—that prices have gone down because by the act of 1873 the "money of ultimate redemption" had been curtailed, only gold being available for this purpose. But according to the Treasury statistics we had in 1873 only \$25,000,000 of coin, including subsidiary silver, in the country, and now we have much more—\$900,000,000 of gold alone, or more than twenty-four times as much "money of ultimate redemption" as in 1873. And yet prices are low. The man whom such facts do not convince that the decline of prices can not have been caused by any effect produced upon our currency by the act of 1873 must have a skull so thick that a triphammer would not drive a sound conclusion through it.

#### CAUSES OF FALL IN PRICES.

But what is it, then, that has caused the decline of prices? I appeal to your common sense. Do you think that when one man, aided by machinery, does as much productive work as formerly ten or more did, and when our modern means of transportation carry the product from the producer to the consumer with five times the speed, at one-fifth the cost, and when in the transmission of intelligence time is quite and cost almost annihilated, do you think that then the product of human labor should not in due proportion become cheaper? If it did not, then modern civilization would, in one of its most important and beneficent functions, be a flat failure. For what is the inventive genius of the age that devotes itself to practical objects engaged in; what else than in devising and developing means and methods by which the things required by mankind for the sustenance and comfort of life be made better and more easily attainable; that is, cheaper?

The farmer in the United States welcomed the agricultural machinery which helps him in planting, raising, and harvesting his crop. He welcomed the railroad, the steamboat, the low freights, the telegraph, which shortened the distance between his farm and the market, and the banking arrangements required for moving and selling his product. But as nearly all our farmers had the same encouragement, so it followed quite naturally that the wheat crop of this country increased from an annual average of 312,000,000 bushels between 1870 and 1880 to an annual average of 475,000,000 bushels between 1880 and 1895. But also foreign countries had the encouraging benefit.

New wheat fields were opened in Russia and the Argentine Republic and elsewhere, and according to Bradstreet's (a very competent authority) the wheat product of the world grew from 1889 to 1894 no less than 429,000,000 bushels, while the world's consumption is estimated to increase only 12,000,000 bushels annually. When the increase of the world's supply thus gains upon the increase of the world's demands, is it a wonder that in the world's market, which rules the price for all exporting countries, prices should have declined? Is not this an infinitely more rational explanation of the decline in prices than to ascribe that decline to the so-called demonetization law of 1873, which practically demonetized nothing, but was actually followed by an increase of our currency, nearly trebling its volume, and making the per capita far, far higher than it ever had been before, and higher than it is in any other country except one? You might as well ascribe our civil war to the great comet of 1811.

#### TRUE SOURCE OF DISCONTENT.

Permit me here a word on what, in my humble opinion, is the true source of the discontent so far as it is entertained by honest men. The new economic conditions somewhat suddenly created in our time by the vast improvements in the means and methods of production and transportation have surprised, puzzled, and perplexed the minds of many well-meaning people. They became alarmed at the naturally and necessarily following decline of the prices of agricultural as well as industrial products, and at the general tendency of profits toward a minimum. Some of them found it very hard to adapt their ways of thinking and doing to the new state of things. They disliked to see in all the change a natural evolution of permanent effect. They easily yielded to the impression that there must be something wrong at the bottom of it all, some conspiracy of wealth, some hocus-pocus with the money of the country, just as once every cattle disease was ascribed to witchcraft, and as even in this century in some places the appearance of cholera was attributed to a conspiracy of the Jews to poison the wells.

Honest people in that state of mind fell an easy prey to the equally honest financial quack as well as to the dishonest demagogue. Thus they were readily persuaded that the so-called demonetization of silver was the true cause of their troubles, and that the free coinage of silver would be the true remedy, while thorough inquiry and calm reasoning would have convinced them that the true cause is the progress of civilization in production and transportation, and that the true remedy can be found only in the adaptation of our schemes of husbandry and our business methods to that progress. This is proved by actual experience. There are a great many prosperous farmers to-day in spite of low prices. They are farming farmers. There are others who do not prosper. They are largely the political farmers. The reason is this: The successful farming farmers have been studying the most economical methods of production, the most profitable varieties of farm products, and the changing opportunities offered by the market, while the political farmers have studied Coin's Financial School and the question how free coinage would give them double prices for what they would have raised if their financial studies had not absorbed so much of their time and attention.

#### BRYAN'S REMEDY MEANS TROUBLE.

Candid reflection will convince them that the remedy urged by the free-coinage men, being based upon a false diagnosis, will not only not cure but immensely aggravate the trouble complained of. It is a case of jumping from the frying pan into the fire. The Bryan remedy demands a radical change of the basis of our monetary system. What is that system? The currency of the United States consists of gold coin, silver coin, and five different kinds of paper money, these all redeemable in gold or in some roundabout way sustained by gold. Besides, there is the national-bank currency, redeemable by the banks in greenbacks, the greenbacks then being redeemable in gold.

It is true, nominally, various descriptions of our paper money, the greenbacks and the Treasury notes, are redeemable in "coin," meaning, literally, gold or silver, at the discretion of the Government, but practically they have always been held to be redeemable in gold if the holder presenting them for redemption so desired. And this construction has been substantially confirmed by the law of 1890. That law directed the purchase of 4,500,000 ounces of silver a month and the issue of Treasury notes therefor, such Treasury notes to be redeemable in gold or silver coin; and in connection therewith the law declared it to be "the established policy of the United States to maintain the two metals at a parity with each other, upon the present legal ratio, or such ratio as may be provided by law."

Fix your minds upon these words. We wish the United States to be regarded as an honest and honorable nation. If so, then this declaration made through its Government must be regarded as an honest declaration. This declaration could honestly have but one meaning, namely, this: The Government said, "Here, I issue paper money to be redeemable in gold or silver coin at my discretion, but lest anybody be disturbed by doubt as to the mercantile value of one of these metals, I hereby solemnly declare it to be my established policy to maintain these two metals at a parity; that is, equal to the more valuable of the two. You can therefore take my paper money with full confidence in my honor and integrity."

#### A SOLEMN OBLIGATION.

I repeat, if ours is an honest and honorable Government, the declaration could not possibly have any other meaning. I therefore affirm and maintain that it constituted a clear and solemn pledge on the part of the United States to keep the silver dollar in its purchasing power as good as the gold dollar, and to do all things that might be necessary to that end. Whoever denies this meaning of the declaration pronounces the United States a cheat, a "confidence" concern, issuing promises to pay under false pretenses.

How is the Government of the United States to make good that pledge? It would be an easy task, indeed, if the silver contained in the silver dollar were in the market, as merchandise, worth as much as the gold contained in the gold dollar. But, for reasons which I shall mention hereafter, the market value of silver has fallen about 50 per cent, so that the silver contained in the silver dollar can be bought in the market, as merchandise, for little more than 50 cents in gold. What is the problem confronting the Government now? Some financial philosophers of the flat persuasion say that when the Government has put its stamp upon the silver dollar, and made it a legal tender, it created in it a value as good as that of the gold dollar, and its duty is fulfilled, once and forever. Is this true?

#### OUR EXPERIENCE WITH THE GREENBACK.

Soon after the beginning of our civil war the Government issued the greenback. The greenback dollar was a bit of paper on which was printed the promise of the Government to pay the holder \$1—meaning \$1 in gold coin, for nobody thought of anything else. It bore the Government stamp and was made a legal tender for public and private dues, except duties on imports. At first, when there were but few greenbacks out, and it was hoped that the war would speedily be ended and the Government would soon be in condition to redeem the greenback, that greenback passed at par with gold, in spite of its not being receivable for duties on imports. But as the war continued and the quantity of greenbacks grew larger and larger, the public confidence as to the Government soon becoming able to redeem them was shaken, and the greenback in spite of the Government stamp and its legal-tender qualities, fell in purchasing power compared with gold. Gold rose to a premium as against the greenback and went out of circulation. This gold premium rose and rose as the quantity of greenbacks out increased, and at the same time the period when the Government would be able to redeem them seemed further removed.

But the civil war came to a happy ending, the issuing of greenbacks was stopped, the redemption act was passed, the Government gathered gold, and the greenback rose to par with gold again. The stamp of the Government and the legal-tender quality had neither saved it from depreciation nor secured its return to par with gold. What caused the depreciation was the prospect of an indefinite increase of the greenback promises to pay and the uncertainty as to the ability of the Government to meet its obligations. What caused the subsequent rise of the greenbacks to par with gold was the limiting of the greenback issues to a manageable quantity, the preparation made by the Government for redemption, and the returned public confidence that the Government was able as well as willing to redeem its promises.

What is now the status of the silver dollar in this respect? The greenback dollar is an evidence of indebtedness on the part of the Government to the amount of just \$1, the bit of paper out of which the greenback is made being worth nothing. Under the pledge of the Government to keep the silver dollar to all intents and purposes on a parity with the gold dollar, the silver dollar is virtually an evidence of indebtedness on the part of the United States to an amount equal to the difference between the mercantile value of the metal in the silver dollar and the gold dollar; that is to say, to the amount of 50 cents if the metal in the silver dollar can be bought at 50 cents. Notwithstanding this difference, the silver dollar will, like the greenback, pass in mercantile transactions as the equivalent of the gold dollar as long as there is public confidence in the ability and willingness of the Government to fulfill its pledge to "maintain the two metals at a parity." To fulfill this pledge it is necessary so to limit the circulation of silver dollars and of paper representing silver, for which the Government is responsible, and to keep so large a reserve of gold on hand as to leave no reasonable doubt of the ability of the Government to meet its obligations.

#### THE BOND SALES DISCUSSED.

We know from experience that when, as in 1893, such doubt arose, gold was withdrawn from the Treasury in large quantities, and the gold dollar was on the point of rising to a premium—that is to say, the parity of the two metals was being disturbed. It could be, as it was, maintained only by stopping the increase of the silver circulation and by replenishing the gold reserve by means of bond sales. Had the Government neglected to take these necessary steps, had it permitted the parity of the two metals to be disturbed, it would have been false to its manifest duty, a duty which President Cleveland faithfully, courageously fulfilled. There stands, then, the national pledge to keep the purchasing power of the silver dollar within the United States equal to that of the gold dollar. Every Government policy disregarding that pledge or making its fulfillment impossible is a policy of downright repudiation, dishonoring the Republic.

#### THE BRYAN PLAN.

What, then, is the policy of the Bryan Democracy? It is expressed in its platform:

"We demand the free and unlimited coinage of both silver and gold at the present legal ratio of 16 to 1, without waiting for the aid or consent of any other nation."

And secondly:

"We are opposed to the issue of interest-bearing bonds of the United States in times of peace."

What does the free coinage of silver mean? It means that anyone, here or abroad, who has any silver of any kind may take it to the mints of the United States to be coined into dollars without charge, and that the silver dollars so coined shall be returned to him and shall be a legal tender for all debts, public or private.

And what does the ratio of "16 to 1" mean? It means that under the law 16 ounces of silver shall be held to be worth 1 ounce of gold. But are 16 ounces of silver to-day worth 1 ounce of gold in the markets of the world? Why, there is not a sane person in the United States or anywhere else who would to-day give 1 ounce of gold for 16 ounces of silver, knowing that he can get more than 31 ounces of silver for 1 ounce of gold. What, then, would free silver coinage mean if suddenly introduced to-day? It would mean that any one, American or foreigner, could at pleasure expand our silver currency and thereby increase our public obligation by taking to our mints silver bullion worth about 50 cents and get back a silver dollar worth about twice as much in its debt-paying power.

#### SILVER KINGS WOULD BE BENEFITED.

This would, no doubt, be a profitable arrangement for those who have silver to take to the mint. Who are they? To judge from the talk of silver orators, you might think that, if only free coinage were once established, every farmer would have his private silver mine in his back yard and every laborer a magic source of silver supply in his kitchen. Such delusions would soon vanish. It would turn out that the men who would have large quantities of silver bullion to be doubled in value are the rich mine owners, the silver kings,

who belong to the heaviest capitalists in the country, and the bullion dealers, the great brokers, the big money changers, here as well as in England and on the European Continent—in short, what Populists usually call "the money power." How large the rush of silver to our mints and the consequent addition to our silver coinage would be I will not here conjecture. It is indeed certain that the inducement of any great profit would very soon disappear. But in any event there would be an indeterminate, indefinite expansion of our silver circulation in prospect, and I maintain that this indefinite prospect of expansion would utterly destroy the parity of the two metals.

It is true some of the free-coinage men reason "that free coinage would increase the demand so as to restore the old price." Let us see. The act of 1873, as has been shown, did not curtail existing demand, for there had been no such demand in this country for many years. The demonetization of silver in the Old World did curtail the demand, but it was far from being the only cause of the fall in the price of silver. The price of silver began to decline in the market, at first slightly, two years before the demonetization took place. The cause was, then, the increase of supply. Between 1866 and 1870 the average annual production of silver in the world was 43,051,583 fine ounces. Between 1871 and 1875 it was 63,317,014 fine ounces, and it went on increasing until in 1895 it was 174,796,875 fine ounces, four times as much as the annual average had been thirty years before. And the rise in production would have been still greater had not the fall in price made the mining of some low-grade ores unprofitable.

#### FREE COINAGE AND PRICE.

Now, I ask any sensible person whether against such an increase of production any product in the world could have maintained its price, even if the demand had remained the same? What, then, would the effect of free coinage in the United States be on the price of silver? It would probably produce at first an upward tendency. But as soon as the price goes up, silver production, greatly facilitated by constantly progressive reduction of its cost, will jump up, too, and once more depress the price. We had a striking illustration of this after the passage of the law of 1890, which provided for the purchase of 54,000,000 ounces annually. At first the price of silver rose sharply, but soon it began to fall again, and fell lower than ever.

Why? Because the production of silver rose from 124,000,000 ounces in 1890 to 137,000,000 in 1891, to 153,000,000 in 1892, and to 185,000,000 in 1893. Can there be any doubt that if free coinage caused any considerable rise in price, that price would be speedily pressed down again by an increased output of the mines? Why is it that such an enormous quantity of silver is produced at the present low price? Because at that low price silver mining on a large scale is still profitable. If it were not, there would be none of it. It is therefore certain that free coinage would not raise the price of silver to anything near the old figure, and that an ounce of gold would continue to buy far more than 16 ounces of silver.

Now, then, under such circumstances, could the parity of the two metals be maintained with an indefinite increase of the silver circulation? It would be impossible, unless the gold reserve behind all our obligations were also indefinitely augmented? And how could that reserve be augmented? As it may appear, only by loans effected through the issue of bonds of the United States. But here the Bryan Democracy steps in with its platform declaring "We are opposed to the issuing of interest-bearing bonds of the United States in times of peace." Thus by making the increase of the silver circulation indefinite and at the same time stopping the only source from which the gold reserve can be replenished, the Bryan Democracy will render the maintenance of the parity of the two metals utterly impossible. This is a clear repudiation of the solemn pledge contained in the law of 1890, with more acts of repudiation to follow.

#### CONSEQUENCES OF BRYAN'S ELECTION.

Consider now what the immediate consequences would be if Mr. Bryan were elected President, with a Congress to match. Mr. Bryan would of course be anxious to have his free-coinage law enacted; but that could not be, even if he called an extra session of Congress, until some time in April or May, five or six months after the day of election. But as soon as the results of the election were announced on the 4th of November everybody would know that the parity of gold and silver would not be maintained. Even Mr. Cleveland would not be able to maintain it till the expiration of his term, for nobody will then buy bonds for gold, expecting them to be paid back in silver. Neither will the banks of the country, as they have recently done, come forward again to supply the Treasury with gold, for they would have to expect that the greenbacks they would get for the gold would be redeemed in silver. And here permit me a word, by the way, about those banks. Some of the silver papers said that the banks in coming voluntarily to the rescue of the Government acted not from patriotism but from interest.

If so, then let us thank God that we have financial institutions that consider it their interest to keep the Government solvent. Wee to the country if a majority of the people should find it in their interest to make the Government bankrupt! Well, even after Mr. Bryan's election the banks might be patriotic or prudent enough to come again to the rescue of the Government with their gold, did they not know that it would be absolutely useless. And why would it be useless? Because, it having been made certain by Mr. Bryan's election that the parity of gold and silver would not be maintained, there would be a rush upon the Treasury for the gold in it by persons holding greenbacks entitled to redemption, and the gold reserve would be exhausted in a twinkling.

#### GOLD WOULD VANISH.

Gold will instantly disappear from circulation to be hoarded or exported. Why will it disappear? Because every sensible person when making a payment will prefer to make it in the less valuable dollar and hold the more valuable gold dollar back for more profitable use. Gold will therefore quickly rise to a premium, and we shall be on the silver basis long before a free coinage law can be enacted. What does it mean to be on the silver basis? The word "coin," wherever it appears in the law, will no longer mean gold, as it was so far understood, but silver alone. The greenback or Treasury note redeemable in "coin" will no longer be redeemable in gold, as heretofore, but only in silver. The United States bond, payable in coin—no matter whether gold was paid for it or whether it had been sold for the very purpose of buying gold for the Treasury—will be paid, principal and interest, in silver—repudiation as flagrant as the world ever witnessed. Our daily transactions in buying and selling, in paying and receiving wages, will no longer be carried on upon the basis of the gold dollar worth 100 cents, but of the silver dollar worth 50 cents or thereabout, for the Government will no longer hold up the silver dollar to the value of the gold dollar. That is what the silver basis means. You can study in Mexico how it works.

Now, who will get that Treasury gold when, after Bryan's supposed election, the rush for it is made? Not the farmer, not the laboring man; not those whom the Populists usually call the people. They have no greenbacks ready to present for redemption, and if they had, they would hardly be quick enough about it. No; that Treasury gold will be promptly gotten hold of by the big bankers, by Wall-street men, and by other persons called by the Populists "the money power," to be by them used as they think most profitable.

#### BIG CONTRACTION INEVITABLE.

The quantity of gold vanishing from circulation will amount to about \$90,000,000, the disappearance of which will make a tremendous hole in the volume of our currency. Nearly one-third of it will be gone, and what remains will be reduced nearly one-half in purchasing power. But, says the silver man, there will be free silver coinage to fill the gap promptly with coined silver or silver certificates. Oh, no, my fellow-sufferers. The disappearance of gold will happen promptly after the election of Mr. Bryan, and there will not possibly be any free coinage of silver for at least six months, and it will require a great many more months to fill a gap of \$90,000,000.

What will happen meanwhile? The St. Louis Globe-Democrat reports Mr. Bryan to have said some time ago: "I think it [meaning the victory of the free-coinage movement] will cause a panic. But the country is in a deplorable condition, and it will take extreme measures to restore it to a condition of prosperity." Whereupon the St. Louis paper pointedly remarks: "Evidently Mr. Bryan has heard of the doctor who always threw his patient into fits before administering any curative medicine." Just so.

How, then, would Mr. Bryan's "fit" work? The sudden disappearance of our gold from circulation would produce the most stringent contraction of the currency on record. Business men who owe money and at the same time have money due them will be forced to collect that money by every means at their disposal. Nobody will be inclined to lend out any money except upon extraordinary security. The banks will naturally consider it their duty to keep themselves strong, and therefore to call in loans and to restrict their discounts and advances to business men with the utmost caution. Business establishments, manufactories, mercantile houses, unable to get the money for meeting their obligations, will by the hundreds succumb to their embarrassments and tumble down like a row of bricks. Others will cautiously restrict their operations to the narrowest possible limit, and wage earners by the thousands will lose their employment and be turned into the street.

#### DIRE EFFECT ON ALL CLASSES.

No class of society will be spared the destructive consequences. Every frightened creditor, pressed by his own creditors, and apprehensive of a growing loss by every day's delay, will eagerly pounce upon his debtors. The prompt settlement of every account will be peremptorily demanded.

Our farmers who have mortgages on their property, and who have been told that free coinage will make things exceedingly easy for them, will have some unexpected experiences. Every mortgage debt that is due will be quickly called in. The mortgagor who tries to have his bond extended will find an unwilling ear. He who seeks to borrow money in order to replace the old mortgage with a new one will be told that this is no time for loans, except, perhaps, upon exorbitant conditions. The mortgagor may find, too, that his bond is payable in gold coin, and he will have to buy the gold at the premium then ruling. Foreclosures will be the order of the day. The mortgagor who seeks shelter under the law's delay will, at any rate, further burden his property with the cost of legal proceedings. Everywhere anxiety, embarrassment, sacrifice, loss, and distress, even before Mr. Bryan could ascend the Presidential chair.

Still there are some who under these circumstances will do a lively and prosperous business—the sheriff, the usurer, and the moneyed man who has ready means to buy real estate or other goods for a song at forced sales. That part of the "money power" will lustily thrive on the misfortunes of the people.

But more. We are largely in debt to Europe—not as if Europe had forced us to borrow, but because we solicited Europe to lend us. Our merchants and bankers owe unsettled balances or accounts, and large amounts of our securities are held there—national, State, and municipal bonds, bonds and stock of our railroads, street railways, and industrial corporations, and even mortgages on city property or farms, placed there by loan companies. The European holders of such securities will be seriously alarmed at the prospects here, and our securities will promptly, and indiscriminately be thrown upon the market for what they will bring. A violent decline of prices will be the consequence, of course, here as well as abroad. This will, indeed, in the first place, affect those who deal in such securities. People who have borrowed money on their holdings will have to sacrifice them, because they can not raise the money to protect them. There will, therefore, be a general and ruinous crash in the stock and bond market.

#### LOSSES IN TRUST FUNDS WOULD FOLLOW.

Our silver friends may say that this will not trouble them, and that the more the money changers of Wall street come to grief the better. Indeed, if it were only the money changers of Wall street that suffered, we might easily console ourselves. But the bonds of the United States, and of States and municipalities, and the bonds and stocks of our railroads, of street railways, and of industrial corporations are also held largely in this country, not merely by big capitalists, but by people of small means, farmers, wage earners, who have invested their savings in them; and by savings banks, life-insurance companies, and trust funds, in which many millions of poor people are interested. Is their loss also a matter of indifference?

Again, our silver friends may say that if Europeans do not "trust silver," and in their fright throw away our securities at a heavy sacrifice, we can pick up those securities at a splendid bargain; that some of them will, after all, become good, and rise to high figures again, and that thus we shall make a heavy profit on them. This is true. But who will make that profit? Not the farmer, not the laborer in the workshop, not the tolling masses. No; it will be he whom our silver friends love to denounce as the great goldbug, the rich operator, the very incarnation of the "money power." That class of men will make those profits and be more powerful than before. The catastrophe in Wall street, caused by the election of Mr. Bryan, and the ruining of some Wall street men would not mean the destruction of what the Populist understands by Wall street; it would mean some big fish swallowing some little fish, the big fish growing still bigger by the operation. It would not weaken, but more strongly concentrate the so-called "money power."

How can I forget these things with so much assurance? Because they have already cast their shadows before. Do you remember the crisis of 1893 when the silver basis was in sight?

#### POSSIBILITY OF BRYAN CAUSING ALARM.

And now, again, the mere apprehension of a possibility of Mr. Bryan's election and of the consequent slipping of our country upon the silver basis has already caused untold millions of our securities to be thrown upon the market in Europe as well as here. Scores of business orders are already recalled, a large number of manufacturing establishments have already stopped or restricted their operations, enterprise is already discouraged and nearly paralyzed. Many works of public utility by industrial or railroad companies have already been ordered off, thousands of workmen are already thrown out of employment, gold is already being hoarded, capital is already being sent out of the country to be invested in Europe for safety.

And why all this? Not, as the silver men foolishly pretend, because the existing gold standard has made money scarce, for capital is lying idle in heaps, scores upon scores of millions, fairly yearning for safe employment. No; ask those concerned why all this happens, and with one voice they will tell you it is because they apprehend serious danger to every dollar ventured out through the change of our standard of value in prospect, through the

debasement of our currency threatened by the free-silver-coinage movement. And if these are the effects of a mere apprehension of a possibility, what would be the effect of the event itself? There is scarcely an imaginable limit to the destruction certain to be wrought by the business disturbance that Mr. Bryan's mere election would cause, even before his inauguration. After five or six months of such a deadly crisis, Mr. Bryan's extra session of Congress would begin and give us free coinage. Then, as Mr. Bryan solemnly promised us in his great New York oration, free coinage will give us bimetalism, bimetalism will give us an abundance of money, and all will be right.

#### WOULD BE A BLOW TO BIMETALLISM.

Bimetalism? What is bimetalism? It is a monetary system in which the two metals circulate together for all the purposes of money on a parity with each other upon a fixed legal ratio, which in our case is 16 to 1. Evidently, to have bimetalism gold must be on hand as well as silver. As I have shown, between Mr. Bryan's supposed election and his extra session of Congress our gold will have run away from circulation. Part of it has been privately hoarded, and another, by far the larger part, has gone to Europe, where it finds profitable employment. Thus it turns out that Mr. Bryan's election will have served to possess the American, and still more the European, "money powers" of most of the gold which he needs here for his bimetalism. This is one of the troubles which the really sincere European bimetalists foresaw when they almost pathetically implored their less sincere American brothers not to think of the free coinage of silver in the United States alone, because it would drive almost all the gold to Europe and attract silver to America, which would make bimetalism impossible in Europe as well as here.

How will Mr. Bryan get the gold back from the "money power"? Evidently he must offer an inducement. What inducement? To be sure, the mint will be open to gold as well as silver. But who will offer gold bullion to have it coined into dollars for circulation when he can have silver dollars with the same legal-tender power at half the price? Only an idiot would do that. Of course gold will be offered only when the silver dollar is up again to the gold standard. There is the rub. But here Mr. Bryan steps in with a theory which is a curiosity in statesmanship. He said in his New York speech:

"Any purchaser who stands ready to take the entire supply of any article at a certain price can prevent that article from falling below that price. So the Government can fix a price for gold and silver by creating a demand greater than the supply."

And again:

"When a mint price is thus established it regulates the bullion price, because any person desiring coin may have the bullion converted into coin at that price, and any person desiring bullion can secure it by melting that coin."

#### REAL MEANING OF FREE COINAGE.

What? Is this to mean that under free coinage the Government will purchase silver bullion and pay a certain fixed price for it? If so, then Mr. Bryan, the great free-coinage apostle, does not know what free coinage is. Let us remind him. It means that the owner of silver bullion may take it to the mint and have it coined and returned to him in coined pieces, so many silver dollars for so much weight of pure silver. It does not mean that the Government "stands ready to purchase the entire supply of silver at a certain price." The Government does not purchase a single ounce of it. It merely receives the bullion, stamps it, and returns it. And as to fixing a price, as soon as the Government stops holding up the silver dollar to the gold standard, as it would with Mr. Bryan's election, the silver dollar, measured by its purchasing power, will be worth not a cent more than the market value of the silver contained in it. If the market value of that quantity is 50 cents in gold, and you present at the mint 50 cents' worth of bullion, you get back, not a gold dollar, but a silver dollar worth just 50 cents in gold.

You might, instead of taking your bullion to the mint, sell it in the market for just the same amount of money. Indeed, bullion owners, unless they have some special reason for taking their bullion to the mint, will take it to the market and sell it there, as they very extensively do in all countries in which there is free silver coinage. Why should they not? Because if they have their bullion coined they get legal-tender dollars for it. If they sell it in the market, they get there legal-tender dollars like wise. It will therefore be a mere question of special convenience whether they take it to the mint or to the market. And in the market, according to all human reason and experience, its price will, temporary fluctuations notwithstanding, remain on the whole very near to the figure of the cost at which it can in large quantities be produced. Mr. Bryan's strange imaginings have therefore proved only that when he speaks of Government purchases of silver, and fixing prices and creating a demand greater than the supply, he simply does not know what free coinage is.

#### THEORY SIMPLY A BELIEF.

The theory that free-silver coinage will make and keep the silver dollar equal in value to the gold dollar rests upon absolutely nothing but Mr. Bryan's incessantly expressed personal belief. Fixed belief is a happy state of the mind. One of the strongest cases of belief I ever met with was a man who inflexibly believed that he was the Pope of Rome, and could, if he would, fetch down the moon. He was under treatment by a specialist for mental peculiarities.

Every sensible person, I trust, will now admit that free-silver coinage in the United States alone will make bimetalism—the equal use of both gold and silver as money—utterly impossible, here as well as abroad. It will confirm Europe in gold monometallism and condemn us to silver, monometallism—the exclusive use of silver as money, and of paper based upon silver. No doubt this is what the silver men are really aiming at.

Let us now consider how it will affect the various interests of the people. The first blessing we are promised will flow from free coinage is a general rise of prices. This means that the silver dollar will buy less than the gold dollar did, and this for the reason that it is no longer worth as much as the gold dollar. Evidently the promise of bimetalism, of silver rising to its old price on the one hand, and the promise of higher prices, owing to a less valuable silver dollar on the other hand, do not go together. The one or the other is a fraud. Of course the fraud is the promise of bimetalism. The rise of prices owing to the debasement of the dollar will begin at once as soon as gold departs and we slip on the silver basis. Bread will be dearer; milk, coffee, sugar, tea, meat, and vegetables will be dearer; clothes, shoes, and hats will be dearer; rents, furniture, coal, kerosene—in short, every article the price of which can be raised by the seller.

#### TWO SIDES TO HIGH PRICES.

High prices are a two-edged sword—handy to the seller, but unpleasant to the buyer. They press, of course, hardest upon those who are compelled to buy most in proportion to their income or their earnings. And who are they? The poor people. What a rich family spends upon the actual necessities of life, the indispensable food, clothing, and shelter, is very little compared with its income. Most of its expenditures are for things that are not necessities, and may be classed as luxuries the purchasing of which may be suspended or postponed without hardship. But the poor family, the wage earner's family, is obliged to spend a very large part of its income from day

to day upon food, clothing, shelter, heat, and light, that can not be temporarily dispensed with without hardship. From a rise in the prices of necessities of life the poor people therefore suffer by far the most.

Here I touch one of the most insidious deceptions with which our free-coinage apostles seek to hoodwink the people. They speak of a class of "consumers" as if they were only a lot of rich people sitting in their fine houses and doing nothing but consume; and of a class of "producers," consisting of all the people engaged in work, especially manual work, doing nothing but produce. And they speak of high prices as if their effect were mainly to make those lazy, rich consumers pay more for the things which the producers make and sell to them. This picture is an insidious lie. The number of people not engaged in any directly or indirectly productive work is, thank heaven, in this country still very small. And not only they are consumers, but everybody is. Nay, more than that, the poorest laborer is, in proportion to his means, a much heavier consumer than the richest millionaire. And as to the blessings of high prices, they are a grinding hardship not to the rich but to the poor consumers, unless their earnings rise in full proportion to the rise in prices. Neither are rising prices a sign of rising business prosperity, except when the rise of prices springs from increasing consumption. It certainly is not when it is caused by a debasement of the purchasing power of the current money.

#### THEORY AS IT WILL WORK IN PRACTICE.

Make the practical application. Some time ago I read among the published utterances of various persons on the silver question the following from a street-car conductor: "I am for Bryan and free silver," said he. "If he is elected, money will be plenty and circulate more, and then we'll get some of it." The poor fellow! Let us suppose, then, Mr. Bryan elected. We are happily on the silver basis. The dollar buys its 50 cents' worth of goods or thereabout. The wages of our street-car conductor are, say, \$2 a day. His wife, poor woman, goes to the grocer and finds that everything she used to buy for 10 cents now costs 20. She plaintively remonstrates. "I can not help that," says the grocer. "You pay me in silver, 50 cents on the dollar. I have to use this money in buying my stock, and need twice as many dollars as I did before. So my customers must pay twice as much, or I must close my store."

There is nothing more to be said. It is the same thing when she goes to the butcher, the baker, the shoemaker, and so on. Our street-car conductor finds that while he and his family could with strict economy live on \$2 a day, they are fearfully pinched when the \$2 buys only as much as formerly did \$1. He consults with his friends, and a committee of them apply to the president of the street railway for higher wages. "Higher wages," says he. "I have been thinking that a reduction of wages will be necessary. For all our supplies and material we have now to pay \$2 where we formerly paid \$1. But we get only our 5 cents fare, which is really now 2½ cents. And, besides, our bonds are payable, principal and interest, in gold, and we have to buy that gold at the rate of \$2 in silver for one gold dollar. How are we to make both ends meet? I really do not know whether we can continue to pay you even \$2 a day." The committeemen growl and speak of striking. "Strike!" says the president. "Why, the streets are full of laboring men thrown out of work by the closing of the shops since we are on the silver basis. There are thousands of them, men with families, who will jump at the chance of earning even less than \$2 a day." The committee look at one another. They know that it is all true. The beauty of higher prices on the silver basis begins to dawn upon them, and they withdraw, wiser but much sadder men; and the conductor's care-burdened wife asks him whether it was really a smart thing to vote for Bryan and plenty of money.

#### DAMAGE TO RAILROADS AND RAILROAD MEN.

The same will happen to the hundreds of thousands of employees of the railroads in the United States. There is hardly one of those railroads that will not be prevented either by law or by other powerful influences from raising its passenger fares or freight ratio to meet the depreciation of the money they receive, and 50 per cent of their bonded indebtedness is contracted to be paid, principal and interest, in gold. Bankruptcy will stare them in the face, and even those of them that may manage to escape it will hardly be able to make good to their employees the damage they suffer through the depreciation of their wages through the silver dollar.

How stands the case of the wage earners whose product can be raised in price proportionate to the debasement of the dollar? As the dollar falls in value, the manufacturer or the merchant marks up his goods. The workman or the clerk, finding himself hard pressed by the rise in price of the necessities of life, applies for a corresponding increase of wages. The head of the factory or the mercantile establishment admits that some increase is called for. "But," says he, "you are not the only person in trouble. The value of our money is fluctuating. We hardly know what it is to-day. We surely do not know what it will be next week. Profits are excessively close, anyhow. We make a sale or a purchase to-day and think it is a profit. To-morrow we may find that it was at a loss. We hardly venture to make a contract to be filled at a future time, because we can make no safe calculations. We can increase your wages a little, but not much. For that you will have to wait until things get more settled. Besides, this silver free coinage has thrown all business into dreadful confusion, and there are plenty of people out of employment who would do your work for less than you get now." And so the wage earner has to be satisfied with a little increase of pay, and wait for more while the advanced prices of necessities prey upon him.

#### OUR OWN EXPERIENCE SHOULD WARN US.

Is this mere conjecture? It is the experience of every country that has been cursed by a rise of prices through money of fluctuating value. I defy anyone to show me in the whole history of the world a single exception. Have we not during our civil war witnessed it with our own eyes? In 1862, when our irredeemable paper currency had begun to depreciate, the average wages of labor rose only 3 per cent, while the average price rose 18; in 1863, when wages had risen 104 per cent, average prices were 49 per cent higher; in 1864 wages had risen 234 per cent, and prices 494; in 1865 wages had advanced 43 per cent, and prices 117 above what wages and prices had been in gold in 1861. In other words, the laboring man's wages had lost in purchasing power more than 30 cents in every dollar. Every country laboring under similar conditions tells the same story. What reason in the world is there to assume that this universal rule will not operate in the case of free coinage?

And what have the apostles of free-silver coinage to say to this? Hear Mr. Bryan himself in his famous New York oration: "While a gold standard raises the purchasing power of the dollar, it also makes it more difficult to obtain possession of the dollar—employment is less permanent, loss of work more probable, and reemployment less certain." Is that all? Yes, all. Does not Mr. Bryan know that under what was practically the gold standard we had in the fifties one of the most active and prosperous periods this country had ever seen? Does he not know that more recently, at the time of the return to specie payments, we had under the gold standard years of signal prosperity, with all hands at work? And does he wish to learn what has been the trouble since and what is the trouble now? Let him ask the employers of labor; and with almost one voice they will tell him that not the existing gold standard, but the growing danger of its overthrow; that the growing aggressiveness of the free-coinage movement, filling the minds of men with

anxious apprehensions as to dark future uncertainties, has served to paralyze that spirit of enterprise which sets the laboring men to work. Let him study the history of the crisis of 1893. Not the gold standard, but distrust of silver, destroyed the confidence that employs labor. This is the truth, and Mr. Bryan will in vain try to deny it.

#### WAGE EARNERS SHOULD NOT BE DELUDED.

I must confess, of all the deceptive appeals resorted to by the silver orators, that addressed to the wage earners seems to me the most heartless and damnable. And of all the instances of reckless credulity we witness, that of wage earners who actually permit themselves to be persuaded that free-silver coinage will be a blessing to them is the most incomprehensible and the saddest. There is something pathetic in their delusion. Of all things human labor is the one that has during the last fifty years in this country largely and almost steadily risen in price. Average wages have nearly doubled since 1840 and have risen more than 60 per cent since 1880. The steady rise has been owing partly to organization, in greater part to the larger average productivity of human labor in connection with machinery—in one word, to the progress of civilization. As civilization has served to multiply and cheapen labor's products, it has at the same time served to enhance labor's earnings. It has thus secured to the laboring man, especially in this Republic, a double advantage—a greater number of dollars by way of wages, and for every dollar more of the things which the laboring man has to buy for the necessities and enjoyments of himself and his family.

This is one of the greatest achievements of our age, at which every true friend of humanity will heartily rejoice, but which more than all others the workingman himself should appreciate. That the workingmen should be called upon, by the exercise of their right as voters, to aid in despoiling themselves of this combined blessing, looks like a satanic mockery. And when we see pretended labor leaders join the silver-mine millionaires, the silver politicians, and the nebulous silver philosophers in an effort to seduce the workingmen into an act of self-destruction so supremely foolish, there is good reason for warning them of treason in their camp. If there is anybody in the wide world who should fight to the last gasp for a money of true value, that does not lie to him, and who should curse and spurn as his worst enemy the demagogue seeking to beguile him with deceitful currency jingles, it is the man who earns his bread by the sweat of his brow. This is emphatically the wage earners' battle. Alas for him if he should desert his own cause!

#### WHO ARE THE DEBTOR CLASS?

The free coinage men profess especial solicitude for those whom they call "the debtor class." Who are the debtor class? Our silver friends speak as if as a rule the rich people were creditors and the poor were debtors. Is this correct? In my household I am the debtor to the cook and the chambermaid and the washerwoman two or three weeks in the month, and they are my creditors. Nor are they likely to be debtors to anybody else, while I may be, for they have little, if any, credit, while I perhaps have some. I am, therefore, the only debtor in my house. The relations between the large employer of labor and the employees are substantially the same.

Ordinarily the employer—the rich man—is apt to be the only debtor among them. The employees are, as a rule, only creditors, and as they lay up savings, they are apt to become creditors in a larger sense. They deposit their money in savings banks or invest it in building associations, in mutual benefit societies, in loan companies, or in life insurance policies, and become capitalists in a small way. The amount deposited by the people of small means in the savings banks of the United States is at present something over \$1,800,000,000, that invested in building associations about \$800,000,000, in mutual benefit societies \$305,000,000, and in life insurance many hundred millions more.

The number of such creditors belonging to what our silver friends often call "the toiling masses" is therefore very large. Together with their dependents it may, for aught we know, amount to fifteen or twenty millions. Who are the debtors of these creditors? The savings banks had, according to the reports of 1894, loaned out about one-half of the money deposited with them on real-estate mortgages, and invested the other half in United States bonds, State, county, and municipal bonds, and railroad and other bonds and stocks. The investments of the life insurance companies were about proportionately the same. The investments in real-estate mortgages are always preferably in large amounts, on property belonging to comparatively wealthy persons, or to business corporations. Thus the debtors to these creditors belonging to the toiling masses are the United States, States, and municipalities, railroad and other corporations, and persons very much richer than the creditors. Here we have, then, rich debtors owing to many millions of poor creditors thousands of millions of dollars.

#### THE SCHEME OF THE SILVERITES.

The silver orators pretend that they have the toiling masses greatly at heart, and that free coinage is to be introduced mainly for their benefit. How do they take care of the toiling masses in this case? By bringing us down upon the silver basis they simply cut down the thousands of millions of invested savings of poor people to about 50 cents on the dollar. And for whose benefit is this done? For the benefit of the debtors of these poor people, who will gain about 50 cents on the dollar. And who are they? Aside from the United States and the States and municipalities, those debtors are railroad and other corporations and more or less rich men, whom our silver friends profess to abhor very much as belonging to the "money power." Thus will the silver standard bleed the poor creditor for the benefit of the rich debtor. May not the toiling masses pray heaven to deliver them of their free-coinage friends?

And what have these friends to say in their own defense? I will again let Mr. Bryan's New York oration speak. He says, first with regard to the insurance companies:

"Since the total premiums received exceed the total losses paid, a rising standard must be of more benefit to the companies than to the policy holders."

How wise! And that the companies may not have this benefit, he proposes by the silver standard to strip the policies of the policy holders of nearly half their value. But does not Mr. Bryan know that most of these companies are mutual insurance, and that what benefits or injures the companies therefore benefits or injures the policy holders?

As to the savings-bank depositors he says:

"Under a gold standard there is increasing danger that the savings-bank depositors will lose their deposits because of the inability of the banks to collect their assets."

And to avert this danger Mr. Bryan advises a policy which would, by the introduction of the silver standard, at once cut down the value of those assets to 50 cents on the dollar. He further says:

"If the gold standard is to continue indefinitely, the depositors in savings banks may be compelled to withdraw their deposits in order to pay living expenses."

Indeed!

#### EVIDENCES OF PROSPERITY SINCE 1873.

It is a remarkable fact that since 1873, the year of the great crime, until 1895, during the period when we had to suffer all the calamities of the gold standard, the deposits in savings banks have, instead of being withdrawn for living expenses, increased, positively increased, much over \$1,000,000,000.

And they would have increased still more had not some depositors with-drawn their deposits, not for living expenses, but to send them to Europe for safety, out of the way of Mr. Bryan and other friends of the toiling masses. They will, no doubt, bring that money back as soon as Mr. Bryan is beaten.

Let us go on. Almost every man in active business is a debtor and a creditor at the same time—every merchant, every manufacturer—a creditor to his customers and a debtor to those from whom he buys. Let Mr. Bryan bring on his panic, and hundreds if not thousands of them, although ever so solvent under ordinary circumstances, will break, because they can not pay what they owe, being unable to collect what is due them.

Every bank, while being a creditor to its borrowers, is a debtor to its depositors. I say this with great deference to Mr. Bryan, for he has made a profound discovery in economic science. He says in his New York speech: "It is sometimes asserted by our opponents that a bank belongs to the debtor class, but this is not true of any solvent bank. Every statement published by a solvent bank shows that the assets exceed the liabilities."

According to Mr. Bryan, then, one must be a bankrupt in order to be a debtor. We always thought that he is a debtor who owes, whether he can pay or not, and that he is a bankrupt who owes more than he has the means to pay. But the new Bryanese doctrine changes all this. The man who owes but can pay his debts is not a debtor, and therefore owes nothing. This will be welcome news to many of his supporters.

#### BRYAN AND THE BANKS.

But although Mr. Bryan is anxious to exclude the banks from his favorite class of debtors, he is not without solicitude for their welfare. He is evidently haunted by the singular idea that the gold dollar will indefinitely go on appreciating, and that prices will indefinitely go on falling, and that we shall never touch bottom. He reasons that if the gold standard be maintained and prices continue falling, "the bank is apt to lose more of bad debts than it can gain by the increase of the purchasing power of its capital and surplus." And to avert this trouble, which the bankers themselves almost unanimously refuse to see, Mr. Bryan proposes to make short work of them by a policy which will result in the establishment of the silver standard and make all the debts due to the banks payable in 50-cent dollars.

If he had the slightest conception of the nature of the banking business and of its history, and especially of its recent experiences, he would know that the banks are not imperiled by the maintenance of the existing standard, but have been and will be imperiled by the danger of a debasement of that standard, for the very simple reason that such a danger causes a feeling of insecurity among depositors, a great many of whom will be anxious to withdraw their deposits and to get hold of their money before it depreciates, thus bringing on the greatest danger to a bank—a depositors' run. This is substantially what threatened in 1893, when a grave doubt arose in the public mind whether the Government would be able to maintain the gold standard. We were then within a hair's breadth of a very widespread bankruptcy of the banks, and only the wisest management and the utmost efforts of the clearing houses prevented it. Nothing will be more apt to bring on such a catastrophe than Mr. Bryan's election; and he will then have the satisfaction of welcoming a goodly number of insolvent banks in the fold of the bankrupts whom he considers the only debtors worthy of the name.

#### THOUGHTS FOR FARMERS.

Among the farmers of the West and South there seems to be an impression that the embarrassment of the banks will be of small concern to them. I would advise them well to consider how much the sale of their staple products depends upon the ability of the banks to advance the money for moving the crops. They would do well to remember 1893, when, owing to the crisis of that year, the banking machinery did not work, when the large grain storehouses were suddenly obliged to sell out, and grain prices dropped like lead in water. Do the farmers want to have that experience repeated in a tenfold aggravated form? Then they have only to do that which always disturbs the functions of the banking system more disastrously than anything else—threaten with debasement the existing standard of value. Mr. Bryan's election would do that work so thoroughly that the paralyzing effects would keenly be felt on every farm in the land.

But we are told that the Bryan panic can not last forever; that finally the business of the country will adjust itself to the silver basis; that then unrest will cease and that confidence and prosperity will return. No; the unrest will not cease, for with the establishment of the silver basis will come the disappointment of those who brought it on.

It will be found that whoever wants silver dollars must either sell something for them or work for them or borrow them, or get them by begging, or steal them; that whoever wants to borrow them must give satisfactory security, just as it was with gold dollars before, and that everybody will want more silver dollars than he wanted gold dollars to do the same business, because they will buy less. It will be found that the silver standard will not lower the rate of interest but raise it, for the lender will make provisions for a further depreciation of the silver money. It will be found that the West and South, in spite of the bombastic speeches now made, will need Eastern or European capital for the more rapid development of their resources just as much as before; that while capital is lying idle in heaps, the South and West can not get it as before, because the free-coinage business will have ruined their credit and frightened capital away by a sense of insecurity. It will be found that if the South and West, in their eager desire to get that capital, would gladly make gold contracts for it, they will, according to the Chicago platform, be prevented from that, too, by a Bryanese law prohibiting gold contracts, as Mr. Bryan himself expresses it, "in the interest of public policy," and that thus the South and West will be stripped of the only means to get the capital they so sorely need. It will, in short, be found that the disastrous consequences of the free-coinage policy will fall upon no part of the country with such crushing weight as upon the South and West.

#### LOGIC OF MADNESS.

Well, and the upshot of it all? Those who now cry out that there must be more and cheaper money because there is not gold enough will then cry out that there must be more and cheaper money because there is not silver enough. And then it will be argued that, inasmuch as there must be more money, more money, more money, just as well as we can make 50 cents' worth of silver a dollar we can make a worthless bit of paper a dollar, and that, after all, the regular unadulterated fiat dollar without redemption is the true money of the people, the only money that costs nothing, the coinage of which will be truly free, independent, and unlimited, the only money that can be made in indefinite quantities until everybody has enough madness. Yes, but there is logic and method in this madness. The difference between making 50 cents' worth of silver a dollar and making a bit of paper a dollar is not a difference in kind, but only in degree. After Bryan, TILLMAN.

However, the ultimate result is not at all uncertain. After a period of infinite confusion, disaster, humiliation, suffering, and misery the American people will at last regain sanity of mind, and arrive again at some very simple conclusions: That if you call a peck a bushel, you will have more bushels, but not more grain; if you call a foot a yard, you will have more yards, but not more cloth; if you call a square rod an acre, you will have more acres, but not more land; and if you call 50 cents, or 1 cent, or a bit of paper, a dollar,

you will have more dollars, but not more wealth—indeed, a great deal less chance for wealth, for you will have far less credit, because far less honesty.

We shall then have learned again that the wit of man can not, although infinitely tries very hard, invent an economic system under which everything you have to sell will be dear and everything you have to buy will be cheap. And having got hold of these very simple truths the American people will then in sackcloth and ashes repent of this insane free-coinage debacle. They will then recognize how wise the great civilized nations of Europe were in adopting the only money in our days capable of being the money of the world's commerce as their own money.

#### THINGS FINALLY UNDERSTOOD.

We shall then be sufficiently cured of prejudice to observe that under that monetary system those nations have on the whole prospered, notwithstanding serious evils and drawbacks under which we do not labor, and that the rate of interest is lowest where the gold standard has existed longest. We shall then understand that it is a good thing to have the necessities of life in plenty and cheap; to have wages rising and payable in money that does not deceive; to have capital inspired with confidence in the value of money, and, therefore, easier to go out in investment or enterprise. We shall then readily acknowledge how foolish we were from the very beginning of our silver experiments in throwing away our gold for silver, by which we lost confidence, credit, and prosperity. Chastened by adversity, we shall then no longer be tempted to repeat such nonsense; but with laborious and painful effort we shall work our way back to that money standard which will insure stability and confidence at home and enable us to trade with the nations of the world on equal terms.

And at what price will this ultimate result be gained in the case of Mr. Bryan's election? At the price of the most violent and destructive crisis on record, such a crisis as can only be brought on by a sudden subversion of the standard of values and of the whole basis of credit. At the price of indefinite business paralysis and distress. At the price of the ruthless spoliation of the savings accumulated by the toiling masses. At the price of robbing our war veterans of half the value of their pensions. At the price of greatly increasing the number of unemployed by discouraging enterprise, and of curtailing the value of wages of those remaining at work. At the price of the respect of the world for our intelligence and practical sense. And worse, far worse than all this, at the price of something that has never been forfeited since this Republic was born—at the price of the greatest good a nation can possess, and for the preservation of which it should shed its last drop of blood—at the price of our national honor. For this nation, so rich and powerful, would stand before the world as a wanton, reckless repudiator, as nothing better than a fraudulent bankrupt. This will be the cost of the experiment. Are you willing to pay this price?

#### WARM WORDS FOR THE POOR.

It is not my habit to boast of a warm heart for the poor and suffering. But my sympathy is no less sincere because I do not carry my love and solicitude for the common people constantly at my tongue's end. If there be those who are satisfied with everything that exists, I am not one of them. There are few, if any, who abhor that which may properly be called plutocracy or detest the arrogance of wealth more heartily than I do. I know also that the industrial developments of our time have brought hardship to some classes of people which only the more sagacious, active, and energetic among them have been able to counterbalance profitably with its benefits.

There are laws and practices which, had I the power, I would promptly change, in the interest of common justice and equity. But because I am so minded I must oppose to the utmost a policy which I am convinced will immeasurably aggravate existing evils. I also know full well that a large majority of those who support free coinage are honest and well-meaning citizens, wishing to do right. But because I know this my blood stirs with indignation when I see the unscrupulous efforts made to goad them on to their destruction. I have witnessed in my long life ten Presidential campaigns, but never one in which the appeals to prejudice, passion, and cupidity were so reckless, and the speculation upon assumed popular ignorance or rascality so audacious and wicked. Some of the silver orators actually speak as if they believed the American people to be born fools or knaves, or both.

Look at this. To frighten the innocent with the terror of the unknown, a dreadful picture is painted of the "money power" of Wall street, and worse still, the money power of England, as able, ready, and eager to "corner" the gold of the world, and thus to impoverish and enslave the people. Well, if the money power were able and eager to corner the gold of the world, would the free silver coinage in the United States prevent it? I have shown that by driving our gold straight into the jaws of the money power, the free silver coinage would help that money power in cornering gold. According to the silver authorities there are in the world about \$4,000,000,000 of silver and about \$4,000,000,000 of gold in circulation. But the silver dollars are the only 50-cent dollars. Now, if the money power, with the help of free silver coinage, corners all the gold, it will be able to buy up all the silver and have nearly \$2,000,000,000 in gold over. Will it not?

#### CHANCES FOR CORNERS UNDER FREE SILVER.

You may say that the money power can not get hold of the silver, because the silver, in the shape of coin, or of paper based upon it, will be in general use as money. But is not, under the gold standard, the gold, in the shape of coin, or paper based upon it, in the same general use as money? And if for this reason silver can not be cornered, will it not for the same reason be impossible to corner gold? This may sound like a huge joke, and so it is. But does it not show that if those terrible things could be done at all, they could be done with silver just as well as with gold? And if it were more difficult with bimetalism, have I not conclusively shown that free silver coinage here would make bimetalism utterly impossible, if it were ever so feasible otherwise?

But Mr. Bryan has in this line a bugbear all his own. In his New York speech, that great deliverance of his statesmanship, he said:

"A gold standard encourages the hoarding of money, because money is rising; it also discourages enterprise and paralyzes industry."

This is unique. According to Mr. Bryan, the "goldbug" will, under the gold standard, hoard his money, and sit on it, because gold is rising in value; and so long as gold does not stop rising the goldbug will not stop sitting on it. Why does Mr. Bryan consider the "goldbug" so stupid? Suppose Mr. Bryan were correct in saying that gold money is rising in value, why should not then the "goldbug," instead of sitting on his gold, lend it out on safe, rock-ribbed security at several per cent more? He would be sure, under the gold standard, of getting his money back in unimpaired value. Can he not thus safely increase his gain? Does not Mr. Bryan think the goldbug will be smart enough to see that? Does not Mr. Bryan know that good money is hoarded only when, if let out, it is in danger of returning in the shape of less valuable money, and that then money is scarce? Does he not know that gold goes out freely and encouragingly into the business of the country when the owner is assured, as the gold standard would assure him, that it will come back in a money equally valuable, and that then money is apt to be plenty? If Mr. Bryan does not know that, every intelligent grocery clerk can tell him.

#### CRUDITIES OF INEXPERIENCE.

Mr. Bryan is certainly a remarkable man, being still so young. I wonder how he found time to accumulate so enormous a store of misinformation and to develop so mature an incapacity for understanding this subject. I say this in all seriousness, compelled by my respect for the exalted office to which Mr. Bryan aspires. Considering that for years the discussion of these questions has been his only business, and that he has remained so entirely unacquainted with the most rudimentary of economic principles and with the most conspicuous of business experience, we must conclude that he not only does not know, but is unable to learn. Imagine such ignorance coupled with such assurance clothed with great power! Imagine him, as President of the United States, parading such childish absurdities in his messages! It would make us the laughingstock of the world, and every self-respecting American would hang his head in shame.

But more. Resorting to that cheapest of all hackneyed tricks of demagoguery, the excitement of American feeling against England in particular and Europe in general, they tell us that, like a "conquered race," we are paying "tribute" to the foreigner. What has Europe done to "subjugate" us? Nothing, absolutely nothing, but lend us money. She did not force her money upon us, but lent it when we asked for it and were glad to receive it. She lent us money when we needed it to maintain the Union and were in dire distress. She lent us money when we wished it to develop the resources of our new country, and now what does Europe ask for? Nothing but what we promised to pay when we took what she lent. Where is the tribute? It is said that Europe largely profited on the loans. On the war bonds, yes, and having been helped in need, we did not grudge it. But as for the rest, is it not true also that untold millions of European money have been sunk in American enterprises that failed? Tribute, indeed! This word can be prompted only by that mean spirit which cajoles the lender as a friend when his money is asked for, and treats him as an enemy and outlaw when he asks for his dues. Is this the spirit of the American people?

#### EASTERN AID TO THE WEST.

They seek to excite the people of the West against the East because, as Mr. Bryan said in the Chicago convention, the East injuriously interferes with the business of the West. Aye, the East has interfered with Western business; but how? In helping to build Western railroads, to dig Western canals, to set up Western telegraphs, to establish Western factories, to build up Western towns, to move Western crops, to allay Western distress caused by fire, flood, or drought. Has this served to enrich the East? Yes; and so it has enriched the West. Their wealth and greatness have been mutually built up by the harmonious cooperation of their brawn and brain and money, just as the blood of the East and the West mingled on the common battlefields of the Republic. And now comes this young man, as if he had not suffered enough from sectional strife, and talks of "enemy's country!"

They seek to excite what they call "the poor" against what they call "the rich"—in this land of great opportunities for all, where now, as ever, so many of the poor of yesterday are among the rich of to-day, and so many of the rich of to-day may be among the poor of to-morrow. Their candidate for the Presidency presented a characteristic spectacle when some time ago he was kindly shown over the farm of the governor of New York, who is himself an example of the poor country boy risen by able and honest effort to affluence and distinction; and when that candidate then straightway in a public speech drew invidious comparisons between the elegant houses on the Hudson and the poor cabins in the West, teaching not the true American lesson of success won by honest industry, thrift, and enterprise, but the lesson that those who have succeeded less should hate and fight those who have succeeded more, a lesson utterly un-American, unpatriotic, and abominable!

#### ATTEMPT TO DECEIVE THE FARMER.

They tell the farmer—most cruel deception—that he must and will be made independent of the world abroad, while year after year from \$500,000,000 to \$700,000,000 worth of our agricultural products must seek the foreign market to find purchasers, and while nothing will hurt the farmer more than a serious impairment of the great home market by a business crisis.

They proclaim themselves the special champions of the toiling masses, while their policy would rob the laboring man of half of his savings and grievously curtail the value of his wages. Am I asked, if the silver standard will relatively reduce wages, why so many employers of labor are opposed to it? The reason is obvious, because, aside from all considerations of sentiment, the prudent employers of labor know that they would lose vastly more through the disastrous disturbance of business sure to be caused by a free-coinage victory than they could possibly gain by the cheapening of labor. And would not the toiling masses suffer most from that disturbance of business? He is a traitor to the laboring man who tells him that he can profit by the ruin of his employer.

They pretend to be enemies of plutocracy and advocate a policy which, if I were a selfish, unscrupulous money shark, I should welcome as my finest opportunity. Am I asked, if a free-coinage victory would play into the hands of the money power, why the bankers and capitalists are generally against it? The answer is simple. No doubt there are those among the rich of the country who will not scruple at any means to increase their wealth, who will crush their competitors with a rude and lawless hand, and take any advantage of the embarrassment of the unfortunate. They are the men who will thrive most in general ruin. But the vast majority of our bankers and business potentates are honorable men, who are proud of their good name, who treat honestly and fairly those with whom they deal, who do not see their interest in the ruin of their customers, and who know that their own prosperity is safest in the prosperity of all. Therefore they are against free coinage. It is not these, but the worst element of the "money power," that free coinage will serve. The real pitiless bloodsuckers in the West and South are their own village usurers, their own sharpers around the court-houses, not the legitimate banker or Eastern capitalist.

#### DEBASEMENT OF MONEY THE DESPOT'S METHOD.

The agitators denounce the gold standard as the device of monarchs and aristocrats, while the history of the world teaches that from time immemorial it was a favorite trick of unscrupulous despots to fleece their subjects by debasing the coin of the realm, and that those who out of the monetary confusion evolved fixed standards of values and money that would not cheat have always been ranked among the most meritorious benefactors of mankind, and especially of the poor and weak.

They seek to inflame the vanity of the American people by telling them that we are great and strong enough to maintain any monetary system we like, and to keep up the value of our money without regard to all the world abroad, while our own history teaches us that a century ago the American people were strong enough to shake off the yoke of Great Britain, but not strong enough to save their continental money from declining in value to nothing; that in recent times the American people were strong enough to subdue a gigantic rebellion, but not strong enough to keep an indefinite issue of greenbacks at par, and that this Republic may be able to conquer the world, but it will not be able to make twice two five, or to make itself richer by watering its currency.

They speak of the silver dollar as the money of the Constitution, while they must know that there is not one single word in the Constitution which, honestly interpreted, could justify such a claim.

They invoke for their cause the names of Jefferson and Jackson, while every reader of history knows that Jefferson and Jackson would have stood against at their wild scheme of creating by law a false value, and would have kicked out of their presence as a public nuisance anyone seriously advocating it.

Such things the free-coinage agitators tell the American people, assuming them to be without intelligence. Far worse are the appeals they address to them, assuming them to be without moral sense.

They have been teaching the people that because the prices of wheat and other things have fallen about one-half since the so-called demonetization year, 1873—I have shown why those prices have fallen—it is not equitable that debtors should be held to pay more than half the amount of their debt in gold, that they should be released in correspondence with the decline of prices, and that it would therefore be right to reduce by free silver coinage the value of the debt-paying money by one-half.

#### OBLIGATIONS OF HONOR.

If this were right as a general principle, how would it apply to our debts? Of our Government bonds there are very few that do not bear date long after 1873. Many of them were sold for the express purpose of bringing gold into the Treasury. Our corporation bonds are, as a rule, also quite young. But all these obligations are a mere trifle compared with the immense sums of debt contracted in the daily transactions of business. The average life of a real-estate mortgage is only five years. But probably nine-tenths of all our debts are those between firm and firm or between man and man in the form of notes, bills of exchange, wage bills, and open accounts, the amount of which is incalculable. How old are these? From one hour to six months. How would the principle apply to them? Would there be any equity, or any shadow, or pretense, or quibble of equity, in scaling them down 50 per cent by a sudden drop from the gold to the silver basis?

Subject the principle itself to a simple test. When I contract a debt, I owe what it is mutually understood that I am to pay. Our whole business life and social fabric, all human intercourse, rests upon the binding force of such understandings. Unless it be expressly understood, has the debtor the slightest right or reason to demand that the creditor shall be satisfied with a less amount in payment if wheat or cotton or something else had meanwhile declined in price? If so, would not the creditor also have the right to demand that the debtor should pay more in proportion if wheat or cotton or something else meanwhile had risen in price? If neither of them had thought of proposing or of accepting so adventurous a contract, how can such claims be justified if based upon a mere secret mental reservation or an arbitrary afterthought? Is it not monstrous that such an assumption should be taken as a warrant for the reduction at one sweep of all debts by a debasement of the standard of value?

You recognize such a principle and carry it into general practice, and there will be the end of all confidence between man and man, the cessation of all credit and trust, the utter subversion of the moral rules governing human intercourse, an unbridled reign of fraudulent pretense and unscrupulous greed—in one word, the overthrow of civilized life.

And yet he who has watched the free-coinage agitation knows that just this appeal to debtors is one of its main allurements. Listen to their speeches, read their literature, and you meet, ever-recurring, now in soft-spoken circumlocution, now in sly suggestion, now in the language of brazen cynicism, the promise that free coinage will enable the debtor to get rid of his obligations by paying only a part of them. It is a scheme of wanton repudiation of private as well as public debts, not as if we could not pay them in full, but because we would prefer not to pay in full—the practice resorted to by the fraudulent bankrupt—and this sanctioned by law, as a part of our national policy.

#### WILL THE NATION DO A DISHONORABLE ACT?

Fellow-citizens, think this out. It is a grave matter; a matter of vital import to the existence of this nation. The father who teaches such moral principles to his children educates them for fraud, dishonor, and the penitentiary. The public men who teach such moral principles to the people educate the people for the contempt and abhorrence of mankind. The nation that accepts such moral principles can not live. It will rot to death in the loathsome stow of its own corruption. If the nation accepting such moral principles be this Republic, it will deal a blow to the credit of democratic institutions from which the cause of free government will not recover for centuries.

But, thank God, the American people will never accept such moral principles. The American people will, before election day arrives, have fully discovered what all this means. They will indignantly repel the unspeakable insult offered to them by the politicians who have dared to ask for the votes of honest men upon the offer of such a bait. They will know how to resent the deep disgrace inflicted upon the nation, in the eyes of the whole world, by those Americans who exhibited their own belief that the American people were capable of taking such a bait.

Mr. Bryan has a taste for scriptural illustration. He will remember how Christ was taken up on a high mountain and promised all the glories of the world if he would fall down and worship the devil. He will also remember what Christ answered. So the tempter now takes the American people up the mountain and says, "I will take from you half of your debts if you will worship me." But then brave old Uncle Sam rises up in all his dignity, manly pride, and honest wrath, and speaks in thunder tones, "Get thee behind me, Satan. For it is written that thou shalt worship only the God of truth, honor, and righteousness, and Him alone shalt thou serve."

This will be the voice of the American people on the 6d of November. And the Stars and Stripes will continue to wave undefiled, honorable and honored among the banners of mankind.

**TRUE FRIENDS OF SILVER—THE REPUBLICANS OFFER THE ONLY FEASIBLE METHOD OF ITS USE—THEY HAVE URGED INTERNATIONAL BIMETALLISM FOR MANY YEARS—INTERNATIONAL BIMETALLIC CONFERENCES WERE CALLED BY THEM.**

[By O. P. Austin.]

Who are the true friends of silver? Is it the men who own silver mines or are employed by silver mine owners and those who by their advocacy of an impracticable system manage to keep their names before the public and themselves in fat offices, or is it the men and the party which gave to the country its great volume of silver money, which originated all efforts at international bimetalism, called all the international conferences which have been called by the United States, appointed all delegates to international conferences, and declared in their national and State platforms time after time in favor of the only practical system of utilizing silver—international bimetalism?

These are questions which the people of the United States can afford to consider carefully at the present moment, when the people have, by an overwhelming vote, declared against independent free coinage by the United States and in favor of international action; and in response to a Republican Congress has passed an act authorizing the calling of such a conference

and the appointment of delegates to it, and a Republican President, William McKinley, has said in his inaugural address that the question of international bimetalism will have early and earnest attention. "It will be my constant endeavor," said he, "to secure it by cooperation with the other great commercial powers of the world."

It has been charged over and over again that the men who make the loudest clamor for the free coinage of silver upon the basis which the people of the United States have declared impracticable, do so and have done so for the purpose of retaining their hold upon public office and their control of a certain class of voters of their States or sections. It has been charged that many of these men were moved by mercenary motives of a more direct character in the ownership of silver mines, or by being directly in the employ of silver-mine owners. Whether this is true or not, every man who studies the attitude of the alleged friends of silver in both Houses of Congress during the recent discussions upon the international bimetallic conference bill must be convinced that they are not the true friends of silver, and that it is difficult to explain their attitude by other than selfish motives.

Add to this the further fact that the Republican party is the one political organization which has from the first urged and taken practical steps in favor of the system which the people of the United States have just declared the only feasible one with reference to silver—international bimetalism—and there can no longer remain a doubt in the mind of the honest student of this subject. As to the party and the men who are the true friends of that system which the people have overwhelmingly declared the only practicable one for the restoration of silver—international bimetalism—the discussions in the Fifty-fourth Congress will show conclusively.

When Senator CHANDLER (Republican), on January 27, 1896, asked unanimous consent to take up in the Senate the bill authorizing the appointment of delegates to an international conference on bimetalism, and the calling of this conference if necessary, Senator PETTIGREW (Silver Republican) refused unanimous consent, saying: "I can not yield, Mr. President. I wish to dispose of the appropriation, and I think we can better do it now."

On January 27 Senator CHANDLER again attempted to call up the bill, and Senator DANIEL (Silver Democrat) objected, saying, "I hope the Senator will not interrupt me at this moment," and insisted upon retaining the floor and discussing the Nicaragua Canal bill, thus again preventing the discussion of the bimetallic-conference bill.

On January 28, when Senator CHANDLER succeeded in getting the bill before the Senate, Senator STEWART (Silver Populist), although protesting that he had no disposition to embarrass and hinder the passage of the bill, proceeded to embarrass and hinder it as far as possible by saying, first, that it placed the United States in a humiliating position; second, that there are "grave objections" to international money, which ought to make us hesitate before we enter into any compact with the world; third, that the establishment of such money would "cause great inconvenience to those involved in the complication," and ended by declaring his opposition to international money and denouncing the proposition as "a fake, an old fake."

On January 28, when the bill was again called up, Senator VILAS (Gold Democrat) spoke against it, saying, "I desire simply to express my opposition to this bill," and proceeded to do so to the extent of remarks covering several pages of the CONGRESSIONAL RECORD.

On January 29, during the discussion of the bill, Senator PETTIGREW (Silver Republican) said, "I wish to record my protest against the passage of this bill," and proceeded to detail his reasons for opposition at considerable length.

On January 29, during the discussion of the bill, Senator ALLEN (Silver Populist) presented a long argument to show that the effort would be unsuccessful, and said of the bill: "It is a useless thing. It is a work of supererogation."

On January 29, during the discussion of the bill, Senator CANNON (Silver Republican), after speaking of the movement as having the "air of grotesqueness," said: "If we must fawn further at the feet of those who control the finances of the world, let us at least preserve our self-respect and do it when we are their hosts."

On January 29, during the discussion upon the bill, Senator JONES of Arkansas, chairman of the Silver Democratic national committee, put himself on record as to his real sentiments by saying: "This scheme is not ours; we have not originated it; we do not believe it is the proper scheme for the solution of these difficulties."

On January 29, when the vote was taken in the Senate on the bill, those who voted against it were ALLEN (Silver Populist), PETTIGREW (Silver Republican), ROACH (Silver Democrat), VILAS (Gold Democrat). Not a Republican voted against the bill.

On February 26, when the bill came up in the House, Mr. McRAE (Silver Democrat) and Mr. DOCKERTY (Silver Democrat) obstructed its consideration by demanding a second.

On February 26, during the discussion in the House, Congressman HARTMAN (Silver Republican) said: "We desire to register our unqualified detestation at the idea embodied in the declaration that we must have the consent of the leading commercial nations of the earth before we can legislate for ourselves."

On February 26, when the bill was under discussion in the House, Mr. COOPER of Texas (Silver Democrat) threw cold water on the proposition in the opening sentence of his speech by saying: "I believe this measure to be a will-o'-the-wisp."

Contrast this attitude of the professed friends of silver in the Democratic, Populist, and "Silver Republican" parties with the ringing utterances of two men, Senator ALLISON and Representative DINGLEY. Here are some extracts from the remarks of Senator ALLISON, the leader of the Republican party in the Senate and a member of the last international bimetallic conference. Contrast them with the words and attitude of the professed friends of silver quoted above. On January 29, when the bill was under discussion, Senator ALLISON said:

"Those who believe in an international agreement on this subject are not abdicating the power and independence of our nation, but are making an honest endeavor to bring these two metals, now widely separated in international value, nearer and nearer, and they believe that can be done by their international use. . . ."

This proposition is not new. It has been an established policy of the United States since 1876 by repeated acts of Congress and by repeated statements in platforms, and never departed from in a single instance by either of the great parties until at Chicago in 1896. . . . Opponents of the bill fear at the idea that there is a possibility of securing concurrent action of a number of commercial nations of the world with this country. . . . There has never been a conference which has not made progress as respects the concurrent use of both gold and silver, and I venture the assertion that outside of the controlling portion of Great Britain, and perhaps also the Scandinavian States, there is not a country in Europe that is not in favor of the effort which is proposed here, and which will not support it and advocate it, excepting only Germany, which stands upon a pivot as to its parliamentary situation, and as to the governing forces surrounding the Emperor."

"I do not advocate this policy because it is found in the platform adopted in St. Louis. I advocate it because I believe it is in the interests of concurrent circulation of these two metals in the world and because it promotes the commercial interests of the world to minimize the difference in the power of

exchange between great connecting trade countries. One or the other of these two metals, so long as these conditions prevail, will be the paramount metal. Which of them is to be paramount until we have the concurrent action of nations? It is that which is the standard in the nations having the chief trade of the world. Who are these nations? Are they China, Japan, or the South American States, some of them having a gold standard and some of them having a silver standard, and all of them having a depreciated paper standard but one? Here lies Europe, with its silver and its gold, having the gold standard, with a trade twelve times as great as all the trade of all the silver countries combined. Therefore, unless we can minimize the difference in the value of these two metals in the exchange of the world, this divergence will go on and the people who have the silver money are those who will be most distressed in the exchanges which are necessary to be made."

On February 23, during the discussion in the House, Representative DINGLEY said:

"The Republican party at St. Louis declared against the free coinage of silver by the independent action of the country, because they believed, as I believe, and as every scientific bimetallic in the world outside of politics believes, that such independent free coinage of silver at the ratio of 16 to 1 is nothing in the world but silver monometallism. But the party said at the same time that they would promote, as far as in their power, an international agreement for the free coinage of silver under circumstances which should make every dollar in silver as good as every dollar in gold; and that pledge it is our duty to-day by the passage of this bill to endeavor to respond to. [Applause.]

"Secondly, Mr. Speaker, I am in favor of the passage of this bill because I believe that its defeat under the circumstances under which it is presented, and in view of the pledge which we made at the St. Louis convention, would result in a tremendous injury to the sound-money cause. [Applause.] It must be understood that there are in this country thousands, yes, millions, of voters, who, while opposed to the free coinage of silver by this country alone, because they believe it would give us simply silver monometallism, as I believe it would, are yet in favor of an honest effort to secure an international agreement upon this point, because they believe that if that can be secured through the cooperation of the commercial nations of the world, it will give us a currency every dollar of which shall be as good as gold, and that we shall have a gold standard or its equivalent. That is what they believe.

"Now, in view of the fact that there are millions of people who believe that this can be accomplished, I hold, without entering upon discussion as to the probabilities of success, that it would be a fatal mistake, practically, for this side of the House, under those conditions, not to meet the wishes of those men, and give a thorough trial to this endeavor to obtain an international agreement. If it fails, then we shall have done our full duty in the premises, and no harm will have happened. If it succeeds, then we shall have secured throughout the commercial world a universal and common standard of value that will promote international trade. I believe, therefore, under these circumstances, without entering upon discussion, that it is the duty of every Republican, in view of the pledge that we have made, in view of the fact that we should damage the cause of sound money by refusing to meet our pledge, to vote for this proposition.

"One word further. When the suggestion is made that gentlemen in favor of silver at 16 to 1 are voting for this bill, I want you to read between the lines of their speeches and you can understand very distinctly that nothing would please them so much as to see this bill defeated to-day, and if their votes would do it, they would so cast them."

#### REPUBLICANS FAVORABLE TO SILVER.

Let us take up the history of the national financial legislation year by year, and show what Republicanism has done for bimetallicism at home and abroad.

The act of February 12, 1873, contained a provision for the unlimited coinage of silver dollars weighing 420 troy grains, nine-tenths fine, and made them legal tender for any amount not exceeding \$5. This was done upon the petition of the Republican legislature and Republican governor of California, presented by the Republican Senator from that State. The act further provided for the use of silver as subsidiary coin, so that, with the exception of the nickel 5-cent piece and the bronze cent, the white metal was able to become the entire small change of the American people after the resumption of specie payment. It did not provide for the coinage of the old dollar of 412½ grains, nine-tenths fine, because that amount of silver was worth more than that, for years had been worth more than 100 cents in gold, and was no longer brought to the mints for coinage by owners of bullion, being more valuable in that condition than as coin. The Government stamp, indeed, in that case, would have set it forth to the world as worth less than the silver used to form it, but that act of 1873 was careful not to demonetize the silver dollars already coined, containing in its sixty-seventh and last section an express provision "That this act shall not be construed to affect any act done, right accrued, or penalty incurred upon former acts; but every such right is hereby saved." And among these, of course, the right of the silver dollar to pass as legal tender was chief.

The Forty-third Congress, Republican in both branches, passed the act providing for the resumption of specie payment. President Grant signed this bill on January 14, 1875, and under its provisions the use of silver as a money metal passing current among the people was made possible, after many years' use of depreciated paper. If the Republican party had done nothing more than this in the legislative field, it would deserve well of the Republic. By making the obligations of the United States payable in specie on the 1st day of January, 1879, it laid the way for the highest possible use of silver throughout the land and attained that standard whereby every dollar in circulation became equally and all as good as gold. For this it deserves the support of every honest believer in bimetallicism. And in its struggle to preserve its high standard it must have his support, or we shall sink to the level of Mexico or Japan.

#### THE MONETARY COMMISSION.

On the 15th day of August, 1876, President Grant gave his approval to the joint resolutions already passed by the Republican Senate, whereby a commission was established having for its object, among others, an inquiry—

First. Into the change which has taken place in the relative values of gold and silver; the causes thereof, whether permanent or otherwise; the effects thereof upon trade, commerce, and finance, and the productive interests of the country, and upon the standard of value in this and other countries.

Second. Into the policy of the restoration of the double standard in this country; and if restored, what the legal ratio between the two coins, silver and gold, should be.

At the head of this body, showing the same regard for the interests of silver which has always characterized Republican legislation, was placed Senator JOHN F. JONES of Nevada. His colleagues from the Senate were George S. Boutwell, a distinguished Republican, and Lewis V. Boggs, a Democrat. RICHARD P. BLAND and Randall L. Gibson, Democrats, and George Willard, Republican, represented the House, and William S. Groesbeck, of Cincinnati, a Democrat, and Prof. Francis Bowen, of Harvard College, a Republican, were added to the commission as experts. The secretary was George M. Weston, of Maine, a Republican.

The minority report of three members of the commission, headed by Senator JONES, declares in favor of the free coinage of silver at the ratio of 154

to 1—the standard of the Latin Union—while the majority report regards the fall in price of the white metal as temporary and directly due to its recent demonetization by five nations.

Neither Mr. Groesbeck, Mr. BLAND, Mr. Boutwell, Mr. Bowen, nor Mr. Gibson, in separate minority reports, concurred in the recommendation of a new ratio of 154 to 1 for silver. Nor did any of the recommendations of the commission find favor in the sight of the National Legislature. But the report undoubtedly led to further inquiry in connection with other nations, which has come to be known in American history as the International Monetary Conference of 1878.

#### FOR INTERNATIONAL BIMETALLISM.

By the act of February 23, 1878, President Hayes extended an invitation to the nations of the world to meet and discuss the establishment of relations looking toward international bimetallicism, and in August of that year representatives from the leading nations of Europe met the distinguished delegates of the United States in Paris under the auspices of the French minister of finance. Ex-Governor Reuben E. Fenton, of New York, was the chairman. Gen. Francis A. Walker and W. S. Groesbeck his associates, and S. Dana Horton, a well-known authority on bimetallicism, the secretary of the delegation; all except Mr. Groesbeck were Republicans. As Mr. Horton was courteously given the same rights on the floor of the conference as the others, the Republicans preponderated. This is the more significant when taken in connection with the reply of the Americans to a majority of the European delegates. This reads:

"The representatives of the United States fully concur that it is necessary to maintain in the world the monetary functions of silver as well as those of gold, and they desire that ere long there shall be adequate cooperation to produce the result.

"In regard to the third and last proposition, they admit that 'some of the states which have the double standard,' or, as they prefer to say, use both metals, 'find it impossible to enter into a mutual engagement for the free coinage of silver.' They, as representatives of the United States, have come here expressly to enter into such an agreement. The difficulty is not with them, and whatever it may be they trust that it may soon be removed."

This final statement, signed by all the Americans, taken by itself, shows more clearly than columns of explanation what the Republican party meant at St. Louis by declaring in its platform for the free coinage of silver "by international agreement with the leading commercial nations of the world, which we pledge ourselves to promote."

At the meeting in Paris in 1878, Germany alone of the great commercial nations of Europe was absent. To the assembled nations the Republican party of the United States, through three of its distinguished members, proclaimed its anxiety then and there to enter into reciprocal relations for the free coinage of silver. What was done then will be done again during the McKinley Administration, and, as will be explained shortly, with every hope of success.

#### THE CONFERENCE OF 1881.

Specie payments were resumed January 1, 1879, and President Hayes was again authorized to send delegates to an international monetary conference, held, like the one preceding, in Paris. The United States was there represented by William M. Evarts, lately Secretary of State; Allen G. Thurman, late United States Senator from Ohio; T. O. Howe, late United States Senator from Wisconsin, and S. Dana Horton, whose services at the former conference and whose authoritative writings on bimetallicism entitled him to the distinction. All the delegates except one, Mr. Thurman, were again Republicans, though the Congress which passed the resolution was Democratic in both branches. The sessions began on April 19, 1881, James A. Garfield being President of the United States.

The report of this Paris conference of 1881 is filled with statements which attest the ardent support of the doctrines of bimetallicism. What the lamented Garfield had said in his inaugural regarding the precious metals was the basis upon which all the delegates of the United States stood throughout the protracted arguments. President Garfield expressed himself as follows:

"By the experience of commercial nations, in all ages, it has been found that gold and silver afford the only safe foundation for a monetary system. Confusion has recently been created by a variation in the relative value of the two metals; but I confidently believe that arrangements can be made between the leading commercial nations which will secure the general use of both metals. . . . If possible, such an adjustment to be made that the purchasing power of every coined dollar will be exactly equal to its debt-paying power in all the markets of the world."

To the same effect, read this extract from Mr. Horton's note presented to the conference in relation to the Allison-Bland bill: "By the law of February 23, 1873, the United States became a teacher of reform monetary doctrine. The United States proposed to Europe concurrent coinage of silver and gold at one ratio, with a view to their convenient use in the countries of the proposed union and the comparative steadiness of their relation to each other everywhere."

#### THE BRUSSELS CONFERENCE.

The last international monetary conference was held at Brussels November 22, 1893, Benjamin Harrison being President of the United States. As at all former assemblages of the kind, the American representation was largely Republican, its members being Senators WILLIAM B. ALLISON, JOHN P. JONES; James B. McCreary, Henry W. Cannon; E. Benjamin Andrews, of Brown University, and Edwin H. Terrill, minister of the United States to Belgium. The object they had in view is indicated in the letter of instructions with which they were supplied by John W. Foster, Secretary of State. In it he says:

"It is the opinion of the President [Mr. Harrison] and, as he believes, of the people of the United States, with singular unanimity, that the full use of silver as a coined metal at the ratio to gold to be fixed by agreement between the great commercial nations of the world would very highly promote the prosperity of the people of all the countries of the world. For this reason your first and most important duty will be to secure, if possible, an agreement among the chief commercial nations of the world looking to international bimetallicism; that is, the unlimited coinage of gold and silver into money of full debt-paying power at a fixed ratio in coinage common to all the agreeing powers."

The report of the American delegates shows that the programme prepared on behalf of the United States containing the sentiments, "that in the opinion of this conference it is desirable that some measure may be formed for increasing the use of silver in the currency system of the nations" received the approval of nearly every one of the nations present.

These declarations of approbation made by Great Britain, France, Spain, The Netherlands, and other great commercial countries, and the concomitant sentiment animating the conference, give the greatest hope to all who hold with the Republican party that bimetallicism by international agreement affords the only practicable solution compatible with American common sense and American honor of the difficulties under which silver is laboring.

#### CHANGE OF SENTIMENT ABROAD.

The Brussels conference adjourned to meet May 30, 1893. Just two months before that date a motion made in the British Parliament to call the conference

powers together was lost by a vote of 148 yeas to 229 nays. On that occasion the chancellor of the exchequer expressed himself thus regarding the conference:

"If, in the future, it is to do any good, it must discuss proposals made by responsible governments. If the United States shall call it together again Her Majesty's Government will probably be ready to discuss the question and would consider, in a courteous and friendly manner, any proposals that might be laid before it."

But on the 17th day of March, 1896, the British House of Commons without a dissenting voice, "urges upon the Government the advisability of doing all in its power to secure by international agreement a stable monetary power of exchange between gold and silver;" in other words, in a little more than three years Parliament had changed its sentiments completely in regard to a bimetallic standard and had evidenced it by turning a vote of 81 against to an absolute unanimity for such a measure as the Republican party favors.

Thus the way now seems to be more clearly open than ever before for the Republican party to carry out its desires for international action in favor of true bimetalism.

That the time is now more auspicious for favorable international action than ever before was testified by Congressman McCreary, of Kentucky, who was a member of the last international monetary conference, a Democrat, and a supporter of Bryan in the late campaign, though not agreeing with the extreme views expressed in the platform in behalf of independent action on the part of the United States.

In discussing the bill for an international bimetallic conference in the House, on February 28, he said: "Four international monetary conferences have been held in the last thirty years. The first was held at the invitation of France, and met at Paris June 17, 1867; the second met at the invitation of the United States at Paris August 16, 1878; the third was called by France and the United States, and held in Paris in 1881; the fourth and last was held at Brussels in 1892. There were but nine nations represented in the conference of 1878; thirteen represented in the conference of 1881; but at the last conference, held in Brussels in 1892, twenty nations were represented, and all of the delegates were in their seats the first day the conference assembled. . . . While the monetary conferences that have been held were not successful on the main question, they made substantial progress in the cause of bimetalism, and helped to educate the people to open the way for that international agreement which I hope will come after a while. I believe the prospect for international bimetalism is better now than ever before."

#### GROWTH OF SILVER CIRCULATION.

The following table, issued by the Director of the United States Mint, gives the per capita circulation of gold and silver in several countries in 1873, when silver was alleged to have been "struck down" in the United States, and the corresponding figures for 1897:

Country.	1873.		1897.	
	Gold.	Silver.	Gold.	Silver.
United States	\$3.24	\$0.15	\$3.41	\$5.77
Great Britain	5.03	11.99	14.91	2.96
France	12.47	13.85	22.19	12.94
Germany	3.91	7.47	12.21	4.20
Russia	1.81	.23	3.80	.38
Italy	.75	.86	3.20	1.35
Belgium	4.81	2.88	8.73	8.71
Netherlands	3.08	9.56	6.21	11.08
Austria-Hungary	.98	1.11	3.22	2.76
Australasia	19.23	1.15	24.48	1.49
Denmark	2.28	4.16	6.30	2.35
Sweden	.41	.98	1.06	1.00
Norway	4.22	.89	3.75	1.00

Thus it will be seen, when the dollar of our daddies was so "plentiful," we had an average of 15 cents apiece. But twenty-four years after "our standard money was cut in two," after the suffering of so long a period "under the blighting effects of the gold standard," we find that our per capita of silver has risen from 15 cents to \$5.77 per capita, and that the per capita of silver money of nearly all other countries has also been increased, though not in nearly so large proportion as in the United States.

#### DECEPTION OR WHAT?—A FEW OF WILLIAM J. BRYAN'S NUMEROUS MISSTATEMENTS OF 1896 DISSECTED.

[By O. P. Austin.]

"This conspiracy which we have to meet is a conspiracy which has for its ultimate object the striking down of silver as one of the standard moneys of the world."—*Syracuse speech.*

Mr. Bryan assumes that this "conspiracy" has been in active operation since 1873. Yet, according to the Director of the United States Mint, there is much more than double the amount of silver money in use in the world to-day than there was in 1873, and practically all of it is a full legal tender. Director Preston estimates the amount of silver money in the world in 1873 at \$1,817,000,000, while to-day it is \$4,070,500,000. Here it is in tabular form:

Silver money in the world in 1873	\$1,817,000,000
Silver money in the world in 1896	4,070,500,000

If this is the result of a "conspiracy" of twenty-three years, wouldn't it be well enough to let the "conspiracy" go on?

"We complain of the gold standard because an increased demand for gold has raised the price of gold and lowered the price of all those things which exchange for money."—*Buffalo speech.*

How can there be an increased demand for gold, when gold, silver, and paper money, as well as bank exchanges, have increased much more rapidly than the population in the past few years? The increased ease of producing both gold and silver has enormously increased the quantity of them offered to the public. Mulhall, Preston, and other authorities show that the gold of the world, coined and uncoined, has increased from less than \$2,500,000,000 to over \$7,000,000,000 in the past half century, and that the silver money of the world, which Mulhall estimates at \$1,900,000,000 fifty years ago, is now over \$4,000,000,000. The proportion of gold in the world which is made into coin has doubled in the last fifty years, being now over two-thirds of the total stock instead of one-third, as it was a half century ago. So there is apparently six times as much gold money and twice as much silver money in the world to-day as there was fifty years ago. Does this look as though there was "an increased demand for gold, which has raised the price of gold?"

"Our opponents can not ignore the fact that gold is now going abroad in

spite of all legislation intended to prevent it, and no silver is coined to take its place."—*Madison Square Garden speech.*

Yes; the gold which went abroad in the fiscal year 1896 amounted to \$80,578,649 in excess of the importations of gold; but if Mr. Bryan will examine the imports of merchandise for the same year, he will find that they were \$124,715,402 in excess of those in the last year of the McKinley law.

Imports of merchandise have to be paid for in gold or its equivalent. Had they been no more in 1896 than they were in the last year of the McKinley law, we could not only have kept at home all of the \$80,578,649 which went abroad, but all of the difference between that and the \$124,715,402 of excessive importations due to the Wilson-Gorman Act, which Mr. Bryan helped to frame and pass, and which not only stimulated the importation of goods demanding gold for payment, but closed the factories of this country at the same time.

"We believe that the free coinage of silver will bring gold to this country, and that, too, without the aid of syndicates."—*Speech at Syracuse, N. Y.*

If that is the effect of the free coinage of silver, why does it not do so in the countries which now have free coinage? The South American States have had free coinage of silver for many years, yet the gold does not appear to be drifting to them. They have actually mined \$25,000,000 in gold since the beginning of 1892, yet they have lost most of that, and instead of the gold going to them under the free coinage of silver, as Mr. Bryan says will happen, they have lost their gold until they have to-day but \$1.11 for each individual.

Mexico has had free coinage of silver for many years; but instead of attracting gold, according to the Bryan theory, her gold has rapidly left her, so that, although she mines between four and five millions of gold a year, her gold money amounts to just 41 cents for each individual in her population, or one-twentieth of what the United States has per capita. Does this look as though the free coinage of silver would "bring gold to this country, and that without the aid of syndicates?"

"Gold and silver are different from other commodities in that they are limited in quantity. Corn, wheat, manufactured products, etc., can be produced almost without limit, provided they can be sold at a price sufficient to stimulate production, but gold and silver are called precious metals because they are found, not produced."—*Madison Square Garden speech.*

Does not Mr. Bryan know that the mining of gold and silver has increased with enormous rapidity in the past thirty-five years? The amount of gold produced from the mines of the world since 1860 equals all that produced in the world in over three hundred and fifty years prior to that time. In a single year now the world produces more gold than was produced in a quarter of a century prior to the gold discoveries in California. The suspension of the purchases of silver bullion in 1893 so stimulated the miners of Colorado to search for gold that they more than doubled the production of that metal in a single year. The silver mines of the world since 1890 have produced more than half as much silver as they mined in the preceding three hundred and fifty years.

"The increased demand for gold has raised the price of gold and lowered the prices of all those things which exchange for money."—*Buffalo speech.*

The one thing which primarily exchanges for money and measures it is labor. The report of Mr. Bryan's collaborator in the silver vineyard, Senator JONES, of Nevada, as a member of the Aldrich committee of the United States Senate, shows that one hour of labor would in 1891 buy more gold than it did in 1873, or in any other period of the previous history of the country. There had never been a year in the history of the country, according to the report of the Aldrich committee, which is accepted by all parties as accurate and reliable, in which an hour of labor would buy as much gold as in 1891, the date at which this committee reported. If there has been any loss in the earning power of labor since that day, it is due to the filing up of the country with foreign-made goods and throwing out of employment millions of laborers, and not because of a gold standard which has been in operation, according to Mr. Bryan's admission, for twenty-three years.

"As soon as the Bland Act went into force, the enemies of free silver proceeded to repeal the Bland Act, and left nothing in its place. But the silver sentiment grew until 1890, and in that year the opponents of free coinage, being afraid of a free-coinage bill, secured another compromise, which was known as the Sherman law."—*Columbus speech.*

Mr. Bryan says:

"As soon as the Bland Act went into force, the enemies of free silver proceeded to repeal the Bland Act."

The Bland Act went into operation February 28, 1878, and continued in operation over twelve years. During that period over fifty times as many silver dollars were coined as had been coined in the eighty-one years preceding the act of 1873. This was accompanied by a constant fall in the price of silver, until the bullion in a silver dollar was worth about 70 cents. Mr. Bryan says:

"They proceeded to repeal the Bland law, but left nothing in its place." The very act which repealed it put the Sherman law in its place, although he adds in the same breath that:

"The silver sentiment grew until 1890, and in that year the opponents of free coinage, being afraid of the passage of a free-coinage bill, secured another compromise, which was known as the Sherman law."

By this distortion of facts, well known to everybody who has given the question any attention, Mr. Bryan attempts to deceive those who are not familiar with the subject.

"The free and unlimited coinage by the United States alone will raise the bullion value to its coinage value, and thus make silver bullion worth \$1.29 per ounce in gold throughout the world."—*Madison Square Garden speech.*

These statements are absolutely at variance with each other. Silver is only worth 68 cents per ounce anywhere in the world to-day. If there is a place in the world that it is worth more, all the silver of the world would, according to Mr. Bryan's theory, instantly rise to that price, whatever it might be. If, as he said, "it is more valuable at this time in other lands than it would be at our mints under free coinage," it must be that he expects the price of silver under free coinage to go below 68 cents per ounce. Yet in the same speech he says: "The free and unlimited coinage of silver by the United States alone will make the silver bullion worth \$1.29 per ounce in gold."

"Bimetalism is indorsed by human history. The gold standard has nothing to indorse it except the misery which follows wherever it has been tried."—*Cleveland speech.*

The sort of bimetalism which Mr. Bryan proposes is that which prevails to-day in Mexico, South America, Central America, and China.

The people of Mexico have a per capita of money in circulation amounting to \$4.05; those of Central America, \$3.66; those of South America, \$2.94 (exclusive of their irredeemable paper currency); and those of China, \$2.08. The gold-standard nations have a per capita circulation of from \$10 to \$35 each. Does that look as though "Bimetalism is indorsed by human history, and the gold standard has nothing to indorse it except the misery which follows wherever it has been tried?"

"I only wish that this distinguished divine (Mr. Beecher), whose name

has added to the great fame of your great city, were with us to-night that he might champion the cause of the people in their great fight of to-day."—*Brooklyn speech.*

During the fiat money and unlimited currency excitement of 1877, Mr. Beecher said in his Thanksgiving sermon: "What the moral sense of man is is such an attempt to tamper with standards that the moral sense of man is bewildered and liberty is given to unprincipled men at large to cheat and to be unfaithful to obligations, to refuse the payment of honest debts, whenever that takes place it is all the worse for being done with permission of law. I hate the devil riding on a law worse than I do the devil riding without a law under him. Whoever tampers with established standards tampers with the very marrow of vitality of public faith. Gold is the world's standard; gold is the universal standard of value."

"Railroad rates have not been reduced to keep pace with the fall of prices."  
"The farmer has thus found complaint against the gold standard."—*Madison Square Garden speech.*

Henry W. Poor, the celebrated statistician, who is recognized by everybody as the authority on railroad rates, shows in a recent publication that the average price for moving freight by rail has been reduced from 2.21 cents per ton per mile in 1873 to eighty-three one-hundredths of a cent per ton per mile in 1895.

This is a reduction of 62 per cent in average rates of freight. The average price of No. 2 spring wheat in Chicago during the year 1873, as reported in the official report of the Chicago Board of Trade, was \$1.18 per bushel in currency, equivalent to \$1.04 in gold. The same grade of wheat is selling to-day in Chicago for 66 cents, thus being a reduction in selling price of wheat since 1873 of only 34 per cent. Thus, while the gold price of wheat has fallen 34 per cent since 1873, the railroad freight rates have fallen 62 per cent.

"They say that under bimetalism a foreigner could bring silver here and have it coined and exchanged for gold and take the gold home, leaving the silver. Where would he get the gold? This Government does not agree to swap dollars. Under bimetalism the Government would coin silver bullion into silver dollars and gold bullion into gold dollars, but would not agree to exchange one for the other."—*Asheville, N. C., speech.*

This is at last a frank admission that the Government would not attempt to maintain the parity between the silver and the gold dollars under free coinage. The only ratio by which they could compare them would be the commercial ratio of the silver and the gold, which is to-day about 32 to 1. Yet Mr. Bryan voted in Congress against all propositions to put a single grain more of silver into the dollar than is in it to-day. Upon his own admission it may be assumed that the Government would, if he were its head, make no effort to make the silver dollars worth more than the bullion in them, and that they would therefore fall to a lower price than the Mexican dollar of to-day, because they have less bullion in them than that dollar has.

"In 1894 the amount of our money in circulation in the United States was, according to the Treasury Department report, \$1,660,700,000. In 1895 the amount of money in circulation had fallen to \$1,601,000,000, a decrease in one year of \$59,000,000. In 1896 the amount in circulation had fallen to \$1,508,000,000. This means that in two years the amount of money in circulation among the people had fallen \$150,000,000."

The Government publication from which Mr. Bryan quoted these figures shows, on the very same page from which he quotes, that the amount of money in the country fell only \$74,803,453 in the two years in question, though the amount of money in circulation fell \$150,000,000. It is the quantity of money in the country which determines whether more money is needed. Lack of circulation is due to depression in business, which in this particular case is caused by the suspension of work in the factories of the country, due to the enormous importations under the Bryan-Wilson-Gorman tariff law.

Why did not Mr. Bryan quote the figures on the money in the country, instead of those relating to circulation? And why did he not admit, what everybody knows, that the loss of money in the country is due to the fact that in the two years in question the importations of foreign goods, which had to be paid for in gold or its equivalent, were hundreds of millions in excess of the rate at which they were imported in the last year of the McKinley law.

During the two years of which he complains the importation of foreign goods, which of course had to be paid for in gold or its equivalent, amounted to the enormous sum of \$1,511,679,987, or ten times the amount of the decrease in circulation of which he complains. Is it any wonder that the gold went abroad?

"Any legislation which lessens the world's stock of standard money increases the exchangeable value of the dollar; therefore the crusade against silver must inevitably raise the purchasing power of money and lower the money value of all other forms of property."—*Madison Square Garden speech.*

The amount of money in the world, both silver and gold, has vastly increased since what Mr. Bryan terms "the crusade against silver" was begun. In 1873 the silver money amounted to less than \$2,000,000,000. Now it amounts to \$4,070,000,000, and nearly all of it is full legal tender. In 1873 the gold money of the world amounted to less than \$2,500,000,000. Now it amounts to \$4,038,000,000. Thus it will be seen that the world's stock of metallic money to-day is double what it was in 1873. Does this look as though legislation had "lessened the world's stock of standard money?"

"If the influences which are at work for the destruction of silver as a standard money succeed in this direction, those same influences will be turned against the weaker nations, and nation after nation will be turned from the use of silver."—*Toledo speech.*

Is it not rather absurd to assume that any given set of "influences" or organizations of men could have secretly and viciously induced the lawmaking powers of the most intelligent nations of the earth to do an unwise thing in such a short period? Is it possible that a handful of men could have compelled the intelligent lawmakers of such nations as the United States, England, France, Germany, Holland, Denmark, Sweden, Norway, Spain, Italy, Switzerland, Austria-Hungary, Belgium, and the English colonies all over the world to commit financial hari-kari, all within a comparatively few years?

If a few men had been attempting a plan of this sort which was really bad, would they not have begun on what Mr. Bryan terms the "weaker nations," which would be more easily influenced, rather than to have begun with the strongest and most intelligent? How can a syndicate, a few dozen or a few hundred at the most, have been able so to deceive 350,000,000 of the most intelligent people of the globe within a few years' time as to lead them to do an unwise thing in regard to the subject uppermost in the mind of all men and all nations, that of business prosperity?

"The advocates of the gold standard have never dared to submit that standard to the arbitrament of the ballot."—*Columbus speech.*

There have been twelve national elections for members of Congress since the act which dropped the silver coins of the United States was offered in Congress. In every one of these the people have had full opportunity to exercise the "arbitrament of the ballot" upon this question, and they have never elected a majority of a Congress in favor of reversing the proposition of that act. Why does Mr. Bryan say that it has not been submitted to the "arbitrament of the ballot?" The silver-mine owners have for a quarter of

a century been urging the people to submit the gold standard to the "arbitrament of the ballot" upon it, and they have expressed themselves every election members of Congress by refusing to send to the House of Representatives a majority favoring the free coinage of silver.

"The laboring man is for the restoration of silver, because he knows that under the gold standard we have hard times and falling prices, and they are hard on the laboring man."—*Milwaukee speech.*

Any laboring man whose memory runs back any considerable time knows that his earnings since 1873 have been larger, and that the dollars which he receives will buy more than they did before that. Mr. Bryan's associate in the cause of free silver, Senator Jones of Nevada, joined with the other members of the Aldrich committee in showing that labor was better paid year by year from 1873 to 1891 than it was before 1873, putting the figures for the war-currency period on a gold basis.

The same report also shows that the additional dollars which he received as his wages increased had also a larger purchasing power.

If there has been any fall in wages, it has been since the closing of the factories by the passage of the free-trade law which Mr. Bryan helped to frame and pass, and which has filled the country with foreign manufactures. Wages rose steadily after the passage of the act of 1873, and their purchasing power also increased.

"A gold standard encourages the hoarding of money because money is rising; it also discourages enterprises and paralyzes industry."—*Madison Square Garden speech.*

The United States census reports show that in 1870, before the passage of the act which Mr. Bryan says established the gold standard, the number of manufacturing establishments in the United States was 253,148, employing 2,053,993 working people, and paying them \$775,584,343 annually, and turning out \$4,232,225,442 worth of products annually. By 1890 the number of hands employed had increased over 700,000, the wages had increased to nearly a billion dollars, and the value of the product increased over a billion. In 1890 the number of hands employed was 4,712,622, or more than double that reported by the last census under free coinage; the wages \$2,283,216,629, three times that in 1870, under free coinage, and the value of the product \$9,372,437,283, or more than double that reported in 1870. Does this look as though the gold standard had "discouraged enterprise and paralyzed industry?" Here are the figures for 1870, 1880, and 1890 in tabular form. Ask Mr. Bryan, or any other free-silver man, how he accounts for them if the gold standard has "discouraged enterprise and paralyzed industry."

Year.	Establishments.	Employees.	Wages paid.	Value of manufactures.
1870	250,148	2,053,996	\$775,584,343	\$4,232,225,442
1880	253,852	2,732,595	\$1,017,953,795	\$5,360,570,191
1890	355,415	4,712,622	\$2,283,216,629	\$9,372,437,283

NOTE.—The figures for 1870 are based upon the paper-currency basis of that date, and if reduced to the gold basis, upon which the later statements were made, the contrast would be even more striking.

"You can not employ labor unless you can sell the products of labor at a profit, and as money goes up the profits of labor must come down."—*Syracuse (N. Y.) speech.*

Mr. Bryan insists that money has been "going up" ever since 1873, and that this has caused a reduction in the profits of labor and, of course, in the wages paid to labor. Yet the report of his silver associate, Senator Jones of Nevada, as a member of the Aldrich committee of the United States Senate, shows that the profits of labor increased steadily from 1873 to 1891 when calculated upon a gold basis. So it is evident that the "profits" of labor have increased under the gold standard, and that the dollars which are received for such labor buy much more than they did prior to the act of 1873.

Mr. Bryan is right, doubtless, in the assertion that "You can not employ labor unless you can sell the products of labor at a profit." That is what was told him when he helped frame and pass the Bryan-Wilson-Gorman law, which brought in \$124,715,402 more of foreign goods in its first year than the McKinley law did in its last year. It is this fact, the filling up of our markets with foreign goods, which causes a lack of employment to-day, since, as he says, "You can not employ labor unless you can sell the products of that labor at a profit."

"John G. Carlisle said in 1878: 'The absolute and instantaneous destruction of one-half the entire movable property of the world would not produce anything like the distress and disorganization that must inevitably result from the permanent annihilation of one-half of the metallic money of the world.' And yet the Republican party has pledged itself to join a conspiracy to destroy this money unless other nations come and help us to save our people."—*Buffalo speech.*

Mr. Carlisle doubtless thought in 1878 that the world would suffer if the use of silver as a money should be suspended; but it has not been suspended, and there is no intention by anybody that it shall be. On the contrary, the silver money of the world, which amounted to \$2,500,000,000 in 1878, now amounts to \$4,070,000,000, and is being increased at the rate of over \$100,000,000 a year.

The silver money of the world has thus greatly increased since 1878. There is much more money in the world for each individual to-day than there was in 1878. The Republican party has not pledged itself to join in any conspiracy against silver, as Mr. Bryan asserts, but to cooperate with those European nations which have recently expressed a desire for an increase in its use. Every European nation of prominence has within the past few years expressed a desire for international bimetalism, and the time is ripe for it.

"Wait until you have drawn Japan and South America and all the other silver-using nations to a gold standard, and then what? You will have something like \$4,000,000,000 of standard money, which will be in shape where the money can be cornered by the great money owners of the world and doled out to mankind at such prices as the owners shall determine."—*Toledo speech.*

The gold money of the world is distributed as follows: Greece, \$500,000; Central American States, \$500,000; Bulgaria, \$600,000; Servia, \$1,000,000; Haiti, \$1,000,000; Mexico, \$5,000,000; Norway, \$7,500,000; Sweden, \$8,000,000; Canada, \$14,000,000; Denmark, \$14,500,000; Switzerland, \$14,900,000; Cuba, \$18,000,000; Netherlands, \$23,200,000; Portugal, \$38,000,000; Roumania, \$38,000,000; South American States, \$40,000,000; Spain, \$40,000,000; Turkey, \$50,000,000; Belgium, \$55,000,000; Japan, \$80,000,000; Italy, \$98,200,000; Australia, \$115,000,000; Egypt, \$120,000,000; Austria-Hungary, \$140,000,000; Russia, \$480,000,000; United Kingdom, \$580,000,000; United States, \$600,100,000; Germany, \$625,000,000; France, \$650,000,000. Does it not seem rather absurd to assume that a few money owners can "corner" this amount of gold, distributed over the world in the manner indicated, and "dole it out to mankind at such prices as the owners may determine?" Besides, the gold of the world is increasing at the rate of over \$300,000,000 a year, and at that rate will double the present sum of gold money in the world within twenty years, thus making its "control" so much the more difficult.

"The Republican party has been legislating to make the dollar dearer. \* \* \* Senator Sherman said, January 25, 1890: 'If our present currency is estimated at \$1,400,000,000 and our population is increasing at the rate of 3 per cent per annum, it would take \$2,000,000 increased circulation each year to keep pace with the increased population.' \* \* \* What provision has the Republican party made for the supply of the money that we need? None whatever.—Greensboro (N. C.) speech.

There was added to the metallic currency of the country last year \$63,196,781, or 50 per cent more than sufficient to "keep pace with the increase of the population." In the preceding year, 1894, the amount added to it was \$39,184,988, or more than twice the amount needed for this purpose. There has not been a year since the repeal of the Bland law in which the increase from the coinage of gold alone was not much more than enough to keep pace with the growth of population. The reduction of the money of the country and of that in circulation is due to the fact that the tariff law which Mr. Bryan helped enact brought enormous quantities of foreign goods into the country and took money out of it to pay for them, instead of keeping it at home and circulating it among the workmen at the mills and factories, as did the McKinley law.

"If you think you have hard times, what would it be if these same influences succeeded in driving India to a gold standard, if they should succeed in suspending the free coinage of silver in India?"—Toledo speech.

Free coinage of silver in India was suspended in 1893 and is still suspended. This action was taken on the recommendation of a commission on the currency appointed on the recommendation of the council of the government of India. The mints of India were closed to silver on June 26, 1893, with the avowed purpose of eventually establishing a single gold standard. They still remain closed to silver, no silver coins except small fractional currency having been coined at the mints of India during the year 1894-95, most of this being recoinage of uncurrent coin and foreign coin.

"Wage earners know that while a gold standard raises the purchasing power of the dollar, it also makes it more difficult to obtain possession of the dollar."—Madison Square Garden speech.

The report of the committee of the United States Senate, of which his silver associate, Senator Jones, of Nevada, was a member, and whose report is accepted by all parties as accurate, shows that the earnings of labor have steadily increased since 1873, the date at which he claimed the United States went to a gold standard.

The report of the Aldrich committee shows the average wages of labor in 1891 were materially higher than they were in 1873, when the figures for that date are reduced to a gold basis, while the dollars now earned will buy on an average 25 per cent more than they did then. If there has been a decrease in the wages of labor since the date of the Aldrich report, it is that of the past two years, due to the closing of shops and factories by the tariff law which Mr. Bryan helped frame and pass.

#### WHY WHEAT FELL—A FEW FACTS FOR FARMERS—INDIA WHEAT AT 13 CENTS A BUSHEL DID IT—THERE IS A REMEDY—READ THIS AND FIND IT.

[By O. P. Austin.]

What was the cause of the low price of wheat in 1895?  
Has the use or disuse of silver had anything to do with it?  
Let us see.

In 1871 we had \$32,000,000 in silver currency in the United States. Wheat was then worth \$1.25 per bushel.  
In 1895 we had \$25,000,000 in silver currency in the United States. Wheat was then worth 50 cents a bushel.

These are official figures. The books of the Treasury Department show that we have twelve times as much silver currency now as we had in 1871. The figures of the Department of Agriculture show that the price of wheat to-day is only two-fifths of what it was in 1871.

If the quantity of silver circulation has any relation to the price of wheat, it would seem to have a bad effect rather than a good one, for wheat has steadily fallen, while the silver money in the country has steadily increased.

Do you believe this?

If not, just run your eye over the following table. It is made up of official figures from the Treasury Department as to the quantity of silver money in the country and the official figures from the Department of Agriculture as to the price of wheat.

Do you see how the silver money has increased and how the price of wheat has decreased?

Run your eye down the silver column and see how it steadily increased. Then run your eye down the column of wheat prices and see how it steadily decreased, just as evenly and steadily as the silver column increased.

Year.	Silver currency in the United States.	Average price of wheat.	Year.	Silver currency in the United States.	Average price of wheat.
1871.....	\$32,000,000	\$1.25	1884.....	\$200,000,000	\$0.645
1872.....	55,000,000	1.241	1885.....	297,000,000	.771
1873.....	58,000,000	1.151	1886.....	329,000,000	.697
1874.....	61,000,000	.945	1887.....	369,000,000	.681
1875.....	63,000,000	1.008	1888.....	403,000,000	.626
1876.....	72,000,000	1.037	1889.....	437,000,000	.606
1877.....	90,000,000	1.034	1890.....	485,000,000	.593
1878.....	105,000,000	.777	1891.....	542,000,000	.639
1879.....	132,000,000	1.109	1892.....	592,000,000	.624
1880.....	163,000,000	.951	1893.....	623,000,000	.536
1881.....	189,000,000	1.192	1894.....	624,000,000	.491
1882.....	218,000,000	.869	1895.....	625,000,000	.600
1883.....	244,000,000	.911			

Strange, isn't it?

Now, let us apply the usual argument of the politicians and silver advocates.

If an increase of 1,100 per cent in our silver money in twenty-five years' time has been accompanied by a fall of 60 per cent in the price of wheat, at the same rate of increase in the silver supply and decrease of the value of wheat the price of wheat will go to 1 cent a bushel in twenty more years of additions to our silver currency.

It is just as logical to argue it that way as it is to try by any other means to show that the fall in the price of wheat is due to any silver legislation in regard to silver as a currency. What, then, is the cause of the fall in the price of wheat?

Simple enough, if you stop and think it out.

The price of wheat is dependent on the demand for it. If the markets of Europe are supplied with wheat produced at one-third what it costs to raise it here, is it to be expected that you will get a living price for your wheat here?

Certainly not.

Senator Peffer, of Kansas, the Populist leader, in his report on the cause of the fall in agricultural prices made to the Senate in 1894, said:

"Our home prices for wheat are largely controlled by the foreign wheat market; and that is regulated by those who supply the greater part of the demand. The effect on our wheat market is to bring down prices. \* \* \* Our strongest rival is now India, whose farmers, during the past seven years, furnished nearly one-half as much as we did of the wheat requirement of our best customer, England. \* \* \* Wages of India farm hands run from 6 to 10 cents of our money per day and wheat costs about 13 cents per bushel on the farm there.

Please read that again, slowly.

India, which only entered the wheat markets of Europe after England opened the Suez Canal and gave quick transportation from India to Liverpool, is now supplying a large share of the wheat markets of Europe, and doing it with wheat which she produces at 13 cents a bushel. The official figures show that other wheat fields of the world are now able to even drive India out of that market.

Is it any wonder that we get low prices for our wheat which goes abroad? Remember, too, that India, where labor is 10 cents a day and wheat is produced at 13 cents a bushel, is a silver-using country. Keep this fact in mind, and look back again at that table showing the steady decrease in the price of wheat while our silver coinage has been increasing.

Now, let us have a little more of Senator Peffer on the price of wheat. He is interesting. He says in the same report quoted above:

"In Kansas it appears from the report of the secretary of the State board of agriculture that it costs 50 cents to raise a bushel of wheat. \* \* \* In Pennsylvania and New York the average cost of producing a bushel of wheat is about 65 cents. \* \* \* In Illinois it costs \$10.20 to produce an acre of wheat, and the average yield since 1873 has been a little less than 14 bushels. \* \* \* Wheat in India costs but about 13 cents a bushel on the farm, 12 cents more puts it aboard ship, and 25 cents additional lands it on the wharves in Liverpool. This 50-cent wheat from India competes (in our best market, England) with wheat on American farms at an average cost of 80 cents a bushel."

Not a pleasing picture, is it?

We used to supply two-thirds of the world's wheat market. Now we supply but one-third, and do it in competition with 13-cent wheat laid down in the London markets at a cost of 50 cents a bushel, all told. Is it surprising that wheat is low?

What is the remedy?

Two things.

First. Create a home market for your wheat.

Second. Vary your production.

How are you to do this?

First. Create a home market by supporting a protective tariff, which will bring business to manufacturers and employment to idle millions, who will thus have money to spend freely for your farm products.

Second. Support the party which gave you reciprocity on farm products, protection for wool, and a bounty on sugar produced by farmers.

Under the reciprocity of the McKinley law our exports of flour, wheat, and other farm products increased steadily and enormously, because we were able to get them into foreign countries at a lower tariff rate than the grain and flour from other parts of the world had to pay for entering those countries. So we could get better prices for our grain and flour under reciprocity than other countries were getting at the same time.

Under the sugar bounty of the McKinley law beet-sugar factories were springing up throughout the Mississippi Valley and on the Pacific Coast, and there was reason to believe we should soon give to our farmers the \$100,000,000 per annum which we now send abroad for sugar.

The repeal of the McKinley tariff law caused the importation of foreign wool to increase from 55,000,000 pounds to 205,000,000 pounds in a single year, an increase of about 300 per cent. Besides this enormous increase in raw wool, the importation of manufactured wool increased from \$19,000,000 in value under the McKinley law to \$36,000,000 in value under the present or Wilson law. Under the McKinley law the importation of rags was only about 100,000 pounds, while the Wilson law in its first year brought in 14,000,000 pounds of woolen rags and shoddy from the hotels and hospitals of Europe to be worked into clothes for our people, and displacing good, clean American wool. The result of all this was a decrease in the value of the flocks from \$125,000,000 under the McKinley law to \$55,000,000 under the Wilson law.

Think what a return of McKinley principles means to the farmer:

(1) Better prices abroad for his wheat by means of reciprocity, which reduces foreign tariffs on his grain while other wheat growers of the world still pay high rates of duty in the countries to which our grain would obtain access at low rates.

(2) The distribution of \$100,000,000 a year among the farmers of the Mississippi Valley and on the Pacific Coast for the sugar which they can produce from beets, if assisted by the Republican policy, which inaugurated the beginning of the beet-sugar industry.

(3) An increase in home demand for grain and other farm products by such a protective tariff as will enable the manufacturers to start their mills and their employees to begin spending their money freely for a comfortable living.

(4) Such a protective tariff on wool and other farm products as will shut out from this country the farm products of other parts of the world.

Do you realize what the effect of the Wilson tariff was on the farmers?

Read the following table and see the enormous increase in the importation of all farm products in the first year of the Wilson law as compared with the last year of the McKinley law. Then look at the table which follows it and see the decrease in the exports of farm products which followed the destruction of reciprocity by the repeal of the McKinley law and the adoption of the Wilson law.

#### THE OFFICIAL FIGURES.

The following tables show, from official reports of the Treasury Department, the imports and exports of farm products in the last fiscal year under the McKinley law, compared with the first calendar year under the Wilson law. These two periods—the fiscal year ended June 30, 1894, and the calendar year beginning January 1, 1895—most nearly touch the date at which the change was made from the old to the new law of any annual periods covered by the official statements of the Treasury Department. The fiscal year 1894 closed two months before the end of the operations of the McKinley law, and the calendar year 1895 began four months after the Wilson law had begun its work. Each year's figures may therefore be assumed to present a fairly normal picture of the workings of the two laws, and thus to give for the first time since the enactment of the Wilson law an absolutely accurate official comparison of their operations as affecting the great class of citizens of the United States dependent on agriculture.

## Imports of farm products.

	McKinley law, fiscal year 1894.	Wilson law, calendar year 1893.
Tobacco	\$11,001,706	\$15,225,726
Wines	6,730,425	7,222,102
Wool	6,107,438	33,770,159
Leather	4,508,330	7,745,002
Cotton (unmanufactured)	3,010,253	5,171,009
Rice	2,464,226	2,955,329
Animals	2,411,096	3,365,123
Seeds	2,305,695	4,650,430
Breadstuffs (all)	1,981,317	2,886,736
Provisions (all)	1,797,847	2,106,130
Flax (unmanufactured)	1,390,845	2,230,920
Cheese	1,247,198	1,471,001
Hay	701,097	2,101,635
Wheat	701,177	1,121,739
Feathers	726,002	3,083,620
Hops	484,415	547,045
Barley	368,744	501,137
Hemp	239,918	1,212,243
Eggs	190,536	219,459

## Exports of farm products.

	\$210,809,298	\$189,880,645
Cotton	186,774,556	125,004,486
Breadstuffs (all)	145,282,273	132,456,843
Provisions (all)	69,271,700	50,292,886
Flour	69,470,041	40,898,547
Wheat	40,690,721	37,348,793
Lard	38,338,357	37,411,944
Beacon	35,608,180	33,791,014
Animals (all)	33,455,082	20,897,701
Cattle	30,211,154	17,907,736
Corn	16,000,383	16,522,015
Beef	8,907,807	7,851,246
Oil cake and meal	7,941,935	1,983,894
Seeds (all)	7,180,232	3,401,117
Cheese	5,067,773	4,430,155
Distilled spirits	4,540,822	1,126,618
Pork	3,972,487	2,835,947
Clover seed	3,844,194	1,745,945
Hides	2,766,164	1,207,350
Tallow	2,426,284	31,076
Flaxseed	2,379,714	1,486,038
Barley	2,300,265	1,890,672
Sugar and molasses	2,027,634	599,835
Oats	1,740,604	1,557,467
Vegetables	800,503	698,034
Hay	210,742	179,856
Broom corn	138,523	724
Eye		

Now you know how to remedy the present unsatisfactory condition on the farm.

Go back to protection, reciprocity, encouragement of the beet-sugar industry, encouragement of the wool industry, encouragement to manufacturers, encouragement to home industries of all kinds, and thus give the home market a consuming power which it had under Republican protection. Do this and we shall again see happy homes and the good prices which we had under protection.

Do not listen to the man who tells you that the price of silver makes the price of farm products.

Look up market records, turn to your own account books, and you will find that corn and oats, and hogs and cattle, the staples you have to sell, brought you as good prices in 1890 as in 1872, and the money you get would buy more of your necessities, because protection had resulted in the cheapening of all manufactured articles.

Why did you get good prices in 1890? Because under Republican protection the country was prosperous, workmen were employed at good wages, and they were able to buy what you had to sell.

The men who talked free trade to you four years ago, and whose legislation in 1894 ruined your home market, made tramps out of your best customers and sent them to soup houses instead of their own well-filled dinner pails, are afraid to come back this year and talk tariff to you.

They are responsible for the present affliction you are suffering, and in order to draw your attention away from what they have done and make you forget what happened when you trusted them before, they are now offering you the free coinage of silver as another quack remedy for the disease they themselves created.

Can the same man fool you twice in four years?

## IMPORTANT TO SHAREHOLDERS—THE EFFECT OF FREE COINAGE OF SILVER ON BUILDING ASSOCIATIONS AND THEIR MEMBERS.

The most important question in a generation, affecting the interest of building, loan, and savings associations, has been presented for their answer and must be decided at the pending Presidential election in November. On their votes will depend the confidence, safety, and prosperity, and the very existence of these institutions in the future.

Shall the savings of the 2,000,000 members, carefully laid by in these institutions for the time of need or to purchase a home, be repaid in currency of the same well-known value, every dollar of which is as good as gold, or by a depreciated currency worth 50 cents on the dollar in its purchasing power?

There are at present over 2,000,000 stockholders in these associations, 90 per cent of whom earn their living by their daily wages or salaries. According to the latest official reports, there has been saved and deposited by these 2,000,000 stockholders in the different associations (not including about 100 associations not reporting) and is now deposited to their credit \$635,774,721.

Every dollar of this is due the members in dollars as good as gold, and every dollar has been contributed through economy and often deprivation of the luxuries of life. The States of New York, Pennsylvania, Ohio, New Jersey, Indiana, Illinois, Michigan, Wisconsin, Iowa, Minnesota, have contributed \$435,807,000 of this amount.

The city of Chicago alone represents 312 associations (117,700 members) and savings of \$39,044,828. The city of Cincinnati, 334 associations (101,605 members) and \$28,845,838 of savings. Nearly every town of importance, from East to West, North and South, is represented by a building association.

The average value of these savings per stockholder amounts to \$313. Assuming an average payment of \$13 per share yearly of dues, and basing the estimate upon the last report of the United States Labor Commissioner, this amount would represent a saving of about two years and six months. In other words, the whole sum of \$635,000,774 represents the deposits and profits of the members within that period, a sum one-half more than all the capital of the national banks in existence.

During the operation of these associations since the year 1861 it is estimated that over 1,000,000 homes have been secured to their members; more than twice the number of homes secured through the homestead act of the same date.

The growth of these institutions and the confidence of the public in them has been slow, but it has been greatly increased by their stability and safety shown during the last financial disturbance. Can they afford to risk another financial disturbance, which would certainly result under the threatened free coinage of silver?

Could the directors of these associations guarantee the future depositors the kind of money with which they would be repaid? Would it be in their power, or practical, to guarantee to any borrowing member that he might not, with the fluctuating value of an unstable currency, be required in the future to repay his loans in a dollar of depreciated or greater value?

The loans of these associations are generally made on long time, averaging about ten years. It is necessary, under these conditions, that a fixed, certain, and definite contract be made between a borrower and the association, in order that the member may be well informed as to the amount of value of the repayment of his debt to be made, and that the associations should be definitely informed as to the amount they will receive on the redemption of their claim.

This can never be satisfactorily arranged or determined with a currency that will fluctuate from time to time, as has been the history of all fiat money. (The issue of a 47-cent dollar without the Government guaranty to maintain its parity with gold is simply fiat money.)

Building and loan associations have been prosperous in the past; there has been no question or suspicion as to the value of the dollar which was loaned by the association, or any question by the borrower as to the value of the dollar which he received and would be required to repay.

In view of the success in the past of these institutions, can their members or directors afford to risk any change of value or tamper with the \$635,000,000, every dollar of which is as good as gold, by encouraging the scheme of supplanting the present dollar, worth 100 cents in gold, with a 47-cent dollar?

The loss resulting from a decrease of purchasing power, and suffered by those who have saved part of their earnings in the past, must go primarily to the owners of silver mines and silver bullion, as it is their product to which a fictitious value is at first given; other articles of barter and sale rising in price later, while wages are always the last to rise.

It is a sacred duty which every building-association stockholder owes to himself and to those who are dependent upon him to preserve the integrity of his little savings, and the value of his hard-earned accumulations, by opposing with voice and vote the free-silver delusion which now threatens to undermine their value and rob him of half of his possessions.

The attention of every stockholder is called to the action of the representatives of their interest, recently assembled at the meeting of the United States League of Building and Loan Associations, held at Philadelphia, July 22 and 23, 1893, where the following was adopted by acclamation:

## BUILDING AND LOAN ASSOCIATIONS.

"It is the sense of this meeting that the interests of all shareholders of Building and Loan Associations in the United States demand that the present standard of values, upon which the monetary system has been based since the resumption of specie payment in 1879, shall remain unchanged and inviolate.

"We believe that the interests of every class in the community, and especially those of the great wage-earning class, imperatively demand that every dollar in circulation, whether coin or paper, shall be equal in purchasing power, and therefore equal in value to every other.

"Patriotism demands that the 'dollar' bearing the mint mark of the United States shall be the equal of the dollar of the most advanced nations, and entitled to full faith and credit all over the world; and to that end it must be maintained free from all suspicion of debasement or repudiation."

These statements embody the convictions of the representative building-association men from all States wherein State leagues had been formed, and who met with a view solely of considering the best interests of all the people connected with the movement, with no personal ends in view, no private "axes to grind."

This is not a question of party politics, nor a question of nationalities. It is a question of pursuing an honest policy in maintaining the purity of the money of the United States as it now exists and of honest dealing between man and man.

All citizens, without distinction of birth, whether native Americans or naturalized citizens, and whatever may have been their political affiliations in the past, can consistently stand together on the platform of sound money by repudiating the platform of free and unlimited coinage on the basis of 16 to 1, by seeing to it that its false pretensions are finally and forever buried at the November election for President of the United States.

## MAIN FACTS ABOUT GOLD AND SILVER.

## FIRST.

1. Silver has always been measured by gold.
2. That by which something else is measured is the standard of value. The number of ounces of silver an ounce of gold would buy has always been the ratio.
3. Like all other values, the ratio of silver to gold has been controlled by supply and demand.
4. When the Government was founded, the commercial or true ratio was believed to be 15 to 1.
5. At that ratio silver was admitted free and unlimited to the mint. Gold dollar, 24 grains fine gold; 24 multiplied by 15 equals 374 grains fine silver, the "silver dollar of the daddies."
6. The intent and belief of the "daddies" was that 374 grains of pure silver would buy as much of anything as 24 grains of gold would buy; or that 15 ounces of fine silver would pay as much debt as 1 ounce of gold.

## SECOND.

1. The ratio of 15 to 1, fixed by law, remained actually correct but a very short time.
2. Owing to admission of foreign coins which were inferior, no American gold or silver coins circulated. Coinage of silver dollars was suspended in 1806, and was not resumed until 1835.
3. In 1837 the weight of the silver dollar was changed to 412½ grains of standard silver by a slight change in the alloy. The ratio between the silver and gold dollar was then 16 to 1, a slight reduction in the weight of the gold dollar having been made in 1834.
4. Silver then became more profitable to export than to coin.
5. Thus we went to the single gold standard, on which we have been down to the present time.

## THIRD.

1. The change in the coinage law in 1873, popularly known as "the crime of 1873," was not surreptitiously made, as is sometimes claimed. The bill had been considered at five sessions of Congress, and the omission of the silver dollar was explained to be because of the fluctuation in the value of silver as measured by gold. Even Senator STEWART voted for the bill, as did all the Senators from silver-producing States.
2. The coinage act of 1873 did not deprive silver dollars already coined and in circulation of their legal-tender quality.
3. In 1878 a law was enacted authorizing the purchase of \$2,000,000 worth of silver per month by the Government and the coinage thereof into dollars of 412½ grains standard silver, which coins were to be full legal tender.
4. There were coined under this act, from 1878 to 1890, 378,165,793 silver dollars, or forty-seven times as many as were coined from 1792 to 1873. These dollars are all a full legal tender.
5. In 1890 an act was passed requiring the purchase of 4,500,000 ounces of silver per month, to be paid for in Treasury notes. The hope that this purchase of nearly the entire output of American mines would restore silver to a parity with gold was not realized, and silver bullion declined to nearly the lowest point in its history.
6. The act of 1890 was repealed in 1893 at a special session of Congress called by President Cleveland, who pointed out that the credit of the Government in silver coinage was exhausted. There were coined under its provisions 39,181,484 standard silver dollars, most of them in the first year of its operation.
7. There have been coined by the United States, in the one hundred and four years since the mints were opened, 431,330,457 silver dollars, all of which

are a full legal tender to-day. Of this number 423,289,219 have been coined since the "crime of 1873," so called, and only 8,041,238 were coined before that date.

8. All the silver dollars in our currency are full legal tender at 100 cents each (except for redemption of gold certificates, which are not legal tender).

9. Subsidiary silver (half dollars, quarter dollars, and dimes) is legal tender to the amount of \$10 in any one transaction.

10. The total limited legal-tender silver coined is \$179,566,288.60.

11. Total silver coined by the United States down to July 1, 1896, \$936,464,343.10.

## FOURTH.

1. The reason why a new demand for free coinage of silver by the United States has arisen is that, owing to increased production, caused chiefly by improved methods of mining and better facilities for transportation, the output of silver has become so large as to diminish its value in relation to gold.

2. Down to 1873 silver was more profitable to export than to coin, and that year only \$238,600 was offered for coinage in the United States.

3. In 1856 the world's production of silver was 31,400,000 ounces; real ratio to gold, 15.38 to 1.

4. In 1876 the world's production of silver was 67,753,000 ounces, or more than double. Real ratio to gold, 17.88.

5. In 1886 the world's production of silver was 93,297,000 ounces, trebling that of 1856. Real ratio to gold, 20.78.

6. In 1895 the world's production of silver was 165,000,000 ounces, or more than five times what it was in 1856. Real ratio to gold, 31.56.

7. That is to say, an ounce of gold is worth to-day nearly 34 ounces of silver.

8. Yet owners of uncoined silver want us to accept it for free and unlimited coinage at the ratio of 16 ounces of silver to 1 ounce of gold.

## FIFTH.

1. The effect would be to flood the country with silver dollars worth 46 cents.

2. When the Government was founded, the "daddies" believed and intended that 15 ounces of silver would purchase as much as 1 ounce of gold, or that 15 ounces of silver would discharge a debt which 1 ounce of gold would discharge.

3. To-day it requires 34 ounces of silver to purchase 1 ounce of gold. If we coined silver at 16 to 1, therefore, we would be forcing on ourselves a dollar of a purchasing power or debt-paying power of less than one-half the present dollar of our currency, all its dollars being kept up to a value of 100 cents each by the existing gold standard.

4. Free coinage of silver would put us on the silver standard with China and other countries in which labor is in practical serfdom and civilization is scarcely begun.

5. There is not in the world to-day a first-class nation that opens its mints to the free and unlimited coinage of silver.

6. Remember always that 63 times as many legal-tender silver dollars have been coined by the United States since the so-called "crime of 1873" as were coined before that date. In the face of this enormous increase of coinage, the price of silver has fallen one-half.

## STOCK ARGUMENTS OF FREE-COINAGE MEN BRIEFLY ANSWERED.

1. That the free coinage of silver will make money plenty. It will not. It will drive more than \$900,000,000 of gold out of the country, and it will require years of work by the mints to replace this amount with silver.
2. That silver was demonetized in 1873. It was not. To "demonetize" means to abandon the use of as money. Up to 1873 we had coined only 8,000,000 silver dollars; since that time we have coined 423,000,000 full legal-tender silver dollars, and they are all in use and all full legal tender.
3. That the present hard times result from the gold standard. One cause of hard times is the continual agitation for cheap money. Under the gold standard we had unexampled prosperity, until the agitation for more silver and low tariff unsettled business.
4. That the gold standard has ruined the country. The wealth of the country more than doubled from 1870 to 1890.
5. That the gold standard has cut wages in half. From 1870 to 1890 wages increased 28 per cent, and their purchasing power 72 per cent.
6. That silver is not a legal tender. Silver dollars are legal tender to any amount for debt, public or private, and subsidiary coins are legal tender to the amount of \$10.
7. That free coinage will make 374½ grains of pure silver sell for \$1. Three-fourths of the earth's population have free coinage of silver, but 374½ grains of silver sell for 47 cents.
8. That the dollar of the daddies must be restored. It was restored in 1873, and over 423,000,000 of them have since been coined.
9. That silver has fallen in value because it is denied free coinage. Silver began to fall one hundred and seventy-three years before we stopped free coinage.
10. That this country is big enough to adopt free coinage and restore silver's value independently of the rest of the world. If three-fourths of the people in the world have failed, how can 70,000,000 succeed?
11. That the "money power" has cornered gold and made money scarce. There is \$6,786,437,000 of gold in the world, and no combination could possibly corner it.
12. That we are being driven into bankruptcy by scarce money and high interest. In 1873 we had \$18.04 per capita; in 1894 we had \$24.39 per capita. Since 1873 rates of interest have fallen 50 per cent.
13. That the larger the volume of currency the higher are prices. France has \$35.77 per capita; Switzerland has \$9.97. Prices are the same in both countries.
14. That primary money only is a measure of values. Gold is the primary money of both France and Greece. France has \$22.19 gold per capita; Greece has only 23 cents. Prices are the same in both countries.
15. That free silver will make the farmer's wheat sell for \$1. But that silver dollar will only purchase what 50 cents will buy at present.
16. That the silver men demand bimetallism. In his Centralia speech, W. J. Bryan said: "The Democratic party has declared for a single standard of silver." That means silver monometallism.
17. That free silver will raise wages. From 1860 to 1895 a 49-cent paper dollar raised prices 116 per cent, and only raised wages 43 per cent. The purchasing power of all wages was reduced 66 per cent compared with the gold wages of 1860.
18. That free coinage will raise the price of silver to \$1.29 per ounce. With an annual purchase for coinage of 2,250 tons per annum, the price fell from \$1.17 to 78 cents between 1890 and 1893 and the production increased 36 per cent.
19. That nature has fixed a ratio of 16 to 1 by yielding annually at the mines in weight about sixteen times as much silver as gold.

This is not true. The ratio in which the two metals have been produced has varied continually and very greatly. According to the most trustworthy statistics we have, the ratio of gold to silver produced was about 1 to 8 from 1493 to 1520, about 1 to 48 from 1581 to 1640, and 1 to less than 4 from 1851 to 1860. Between these extremes the ratio has varied very widely.

#### RAPID PROGRESS OF THE DINGLEY BILL—ITS RECORD COMPARED WITH THAT OF OTHER TARIFF MEASURES.

The following table (prepared by Mr. William T. Bingham, a correspondent of the New York Sun) gives a comparison of the number of days the McKinley, Wilson, and Dingley bills were in process of legislation:

	McKinley bill.	Wilson bill.	Dingley bill.
	Days.	Days.	Days.
Debated in House.....	35	25	10
In Senate Finance Committee.....	26	47	34
Debated in Senate.....	85	95	42
In conference.....	10	36	10
	156	203	97
Actual time from reporting to House until becoming a law.....	167	252	125

Mr. Harrison was elected November, 1888, and Congress met December, 1889; the McKinley bill became a law October 1, 1890, or almost twenty-three months after the election, and almost ten months after the meeting of Congress.

Mr. Cleveland was elected November, 1892, and Congress met August 7, 1893; the Wilson bill became a law August 28, 1894, or almost twenty-two months after the election, and more than a year after the meeting of Congress.

Mr. McKinley was elected November, 1896, and Congress met March 15, 1897; the Dingley bill became a law July 24, in less than nine months after his election, and in four months and nine days after Congress met.

#### The Tariff.

#### SPEECH

OF

HON. PETER J. OTEY,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. OTEY said:

Mr. SPEAKER: Having expressed my views fully on the measure now before this body when it was before it last March, and having had nothing to occur to cause any modification of those views, it is my purpose to discuss the effect of such Republican legislation as this on my State.

When the war between the States ended, Virginia lay prostrate, like Samson after Delilah had shorn him of his strength.

There are those here to-day who were not born when, in 1865, the vultures from the North flocked to the South to feed on the exhausted body of the once glorious and great Old Dominion. She had already been dismembered, that another star might be added to that flag which floated in triumph over the greatest battlefields of modern times, and which her people had helped to make renowned. But the edict had gone forth that for a time at least the name of Virginia should be blotted out, and that the mention of her great and glorious memories should be treason; that the fame of her sons should not be written, and that thenceforward District No. 1 should take the place of Virginia.

Four long years did her white people bear the yoke, during which time their good sense, conservatism, and courage engaged the admiration of the whole world. In 1869 they were given an opportunity to speak, and once again did that old party, which for fifty-two years prior to the war had guided the destinies of the nation, hoist the Democratic flag, on which was emblazoned "Sic semper tyrannis," and control of State affairs once again passed into the hands of the white people of this battle-scarred old State.

It is only necessary for us to compare the conditions now with then.

Place a thermometer before us and let us suppose that the degrees represent advancement and progress, civil and religious liberty, and human happiness; and compare the mercury at different stages since 1869, and the record will show that it had reached zero in 1870. At the end of two years it had risen and continued to rise till 1881, when the Democratic party lost and the mercury fell. Another two years passed, and it recovered, the upward movement being caused by the restoration in part of Democratic rule. Two years later this restoration was complete, and the mercury has risen ever since. I do not mean to say that prosperity has attended this upward march. There may be great

advancement and progress without prosperity, and such conditions have existed in Virginia.

Ours is a dual Government; both State and Federal Governments must perform their allotted function to secure the greatest good to the greatest number. The State may perform its function, but if the Federal Government perform not its duty, the tree of prosperity will bear no fruit.

This tree has been subjected to the blight of Federal legislation, taxation galore, prodigal expenditures, tariff and money legislation—enough to have destroyed its roots and rendered even budding impossible.

It is the function of the Federal Government to provide the best markets for the produce of our people. This it has not done. The State is powerless to do so, and the tariff bills under which we have been forced to live precluded it, as the present bill does. It is the function of the Federal Government to supply both gold and silver coin as a medium of exchange, which it has denied.

No State is permitted to make anything but gold and silver coin a legal tender, and yet Federal legislation forbids the use of silver.

The wonder is that all State legislation has not been neutralized by such Federal action.

It matters not what is the increased volume of production, manufacturing, and the mechanic arts that have resulted from good State government, prosperity will not be an attendant when Federal legislation reduces prices so that no profit accrues. So, then, if it can be shown that the party in power in a State has provided the conditions for such increase, which, under proper Federal legislation, profit and consequent prosperity would have followed, and such Federal legislation was denied, who can lay the blame of the want of prosperity at the door of the dominant party in this State?

Then, too, when it can be shown that actual decadence of these conditions occurred when another party got control, and improved when it lost control, it is clear that its temporary control had something to do with the decadence. Analyze the acts of the Democratic party in Virginia, and it will be seen that it has never failed to foster the welfare of her people, to maintain their honor, and sustain the integrity of the Commonwealth.

The great and perplexing question of taxation has been handled with consummate skill. Where there was a deficit, a surplus has grown. The revenues have been increased without increase of taxation. Assessments have been equalized, so that not more than one-fourth of the burdens of taxation now rest on the producing classes, whereas before three-fourths of it almost crushed the farming element of the State. Expenditures have been economically regulated, so that increased appropriations have been made to schools, asylums, higher institutions of learning, and to our own Confederate veterans.

In an interview with me which was published in the Washington Post in the early part of this spring I said (I incorporate it as part of my remarks) of the Republican party of Virginia:

"It is principally composed of negroes. There are thousands of names on registration books which have not been purged, which under a new registration would melt away. Virginia is a white man's State. Nowhere is the Anglo-Saxon blood stronger than in Virginia. Just as this race stands preeminent in the world, so does it stand predominant in Virginia, and there are very few white people who forget this when the weal or woe of the State is at stake. One statement from the census of the United States, 1890, ought to satisfy any unprejudiced mind that Virginia is inherently Democratic. The population consists of whites, 60 per cent; negroes, 40 per cent; 1,000,000 whites, and 600,000 blacks. Ergo Democratic. Only once since 1870, in which year the State emerged from 'District No. 1,' as the chrysalis from the cocoon, to assume new life, has the combined opposition to the Democracy of Virginia got control of the State. The history of those two years will never be forgotten by the white people of Virginia."

I also stated that public education, which had been fostered by the Democratic party, placing the public-school system on its feet six years before the constitution of the State required it, suffered a blow from its so-called friends, when they got control of the State for two years, that well-nigh ended it. Blacksburg College, an institution organized so that poverty might be lifted to the same plane with wealth and the poor boy given an equal chance in the race of life with the more fortunate wealthy neighbor, was well-nigh wrecked.

The Virginia Military Institute, that educates fifty young men, sending them out annually as graduates after a four-years course, all at the expense of the State, met a similar fate. The one was reduced to 70 students, the other to 100, mostly sons of wealthy or well-to-do people. Public schools were withering under the blight of coalition. Two years were enough to open the eyes of the people, and in 1883 the white people, under the lead of Democracy, cleared the deck, and to-day we find Blacksburg, with its magnificent workshops and its technical courses, educating 400 young men, many of whom pay nothing but their labor in return. The Virginia Military Institute, the West Point of the South, with its

splendid corps of 200 cadets, has sprung into a new and useful life. Education has been nurtured, illiteracy has greatly decreased, and crime is abating.

#### PUBLIC SCHOOLS.

The constitution provided that the public-school system should be in operation on or before the year 1876. The Democratic party again assumed control of affairs in 1870. The constitution also provided that a superintendent of schools be elected by the general assembly within thirty days after it assembled. What did the Democratic legislature do?

It appointed or elected a superintendent within eight days of the time required, and he qualified five days before the expiration of the time.

A bill passed the legislature and became a law July 11, 1870, for speedily placing in operation the public schools. Six years before the constitutional requirement was the public-school system of Virginia an accomplished fact. Why should it not have been, when it is a fact that the first public school in the world was in Virginia?

It is worthy of note, too, as it was quite apparent that the revenue to provide for the firm establishment of the system had to be drawn from the white people in the shape of taxes.

So it is a remarkable fact that, except in one district, the question of levying a local tax for providing school accommodations was carried in every case where submitted to the suffrage of the people by a large majority, and that exception was in a district in which the colored people voted adversely. In some districts the colored people declined to vote (be it to their credit) on the ground that as the white people had to pay the tax they preferred for the white people to determine the question. Henrico County was an instance of this. The polls were opened in all the districts in Henrico, and there were only 18 votes cast against the tax.

Then, too, elections were held in May as to raising money in each county additionally by taxation for paying teachers, and it was carried affirmatively in 73 counties and lost in 25, no vote being taken in any of the cities. In some counties where it was not carried it was not needed.

So by November, 1870, most of the schools were in operation; more than a thousand officers were commissioned. Before the end of the scholastic year the number of pupils enrolled had increased to 130,000; teachers, 3,000, and schools, 2,900.

Number attending, 1870 ..... 50,775  
Illiteracy in 1870—  
Over 21, can not write, white ..... 68,000  
Over 21, can not write, colored ..... 208,000  
Aggregate cost of public schools, 1870 ..... \$450,000

It was then estimated that if wages be placed at \$30 per month, and five months made the term, the tuition would cost \$150 per annum, which would be \$720,000 for the State.

We will see that the Democratic party has done better than this. The coalition—Republicans and other schismatics—got control of the government of the State of Virginia in 1881. The difference between what was done in 1879 and what was done in 1881 will show the effect of Democratic rule. The difference between 1881 and 1883 will show the effect of two years of Republican rule, and the difference between 1883 and 1885 will show the effect of the recovery of the legislature by the Democratic party. I quote from summaries prepared and published by the Republican or coalition officers.

	Difference in years named.		
	Between 1879 and 1881 (Democratic rule).	Between 1881 and 1883 (Republican rule).	Between 1883 and 1885 (Democratic rule).
Number of schools opened.....	2,891	592	601
Number of graded schools.....	106	57	81
Number of children enrolled.....	131,073	29,314	34,983
Number in average attendance.....	68,611	15,518	20,464
Number supplied with books.....	3,272	1,558	2,404
Percentage school age enrolled.....	21	4	6
Cost tuition per month per pupil in average attendance.....	*\$0.07	†\$0.03	*\$0.05
Whole cost public education per month per pupil enrolled.....	*\$0.20	†\$0.02	(†)
Whole cost of education per month per pupil in average attendance.....	*\$0.24	†\$0.04	*\$0.04
Number teachers: White.....	1,376	255	212
Colored.....	512	350	384
Average number pupils.....	9	†11	†1
Number schoolhouses owned by districts.....	651	410	1,190
Number built during year.....	159	66	351
Deficit or arrearage.....	\$60,000	\$100,000	\$100,000

\* Decrease. † Increase. ‡ No increase.

In 1879, 2,891 schools opened, only 592 in 1881, and in 1883, 601 opened. The decadence under Republican rule is shown in 1881,

and the recovery and advance again inaugurated under Democratic rule in 1883.

So for graded schools established: 106 in 1879, 57 in 1881, and 81 in 1883; number of children enrolled, 131,073 in 1879, 29,314 in 1881, and 34,983 in 1883; cost per month per pupil, 7 cents decrease in 1879, 3 cents increase in 1881, and 5 cents decrease in 1883; number of white teachers, 1,376 in 1879, 255 in 1881, and 212 in 1883; number of colored teachers, 512 in 1879, 350 in 1881, and 384 in 1883; number of buildings, 159 in 1879, 66 in 1881, and 351 in 1883; deficit or arrearages, \$60,000 in 1879, \$100,000 in 1881, and \$100,000 in 1883.

Population 10 years of age and over, showing percentage of illiteracy in Virginia.

[From report of Commissioner of Education.]

	1870.	1880.	1890.
	Per cent.	Per cent.	Per cent.
All 10 and over 10.....	50	40	30
Native whites.....	19	13	13
Foreign whites.....	5	10	10
All whites 10 and over.....	23	18	13
All colored 10 and over.....	89	73	57

Virginia had 890,000 population in 1870, 10 years of age and over, 446,000 of whom were illiterates—322,000 colored. In 1890, 1,212,000; 366,000 of whom were illiterates, of which 260,000 were colored. All this under Democratic rule.

Statement showing decrease and increase of illiteracy in some Republican States as compared with Virginia.

State.	De-crease.	In-crease.	State.	De-crease.	In-crease.
	Per ct.	Per ct.		Per ct.	Per ct.

Vermont.....	12	.....	Connecticut.....	7	.....
New Jersey.....	5	.....	Ohio.....	5	.....
Wisconsin.....	15	.....	Indiana.....	16	.....
Michigan.....	14	.....	Delaware.....	18	.....
Pennsylvania.....	4	.....			

There were only 14 States that decreased their illiteracy more than Virginia, of which 8 were Democratic States, 1 Populist, 1 Silver, 1 Republican, and 3 doubtful.

Compared with Europe, we find that illiteracy of males in Virginia has been reduced from 1870 to 1890 from 50 per cent to 30 per cent; and in Hungary it is 32 per cent, Italy 40 per cent, Portugal 92 per cent, Spain 63 per cent, Russia 71 per cent, Serbia 79 per cent, and Roumania 89 per cent.

The number of colored illiterates 10 years of age and over in 1870 was 89 per cent; in 1890, 73 per cent; in 1890, 57 per cent.

The white illiterates in 1890 had been reduced to 13 per cent.

If we now compare some of the Southern States, we will get a glimpse of the effect on the illiteracy of the colored people. Those States which were longest under the iron heel of Republicanism were slower in the advancement of the colored people.

State.	Illiterates.		
	1890.	1880.	1870.
	Per cent.	Per cent.	Per cent.
Missouri.....	43	54	72
West Virginia.....	44	55	77
Florida.....	51	71	84
Texas.....	52	75	86
Virginia.....	53	73	89
Arkansas.....	54	75	81
Tennessee.....	54	71	82
North Carolina.....	60	77	85
Mississippi.....	61	75	87
South Carolina.....	64	78	81
Georgia.....	67	82	92
Alabama.....	69	81	89
Louisiana.....	72	79	85

## Illiteracy declined in the order named:

State.	1870 to 1880.	1880 to 1890.
	Per cent.	Per cent.
Missouri.....	18	12
Texas.....	19	20
Virginia.....	16	20
Tennessee.....	11	16
North Carolina.....	8	17
Mississippi.....	8	14
Alabama.....	8	13
Arkansas.....	6	21
South Carolina.....	3	14

These are only differences between the percentages and not the actual percentage or ratio of illiterates to population at the last of each decade.

These tables show that while those States that had to submit to Republican carpetbag rule made little headway in the increased education of the colored people, all of them show marked improvement after Democratic control was accomplished.

Missouri was soon out of the toils, and the 18 per cent decline of the illiteracy of the first decade shows it.

Virginia recovered her home rule in part in 1870, and the first decade shows 16 per cent decline of illiterates and the next 20 per cent under Democratic rule.

Tennessee was ahead of some of her less fortunate Southern sisters, and her advantage gained under Democratic rule is expressed in a decline in illiterates during the first decade of 11 per cent, and the second of 16 per cent.

Turn now to our less fortunate Southern States. The percentage of decline in illiterates in North Carolina, Mississippi, and Alabama is denoted by 8 per cent in each, and marks the delay in recovering control by the Democratic party.

Still a prolonged term of Republican misrule is expressed in Arkansas and South Carolina by the percentages of 6 and 3. Yet

the second decade, when the Democrats were in full control, we find that Arkansas made greater advances in educating the negro than any of the others, and Alabama reached the same percentage as Missouri, the latter State giving the largest percentage in the first decade, because it was not under carpet-bag rule at all.

So we find that the education of the colored people of these States was retarded in proportion to the time they were under the dominion of Republicans, and the inference, indeed the absolute conclusion, is irresistible that the said domination was the cause of the hindrance and was in fact the impediment.

Not only is this true, but the figures also show that as soon as the obstacle was removed advancement in the education of the colored people not only began but continued with an increasing ratio to population.

Obviously Democratic rule has improved the colored man. Not only is this true of the negro, but it is true of the white people.

Another fact worthy of note is that in the States of Maine, New Hampshire, Vermont, and Massachusetts there was an increase in the illiteracy of the colored population. So, too, in Michigan, North Dakota, Montana, Wyoming, Colorado, Arizona, Nevada, Idaho, Washington, Oregon, and California. Virginia was the forty-sixth (counting Territories and the District of Columbia) State in illiteracy of the colored people in 1870, the thirty-eighth in 1880, and the thirty-seventh in 1890.

It is a fact, too, that the illiteracy is greater among the colored females than among the males. This is accounted for from the fact that large numbers of the colored men, who are required by law to be able to read in order to vote, attend night schools and prepare themselves. The Democrats of the Southern States, in some instances, have followed the example of Republican Massachusetts and enacted this law. Its beneficial effects are manifest.

Compare Virginia with what is claimed to be the most advanced Republican State and let us see if Virginia suffers much by such comparison. I refer to Massachusetts.

State.	Area in square miles.	Population per square mile.	Persons of school age.	Public common school enrollment.	Per cent of enrollment to total population.	Average length of school term in days.	School-houses.	Square miles to each schoolhouse.	Total population, 1890.
Massachusetts.....	8,915	278.48	650,870	371,492	16.59	169	7,239	1.1	2,238,943
Virginia.....	45,450	41.27	671,779	342,269	29.67	116	6,509	6.5	1,653,980
Difference.....	37,135	237.21	20,909	29,223	4.08	53	730	5.4	582,963

Massachusetts—Number of schools: One to every 309 of population. Virginia—Number of schools: One to every 270 of population.

Massachusetts—One school to every 51 of children enrolled.

Virginia—One school to every 52 of children enrolled.

Massachusetts—Percentage of persons of school age to enrollment, 57.

Virginia—Percentage of persons of school age to enrollment, 50.

Massachusetts has 37,135 square miles less to cover than Virginia. She has 237 more people per square mile, and hence easier to have attendance at schools. She has 20,909 fewer persons of school age, while she has 582,963 more population and 29,223 more enrolled. And she operates a schoolhouse to about each square mile. Virginia has to arrange to operate 1 to about 6 square miles.

Massachusetts has all the advantage of density of population, the per cent of urban population in Massachusetts being 70 and the per cent of urban population in Virginia being 13.

When these statements are considered, it is easy to discern not only why education of the whites as well as the blacks was retarded, but the wonder is that the Southern people could survive at all after passing through the thrashing machine of carpetbag rule.

The carpetbag rule indebtedness fastened on the Southern people amounted to \$290,000,000, which was more than the present net debt of all the States in the Union combined.

State.	Total carpet-bag debt.	Reduced since restoration of Democratic rule.
Alabama.....	\$52,800,000	\$12,400,000
Arkansas.....	19,400,000	8,600,000
Florida.....	15,800,000	1,000,000
Georgia.....	43,600,000	10,500,000
Louisiana.....	40,000,000	16,000,000
North Carolina.....	34,900,000	7,700,000
South Carolina.....	22,500,000	6,900,000
Texas.....	14,900,000	4,300,000
Virginia.....	47,000,000	20,000,000
Total.....	289,300,000	88,400,000

The net debt, 1890, of all the States is \$229,000,000.

A reduction of the burdens of \$200,000,000; and since 1890—for these are the census figures—there have been further reductions, though largely increased appropriations for education and for other purposes for the public good.

Foreign capital began to flow southward as soon as Democratic ascendancy was assured, and even to this day the blackest Republican capitalist North will withdraw his capital at once from any locality in the South on being advised that said locality has gone into the hands of Southern Republicans, for he knows that the mainstay of good, stable, and economical government in the South resides with the white people, 95 per cent of whom are Democrats.

When we look at values and taxation, it can readily be seen that the white people of Virginia have shown what it is to pass through the crucible and come out refined gold. Look at these tabulated statements, and let Massachusetts and New England blush when they cast any slur on the treatment of the colored people in Virginia.

The increase in revenue was on all subjects except two—one, incomes; the other, tax on seals used by the secretary of the Commonwealth.

Increase was \$443,000, without any increase of rate.

Of the \$3,100,000 taxes collected, one-fourth only was laid on the farmers, while they constitute 50 per cent of the population.

The decrease was on incomes, caused, of course, by low prices and the continued depression by reason of gold monometallism.

The annual appropriations show great increase, principally in schools and eleemosynary institutions.

And yet examine the values and compare those of colored people with those of white people.

Out of a total valuation of real estate of \$304,000,000, the colored people hold \$10,000,000, or 3 per cent, and capitation tax imposed by the constitution capitalized makes this valuation \$9,000,000, as they pay only 3 per cent of the taxes, and the capitation tax collected from them is 90 per cent of all the taxes they pay.

I use round numbers: \*

Taxes collected in 1889 and 1896, showing increase.

	1889.	1896.	Increase.
Real estate.....	\$1,064,700	\$1,215,700	\$151,000
Personal property.....	344,000	377,800	33,800
Capitation.....	324,700	364,200	39,500
Income.....	45,900	42,300	3,600
Liquor license.....	257,300	292,600	35,300
Other license.....	341,500	402,300	60,800
Railroad.....	155,400	210,800	55,400
Steamboat.....	2,600	2,900	300
Telegraph and telephone.....	3,200	7,100	3,900
Oyster.....	12,400	31,900	19,500
Notary.....	5,600	5,700	100
Insurance company.....	30,500	62,900	32,400
Express company.....	200	1,400	1,200
Clerks, etc.....	65,000	96,800	31,800
Bank.....	32,700	39,300	6,600
Tax collected by secretary Commonwealth.....	2,800	1,400	1,400
Charters.....		16,200	16,200
	2,727,500	3,171,300	443,800
Increase in all except.....			
Income, which decreased.....		\$3,600	
Secretary Commonwealth collected.....		1,400	
			5,000
Total increase.....			443,800

Annual appropriations.

	1889.	1896.	Increase.
Public schools.....	\$556,000	\$937,500	\$381,500
Pensions.....	65,000	110,000	45,000
Soldiers' Home.....	10,000	35,000	25,000
Asylums.....	281,000	296,000	15,000
Total.....	1,212,000	1,378,500	166,000

Auditor's report, year ending September 30, 1896.

Real estate.

	White people.		Colored people.	
	Acres.	Value.	Acres.	Value.
Farm lands and buildings.....	25,000,000	\$154,900,000	858,000	\$5,500,000
City and town lots and buildings.....		112,900,000		3,500,000
Total real estate.....		267,800,000		10,000,000

So the colored people pay about 3 per cent of the taxes on real estate; the whites about 97 per cent.

Yet they constitute about 40 per cent of the population, and receive the benefit of very nearly half the appropriations for schools.

How about taxes assessed specially for schools?

	Whites pay.	Colored pay.	Percent.
Real estate.....	\$293,200	\$10,900	3
Capitation.....	241,100	123,000	33
Personal property.....	91,200	3,300	30
Income.....	42,300	46	(*)
Total.....	637,800	134,246	10
All taxes.....	1,830,000	180,000	9

\*One-tenth of 1 per cent.

It is not uninteresting to examine a little into—

Strikes in 1894.

	Number.	Number of establishments.
In the United States.....	896	5,154
In Northern States.....	800	4,785
In Southern States.....	96	550
Average per State in the North.....	33	156
Average per State in the South.....	8	50
In Virginia.....	3	3

Of the twenty-four Northern States which gave the above record, twenty-one yielded to MARK HANNA and went Republican in 1896, and four of the New England States are embraced in the number.

The conservatism of Virginia under Democratic rule is manifest, and the treatment of her employees is as 3 to 33 when compared with these States under Republican rule.

Mr. Speaker, it is a well-known fact that capitalists are much less restless about their investments when the Democratic party of

Virginia is in power. I have had a great deal to do with negotiating city and county bonds and bonds for railroads and other improvements, and it matters not how radical a Republican he may be in Boston, New York, or Philadelphia, he prefers to loan his money on city, county, or railroad bonds when the municipalities are under Democratic control. Under the blessings of a kind Providence, we are possessed of a good climate and other natural advantages, which are causing those who have hitherto looked to the bleak and cold Northwest to turn their eyes toward us. Industries which have sought the home of the blizzard and the cyclone are offered inducements to partake not only of our genial climate, our crystal springs, and limpid streams, but to take up our lands amid our social and educational wealth, where their children may be raised "in the fear of God and the love of understanding," where the Sabbath is respected, and where "peace on earth and good will to men" prevail, regardless of politics, and all under Democratic rule. To-day our schools, our higher institutions of learning, our asylums and hospitals, our institutes for deaf and dumb and blind, compare favorably with those of any other State in the Union. In no State are the colored people better cared for. They have the same educational advantages that are accorded the whites, and to the Democratic party of Virginia are they indebted for it.

WHAT THE STATISTICS SHOW.

The revenues of the State are, in round numbers, \$3,000,000, and of this amount the negro pays \$100,000, and yet \$1,000,000 is appropriated and expended on public schools, and the negro schools get nearly one-half of this. We have seen that the negroes constitute 40 per cent of the population, yet they pay only 3 per cent of the taxes and receive nearly 50 per cent of the school fund, all under Democratic rule.

The annual criminal expenses of the State are about \$250,000, 80 per cent of which is chargeable to the 40 per cent of negro population. The census of 1890 gives the number of native white people convicted of crime, in groups, as follows: 1, North Atlantic States; 2, North Central States; 3, South Atlantic States; 4, South Central States. Nos. 1 and 2 embrace all the Northern States except the extreme Northern Western States, and a population of 40,000,000. Nos. 3 and 4 embrace all the Southern States except Missouri, and a population of 20,000,000. In Nos. 1 and 2 the number of native whites convicted of crime is 7.5 per 10,000. In Nos. 3 and 4 it is 3.2 per 10,000, and in Virginia it is 2.3 per 10,000. This does not speak badly for our State under Democratic rule.

The census of 1890 also discloses the fact that everything that industry and integrity, honesty and energy could accomplish has been accomplished in Virginia, and this under Democratic rule; 1,000,000 acres more of improved land, 2,500 more farms cultivated, and millions of bushels and tons more of wheat, corn, hay, and farm products generally; 12,000,000 more pounds of tobacco, 3,000,000 more bushels of potatoes, 500 more manufacturing establishments, 19,000 more employees, \$12,000,000 more wages paid, \$22,000,000 more material used, valued at \$37,000,000 more; 13,000 more men employed in fisheries and \$2,000,000 more capital, and taxation 22 cents on \$100 value less than when we emerged from carpetbag and scalawag rule.

Police regulations and society have been no better in any State than Virginia. Statistics on conjugal relations speak volumes, notwithstanding 40 per cent of our population are an inferior race. Thirty-five per cent of our people are married, while the average in the United States is 28 per cent, as per last census. While there are 2 persons out of every 1,000 divorced in the United States, there is but 1 out of every 1,000 in Virginia. The census shows that 20 per cent of the population of the United States are pupils in the schools. In Virginia it is 22 per cent. There are 365,000 teachers in the United States, and 9,000 in Virginia, or up to the general average. Virginia is the sixteenth State in population, but thirteenth in religious communicants. In other words, above the average compared with population, and below the average in crime. She is next to Georgia of the Southern States in providing for her disabled soldiers.

Virginia is suffering under the blight of gold monometallism, domination of trusts, high tariff, and burdensome taxation, all children of Republicanism, and not from Democratic rule within her borders. Her farmers constitute 50 per cent of her population, and they can produce more than they ever did and of better quality, but they can get no remunerative prices for their products. Their energy, long suffering, and self-denial entitle them to some consideration in national legislation. Denied this for the time being, they are not apt to run after strange Republican gods in their own State. They know that it is the trust, the monopoly, the combination of Northern capital with Republican politics, and not Virginia Democracy, that has closed and is keeping closed the doors of prosperity to them. The gold trust is the greatest of these. The free coinage of silver will lighten their burdens and they are demanding it now more than when they voted so solidly for William Jennings Bryan; and there is no fear that they will make any mistake next fall.

No calamity could befall Virginia so great as that which would close around us the night of Democratic defeat. The negroes blindly follow the white Republicans, even voting for Democrats with McKinley proclivities when the Republican leaders order it, regardless of what they so often term the fundamental principles of the G. O. P.; and yet, no matter whether in national or State elections, if the Republicans are successful, the negro takes a back seat while the white Republicans take the offices.

In other words, there are a select few of white Republicans who claim the offices, while the white contingent of the Republican party in Virginia is probably not 10 per cent of the whole. We must stand together for war against plutocracy, monopoly, and trusts, and for home rule and the management of our internal affairs without Federal interference, and bide our time on national questions—the free coinage of silver as well as of gold, tariff for revenue, and income tax by constitutional amendment (all of which will come)—and again roll up the normal white majority in the Old Dominion.

Mr. Speaker, the Democratic party of Virginia needs no apologist for its acts in the past; no sponsor for its promises for the future. The glorious history of Virginia is the history of Virginia Democracy. Point to any good law under which we live, and we will point to a Democratic legislature that enacted, a Democratic executive that enforced it. Point to a bad one, and we will point to an accidental legislature and executive temporarily in charge of the affairs of the Commonwealth.

In such times of financial depression as we are passing through there are those whose opportunity has come. They ever lay at the door of the Democratic party all the ills that afflict the land. They decry the commendable acts of others with the purpose of stimulating dissatisfaction and revolt, whilst they are themselves the outgrowth of misguided lives. They lose sight of the fact that the highest patriotism and philanthropy consists in stimulating their fellow-men to elevate and improve themselves, and that the progress of the State is dependent on individual energy, industry, and virtue.

Our State debt has been settled on a basis alike honorable to the creditor and the debtor by the consent of both parties, and with full satisfaction to each, and yet showing a diminution of fixed annual charges. The State has paid all arrearages to the public schools, which in some sections had been languishing, and now appropriates \$937,000 annually to sustain them, being an increase of \$81,500 over the appropriation of 1889.

The asylums and other eleemosynary institutions had been in great need of proper support, but, through means devised and adopted by a Democratic administration in the Commonwealth, large additions have been made to the buildings and \$296,000 appropriated in 1892 to secure additional care, comfort, and treatment of our unfortunate insane—an increase since 1889 of \$15,000.

Buildings and other improvements have been added to your literary and scientific institutions, and they are all now on the road to increased prosperity and greater usefulness.

Pensions to our disabled and dependent Confederate soldiers to the extent of \$110,000 are annually paid, and \$35,000 is annually appropriated for the soldiers' home. In other words, after paying all of our just obligations in the way of interest, expenses, and maintenance, we now appropriate \$1,376,000 annually for the care and education of our children and for the custody, comfort and proper treatment of our afflicted.

What pledges has the Democratic party in Virginia made?

1. It pledges itself to extend to the public-school system a loyal and generous support, until every child in the Commonwealth shall receive the benefits of an education.

2. To the encouragement of desirable immigration, and to the enactment of laws to promote and advance the agricultural interests of the State.

3. To the enforcement of rigid economy in the administration of the State government, and to the revision of the laws regulating criminal expenses.

4. To the enactment of laws still further equalizing the assessment of property returned for taxation, and to the relief, as far as possible, of the farming lands from taxation by the imposition of taxes on avocations, enterprises, and other interests, which can better bear the burden.

5. To fostering the oyster industry for the benefit of the whole people, opposing all transfer or surrender of the public right therein to individuals, companies, or syndicates, and to the correction of all unequal and unjust taxation which may be on it.

6. To the continuance of liberal appropriations to the disabled and needy Confederate veterans.

7. To legislation having in view the improvement of the condition of the public roads.

The pledges are full and unambiguous. They were made by the solemn declaration of the representatives of the Democratic people of Virginia in the largest convention ever assembled in the State, and they have been faithfully carried out.

Summing up some things the Democratic party has more recently done since it regained power in 1883:

The public free schools have been fostered so that they have steadily advanced in numbers and efficiency. The amount of annual appropriation to them in 1883 was \$601,198.20, and in 1896, \$937,512.07.

The Female Normal School at Farmville has been established for the education of teachers for the public schools. The buildings and grounds of the school are commodious, and the State appropriates annually \$15,000 for its support.

Large and substantial dormitories for students, professors' houses, schoolhouses, and workshops have been erected for the Agricultural and Mechanical College at Blacksburg, and that institution is now in a highly prosperous condition.

An agricultural department has been created since 1883 and is sustained at an annual cost of about \$12,000.

Disabled soldiers and the widows of soldiers who lost their lives in the late war are cared for, the State now paying annually \$110,000 in pensions and \$35,000 for support of the Soldiers' Home.

The Southwestern State Hospital has been erected and the other three State hospitals for those afflicted with insanity have been greatly enlarged since 1883, and the State contributed in 1896 to the care and maintenance of these unfortunates the large sum of \$313,187.22.

The deaf, dumb, and blind are supported and educated in the commodious and convenient institution at Staunton, the appropriation to which in 1896 was \$35,000.

The oyster grounds have been surveyed and platted and are now protected by a sufficient number of steamers and sailing vessels.

When the Democrats obtained control of the State government in 1883, these grounds were being rapidly destroyed for want of protection. They now yield a revenue to the State and give employment and support to a large number of her people.

If comparison is made of the censuses of 1870 and 1890, it will demonstrate that everything increased except value. Suppose Federal legislation had been aimed to raise the price of produce instead of to depress it, does anyone doubt that prosperity would have resulted? But high-protective tariff was laid that the farmer be required to pay more for what he consumed that the great manufacturers might profit by his fall, and silver was demonetized that his produce might be purchased by this same manufacturer at reduced prices to still further enhance this princely wealth.

Look at this table:

Comparison Virginia and end of carpet-bag rule 1870 and 1890.

[From census reports.]

	1870.	1890.	Increase.	Decrease.
Number of farms.....	74,000	127,000	53,000	
Size of farms.....acres..	246	150		96
Improved land.....do....	8,000,000	9,000,000	1,000,000	
Total value.....	\$246,000,000	\$295,000,000	\$49,000,000	
Farm implements and machinery.....	\$5,000,000	\$6,500,000	\$1,500,000	
Live stock.....	\$25,000,000	\$31,000,000	\$5,000,000	
Value of farm products.....	\$21,000,000	\$42,000,000		\$21,000,000
Horses.....number.....	152,000	242,000	90,000	
Mules.....do.....	25,000	37,000	11,000	
Work oxen.....do.....	45,000	61,000	16,000	
Milk cows.....do.....	188,000	273,000	85,000	
Other cattle.....do.....	277,000	412,000	135,000	
Swine.....do.....	674,000	796,000	122,000	
Sheep.....do.....	370,000	495,000	125,000	
Butter.....pounds.....	7,000,000	17,000,000	10,000,000	
Chickens, 1880.....number..	2,000,000	6,500,000	4,500,000	
Other poultry, 1880.....do....	650,000	990,000	340,000	
Eggs, 1880.....dozen.....	8,900,000	13,550,000	4,650,000	
Honey.....pounds.....	505,000	1,500,000	995,000	
Wax.....do.....	26,000	44,000	18,000	
Corn.....bushels.....	17,000,000	27,000,000	10,000,000	
Wheat.....do.....	7,000,000	8,000,000	1,000,000	
Hay.....tons.....	300,000	656,000	356,000	
Tobacco.....pounds.....	37,000,000	49,000,000	12,000,000	
Irish potatoes.....bushels..	1,200,000	2,300,000	1,100,000	
Sweet potatoes.....do.....	800,000	2,800,000	2,000,000	
Value market-garden produce.....	\$505,000	\$655,000	\$150,000	

Let us stop a while to make some comparisons as to crops in Virginia and the United States. Virginia is the fifteenth State in population.

In the corn crop she is sixteenth in acreage—1 acre to each inhabitant. In the United States it was 1.16 acres.

It was the seventeenth in production, having raised 17 bushels to each inhabitant. Average in the United States was 30 bushels per capita.

Iowa, which produced about 15 per cent of all produced in the United States, averaged on its fertile fields 41 bushels to the acre, while New Hampshire, producing only five one-hundredths of 1 per cent of the total crop, averaged as much per acre as Iowa—the one with its virgin soil of unsurpassed fertility; the other with its thoroughness of cultivation.

Virginia improvement is greatly due to more thoroughness in cultivation, as evidenced by the average reduction in the size of her farms.

Vermont, another State which must resort to thorough cultivation, exceeded in yield Nebraska and Illinois, while it produced only eight one-hundredths of 1 per cent of the total crop in the United States, the latter two States producing, respectively, 14 per cent and 10 per cent of the total crop.

Virginia equaled the State of Washington per acre and exceeded North Dakota, Utah, Montana, Wyoming, and Colorado.

In 1850 Virginia was the sixth State in the production of iron ore. The war over, the State fell upon evil times, and 1870 found her struggling, after the carpetbag rule, as the twelfth State. It at once began to regain what it had lost, and in 1880 it was eighth and in 1893 it ranked fifth. This under Democratic rule. In 1894 it had reached the fourth place, and it has held its own. Since we got from under the baneful influence of that direful rule prior to 1870, Virginia has produced more manganese than any State in the Union. We produced 3,600 tons in 1880; comparatively none before 1870. We produced 16,200 tons in 1891.

The first systematic coal mining in this country was done in Virginia in the Richmond coal fields.

The records show that in 1870 the coal production in Virginia had been unimportant. In 1890 it had reached millions of tons, the counties of Tazewell and Wise alone furnishing in 1894 955,000 tons. Beginning in 1880 with 112,000 tons, it reached 1,229,000 tons in 1894 under Democratic rule.

No coke ovens started before 1870 of any moment, yet in 1883 there were 200 of them, with an output of 25,000 tons; in 1894, 736 ovens; capacity, 180,000 tons. Rising from fortieth in 1870, she became the fifth State in 1894.

In wheat Virginia is the sixteenth State in acreage, leading Iowa, Washington, Colorado, and all the Southern States except Kentucky, Tennessee, and Missouri. In actual production, Virginia is twentieth, ahead of some of the more favored States in the West and of all the other Southern States except Missouri, Kentucky, Maryland, and Tennessee.

Look backward at 1870, and we should be greatly encouraged at this great stride in improvement.

In the South Atlantic States the average per acre is 10.25 bushels, and Virginia maintained it.

In oats Virginia was nineteenth in area and nineteenth in production; but in 1870 she was away below this, being in the thirties.

In rye Virginia rose to fourteenth, both in acreage and production.

Tobacco is Virginia's greatest crop. She has risen from the eighth to the second place since 1870, and still holds it.

One-half of the area in the United States devoted to tobacco is in Kentucky and Virginia.

Virginia raised in 1890 the largest crop of Irish potatoes of any of the group of South Atlantic States, and there were only nineteen States ahead of her.

In the peanut industry it stands at the head of the list; and under Democratic rule she has attained the fourth place in the production of apples.

In mineral springs, stimulated by good government, she stands first, having 357, whose waters are used commercially over the whole world. She now has 10 per cent of all in the United States.

In everything except value of farm produce increase is shown. So, then, if value had shown advance *pari passu* with increased consumption and production, it follows as axiomatic that increased prosperity, which is governed by price, would have followed instead of depression, misery, and want. The Democratic party in Virginia has performed its part. There was progress in everything except price, which was regulated not by overproduction, for there were more people to consume, but by underproduction of money and therefore less with which to buy.

Again, Virginia's greatest industry is the farming interest.

The urban population of the United States had increased from 3.35 per cent at the beginning of this century to 29.20 per cent in 1890.

In other words, while about 3 out of every 100 lived in cities of 8,000 population and upward, now about 30 out of every 100 do.

This marks a great decadence in the farming industry and shows that the laws under which we live tend to drive people from farms to cities.

From 1790 to 1880—ninety years—the increase in the number of cities of 8,000 was from 6 in 1790 to 286 in 1880; and yet from 1880 to 1890—ten years—the increase leaped from 286 to 448.

But Virginia under Democratic rule fostered her farming interest as best she could, and while the average increase in urban population in the United States was 29 per 100 in 1890, in Virginia it was only 10 per 100; and the increase in the last decade in the United States was 7 per 100, while in Virginia it was only 3 per 100.

One-third of our people are church communicants, and nowhere is the Sabbath more respected. Thirty States are behind us in

this respect; 34 States are behind us in value of church property; 38 States are behind us in seating capacity; 38 States are behind us in number of church buildings; 36 States are behind us in number of organizations; and yet we are fifteenth in population. Our death rate lowered in the last decade from 16 per 1,000 to 14 per 1,000.

But we have been constantly oppressed by Federal legislation, and our farmers lost in the last three years \$2.72 per acre on wheat and \$5.65 per acre on corn.

We had in 1890 55 per cent of all the cultivated land in corn, 26 per cent in wheat, and 17 per cent in oats.

We were the seventeenth State in production of cereals, and the sixteenth State in area of production; the twentieth State in production of wheat, and the sixteenth State in area of production; the nineteenth State in production of oats, and the nineteenth State in area of production; the second State in production of tobacco, and the second State in area of production.

We were fourth in fisheries, the value of our product being \$4,800,000; and our oyster industry by the census of 1890 made us the second State, with 19,000 employees, \$2,600,000 capital, 1,145 vessels, with 14,000 tonnage, valued at \$689,000, and 8,726 boats, valued at \$441,000, the product from this industry being 6,500,000 bushels.

Our manufactories employ 59,591 people, pay \$19,600,000 in wages, and turn out a product valued at \$88,300,000.

The Constitution of our country gave us the right to both gold and silver as money, and as long as Federal legislation denies the right to one, so long will our country be in peril and poverty and distress will stalk abroad in the land.

Our Constitution places it in the hands of Congress to coin money and regulate the value thereof, and all the international agreements in the world can not deprive Congress of that right; and Mr. WOLCOTT and Mr. Stevenson had as well pack their little trunks and come home. There is no halfway ground to the silver question, and I will oppose and vote against any international agreement that does not accord to silver identically the same rights as are accorded gold at the mints of the United States. As long as this question is unsettled, we are necessarily subjected to other perils.

There is the peril of immigration. That good immigrants will benefit us, I think is an agreed fact; but when we see the agents of steamboat lines, under the direction of aggregated capital, dumping immigrants here without education, family ties, means of support, and capacity—paupers and criminals—it is time for our legislative friends to recognize that protection is more needed on this product of gold-standard countries than on any other. It is a fact worthy of note that gold-standard countries are the principal countries that send pauper labor to this country. This commodity grows spontaneously in Italy, Hungary, Austria, and Germany. Some writer has said that "God takes care of children, fools, and the United States." To this I attribute the reason why we have not already been ruined by the pauper immigration from gold-standard countries.

Do you not know that we have suffered in the last few years an invasion twice in number to the Goths and Vandals that swept over southern Europe? Of the 10,000,000 who reached us the first eighty years, few were paupers; but so much has the growth of pauperism been encouraged in the gold-standard countries, so great has been the attracting influence in this country, and so great has been the expellant forces in the old countries that even the Republican party sees that something must be done after preventing for ten years what Democrats clamored for.

Here the average consumption for a person is 41 bushels of grain and 120 pounds of meat, while in gold-standard Europe it is 18 bushels of grain and 57½ pounds of meat. Of course it is inviting for them to come.

Then they can be landed proprietors here, but the paupers are sent here by the aggregated capital. They are evicted from large estates that deer parks may be established, so that a landed proprietor may ride 100 miles on his own game preserve. We have the attracting influence here and the expellant force there.

So it behooves us to guard against pauper immigration that our own fields may not become great landed possessions ruled by a lord and governed as a small State within the bounds of our Republic; that our own brain and brawn may not be enervated and rendered powerless; that our own artisans and mechanics may not be driven from their homes into that verge of want that smacks of slavery, to that dependence which means misery to the home and poverty to the wife and children.

And this brings to view the perils of the greatly increasing urban population.

In the beginning of our Republic, one-thirtieth of our population lived in cities of 8,000 inhabitants and over; in 1800, one-twenty-fifth; 1830, one-twentieth; in 1850, one-eighth; 1870, one-fifth; in 1880, one-fourth, and to-day the urban population increases with much more rapidity than the rural population. In 1800 there were

only 6 cities with a population over 8,000. In 1880 there were 286, because of Republican national legislation, and in 1890 it reached, as I said before, 448.

The city is a menace, because all vices center there. It has a peculiar attraction for the pauper, be he immigrant or native, and it is in the city where great wealth is amassed, which is the third great peril. Here Mammon has the widest sway. Luxuries are gathered that dazzle the eye and tempt the appetite.

Dives and Lazarus are brought face to face. Here is the ennui of surfeit and the desperation of starvation.

The rich are daily richer and the poor are hourly poorer.

Men and women die daily sharing trouble, enduring hunger and cold, waiting without hope, without a single ray of comfort, with no refuge from starvation except the prison or the grave.

A judge of the New York supreme court said that a large class, if not quite the majority, of the population of New York just manage to live, and to whom the rearing of two or more children means inevitably a boy for the penitentiary and a girl for the brothel.

Such dangerous elements should not be multiplied. And they are due in this country mainly to the increased pauperism of pauper immigration, which furnishes food for all kinds of vice and displaces our own well-to-do laboring people, who hitherto have enjoyed a happy and peaceful home and a joyous and prosperous life.

The fundamental idea of popular government is distribution of power. It has been the struggle of ages to wrest the power from the few and place it in the hands of the many. This can not be continued with the money of the country in the hands of the few to purchase control and the million of pauper laborers coming here ready to be purchased.

The boss makes his bargain and sells his 10,000 voters, or, what is the same thing, purchases their franchise for others.

We are the youngest of all nations, yet we are the richest, and our resources have hardly begun to be developed. We have seen how one man could demand \$20,000,000 for election purposes and when it was granted him in less than a day.

We have seen him, as I believe, buy the office of the Chief Executive of the nation and demand at once a seat in the United States Senate to pose as the peer of Webster and Clay and Calhoun, and yet be without the first qualification for such a position.

These are some of the dangers and perils that confront us; and it should be to us a matter of congratulation that Virginia is to-day the most American State in the Union; that we have not been afflicted with pauper immigration, a very small part of our population being of foreign birth, and those who are are Virginianized and are well-to-do, frugal, and industrious people and good and loyal citizens.

Let us, then, leave no stone unturned to preserve our ancient landmarks. The world knows that we are not for sale to the gold barons, and that we propose to fight first for the money of the people—free silver, 16 to 1—to keep them from further want and slavery; that we resist pauper immigration that must degrade our people and drive them from the workbench, the press, the plow; that we invite capital to come in and partake of our advantages, yet resent the encroachments of ill-gotten wealth on the liberties of our people.

Virginia is the land we love, and if the consummation of human progress can be reached anywhere, it is within the borders of the Old Dominion. If there is to bud and blossom a flower of higher civilization, nowhere on earth will it thrive better or give out more fragrance than in Virginia.

Mr. Speaker, in conclusion I would simply add that this tariff bill is but the repetition of Republican legislation to foster and build up trusts, to favor aggregated capital, and to continue the oppression of the poor, that in growing poorer the rich may grow richer. I have endeavored to show that but for such legislation, always unfriendly to my State, she would have blossomed like a rose. The time is not far distant when the people will rise in their might and dethrone your party from its proud and arrogant eminence and power, and then Federal legislation will lend its aid to State effort, and progress and prosperity will become synonymous and will travel the same road with energy and industry, all being linked with human happiness, and civil and religious liberty. Prentiss said that "the Architect of the Universe could have bridged the ocean, but He left it for us to do. He could have healed all wounds, cured all cares, dried the widow's tears, and hushed the orphan's sigh, made the poor rich and the weak strong." But He has left the problem for us to solve. And the people of my State are patient, law-abiding, God-serving people, and they recognize that on the tree of life hangs the precious fruit of prosperity, and he who would gather it must water it with the sweat of his brow. And we recognize that we must do our part. And at no far distant day the Republican party will see the obstacles which it has deliberately placed in the pathway to the prosperity of the masses of the people removed, and the Old Dominion will once again bloom and blossom like a rose.

Protests of Foreign Governments—Twenty Official Communications from Twelve of the Leading Commercial Nations of the World—All Agree that a Protective Tariff is Mainly Paid by Foreigners, and All Ask Us to Make the Duty Low for Their Benefit.

### SPEECH

OF

HON. M. N. JOHNSON,  
OF NORTH DAKOTA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 13, 1897.

On the report of the committee on conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. JOHNSON of North Dakota said:

Mr. SPEAKER: As my final contribution to the tariff discussion of 1897, I desire to present to the House and to place before the country, in the RECORD, in convenient and enduring form for the use of writers and students of political economy, the protests and communications from foreign governments which, as a member of the Ways and Means Committee, it became my duty to carefully consider while assisting in framing the tariff of 1897, popularly known as the Dingley bill.

Some of these communications were directed to the President, some to the Secretary of State, some to the Finance Committee of the Senate, and some to the Ways and Means Committee of the House, or its chairman, Mr. DINGLEY.

All were intended to influence legislation, all were laid before the committees, and all received careful and respectful consideration.

I have endeavored to make the collection complete, and it is believed that every official communication from any foreign government that was received or considered will be found complete in the following:

#### LIST OF PAPERS.

1. From the Danish minister, March 29, 1897.
2. From the Italian ambassador, April 4, 1897.
3. From the Italian ambassador, May 9, 1897.
4. From the Italian ambassador, May 26, 1897.
5. From the Belgian minister, April 16, 1897.
6. From the Belgian minister, May 30, 1897.
7. From the Argentine minister, May 1, 1897.
8. From the Turkish minister, May 10, 1897.
9. From the Japanese minister, June 3, 1897.
10. From the Swiss minister, June 17, 1897.
11. From the British ambassador, December 26, 1896.
12. From the same, June 18, 1897.
13. From the Chinese minister, June 29, 1897.
14. From the Austro-Hungarian minister, May 28, 1897, in Senate Executive Document No. 141, Fifty-fifth Congress, first session.
15. From the German ambassador, April 5, 1897, in Senate Executive Document No. 97, Fifty-fifth Congress, first session.
16. From the consul-general of Greece, April 10, 1897.
17. From the Belgian minister, May 27, 1897.
18. From the Swiss minister, April 29, 1897.
19. From the same, May 20, 1897.
20. From 53 Irish members of the British Parliament, March 17, 1897.

[No. 1.]

LEGATION OF DENMARK, Washington, March 29, 1897.

Mr. SECRETARY OF STATE: The debate on the new customs tariff in the United States Congress is followed with deep interest in Denmark, both by the King's Government and by the producers, merchants, and shipowners of our country.

There is a quite considerable exchange of productions between Denmark and the United States, which exchange is effected by both Danish and American vessels, and also by vessels belonging to other nations.

The tendency of this trade is to increase from year to year, and, in the opinion of all persons who are competent to judge, the commercial relations between our two countries, which have happily thus far been so much favored by our respective laws, are still susceptible of great development. My Government deems it to be its duty to spare no effort to enable our country to derive the greatest possible advantage from these conditions. It is convinced that the United States Government is aware that a prosperous trade with Denmark is desirable from the point of view of American interest, and that joint efforts are indispensable to reach a result satisfactory both to the United States and Denmark.

Holding these views, my Government has just instructed me to call your excellency's attention to some points of the tariff in which the interests of Denmark and the United States appear to clash, and on which an understanding seems both desirable and possible.

The Danish tariff is exceptionally favorable to the importation of American products. Thus raw metals, butter in casks, stone, trees, plants, all kinds of grain and grain products, fertilizers, both natural and artificial, oil cake (rape cake, etc.), dyewoods, various kinds of seeds, fat, lard, bacon,

hams, meat, and sausages are exempt from any duty and enter Denmark free.

The importation of these articles is considerable, and the other American products which are imported into Denmark are subjected to an extremely low duty, not exceeding 1 or 2 ore (Danish money) per pound. Such are petroleum, molasses, and sirup.

It is in every way desirable that this great facility of commerce, due to the liberality of our tariff, may continue and be developed. The admission to the United States of certain Danish products on favorable terms as regards the tariff régime, while it would be only a fair return for the advantages offered by the Danish tariff, would necessarily exert an influence on the subsequent development of that tariff.

Among these products I have the honor to call your excellency's attention to the following: Beer, cement, white cabbages, hemp seed, porcelain, hides and skins, wool, rags, pebbles, lime, chalk, gloves, leather, condensed milk, granite, monuments, dairy machinery, and Doecker tents.

In obedience to my instructions, I hasten to beg your excellency to be pleased, in the well-understood interest of our respective countries, to subject what I have just had the honor to state to an examination, and to use your good offices in the proper quarter, to the end that a customs régime as favorable as possible may be secured for the above-mentioned products.

To this effect I have the honor to suggest that, if your excellency sees no objection thereto, the contents of this note be communicated to those committees of the Senate and House of Representatives which are specially charged with the duty of examining the tariff. I should be particularly grateful to you if, in transmitting these wishes to Congress, you would commend them to the favorable consideration of that body.

Be pleased to accept, Mr. Secretary of State, a renewed assurance of my high consideration.

His Excellency JOHN SHERMAN,  
Secretary of State.

C. BRUN.

The right to make its own tariffs high or low is conceded to every nation by every nation.

The rate is a matter of opinion and judgment for each government to fix at the point most advantageous for its own people. We are making this tariff solely with a view to benefiting the people of the United States. Other people will make their tariff laws in the same way, for their own advantage.

This is the only right and sensible way for any country to make its laws. In framing this law we have placed everything upon the free list which we can not produce to advantage in this country except a few luxuries.

This is done in order to remove all restrictions and burdens from the importation of all articles which we do not ourselves produce in great abundance. This covers more than half of our enormous imports.

But when it comes to such things as the chief products of our own farms, forests, and factories, which we do not need to ship in from abroad, then we have placed such a rate of duty on the imported article as will, in our judgment, equalize the cost of production (mainly the wages of labor) at home and abroad.

Other countries, except the few who have adopted the policy of a "tariff for revenue only," sometimes called free trade, make their tariffs about in the same way. We have never asked any country to make its tariff laws with the slightest reference to our benefit.

We expect them to be guided entirely by enlightened selfishness. If we have anything for sale which they can not advantageously produce, it will be to their interest to put it on the free list, just as we do.

That will afford us all the market we need.

Let us now, in the light of this policy, examine the proposition of the Government of Denmark. There is not an article in the entire list for which the Danish minister solicits low duties (favorable customs régime) of which we do not already produce a surplus except wool and hides, and even these we ought to produce, and will produce, in sufficient quantities to supply our own needs.

Every dollar sent to Denmark for "beer, cement, cabbages, hemp seed, porcelain, pebbles, lime, chalk, gloves, leather, condensed milk, granite monuments, dairy machinery, and tents" takes a dollar away from some American citizen who would be very glad of a chance to earn an honest living here by supplying those things to our own market. These may seem small items, but our industrial life is made up of just such atoms. If we buy these things of the Danes, we must buy that much less of our own fellow-citizens. Shall we keep the money at home or send it to Denmark? Shall we furnish bread and wages to our own fellow-citizens or to the subjects of the King of Denmark?

I concede the right of the minister of Denmark to respectfully offer these suggestions, as he has done. But as a loyal citizen of my own country and a faithful servant of my own people, preparing a law "to provide revenue for the Government and to encourage the industries of the United States," my judgment and my sense of duty will not allow me to follow his advice.

[No. 2.]

EMBASSY OF HIS MAJESTY THE KING OF ITALY,  
Washington, April 4, 1897.

MR. SECRETARY OF STATE: The news which has reached Italy that the tariff recently adopted by the House of Representatives levies the very high duty of 75 cents (in all) per box on oranges and lemons imported into the United States, whereas the duty has hitherto been 22 cents per box, has caused great agitation there, especially in Sicily.

In pursuance of the instructions of the King's Government, which transmits this intelligence to me, I have the honor to call your excellency's atten-

tion to this state of things, and to solicit your good offices for the purpose of preventing the imposition on Italian oranges and lemons of a duty which will prove so disastrous to the Italian trade in those fruits.

Tendering your excellency my thanks in advance, I further take the liberty to submit to you for examination a memorial of the Fruit Importers' Union of the city of New York, relative to paragraph 267, Schedule G.—Agricultural products and provisions.

Accept, etc.,

HON. JOHN SHERMAN,  
Secretary of State, Washington.

FAVA.

[No. 3.]

EMBASSY OF HIS MAJESTY THE KING OF ITALY,  
Washington, May 3, 1897.

MR. SECRETARY OF STATE: The Chamber of Commerce of Leghorn has sent to the royal ministry of foreign affairs, together with the letter which I have the honor herewith to inclose in the original, a petition from the principal manufacturers of candied fruits in the city of Leghorn, who earnestly beg the United States Senate not to approve the exorbitant duty of 60 per cent which is imposed upon candied fruits by the American tariff bill now under discussion.

The aforesaid Chamber of Commerce hopes that the serious injury may be seen which will accrue to the manufacture of candied fruits from that absolutely prohibitory duty.

I have the honor, in pursuance of instructions received from the King's Government, earnestly to commend to your excellency's good offices the desire expressed by the Chamber of Commerce and the manufacturers of candied fruits of the city of Leghorn.

Thanking you in advance, Mr. Secretary of State, for the courtesy with which you will be pleased to comply with this my request to the reciprocal benefit of the interests of our two countries,

Accept, etc.,

HON. JOHN SHERMAN,  
Secretary of State, Washington.

FAVA.

PROVINCE OF LEGHORN, CHAMBER OF COMMERCE AND ARTS,  
Leghorn, April 16, 1897.

The manufacturers of candied fruits of this commune, who are seriously and very properly concerned, owing to the large increase proposed by the Congress of the United States of America on the import duty to be levied on candied fruits, have addressed to this chamber the inclosed petition, whereby they request it to use its influence to the end that the King's Government, through the Italian embassy at Washington, take steps with a view to preventing the approval of the increase in question by the United States Senate.

The chamber hastens to communicate the aforesaid petition to your excellency, in the hope that the very serious injury may be prevented which would accrue to the manufacture of candied fruits from that absolutely prohibitory duty, this manufacture being one of the most important in this city, and its product being now, for the most part, exported to the United States of America.

It is certain that if this increase should be definitely approved, this industry would receive a fatal blow, and agricultural industry would also be greatly injured thereby, since the citrons, lemons, and oranges which are candied come in great part from the southern provinces of Italy, so that the crisis in the trade in these fruits which now causes such grave concern to the Italian Government would be rendered still more serious.

The American Senate should consider that a prohibitory duty like that which has been submitted to it for approval would wholly prevent the importation of the products named, while no benefit would result from it to the Treasury; and that Italy might in turn levy an increased duty upon some articles of American production, such as, for instance, cotton and petroleum, which would be more hurtful to the United States than the increase which it is proposed to levy on candied fruits would be to Italian industry.

N. COSTELLA, President.

His Excellency the MINISTER OF FOREIGN RELATIONS, Rome.

To His Excellency NICCOLA COSTELLA,  
President of the Chamber of Commerce and Arts of Leghorn:

The undersigned, who are engaged in the manufacture of candied fruits in this city, beg the honorable Chamber of Commerce over which you preside to be pleased to use its influence with his excellency the minister of foreign relations, to the end that the embassy of Italy at Washington may take measures to secure from the United States Senate a more equitable usage, and one better calculated to benefit the American Treasury, for the candied fruits which are exported from Italy to the United States of America.

The import duty which has hitherto been imposed on candied fruits was 30 per cent ad valorem, and while this rate was in force, the United States Government derives from this source an annual income of about \$500,000. In the new tariff prepared by the House of Representatives the duty on the aforesaid article was 2 cents per American pound, which was a little less than 30 per cent ad valorem, but the Congress doubled the figure and raised the duty to 4 cents per pound. Such an enormous tax, which would amount to almost 60 per cent ad valorem, would be equivalent to actual prohibition, and would absolutely put a stop to any exportation from Italy, which does not seem to the undersigned to be in harmony with the views of the American Government, which doubtless, while it proposes to protect its own industries, seeks at the same time to secure the largest amount of revenue possible for its Treasury by means of import duties.

The duty of 2 cents per pound, which was proposed to the Congress, would have accomplished this double purpose, because, while it would have amply protected American manufactures, it would have been a source of abundant revenue to the United States Treasury.

The undersigned believe that a statement of the foregoing reasons, made in such a manner as may be thought most opportune by the Italian embassy to the United States Senate, might induce that body to modify the tariff to the reciprocal advantage of both countries.

Very respectfully,

ENRICO TORELLI & CO.  
J. P. PISANI  
FEHR WÄLSER & SONS.  
N. VARIANI  
GIOVANNI RAMACIOTTI  
ANGELO GAZZO.  
CANESSA BROS.

LEGHORN, April 14, 1897.

I certify that the foregoing is a true copy of its original.

ANO. GIULIO SALVERTI, Secretary.

[Seal of the Chamber of Commerce of Leghorn.]

[No. 4.]

EMBASSY OF HIS MAJESTY THE KING OF ITALY.  
Washington, D. C., May 26, 1897.

MR. SECRETARY OF STATE: The Government of the King, to which I hasten (as I stated to your excellency in my note of the 16th of March last) to communicate the observations of the honorable Secretary of the Treasury [Agriculture] relative to the ministerial sanitary decree of January 26, 1897, which requires a consular visé for certificates of origin, issued by American authorities and accompanying shipments of meat, has now informed me that the question will be submitted for examination to the zootechnic and epizootic board at one of its next sessions.

His Majesty's Government, however, desires to perform a friendly act toward that of the United States by frankly forewarning it that it could in no case be induced to modify the provisions contained in the aforesaid decree in accordance with the desire expressed by the Federal Treasury Department (Department of Agriculture) if the United States should persist in retaining in the new customs tariff the exorbitant duties to which I have had the honor to call your excellency's attention in my preceding written and verbal communication.

The same warning has been communicated, with the same amicable intent, by my Government to the representative of the United States at Rome, who has presented a complaint similar to that which, after receiving your excellency's note of March 15, I transmitted to the royal ministry of foreign affairs. Accept, etc.,

FAVA.

His Excellency JOHN SHERMAN,  
Secretary of State, Washington.

Document No. 2 states that a duty of 75 cents a box on oranges and lemons "will prove disastrous to the Italian trade in these fruits." Well, what of it? We can get all the oranges and lemons we want from California and Florida, and of a superior quality, but we must pay living, American wages to men laboring in the groves. The evidence before the committee indicates that much of the labor of cultivating and picking citrus fruits in Italy is done by women and children at wages ranging from 20 to 30 cents a day. These labor conditions are scarcely equalized in the new tariff.

No. 3 states that the industry of manufacturing candied citrons, lemons, and oranges in the city of Leghorn would "receive a fatal blow" by the enactment of the new American tariff.

Well, what then? If worst comes to worst, our enterprising American confectioners might learn to manufacture candied fruit in this country.

It ought not to be very difficult to learn how to saturate and coat citron, orange, and lemon peel with sugar. But we do not want to compete evenhanded with cheap child labor.

The benefit of a low tariff for Italy is plain enough, but the only hope of any benefit to the United States held out by the ambassador is that if we comply with the request of his Government, then "the question of the sanitary decree requiring a consular visé for certificates of origin issued by American authorities and accompanying shipments of meat will be submitted for examination to the zootechnic and epizootic board at one of its next sessions."

We are, however, "warned," both in Washington and at Rome, that if we persist in this new tariff, then His Majesty's Government could in no case be induced to modify the existing decree. When these sanitary decrees of various kinds were issued against our meat products by various European governments, we immediately organized at great expense a very thorough system of inspection, whereby every piece of meat exported from this country was microscopically and otherwise examined and accompanied with certificates and marks of the Government inspectors. We demonstrated the wholesomeness of our meat products, and warranted every ham, shoulder, side of bacon, etc. The sanitary decrees were thin excuses for excluding our meats. They had a right to exclude any merchandise, but it would have been more conducive to their reputation for frankness and courage to assign a better reason for the exclusion.

These prohibitory decrees concern the Government and people of Italy more than they do us. They ought never to have been passed, or should have been promptly repealed when shown to be based on a fallacy. That they still exist in full force contemporaneous with the low tariff of 22 cents a box on lemons and oranges is poor encouragement for us to let the King's ambassador write our tariff, when the only hope of reciprocal advantage held out to us is that the consular visé will be submitted for examination to the zootechnic and epizootic board.

What if the zootechnic and epizootic board should adopt a policy of "masterly inactivity"? Worse than all, the zootechnic and epizootic board might, after deliberation, decide to let well enough alone. The consequences of never submitting the consular visé to the zootechnic and epizootic board of Italy may be terrible enough to our citizens, but for one I am inclined to take the risk rather than abdicate to the minister of any king the right to make any of our laws, especially those "to encourage the industries of the United States."

[No. 5.]

BELGIAN LEGATION, Washington, April 16, 1897.

MR. SECRETARY OF STATE: The amendment passed by the House of Representatives on the 31st of March last provides that merchandise shipped by the 1st of April shall be admitted at former rates of entry.

As especially regards agricultural products, the orders accepted in good faith several months ago by Belgian horticulturists had necessarily to be suspended until the end of the winter, such products not being able to stand the voyage with impunity during the frosty season. I will add that to my knowledge packages containing plants, bulbs, or shrubs remained for some time deposited on the wharves at Antwerp, owing to the quantity of freight, and due to this circumstance must arrive late at their destination.

According to instructions received from my Government, I have the honor to point out this particular situation to the kind attention of the American Government, in the hope that it will have the goodness to suspend the too severe measures, and I am confident that it will not add to the considerable detriment which the new duties will occasion Belgian trade the annoyances of a premature application of them.

I have, etc.,

LICHTERVELDE.

[No. 6.]

LEGATION OF BELGIUM, Washington, May 30, 1897.

MR. SECRETARY OF STATE: I take the liberty to call Your Excellency's attention to the very high duty that has been imposed on cement by the Senate in article 84 of the new tariff bill. The discontinuance of the trade in this heavy substance would result disastrously to that in grain exported from the United States, inasmuch as cement constitutes the principal return freight which enables vessels sailing under the American flag and others to carry grain to Antwerp at reduced rates. Without such remunerative freight, shipowners will be compelled to charge higher rates for the transportation of grain, vessels carrying which will be obliged to return in ballast.

Hoping that these considerations will induce the conference committee in Congress to modify the prohibitory duties in question, I gladly avail myself of this occasion to offer your excellency a renewed assurance of my highest consideration.

His Excellency JOHN SHERMAN,  
Secretary of State.

LICHTERVELDE.

[No. 17.]

LEGATION OF BELGIUM, Washington, May 27, 1897.

MR. SECRETARY OF STATE: I take the liberty, in obedience to the instructions of my Government, to call your excellency's attention to the assimilation of sprats and sardines in the new tariff bill, and to remind you that sprats constitute a much cheaper article of food, used chiefly by the working classes. I would add that it does not appear that these fish are found in North American waters, and that they can not, therefore, constitute a local industry. I should be very grateful to your excellency if you would communicate these observations, which have reference to a product of the Belgian coasts, to the competent committee, hoping that they may lead to a reduction of the duties proposed.

I avail myself of this occasion, etc.,

LICHTERVELDE.

His Excellency JOHN SHERMAN,  
Secretary of State.

Documents Nos. 5, 6, and 17 came to us from the Belgian minister in obedience to instructions from his Government.

If followed, his suggestions would doubtless result in the advantages named therein to Belgium.

But where do we come in for our share? The only benefit offered to us is the single, slender hope that under a low tariff on cement from Belgium ships carrying cement to America can afford to charge less on wheat, return cargoes, to Antwerp. We can make cement in America.

Every pound of cement imported takes to Belgium money, bread, and wages which some citizen of our own country needs and ought to have, and shall have, if left to my arbitrament.

Free trade in cement may or may not lower the freight on wheat, but not more so than free trade on other heavy articles. Cheap freight on wheat to Antwerp might lower the price of wheat in Antwerp, but would not raise it perceptibly in North Dakota.

In my judgment, the great reduction in freight rates on wheat, both by land and sea, during the last twenty years have accrued entirely to the benefit of the consumer, while the advantage due to improved agricultural machinery, on the other hand, have accrued almost entirely to the benefit of the producer of wheat.

[No. 7.]

LEGATION OF THE ARGENTINE REPUBLIC,  
Washington, D. C., May 1, 1897.

SIR: In compliance with instructions from my Government, I have the honor to submit to your excellency some remarks relating to the tariff bill pending on the approval of the Congress of this nation, praying your excellency to give them your kindly attention, and if your excellency deems it opportune, to make such use of it as your excellency may judge proper. On doing so, it is far from my object to interfere in any manner in a matter of domestic fiscal policy of this great Republic. A friendly interest has been manifested on many occasions by the Government of the United States in favor of the improvement of the commercial relations which unite this nation and the Argentine Republic.

Various attempts have been made here for increasing the currents of our mutual interchange, either by means of sending official commissions in charge of studying and proposing the best means for that object or by means of the convocation of a Pan-American conference, endeavoring to connect the political and economical links which unite the diverse sections of our vast continent; or, in short, in the form of excursions of representative manufacturers and business men, as the one which took place at the close of last year.

These are so many antecedents which encourage me in hoping that the Government of your excellency will give my words a friendly hearing, being convinced that they have no other purpose than that of endeavoring toward their noninterruption in the least; but, on the contrary, that they may increase each day the commercial relations which exist to-day between the United States and the country which I have the honor to represent.

If your excellency deems it desirable to review the official correspondence exchanged in 1891 and the beginning of 1892 between the minister of foreign relations of the Argentine Republic and the minister of the United States, Mr. Oitkin, your excellency will see by the communication of the former, dated December 24, how great was the place which American commerce

occupied in our markets since the epoch of the definitive constitutional organization of my country, until the time when the Government of the United States levied high duties upon wool and other Argentine products, i. e., from 1852 to 1868.

In that communication the historical fact is pointed out of the participation which was shared by the United States in the benefits of the Argentine progress. It is reminded that the number of the ships of this country which arrived at our ports at times exceeded the share belonging to the maritime nations of Europe, whilst the exportation of Argentine wool for the markets of the Union surpassed sometimes the shipments made from it to France and England. Lastly, mention is made in the same communication that the commerce of the United States during that period amounted to more than 50 per cent of the English and French commerce, to 80 per cent of the Belgian commerce, and surpassed five times that of Germany; and these figures seem to argue that your commerce would end by maintaining one of the first ranks in our mercantile markets.

Unfortunately this movement, which promised so many advantages to both countries, was deferred in consequence of the high duties imposed by the tariff of 1867 on Argentine wool.

Your excellency knows that wool is one of our principal national products, and the new classification to which it was submitted in that act doubled the duties imposed on the same by the law of 1864. So some years after, the Argentine minister in Washington, Señor Luis L. Dominguez, addressed himself to the Department of State, calling attention to the decrease of the imports from the United States into the Argentine Republic, and the corresponding fall in the Argentine exports to the markets of this country.

In 1882, in fact, of our total imports, 8.5 per cent belonged to the United States, and of the total of our exports came to this nation only 4.9 per cent. In that year our exportation of wool was 222,000,000 pounds, of which there only entered into the United States nearly 2,000,000 pounds.

On the other hand, in 1866 the importation of wool from the Argentine Republic had reached 37,000,000 pounds, in round figures, and in 1867 it fell to 12,000,000 pounds, the fall continuing greater every year until it reached in 1882 the figure of 2,000,000 pounds just mentioned.

It is convenient to show your excellency that the Argentine Republic admitted in exchange the most important articles of American production free of duty, or only levied a rate of duty from 5 per cent to 10 per cent, whilst our wool, which represented more than half of the total of our production, was burdened with a rate of duty of 100 per cent.

Notwithstanding these disadvantageous conditions, the commerce of the Argentine Republic continued to increase year by year, and its volume sometimes became considerable, as your excellency may see in the following statement taken from the general bureau of statistics of the Argentine Republic:

Year.	Imports of the United States.	Exports of the United States.
1886	\$7,673,284	\$5,580,406
1887	11,044,553	5,938,808
1888	9,909,895	6,665,520
1889	16,801,750	7,736,691
1890	9,301,541	6,066,958
1891	3,445,904	4,214,502
1892	7,373,583	4,834,454
1893	9,619,317	3,416,740
1894	10,149,018	5,285,210
1895	6,686,999	8,947,165
1896	11,210,475	6,410,362
Total	100,216,319	63,086,816

As your excellency will observe, during the period of eleven years comprised in the preceding statement, we have received from the United States merchandise to the value of \$103,216,319, and we have sold in the markets of this country products to the value of \$63,086,816, which shows a balance against us of \$40,129,503. According to the same publication, the maritime trade, between our respective countries was represented in 1896 by 63 steamers, with a tonnage of 92,355 tons, and 172 sailing vessels, with a tonnage of 139,572 tons, coming from ports of the United States; and by 19 steamers, with 28,816 tons, and 74 sailing vessels, with 55,494 tons, entered in the American ports proceeding from the Argentine Republic.

The official publication of the Department of the Treasury, entitled Foreign Commerce of the United States, corresponding to the fiscal year from July 1, 1895, to June 30, 1896, shows that there were imported into this country 224,865,257 pounds of wool, camel's and goat's hair, alpaca, etc., importations representing a value of \$31,497,896. According to the same official source, there proceeded from the Argentine Republic the following quantities and values of wool:

Wool.	Pounds.	Value.
First class (clothing)	6,128,552	\$871,905
Second class (combing)	3,273,075	463,875
Third class (carpet)	13,365,224	1,283,077
Total	22,766,851	2,618,857

In addition, the section of foreign markets of the Department of Agriculture has just published a statement of the principal imports of agricultural products to this country during the five years ending June 30, 1896. From said statement it appears that from 1892 to 1896 the Argentine Republic has imported into the United States an annual average of 8.1 per cent of the total entry of wool in this country, while the United Kingdom has imported 43.5 per cent, Australia 16.5 per cent, and Russia 8.5 per cent. Our shipments occupy then the fourth place. On the goatskins we occupy the third place, with 13.1 per cent; on bristles the same, with 15.7 per cent; finally, on hides the second place, with 21.9 per cent, only the United Kingdom surpassing us, with 22.5 per cent.

Nevertheless, and in spite of the satisfactory amount of these figures, Your Excellency will observe that respecting the wool our imports of last year into the United States (22,766,851 pounds) are far from reaching the sum we sent in 1866 (37,000,000), notwithstanding the enormous increase of our production since that date to the present time.

One reason for this deplorable fact has been given with remarkable frankness and striking clearness by the president of the National Wool Growers' Association, Mr. Lawrence, in the following manner:

"The tariff act of 1883, with a duty of only 10 cents per pound on unwashed

merino, effectually excluded South American wools under conditions existing in 1888 and since that. Now, the effect of this peculiarity in the Australian merino—that is, it has less shrinkage than any other merino wool in the world—was that under the Wilson bill we imported last year 71,000,000 pounds of this Australian wool, and only 14,000,000 pounds were imported from South America. It was because the South America wool, like the Ohio wool and all our American wools, will shrink 66 per cent in the scouring. The result is, by letting in this Australian wool unwashed, shrinking less than the American washed, that amount of merino shuts out substantially all merino wools from other countries.

"The American consul at Buenos Ayres, in his report to the State Department of December 13, 1888, says: 'The shipments of wools to the United States were exclusively of the long carpet wools from Cordova, it being the only class that it is possible to send to our (United States) market under our tariff at a profit. Our tariff, so far as the clothing (merino) and finer qualities are concerned, is prohibitive. While those from Australia can come in, those from the Argentine Republic, owing to the greater amount of grease and dirt which they contain, are quite excluded. The amount of dirt and grease in the (unwashed) wools of the Argentine Republic reaches to more than 70 per cent, while the (unwashed) wools of Australia and New Zealand only have about 50 per cent.'

"As between the South American wools and the Australian, the McKinley Act of October 1, 1890, excluded those from Argentina."

I do not wish to extend this communication too much by dwelling any longer on an examination of the figures of the commerce existing between the Argentine Republic and this country. What has been said should suffice, and as Your Excellency may notice that if this commerce has not taken the great development which it promised, it has not depended on our good will, nor on our desire of establishing more intimate business relations with this great Republic, the institutions of which serve us as a model, and which marvelous civilization we follow with the greatest interest and sympathy.

We have manifested that sympathy, as was recognized by the honorable President of the United States in his message of December 2, 1895, by reducing as much as possible, and in spite of the fact that our country draws from the custom-house duties the principal source of its revenue, the import duties which were levied on American products, and by placing several of them on the free list of our tariff law. If your excellency will have the kindness to examine the communication addressed by Mr. Buchanan, American minister to Buenos Ayres, to the honorable Secretary of State, the late Mr. Gresham, dated November 10, 1894, your excellency will observe that on the request of that functionary the committee of the House in charge of the study of our tariff approved the modifications recommended by the Government relative to agricultural implements and lumber, as well as making favorable changes in the rates on farm wagons and canned fruits and vegetables. The reduction of the rate of duty on yellow pine, to which Minister Buchanan refers in his communication of October 5, 1894, alone amounted to a reduction of import duties of \$250,000 to the benefit of the American exporter.

Your excellency knows that mowers, binders and reapers, and steam thrashers are on our free list, while the rate of duty on machinery and motors of all kinds for agricultural purposes remains at 5 per cent ad valorem.

The market offered by the Argentine Republic for that class of articles is already very considerable. The following statement, which I take from the American official statistics for the fiscal year ending June 30, 1895, contains the figures reached by this branch of the American imports, compared with those from other nations with which the United States maintain extensive commercial relations:

Mowers and reapers:		
Argentine Republic		\$817,445
Russia—		
Baltic and White Seas	\$101,783	
Black Sea	527,653	
United Kingdom		629,435
France		447,114
Germany		424,312
		375,348

But it is not only this branch of American industry that finds in the Argentine Republic an easy acceptance and an ample market. The United States also send us mineral oils, lumber, tools, all kinds of instruments, locomotives, and railroad material; in short, all the products of the vast industry of that country may enter our market under favorable conditions and analogous with those extended to the goods from other parts of the world. The marked contrast between the imports and exports of this country and other South American nations, which often caused the commercial balance to be against the United States, does not exist between our respective countries.

This contrast is rather unfavorable to us, although we occupy in South America the second place in American commerce, Brazil only surpassing us on account of its considerable imports to this market. Finally, the prospects of our mutual interchange are unlimited, taking into account the progressive development of the Argentine Republic, the activity and energy of its people, the importance of its natural resources, the extension of its territory, and the growth of its population by the constant assimilation of great masses of European immigrants who come to cultivate our fertile fields.

Your excellency will not wonder, in view of the succinct considerations herein made, that my Government should have been painfully surprised on hearing of the prohibitory rate of duties which threatens our wool should the present tariff bill now pending before Congress become a law. The enacting of said rates, as those proposed on our hides, would make impossible the introduction of the former as well as the latter, it would be hostile to an important industry of our country, without benefit to the people or the industry of the United States, and lastly it would end by interrupting in toto a commercial movement which was being started and every day increasing, to the mutual advantage of both countries.

The important concessions which spontaneously and with the desire of making still closer the commercial relations with this nation we have granted to important American products and articles should guarantee to us that the Congress of this nation would not enact a law which might destroy our growing trade, and thus close our doors to the introduction of American products. Instead of that, we behold with disappointment and regret that the projected bill affects us with extreme severity, practically applying a discriminating rate of duty on our wool, since our wools have a larger shrinkage than those from Australia, as I have had the honor of mentioning before by citing some utterances of Mr. Lawrence.

After those words had been expressed by that gentleman before the Ways and Means Committee of the House of Representatives he amplified them later on in the memorial of the National Wool Growers' Association in a form which demonstrates in a manner so efficacious and eloquent the exigencies of our position in this matter that I pray your excellency to permit me to transcribe them, calling your excellency's attention to the same:

"The injustice . . . of favoring Australasia, a British dependency, at the sacrifice of trade with South America is palpable and appalling. The unanswerable argument of that great statesman, Hon. Warner Miller, on this subject should be pondered by every American citizen. We can not hope for increased trade with South American States nor advantageous reciprocity

treaties while this injustice is continued. \* \* \* But Argentina has a real grievance of which she may justly complain, and the grievance is still non [more?] ruinous to our industry. By imposing an additional duty on the light shrinking Australasian merino the United States will take less wool from that country and more from South America, and thus enlarge our trade with our sister Republics of the Western Hemisphere, Mexico included."

Before closing I beg your excellency to allow me to call attention to the following paragraphs from a report of the United States consul in Buenos Ayres, Mr. Baker, referring to the Argentine production and to the growth of our commercial with this great nation:

"The Argentine Republic is a country which for the most part produces only raw materials, the bulk of its exports consisting of wools, hides, skins, etc. If the United States have no market or an uncertain market for such articles, or its fiscal laws are such that it will not pay to ship them to our ports, it is out of the question that our country can not have a very large or a very reliable trade with the River Plate.

"During all the twenty years that I have been at this port, I have persistently sought to impress upon our Government the importance of this fact, and have in my reports time and again suggested that modifications of such restrictions, thus stimulating a freer exchange of products, was the 'key which would open a large reciprocal trade between the United States and the Argentine Republic.' I can only reiterate what I have heretofore so often said, and I do so at the request of American merchants dealing with the River Plate, is the hope—which they express—that something may be done to ease up the situation and give them the chance of a market for Argentine wools in the United States.

"There is no doubt that it would have a marked effect upon our commerce with this country, not merely in respect to the amount of shipments from here, but, what is more important to us, in the increase of the imports hither of our manufactured goods. It is well said that 'business begets business,' and the opening of our markets to the wools of this country would have a direct effect, not only in strengthening our commercial relations with the people of the Argentine Republic, but, what is always desirable, in promoting their good will and bringing them socially and politically nearer to us."

It is perhaps unnecessary to insist on the considerations which I have had the honor of placing before your excellency with the certainty that the high sense of justice and the friendly feeling which inspire the American policy in its relations with the Argentine Republic will suffice to secure the adoption of any measure whatsoever which may save the interests of my country, threatened by the tariff bill this note has reference to, either by reducing the proposed duty in a proportion so as to leave our wool in a position equal to that of Australia, or by leaving wool in its present condition.

The mere mention of the facilities with which the American products enter our custom-houses is the most eloquent argument which I could present to your excellency in favor of the suggestion just made. We have on the free list, besides other articles, mowers, reapers, thrashers, raw petroleum, coal, coke, locomotives, rails, and sleepers; we have reduced the duty on lumber (yellow pine and oak), on canned goods, on petroleum, on cotton goods (this last from 60 to 20), and we are levying a moderate duty on all other American products imported there (5 per cent ad valorem on plows, machines, and motors of all kinds for agricultural purposes, sewing machines, rosin, wire for reapers, fences, etc.).

In view of these considerations, I am encouraged to hope my country will not be subjected to the hardships which would follow the enactment of a law bearing so directly on our trade with this country, forcing us to abandon the mutual and beneficial commercial relations which bind us with the United States, whose gates would remain entirely closed to our products.

Again, praying your excellency to consider this note as a simple friendly suggestion, made in a spirit of perfect cordiality and without intending in any manner to interfere with the decisions of one of the high branches of the Government of this great Republic, to which by so many links we are bound, I renew to your excellency the protests of my highest and distinguished consideration.

THE HON. JOHN SHERMAN,  
Secretary of State of the United States.

M. GARCIA MEROU.

Nc. 7 shows clearly enough how a low tariff would benefit the Argentine Republic. The advantage to us is not so clear.

The Argentine Republic occupies relatively about the same position in the Southern Hemisphere that we do in the Northern. They are our competitors in the production of grain and animal products. They have practically nothing but grain and animal products for sale. Of these we have a plenty. They produce nothing that we need, except possibly quebracho wood, and for that we have an excellent substitute in oak and hemlock bark. Only a small per cent of the wool of Argentina comes to our market anyhow, even under a "free-wool" tariff, viz, 12,187 tons out of 201,353 tons exported in 1895.

The new tariff will be no more "prohibitory" than the tariff of 1890. Under that excellent tariff law we bought of Argentina \$3,416,740 worth of goods and sold them \$9,619,317 worth in 1893, while in 1895, under the "free-wool" tariff, we bought of them for \$8,947,165 and sold them \$6,686,999 worth.

We have for the last twenty years supplied only from 5 to 7 per cent of the goods imported into Argentina, and more than half of that consists of white pine and petroleum, articles which they do not produce and can get only from us. The next important article is agricultural machinery. These they have not the facilities to manufacture, and without our improved machinery they are unable to compete with us in the grain markets of the world.

We received no communication from the governments of any of the other countries of South America, Central America, or Mexico. The reason probably is that they have climates, and consequently productions, quite different from those of the temperate zones. We have placed their products on the free list if they are such as we can not produce. We have no written communication from the Canadian Government, but did have an official visit from one of the ablest statesmen of that Dominion, who came here to confer with the members of the Ways and Means Committee while we were preparing the new tariff. He wished us to make low rates on such articles as are usually imported from Canada, mainly agricultural products.

His main reliance seemed to be the statistical fact that our exports to Canada exceed our imports from that country. But the reason for that is geographical or astronomical rather than political. We produce in Maine, New York, Ohio, North Dakota, and Washington everything which they can possibly produce in any part of the continent north of latitude 49°, while in California, Texas, Louisiana, and Florida we furnish many semitropical products, such as cotton and fruits, which they can not produce and must buy of us.

[No. 8.—Note verbale.]

IMPERIAL LEGATION OF TURKEY, Washington, May 10, 1897.

The Imperial legation of Turkey observes with regret that the new American tariff, as it has just been sent to the United States Senate, imposes an import duty of \$1 per pound on crude opium.

As the Department of State is aware, opium is a product of Ottoman soil which in previous tariffs was always placed on the free list. Its removal from that list and the imposition of a high duty can not, in the opinion of the Imperial legation, answer the twofold purpose had in view by the new financial legislation, viz, first, the protection of home industry and productions; and second, the increase of the revenue. As opium is not produced or cultivated in the United States, there is no reason for a protective duty on this article.

As to the increase of the revenue of the American Treasury, the Imperial legation doubts whether the duty levied on crude opium could contribute thereto to any appreciable extent. Its effect would, on the contrary, be to diminish the importation of this article, and thus to reduce the estimated receipts to insignificant proportions.

Furthermore, even supposing that the importation of crude opium would not suffer, and that the receipts of the Treasury would be considerable owing to the duty levied thereon, it is scarcely necessary to remark that, even then, American industry and American laboratories which manufacture extracts of this drug for the requirements of medicine and pharmacy would be the sufferers. Consumers would then have to bear the burden of a duty which, after all, holds out merely the hope of a doubtful profit to the public Treasury. The Imperial legation thinks that it would be advisable to place crude opium again on the free list, or at least to reduce the duty on it.

In expressing this opinion, by way of suggestion, the Imperial legation of Turkey trusts that the Department of State will kindly make it known in the proper quarter, transmitting at the same time such recommendations in support thereof as it may think proper.

The Turks are evidently of the opinion that they will have to pay, in whole or in part, the dollar a pound duty on opium. Their concern for our public Treasury could well be stricken out as surplusage.

[No. 9.]

LEGATION OF JAPAN, Washington, June 5, 1897.

SIR: Under instructions from His Imperial Majesty's minister for foreign affairs, I have the honor to invite your attention to the proposed increase of duties upon certain articles imported into the United States from Japan. In doing so I beg to state that while under ordinary circumstances the Imperial Government would hesitate to express an opinion concerning a question which might be regarded as pertaining exclusively to the domestic policy of this country, they believe that the fact that important Japanese interests are at stake will be deemed sufficient justification for the representations they desire to make.

This belief is strengthened, moreover, by the conviction that the proposed increase of duties will injure the United States no less than Japan by retarding the growth of commercial relations which have hitherto proved equally advantageous to both countries and which promise even greater future benefits. The Imperial Government are well aware that the Government of the United States must share with them the desire to promote and extend those relations, and consequently they feel assured that their motive will not be misconstrued if they frankly express their views upon the subject.

The articles of Japanese importation which will be most injuriously affected by the proposed increase of duties are light-weight silks, silk handkerchiefs, matings, hemp and jute rugs and carpets, and tea.

Taking these articles in order, I beg to call your attention to the fact that the proposed duty upon Japanese silk goods and silk handkerchiefs is greatly in excess of any similar duty ever levied in this country. The tariff bill, as it passed the House of Representatives, provided for a duty of \$4 per pound upon silk goods weighing less than 1 ounce and more than one-third of an ounce per square yard. In actual operation this provision would apply almost exclusively to cheap silks, the manufacture of which may be said to be peculiar to Japan. The proposed duty will bear much more heavily upon them than upon silks manufactured in other countries, most of which will be subjected to relatively lighter rates of duty.

Thus, unintentionally no doubt, there is the appearance of discrimination against the Japanese product. The Japanese silks imported into this country, although light in weight, are made of inferior raw silk, and do not come into competition with staple American silks. The duty of \$4 per pound would be equivalent to an ad valorem rate of between 95 and 100 per cent upon the varieties most generally imported. The duty upon handkerchiefs made of similar grades of silk would be 10 per cent more. The consensus of expert opinion is that these rates are practically prohibitory.

The Senate Finance Committee has reduced the proposed duty to \$3 per pound, which is equivalent to between 70 and 75 per cent ad valorem upon piece goods, with 10 per cent added upon silk handkerchiefs.

From all the information I can gather upon the subject, I am convinced that these rates, if adopted, will greatly lessen the volume of importations, and so far, at least, injuriously affect the trade.

Under the present law the duty upon Japanese silk goods and silk handkerchiefs is 45 per cent and 50 per cent ad valorem, respectively; under the law of 1890 it was 50 per cent upon the one and 60 per cent upon the other.

Japanese matings are at present admitted free of duty in the United States, as they were also under the law of 1890. At no time has a higher rate of duty than 30 per cent ad valorem ever been levied upon this class of goods. In consequence, an extensive and prosperous trade has been established, the use of matings has become more general than ever before, especially among the poorer classes and in those parts of the country where the warmth of the climate precludes the use of other floor coverings.

Under the bill passed by the House of Representatives the duty levied upon matings was 8 cents per square yard upon those valued at less than 10 cents per square yard, and 8 cents per square yard, with 25 per cent ad valorem additional, upon those valued at more than that price. Inasmuch as the dutiable value of most of the matings imported from Japan does not exceed 6 cents per square yard, it is apparent that the proposed duty would be equivalent to a very high ad valorem rate.

The Senate Finance Committee amended this section of the House bill

by reducing the duty upon the cheaper grades of matting to 4 cents per square yard, but added a proviso imposing an additional duty of 25 per cent ad valorem upon all mattings "manufactured with a warp composed of flax, cotton, or other vegetable fiber." Since all mattings are manufactured with a warp composed of some kind of vegetable fiber, it is not thought that the reduction effected by this amendment will greatly lighten the burden imposed by the original duty. How heavy that burden is you can perceive when I assure you that it is stated upon the best authority that the trade in mattings can not survive the imposition of such high duties. It must cease altogether, or dwindle to insignificant proportions. In either case the people of this country will be deprived of the use of an article not manufactured in the United States, which experience has shown to be well suited to their needs, and the public finances, it is safe to predict, will not be appreciably benefited.

It has been officially stated that the proposed duty upon hemp and jute rugs and carpets will be equivalent to the about 50 per cent ad valorem. The fact is, however, that the average ad valorem rate of duty equivalent to the proposed specific duty upon the varieties of this class of goods imported from Japan would be nearly 80 per cent. Such a duty, if applied, can not but be a severe blow to another article of Japanese commerce the introduction of which has never been shown to be harmful to any product of American industry.

The proposed duty upon tea has attracted the especial attention of the Imperial Government. While it is true that the taxation of an article like tea for exclusively revenue purposes might not ordinarily be open to criticism, the circumstances of the present case are such as to give rise to serious apprehension. For a number of years past the tea industry in Japan has been in a depressed condition. The United States furnish the principal market for Japanese teas, more than two-thirds of the importation to this country being from Japan. It will thus be seen that Japanese tea must bear a larger share of the burden of taxation than the teas of any other country.

The proposed duty will be equivalent to from 50 to 100 per cent ad valorem, according to quality. It can not be a matter of surprise, therefore, that the prospect of a sudden change from free importation to comparatively heavy taxation should awaken in the minds of Japanese tea producers the gravest fear for the stability of their trade in its chief market. Equally with them, the Imperial Government are apprehensive that such a change, added to the depressing conditions which already prevail, must do great harm to an industry upon which a large number of the Japanese people are wholly or in part dependent.

As regards the general subject of the proposed taxation of Japanese imports to this country, I regret to observe that the opinion has gained some credence in Japan that the legislation in question is intended to discriminate against Japanese products. I do not need to assure you that the Imperial Government do not share in this belief, but I would respectfully submit that it is in a measure natural, since, by what is no doubt merely an unfortunate coincidence, it happens that the articles of Japanese importation most injuriously affected by the proposed legislation are what may be termed specialties of Japanese production and manufacture. All the articles herein enumerated come within that category, and for that reason it is not, perhaps, to be wondered at that those whose interests are so seriously threatened should believe that they are in some way the victims of intentional discrimination.

As I have had the honor to state, the Imperial Government are far from sharing in a belief for which they find no warrant in the cordial attitude always maintained by the United States toward Japan, but nevertheless they do not think it either wise or prudent to ignore a sentiment which, under certain circumstances, might have a most unfortunate effect upon the relations of the two countries. They hope, moreover, that it will not be forgotten that this feeling may be attributed in some degree to the fact that no article of American importation to Japan pays at present anything more than a nominal duty, and to the further circumstance that the Legislature of Japan has already signified its intention of hereafter levying only the most moderate imposts upon American commerce.

I have the honor, Mr. Secretary, to submit the foregoing observations for your consideration, trusting that you may deem it proper to communicate them to the authorities intrusted with the task of determining this question in which Japan is so deeply interested. As I hardly need assure you, the Imperial Government, in this frank exposition of their opinion, have no other aim than the promotion of those cordial sentiments of good neighborhood which have been such a marked characteristic of the intercourse of our countries. Actuated by this sentiment, they have authorized me to submit their views in the earnest hope that through this representation some amelioration may be obtained of conditions that threaten the prosperity and even the stability of commerce between Japan and the United States.

Accept, etc.,

Hon. JOHN SHERMAN,  
Secretary of State.

The Japanese minister is instructed by His Imperial Majesty to say to us that, in his opinion, a duty of \$3 a pound on light silks "will greatly lessen the volume of imports, and so far at least injuriously affect the trade." In this, I think, he is correct. He does not claim that the increased duty would increase the price to the consumer. In this, I think, he is wise. The price will remain the same to the people who wear silk dresses. In the same ratio that it "will greatly lessen the volume of imports," I think it will greatly increase the industry of weaving silk in this country.

It may also "injuriously affect the trade" by making foreign manufacturers pay the duty and subtract that much from their profits. It may also be that the "trade in mattings can not survive the imposition of" from 3 to 7 cents per square yard duty. Perhaps "it must cease altogether, or dwindle to insignificant proportions."

In my opinion, we shall get all the matting we want at the same old price, and our Japanese friends will continue to do business at the old stand on a narrower margin of profit, while cheerfully contributing the stipulated "tax" into the Federal Treasury for the privilege of using the best market in the world.

[No. 10.]

LEGATION DE SUISSE AUX ETATS-UNIS,  
Washington, D. C., June 17, 1897.

MR. SECRETARY OF STATE: According to my promise, I have the honor to present herewith to your excellency a statement written by Mr. James Robert, of New York, and concerning the newly proposed import duties on watches. Mr. Robert is a citizen of the United States. He is at this time retired from business, but he has a complete knowledge of all the questions relating to the manufacturing of watches in this country and in Switzerland, and is thoroughly acquainted with all the facts of importance in this branch

of business. He is also vice-consul of Switzerland in New York. I beg to call the attention of your excellency to this statement, which contains observations that may be of interest to the honorable gentlemen who are at this moment preparing the new tariff measures.

Please accept, Mr. Secretary, the renewed assurances of my highest consideration.

His Excellency Mr. JOHN SHERMAN,  
Secretary of State, Washington, D. C.

J. B. PIODA.

NEW YORK, June 15, 1897.

At the request of a number of friends interested in the importation of Swiss watches, I am asked to add the testimony of a lifelong experience in that business, with such facts as may assist in retaining the present tariff of 25 per cent duties imposed upon that article.

This tax has benefited protection far more than revenue, as shown in the extraordinary development of American watch factories, which have become wealthy, powerful, and entirely independent of any foreign competition.

On the other hand, the revenue expected from the importation of Swiss watches has continued to decline upon the yearly value, which at one time exceeded \$3,000,000, and now barely amounts to one-third of that sum.

The higher duty of 40 per cent, as now proposed, would certainly not add to protection, which is not needed, as facts prove, but would materially lessen the United States revenues in excluding more and more watches of foreign make, the majority of which being specialties or particular trade-marks not subject to American competition. Besides, it would, in my estimation, be altogether to the detriment of the dealer and consumer in making them dependent on the privilege to increase the margin of the already powerful American watch stock companies. It would also give an incentive to dishonest undervaluation or fraud and encourage the purchase of the more valuable article by Americans or others traveling abroad, who enjoy the right to bring over a single watch for their own personal use, thus entailing a loss of business to the retail dealer here.

The honest importer, who is most in need of protection, as well as the Government, would, under these circumstances, be the greatest sufferer if the actual ad valorem duty of 25 per cent was now to be revised, and I trust that upon fair examination of the interests involved no change will be made from what had been considered amply sufficient in the McKinley tariff bill of 1890.

Very respectfully submitted by

J. EUGENE ROBERT.

[No. 18.]

DEPARTMENT OF STATE, Washington, May 2, 1897.

SIR: By direction of the Secretary of State, I have the honor to inclose for your information and consideration copies of notes dated the 28th ultimo and the 20th instant, respectively, from the minister of Switzerland at this capital, relative to the provisions of the tariff bill pending before the Senate which affect Swiss exports to the United States.

Respectfully, yours,

WILLIAM R. DAY, Assistant Secretary.

Hon. NELSON DINGLEY, Jr.,  
Chairman of the Committee on Ways and Means,  
House of Representatives.

LEGATION OF SWITZERLAND IN THE UNITED STATES,  
Washington, April 29, 1897.

SIR: I have the honor in pursuance of the instructions of my Government, to state the following considerations to which I take the liberty to invite your excellency's kind attention. I recently transmitted to my Government the tariff bill as it left the House of Representatives. The Federal Council has considered its scope, which can not fail to be disastrous to commerce between Switzerland and the United States inasmuch as the productions of the three principal export industries of Switzerland are thereby subjected to prohibitory duties. Swiss embroidered goods, silks, watches, and clocks would be almost excluded from the territory of the United States.

In this state of things my Government appeals to the sentiments of friendship and equity of its sister Republic, trusting that it will not close its territory to Switzerland, since that of the Confederation has been at all times wide open to American productions on which extremely low duties are levied. The United States export goods to Switzerland to the value of about 39,000,000 francs, which may be divided as follows: Cotton, 16,000,000; petroleum, 5,000,000; tobacco, 4,000,000; meat, 3,000,000; hides, 3,000,000; lard, 2,000,000; wheat, 1,000,000, etc. Switzerland exports to the United States goods whose value is 13 francs per inhabitant, whereas the purchases of the United States from Switzerland amount to but 1 franc 25 centimes per inhabitant. Swiss exports consist mainly of specialties which do not compete with American industry; their exclusion would be regretted by the American public, and would occasion a diminution of revenue to the United States Treasury.

The Federal Council is not without hope that these considerations will lead in the proper quarter to arrangements favorable to a reasonable reduction of the duties on Swiss imports, or that at least account will be taken of the considerations set forth by me, and of some concessions in the form of a convention.

Hoping that your excellency will kindly second my suggestion, I avail myself, etc.,

J. B. PIODA.

LEGATION OF SWITZERLAND, Washington, D. C., May 20, 1897.

MR. SECRETARY OF STATE: As a sequel to the note which I had the honor to address to your excellency on the 28th ultimo, and in compliance with the request which you were pleased to make of me in the course of our conversation of the 13th instant, viz. that I would specify the wishes of my Government in regard to the duties on imports from Switzerland which are contained in the tariff bill now under consideration by the United States Senate, I take the liberty to submit to your excellency the following desiderata:

1. That bolting cloth may be allowed to remain on the free list.
2. That there may be no increase in the duties on the following articles:
  - (a) Silk piece goods.
  - (b) Silk ribbons.
  - (c) Embroideries, loom-woven, dotted, and figured.
  - (d) Swiss watches and watch movements.
  - (e) Tar colors.

I will thank your excellency to make the foregoing known in the proper quarter, and to call attention at the same time to the fact that Switzerland has always kept her market open to American productions.

Be pleased to accept, Mr. Secretary of State, the assurances of my very high consideration.

J. B. PIODA.

His Excellency JOHN SHERMAN.

Documents Nos. 10 and 18 are in the main a plea for lower duties on embroidered goods, silks, watches, and clocks for the benefit of the people of Switzerland.

It may be that lower duties would benefit them. We are manufacturing these articles in America. We are now writing a law "to encourage the industries of the United States." Domestic manufacturers and labor organizations have presented their side of these three industries to our committee with great earnestness and told us what they want and must have in order to hold the trade. They say they can abundantly supply our markets with embroideries, silks, and watches, without raising the price to the consumer, if only protected by a duty sufficient to cover the difference in labor cost. We had to decide for the Americans.

[No. 11.]

BRITISH EMBASSY, Washington, December 26, 1896.

SIR: I have the honor to inform you that the fishery board for Scotland has drawn the attention of the foreign office to the high rate of duty imposed on cured herrings imported into the United States, and have represented the expediency of endeavoring to obtain a substantial reduction thereon.

I have therefore the honor, acting under instructions from the Marquis of Salisbury, to submit to the United States Government the representation made by the fishery board, with a view to its favorable consideration.

I have the honor to be, etc.,

JULIAN PAUNCEFOTE.

The Hon. R. OLNEY, etc., etc., etc.

[No. 12.]

BRITISH EMBASSY, Washington, June 18, 1897.

SIR: I have the honor to inform you that the attention of Her Majesty's Government has been called to the increased duty which it is proposed, under the provisions of the Dingley tariff bill, to impose upon salted mackerel and other cured fish.

In view of the grave injury which such action would cause to the trade of the west coast fisheries of Ireland, I am desired by the Marquis of Salisbury to repeat to your Government the representations which I made to you in my note of December 26 last year with regard to a similar proposal concerning the import of Scottish cured herrings.

I have the honor to be, etc.,

JULIAN PAUNCEFOTE.

Document No. 11 is either incomplete or very remarkable. It informs us that "the fishery board of Scotland has drawn the attention of the foreign office to the high rate of duty, \* \* \* and have represented the expediency of endeavoring to obtain a substantial reduction thereon."

Neither a copy of the "representation" of the board nor the substance thereof is communicated to us. No reason is urged. No statement of advantage or disadvantage is made. No other document accompanied the note as it came to the committee, and I am informed at the State Department that none was inclosed with the note when received there.

How anybody could expect us to amend a bill pending in a committee of the United States Congress simply because a fishery board had drawn the attention of the British foreign office to one of its paragraphs, without suggesting any reason of advantage or disadvantage for or against the change is hard to comprehend.

There may be something the matter with the paragraph, but the defect, if any, should be indicated. I know the spelling is correct, and I think the figures are all right.

No. 12 asserts that increased duty on salted mackerel and other cured fish would cause grave injury to the trade of the west-coast fisheries of Ireland.

We may safely assume that to be true, but still there are no reasons assigned why a lower duty would be any advantage to us.

This absence of information in No. 11 is not cured by a simple assertion in No. 12 that the representations of No. 11 are repeated. We look in vain for any "representations" either in No. 11 or No. 12.

[No. 13.]

CHINESE LEGATION, Washington, June 29, 1897.

SIR: I have the honor to state that I have received representations from Chinese merchants doing business in various parts of this country relating to the increase of duty on several articles of merchandise, principally tea, silks and silk manufactures, floor matting, rice, and firecrackers, as proposed in the tariff bill now under discussion by the Senate.

While disclaiming any wish on my part to interfere in the discussion of the tariff legislation of the United States, I deem it my duty to respectfully make known to you, and through you to the legislative branch of your Government, the appeals of my countrymen, who earnestly entreat that the Congress of the United States will legislate no law which would impose higher rates of duty on the aforementioned articles than those of the existing tariff.

In this connection I beg to express my gratification on learning that the Senate has kept matting still on the duty-free list.

I trust the Senate's action in this respect will be concurred in by the other branch of the Congress, as I am strongly of the opinion that it will be beneficial not merely to the manufacturers and importers of matting but also to a large class of people in this country who constitute the consumers.

As for rice, which, as you are well aware, is a chief and necessary article of subsistence to my countrymen, an increase on the present duty, which is already very high, would entail still greater hardship on the large number of them in this country who during recent years have had to gain a mere living by dint of hard toil, while its increase to the revenue would be small and insignificant.

In a letter just received from some of our merchants on the Pacific Coast, they say that the proposed increase of duty on firecrackers "is excessively high and destructive to the trade. It would greatly injure the importers of this line of goods. Comparing the costing value between the old and new duty, it will make the goods cost from 150 to 200 per cent. The price of these

crackers is very low in China, but the weight of them is very heavy, and at 6 cents per pound it would bring the cost of them very high."

As the import of this line of goods does not interfere with the industrial interest of the United States and has no fiscal importance to this Government, it is hoped that the existing tariff rate will be maintained.

I trust that you will be so good as to give the earliest attention possible to the above respectful expression of views and that you will see fit to bring it to the favorable consideration of the United States Congress, so that some expedient may be found for modifying the proposed tariff in such a way as not to work hardship on my countrymen.

Thanking you, Mr. Secretary, in advance for any step you may deem proper or expedient to take in complying with the above request, I avail myself of this opportunity to renew to you the assurance of my highest consideration.

WU TING FANG.

Hon. JOHN SHERMAN,  
Secretary of State.

Of No. 13 there is little to say. Chinese silks and mattings are on a par with the same articles coming from Japan. Rice is one of our own staples, which has always been well protected, as it must be, since its producers have to compete with the cheapest labor in the world.

The Chinese minister is evidently of the opinion that an increased duty on firecrackers would be paid by the Chinese manufacturers and importers. In this I concur.

[No. 14.]

BOUNTIED SUGARS.

[Letter from the Secretary of State, transmitting a translation of a note containing the protest of the Government of Austria-Hungary against the proposed treatment of bountied sugars in the tariff bill at present under consideration in the Senate.]

DEPARTMENT OF STATE, Washington, June 4, 1897.

SIR: Agreeably to the request of the minister of Austria-Hungary, herewith transmitted, I have the honor to lay before you, with a view to its presentation to the Senate, a translation of a note containing the protest of the Government of Austria-Hungary against the proposed treatment of bountied sugars in the tariff bill at present under consideration in the Senate.

Respectfully, yours,

JOHN SHERMAN.

Hon. GARRET A. HOBART,

Vice-President of the United States.

IMPERIAL AND ROYAL AUSTRO-HUNGARIAN LEGATION,  
Washington, May 28, 1897.

MR. SECRETARY OF STATE: I have had the honor to receive your note of the 17th ultimo, No. 139.

The provision relative to the discriminating duty on sugar contained in the tariff bill which has been passed by the House of Representatives is still found in that bill as amended by the Senate committee (section 3). I was instructed to protest against this provision on the ground of the right of the most favored nation, which is guaranteed to us by treaty, and should consequently be very grateful to you if you would have the kindness, Mr. Secretary of State, to send my note of April 13, 1897 (whereby I obeyed said instructions), to the Vice-President of the United States, that it may be communicated to the United States Senate.

I avail myself of this occasion to renew to you, sir, the assurance of my most distinguished consideration.

HENGELMÜLLER.

His Excellency JOHN SHERMAN,  
Secretary of State, etc.

IMPERIAL AND ROYAL AUSTRO-HUNGARIAN LEGATION,  
Washington, April 13, 1897.

MR. SECRETARY OF STATE: Pursuant to instructions, I have the honor, Mr. Secretary of State, to invite your attention to the provisions of the tariff bill now before the Senate of the United States which relate to the duty on sugar, and conflict, on the one hand, with our right of the most-favored-nation treatment, and, on the other, threatens to heavily damage Austro-Hungarian exports.

The above-mentioned bill provides, namely, in Schedule E, No. 206, that sugar exported from such countries which grant a direct or indirect bounty shall pay, apart from the actual duty upon entrance set forth in No. 206, an additional duty to the amount of the bounty granted, so far as this bounty shall be in excess of any internal tax collected upon such sugars or upon the raw materials (beet or cane) used in their manufacture.

The question of the discriminating tariff treatment against our sugar has already been the subject of negotiation between the Imperial and Royal Government and the Government of the United States. The Imperial and Royal Government had looked upon the additional duty of one-tenth per pound upon sugar coming from Austria-Hungary provided for in the tariff act of August 27, 1894, as a violation of the right of the most favored nation granted to her by Article V of the treaty of 1829, and instructed me on that occasion to protest against it.

This instruction I had the honor to carry out in a note of January 3, 1895, to Secretary Gresham, and I therefore consider it unnecessary to repeat here the views advanced therein, which my Government entertains to-day in their entirety. On the other hand, I beg to call attention to the fact that the Government of the United States has recognized our right to protest against any additional duty upon our sugar which is based upon our export bounty, as it will appear from the report of Secretary Gresham to the President of October 12, 1894, and that the President, in his annual message of December, 1894, recommended to Congress the repeal of the additional duty in question.

The bill now pending in Congress has in view a much greater increase of the discriminating additional duty on sugar, and threatens, therefore, our trade with the United States with new injury. In view thereof the Imperial and Royal Government has instructed me to call the attention of the Federal Government to the disposition of these proposed provisions to infringe upon treaty obligations, and in connection therewith to express the hope that it will lend its assistance in order to enlighten Congress upon the existing treaty obligations between our countries, and to prevent that the proposed increase of the additional duty upon our sugar, against which the Imperial and Royal Government must further protest, should become a law.

Accept, etc.,

HENGELMÜLLER.

Hon. JOHN SHERMAN,  
Secretary of State.

No. 14 claims, first, that the countervailing duty on bounty-paid sugar violates the "most favored nation" clause of our treaty

with Austria-Hungary, and, second, that the new tariff "threatens to heavily damage Austro-Hungarian exports." In answer to the first we have only to say that the new tariff treats all countries alike. The "most favored nation" in the world has to pay the countervailing duty on bounty-paid sugar. If Austria-Hungary and Germany place themselves in a different class from other nations by subsidizing the sugar industry, they can only get from us the rights of trade in our ports which are granted to all countries who subsidize that industry.

If by building up the sugar industry in the United States the result is damage to Austro-Hungarian exports, we can only say that our purpose is to build up the industries of our own country, furnish labor to our own people, and keep our money at home. Our purpose has never been to injure others. It is not any injustice to buy of our own fellow-citizens, even if the result is that we are therefore unable to buy of foreigners.

[No. 15.]

#### DIFFERENTIAL TREATMENT OF BOUNTIED SUGARS.

[Letter from the Secretary of State, transmitting letters from the German ambassador in regard to the protest of the German Government against differential treatment of bountied sugars.]

DEPARTMENT OF STATE, Washington, May 19, 1897.

SIR: Agreeably to the request of the German ambassador, I have the honor to lay before you, with a view to their presentation to the Senate, copies of the correspondence indicated below, in regard to the protest of the German Government against differential treatment of bountied sugars in the tariff bill at present under consideration in the Senate.

Respectfully, yours,

JOHN SHERMAN.

HON. GARRET A. HOBART,  
Vice-President of the United States, United States Senate.

Inclosures.

From German ambassador, April 5, 1897.  
To German ambassador, May 15, 1897.  
From German ambassador, May 16, 1897.  
From German ambassador, May 16, 1897.

IMPERIAL GERMAN EMBASSY, Washington, April 5, 1897.

MR. SECRETARY OF STATE: The bill approved by the House of Representatives, now before the Senate of the United States, relating to the tariff of the United States (H. R. 379) provides, in Schedule E, No. 206, that sugars, etc., the product of any country which pays, directly or indirectly, a bounty on the export thereof, shall pay, apart from the actual duty set forth in the said No. 206, an additional duty equal to such export bounty, so far as this bounty shall be in excess of any (internal) tax collected upon such sugars or upon the raw materials (beet or cane) used in their manufacture.

By instruction of the Imperial Government, I have the honor respectfully to invite your excellency's attention to the fact that this provision can not be reconciled with the right of the most favored nation, which is granted by existing treaty stipulations to German products with respect to the duties to be imposed upon them on entry into the United States. The above provision, should it become a law, would, on the contrary, by imposing upon German sugar a special additional duty and thereby establishing in the aggregate a higher duty than upon sugars from various other countries, seriously damage, in treaty violation, German exports to the United States.

Your excellency is aware that this question was already discussed in the year 1894 between the Imperial Government and the Government of the United States. I may, in especial, refer to the memorandum of this embassy of July 16, 1894, and to the note of August 28, 1894, addressed by my predecessor, Baron Saurma, to the Secretary of State, Mr. W. Q. Gresham, both of which are found printed on pages 234 and 235 of the proper volume of Foreign Relations of 1894.

It appears to me needless, therefore, to repeat here the text of these two documents; but I must say here emphatically that I accept, in their entirety, as my own the arguments advanced therein on the part of my predecessor in behalf of the opinion held by the Imperial Government. I must state, furthermore, here that the damage which threatens German exports from the provisions of the present bill before Congress is a much heavier one than that which resulted from the tariff law of August 28, 1894, as this law provided only for an additional duty of one-tenth of a cent per pound on German sugar, while the present bill, if it should become a law, will entail a much higher additional duty upon German sugar.

As your excellency further knows, the Government of the United States has unreservedly recognized the justice of our protest against any additional duty based on our export bounty upon German sugar. This is clearly expressed in words in the report by Secretary of State W. Q. Gresham to the President of the United States of October 12, 1894, a copy of which was communicated to this embassy in a note of December 7, 1894, and may be found printed on pages 236 and 239 of the proper volume of Foreign Relations for the year 1894.

The President of the United States explicitly concurred in this view of the Secretary of State by recommending to Congress in his annual message of December, 1894, the repeal of the additional duty upon German sugar. The Imperial Government may therefore entertain the hope that the Government of the United States will exert every endeavor to explain to Congress the importance of the existing treaty obligations between Germany and the United States and the consequences to be adduced therefrom, in order to prevent the proposed provision concerning the adding of the amount of the German export bounty to the duty upon German sugar from becoming a law in violation of treaty obligations.

On this occasion I may invite your excellency's attention to another point which my predecessor in 1894 only touched upon. On August 22, 1891, declarations were exchanged at Saratoga between Mr. von Mumm, the Imperial chargé d'affaires, and Mr. John W. Foster, specially empowered by the United States, which had on the one part the importation of German sugar into the United States in view and on the other the importation of American pork into Germany.

The United States made as the basis of these declarations the admission free of duty of German sugar, pursuant to the tariff act of October 1, 1890. The tariff act of August 28, 1894, had already shifted in an unfavorable way for Germany the premises upon which the exchange of these notes were effected, and they would be changed still more to the disadvantage of Germany if the present bill now before Congress should, without amendment concerning sugar, become a law.

The Imperial Government would, in such event, be compelled to regard the premises as defective upon which the German declarations had been based in the correspondence exchanged in August, 1891, and it would, moreover, be confronted with the question whether those advantages should be further continued which it had hitherto extended to the United States by applying to the importations from that country, especially with regard to its agricultural products, the minimum tariff established by the customs treaties concluded between the German Empire on the one hand and Austria-Hungary and several other States on the other.

With respect to the advantages which the United States, and especially its agriculture, has been afforded by these reduced duties, I may refer to the note of Mr. von Mumm, chargé d'affaires ad interim, of December 10, 1891, in the annex to which the duty rates of the general German tariff are contrasted with the treaty tariff. This note will be found printed as an annex to the proclamation of the President of the United States of February 1, 1892.

Accept, etc.,

THIELMANN.

No. 331.]

DEPARTMENT OF STATE, Washington, May 15, 1897.

EXCELLENCY: Adverting to your interview at the Department yesterday, at which you expressed a wish to have your note of April 5, 1897, in regard to the pending tariff bill, presented to the Senate, where the bill is now under consideration, I have the honor to say that, although a copy of your note has been brought to the attention of the Committee on Finance of the Senate, the Department will, as you request, lay before the Vice-President a translation of the same with a view to its formal communication to that body if this is what you desire. In case you wish to make any further communication upon the subject, I shall be glad to know it before taking action as I propose.

I avail myself, etc.,

JOHN SHERMAN.

His Excellency Baron MAX VON THIELMANN, etc.

IMPERIAL GERMAN EMBASSY, Washington, May 16, 1897.

MR. SECRETARY OF STATE: I have had the honor to receive your excellency's note, No. 331, of the 5th instant, and beg to say in reply that I will be very much obliged to you if you will send a translation of my note of April 5, 1897, referred to therein, to the Vice-President of the United States, for communication to the Senate.

In view of the action of the Committee on Finance of the Senate, the tariff bill has in the meantime assumed a materially different shape, inasmuch as the clause relating to an additional duty on such sugars upon which an export bounty in the country of their origin has been paid has been stricken from Schedule E and incorporated in a more general way in new section 3.

As this change does not alter in substance, but only in form the subject of my protest contained in my note of April 5 last, I have taken leave to address to your excellency to-day another note, which bears No. 1120-97. I should be very sensible of the kindness if your excellency would cause a translation of the note just mentioned (No. 1120-97) to be transmitted to the Vice-President of the United States for communication to the Senate, simultaneously with my previous note of April 5.

Accept, Mr. Secretary of State, the renewed assurances of my highest consideration.

His Excellency JOHN SHERMAN,

Secretary of State of the United States.

THIELMANN.

IMPERIAL GERMAN EMBASSY, Washington, May 16, 1897.

MR. SECRETARY OF STATE: In my note of the 5th ultimo, relative to the duty on German sugar which was proposed in the Dingley bill, the receipt of which your excellency had the kindness to acknowledge under date of the 7th ultimo, No. 206, Schedule E was referred to by me as the one against whose provisions I had been instructed by the Imperial Government to protest on the ground of the treaties concluded by the United States with various German States. The Committee on Finance of the United States Senate has meantime made important changes in the original wording of the tariff bill, eliminated from Schedule E the discriminating duty on sugar from countries which pay export duties, and has introduced that discriminating duty in a form which extends to goods of all kinds into the new section 3.

I consequently have the honor, with a view to the prevention of misunderstandings, most respectfully to inform your excellency that the protest which I was instructed by the Imperial Government to make now naturally has reference to the contents of the new section 3, since, in case the contents of the new section 3 should acquire the force of law, German goods would be obliged to pay a discriminating duty in addition to the ordinary duties.

I should be obliged to your excellency if you would have the kindness to bring this note, as you did that of the 5th ultimo, to the notice of the United States Senate.

Accept, etc.,

THIELMANN.

His Excellency JOHN SHERMAN.

No. 15 is in error when it asserts that "the Government of the United States has unreservedly recognized the justice of our protest against any additional duty based on our export bounty upon German sugar."

It is true that Mr. Cleveland and Mr. Gresham recommended that course to Congress in 1894. Congress is a part, and a very important part, of "the Government of the United States." We have collected the countervailing duty for three years. Congress has declined to repeal it, and will reassert the doctrine in this bill.

[No. 16.]

CONSULATE-GENERAL OF GREECE,

New York, April 10, 1897.

SIR: I have the honor to call your excellency's attention to the enormous import duty of 2 cents per pound imposed on currants by the tariff bill now before the United States Senate, and the great injustice that will be done to Greece if said duty is confirmed by the Senate.

It is a well-known fact that Zante or Greek currants do not come into competition with any product of this country. They are raised and thrive only within a narrow strip of land to the south of the Gulf of Corinth and in the adjacent islands of Corfu, Cephalonia, and Zante. The capricious nature of the genus of this plant is well known and it is an established fact that the product of currants is thus confined in space and limited in quantity.

The amount of currants annually imported to this country is about 32,000,000 pounds. The average amount of the years 1895 and 1896 was, according to the Treasury statistics, 31,961,000 pounds.

The import duty was as follows: Up to 1890, 1 cent per pound; from 1890

to 1894, free; from 1894 to 1896, 1½ cents per pound; and by the Dingley bill, 2 cents per pound.

The average cost of the imported currants for the last two years, according to the records of my consulate, has been as follows: Year 1893, 1.54 per pound; year 1894, 1.84 per pound; or an average of 1.69 per pound. On this basis the proposed duty of 2 cents would make it 118 per cent ad valorem. No such duty exists in the tariff for a similar article. It is a discriminating duty against Greece, amounting almost to prohibition, and out of all proportion to that on other fruits, as will be seen from the following table:

	Average cost without duty.	Imposed duty.	Equal to—
	Cents.	Cents.	Per cent.
Valencia raisins.....	3.50	2.5	74
Malaga raisins.....	7	2.5	35½
Sultana raisins.....	4	2.5	62
Prunes.....	5	2.5	50
Figs.....	4	2.5	62
Currants.....	1.69	2	118

This duty of 2 cents per pound was imposed, as I understand, first, by an erroneous impression that currants are a grape and compete with California raisins, and, second, by the statement made in the House on March 31 by the Hon. Mr. DINGLEY, chairman of the Committee on Ways and Means, that the duty of 2 cents per pound was only one-half of that imposed by England.

As a matter of fact, the duty on currants in England is 2 shillings (48 cents) per quintal of 112 pounds, and consequently it amounts to four-tenths of 1 cent per pound.

As to the first assertion, I beg to state that currants are a unique product, grown nowhere else in the world except in Greece and her adjacent islands. They furnish the masses with a cheap and nutritious fruit product, which benefits the consumers without injuring anybody, and that it has no real substitute. Raisins are an article for the table. Currants are an article for the kitchen.

These facts are so palpable that when in 1890 I explained them to Hon. Major McKinley, now President of the United States, he placed currants on the free list without hesitation. The same point of view was taken by your excellency in the United States Senate, when you spoke on the subject, June 9, 1894. I take the liberty to inclose copy of your remarks, taken from the CONGRESSIONAL RECORD of June 10, 1894 (volume 26, No. 150, page 7179), and I hope that your excellency entertains still the same opinion.

Before I conclude, I beg to be permitted to remark that the vote of the United States Senate of February 20, expressing its sympathy for Greece and her Government, had an immense effect in Greece and strengthened our hands in our present struggle to free our brethren in Crete from the Turkish yoke. It would be an anomaly and almost incomprehensible to our people if that same Senate, which expressed unanimously its strong sympathy for Greece, would crush the only Greek product imported into this country by imposing an enormous and almost prohibitory duty.

Yet, in view of the present policy of the United States Government, we do not ask that currants should be placed on the free list, as they were by the act of 1890, but as the question of revenue must be considered, a duty of 1 cent per pound would make this article bear a fair relation to other imports.

I most respectfully beg your excellency to transmit these remarks to the Finance Committee of the United States Senate for their consideration.

I have the honor to be, with the highest consideration, sir,

Your most obedient humble servant,

D. N. BOTASSI,  
Consul-General of Greece.

Hon. JOHN SHERMAN,  
Secretary of State, Washington, D. C.

[FROM CONGRESSIONAL RECORD, June 10, 1894.]

Mr. SHERMAN. Mr. President, the vote taken when I was absent temporarily, fixing a duty of 1½ cents a pound on Zante currants, seems to me a gross injustice to a country with which we have considerable commerce, and with which we have an increasing commerce.

I have some facts which I have received from the representatives of that Government in respect to Zante currants. If the statements are true—and I have no doubt they are, because they are verified from the market quotations in the city of New York—it is a grossly outrageous duty on what is commonly called the raisin of the poor. The statement I have shows conclusively that Zante currants are now quoted in the market of New York at about 1½ cents a pound. This, therefore, would be a duty of 125 per cent upon Zante currants, which are imported in large quantities, and which are used mainly by the poor people in their puddings, etc., as a substitute for raisins. Large quantities of currants of that kind are imported. I shall read what is said here in a communication which I have before me:

"CONSULATE-GENERAL OF GREECE, 33 SOUTH WILLIAM STREET,  
New York, May 13, 1894.

"SIR: In the tariff amendments just presented in the United States Senate (article 217), I notice that a duty of 1½ cents per pound is put on Zante currants, which are produced exclusively in Greece.

"This enormous duty is equivalent to 135 per cent ad valorem, the average price of currants in Greece being about 1½ cents per pound. They are selling now in New York from 1½ to 1½ cents per pound.

"Zante currants, now on the free list, are taxed 10 per cent ad valorem by the House bill. In the Senate bill the duty was increased to 20 per cent; then the Finance Committee increased it to 30 per cent, and now in the amended bill a specific duty of 1½ cents per pound is put thereon, equal to 125 per cent ad valorem.

"And yet it is a fact that Zante currants do not come into competition with any product of this country. A small raisin produced in California has nothing whatever to do with the Zante currants of Greece.

"We only demand justice. We do not compete with your products. We buy in the United States every gallon of petroleum that is consumed in Greece, as well as all our agricultural implements, and yet it is proposed to tax at the enormous rate of 125 per cent the only article that Greece sends to this country.

"The whole tariff does not offer a second example like this, viz, take an article from the free list and tax it 125 per cent. Is this not a great injustice done to a friendly country, and will it not affect the promising trade which was just being developed between the two countries?

"Very respectfully,

"D. N. BOTASSI,  
Consul-General of Greece.

"Hon. JOHN SHERMAN,  
United States Senate."

It seems to me that this statement, which is made, and I have no doubt truly, by a responsible party, the consul-general of Greece, shows that we ought not to make this discrimination against that important product of Greece, the only thing that we import from that country.

As the vote has already been taken, I do not care to move to reconsider, because I hope Senators on the other side having the matter in charge will correct it.

There is no similitude in the use or cost of Zante currants and raisins. Raisins are worth 2, 3, 4, or 5 cents a pound; and the raisins of California are very beautiful, probably the best raisins in the world. I have seen specimens of those raisins which are equal to any produced in the world. To make such a change in the duty on this article, which does not really compete with the raisins of our own country, seems to me at least extortionate, and I think it ought to be corrected. I should have no objection, however, to putting a reasonable rate, an ordinary ad valorem rate, on raisins; but to apply a specific rate to these two articles, which differ so widely in value, raisins being worth at least four or five times as much as Zante currants, is not just to a friendly country, especially to a small country which has an increasing commerce with our own.

I hope Senators will take the matter under consideration, so that it may be called up again when the bill is reported to the Senate. I call attention to it now, but shall not put the Senate to the trouble of taking a vote upon it.

Whatever may have been thought in 1890, it is now well established that Zante currants are really raisins, and grow on a vine like other grapes. Specimens of full-grown vines with the fruit on have been produced in the Federal courts, authenticated by our consuls in Greece, who have superintended the digging and shipping of the specimens.

They come in direct competition with certain California raisins which are now produced in great abundance.

By good rights Zante currants ought to be classified as raisins, which they really are. Then they would have to pay the still higher duty of 2½ cents.

[No. 20.]

IRISH MACKEREL FISH CURERS' ASSOCIATION,  
OFFICES, 10 UNION QUAY,  
Cork, March 17, 1897.

SIR: We are authorized by the above association to transmit to you the inclosed memorial, signed by almost every Irish representative in the British House of Commons, and we hope that you may see your way to concede to the prayer of the petition, which asks that you will be good enough not to increase the duty on Irish-cured mackerel and herrings.

We remain, your obedient servants.

W. W. HARVEY, President.  
GEO. GEORGINSON, Honorary Secretary.

The Right Hon. WILLIAM MCKINLEY,  
President of the United States of America, Washington.

EXECUTIVE MANSION, Washington, March 29, 1897.

MY DEAR SIR: By direction of the President the inclosed memorial from Irish representatives in the British House of Commons in regard to the duty on Irish-cured mackerel and herrings is referred to you for your consideration.

Very truly, yours,

JOHN ADDISON PORTER,  
Secretary to the President.

Hon. NELSON DINGLEY, JR.,  
Chairman Committee on Ways and Means, House of Representatives.

SIR: We, the undersigned Irish representatives in the British House of Commons, have learned with deep regret that there is a probability of heavier duties being imposed on Irish cured mackerel and herrings going into the United States of America.

On behalf of the poor Irish fishermen, we would humbly and very respectfully bring before your notice the real facts of the case, which, when disclosed, will reveal a state of matters rarely to be met with in the annals of any nation.

Within the past ten years the mackerel-curing industry has been started in our country and has given employment to many thousands of poor people living in the most poverty-stricken districts of our land.

Since the inception of this industry there has been a marked improvement in the social condition of the people, although their present state is still very miserable and leaves great room for improvement. Prior to the rise and growth of this industry the condition of the people was sad in the extreme; in fact, our workhouses were every one of them crowded to excess.

For the first few years of the business the prices paid to the fishermen were such as secured for them earnings which after supplying their daily needs left a small surplus to help to purchase nets and boats, or to repay the Government and philanthropic friends, who in the first place provided both boats and nets.

For the past few years the prices paid to the fishermen have been so low that at the end of the season they usually found themselves in debt to the merchant, and before next season came around it has been by no means uncommon to find many of these men with their families applying to the union for relief, and to prevent them from starvation they were reluctantly obliged to accept such shelter.

It should be noted here that the United States of America is the only market to which Irish cured mackerel are sent, and if the present duty were increased, there is, we fear, no alternative for the vast majority of the poor Irish fishermen, but a return to the days of ignominious existence in the wards and hospitals of our unions.

The price paid for fresh mackerel these past few years were so low that if they were reduced—as an increase of duty would necessitate—it would mean that the result of their fishing would not pay for wear and tear of boats and nets, far less leave anything for themselves and their families.

The industry is a young one, and in such a poor country as Ireland is, where there are so few industries, we appeal to you on these high and benevolent grounds of common humanity to graciously consider our applications, and instead of increasing the duties on Irish cured mackerel or herrings, perhaps you will consider favorably the deplorable condition of the Irish fishermen and possibly reduce the existing duties of one and a half dollars per barrel on mackerel and \$1 per barrel on herrings. If it be pleasing to you to keep the duty at its present level, you will confer an untold blessing on many thousands of very poor people in Ireland, and the reduction of these duties would help these thousands to live in a state of comparative comfort and so relieve them from their present abject poverty.

It will be at once obvious to you that a reduction of duty would have far-reaching effects on the social conditions of our very poor fellow-countrymen, and would tend to increase rather than diminish the wealth of the United States, inasmuch as, if the population of these poor congested districts of

Ireland were rendered self-supporting, the immense sums at present sent yearly by their friends in the United States for their support would be no longer needed.

Praying that you may see your way to grant our petition, we have the honor to be, sir,

Your obedient servants,

John Dillon, Edward Saunderson, Michael Davitt, Thos. Waring, P. J. Power, R. N. Penrose Fitz, Gerald, Jas. C. Flynn, A. H. Smith Barry, Jas. F. X. O'Brien, Herbert Robertson, W. Abraham, Robt. T. O'Neill, T. J. Candon, W. E. H. Lecky, James Gilhooly, James M. M. Calmont, James O'Connor, M. A. MacDonnell, Saml. Young, Michael J. Flavin, I. G. Swift MacNeill, Michael Austin, Denis Killeide, Thos. H. Grattan Esmonde, James Roche, Richard McGihee, Justin McCarthy, P. J. O'Brien, M. J. Minch, Bernard Colclery, Th. Healy, T. D. Sullivan, Donal Sullivan, T. Harrington, James P. Farrell, P. A. McHugh, Eugene Crean, John Finnane, Pat O'Brien, J. H. Clancy, William Field, James O'Kelly, James L. Carew, W. H. K. Redmond, John H. Parnell, Thomas B. Curran, James O'Connor, D. MacAleese, Maurice Healy, James Daly, M. A. MacDonnell, A. J. C. Donelan, George Murnaghan.

To the Hon. WILLIAM McKINLEY,

President of the United States of America.

No. 20 is from fifty-three Irish members of the British Parliament. Among them will be noticed such names as John Dillon, Michael Davitt, John H. Parnell, and Justin McCarthy. They are among the ablest statesmen in Parliament. It is fair to presume that in a document of this kind they have addressed to us their most persuasive argument. They, no doubt, paint a truthful picture of the poverty of the Irish fishermen. They are, no doubt, also correct in their contention that a low tariff on mackerel and herring would greatly assist these poor Irish fishermen. But as an American statesman writing a law for the American people, I am more concerned to know what we are going to get out of it.

The only benefit the petitioners offer us is that if we will kindly remit this "tax" on mackerel and herring, then the money thus saved to the fishermen (and lost to our Treasury) will render them self-supporting, so that there will be no necessity for them to live on the charity of their relatives in America. Such legislation would simply transfer the burden of supporting these fishermen from their kind-hearted and prosperous relatives in America to the Federal Treasury. We are willing to do anything that our big-hearted Irish-American fellow-citizens ask us to do, but they have never asked us to relieve them of a duty of filial affection in this way.

The Irish members of Parliament ought not to have asked it. All of the foregoing twenty communications are from statesmen who are employed to work for the advancement of the material welfare of their own several countries.

None of them are so situated that they could be adequately punished by us for their negligence if convicted of occasionally relaxing their vigilance in keeping a watchful care over everything that makes for our national prosperity.

They are unanimously in favor of a tariff for revenue only. They agree that a low tariff will benefit them, and give good reasons for it.

Most of them mention no benefit that we can expect, and the two or three who attempt it give very shadowy and speculative reasons for our comfort.

#### The Currency Commission.

#### REMARKS

OF

HON. DANIEL ERMENTROUT,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 24, 1897.

The House having under consideration the joint resolution authorizing the President to appoint a monetary commission, etc.—

Mr. ERMENTROUT said:

Mr. SPEAKER: At the end of this extraordinary session—extraordinary because it was unnecessary; extraordinary because of the reasons not apparent on the surface for its assembling; extraordinary because of the circumstances connected with the formulation of the chief measure of legislation proposed; extraordinary because of the contradictory title of that measure; extraordinary because of its provisions; extraordinary because of the methods adopted to secure its passage; extraordinary because of the benefits conferred upon individuals by the extraordinary rise through it of certain stocks and commodities in the markets; extraordinary because of the burdens placed upon the consumer even before its passage, and most extraordinary because, having caused all other measures affecting both private and public interests to be set aside, at the tail end of this session most inactive, so far as the House is concerned—it is a noteworthy fact that at this

date three-fourths of its members, without regard to party, have picked up their traps and belongings and have either left or are about to leave the capital. And now, when the dog star, scorching heaven and earth, is preparing to mount to its zenith, the Administration wakes up from its Rip VanWinkle sleep and has made the brilliant discovery that though the revision of the tariff was really the important thing which made this extraordinary session necessary and caused all these extraordinary measures and methods to be invented, yet that the currency question, after all, is of as much importance as the tariff. They told us before that an abundant revenue was the real remedy. They sing another tune now, and it makes discord in the dulcet notes of "Home, Sweet Home" now floating through these halls. But if it be true that it is of equal importance, why was it not given equal rights and equal standing in this extraordinary session? Why was not the precious time wasted in idling by the House allowed to be made useful to the country in investigation, report, and discussion? There is no excuse for this tardiness. It was the question most in issue in most sections in the contest of 1896; the only question discussed before the people in the contest of 1896. It commanded in that contest the largest expenditure of ability, brain, time, eloquence, and also of money, and the application of the most nefarious electioneering methods ever practiced in the political annals of this country.

The brains, the intelligence, the learning, and it is alleged even the morality and honor, of not only this country, but of the whole civilized financial world, were called into requisition in that discussion. And yet, after nearly five months of slumber, this belated Administration wakes up to find that it is at least of equal importance with the tariff. Well might we repeat the maxim of the learned chancellor Oxenstiern, "Behold, my son, with how little wisdom the world is governed!"

The President now sends in a special message, advising what? Not immediate action upon this pressing question. Oh, no; but the appointment of a commission to report in the future. And yet there is no reason stated in the message of the President for the appointment of a commission which is not a stronger reason for immediate action on the currency question. If it be so important, and if a commission was necessary, why not have moved at once? This squandered time, at least, would have been made in the slow process of this remarkable evolution. Is it possible that so low an estimate is placed upon the intelligence of the American people by this Administration and its kitchen Cabinet as to suppose they can be hoodwinked or longer deluded by a scheme so transparent as this?

The popular impression is that had not the general in chief of the Administration discovered that it was not a smooth passage into the Senatorial haven for which he has been trimming his sails this message would never have been laid before us. The knowledge that such a message has been prepared for nearly two weeks, that it has been a matter of Cabinet discussion, newspaper discussion, and yet it has been withheld until it is manifest that no final action could or would be had, exposes the insincerity of the measure, reveals its true inwardness, and supplies the best evidence that it was intended to meet the political emergency which has arisen in the State of Ohio.

The truth of the matter is, taxation and finance, currency and revenue, are mutually interdependent, and should go hand in hand. Those who framed the rules and established the committees for this House have furnished us a striking proof of this principle, because your present Committee on Banking and Currency is but an offshoot of the Committee on Ways and Means.

No one knows this better than our present Chief Executive. I imagine the intelligence of the country will be at a loss to understand how he will be able satisfactorily to explain to the business men of the country his forgetfulness in this behalf and his tardiness in action.

I wish to call especial attention to some features of this resolution. It proposes to expend as an educational fund \$100,000. To start with, that is no small sum. Formerly, before the days of the great trusts, it would have been a very handsome fortune. The action of our friends in the tariff legislation was predicated upon a constantly increasing deficit.

Times are hard. Next year's revenue has been largely anticipated. If money is to jump out of the Treasury by joint resolutions at the rate of \$100,000 in sixty minutes, I fear we will be soon called on to discover additional sources of revenue and probably have another extra session. I submit, under the circumstances in which we find ourselves, we should hesitate long before putting our hands into the people's cash box. Only the supremest necessity will justify it.

Our eloquent colleague from Iowa [Mr. DOLLIVER] has kindly pointed out to us that this commission is not intended, at least not at present, for the enlightenment of the House, but for the education of the Chief Executive; in fact, the beginning of a sort of campaign for education. You know we have had several lately.

But this suggestion relieves the situation materially, because the world knows that we have all been studying up the financial question during the past year, and most if not all of us have endeavored to enlighten and educate the public generally on this question.

We might feel affronted if we were now told that we ought to go to night school. But does the Chief Executive need further knowledge in the case? If he does, probably \$100,000 would be a reasonable price to pay for it. However, when I go back and look into the record, I find that he, when a member of this House, upon one occasion voted for the free and unlimited coinage of silver; that later, on another occasion, he voted for the limited coinage of silver, the Bland-Allison Act, and when President Hayes vetoed the bill, he voted to pass it over his veto.

Also he was the friend of the Sherman bill, and when the late President secured the repeal of that act he denounced him for it in vigorous and emphatic terms. Naturally the inquiry arises, Were the views of the now Chief Executive on this question then sound? Was his education properly completed when he made this record? Does anyone who knows him doubt that he then voiced his genuine convictions?

Does any one doubt that these convictions were the result of observation, of thought, and of study? No one who knows him can doubt it, for he has always been an observant man and a careful student. Has anything occurred to cause him to change his convictions? And if so, when did that occur? We do know that the Republican convention of Ohio that named the delegates to the Republican national convention of 1896 put out a straddling platform on the currency.

We have had no official declaration of any conversion or of any change of views on his part. But let us pass on. When these experts have supplied the Chief Executive with the necessary knowledge, the next step will be to enlighten the House.

In due time, no doubt, a terse message from the White House will be read here. And, if precedents are to be relied on, simultaneously a bill prepared in the usual way, that is, beforehand, by a section of a committee or volunteers, will be promptly introduced and as promptly reported back, containing all this valuable education, and for the purpose of imparting a quick to our body, the Committee on Rules will be on hand meaning business, as my friend HENDERSON, of Iowa, has just declared, and before this House knows itself this information will be pounded down their backs in twenty minutes.

Mr. Speaker, this is unworthy of the high reputation our worthy President has justly earned. To-day for the first time since my return to Congress I have visited the Public Library. No one can go there without feeling that it is the noblest tribute ever erected in the whole wide world by any nation to learning. It is a proud thought that it was erected by this young and glorious Republic of the West. In comparison with it everything ancient and modern pales into utter insignificance.

Why does the Chief Executive seek to take counsel from those whose personal interests are bound up with the present system of finance? Why does he not carry out conclusions long ago arrived at? His soul was in the past on fire for bimetallism. Why should he not think of the wisdom written on those walls—the legend of Prometheus, and rise up to the full height of the occasion?

To the soul of fire,  
I, Pallas Athena,  
Give more fire,  
And to those who are manful,  
A might more than man's.

Let him be manful. Let him discard the preconceived views of a feigned commission, so that this nation may not need, in its great necessity, to echo the companion legend on those walls.

Ancient of days! august Athena! where,  
Where are thy men of might, thy grand in soul?  
Gone—glimmering through the dream of things that were.

The policy of the Chief Executive in this behalf is unworthy of his courage as a gallant soldier and of his experience as a conscientious statesman. Sooner or later he will awake to the full consciousness of this truth.

But why should a commission be created at all? Has not that eminent financier the present Secretary of the Treasury been traversing the entire country? Has he not been taking advice and counsel from divers eminent financiers, who, in their own opinion, know all about banking and currency, gold and silver coinage, and the laws of finance that are worth knowing?

He has gone through the whole gamut, the entire scale. He has held symposiums with them all. From the intellectual misfits of Chicago to the highest authority in Wall street. From Lucy Parsons to J. Pierpont Morgan. By the bye, it may be well for our old-fashioned Republican friends to remember back from whom they are now taking their financial gospel. Our distinguished Secretary voted for that eminent gentleman, the late President, the sire of all the goldbugs. No doubt he would have voted so again had the opportunity been presented.

Common report has it that the Secretary has even prepared a

measure to reform the currency. Financial articles of the metropolitan journals have so asserted. We honor him for it.

This was his sworn, plain duty from the moment he assumed the duties of his appointment. Let the Secretary now take the American people and their representatives into his confidence, and let him disclose to them the "big medicine" he has prepared. It argues bad faith and taints the proposition for a monetary commission with such grave suspicion that it should not command any support whatever in any quarter, least of all in a body bearing a whole people's commission to propose, discuss, and enact all and every measure affecting their welfare. That is what we are commissioned for.

The financial question was last fall and is yet the main issue before the people. To say that it has not been fully discussed is presumptuous and a reflection upon the common intelligence. We are here ready to act. It is our duty to act. If a commission for this, why not turn your Government into a government of commissions? Abolish your House and Senate, save the expense, and give us all a rest. Why this commission? We have had commissions and commissions; tariff commissions and monetary commissions. We had a tariff commission which reported to Congress in 1883. What came of it? Why, members of that very commission appeared before the Congress that met thereafter and opposed the very propositions incorporated in their report and signed by themselves. The commission was useless except for the end for which it was practically created, namely, delay. True, a bill was then passed, but the history of tariff legislation since then shows that it was not satisfactory. That commission, like this, was appointed to take the tariff out of politics, with what success you all know.

There was a monetary conference in 1867, the very first of all, and the meanest of all. It was the conference that made the mischief and opened that Pandora's box of evils from which we now suffer, leaving only a struggling hope behind—a hope, I may add, which, flickering long, became, under the inspiring eloquence and fearless courage of the man Bryan, raised up by Providence to redeem the people, has become brighter and more resplendent, blazing out a pathway in future to the final victory of the true solution of the difficulties and dangers which encompass the nation and the true liberty, prosperity of our people.

I repeat, the monetary conference of 1867 was the first and the meanest, because prior to it there was no disturbance in the workings of the money markets of the world. That was "the first disturbance in what was a satisfactory condition in the workings of the money market of the world," and in these exact terms was so declared by the Hon. William M. Evarts, speaking as a delegate from the United States in the international conference of 1881, and he further declared at the same time that the disturbance "became so by either a fortuitous or a circumspect consent which had obtained between the nations theretofore."

It is very suggestive of how the commission now proposed may be expected to work. Since then there have been numerous monetary commissions and conferences—the commission of the United States of 1876, the international conference of 1881 and that of 1892, at which were represented the best financial ability of the United States as well as that of other countries. A flood of literature on the subject has been emptied on the country, floods of learning and floods of eloquence. What have these conferences accomplished? They have been, under the potent influences controlling them, simply instruments of delay. They were so intended by the same influences, or intended to consummate the mischief begun in the conference of 1867. Results so far would seem to establish the assertion.

During this period the value of products and of commodities, the lands of the farmer, the homes of the workingman, the shops of the merchants, and the property of the real-estate owner have been ground down and down, as the rocks of the mountains are ground by the winds of heaven and dissipated in dust along the highways. If we will follow the teachings of the past, we will create no commission. There has been enough of commissions and conferences, enough of talk, and enough of council.

The time is here for action. Let the matter at last be decided, where it should first have been considered and where it must finally be decided, in these Halls by the American people through their duly accredited representatives, without whose assent and sanction nothing final can be done. If we here carry out the people's wishes, they will sustain us. If we do not, we deserve to be condemned.

As for the influences that have so long barred the way to the triumph of bimetallism, we believe the days of their ascendancy are numbered. They may yet, a little while in the future as in the past, by human agencies work delay. But human laws and human agencies can not prevail against the truth. The great Architect of the Universe built it upon sure foundations and a sure plan. He created gold and silver side by side for human uses, and endowed man with the intellect to perceive and act upon it. Every time that men have schemed to baffle His designs, their councils have come to naught.

When human means have failed, He has always come up to the full measure of relief required by circumstances. When the ancient mines were exhausted and the world was impoverished, He opened up the riches of the Western World through Columbus. In 1849 and 1850, when depression paralyzed the energies of that period, He again was at hand to open the Golden Gate and the rich supplies of Australia. And now, at this era of depression, created artificially by legislation, the Pactolian streams of the Yukon and the golden sands of the Klondyke are flowing in on us in fabulous volume, and because it is added wealth, gladdening the drooping spirit of enterprise and baffling the plans of the schemers who would hold in a few hands the money of the world.

But even should such discoveries fail, this overruling Providence, which through the genius and ever-increasing mastery of man over the forces and secrets of nature is controlling and ever will control all things to carry out and perfect the Divine plan as revealed in the structure of the universe, will not fail. In this age of wonders, of most miraculous and wonderful discoveries, surpassing all the creations of ancient fable or the wildest dreams of the most fervid imagination, it is within the bounds of probability that science may yet discover a method by which every atom of the golden dust now so much worshiped and now a part of mother earth everywhere may be picked up, a method by which every golden atom floating in the waters of the world's oceans may be precipitated and all collected and made useful.

When this immense amount of the yellow metal, exceeding by many, many times the accumulations intact of all the ages, is made available, gold will be as common as dirt. Then, no doubt, the wisecracks may again clamor for the demonetization of gold as they did in 1850, and as they now stand up for the demonetization of silver. Sir, when this not unlikely discovery shall burst upon us, the wisdom of God and the folly of man will again be revealed in a wonderful manner. Then, no doubt, our financiers will stand ready, as they now stand ready, with a proposition to appoint a commission to reform the currency; a proposition for some new device to create a currency which they may again control with the power to impose it upon mankind for their sole benefit. We shall see.

#### The Tariff.

#### SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States—

Mr. WHEELER of Alabama said:

Mr. SPEAKER: Two hours ago the Democratic members of the conference committee were for the first time permitted to see the tariff bill which has been so precipitately thrust before the House.

The greater part of that time has been occupied by the speech of the premier of the House, the sponsor of the bill [Mr. DINGLEY], and it is worthy of note that from the commencement to the close of his speech the distinguished gentleman did not give utterance to a single expression either in its praise or in its defense.

His speech was devoted to an account of the wrangles and controversies between the conferees of the Senate and the House as to schedules and rates, and he closed with a weak apology for the measure which two months ago was the subject of his most enthusiastic adulation.

The whole tenor of this speech was of a nature to make the impression upon his hearers that he had become as much disgusted with the bill as the people will be after they have been subjected to and have felt the weight of its burdens.

It is important that the country should know that the Democratic party and its representatives have never been permitted to exercise either voice or influence in the framing of this measure. [Applause.] When the Democratic conferees were called to the conference this morning, we were informed that it was for the purpose of reporting the bill when the House met at 12 o'clock to-day.

#### IMPORTANT AMENDMENTS REJECTED.

I went to the conference with a number of amendments which I had prepared. They were all reasonable and proper. Their purpose was to restore cotton bagging, iron ties, and grain bags, and many other articles indispensable to farmers to the free list; and if these amendments failed, I had other amendments which sought to include bagging and ties with those articles which are entitled to a drawback when reexported as coverings to cotton.

Before completing the reading of these amendments it was announced that the Republican conferees of both the Senate and House would vote solidly against any amendments offered by a Democrat, and that any time consumed in the committee of conference would lessen the time in which we would be allowed to discuss the bill in the House. During the brief two hours I have had to examine this bill I have found that it contains provisions which justify the assertion that no tax law ever existed since the beginning of civilization that is as odious and atrocious as the measure now being considered by this House. [Applause.]

No doubt the influx of gold from the newly discovered fields will bring some measure of relief, but this law will be a constant weight and hinderance and counteract much of the good which would otherwise come to us.

No measure was ever submitted to Congress so thoroughly favorable to trusts and combines and so disastrous to the interests of the great mass of the people. Every page and nearly every line increase burdens upon labor, and our experience is that laws of this character always have the effect to decrease the wages of labor, to decrease the incomes of the farmers, and to increase the prices they have to pay for the necessities of life.

Mr. GAINES. I desire to ask the gentleman whether the Democratic conferees were at any time requested to be present at the meetings of the Republican conferees of the House?

Mr. WHEELER of Alabama. Never. On the 7th day of July the bill passed the Senate, and the next day the conferees were called to the Senate Committee on Finance. After a short discussion the Democratic members were informed that the Republican members of the committee desired a private consultation, and from that time the Democratic members have not been permitted to be present at any of the conferences, and they have been kept in absolute ignorance of all the proceedings except what they could learn from the public press.

This morning we were called into conference and shown the bill now being considered, and without permitting a single amendment, the Republican conferees of both the Senate and House voted solidly to report the bill.

Mr. GAINES. So that the Democratic conferees were not present at all at the hearings?

Mr. WHEELER of Alabama. Not during this Congress. In the latter part of the last—the Fifty-fourth—Congress hearings were held which were public to everyone, and of course the Democratic members of the Committee on Ways and Means were present.

The Fifty-fifth Congress convened on March 15, and the Committee on Ways and Means was appointed the same day, but the Democratic members were not allowed to participate in any way in the framing of the bill. Of course we were present at the meeting of the committee which voted to report the bill. I proposed a number of amendments in writing, but they were all voted down. Among them were propositions to put bagging, ties, and grain bags on the free list.

#### THE DINGLEY BILL IN FAVOR OF COMBINED WEALTH.

Experience will prove this bill to be more favorable to combined and accumulated wealth, and more oppressive to the toiling masses who by their labor produce all wealth, than any tax law which was ever enacted or even conceived by the lawmaking power of any government.

The McKinley bill was the most odious enactment of that character up to the date it was passed, but the Dingley bill very far exceeds that measure in the disastrous effect it will have upon the producing classes.

Every article of woolen which shields the laboring man and his family from the blasts of winter, whether clothes worn by day or blankets to shelter from cold at night, is taxed from 50 to more than 200 per cent. The carpet of the workingman is taxed as high as 300 per cent, and sugar, which must be used in every family, is taxed nearly 100 per cent.

The bill is sectional in its character to an extreme. It gives increased bounties to the people of the North and Northeast and places most onerous burdens upon the people of the South and West.

In his speech on May 25, 1897, Senator ALDRICH said:

It was, I believe, thoroughly understood throughout the country in the last political campaign that if the Republican party should be again intrusted with power, no extreme tariff legislation would follow.

He also said:

It was believed that in the changed condition of the country a return to the duties imposed by the act of 1890 would not be necessary, even from a protective standpoint.

#### THE DINGLEY BILL RATES FAR EXCEED THE MCKINLEY BILL.

In order to show how utterly these solemn pledges have been disregarded and violated, and that the pending tariff bill is the same old McKinley bill with its worst and most odious features intensified, I have prepared a table showing that upon very many articles used by the poor the tariff tax is higher in the proposed Dingley bill than they were under the McKinley bill, and that the rates on an average are more than double those of the present law.

The table is as follows:

The first column gives the paragraph of the Dingley bill, the second the description of the articles, the third the equivalent ad valorem of the McKinley bill, the fourth column the equivalent ad valorem under the Wilson bill, and the fifth column the equivalent ad valorem under the Dingley bill. Where the duties are specific and values could not be accurately ascertained, the specific rates are inserted.

#### INCREASES ABOVE M'KINLEY BILL.

Table showing some of the articles upon which the Dingley bill levies a higher tariff tax than was levied by the McKinley bill.

[The equivalent ad valorem figures are given, except when values could not be accurately ascertained.]

408	Beads of glass, loose, unthreaded or unstrung.	10	35	35
412	Buttons: Known commercially as agate buttons, metal trousers buttons, except steel, and nickel bar buttons. Pearl or shell. Horn, vegetable ivory, glass, or metal. Shoe buttons, made of paper board, papier maché, pulp, or similar material, not specially provided for, valued at not exceeding 3 cents per gross.	25 143 50 65.03	25 57.15 35 25	35 78.25 43 84.32
415	Coal and coke: Bituminous coal and shale.	22.72	13.76	23.04
419	Emery: Grains, and ground, pulverized or refined.	25.10	Free.	28.95
425	Ostrich feathers. All other.	10 10	Free. Free.	15 15
432	Hats, for men's, women's, and children's wear, composed of the fur of the rabbit, beaver, or other animals, or of which such fur is the component material of chief value, wholly or partially manufactured, including fur hat bodies.	55	40	60
434	Jewelry: All articles not specially provided for, composed of precious metals or imitations thereof, whether set with coral, jet, or pearls, or with diamonds, rubies, cameos, or other precious stones or imitations thereof, or otherwise, and which shall be known commercially as "jewelry," and cameos in frames. Set and not specially provided for.	50 25	35 30	60 60

Table showing some of the articles upon which the Dingley bill levies a higher tariff tax than was levied by the McKinley bill—Continued.

Para-graph.	Article.	McKinley bill.	Wilson bill.	Dingley bill.
435	Precious stones, and imitations of, not set, composed of paste or glass, not exceeding 1 inch in dimensions.	10	10	20
438	Leather and manufactures of— Bend or belting and sole. All other not specially provided for.	10 10	10 10	20 20
447	Harness, saddles, and saddlery, or parts of either, in sets or in parts, finished or unfinished.	35	10	45
454	Paintings, in oil or water colors. Statuary.	15 15	Free. Free.	20 20

The above comparisons are based upon the average value of all importations of the same character during the entire fiscal year. This includes the cheapest articles of a certain class, as also the most expensive. Where the duty is specific the ad valorem on the cheap articles would far exceed the figures above given.

To illustrate: Wools denominated as first class are all taxed 11 cents per pound. Under the Dingley bill this includes a class of wools heretofore called "carpet wools," which, under the McKinley bill, were taxed 32 per cent.

Some of these wools sell at such a low price that the equivalent ad valorem would be over 200 per cent.

The average equivalent ad valorem on one class of buttons is put down at 48 per cent, and that on another class at 78.25 per cent; but some of these being very cheap, the ad valorem duty becomes immense. A New York importer gives instances where the duty on buttons would run to the following figures:

Vegetable ivory buttons for men's wear:	Per cent.
Size 24.....	120
Size 30.....	97
Nickel bar buttons for underwear, size 24.....	607
Linen bar buttons for underwear, size 24.....	447
French bone for underwear, size 25.....	157
French horn for underwear, size 26.....	108
Italian horn for women's wrappers and cardigan jackets, size 31.....	220

Another New York importer gives instances of the actual tariff tax under the Dingley bill upon the following cloths, which are in very general use:

	Per cent.
Black union beaver, 44-inch, for men's overcoats, cotton warp and shoddy weft.....	200
Black union beaver, 54-inch, for men's overcoats, cotton warp and shoddy weft.....	190
Black union beaver, 54-inch, for men's overcoats, cotton warp and shoddy weft.....	158
Black curl, 54-inch, for women's jackets and men's overcoats, cotton warp and shoddy weft.....	153
Black curl, 54-inch, for women's jackets and men's overcoats, cotton warp and woolen and shoddy weft.....	137

These figures show that under the specific duties which prevail in the Dingley bill the ad valorem tax upon cheap articles purchased by the wage earners of our land is enormous.

#### WHY WE HAVE LOST WHEAT EXPORTS.

I have prepared two tables; one showing the exports of wheat from the United States, Argentine Republic, and Russia, and also the exports of flour from the Argentine Republic, Russia, and India from 1880 to 1895, the other showing the average annual product of wheat in the United States, Canada, Argentina, Russia, and British India from the year 1881 to 1895.

The tables are as follows:

Table showing exports of wheat from the United States and the Argentine Republic and Russia, and exports of flour from the Argentine Republic and Russia and India from 1880 to 1895, inclusive.

Year.	Grain.			Flour.		
	United States.	Argentina.	Russia (including Poland).	Russia (including Poland).	Argentina.	British India.
	Bushels.	Bushels.	Bushels.	Pounds.	Pounds.	Pounds.
1880.....	150,712,500	42,829	86,553,741	92,105,845	3,137,776	5,167,317
1881.....	95,962,407	5,772	48,972,597	70,958,434	2,538,193	6,816,048
1882.....	107,352,242	62,658	76,373,532	101,131,373	1,200,838	7,860,854
1883.....	70,450,007	2,232,829	83,777,096	85,948,940	10,679,931	11,067,126
1884.....	84,935,183	3,986,623	67,735,676	98,949,689	8,232,834	18,879,201
1885.....	58,105,141	2,884,109	91,758,136	180,565,000	16,417,826	35,744,069
1886.....	102,390,395	1,391,265	51,614,696	131,451,320	11,601,065	36,082,349
1887.....	66,279,993	8,739,967	77,797,272	135,062,620	11,907,266	36,290,371
1888.....	46,635,624	6,574,431	127,445,302	97,320,851	14,092,778	48,572,042
1889.....	54,558,144	837,982	106,282,491	78,069,947	7,409,387	47,035,853
1890.....	55,131,948	12,047,924	99,955,844	58,363,313	20,494,807	61,028,205
1891.....	159,118,721	14,534,141	105,963,000	111,119,701	15,465,269	57,940,360
1892.....	117,693,859	17,273,565	49,022,000	77,931,854	41,554,505	65,446,446
1893.....	88,631,650	37,042,650	93,991,000	108,158,435	83,000,637	65,916,003
1894.....	76,651,496	59,094,067	123,139,000	128,201,150	89,855,067	74,113,622
1895.....	63,011,494	87,120,987	142,711,000	143,079,706	118,905,101	

Table showing average annual production of wheat, by quinquennial periods, in six of the principal wheat-exporting countries.

Countries.	Average annual product.		
	1881-1885.	1886-1890.	1891-1895.
United States .....	<i>Bushels.</i> 435,685,744	443,847,400	490,246,218
Canada .....	30,200,000	36,294,636	51,405,800
Argentina .....	* 13,000,000	22,300,000	61,600,000
Russia .....	† 224,106,611	233,400,988	301,406,600
India .....	289,721,362	245,657,238	224,900,600

\* Annual average for the two years 1884-1885.

† Annual average for triennium 1883-1885.

These tables show that while our product of wheat has increased, our exports have fallen to one-third, while our values of exports have fallen to one-fifth. It also shows that while India has decreased her production of wheat, she has increased her exports of flour fifteenfold, and it shows that India, Argentina, and Russia now supply the market that was once supplied by the United States.

There are two reasons for this. One is that our tariff laws and our financial laws against silver are such that the nations which purchase grain and flour find it more to their advantage to purchase in Argentina, Russia, and British India than in the United States.

It is true that the United States has increased its exports of flour, but by no means in proportion to its loss of exports of wheat.

We increased the tariff on wheat to enable a few American farmers on the Canada border to charge their neighbors more for that article.

But the Canadians quietly shipped their wheat to European markets, and during the last four years their exports to Europe have been 34,976,904 bushels, an annual average of 8,744,226, and we have lost that amount of export.

All these tables and facts should be well considered by Republicans who are engaged in raising wheat.

#### EXPORTS OF COTTON GOODS BY INDIA AND UNITED STATES.

I have also prepared the following interesting table, which tells our cotton planters that poor heathen India during the last quarter of a century has increased her exports of cotton goods more than fivefold, and that they are now more than double the exports of the United States. This is also due to Republican tariff and financial legislation.

Table giving values of exports of manufactured cotton (twist and yarn) from British India, and the exports of all cotton goods of domestic manufacture from the United States for the years 1871 to 1896, inclusive.

Year.	Exports from United States.	Exports from British India.	Year.	Exports from United States.	Exports from British India.
1871.....	\$3,558,136	\$6,861,828	1884.....	\$11,885,211	\$20,660,929
1872.....	2,304,330	5,730,325	1885.....	11,836,591	22,320,854
1873.....	2,947,528	6,898,506	1886.....	13,359,934	24,773,055
1874.....	3,065,840	7,763,898	1887.....	14,929,342	20,840,811
1875.....	4,071,832	7,994,103	1888.....	13,013,189	21,279,254
1876.....	7,722,978	8,297,154	1889.....	10,212,644	25,945,636
1877.....	10,235,843	9,417,641	1890.....	9,939,277	27,337,428
1878.....	11,458,680	11,169,002	1891.....	13,004,857	30,326,336
1879.....	10,893,650	12,564,462	1892.....	13,225,277	28,425,091
1880.....	9,881,418	13,324,068	1893.....	11,809,855	29,754,588
1881.....	13,571,387	15,125,000	1894.....	14,340,886	24,411,981
1882.....	13,222,979	16,231,169	1895.....	13,789,810	26,702,913
1883.....	12,951,145	19,308,374	1896.....	16,837,396	32,519,937

#### BILL TO PROTECT MONOPOLIES AND TRUSTS.

The bill should be entitled "An act for the protection of and to increase the power and wealth of combines, monopolies, and trusts."

Nearly the entire bill is framed to attain such a purpose. On March 31 a resolution was voted upon in the House the object being to incorporate a provision in the bill, the effect of which would have been to add an amendment placing

upon the free list all articles manufactured, produced, or controlled by any combination or organization of persons or corporations formed in the United States for the purpose of limiting, regulating, or controlling the supply or price of any such articles.

The proposed amendment also contained the further provision that

the rates of duty now prescribed by law shall be levied and collected on any or all of such articles when, in the opinion of the Secretary of the Treasury, such articles shall cease to be manufactured, produced, or controlled in the United States by any such combination or organization.

This amendment was a blow at organized trusts. It was voted for by every Democrat and voted against by every Republican, and, as a prominent Republican stated, if that amendment carried, the entire purpose of the bill would be defeated.

Nearly all the manufacturers of similar articles in the North-east have organized into what are called trusts or combinations. For instance, the Standard Oil trust, the cotton-seed oil trust, the nail trust, and the barbed-wire trust. These organizations are as follows:

All the manufacturers in a certain line combine together and elect a board of trustees. They keep informed as to the stocks of goods in the United States of the kind in which they are interested, and by closing a portion of their factories from time to time they keep the production down to the demand in this country. By these organizations they regulate the production, the price, and the price of labor. When the production exceeds the demand, several factories stop work, and thus laborers are thrown out of employment. This enables the manufacturer to take advantage of the suffering of these idle men and reduce wages.

In 1888 Mr. William Cook published a book on Trusts. He says:

A "trust" is a combination of many competing concerns under one management, which thereby reduces the cost, regulates the amount of production, and increases the price for which the article is sold. It is either a monopoly or an endeavor to establish a monopoly. Its purpose is to make larger profits by decreasing cost, limiting productions, and increasing the price to the consumer. This it accomplishes by presenting to the competitors the alternative of joining the "trust" or of being crushed out. Its organization is intricate, secret, and subtle.

They then have the power to cause one concern to be closed, limit the production of another, and so control the market.

This book and a work on monopolies and their relation to the people, published by G. P. Putnam's Sons, 1889, give some account of several organizations of this character which existed at that time.

#### REPUBLICANS PAY CAMPAIGN DEBTS.

I will print the list, together with the names of other trusts which have been organized since that time, as an appendix to my speech, and will state the tariff protection they now enjoy and the enormous increase which is donated to them by the bill.

The moment the Dingley bill was reported to the House the capital stock in each of these organizations commenced to rise and has continued to increase ever since.

To show the enormous extent of the benefit which these trusts and combinations expect to derive from this bill, I give below the names of eleven of these organizations, together with the amount of stock, its value in April, its value to-day, and the gross increase in values since this bill passed the House of Representatives.

Name of company.	Amount of stock (par 100).	Price in April.	Yester-day's price.	Increase in market values.
American Cotton Oil Co. ....	\$20,237,100	9½	15	\$1,214,226
American Cotton Oil Co., preferred.	10,198,600	52½	66	1,427,804
Equitable Gas Co. ....	4,000,000	180	262	3,200,000
Standard Oil Co. ....	100,000,000	250	320	70,000,000
American Spirits Manufacturing Co. ....	26,491,200	9½	14½	1,324,560
American Spirits Manufacturing Co., preferred.	6,062,820	26	34½	580,325
American Sugar Refining Co. ....	37,500,000	109½	144½	13,125,000
American Sugar Refining Co., preferred.	37,500,000	100½	113	4,875,000
American Tobacco Co. ....	17,900,000	67½	81½	2,500,000
Chicago Gas Co., certificate of deposit.	24,885,800	73½	98½	6,221,450
Consolidated Gas Co. ....	35,430,000	136½	169½	11,091,919
United States Leather Co. ....	62,221,900	6½	9½	1,896,657
United States Leather Co., preferred.	61,621,900	50	63	8,010,847
United States Rubber Co. ....	19,400,500	10	25½	2,910,075
United States Rubber Co., preferred.	20,166,600	52	70½	4,830,984
Western Union Telegraph Co. ....	95,370,000	75½	85½	9,537,000

The New York World and the St. Louis Republic each give a list of twenty-five organized trusts, together with figures, showing that the advance in their market value during the last three months exceeds \$200,000,000, and this is the recompense for their contributions to the campaign fund which restored the Republican party to power. I think anyone who is familiar with the facts will conclude that the convening of this extraordinary session and the enactment of this bill were solely for the purpose of paying campaign debts.

#### PRESIDENT'S MESSAGE MISLEADING.

On March 6, two days after the inauguration of the present Executive, he convened this extraordinary session of Congress.

On the 15th, the day Congress assembled, we received his message informing us that during the last three years the Government expenditures had exceeded our receipts and that we were convened for the sole purpose of enacting a law to increase the revenue. The closing paragraph of the message contains these words:

The necessity of the passage of a tariff law which shall provide ample revenue need not be further urged. The imperative demand of the hour is the prompt enactment of such a measure, and to this object I earnestly recommend that Congress shall make every endeavor. Before other business is transacted, let us first provide sufficient revenue.

President McKinley's message tells us that the expenditures exceeded the receipts during the last three years as follows:

Year ending June 30, 1891.....	\$69,803,200.58
Year ending June 30, 1892.....	42,805,223.18
Year ending June 30, 1893.....	25,203,245.70

The message seems to have created the impression that these deficiencies occurred under the Wilson bill. This is very erroneous.

Every dollar of the \$69,803,260.58 deficiency was incurred under the administration of the McKinley bill. A considerable portion of the \$42,805,223.18 was also incurred under the operation of the McKinley bill, and of the three amounts given the \$25,203,245.70 was the only one which occurred solely during the operation of the Wilson bill. This shows that under the Wilson bill the deficiencies were but little more than one-third what they were under the McKinley bill.

The records of the Treasury show that deficiencies commenced immediately after the McKinley bill went into operation. The deficiencies were \$13,891,347.93 the month following its passage, and during fifteen months of Harrison's Administration the expenditures exceeded the receipts, and in September, 1892, before Cleveland's election, the deficiencies commenced being continuous, and they continued every month until the close of Harrison's Administration.

I append a table and statement sustaining this assertion.

On March 22, 1897, the distinguished chairman of the Committee on Ways and Means [Mr. DINGLEY], the premier of the House, made an eloquent and thrilling speech upon this floor in which he earnestly appealed to his Republican conferees to vote for the tariff bill which on the first day of our session he had presented to the House.

His first utterance was as I will read:

Congress has been convened in extraordinary session by the President for the purpose of providing adequate revenue for carrying on the Government.

Mr. DINGLEY repeated the figures of deficiency as given by the President and added the assertion that the deficiencies for the year ending June 30, 1897, would be \$65,000,000. To show that Mr. DINGLEY was as far in error in this statement, as he has been in other estimates, I give the exact figures as furnished by the Treasury Department of the expenditures and receipts for the year ending June 30, 1897:

Expenditures.....	\$365,807,836.32
Receipts.....	347,184,728.62
Deficiency.....	18,623,107.70

This shows that Mr. DINGLEY's estimate exceeded the actual facts by \$46,876,892.80, and was more than three and one-half times the actual deficiency.

Republicans have attempted to explain this by stating that the large receipts within the last three months have been caused by excessive imports. They have especially dwelt upon the large imports of wool. Now, they forget that wool is on the free list, and most of the articles that are being imported largely are also on the free list, and therefore not one cent of revenue is derived from such imports.

That there was no necessity for increasing our revenues was evident, because the day the proclamation was issued the available cash balance in the Treasury was \$211,506,968.59, and on the day Mr. DINGLEY reported the bill and made his speech this available cash balance had increased to \$218,050,908.78, and to-day this cash balance has increased to \$231,301,930.61.

I will append to my speech figures showing that nearly every day since March 6 the receipts under the Democratic Wilson bill have far exceeded the expenditures.

These figures show that these excesses since March 6, the day that President McKinley issued his proclamation, have reached the enormous sum of \$38,149,879.25.

REPUBLICANS NOW CONFESS IT IS ONLY TEMPORARY.

The speeches during the campaign, and those made in both Houses of Congress during the first two months of the discussion of this bill, were eloquent in their assurances to the country that the bill about to be enacted by the Republican party would be so wise and just, and so satisfactory to all interests and all sections, that it could be regarded as the permanent law of our land.

Even the distinguished and aggressive advocate of extreme protection, Senator ALDRICH, of Rhode Island, joined heartily in this assurance. In his opening speech of May 25, 1897 (CONGRESSIONAL RECORD, page 1553), this distinguished Senator said:

Such a moderate and reasonable measure should be adopted as will insure a much greater degree of permanence to our tariff legislation. Frequent revisions of the tariff are productive of long periods of uncertainty and arrested development. The radical change in policy in 1894 proved disastrous to the business interests of the country.

The insincerity of these professions was soon made manifest. Enormity after enormity was adopted as the bill progressed. The alarm of the country became intensified. The great press of the country became vehement in their denunciation of the measure, and European nations, who are our largest purchasers, boldly

threatened to retaliate by placing prohibitory duties upon American products.

Republican Senators sought to quiet the alarm of the people. They abandoned all their assertions that the bill must be permanent, and took measures to assure the people that the bill was only a makeshift and that they would be afflicted by its evils and burdens only for a short time; and finally, to emphasize this assurance of the temporary character of the bill, an amendment was voted for by Republican Senators to attach a section to the bill providing for the appointment of three general appraisers, whose duty would be to commence immediate investigations and prepare recommendations to be submitted to Congress through the Secretary of the Treasury.

The effect of this amendment would be to commence laying the foundation for a new tariff bill the moment this bill became the law.

I mention this to show the utter inconsistency of the Republican party and their confession that the measure they are preparing is simply for the purpose of paying the political debts of the last campaign.

FARM LIFE PRODUCES OUR GREAT MEN.

I yield to no man, Mr. Speaker, in my devotion to the interest of the farmers of our country. From the farmer springs substantially all the wealth of which our country boasts, and the welfare of all other vocations is largely dependent upon his prosperity. When the farmer is prosperous, the manufacturer has the best market for his wares, the merchant collects his debts, the educator, the minister, the lawyer, the physician, and the followers of all other vocations are well paid. [Applause.]

The farmers are our best, most conservative, and most virtuous citizens during peace, and our bravest and least complaining soldiers during war. It is from the farm home that have come our great generals, our wisest statesmen, our most eminent jurists and divines, and our inventors; and it is from that nursery of virtue that have come the men who have built our cities, our manufactories, our railroads, and developed our commerce. It was to the virtue and the wisdom of farmers that we owe the foundation of this great Republic.

Washington, the father of our country, and the successful commander of our Revolutionary Army, was a farmer, and reared by his mother, a farmer's widow.

Putnam, Wayne, Starke, Marion, Greene, Lincoln, Mercer, and Sullivan were farm boys, and after reaching manhood followed the vocation of farmers. Grant, Lincoln, Lee, and Stonewall Jackson were reared upon farms.

With scarcely any exception, all the great men of our colonial days and the members of our colonial and continental Congresses were men who devoted themselves to the ennobling occupation of agriculture. The same is largely true regarding the learned, wise, and eminent statesmen to whom we are indebted for the Constitution under which we live; for not only was the constitutional convention itself mostly composed of farmers, but the conventions of the States which ratified that instrument were also almost entirely composed of men who had been reared upon the farm and were following that profession as a vocation.

FARMERS INJURED BY HIGH TARIFF.

I oppose the tariff upon farm products for the reason that my investigations have convinced me that it is injurious to 99 out of 100 of our farmers, and that the tariff is placed upon their products for the purpose of inducing them to join the Northeastern manufacturers in electing officials who will enact tariff laws dictated by them.

I give below a statement of the proposed tariff on many farm products, and also give the quantity imported last year:

Article.	United States production.	Quantity imported.	Value of imports.	Tariff.
				Per cent.
Cotton-seed oil.....	gallons.....	7,621	\$2,216	24.07
Barley.....	bushels.....	829,017	312,224	79.39

If we leave out hay, the entire value of the imports of all these farm products would be only \$1,445,916, a sum which is absolutely insignificant when compared with the total value of the farm products of the United States, which were estimated last year at over \$3,000,000,000.

It seems to me impossible to conceive of more injudicious legislation.

The tax on these farm products can not and does not have the effect of raising the price of the articles, except in a narrow strip along our immediate border, and therefore can not have any beneficial effect, except to, say, one citizen out of a thousand.

#### WRONG END OF THE LEVER.

Statesmen who are trying to help the farmer by putting a tariff duty on wheat, rye, rye flour, barley, barley corn, cornmeal, cotton, pease, cotton-seed oil, straw, oatmeal, and wheat flour have gotten hold of "the wrong end of the lever." Most of them know that they are at the wrong end, and they are willfully trying to deceive the farmer; others who are intrusted with legislation innocently catch "the wrong end" because they have been deceived by wily, sagacious, and unscrupulous politicians.

To illustrate the force of this, I give a statement showing the number of bushels of various farm products produced in the United States to one bushel imported, and the same estimate in regard to tons of hay, pounds of hops, and bales of cotton:

In year—	Production to 1 bushel imported.
1896, for 1 bushel corn imported we produced.....	411,114 bushels.
1893, for 1 bushel corn imported we produced.....	863,817 bushels.
1896, for 1 bushel wheat imported we produced.....	17,341 bushels.
1891, for 1 bushel wheat imported we produced.....	113,187 bushels.
1896, for 1 bushel barley imported we produced.....	105 bushels.
1896, for 1 bushel buckwheat imported we produced.....	29,165 bushels.
1896, for 1 bushel buckwheat imported we produced.....	35,468 bushels.
1896, for 1 bushel rye imported we produced.....	1,875,000 bushels.
1890, for 1 bushel rye imported we produced.....	933,333 bushels.
1894, for 1 bushel rye imported we produced.....	534,532 bushels.
1896, for 1 bushel rye imported we produced.....	201,555 bushels.
1896, for 1 bushel potatoes imported we produced.....	1,696 bushels.
1896, for 1 bushel oats imported we produced.....	4,413 bushels.
1896, for 1 pound hops imported we produced.....	723 pounds.
1893, for 1 ton hay imported we produced.....	641 tons.
1896, for 1 bale cotton imported we produced.....	166 bales.

#### LEGISLATIVE FOLLY.

Did any nation on earth ever commit such a folly as to put a tariff tax on rye with the records before them that in a single year we produced nearly 2,000,000 bushels to one bushel imported, and a tariff of 26.37 per cent on corn when we produced 863,817 bushels to one imported, and a tariff of 48.33 on buckwheat when we produced 35,468 bushels to one imported?

In 1887, with a tax on cotton-seed oil of 25 cents a gallon, only 15 gallons were imported. In 1888, 2 gallons were imported. In 1889, 1890, and 1891 the Treasury Department reports that there were no imports. In 1892, with a tax of 10 cents a gallon, 14 gallons were imported. In 1894, 10 gallons were imported. The Democrats then made cotton-seed oil free, and in 1895 but 1 gallon was imported.

It is true that under peculiar circumstances the importations were much larger in 1894 and 1896.

Republican legislation is like the same old story—they take the turkey and give us the buzzard, but they strip the buzzard of its feathers before handing it to the Southern farmer.

Now, the detrimental effect of putting a tariff upon articles which we produce so abundantly and export so largely is that it induces nations which import and consume these products to put upon them heavy import duties, and thus restrict or prevent us from selling our products in their markets.

#### UNDER DEMOCRATIC LAWS FARMERS BUY IN THE CHEAPEST AND SELL THEIR PRODUCTS IN THE HIGHEST MARKETS.

The Democratic party seeks to help the American farmer by making laws so as to enable him to sell his products with the least possible restriction in the highest market, and therefore get the highest price, and at the same time to enable him to buy his bagging and ties and fertilizers and seeds and cotton gins and cotton machines and clothing with the least possible restriction in the lowest market, and therefore at the cheapest price.

It is for this reason that Democrats seek to admit all of these articles free. That is the way to relieve the farmer of burdens.

That was the line of legislation in the Wilson Democratic bill, but this Republican bill reverses the method. It puts a duty upon all these articles which farmers purchase, which increases their cost, therefore compelling them to purchase in the highest market.

The result of Republican legislation is to induce those countries where our farmers find a market for their products to enact retaliatory tariff legislation, which restricts or prevents our farmers from selling their goods in the highest market, and in that way prevents their getting the highest price for what they produce.

Again, I have always advocated and insisted upon machinery for making cotton being admitted free. This was for the benefit of the cotton farmers, because it facilitated the preparation of their

raw cotton for the use of mankind, and this always tends to enhance the value, even in its raw state.

#### DETRIMENTAL EFFECT OF INJUDICIOUS TARIFF LAWS.

Witness the effect of injudicious tariff laws. With cotton free of duty, we have increased our production to 9,901,351 bales in 1894, from 5,713,300 bales in 1884, while with an equivalent ad valorem duty varying from 100 to 200 per cent on wool, our production of wool has fallen to 335,210,712 pounds in 1894, from 337,500,000 pounds in 1884, and the wool clip of Texas under this enormous tariff duty has fallen to 20,014,883 pounds in 1894, from 26,973,296 pounds in 1884, and the number of sheep during the same time has fallen to 2,859,269 in 1894, from 4,691,008 in 1884. Now, with cotton absolutely free of duty, Texas has increased the crop of that article to 3,073,861 bales in 1894, from 1,101,746 bales in 1880, and yet with these facts before them, Republican politicians insult the intelligence of the people of that great State by telling them that they advocate a protective duty on their cotton, wheat, corn, and wool because they love the people of Texas and want to increase their prosperity.

Their devotion to our Texas people is very like that of the devotion of the friends of Max Lebandy: This unfortunate Frenchman inherited \$3,600,000. He was immediately surrounded by friends who assured him they wished to make him a rival of the Rothschilds, and one year after attaining his majority he died a bankrupt.

Some of his devoted friends are now in prison, charged with and convicted of willfully persuading him to enter into business arrangements which they knew would result in loss to him.

Now, if this country was like France and they imprisoned men here for knowingly attempting to persuade good, honest farmers into the advocacy and support of legislation detrimental to their interest, some of our great Republican statesmen would inhabit the penitentiary for the rest of their lives.

#### FERTILIZERS.

For fifty years gypsum, or plaster of paris, has been free. It is well known that the fertility of our soil is being rapidly exhausted, and that every ton of the products of agriculture that is shipped abroad enriches the nation but impoverishes our soil. After the tariff bill had been reported by both the House and Senate with this article free of duty, the mine owners procured the adoption of an amendment subjecting this fertilizer to duty.

Now, it must be borne in mind that the farmer gets no drawback and no compensatory duty upon anything he produces, while the manufacturer is allowed either a compensatory duty, a drawback, or free raw material on everything that enters into the manufacture of his products, in addition to the protection allowed on the article he manufactures.

#### BARLEY.

The price of barley, in spite of the almost prohibitory duty, has fallen from 74 cents a bushel in 1883 to 38 cents in 1896.

Now, the proposed duty of 30 cents for a value of 40 cents must of necessity be prohibitive.

This duty will not benefit one farmer out of five hundred. The only persons it can benefit are the few who raise barley along the Canadian border.

It can not benefit farmers generally, for we produce more barley than is consumed in the United States. Last year we exported 7,680,331 bushels, while we imported only 826,017, about one-tenth of exports.

Examples of the effect of high tariff legislation and the resulting retaliatory tariffs from foreign countries come constantly to my mind. Last year we raised 2,151,139,000 bushels of corn, worth \$1,000,000,000. We could readily have exported half of this, but, on account of retaliatory tariffs with foreign countries, our exports of corn have for several years run from \$13,000,000 to \$30,000,000 and our exports of wheat from \$11,000,000 to \$60,000,000, whereas formerly our exports of wheat were \$232,000,000 and our exports of corn over \$56,000,000.

#### DESTRUCTIVE EFFECT OF HIGH TARIFF.

A nation which has but 4 per cent of the population of the world, and produces 87 per cent of the corn certainly should so frame its laws as to secure as far as possible the markets of the world for its surplus products.

This is so plain and unquestionable that it seems to me it will be admitted by all intelligent people. My examination of our country's history has so thoroughly convinced me that I have frequently alluded to it since I have been in public life.

I trust I may be pardoned for referring to some of my speeches upon this point which I happen to have before me on my desk.

On January 30, 1883, having moved to strike out the tariff on cotton seed oil, I said:

On cotton-seed oil there is a duty of 30 cents a gallon. By imposing this duty we justify Italy in imposing a tariff duty upon the cotton-seed oil that we export to that country, and I see by the report of the Tariff Commission that nine-tenths of the cotton-seed oil made in the United States is exported to Marseilles, Trieste, and other Mediterranean ports.

Now, again, comes the question of retaliatory tariff. I am informed that

after we enacted the law taxing the importations of raw cotton-seed oil into our ports, the Government of Italy retaliated and laid a tariff tax on all cotton-seed oil which we shipped to her ports, and as a consequence materially impeded our trade to that country.

On March 21, 1892, I made an argument in this Hall against high tariff, and in referring to this question I said:

In the speech which I had the honor to make in this Hall January 30, 1883, I made a motion to strike out a clause in the tariff bill of that year which proposed tariff protection to manufacturers of cotton-seed oil.

The bill proposed to continue a duty of 30 cents per gallon, equal to 86 per cent ad valorem. The people of the South were struggling to build up this new industry, and with great difficulty we had found a foreign market, three-fourths of which was with Marseilles, Trieste, and other Mediterranean ports.

I am informed that France and Italy had been induced to put an import duty on our cotton-seed oil, and our exports, which in 1880 reached 6,907,796 gallons, fell off in a few years to only 415,011 gallons. In 1883 these facts were presented to Congress, but the best we could do was to get a reduction of duty to 25 cents.

It is true that since that time we have built up an export trade with the Netherlands and other countries, and I give this experience as a proof of the injurious effects of injudicious legislation. Again, on May 9, 1890, I spoke against the McKinley bill in these words:

#### PREDICTIONS FULLY VERIFIED.

The advocates of the bill now before the House tell us that it will stop the importation of all manufactured articles which can be made with American labor, and they are so ignorant of the great laws of trade and commerce as to exultingly boast of the injurious effect the McKinley bill will have upon foreign industries.

I want to say here and now, and I want it to be remembered, that I assert this bill is framed so as to especially favor the general policy of the English commercial system, and I further assert that it will not be regarded with disfavor by the statesmen who control that system.

Any action upon our part which cuts off or limits the commercial relations of the United States with the rest of the world will be to the advantage of English manufacturers and English commerce and will go far toward adding to the supremacy of England upon the oceans of the world. It is true that some manufacturers of England, who are engaged in the production of articles particularly adapted to our market, will be subjected to losses, but the great bulk of English trade and commerce will ultimately be the beneficiaries of the suicidal policy upon which the McKinley bill is based.

I have not time to repeat the statistics, but in my speech of May 10 of this year I gave the exact figures showing that under the McKinley bill our iron industries had fallen off, while those of nearly all European countries had been materially benefited.

#### EUROPE THREATENS RETALIATION.

Since the purpose of those who are responsible for the Dingley bill has been made public the great journals of Europe have informed us that European nations will promptly enact laws placing high and probably prohibitory duties against the products of the United States.

The following dispatch from Berlin is a brief but pointed expression of this character:

#### CLAMORS FOR RETALIATION—A TARIFF COALITION OF EUROPEAN COUNTRIES PROPOSED.

The Kreuz Zeitung, of this city, in an article directed against the Dingley tariff, clamors for retaliation, and asks the Government to form a tariff coalition with Austria, France, Italy, Spain, and Holland for the purpose of keeping American grains, meat, cotton, and petroleum out of all those countries. This proposal has attracted attention throughout Europe.

That this threat will be carried out, at least in a measure, I think there can be no doubt. The bill is prohibitory, or nearly so, on many articles which Germany has been selling in this country, and the tariff upon German refined sugar is doubled. The sugar trust will be the immediate beneficiary, the people the victims of this legislation.

#### THE SUGAR-TRUST SCHEDULE.

It is quite apparent that the sugar trust, like all the other combines, has succeeded in securing a schedule on sugar which will give this wealthy organization most enormous profits. It is a painful spectacle to see the sugar-trust attorneys and agents coming to a Republican Congress, controlling their committees, and influencing the votes of men who are sent here by honest constituencies to defend the rights of the people.

This exercise of the power of wealth in controlling legislation reminds me of the corrupt days of the Roman Empire, prior to the downfall of that great nation which was once the mistress of the world. [Applause.]

Mr. JOHNSON of Indiana. Will the gentleman permit me a question?

Mr. WHEELER of Alabama. Yes.

Mr. JOHNSON of Indiana. I understood the gentleman to speak of this Congress being dominated by the sugar trust.

Mr. WHEELER of Alabama. Yes, the Republican side of it.

Mr. JOHNSON of Indiana. Well, I understand that in the bill under consideration now the differential duty on sugar is less than it is in the existing Wilson law.

Mr. WHEELER of Alabama. The gentleman is mistaken. The bill now being considered gives a differential or protection to the refiners, which includes the sugar trust, more than twice as great as that which they enjoyed under the Wilson bill.

Mr. JOHNSON of Indiana. That is not my understanding.

Mr. WHEELER of Alabama. If the gentleman will examine

the statement upon this subject from the Treasury Department, he will see that he is mistaken. It is true that by taking a certain grade of very cheap raw sugar of which very little is imported such a result has been figured out.

For instance, Mr. DINGLEY makes his estimate on raw sugar at 1.85, when to be accurate he should have put it at 2.13, which was the correct price as stated by the Treasury officials.

It has also been stated that there were undervaluations under the Wilson bill which gave importers an advantage, but this statement is not substantiated and has been denied.

Under the Wilson bill the duty on refined sugar is 40 per cent ad valorem and one-eighth of a cent per pound, and if imported from Germany, the place from which most of our refined sugar comes, the duty was 40 per cent and nine-fortieths of a cent, because of the bounty paid by that country.

The duty under the House bill was 1.875, and under the conference report as it now is it is 1.950.

More than 90 per cent of imported sugar comes to us in a raw condition, and the sugar trust refines and furnishes to the public 96.67 of this importation.

The greater part of the sugar imported was 92 degrees.

Mr. DINGLEY admitted this in the speech which he has just made. He said:

Ninety-two degrees test was the average test of the importations of raw sugar last year.

According to the conference report (paragraph 209) the duty on 100 pounds of refined sugar would be \$1.95, and on 100 pounds of 92-degree raw sugar, \$1.545, leaving a protection to the sugar trust on 100 pounds of sugar of four hundred and five one-thousandths.

Now, most of the refined sugar which is imported in this country comes from Germany, and that country pays a bounty of 37.8 cents upon 100 pounds of refined sugar.

Now, section 5 in the latter part of this bill provides that—

There shall be levied and paid, in all such cases, in addition to the duties otherwise imposed by this act, an additional duty equal to the net amount of such bounty or grant.

Therefore on all German refined sugar there would be a protection under this bill of 78.3 cents upon 100 pounds.

Senator ALDRICH says (CONGRESSIONAL RECORD, page 1556):

I have taken first marks German granulated for the comparison, as this is the sugar that competes with our refiners and furnishes the proper basis for comparison.

He also says, on page 1557:

I have taken the March figures as a basis for all comparisons, as I believe they fairly represent normal conditions.

Now, German refined sugar was 2.3 cents a pound in March, and 40 per cent duty on \$2.30 is 92 cents. One-eighth of a cent per pound differential is one hundred and twenty-five one thousandths. One-tenth of a cent per pound countervailing duty is ten one-hundredths, and the total duty on 100 pounds of German refined is \$1.145.

Now, under the Wilson law, the duty on raw sugar did not include any one-eighth differential, and as no raw sugar comes from a bounty-paying country there was not any countervailing duty, the only duty on raw sugar under the Wilson bill being 40 per cent, and the duty on 100 pounds, worth \$2.13, would be eight hundred and fifty-two one thousandths.

Now subtract this from \$1.145 and we would have two hundred and ninety-three one-thousandths, which would be the protection to refiners on 100 pounds of sugar under the Wilson bill.

Now, according to the conference report, the duty on 100 pounds of German refined sugar would be 1.950; add the countervailing duty, 37.8, and the total duty on 100 pounds of German refined would be \$2.328.

Now, the duty on 100 pounds of 92-degree raw sugar is \$1.545, and the protection to the refiners under the conference report would be seven hundred and eighty-three one-thousandths. The protection to refiners under the Wilson bill would only be two hundred and ninety-three one-thousandths, showing that the refiners get forty-nine one-hundredths more under the Dingley law as reported than under the Wilson law.

Mr. GAINES. The gentleman from Maine [Mr. DINGLEY] also said that the sugar stock had gone up, and in the breath previous he said the tariff on sugar had been lowered.

Mr. JOHNSON of Indiana. We can not understand the reasons of speculators for the rise and fall of sugar stock, but we can tell the difference between one-eighth and one-fifth differential. Now, what I want the gentleman to do is, if we have been dominated by the sugar trust, to point it out in some tangible way, that I may be able to comprehend.

Mr. WHEELER of Alabama. What I have stated, which you will find elaborated in the conference report, is quite explanatory. The gentleman can not doubt but that the sugar trust understands the advantage, because since the report has been made sugar-trust stock has risen so that the total increase enriches its owners by about \$11,000,000. If I had time, I would make an elaborate statement.

Mr. JOHNSON of Indiana. I do not want an elaborate statement, but just a pointed one that I can comprehend.

Mr. WHEELER of Alabama. If the gentleman will go with me to my committee room at his leisure, I will figure the matter out for him in all its aspects.

Mr. JOHNSON of Indiana. But the vote, I understand, is to be taken to-night, and that kind of information would be of no use.

Mr. WHEELER of Alabama. If it is possible for the Democratic side of the House to prevent it, we will not allow a vote to take place to-night.

The public press only received the conference report this afternoon, and the Republican majority are endeavoring to force us to a vote to-night, because they know that the public press to-morrow morning throughout the country will denounce the bill so furiously that it will be very difficult to keep their party in line. They know that if the bill is delayed until to-morrow there will be many Republicans who will be afraid to vote for it. [Laughter and applause.] That is the reason why they are so anxious to force a vote to-night.

Mr. JOHNSON of Indiana. That is a phase of the question that had not occurred to me.

Mr. GAINES. They formulated this bill at night and want to pass it at night.

Mr. WHEELER of Alabama. Dispatches tell us that stocks of all combines and trusts have risen in New York in the last two hours. Since the features of this bill were sent off by telegraph sugar stock jumped 7 points at once. No doubt combines and trusts, in whose interests this bill was framed, have telegraphed here ordering that the bill be passed to-night. This morning in the conference committee neither Mr. DINGLEY nor anyone else made any suggestion or expressed any desire for the vote to take place before to-morrow night. Orders must have come from somewhere to make the change.

Mr. HANDY. The stock has risen over 11 per cent to-day.

Mr. WHEELER of Alabama. I am informed by the gentleman from Delaware that sugar stock has risen over 11 per cent to-day.

Mr. GAINES. And that under a tariff that is said to be less than the Wilson bill.

Mr. JOHNSON of Indiana. That may be. We do not understand what the course of the speculator is upon propositions of this kind. Certainly if there is anything in the interest of the trust in this legislation, some gentleman ought to be able to discover it.

Mr. WHEELER of Alabama. It seems to me, from the way the sugar trust and other trust stocks are jumping up in price, that most of the people have discovered it.

My objection to the bill is that, while it will add to the wealth of a very few, the effect will be detrimental to the general prosperity of the country.

#### THE TARIFF A PROBLEM OF POLITICAL ECONOMY.

I hold in my hand a book published in New York, 1885, entitled Economic Fact Book. I find entire chapters devoted to views of people on the tariff. Among them I find an expression from myself, which I will read. It expresses my views then; I adhere to the same views to-day, and I do not expect to change them as long as I live. I read from page 141:

I think all will concede that successful manufactories are very important, if not essential, elements to the prosperity of agricultural interests. Certainly all will concede that in a country like ours, where we have such abundant raw material—coal, iron, copper, timber, cotton, and wool—we ought to excel all other nations in the variety and extent of our manufactures. No one will deny the fact that the tariff law of March 3, 1883, and the law which was repealed at that date utterly failed to even approximate such a result.

Under these laws we have not succeeded in selling the products of our factories to any extent in foreign markets, but, quite the contrary, we have seen England supply the world with fabrics and get prices for them much higher than we would be glad to sell the same articles, while at the same time we have seen our home markets glutted by overproduction; and we have not seen factory operatives enjoying steady and well-paid work, and to-day we see Bismarck recommend that the Reichstag treble the duty on American wheat and allow it to stand untouched upon Russian cereals. It seems to me that the tariff question should be regarded as a problem of political economy the solution of which would be to find what laws will do most toward stimulating and building up the industries of our country. To attain this, I think the tariff must be revised so as to be fair to all interests, so as to encourage a trade with foreign nations, so as to bear heaviest upon articles of luxury and lightest upon articles of necessity.

#### MANUFACTORIES ESSENTIAL TO BEST INTERESTS OF AGRICULTURE.

Experience has clearly proven that the best interests of the farmer requires the establishment of factories in easy access to the farm.

Without the aid of the skill and machinery of the manufacturer, comparatively few of the products of the agriculturists would be of much value.

We must have mills and factories, so that the raw material of the farm and mine may be changed into finished products suitable to the use of man, and therefore, as a friend to the farmer, I advocate laws which will encourage the manufacturing interests of our country.

Now the Southern farmer ships two-thirds of his cotton across the ocean to the mills of foreign countries. If all of the raw cotton could be manufactured in the immediate vicinity of its growth, much expense of transportation, etc., would be saved, and the farmer would be the recipient of a share of this benefit. The establishment of these factories would bring a large population which would again make a demand for products of the farm other than cotton, and our cotton crop, which now sells for from \$292,234,437 to \$430,380,174, would when manufactured into cloth and thread bring us from \$1,500,000,000 to \$2,000,000,000.

#### ALEXANDER HAMILTON SAYS TARIFF ON COTTON DETRIMENTAL.

Hamilton's report to Congress as Secretary of the Treasury (page 243 of his works) speaks of cotton, wool, and silk and the peculiar adaptability of the Southern States to those products. Secretary Hamilton then proceeds to speak of the culture of cotton in these words:

The extensive cultivation of cotton can, perhaps, hardly be expected, but from the previous establishment of domestic manufactories of the article.

He also says, page 278:

The present duty of 3 cents per pound on the foreign raw material is undoubtedly a very serious impediment to the progress of those manufactories.

It thus appears that Hamilton contended that the prosperity of our cotton planters required the establishment of factories to convert their raw material into finished product, and he specially asserts that a tariff duty upon raw cotton was a detriment to the cotton planters.

This principle, so far as it affects raw cotton and raw wool, has been reiterated by our Presidents and Secretaries of the Treasury from that time to this. Hon. James Guthrie, who was Secretary of the Treasury during Pierce's Administration, made a strong report in favor of free raw material, and in speaking of free wool said:

A single example illustrates the case: Great Britain admits wool, a raw material, free of duty, and the United States imposes upon it a duty of 30 per cent. This enables the English manufacturer to interfere with the American manufacturer in the American markets, and to exclude him from the foreign markets. It does more. It surrenders the market of the countries producing the raw material to the nations who take it free of duty.

Now, as raw cotton bears a relation to cotton mills that raw wool bears to woolen mills, it is interesting to see that Hamilton's idea of free raw cotton in 1791 was based upon reasoning quite in harmony with the advocacy of free raw wool by our most distinguished statesmen during the last half century.

Congress disregarded Hamilton's advice, and until 1846 they maintained an import tax of not less than 3 cents, and at one time 6 cents, a pound on raw cotton. Its repeal did not lessen our crops, but, on the contrary, during the next thirteen years our net production of cotton increased 300 per cent, and is now five times what it was when the misguided friends of the cotton planters were attempting to aid him by a protective tariff on cotton.

#### FREE COTTON INCREASED CROPS AND PRICE.

In reading the speeches in Congress during and prior to 1846 you will find that those who insisted on the continuance of that tax maintained that if cotton were made free the price would fall and we should be flooded with cotton from every land. But the wisdom of our people viewed the matter in a different light, and the policy of the Democratic party triumphed. Cotton was made free, and from that moment the price of cotton rose and rose continually until 1861.

Between 1846 and 1860 the cotton crops of the United States more than tripled, the crop of 1846 being 1,778,651 bales weighing 431 pounds each, and the crop of 1859 and 1860 being 4,861,292 bales weighing 460 pounds each, and the price rose from 8 to 13 cents, and during that period our exports of raw cotton increased from 1,241,200 bales to 3,774,173 bales.

All of our Presidents to the beginning of our Government were impressed with the truth of these propositions.

On January 8, 1790, Washington sent his first annual message to Congress, in which he used these words:

The advancement of agriculture, commerce, and manufactures by all proper means will not, I trust, need recommendation; but I can not forbear intimating to you the expediency of giving effectual encouragement as well to the introduction of new and useful inventions from abroad as to the exertions of skill and genius in producing them at home.

On December 8, 1795, Washington, in his seventh annual message, congratulated the country on the unexampled prosperity of the Union under light taxes, in these words:

Our agriculture, commerce, and manufactures prosper beyond example.

Every part of the Union displays indications of rapid and various improvement, and with burdens so light as scarcely to be perceived.

Is it too much to say that our country exhibits a spectacle of national happiness never surpassed, if ever before equaled?

#### TARIFF OF 12 PER CENT FOSTERS MANUFACTURES.

And with the average import taxes still as low as 11 to 12 per cent, Washington, on December 7, 1796, transmitted his eighth annual message to Congress, from which I read these words:

Congress have repeatedly, and not without success, directed their attention to the encouragement of manufactures.

The message did not say that Congress encouraged manufactures by duties upon imports, and it is very probable that he had in his mind the recommendation of Hamilton in favor of admitting foreign raw material free.

President John Adams, in his first annual message, November 23, 1797, in speaking of commerce, he said:

Our agriculture, fisheries, arts, and manufactures are connected with and depend upon it.

December 8, 1801, Mr. Jefferson, in his first annual message, said:

Agriculture, manufactures, commerce, and navigation, the four pillars of our prosperity, are the most thriving when left most free to individual enterprise.

In Madison's second annual message, December 5, 1810, we find these words:

To a thriving agriculture and the improvements relating to it is added a highly interesting extension of useful manufactures, the combined product of professional occupations and of household industry.

Mr. Madison's seventh annual message, December 5, 1815, is emphatic in its advocacy of a tariff for revenue, but Congress was especially cautioned to consider the influence of a tariff law upon manufactures. He said:

In adjusting the duties on imports to the object of revenue, the influence of the tariff on manufactures will necessarily present itself for consideration.

Mr. Madison was then known and referred to as the "Father of the Constitution," and he probably comprehended the widest scope of the powers conferred by that instrument as understood and intended by its progenitors more thoroughly than any man who assisted in framing it.

Is it not probable that this expression of Mr. Madison meant that the proper way to encourage American manufactures was to enable them to purchase their machinery and material without the burden of a tariff duty?

In this message Mr. Madison also uses this language:

Under circumstances giving a powerful impulse to manufacturing industry, it has made among us a progress and exhibited an efficiency which justify the belief that with a protection not more than is due to the enterprising citizens whose interests are now at stake, it will become at an early day not only safe against occasional competition from abroad, but a source of domestic wealth and even of external commerce.

Cotton was then beginning to be an important agricultural staple, owing in a great measure to the improvement of the cotton gin, and Mr. Madison says:

It will be an additional recommendation of particular manufactures where the materials for them are extensively drawn from our agriculture, and consequently impart and insure to that great fund of national prosperity and independence an encouragement which can not fail to be rewarded.

Mr. Blaine, in his Twenty Years in Congress (page 189), in speaking of the tariff of 1816, says:

New England was radically hostile to high duties for the reason that they seriously interfered with the shipping and commercial interest in which her people were largely engaged. In examining the debates on that important act, it is worthy of notice that Mr. Clay, from an extreme Western State, was urging a high rate of duties on cotton fabrics, while his chief opponent was Daniel Webster, then a Representative from Massachusetts.

On page 190 Mr. Blaine explains Mr. Webster's position in these words:

Mr. Webster's opposition to protection was based on the fact that it tended to depress commerce and curtail the profits of the carrying trade. The tariff of 1816 was termed "moderately protective," but even in that form it encountered the opposition of the commercial interest.

Mr. Blaine says (page 191):

The act of 1824 was avowedly protective in its character, and was adopted through the influence of Mr. Clay, then Speaker of the House of Representatives. . . . Mr. Webster again appeared in the debate arguing against the "obsolete and exploded notion of protection," and carrying with him nearly the whole vote of Massachusetts in opposition.

In his message to Congress of December 2, 1828, Mr. Adams used these words:

The great interests of an agricultural, commercial, and manufacturing nation are so linked in union together that no permanent cause of prosperity to one of them can operate without extending its influence to the others.

On December 8, 1829, President Jackson sent his first message to Congress, and comments upon the effect of the tariff laws in these words:

The agricultural interest of our country is so essentially connected with every other, and so superior in importance to them all, that it is scarcely necessary to invite to it your particular attention. It is principally as manufactures and commerce tend to increase the value of agricultural productions, and to extend their application to the wants and comforts of society, that they deserve the fostering care of Government.

#### AGAINST MONOPOLY.

President Jackson was so strenuously opposed to any system which might by any possibility tend to establish monopolies that on April 15, 1834, he used this forcible language:

The ambition which leads me on is an anxious desire and a fixed determination to . . . persuade my countrymen, so far as I may, that it is not in a splendid Government supported by powerful monopolies and aristocratical establishments that they will find happiness or their liberties protected; but in a plain system, void of pomp, protecting all and granting favors to none, dispensing its blessings like the dews of heaven, unseen and unfeigned, save in the freshness and beauty they contribute to produce.

General Jackson also adds this great and undeniable truth:

It is such a Government that the genius of our people requires—such a one only under which our States may remain for ages to come united, prosperous, and free.

In his second annual message, December 7, 1842, President Tyler said:

Extravagant duties defeat their end and object.

President Polk, in his inaugural address, said:

Justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another.

He also said:

The largest portion of our people are agriculturists; others are employed in manufactures, commerce, navigation, and the mechanic arts. To tax one branch of this home industry for the benefit of another would be unjust.

What was called the free-trade law of 1846 had been in operation for more than a year when President Polk transmitted to Congress his message of December 7, 1847, in which he used these words:

While the interests of agriculture, of commerce, and of navigation have been enlarged and invigorated, it is highly gratifying to observe that our manufactures are also in a prosperous condition. None of the ruinous effects upon this interest which were apprehended by some as the result of the operation of the revenue system established by the act of 1846 have been experienced. On the contrary, the number of manufactories and the amount of capital invested in them are steadily and rapidly increasing.

I desire to specially call attention to the fact that the effect of this so-called free-trade tariff of 1846 was to yield fair profits to manufacturers and augment the wages of labor employed in manufactures, agriculture, commerce, and navigation.

The language of Mr. Polk's message was as I will read:

While capital invested in manufactures is yielding adequate and fair profits under the new system, the wages of labor, whether employed in manufactures, agriculture, commerce, or navigation, have been augmented. The toiling millions whose daily labor furnishes the supply of food and raiment and all the other necessities and comforts of life are receiving higher wages and more steady and permanent employment than in any other country or at any previous period of our own history.

#### FREE TRADE AND FREE RAW MATERIAL MISCONSTRUED.

The expressions "free trade" and "free raw material" have received very contorted and extreme constructions.

Pronounced protectionists insist that their opponents are a free-trade party, and that they advocate the admission of all goods absolutely free from duty.

This is a misrepresentation. No platform or authoritative statement from the Democratic party has ever advocated any such legislation. What the Democratic party means by free trade is that the tariff laws shall be so constructed as to invite the greatest freedom of trade from the entire world.

We have always contended that the highest tariff should be levied upon luxuries and the smallest upon necessities.

The Democratic party has always sought to frame tariff and other laws so as to stimulate and build up all American industries.

The words "raw material" is another expression which has been subjected to most extreme constructions, and a few members of Congress who represent districts where wool is largely produced, and who have been lead to believe that a high tariff on raw wool would increase its price, have opposed the principle of raw material as a method of advocating high tariff upon that article.

A moment's reflection shows us that there is really no such thing as raw material. What is raw material to one man is a finished product to another.

Coal and iron ore are the finished product of the miner; pig iron, the finished product of the furnace; bar iron and steel, the finished product of the rolling mill.

Wool is the finished product of the farmer; yarn, of the spinner; cloth, of the weaver, and clothing, of the tailor.

#### WHY WOOL SHOULD BE FREE.

Those who advocate admitting wool free of duty do not base their argument upon the idea that wool is an absolutely raw material, but that the best interests of a very large majority of the people of the United States are best served by a very low or possibly no tariff at all upon raw wool.

Experience shows that, situated as our country now is, with our wonderful facilities for manufacturing, it ought to successfully compete with every nation on earth in the manufacture of woollen goods. But, as I have shown, it has always been contended that a high duty on raw wool places the American manufacturer at an almost fatal disadvantage as compared with manufacturers in those countries where wool is admitted free of duty.

#### TARIFF LAWS AND RATES FROM 1789 TO 1897.

Mr. Speaker, I will now present a table showing the dates of all tariff laws which affected wool since 1789, together with the dates that these laws went into effect; also the rate of duty, both specific and ad valorem.

Dates of tariff laws affecting wool and woolsens, and the dates on which they went into effect.

Year.	Date of act.	Went into effect—	Year.	Date of act.	Went into effect—
1789	July 4	Aug. 2, 1789	1842	Aug. 30	Aug. 30, 1842
1790	Aug. 10	Jan. 1, 1791	1846	July 30	Dec. 1, 1846
1792	May 2	July 1, 1792	1857	Mar. 3	July 1, 1857
1794	June 7	July 1, 1794	1861	Mar. 2	Apr. 2, 1861
1800	May 13	July 1, 1800	1862	July 4	Aug. 2, 1862
1804	Mar. 26	July 1, 1804	1864	June 30	July 1, 1864
1812	July 1	July 1, 1812	1867	Mar. 2	Mar. 2, 1867
1816	Apr. 27	July 1, 1816	1872	June 6	Aug. 1, 1872
1824	May 22	July 1, 1824	1875	Mar. 3	Mar. 3, 1875
1828	May 19	Sept. 2, 1828	1883	Oct. 1	Oct. 6, 1883
1832	July 14	Mar. 4, 1833	1890	Aug. 28	*Aug. 28, 1890
1833	Mar. 2	Jan. 1, 1834	1897	July 24	July 24, 1897

\*As to manufactured wool, in effect January 1, 1896; as to all other articles, August 28, 1894.

Rates of duty upon raw or unmanufactured wool from July 4, 1789, to July 24, 1897.

Act of—	Description.	Duty.
1789-1812	All raw wool.....	Free.
1816	do.....	15 per cent.
1824	Valued:	Do.
	At 10 cents or less per pound.....	20 per cent.
	Other, until June 1, 1825.....	25 per cent.
	From June 1, 1825, to June 1, 1826.....	30 per cent.
	After June 1, 1826.....	30 per cent.
1828	Unmanufactured:	
	Till June 30, 1829.....	4 cents per pound and 40 per cent.
	June 30, 1829, to June 30, 1830.....	4 cents per pound and 45 per cent.
	June 30, 1830, to June 30, 1831.....	4 cents per pound and 50 per cent.
1832	Valued:	Free.
	At not exceeding 5 cents per pound.....	4 cents per pound and 40 per cent.
	At exceeding 5 cents per pound.....	4 cents per pound and 40 per cent.
1833	This act provided for a gradual reduction as follows:	
	After Dec. 31, 1833, on all duties exceeding 20 per cent, one-tenth of the excess shall be deducted.	
	After Dec. 31, 1837, another tenth deducted.	
	After Dec. 31, 1839, another tenth deducted.	
	After Dec. 31, 1841, one-half of the residue of such excess shall be deducted.	
	After June 30, 1842, the other half thereof shall be deducted.	
1842	Valued:	
	At 7 cents or less per pound.....	5 per cent.
	All other.....	3 cents per pound and 30 per cent.
1846	All.....	30 per cent.
1857	Valued:	Free.
	At 30 cents or less per pound.....	24 per cent.
	All other.....	24 per cent.
1861	Valued:	
	At less than 18 cents per pound.....	5 per cent.
	Exceeding 18 cents and not exceeding 24 cents.....	3 cents per pound.
1864	Less than 12 cents.....	9 cents per pound.
	Exceeding 12 cents and not exceeding 24 cents.....	3 cents per pound.
	Exceeding 24 cents and not exceeding 32 cents per pound.....	6 cents per pound.
	Exceeding 32 cents per pound.....	10 cents per pound and 10 per cent.
1867	Class 1—Clothing wool:	
	Valued 32 cents or less per pound....	10 cents per pound and 11 per cent.
	Exceeding 32 cents.....	12 cents per pound and 10 per cent.
	Washed.....	Double duty.
	Scoured.....	Treble duty.
	Class 2—Combing wool:	
	Valued 32 cents or less per pound....	10 cents per pound and 11 per cent.
	Exceeding 32 cents.....	12 cents per pound and 10 per cent.
	Scoured.....	Treble duty.
	Class 3—Carpet wool:	
	Valued 12 cents or less per pound....	3 cents per pound.
	Over 12 cents.....	6 cents per pound.
	Scoured.....	Treble duty.
1873	Class 1—Clothing wool:	
	Valued 32 cents or less per pound....	9 cents per pound and 9.9 per cent.
	Exceeding 32 cents.....	10.8 cents per pound and 9 per cent.
	Washed.....	Double duty.
	Scoured.....	Treble duty.
	Class 2—Combing wool:	
	Valued 32 cents or less per pound....	9 cents per pound and 9.9 per cent.
	Exceeding 32 cents.....	10.8 cents per pound and 9 per cent.
	Scoured.....	Treble duty.
	Class 3—Carpet wool:	
	Valued 12 cents or less.....	2.7 cents per pound.
	Over 12 cents.....	5.4 cents per pound.
	Scoured.....	Treble duty.

Rates of duty upon raw or unmanufactured wool, etc.—Continued.

Act of—	Description.	Duty.
1875	Class 1—Clothing wool:	
	Valued 32 cents or less per pound....	10 cents per pound and 11 per cent.
	Exceeding 32 cents.....	12 cents per pound and 10 per cent.
	Washed.....	Double duty.
	Scoured.....	Treble duty.
	Class 2—Combing wool:	
	Valued 32 cents or less per pound....	10 cents per pound and 11 per cent.
	Exceeding 32 cents.....	12 cents per pound and 10 per cent.
	Scoured.....	Treble duty.
	Class 3—Carpet wool:	
	Valued 12 cents or less per pound....	3 cents per pound.
	Over 12 cents.....	6 cents per pound.
	Scoured.....	Treble duty.
1883	Class 1—Clothing wool:	
	Valued 30 cents or less per pound....	10 cents per pound.
	Over 30 cents.....	12 cents per pound.
	Washed.....	Double duty.
	Scoured.....	Treble duty.
	Class 2—Combing wool:	
	Valued 30 cents or less per pound....	10 cents per pound.
	Over 30 cents.....	12 cents per pound.
	Scoured.....	Treble duty.
	Class 3—Carpet wool:	
	Valued 12 cents or less per pound....	24 cents per pound.
	Over 12 cents.....	5 cents per pound.
	Scoured.....	Treble duty.
1890	Class 1:	
	Unwashed wool.....	11 cents per pound.
	Washed.....	Double duty.
	Scoured.....	Treble duty.
	Class 2:	
	Unwashed wool.....	12 cents per pound.
	Washed.....	Double duty.
	Scoured.....	Treble duty.
	Class 3:	
	Value 13 cents or less per pound....	32 per cent.
	If assorted.....	Double duty.
	Over 13 cents.....	50 per cent.
	If assorted.....	Double duty.
	Unwashed wools shall be considered such as shall have been shorn from the sheep without any cleansing; that is, in their natural condition. Washed wools shall be considered such as have been washed with water on the sheep's back. Wool washed in any other manner than on the sheep's back shall be considered as scoured wool.	
1894	All unmanufactured wool.....	Free.
1897	Class 1:	
	Unwashed wool.....	11 cents per pound.
	Washed.....	Double duty.
	Scoured.....	Treble duty.
	Class 2:	
	Unwashed wool.....	12 cents per pound.
	Washed.....	Double duty.
	Scoured.....	Treble duty.
	Class 3:	
	Valued at 12 cents or less per pound.	4 cents per pound.
	Over 12 cents.....	7 cents per pound.
	If imported in condition for carding or spinning, or containing not more than 8 per cent of foreign substance.	Treble duty.
	Wool on skin.....	1 cent per pound less.

#### AD VALOREM DUTY ON WOOL, 1816 TO 1897.

I have also prepared a table showing the ruling price of down fleeces in England at the date of each of the tariff laws; also the rate of duty and equivalent ad valorem, and also showing that the contention of the protectionists is not true that a low tariff increases the price of wool in England. It is as follows:

Table showing rates of duty under each of the tariff acts, the equivalent ad valorem, and the average price of wool in England up to 1867 under each of the acts.

	Average price English market.	Equivalent ad valorem duty on wool.
On page 1494 the English price is given for long wools of the mutton breeds from 1784 to 1894. We see that from 1789 to 1816, under free wool, the average price was 38.51 cents.	38.51	Free.
From 1816 to 1824 the tariff on all wool was 15 per cent.		
Instead of falling by our changing the tariff from free wool to a tariff of 15 per cent, wool in the English market rose from 36 cents in 1816 to 48 cents in 1817, and 60 cents in 1818, and the average price in England during that period was 39.33 cents.	39.33	15
From 1824 to July 1, 1829 (the act of 1828 did not go into effect until July 1 and September 2, 1829), the tariff on wool averaged about 22 per cent, the cheaper wools being only 15 per cent. Under this law, which was called a very moderate tariff, the price of wool in England fell from 28 cents in 1824 to 13 cents in 1829.	13	23
In 1829 the tariff was increased to 4 cents per pound and 45 per cent ad valorem, and from June 30, 1830, to June 30, 1831, to 4 cents per pound and 50 per cent ad valorem.	13	75.7

Table showing rates of duty under each of the tariff acts, etc.—Continued.

	Average price English market.	Equivalent ad valorem duty on wool.
The value of English wool under this enormous increase of tariff, so far from falling in value, increased in value from 13 cents in 1829 to 19 cents in 1830 and to 27 cents in 1831.		
In 1830 the English price was 19 cents and the tariff was 4 cents per pound and 45 per cent, making the equivalent ad valorem 66 per cent.	Cents. 19	66
In 1831 the English price was 27 cents and the tariff was 4 cents per pound and 50 per cent, making the equivalent ad valorem 64.81 per cent.	27	64.81
On March 4, 1832, the act of 1832 went into effect, fixing the tariff on wools exceeding 8 cents per pound at 4 cents and 40 per cent.		
The price of wool is given at 34 cents, and assuming that all imported wool was worth over 8 cents, the equivalent ad valorem is 51.17 per cent.	34	51.17
In 1834 the value was 37 cents, and as one-tenth was deducted, the equivalent ad valorem would have been 44.72 per cent.	37	44.72
In 1838 the value was 32 cents, and as two-tenths were deducted, the equivalent ad valorem would be 42 per cent.	32	42
In 1841 the value was 22 cents, and as one-half the remaining excess above 20 per cent was deducted, the equivalent ad valorem would be 31 per cent.	22	31
On August 30, 1842, all wool valued above 7 cents was 3 cents per pound and 30 per cent ad valorem. English wool was then 20½ cents per pound, and the equivalent ad valorem was 44.63 per cent.	20.5	44.63
Under this high tariff English wool rose from 20½ cents in 1842 to 27½ cents in 1845.		
From 1846 to 1857 the duty was 30 per cent ad valorem and the average value of English wool was 28 cents.	28	30
From 1857 to 1861 wool, except that valued at 20 cents or less, was 24 per cent, but as wool was quoted in England at from 20½ to 30 cents, and averaged 34 cents during that period, we must assume the duty at 24 per cent.	34	24
From 1861 to 1864 the average value was 30½ cents, and the duty on wool exceeding 24 cents in value was 9 cents, making the ad valorem 23.5.	30.25	23.5
From 1864 to 1867 the average value of wool was 39½ cents, and the average ad valorem duty was 35.6 per cent.	39.5	35.6

In order to show clearly the equivalent ad valorem duty on wool from 1867 to 1894, inclusive, I have prepared tables from the statistics of the Treasury Department which show the actual ad valorem based upon the actual imports in pounds and the actual amount of duty paid.

It will be seen that the tariff upon the different grades of wool varies, running as high as 100.60 per cent under the act of 1883, and one grade of wool under the act of 1890 was taxed 273.14 per cent.

I call especial attention to the fact that the third column which contains the clothing wools were taxed on an average very nearly 100 per cent.

Tables giving average ad valorem duty on unmanufactured or raw wools from 1867 to 1894, inclusive, as calculated upon actual imports in pounds and actual amounts of duty received, as shown by the records of the Treasury Department.

## ACT OF 1863.

Year.	Class 1—Clothing wools.				Class 2—Combining wools.		Class 3—Carpet and other similar wools.	
	Value 22 cents or less per pound.	Value over 22 cents per pound.	Scoured, value 22 cents or less per pound (before being scoured).	Washed.	Value 22 cents or less per pound.	Value over 22 cents per pound.	Value 12 cents or less per pound.	Value over 12 cents per pound.
1867	48.88	41.73			57.22		39.12	34.35

\* Value over 22 cents before scouring.

† Scoured.

Tables giving average ad valorem duty, etc.—Continued.

## M'KINLEY ACT OF 1890.

Year.	Class 1.			Class 2.		
	Unwashed.	Washed.	Scoured.	Unscoured.	Sorted.	Scoured.
1891	50.37	61.90	69.06	51.81	34.02	31.35
1892	55.00	36.00	65.52	53.21	37.76	24.50
1893	50.63	48.86	66.60	56.23	91.69	43.00
1894	50.81	108.24		50.84	73.64	273.14

The duty on class 3 valued at 13 cents or less was 32 per cent; if assorted, 64 per cent.

Class 3 valued at over 13 cents, 50 per cent; if assorted, 100 per cent.

By again referring to the table of prices of wool in England we see that immediately following the passage of the act of 1867 the price of wool in that country was 31½ cents, and that under this high-tariff act the price of English wool did not decline, but that the general tendency was to rise.

In 1871 it was 35½ cents; in 1872 it was 43 cents; in 1873 it was 37 cents; and in 1875 it was 36½ cents. There was no material change in the specific rates from 1867 to 1894, and this table shows that under the high tariff the price of wool maintained itself in England better than almost any other commodity, the lowest price being 20½ cents, and the average from 1867 to 1895 being 27½ cents.

Wool shrinkage is such that it takes about 4 pounds of raw wool to make 1 pound of finished product, therefore making the duty upon 1 pound of woolen goods 44 to 48 cents.

We have 4 per cent of the world's population, and the rest of the world includes 96 per cent. For our woolen factories to become prosperous they must secure a share of this 96 per cent as purchasers of woolen goods. France, England, and Germany get their wool free of duty. If our manufacturers pay 44 to 48 cents a pound duty upon all the wool in their manufactured product, they can not compete successfully with foreign factories.

Even admitting that a prohibitory tariff on manufactured wools would give them the American market, it will only embrace 4 per cent of the population of the world; but it is certain they could not compete with English, German, and French factories in the foreign markets, which would embrace 96 per cent of the population of the world.

The distinguished chairman of the Committee on Ways and Means [Mr. DINGLEY], who has just finished his speech, admitted the truth and force of this principle. He said:

The duty of 20 per cent on imported cotton, as proposed by the Senate, has been receded from by the Senate conferees, leaving cotton upon the free list. A careful investigation by the conferees made it clear that a duty upon cotton would be simply a duty upon Egyptian cotton, and would merely obstruct our cotton-manufacturing interests.

He then makes this important statement:

If a duty should be placed on this cotton, the effect would be to transfer abroad the manufacture of goods made from Egyptian cotton without benefiting anyone.

He also said:

It was not believed that a duty upon Egyptian cotton could be of any possible benefit to anyone.

Senator CHILTON, page 1908 of the RECORD, in opposing a tax upon raw cotton, said:

You can not raise the price of an article by tariff when you raise more of it than your home consumption.

The only result, as I say, would be to burden the consumer. If you place such a burden on manufacturers as to drive the industry over to England, then you rather hurt the price of your domestic cotton.

I also read from the RECORD, page 1910:

Mr. BERRY. I wish to ask the Senator if he believes the tax proposed by him will increase the price of American cotton throughout the United States? Mr. BACOS. I will state to the Senator that I think it will have very little or no effect upon the general class of cotton.

We see that it was positively asserted, and not questioned, that a tariff duty on cotton would not benefit cotton producers or any one else, and that its effect would be to obstruct cotton manufacturing and drive the industry of cotton manufacturing over to England and hurt the price of domestic cotton.

I have clearly shown that good results followed the removal of tariff taxes from raw cotton in 1846, and all who have considered the subject realize the evil which would follow its restoration.

Now, this principle which controls in the cotton industry applies with almost equal force to wool. It is true that we do not raise more wool than we consume, but in other respects the principle fully applies.

## WHY REPUBLICANS PUT TARIFF ON RAW WOOL.

The reason why the Republican party insist upon a duty on wool is easily understood.

Sheep raising is carried on in every State in the Union, and the vote of those engaged in that industry is sufficient to determine the election. The Republican party therefore devote themselves to convincing the sheep raisers that a high duty on wool will be to their benefit, and then in every platform they promise the sheep raisers a high duty on that article.

Notwithstanding the millions upon millions spent upon the election of McKinley, it is clear he would not have been elected had it not been for the sheep raisers' vote.

I read the following from the Wool Growers' Association, which is found in the hearings before the Committee on Ways and Means, page 1495:

Whereas the convention that nominated William McKinley as a candidate for the Presidency of the United States embodied in the platform of principles then declared the following promise, viz:

"To wool, the product of the great industry of sheep husbandry, as well as to the finished woolsens of the mills, we promise most ample protection."

And whereas that promise was accepted in good faith by more than one million of husbandmen and farmers that are now engaged in sheep husbandry and woolgrowing in the United States, or that would gladly engage therein, with proper governmental protection, and without whose votes McKinley could not have been elected: Therefore,

Resolved, That as American citizens engaged in that "great industry," we demand that that pledge shall be sacredly kept, and that in framing any law on the subject of protection by customs duties that shall be enacted that it shall be so framed as to afford protection to woolgrowers equal in all respects to that afforded to the most favored industries of the country.

This shows that the sheep raisers assert that their vote was necessary to the election of McKinley, and they further state that they voted for McKinley on the promise in the Republican platform that a high duty would be placed upon wool.

#### WHY REPUBLICANS MADE RAW COTTON FREE.

Now, while it is very evident that a tariff tax on cotton would not benefit anybody in the United States, but would most likely result in serious injury to us, yet the Republicans would readily put a tariff duty upon it if by so doing they could get votes in the Southern States and thus add to the strength of the Republican party.

They put an exorbitant duty upon sugar and wool, and one Democratic Senator and five Democratic Congressmen from Louisiana and Texas voted with the Republicans for this oppressive bill; and after these votes were given, the conference committee met and acted upon the bill, and of course they retained the high duty upon these articles.

Again, when the Senate was considering the bill, the solid Republican party voted, with three Southern Democratic Senators, for a duty of 20 per cent on raw cotton, but after this, when the bill was passed by the Senate, all three of these Democratic Senators voted against it.

Of course the Republican majority of the conference committee saw that the duty on raw cotton did not secure Democratic votes, and they struck the duty off and made cotton free; and as a further exhibition of sectional feeling, they put a duty on cotton bagging, iron ties, and paris green, all of which articles have heretofore been free of duty, and all of which articles are purchased and used by Southern planters.

The reason for this was that the New England mills wanted to import cotton free, and the Northern manufacturers of cotton bagging, iron ties, and paris green wanted a tariff duty on these articles so as to enable them to charge the Southern people an increased price.

The conference committee also put manganese, a Southern production, on the free list. This was done at the demand of Mr. Carnegie, who imports this article from Spain.

It is also contended that as it takes about an equal amount of foreign and American wool to manufacture the kinds of cloth which are demanded by the world at large, therefore every pound of wool imported creates a demand for American wool, and this of course tends to increase both the price and demand for wool grown in America.

#### IMPORTED WOOL INCREASES DEMAND FOR AMERICAN WOOL.

In the bulletin of the National Association of Woolgrowers for the quarter ending September, 1891, is an editorial which says, page 237:

The foreign wools imported do not represent an equal number of pounds of domestic wools displaced, but increase the market for domestic wool.

This has been insisted upon for half a century, and was reiterated by the most distinguished wool experts at the recent hearings before the Ways and Means Committee.

I read from the statement of Mr. S. N. D. North, secretary of the National Wool Manufacturers' Association (Tariff Hearings, 1897, page 1652):

Mr. WHEELER. It has been stated here that foreign wool is not essential to the American wool manufacturers.

Mr. NORTH. I do not think any manufacturer made that statement, and he is the only man who can know.

Mr. WHEELER. You are quite certain that your statement is correct. You even go so far as to state that foreign wool has not displaced any American wool, but rather increased the demand for American wool. You are quite certain about that?

Mr. NORTH. I am.

I also read from the statement of Mr. John G. Clark, representing the Woolgrowers' Association (Tariff Hearings, pages 1344 and 1345):

Mr. WHEELER. How do you account for the fact that in the tariff of 1846 and 1867 New England was substantially for free wool? The Maine Representatives all voted for it, I believe, except one.

Mr. CLARK. Well, I suppose it was under the influence of manufacturers, perhaps.

Mr. WHEELER. Is it not true in manufacturing that it is absolutely necessary to have foreign wool to mix with the American wool?

Mr. CLARK. The American wool is grown just as fine as the Australian wool, or any other wool.

This was not an answer to my question. Even if it were true that some wool is grown in America as fine as any other wool, it would not controvert the fact that our manufacturers need foreign wool to mix with American wool. I continue to read, page 1345:

Mr. TAWNEY (a Republican member of the committee). Are you a manufacturer?

Mr. CLARK. I am a sheep grower and farmer, and live on my farm.

Mr. WHEELER. Is it true now that we do not raise the wool of the character which answers all the purposes of the manufacturer?

Mr. CLARK. I might answer in this way.

Mr. Clark then went on talking about the war and taking great pains not to answer the question; but in the course of his remarks he did admit that the character of American wool now is of a coarser type than it was thirty years ago. Later on Mr. TAWNEY used an expression which explained this. He said on same page that American wool—

is as fine as a great many samples of Australian wool I have seen. I have never seen it in bulk, but have seen specimens.

This statement of Mr. Clark shows that he was not well informed about the relative qualities of American and foreign wool.

#### REPUBLICANS PERPLEXED AND EMBARRASSED.

I will now turn back a page and read some additional statements of Mr. Clark's upon this question of the necessity of our manufacturers having foreign wool, pages 1343 and 1344:

Mr. GROSVENOR. What is the entire product now, say for 1896, of wool in the United States?

Mr. CLARK. Well, I am not much of a statistician.

Mr. LAWRENCE. Two hundred and seventy million pounds.

Mr. GROSVENOR. Assuming, now, that it is 270,000,000 pounds, how much of it do we consume?

Mr. LAWRENCE. We consume in all 630,000,000 pounds.

Mr. GROSVENOR. That would leave 360,000,000 pounds we imported. What length of time, in your judgment, would be a satisfactory time required in order to put the country in a condition to produce that amount of wool?

Mr. CLARK. There are others here who can answer that question better than I can.

Mr. LAWRENCE. Four years.

Mr. GROSVENOR. Assuming that it will take four years, what proposition do you intend to offer between now and four years hence in regard to the supply of wool?

Mr. CLARK. I do not know that I understand your question.

Mr. GROSVENOR. Assuming that we put a tariff now that would be practically or largely prohibitory, and we require 360,000,000 pounds of imported wool in 1897, and that it would take four years to put the country, in the matter of flocks, in a condition to produce the wool necessary for the country's use, what do you propose for the time between now and then?

Mr. CLARK. Well, I could not make any definite answer in regard to time.

Mr. GROSVENOR. Well, the higher the tariff—assuming that it would become what would be called a high tariff—the less certainty of stability, would there not?

Mr. CLARK. Well, I do not know as to that; the highest tariff we ever had continued much the longest. I believe the tariff of 1867 was as high as the tariff of 1842, but I think the history will back me up in it; the tariff of 1842 was quite a high wool tariff and gave great impetus to the business for two or three years.

I will now ask the witness to pause while I remind the House and the country that Mr. Congressman GROSVENOR, who asks the question, and Mr. Lawrence and Mr. Clark, who were there as witnesses, are all extreme high-tariff Republicans.

The record shows that Mr. Clark was unable to help Mr. GROSVENOR out of the dilemma in which he had become involved, and Judge Lawrence, who had been ever ready with answers, was dumb as an oyster when these knockdown queries were propounded.

At that solemn moment the committee room was filled to overflowing with the leaders of wool protectionists, and in this critical exigency not one dared open his mouth. Even the eleven Republican apostles of protection who composed the Republican wing of the Committee on Ways and Means were not able to come to the rescue, and Mr. Clark, who had the floor, changed the subject, and commenced expressing his views upon the tariff laws of 1842 and 1847.

I wish, however, to call especial attention to the fact that Mr. Clark said:

The tariff of 1842 was quite a high wool tariff and gave great impetus to the business for two or three years.

#### MAINE AND NEW HAMPSHIRE CONGRESSMEN VOTE FOR A FREE WOOL TARIFF.

Now, the tariff rate in the act of August 30, 1842, was 5 per cent ad valorem on cheap wools, and this tariff on cheap wools Mr. Clark says was then regarded as a high tariff and gave great impetus to business, and yet he is now advocating a tariff on wool which runs from 100 to 200 per cent. The highest tariff on any wool under the act of August 30, 1842, was 3 cents a pound and 30 per cent ad valorem.

Now, Mr. Lawrence tells us (page 1494 of the hearings) that the English price of down fleece in 1842 was 204 cents. It will therefore be seen that under the act of 1842 the tariff on wool

ranged from 5 per cent ad valorem to 44 per cent ad valorem, the average being about 25 per cent ad valorem.

The graduation clause of the act of July 14, 1832, provided that after June 30, 1842, the duty on wool should be 20 per cent. Under the act of 1846 it was 30 per cent, and under the act of 1857 all wool valued at over 20 cents per pound was 24 per cent, and all other wool was free.

I give below the vote of the New England States upon these acts:

Table showing the votes of the New England States in the House of Representatives on the passage of the acts of July 14, 1832, July 30, 1846, and March 3, 1857.

State.	July 14, 1832.		July 30, 1846.		March 3, 1857.	
	Yea.	Nay.	Yea.	Nay.	Yea.	Nay.
Maine	6	1	5	1	6	1
New Hampshire	5		3	1	2	1
Vermont		3		2		3
Massachusetts	4	8		9	9	
Connecticut	2	3	1	4		4
Rhode Island		2		2	1	1

The significance of these votes will be appreciated when we remember that the tariff acts of 1846 and 1857 have during late years been denounced by Representatives from these States as free-trade laws.

The law of 1846 was so designated by Mr. Blaine. In his Twenty Years in Congress, page 65, he referred to it in these words:

The enactment of the tariff of 1846, which offended the manufacturing interests of the country.

And on page 195 he says:

The free-trade tariff of 1846 was passed.

Mr. Blaine admits that the law of 1846 was beneficial to the business of the country; and on page 196 after stating that in 1850, after Taylor's Administration went into power, there was no desire to change the tariff, he goes on and says:

Moreover, the tariff of 1846 was yielding abundant revenue, and the business of the country was in a flourishing condition at the time his Administration was organized. Money became very abundant after the year 1849; large enterprises were undertaken, speculation was prevalent, and for a considerable period the prosperity of the country was general and apparently genuine. After 1852 the Democrats had almost undisputed control of the Government, and had gradually become a free-trade party. The principles embodied in the tariff of 1846 seemed for the time to be so entirely vindicated and approved that resistance to it ceased not only among the people but among the protective economists, and even among the manufacturers to a large extent. So general was this acquiescence that in 1856 a protective tariff was not suggested or even hinted by any one of the three parties which presented Presidential candidates.

I beg to call special attention to Mr. Blaine's assertion that the principles embodied in the tariff of 1846 were approved not only among the people, but among the protective economists and manufacturers. Mr. Blaine then proceeds:

It is not surprising, therefore, that . . . the Democratic Congress, in the closing session of Pierce's Administration, exacted what has since been known as the tariff of 1857. By this law the duties were placed lower than they had been at any time since the war of 1812. The act was well received by the people, and was indeed concurred in by a considerable proportion of the Republican party.

#### REPUBLICANS DEMAND UNCONSTITUTIONAL LEGISLATION.

I will now read from Tariff Hearings, page 1371:

Mr. WHEELER. This is the 9-cent wool that you propose to put the 24-cent duty on?

Mr. LAWRENCE. That is the wool we are competing with.

Mr. WHEELER. And you ask 24 cents per pound duty?

Mr. LAWRENCE. We ask 12 cents a pound duty on unwashed, double on washed, and triple on scoured; and inasmuch as the Australian merino as now imported unwashed is better than any other washed wool in the world, it should be classed as washed wool.

Mr. WHEELER. Therefore the 9-cent wool would be classed as the wool upon which you would impose a duty of 24 cents?

Mr. LAWRENCE. We want a duty of 24 cents on unwashed Australian merino wool, as now imported, which is better than any other washed wool in the world.

It will thus be seen that Judge Lawrence was demanding a duty on wool of 266 per cent.

This, of course, would be prohibitory; but we see that Mr. Lawrence unblushingly admits that it is protection, not revenue, that he is after. On page 1399 he says:

I repeat from the published answer of the honorable chairman of the committee: "It is protection we are after."

The last six words Judge Lawrence insisted should be quoted and printed in very large type.

On page 1418, in speaking of foreign wools, Judge Lawrence says:

They should be prohibited, as they ought to be.

Mr. TURNER. And you propose it to be prohibited?

Mr. LAWRENCE. Only when we are able to supply our wants.

Mr. WHEELER. And finally we will get none [no revenue]?

Mr. LAWRENCE. And finally we will get no revenue.

This shows the extreme and undemocratic and unconstitutional demands of Judge Lawrence and those whom he represents.

This reminds me of a speech that I heard in this Hall in the Forty-seventh Congress, in 1882, by Hon. William A. Russell, of Lawrence, Mass.

Mr. Russell was a member of the Committee on Ways and Means and was demanding a prohibitory tariff upon woolen goods.

Mr. Russell said:

There is no protection in a strictly revenue tariff—that is, to an American manufacturer; for if a revenue is to be derived from an imported article it must be imported, which certainly involves its manufacture elsewhere, and the rate of duty must be so fixed as to invite its importation. Therefore a tariff can not be adjusted on a single article to serve the double purpose of revenue and protection. It must be either at a point to check importation and thus protect, or it must be at a point low enough to admit importation and thus produce a revenue. That is, when fixed at a revenue point it ceases to protect, and when fixed at a protective point it ceases to yield a revenue.

Mr. FLEMING. From whose speech is the gentleman reading?

Mr. WHEELER of Alabama. From the speech of Mr. Russell of Massachusetts. Again, Mr. Speaker, only last month the distinguished leader of the Republican protective hosts in the other Chamber, in a speech upon the pending bill, used this language:

The legitimate result of a protective policy is to give the American market to American producers. When this becomes an accomplished fact, the revenue growing out of protective duties disappears. It must be evident, therefore, that we must look for other sources of revenue.

The principle enunciated by Mr. Russell in 1882 and reiterated by Judge Lawrence in the Committee on Ways and Means this year, and recently so boldly proclaimed by the distinguished Senator from Rhode Island, involves the question of the right of Congress to enact laws under the guise of tax laws for purposes other than to collect revenue, and I regret to say that the affirmative of this question is boldly insisted upon by many of the opponents of the Democratic party.

This is done in the face of two decisions by the Supreme Court of the United States, both of which hold that laws of that character are unconstitutional and void. I will cite one opinion by Justice Miller, who at that time was one of the oldest and ablest justices on the bench. I read from 20 Wallace, page 664, *Loan Association vs. Topeka*:

To lay with one hand the power of the Government on the property of the citizen, and with the other to bestow it upon favored individuals to aid private enterprises and to build up private fortunes, is none the less a robbery because it is done under the forms of law and is called taxation. This is not legislation. It is a decree under legislative forms.

This principle of law governing the taxing power was reaffirmed in *Parkersburg vs. Brown* (106 U.S., page 487). The opinion was delivered by Justice Blatchford, another distinguished jurist, who cited and approved the *Topeka* case.

The Hon. William A. Russell represented a district largely engaged in wool manufactures, and in his speech dwelt largely, almost entirely, on wool and its great need of protection.

#### TEXAS OPPOSED TO PROTECTION.

A great effort has been made to build up what is called a sentiment in favor of protection in the State of Texas, and to carry out this purpose the advocates of the theory of protection endeavor to convince the chivalrous and noble people of that State that a high tariff on wool would be to their benefit, and that they ought, like the people of the sugar districts of Louisiana, to join the Northeast in voting for protection.

To show that there is no ground for this, it is only necessary to make an intelligent examination of the evidence which these gentlemen have placed before the Committee on Ways and Means to sustain their position. I insist that so far from substantiating their claim that Texas is benefited by protection, the facts they presented prove exactly the reverse.

The price of wool per pound is furnished by Messrs. T. C. Frost & Co., Hill & Palmer, and Half & Bro., of San Antonio, Tex. The number of sheep and valuation per head are from official reports of the comptroller of the State of Texas, and the other columns are taken from Government statistics. These figures are in the hearings of the Ways and Means Committee by Judge Lawrence, and are found on page 1425.

It is headed:

How sheep declined in number in Texas under the inadequate protection of the wool tariff in the act of October 1, 1890—Texas sheep and wool statistics.

I give the table precisely as it appears in Judge Lawrence's remarks, page 1425 of the hearings.

It is especially arranged by the advocates of protection on wool to make the best showing possible to sustain their theory. They only include figures that are favorable to them, carefully omitting all others.

Now, if we show by the evidence of these high-protection witnesses that a high tariff on wool is destructive to the wool interest in America, and that a low tariff or free wool is beneficial to our wool interests, our argument ought certainly to be accepted as conclusive.

In submitting this table, presented by protectionists, upon the Texas wool industry, I will call attention to the fact that out of all the States in the Union these protectionists have selected the

wool statistics of the State of Texas as the statistics most favorable to their theory of a high protection on wool.  
The table is as follows:

HOW SHEEP DECLINED IN NUMBER IN TEXAS UNDER THE INADEQUATE PROTECTION OF THE WOOL TARIFF IN THE ACT OF OCTOBER 1, 1890.

Texas sheep and wool statistics.

STOCK.

[From official reports of comptroller of State of Texas.]

Year.	Number of sheep.	Valuation.	Average per head.	Increase in number.	Decrease in number.	Increase in valuation.	Decrease in valuation.
1870	924,749	\$992,316	\$1.07				
1875	1,706,044	1,939,740	1.13	781,295		\$947,424	
1880	2,977,618	4,282,530	1.43	1,271,574		2,342,790

1885	do	16.27	54	27,310,343	4,443,392	337,047		\$904,496	
1886	do	18.15	54	29,534,472	5,300,506	2,224,129		917,114	
1887	do	15.97		27,790,061	4,438,072		1,744,411		922,434
1888	do	16.20		28,067,334	4,545,278	267,273		107,216	
1889	do	18.40		27,820,721	5,119,012		236,613	573,724	
1890	11 cents.	18.21		27,831,778	5,068,166	11,057			50,846
1891	do	17	7	28,491,575	4,843,567	659,797			224,599
1892	do	15.72		24,951,283	3,922,341		3,540,202		921,226
1893	do	9.82		23,563,799	2,223,965		1,387,484		1,608,376
1894	Free	7.44		20,014,883	1,489,107		3,548,916		734,858
1895	do	7.89		16,707,754	1,318,241		3,307,129		170,866

It is true that from 1870 to 1883 the tariff on the higher grades of wool was about as stated in the table, and if scoured, the duty was three times the above rate; but under these high rates the New York Price Current tells us the price of fine washed wool fell from 70 cents in 1872 to 40 cents in 1883, and from the census reports I learn that the number of sheep in the States east of the Mississippi and Missouri rivers fell from 23,397,917 in the census year of 1870 to 21,712,700 in the census year of 1880.

This certainly shows that a high tariff not only did not benefit the sheep and wool industry, but that it was an injury to it.

Now, comparing Mr. Lawrence's figures of the price of wool as quoted in the New York market from 1883 to 1893 with the average price of Texas wool during the same period, we find that he puts the average price of Texas wool at about one-third to one-half the average price of medium American wool as quoted in the New York markets.

WOOL INDUSTRY VERY PROSPEROUS UNDER A LOW TARIFF.

Originally the great bulk of Texas sheep were the common Mexican sheep, but for many years finer qualities have been carried to that State and some of the wool now raised in Texas is equal in quality and value to the best wool produced in the world.

Now, if the figures given by Mr. Lawrence as to the average price of Texas wool, and which he states were furnished by three principal wool merchants of Texas, are correct, we must assume it to be true that a great bulk of Texas wool is of a cheap character, and similar to the wool which was imported at that time under what was known as class 3, valued at less than 12 cents per pound.

The tariff on this character of wool was 3 cents a pound up to August 1, 1872; it was 2.7 cents per pound from the date to March 3, 1875, and it was 3 cents per pound from March 3, 1875, to July 1, 1883. We therefore see that under this very low tariff the number of sheep in Texas increased fivefold, their value increased ten-

fold, their average per head doubled, and the average clip or product increased fivefold.

In order to make this statement clear, I have prepared a table from Mr. Lawrence's figures, showing the condition of the wool industry in Texas during the period when cheap wools enjoyed the benefit of the low tariff of 2.7 cents to 3 cents per pound. It is as follows:

Table showing tariff rate, number of sheep, aggregate valuation and average value per head, and aggregate clip in Texas from 1870 to 1893:

Year.	Import rate of wool, class 3, valued at 12 cents or less.	Number of sheep.	Aggregate valuation.	Average valuation per head.	Aggregate clip.
1870	2 1/2 cents to 3 cents per pound.	924,749	\$992,316	\$1.07	5,086,119
1875	do	1,706,044	1,939,740	1.13	9,383,242
1880	do	2,977,618	4,282,530	1.43	17,121,308
1881	do	3,282,107	5,001,619	1.53	18,757,114
1882	do	3,771,242	7,031,789	1.86	21,684,041
1883	do	4,491,600	9,228,234	2.05	25,826,700

By referring to Mr. Lawrence's table (Tariff Hearings, page 1425), we see that from 1883 to 1890 there was not a great deal of change in the wool and sheep industry in Texas, but immediately after the passage of the McKinley bill in 1890, the decline in this industry commenced.

WOOL INDUSTRY DESTROYED BY MCKINLEY HIGH TARIFF ON WOOL.

The McKinley bill, which went into effect October 6, 1890, fixed the tariff on the commonest and cheapest wool at 32 per cent ad valorem, and the clause provided that wool of class 3, valued at over 13 cents per pound, should pay a tariff tax of 50 per cent ad valorem, and if assorted the tax was to be double these figures.

This was an enormous increase upon the cheap character of

wools, and we see from Mr. Lawrence's table that from that moment the wool industry in Texas was seriously injured. The price, the number of sheep, their value, and the aggregate clip fell to about one-half during the four years of the existence of the McKinley law, with its high tariff rates upon wool.

I have prepared a table from Mr. Lawrence's figures illustrating this terrible decline.

I have also added the same statistics for the year 1895, under the Wilson law, during which wool was absolutely free from duty. The table is as follows:

Table showing tariff rate, number of sheep, aggregate valuation, average value per head, aggregate clip, value of clip, and average price per pound in Texas, from the year 1890 to 1894, under the McKinley bill, and 1895, first year under the Wilson bill.

Year.	Import rate of wool, class 3.		Number of sheep.	Valuation.	Average per head.	Aggregate clip.	Value of clip.	Average price per pound.
	Value not more than 18 cents.	Value more than 18 cents.						
1890	32 per cent.	50 per cent.	4,281,812	\$5,454,810	\$1.27	Pounds. 27,831,778	\$5,068,166	Cents. 18.21
1891	do	do	4,070,225	5,639,705	1.33	28,481,575	4,843,567	17
1892	do	do	3,504,469	4,854,394	1.36	24,951,283	3,922,341	15.73
1893	do	do	3,006,257	4,776,848	1.42	23,563,799	2,223,965	9.83
1894	do	do	2,809,239	2,701,727	.97	20,014,883	1,489,107	7.44
1895	Free	Free	2,389,823	2,442,103	1.03	16,707,794	1,318,241	7.89

The Wilson law, which made raw or unmanufactured wool free and reduced the tariff on all woolen goods, went into operation August 28, 1894, but the tariff on manufactured woolen goods did not go into operation until January 1, 1895.

#### MCKINLEY HIGH TARIFF DESTROYED WOOL INDUSTRY IN TEXAS.

It will be seen that during the years 1891, 1892, 1893, and 1894, while the McKinley high-tariff law was in operation the wool industry in Texas was nearly destroyed, and it also shows that after wool became free under the Wilson bill, the average price per pound of wool and the average value per head increased.

The noble, brave, and intelligent woolgrowers of Texas fully appreciate this question. They look back to the prosperous times from 1870 to 1883, when we had a low tariff upon cheap wool, and they have been deeply impressed with the disaster and ruin which has overtaken the wool industry under the high tariff on cheap wools imposed by the McKinley law. Only a moment ago my eye fell upon a letter from the Texas woolgrowers, protesting against a high tariff on wool and demanding a reduction. The letter is addressed to Hon. JAMES L. SLAYDEN, who spoke upon the tariff bill March 30. The writer is Mr. James McLymont, and, incorporating the letter in his speech, Mr. SLAYDEN says:

I will incorporate in my remarks a letter received from one of the largest flock masters in Texas:

I will read some extracts from this intelligent gentleman, who, Mr. SLAYDEN says, is one of the largest sheep owners of Texas:

I saw a letter from Judge Lawrence, president of the National Wool Growers' Association. I beg to disagree with Judge Lawrence. I think that 8 cents per pound would be ample. I have talked with a great many of the woolgrowers, and have heard none wish for more than 8 cents, and a great many would be satisfied with 6 cents.

I think, Mr. Speaker, taking these tables and other information, it is clearly shown that the great minds of our country, who for more than half a century have given the subject careful study, are correct in their view that a high tariff is injurious to the woolgrowers and every other wool industry in this country.

#### MILLIONS JEOPARDIZED BY PROTECTION.

But there is another view that the Texas people take of this case.

Their cotton crop for 1870 was 350,628 bales; in 1880 it was 1,101,746 bales; in 1890 it was 1,471,242 bales, and in 1895 it reached 3,276,000 bales.

The value of this crop, at 8 cents a pound, is \$131,040,000. Now if the people of Texas and the people of the South generally join the Northeast in voting for a high tariff, as has just been done by certain Representatives from Louisiana and Texas, the people of Germany, France, and other European nations will certainly retaliate by putting a duty on cotton.

A tariff duty of only 10 per cent upon raw cotton by those nations would cost the State of Texas at least \$13,104,000, about ten times the entire value of their wool for 1896, and if those nations should, in retaliatory laws against Southern States, approximate the severe legislation they have enacted against Western wheat and beef and hog products, the damage to Texas would very possibly reach \$30,000,000.

#### PROTECTIONISTS ADMIT MCKINLEY LAW WAS INJURIOUS.

The McKinley law was the highest ad valorem duty on wool ever enacted until the present bill, and even the great apostle of protection, Judge Lawrence, admits that it was a disappointment, and that the price of wool went down under it.

I read from Tariff Hearings, page 1419:

Mr. TURNER. What was the effect of the McKinley Act, which, I think, was prepared somewhat under your advice? Was that a disappointment or not?

Mr. LAWRENCE. It was a disappointment. The effect of the McKinley Act was that the prices went down and down under it, and in Texas sheep declined in numbers.

Judge Lawrence admits another had effect of the high-tariff McKinley bill. I read again from same page:

Mr. WHEELER. What effect would this increase of tariff have upon the ordinary cheaper woolen clothing?

Mr. LAWRENCE. The effect of this tariff would be, for a time, to increase the cost of clothing.

Now, the only purpose claimed for a high tariff is that it increases the price of wool. We see it is admitted here that this was not realized, and we also see an admission from an advocate of protection that the effect of the McKinley law was to increase the price of clothing, and we were shown elsewhere that the increase was heaviest upon cheap clothing worn by people in moderate circumstances.

#### WOOL AS AN "INFANT INDUSTRY."

I find, in reading the speeches of Clay, Prentiss, and other great protectionists, that the theory upon which such laws were demanded was that it was proper to protect infant industries. The argument was that moderate protection should be extended to them until they had time to get established. Will some one who demands high tariff on wool tell how he now applies such a theory to that industry?

Our earliest histories tell us that the wool industry was in a flourishing condition before the flood. We read that Abel was a "keeper of sheep" when he was killed by his brother. In later years the flocks of Jacob and the other patriarchs are continually referred to in the Bible as sources of their great wealth. Ancient mythology tells the wonderful story of Jason's voyage in search of the golden fleece. At the dawning of Christianity we read of shepherds "watching their flocks by night."

Certainly there are few industries which can boast of a higher antiquity than this.

Mr. Thomas G. Shearman, in an address upon the tariff which he delivered in Detroit on January 11, 1883, said:

The manufacture of woolen goods affords another illustration. It has always been grievously injured by a heavy tax on wool. Woolen goods are "protected" (that is, taxed) by a duty of 50 to 100 per cent; but wool is also taxed at about the same rate, and machinery used in the manufacture is taxed 45 per cent. Now, it is impossible to manufacture first-class real woolen goods without mixing in them more or less of foreign wool. American wools will answer for a limited class of purposes, but for some other purposes they are, taken alone, of no good at all. The one great reason that has always been advanced for protecting our woolen manufacturers is that we ought to keep out English shoddy goods. The result of protection is that the woolen manufacturers of this country, being hindered by protection from getting real wool, use more shoddy and cotton in place of wool than any other manufacturers in the world. Real woolen goods are almost unknown here. First-class cloth is not made here at all. For every pound of wool in American woolen goods there is an average of three-quarters of cotton and shoddy.

Mr. David A. Wells, in speaking of the effect of the high tariff duty on wool, quotes a letter from Mr. George William Bond, of Boston, who is, he says, the highest authority on wool in this country.

Mr. Wells states:

Mr. Bond begins his letter by saying "that high duties on wool are now maintained as a bounty to States which raise comparatively a small part of the clip, for the rest do not require it. The oft-repeated claim that the United States should raise all the wool she consumes is folly. You ask, 'At what point does any tariff on wool begin to affect the price of the domestic clip?' I should say at that point which shuts us out from the competition of the world, so that we are restricted in the range of our manufacturers. Our fine wools have always been higher, other things being equal, when we were able to import the wools of other countries at a low duty, or at no duty at all. When the tariff of 1857 was passed, fine wools became virtually free, so that we went into full or nearly full competition with Europe.

President Grant, in his annual message to Congress of December 7, 1874, recommends in strong language that the tariff be revised and that such wools as we do not produce should be admitted free. He says:

The introduction free of duty of such wools as we do not produce would stimulate the manufacture of goods requiring the use of those we do produce, and therefore would be a benefit to home production.

Congress having disregarded the recommendation of General Grant, eight years later President Arthur felt called upon to recall the subject of tariff reduction to its attention as a matter of urgent importance, and in his second annual message of December 4, 1883, we find this language:

It will be remembered that I urged upon the attention of Congress, at its last session, the importance of relieving the industry and enterprise of the country from the pressure of unnecessary taxation.

If the tax on domestic spirits is to be retained, it is plain, therefore, that large reductions from the customs revenue are entirely feasible. While recommending this reduction, I am far from advising the abandonment of the policy of so discriminating in the adjustment of details as to afford aid and protection to domestic labor. But the present system should be so revised as to equalize the public burden among all classes and occupations, and bring it into closer harmony with the present needs of industry.

Without entering into minute detail, which, under present circumstances, is quite unnecessary, I recommend an enlargement of the free list so as to include within it the numerous articles which yield inconsiderable revenue, a simplification of the complex and inconsistent schedule of duties upon certain manufactures, particularly those of cotton, iron, and steel, and a substantial reduction of the duty upon those articles, and upon sugar, molasses, silk, wool, and woollen goods.

I again read from the address of the distinguished Republican, Thomas G. Shearman, of New York:

While it is true that wages generally are higher in this country than in England, it is not true that they are in all the protected industries. On the contrary, one of the results of the twenty-two years of steady protection which the cotton and woollen manufactures have had has been that the employers have finally succeeded in cutting down wages in this country below the rates paid in England.

I call special attention to the statement of Mr. Thomas G. Shearman that at the time to which he refers, January, 1883, wages in the woollen manufactures in this country were below the rates at that time paid in England.

Why was it that in January, 1883, labor in woollen mills had fallen until it was lower than in England? It was not low tariff on woollens that brought about this condition of labor. The duty on wool at that time was at its height, and it is clear to any investigating mind that this unreasonably high duty on raw wool was the main and controlling reason for the unfortunate condition of labor in American woollen mills.

#### SENATORS WILSON AND ALLISON ON WOOL.

It is not necessary to repeat so clear a proposition. In the Forty-first Congress Hon. William Lawrence, of Ohio, asked the Hon. WILLIAM B. ALLISON, of Iowa, with some sarcasm, how a reduction of duty on wool could benefit the woolgrowers. I will read a few expressions from Mr. (now Senator) ALLISON's reply. He said:

As the law now is, the tariff upon fine wools of a character not produced in this country is 100 per cent upon their cost.

Before the tariff of 1867 our manufacturers of fine goods mixed foreign fine wools with our own domestic product and thus were able to compete successfully with the foreign manufacturer of similar articles.

Mr. ALLISON then explained that the law of 1867 being prohibitory, these fine goods could not be produced so cheaply as in other countries; and—

Consequently mills that were formerly engaged in producing these goods have been compelled to abandon business or manufacture the coarser fabrics. If they could afford to manufacture these fine goods they would make a market, which we do not now have, for our fine wools to be mixed with other fine wools of a different character from abroad. This want of a market, as I understand, is the reason why our fine wools now command so low a price; there is no demand for them at home, and we can not export them in competition with fine wools grown in other countries.

This Hon. William Lawrence is the same William Lawrence who is now president of the National Wool Growers' Association, and who appeared before the Committee on Ways and Means and advocated an absolute prohibitory tariff upon wool; and this Hon. WILLIAM B. ALLISON is the same WILLIAM B. ALLISON who is now a distinguished Senator and the leading member of the Finance Committee of the Senate.

It will be observed that Mr. Lawrence is now in the employ of woolgrowers, and still advocates his extreme protection doctrine.

SENATOR WILLIAM H. SEWARD, OF NEW YORK, AND SENATORS CHARLES SUMNER AND HENRY WILSON, OF MASSACHUSETTS, ALL ADVOCATE FREE WOOL.

All through the records of Congress I find the most enlightened Whig and Republican Senators and Representatives of New England have argued with great force that the interests of the people of this country, including the woolgrowers, would be best served by placing wool on the free list. On February 26, 1857, Senator Wilson, in speaking on the tariff bill which was enacted on March 3 of that year, was very emphatic in demanding free wool for the benefit of the woolgrowers as well as for the benefit of the woollen manufacturers.

Mr. Wilson said:

The manufacturers, Mr. President, make no war upon the woolgrowers. They assume that the reduction of the duty on wool, or the repeal of the duty altogether, will infuse vigor into that drooping interest, stimulate home production, diminish the importation of foreign woollen manufactures, and afford a steady and increasing demand for American wool.

I would like to read the whole of Mr. Wilson's speech, as it bristles with facts and ideas which I commend to every gentleman

on the Republican side of the House. I will, however, read one more paragraph. I read from page 343, Appendix, third session Thirty-fourth Congress:

Since the reduction of duties in England, since wool was admitted free, her woollen manufactures have so increased, so prospered, that the production of native wool has increased more than 100 per cent. The experience of England, France, and Belgium demonstrates the wisdom of that policy which makes the raw materials duty free. Let us profit by their examples.

In the discussion and votes on the amendments to the tariff bill of March 3, 1857, I find that Mr. Wilson was fully supported by those distinguished Senators, Seward, of New York, and Sumner, of Massachusetts. They seemed to fully concur with Mr. Wilson that raw wool should be either free or subjected to a low tariff.

There are three things insisted upon by the advocates of high tariff upon raw wool:

First. That a high tariff will enable the United States to increase their product as compared with the product of the world;

Second. That a high tariff will cause the price of wool to rise in America and fall in foreign countries; and

Third. That free trade, which gives an unrestricted entry of wool free of duty to our ports, would cause a large increase in the price of wools in foreign markets.

The facts show that all three of these assertions are entirely without foundation. So far from these statements being true, the records show that they are the reverse of true.

Tariff Hearings, page 1545, states that the world's supply of wool increased from 1,126,000,000 in 1880 to 2,700,000,000 in 1895, an increase of 139 per cent. During all this time we had a tariff on raw wool running as high as 273 per cent and averaging over 100 per cent.

The actual production of wool in the United States, as shown by the earnings, page 1561, was 337,500,000 pounds in the grease in 1884, and it fell to 325,210,713 in 1894. The yield in scoured wool also fell from 151,875,000 in 1884 to 140,292,368 in 1894, and the number of sheep in the United States decreased from 50,500,000 in 1884 to 45,000,000 in 1894.

During all this time, as shown by page 1379 of the Hearings, the price of American wool in American markets fell from 37 cents in 1884 to 20½ cents in 1894, and we have already shown that the fall in price in England during this period of high tariff was not as great as in the United States, the table presented by Judge Lawrence, Tariff Hearings, page 1494, giving the English price in 1879 at 24 cents and the price in 1894 at 21 cents.

Now, we made wool free on August 23, 1894, and so far from foreign wools rising in value, as contended by protectionists, on the contrary, they fell.

On page 1491 we see that the quotation of the price of wools in London was for Southdown 21.70 in September, 1894, the date of the Wilson free-wool act, and instead of London wool rising under this act, as contended, it fell so that in March, May, and June, 1895, it was quoted at 20.20.

Lincoln wool was 21.70 in 1894. It was 18.60 in May, and 20.20 in June, and New South Wales, which was 14.49 in September, 1894, fell to 12.27 in June, 1895; and it must be borne in mind that all these figures are given by persons who insist upon a high rate of duty.

#### ENORMOUS DUTY ON CHEAP WOOLS.

The quotations of wool which I have cited are those of the best qualities of English. Now, the advocates of specific duties take pains to convey the impression that it is upon such wools that they ask a tariff of 11 cents a pound. But, in fact, we find that a large amount of the carpet wools which under the Dingley bill were transferred from Class III to Class I are purchased in South America, Asia, and Africa at a very low price. The records of the Treasury Department give the actual number of pounds of wool imported and the actual gross value.

The report presented to us of imports for consumption for 1893 and 1896 by the Treasury Department, page 1367, states that the imports of wool for consumption in 1895 were 129,527,223, and that their values were \$12,673,529.75. It gives the import value of one grade at 8 cents and the other at 9 cents, the average being 8½ cents. The duty on this was 11 cents, showing that the import duty under the present (the Dingley) bill would be 129 per cent.

In 1896 the imports are stated at 97,911,183 pounds, valued at \$9,473,748.06, and the valuation per pound of one class is stated at 9 cents and the other 10 cents, the average being 9½ cents; therefore the average ad valorem under the rates proposed by this (the Dingley) bill would be 115.7 per cent.

This equivalent ad valorem duty of 129 per cent for 1895 and 115.7 per cent for 1896 of all wools imported for consumption is calculated upon the actual value of all wool, including both the cheapest and dearest. Now, as the average was from 8 to 10 cents, and some of the wool cost 21 cents and over, it is evident that a considerable portion cost much less than 8 or 10 cents, and therefore the ad valorem under the Dingley bill would be as high as 200 per cent.

To further prove the high ad valorem duty upon many classes of

wool under this bill, I invite attention to tables on pages 1879, 1880, and 1881, showing the valuation of wools.

These tables were presented by Judge Lawrence at the hearings.

The following are the values given for 1894, and I give the equivalent ad valorem under the Dingley law, estimating scoured wool at 33 cents duty and scoured combing at 36 cents.

Description of wool.	Price.	Equivalent ad valorem under Dingley bill.
	Cents.	
Australian average scoured.....	31	106.4
Cape of Good Hope average scoured.....	27	123.2
Australian, Port Philip, good average scoured combing, 14 pence.....	28	123.4
Buenos Ayres average scoured.....	25	132
Adelaide Australian wool, average grease.....	10 1/2	104.7
Buenos Ayres, average grease, 35 per cent yield.....	9	122.2
Buenos Ayres, average grease, 30 per cent basis.....	7 1/2	146.6

Now, I find the following evidence as to the price of American wools, submitted by advocates of high protection:

Description of wool.	Equivalent ad valorem on the cheapest of these wools under Dingley bill.
	Per cent.
Page 1422, they quote—	
Washed clothing wool, Ohio, Pennsylvania, and Virginia, at from 15 to 21 cents.....	122.2
Washed combing and delaine wools, Ohio and Michigan, at from 18 1/2 to 21 cents.....	129.7
Unwashed wools, from 7 to 15 cents.....	157.1
Page 1582, New Mexico wool, 4 1/2 to 8 cents.....	206.6
Page 1604, 5,000 pounds sold at Albuquerque, N. Mex., at 2 1/2 cents a pound.....	440
Page 1585, Utah wool, 7 cents.....	157.1
Page 1597—	
California spring wool, 4 to 12 cents.....	275
California fall wool, 2 to 9 cents.....	550
California scoured wool, 12 to 30 cents.....	275
Page 1425, average price Texas wool, 7.39 cents.....	134.1

Now, under the wording of the Dingley bill, cheap wools similar to these in quality might be taxed by collectors as class 1, making the tax as high as 275 or even 550 per cent; or they might be taxed as class 3, and even then the tax would be 200 per cent on the 2-cent wool. It is true I have given extreme cases, but they show the inequality and injustice of the bill.

#### OTHER MANUFACTURERS DEMAND LOW TARIFF.

It appears that wool does not stand as an isolated instance of the advantages of reduction or abolition of duties.

A prominent manufacturer of shoes, in explaining the baleful effect of a high tariff upon his business, said:

If the materials used to make a shoe go up in price, labor always has to go down. Strikes result, as that seems to be the only way the laborer can protect himself from the encroachment of the employer. In a general strike in a shoe-manufacturing center, the operatives often gain temporary advantage; but with a supply greater than the demand, it can not long continue.

Gentlemen, do not blame the manufacturer for trying to meet the market, or blame the operatives for resisting a reduction in wages. It all goes to show that the supply is greater than the demand, and that our market is not large enough.

This manufacturer then goes on to explain how the cost of shoes is increased by duties on the articles used in their manufacture:

I will mention two or three articles specially, and speak of the others generally. Take, for instance, serges or lastings. The average duty on the serges or lastings used in the manufacture of shoes is 85 per cent.

Cotton, nails, tacks, buttons, threads, all have to be used in the make-up of a shoe, and they are protected. The iron from which we make our machinery is protected. If, as facetiously said, we make shoes of paper, that is protected, too. In short, you have paid a duty on nearly every component part of the shoe which you are now wearing on your foot.

A removal of duty from all articles used in the manufacture of a shoe would be an advantage to employer and employed.

He then states as a fact within his own knowledge that Canada imposed an import duty of 25 per cent on shoes, hoping thereby to be able to compete with the superior skill and the greater efficiency of the workman in the United States.

The gentleman then says that though they (the shoe manufacturers of the United States) are obliged to pay a high duty on every article that enters into a manufactured shoe, and contend against the Canadian import tax as well, they furnish as many shoes to Canada as ever. He then goes on to show what his craft could do were the burden of the duties on materials used in making shoes removed, and adds to the already accumulated mountain

of proof which shows that it is the superior skill and greater productive power of our workmen which secure them a higher rate of compensation than is paid for the character of work in other countries, and that this superior skill and greater capacity for production are actually weighted down by a high tariff. These are his words:

This alone proves what our shoe-manufacturing industry is capable of achieving if it can have a chance. There is no other country knows how or could make shoes as fast and as cheap as the Yankees, and all we need is one end of the bargain. If we are able to sell our goods when protected and protected against, if half the disadvantage we now stagger under were removed, we could soon fix ourselves into a place where the world's buyers could not afford to purchase from any other market.

In June, 1872, hides were put on the free list, and it was asserted that it would make them so cheap that farmers could not sell them for enough to repay the cost of curing and shipping. But this proved to be a mistaken prediction, as the price of sole leather has fallen much less than other articles.

#### DUTY ON RAW HIDES TO BENEFIT WEALTHY TRUSTS.

In 1872 we exported 12,102,019 pounds of sole, upper, and other leather, valued at \$2,864,800, the average price being 23.67 cents per pound.

In 1896 we exported 41,818,503 pounds of sole leather alone, valued at \$7,474,021, the average price being 17.87 cents per pound.

Section 437 of this act reads as follows:

Hides of cattle, raw or uncured, whether dry, salted, or pickled, 15 per cent ad valorem: *Provided*, That upon all leather exported, made from imported hides, there shall be allowed a drawback equal to the amount of duty paid on such hides, to be paid under such regulations as the Secretary of the Treasury may prescribe.

Now, about four-fifths of our exports of leather is made from domestic hides, but the leather trust, with a capital of \$125,000,000, will control the Government, so long as the Republican party remains in power, with regard to this matter, and they will succeed in getting a drawback on nearly all the leather which is exported.

The duty on hides will not benefit the farmer one particle, and with this drawback clause it is doubtful if it adds a particle to the revenue of the Government.

I think it will finally be developed that this duty on hides, together with the drawback clause, was inserted in the bill for the purpose of adding to the profits of a powerful and wealthy trust.

How differently this Republican Congress treated us with regard to iron ties and bagging for cotton.

Under the Wilson bill they were free. In the committee of the House and while the bill was being considered by the House, and again in the conference committee, I offered an amendment to retain these articles on the free list. This was opposed by every Republican, but was advocated by every Democrat. I then offered an amendment giving a rebate upon iron ties and cotton bagging when exported as a covering for cotton. This reasonable provision was also rejected.

Now, the bagging and ties on cotton are a part of the manufacture of the bale. They have no value after they have served their purpose of transmitting the cotton to the market, and there is much more reason why a rebate on such articles should be allowed than upon imported hides.

In the case of bagging and ties their identity could not be questioned, while hides manufactured into leather would be so changed that it would be very difficult to prevent glaring fraud.

It is a discrimination against the Southern farmers who make cotton and the Western farmers who raise grain which is utterly unjustifiable.

#### LARGE MAJORITY OF WHITE VOTERS FAVOR DEMOCRATIC LAWS.

Many of the Republican orators have contended that the result of the Presidential elections which have been held since the enactment of protection laws have been such as to justify the statement that these un-American and unconstitutional laws have been approved by the people. But the facts do not justify this conclusion.

Assuming the statement to be correct that the colored vote was so influenced by sentimental devotion to the governing party, or was so controlled by Republican officials and party machinery that it in no wise expressed either approval or disapproval of the methods of taxation, the white vote alone is left to afford us any guide as to the opinion of the people on this important question.

Although the Republican party availed itself of the eminent services and consequent exceptional popularity of that great soldier, General Grant, as its standard bearer in 1868 and 1872, Governor Hayes, whose career, military and civil, had been so blameless that censure or criticism were hardly attempted, to lead their hosts in 1876, and Garfield, equally popular as a general in war and a statesman in peace, in 1880, and had the Knight of the White Plume to magnetize and electrify the popular mind in 1884, and Benjamin Harrison, the grandson of the hero of Tippecanoe, and enjoying as he did the good record of Senator and general during the war, in 1888 and 1892, and the great apostle of protection, backed by the capital and wealth of the manufacturers and

bankers, in 1896, the vote cast by the white people during those eight elections was as follows:

Table showing the vote for President; also the white vote for President and the Democratic majority of white voters at each of the eight elections from 1863 to 1896.

Year.	Presidential candidates.	Republican.	Republican, negro vote deducted.	Democratic.	Democratic majority of white voters.
1868.	Seymour and Grant.....	3,015,071	2,525,719	2,709,613	183,894
1872.	Greeley and Grant.....	3,507,070	2,796,401	2,834,079	37,678
1876.	Tilden and Hayes.....	4,033,950	3,197,297	4,284,757	1,087,460
1880.	Hancock and Garfield....	4,449,053	3,640,310	4,442,035	801,725
1884.	Cleveland and Blaine.....	4,848,334	3,979,275	4,911,017	931,742
1888.	Cleveland and Harrison....	5,440,216	4,663,043	5,538,233	875,190
1892.	do.....	5,176,108	4,436,664	5,556,918	1,120,254
1896.	Bryan and McKinley.....	7,104,770	6,089,811	6,502,925	413,114

In 1868, Mississippi, Texas, and Virginia were not allowed to vote, and the electoral vote of Florida was cast by the legislature. There were 399,738 white voters in those States, none of whom were included in the above returns. It may be safely estimated that nearly 300,000 of these would have voted for the Democratic ticket, increasing the Democratic vote for that year to nearly 3,000,000.

I do not think that anyone will question the proposition that every Democratic vote of this large majority of the white voters of the country should be accepted as the voluntary expression of the preference of the citizen. But this statement can not be said to apply to the whole of the votes which make up the white voting strength of the Republican minority. The proof is too conclusive to be doubted that in the manufacturing districts the practice prevailed of giving the employees to understand that unless they voted as their employers desired their services would be dispensed with.

There are about 900,000 voters engaged as operatives in factories, and we may assume that one-third of these are influenced or constrained to vote as desired by their employers. Deduct these from the Republican column and add them to the Democratic vote and the expression in favor of Democratic principles would be very pronounced.

Mr. Speaker, I will mention some of the burdens which the poor must bear under this bill.

The blankets, the flannels, and hats that are to shield them from the cold of winter and the window glass for their cabins and houses are all taxed from 100 to 250 per cent.

A MEMBER. Is that an increase over the present law?

Mr. WHEELER of Alabama. Yes, an increase over the present law and also over the McKinley bill.

I have before me five sizes of window glass. The tariff rate is as I will read by the three bills:

	McKinley bill.	Wilson bill.	Dingley bill.
	Per cent.	Per cent.	Per cent.
First size.....	47.47	39.57	55
Second size.....	106.19	82.33	125
Third size.....	120.66	100.77	139.70
Fourth size.....	124.97	106.47	151.31
Fifth size.....	116.79	95.66	174.45

The poor man's tobacco, by the Dingley bill, is taxed as high as 837.39 per cent; the tax on blankets is raised from the Wilson bill rate of 40 per cent to 167.9 per cent; the tax on flannels is raised from the Wilson bill rate of 35 per cent to 145.29 per cent; the tax on cheap shawls is raised from the Wilson bill rate of 35 per cent to 212.83 per cent, and the tax on wool hats from the Wilson bill rate of 25 per cent up to 257.50.

#### INCREASED PRODUCTION UNDER DEMOCRATIC (WILSON) BILL.

Mr. Speaker, the bill we are about to repeal has infused life and prosperity into American industries. The McKinley bill was the law during most of 1894 and the three previous years. The Wilson bill was in full operation during 1895 and 1896. I give below statistics showing the marvelous increase of production and export under the Wilson bill as compared with the McKinley bill:

Production.	Under McKinley bill (1894).	Under Wilson bill (1895).
Pig iron.....gross tons..	6,057,388	9,446,308
Spiegelisen and ferromanganese, included in pig iron.....gross tons..	130,180	171,724
Bar hoop, skelp, and structural iron and steel, gross tons.....	2,155,875	3,005,765
Iron and steel, structural shapes, included above, gross tons.....	360,305	517,908

Production.	Under McKinley bill (1894.)	Under Wilson bill (1895.)
Iron and steel rods.....gross tons..	673,402	791,130
Plate and sheet iron and steel, except nail plate, gross tons.....	682,900	991,459
Iron and steel wire nails, kegs of 100 pounds.....	5,681,801	5,841,403
All rolled iron and steel, including cut nails and excluding rails.....gross tons..	3,620,439	4,883,439
All rolled iron and steel, including both cut nails and rails.....gross tons..	4,642,211	6,180,574
Bessemer steel rails.....do.....	2,016,013	1,399,623
Iron nails.....do.....	4,674	5,810
Total production of rails.....do.....	1,021,772	1,300,135
Street rails included above.....do.....	1,087,460	157,457
Bessemer steel.....do.....	3,571,313	4,909,123
Open-hearth steel a.....do.....	784,936	1,137,183
Crucible steel.....do.....	51,702	67,668
All kinds of crude steel.....do.....	4,412,032	6,114,834
Ore, pig, and scrap blooms for sale.....do.....	3,621	7,225
Tin plates for year ended June 30 b.....pounds..	139,223,467	193,801,073
Iron and steel ships built, fiscal year ended June 30 c.....gross tons..	39	43
Bars, rods, bolts, hoops, skelp, shapes, rolled axles, etc.....gross tons..	1,466,246	1,932,025
Total rolled iron and steel.....gross tons..	2,719,796	3,491,935
Bars, rods, bolts, hoops, skelp, shapes, rolled axles, etc.....gross tons..	448,297	649,136
Iron and steel plates, except nail plates.....do.....	107,347	163,006
Total consumption of iron ore.....gross tons..	12,235,000	17,253,000
Shipments of anthracite coal from the mines in Pennsylvania.....gross tons..	41,391,200	46,511,477
Exports of anthracite and bituminous coal, gross tons.....	3,639,344	3,682,683
Immigrants in the year ended December 31.....	250,313	234,330
Value of exports of iron and steel d.....	\$29,943,729	\$35,062,838

a For 1896, 1,298,700 gross tons.

b For 1896, 307,228,021 pounds.

c For 1896, 60.

d For 1896, \$48,070,218.

Table showing United States exports of merchandise during the year 1894, the last year of the McKinley bill; the increase during 1895, the first year of the Wilson bill, and the remarkable increase in 1896 and 1897, the second and third years of the Wilson bill.

Domestic.	Twelve months ending December—			Twelve months, June 30, 1897.
	1894.	1895.	1896.	
Products of agriculture.....	\$573,684,383	\$545,715,881	\$664,962,505	\$683,878,900
Manufactures.....	177,800,969	201,153,663	253,688,627	275,357,861
Mining.....	17,568,704	19,820,503	21,405,771	21,338,129
Forest.....	28,786,851	30,602,003	36,281,501	40,480,321
Fisheries.....	5,230,818	6,232,229	6,594,463	6,134,014
Miscellaneous.....	4,231,391	4,158,047	3,911,420	3,802,965
Total.....	807,312,116	807,742,415	986,844,193	1,032,001,300

#### DINGLEY BILL WILL AROUSE INDIGNATION.

These tables, Mr. Speaker, are taken from the published records of the Treasury Department, and from the records of the American Iron and Steel Association, an organization devoted to the advocacy of tariff duties for protection. With these figures staring them in the face, it is not surprising that Mr. DINGLEY and his Republican associates have made no attempt to defend the measure which they are about to enact into law.

These figures are an argument in favor of the Democratic idea of tariff and against Republican theories which can not be answered by sophistry and high-sounding platitudes.

These figures and the uncontrovertible facts which I have stated carry with them a conviction more powerful than the most soul-stirring eloquence. They show that under a tariff law similar to the one the Republican party is now forcing upon the country industries were paralyzed, production and exports decreased, factories were closed, people were idle, and prosperity languished.

The Democratic tariff bill, which you are about to repeal, has been in full operation but two and one-half years.

During that short time life has been enlivened in every industry in our land, closed factories have been opened, the idle have been employed, production and exports have been increased, and an era of prosperity seemed to be about to commence.

Since the passage of the wise Democratic bill our exports of agricultural products have increased \$110,194,607; our exports of manufactured goods have increased \$97,556,892; our exports of mining products have increased \$3,751,425; the exports from our forests \$11,702,470, and the exports of our fisheries \$894,196, and our total exports have increased \$224,639,184.

With this evidence before you of advancing prosperity under the Democratic Wilson bill, which you are about to repeal, and the languishing industries under a Republican bill similar to the one which you are about to enact, I tell you now that this action will be followed by a storm of indignation and resentment from all parts of our land which will sweep the Republican party from power and once again place the Government under the control of the defenders of right, the defenders of liberty, and the defenders of the people. [Prolonged applause on the Democratic side.]

## EXHIBIT No. 1.

Extract from Mr. Wheeler's speech of March 22, 1897.

DEFICIENCY CREATED UNDER MCKINLEY BILL, NOT UNDER WILSON BILL.

The attempt of Republicans to hold the Democratic party and the Wilson bill responsible for deficiency in the revenues is a gross outrage and wrong. There never was any deficiency under President Cleveland's first Administration, but on the contrary, owing to the economy and integrity with which the high duties of that office were administered, a very large surplus was created during the four years that he occupied the Presidential chair, from 1885 to 1890. And I assert that the deficiencies commenced during the Administration of President Harrison and after the passage of the McKinley bill. The McKinley bill became law on October 1, 1890, and a deficiency of \$13,891,347.60 occurred the very next month, namely, November, 1890.

I give below the receipts and expenditures and exact deficiencies during fifteen months of President Harrison's Administration.

Every one of those deficiencies were under the operation of the McKinley bill and under a Republican Administration. It will be seen that they commenced to be continuous in September, 1892, before Mr. Cleveland was elected, and at a time when Republicans were confident of a Republican victory, and these deficiencies continued every month until the close of President Harrison's Administration on March 4, 1893:

Table showing the receipts, expenditures, and deficiencies during fifteen months of President Harrison's Administration, and during a period when the McKinley bill was in full operation.

Month of—	Receipts.	Expenditures.	Deficiencies.
November, 1890.....	\$23,678,674.71	\$42,570,022.40	\$13,891,347.69
February, 1891.....	29,273,173.02	29,725,009.86	451,836.84
March, 1891.....	29,027,455.46	29,062,737.10	35,281.64
May, 1891.....	27,289,305.94	27,690,326.65	401,020.71
October, 1891.....	28,448,562.21	30,650,810.52	2,202,248.31
December, 1891.....	37,646,515.73	30,424,727.67	7,221,788.06
January, 1892.....	30,383,478.60	34,175,350.10	3,791,871.50
April, 1892.....	26,971,224.04	30,050,631.97	3,088,407.93
May, 1892.....	28,228,393.45	31,732,793.89	3,504,400.44
July, 1892.....	34,314,331.25	37,249,407.04	2,935,075.79
October, 1892.....	31,836,138.21	31,881,250.18	45,111.97
November, 1892.....	28,739,885.38	29,640,778.28	900,892.90
December, 1892.....	33,086,963.60	33,459,959.58	372,995.98
January, 1893.....	35,003,052.31	38,351,452.18	3,348,399.87
February, 1893.....	29,606,142.23	30,896,273.00	1,289,130.77

These deficiencies were due solely to Republican tariff and Republican pension legislation and other extravagant appropriations made by Republicans, all of which were opposed and condemned by Democratic Representatives.

The laws passed by Republicans during the first Congress under President Harrison made an increase of annual charges upon the Government of more than \$50,000,000 per annum.

## EXHIBIT No. 3.

Trusts described in a work by William W. Cook, of the New York bar, pages 64 to 77.

Trust.	Present duty.	Proposed duty.
The Standard Oil trust.....	Free	1.05 per pound.
The sugar trust.....	40 per cent and 1 cent	4 cents a gallon.
The American cotton-seed oil trust.....	Free	
The envelope trust.....	20 per cent.	20 per cent.
The glass trust.....	36 per cent.	45 per cent.

Trusts described in a work by William W. Cook, etc.—Continued.

Trust.	Present duty.	Proposed duty.
The New York meat trust.....	20 per cent.	2 cents per pound.
The Brooklyn warehouse trust.....	Free	2 cents a gallon.
Milk trust.....	Free	35 to 50 per cent.
The oilcloth trust.....	25 to 40 per cent.	50 per cent.
The sandstone trust.....	30 per cent.	
The pitch and coal-tar trust.....	Free	

Trusts described by Charles Whitney Baker in a work published in 1889.

Trust.	Tariff under—	
	Wilson bill.	Dingley bill.
Beef.....	20 per cent.	2 cents pound.
Bread.....	do.	20 per cent.
Carpet.....	30 to 40 per cent.	62½ cents and 40 per cent.
Clothes wringers.....	35 per cent.	45 per cent.
Dental tools.....	do.	Do.
Felt.....	25 to 50 per cent.	40 cents and 55 per cent.
Flour.....	20 to 25 per cent.	15 per cent.
Jute bagging.....	Free	20 cents to 40 cents.
Lager beer.....	15 cents to 30 cents.	45 cents per gross and 25 per cent.
Lead pencil.....	50 per cent.	\$1 per M.
Lumber.....	Free	2 cents per gallon.
Milk.....	do.	20 cents a pound and 10 per cent.
Patent leather.....	20 per cent.	30 cents per M.
Shingle.....	Free	\$3 and 25 per cent.
Watch and case.....	25 per cent.	2½ cents.
White lead.....	1½ cents.	

List of trusts of more recent origin, referred to by Hon. De Witt Warner and Senators Vest and White.

Name of organization.	Tariff under—	
	Wilson bill.	Dingley bill.
Barbed wire.....	2½ cents per pound.	2½ to 3 cents.
Biscuit and cracker.....	20 per cent.	20 per cent.
Bolt and nut.....	1½ cents per pound.	1½ cents per pound.
Boiler.....	35 to 45 per cent.	45 per cent.
Boot and shoe.....	20 per cent.	25 per cent.
Borax.....	2 cents per pound.	5 cents per pound.
Broom.....	30 per cent.	40 per cent.
Brush.....	35 per cent.	Do.
Button.....	35 to 57 per cent.	47 to 78 per cent.
Carbon candle.....	30 per cent.	30 per cent.
Cartridge.....	do.	Do.
Casket.....	25 per cent.	35 per cent.
Caster oil.....	35 cents per gallon.	35 cents per gallon.
Celluloid.....	45 per cent.	65 cents and 25 per cent.
Cigarette.....	\$4 per pound and 25 per cent.	\$4 per pound and 25 per cent.
Coal.....	40 cents per ton.	67 cents per ton.
Condensed milk.....	2 cents per pound.	2 cents per pound.
Copper, ingot.....	Free.	Free.
Copper, sheet.....	do.	Do.
Cordage.....	Binding free; 10 per cent and 1 cent per pound.	1 cent and 2 cents per pound.
Crockery.....	30 and 35 per cent.	55 per cent.
Cotton, duck.....	35 per cent.	35 per cent.
Cotton-seed oil.....	Free	4 cents per gallon.
Cotton thread.....	5½ cents per dozen.	6 cents per dozen.
Electric supply.....	35 per cent.	45 per cent.
Linseed oil.....	20 cents per gallon.	30 cents per gallon.
Lithograph.....	13 to 25 per cent.	26 to 41 per cent.
Locomotive tire.....	1½ cents per pound.	1½ cents per pound.
Marble.....	85 cents per cubic foot.	\$1.50 per cubic foot.
Match.....	20 per cent.	8 cents per gross.
Morocco leather.....	do.	10 per cent.
Oatmeal.....	15 per cent.	1 cent per pound.
Paper bag.....	20 per cent.	35 per cent.
Pitch.....	Free.	Free.
Plate glass.....	5 to 35 cents per square foot.	8 to 35 cents per square foot.
Pocket cutlery.....	25 to 75 per cent.	To 100 per cent.
Powder.....	5 to 8 cents.	4 to 6 cents.
Preserves.....	30 per cent.	35 per cent.
Pulp.....	10 per cent.	\$1.50 to \$5 per ton.
Rice.....	1½ cents per pound.	2 cents per pound.
Rubber gossamer.....	45 to 60 per cent.	50 cents and 55 per cent.
Rubber, general.....	25 per cent.	30 per cent.
Safe.....	35 per cent.	45 per cent.
Salt.....	Free	12 cents per 100 pounds.
Sanitary ware.....	do.	55 per cent.
Sandpaper.....	20 per cent.	35 per cent.
Sash, door, and blind.....	25 per cent.	Do.
Saw.....	12 to 50 per cent.	12 to 50 per cent; band, 10 cents and 20 per cent.
Schoolbook.....	25 per cent.	25 per cent.
School furniture.....	do.	35 per cent.
Sewer pipe.....	20 per cent.	25 per cent.
Shot and lead.....	1½ cents per pound.	2½ cents per pound.
Skewer.....	25 per cent.	35 per cent.

List of trusts of more recent origin, etc.—Continued.

Name of organization.	Tariff under—	
	Wilson bill.	Dingley bill.
Amalgams	35 per cent.	45 per cent.
Snath	25 per cent.	35 per cent.
Soap	10 to 35 per cent.	20 to 50 per cent.
Road-water machinery	35 per cent.	45 per cent.
Spool, bobbin, and shuttle	25 per cent.	35 per cent.

1883	8,491,988	3,174,628	37.38	42,552,456	29,146,265	68.49
1884	13,503,200	4,532,826	33.27	41,484,872	27,478,400	66.23
1885	9,474,204	3,164,290	30.40	36,176,705	24,294,939	67.16
1886	13,794,213	5,126,108	37.10	40,596,509	27,278,528	67.29
1887	10,351,370	5,890,816	56.98	44,235,244	29,739,718	67.21
1888	14,022,100	4,739,497	33.63	47,158,048	32,215,121	68.31
1889	17,432,759	5,982,312	34.32	52,981,483	35,373,627	67.15
1890	16,105,043	5,460,886	33.78	54,165,423	37,440,051	69.12
1891	17,070,183	5,552,886	32.36	63,235,469	34,867,453	55.82
1892	17,067,068	7,790,089	44.07	35,708,900	34,236,006	95.81
1893	15,403,689	8,147,230	44.27	30,957,804	36,451,562	98.55

I call attention to the fact that in 1893, when the equivalent ad valorem of the McKinley bill was the highest, the imports of raw wool were valued at \$18,403,689, a greater amount than was ever before imported. This goes very far to show that American manufacturers must have foreign wool, and goes very far toward sustaining our argument against a high tariff upon this article.

## The Issues of the Campaign.

## SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States, and the question being upon agreeing to the report of the committee of conference on the disagreeing votes of the two Houses—

Mr. GROSVENOR said:

Mr. SPEAKER: The Republicans have not abandoned any part or tittle of their political faith. They have stood by their guns; they have abandoned no word of their platform, and during the session of Congress now closing the party on this floor has redeemed, as far as possible, every pledge made to the people of the country, and we go forth to the contest of 1897 reiterating the platform adopted at St. Louis and the construction given to it by the great leader of the party in 1896. In his letter of acceptance he said:

GENTLEMEN: In pursuance of the promise made to your committee when notified of my nomination as the Republican candidate for President, I beg to submit this formal acceptance of that high honor, and to consider in detail questions at issue in the pending campaign. Perhaps this might be considered unnecessary in view of my remarks on that occasion and those I have made to delegations that have visited me since the St. Louis convention, but in view of the momentous importance of the proper settlement of the issues presented on our future prosperity and standing as a nation, and considering only the welfare and happiness of our people, I could not be content to omit again calling attention to the questions which, in my opinion, vitally affect our strength and position among the governments of the world, and our morality, integrity, and patriotism as citizens of that Republic, which for a century past has been the best hope of the world and the inspiration of mankind. We must not now prove false to our own high standards in government, nor unmindful of the noble example and wise precepts of the fathers, or of the confidence and trust which our conduct in the past has always inspired.

## THE FREE COINAGE OF SILVER.

For the first time since 1866, if ever before, there is presented to the American people this year a clear and direct issue as to our monetary system, of vast importance in its effects, and upon the right settlement of which rests largely the financial honor and prosperity of the country. It is proposed by one wing of the Democratic party, and its allies, the People's and Silver parties, to inaugurate the free and unlimited coinage of silver by independent action on the part of the United States at a ratio of 16 ounces of silver to 1 ounce of gold.

The more declaration of this purpose is a menace to our financial and industrial interests, and has already created universal alarm. It involves great peril to the credit and business of the country, a peril so grave that conservative men everywhere are breaking away from their old party associations and uniting with other patriotic citizens in emphatic protest against the platform of the Democratic national convention as an assault upon the faith and honor of the Government and the welfare of the people. We have had few questions in the lifetime of the Republic more serious than the one which is thus presented.

## NO BENEFIT TO LABOR.

The character of the money which shall measure our values and exchanges and settle our balances with one another and with the nations of the world is of such primary importance and so far-reaching in its consequences as to call for the most painstaking investigation, and, in the end, a sober and unprejudiced judgment at the polls. We must not be misled by phrases nor deluded by false theories. Free silver would not mean that silver dollars were to be freely had without cost or labor. It would mean the free use of the mints of the United States for the few who are owners of silver bullion, but would make silver coin no freer to the many who are engaged in other enterprises. It would not make labor easier, the hours of labor shorter, or the pay better. It would not make farming less laborious or more profitable. It would not start a factory or make a demand for an additional day's labor. It would create no new occupations. It would add nothing to the comfort of the masses, the capital of the people, or the wealth of the nation. It seeks to introduce a new measure of value, but would add no value to the thing measured. It would not conserve values. On the contrary, it would derange all existing values. It would not restore business confidence, but its direct effect would be to destroy the little which yet remains.

## WHAT IT MEANS.

The meaning of the coinage plank adopted at Chicago is that anyone may take a quantity of silver bullion, now worth 53 cents, to the mints of the United States, have it coined at the expense of the Government, and receive for it a silver dollar which shall be legal tender for the payment of all debts, public and private. The owner of the silver bullion would get the silver dollar. It would belong to him and to nobody else. Other people would get it only by their labor, the products of the land, or something of value. The bullion owner on the basis of present values would receive the silver dollar for 53 cents' worth of silver, and other people would be required to receive it as a full dollar in the payment of debts. The Government would get nothing from the transaction. It would bear the expense of coining the silver and the community would suffer loss by its use.

## THE DOLLARS COMPARED.

We have coined since 1878 more than 400,000,000 silver dollars, which are maintained by the Government at parity with gold, and are a full legal tender for the payment of all debts, public and private. How are the silver dollars now in use different from those which would be in use under free coinage? They are to be of the same weight and fineness; they are to bear the same stamp of the Government. Why would they not be of the same value? I answer: The silver dollars now in use were coined on account of the Government, and not for private account or gain, and the Government has solemnly agreed to keep them as good as the best dollars we have.

The Government bought the silver bullion at its market value and coined it into silver dollars. Having exclusive control of the mintage, it only coins what it can hold at a parity with gold. The profit, representing the difference between the commercial value of the silver bullion and the face value of the silver dollar, goes to the Government for the benefit of the people. The Government bought the silver bullion contained in the silver dollar at very much less than its coinage value. It paid it out to its creditors and put it in circulation among the people at its face value of 100 cents, or a full dollar. It required the people to accept it as a legal tender, and is thus morally bound to maintain it at a parity with gold, which was then, as now, the recognized standard with us and the most enlightened nations of the world. The Government having issued and circulated the silver dollar, it must in honor protect the holder from loss. This obligation it has so far sacredly kept. Not only is there a moral obligation, but there is a legal obligation, expressed in public statute, to maintain the parity.

#### THEY COULD NOT BE KEPT AT PAR.

These dollars, in the particulars I have named, are not the same as the dollars which would be issued under free coinage. They would be the same in form, but different in value. The Government would have no part in the transaction except to coin the silver bullion into dollars. It would share in no part of the profit. It would take upon itself no obligation. It would not put the dollars into circulation. It could only get them, as any citizen would get them, by giving something for them. It would deliver them to those who deposited the silver, and its connection with the transaction there end. Such are the silver dollars which would be issued under free coinage of silver at a ratio of 16 to 1. Who would then maintain the parity? What would keep them at par with gold?

There would be no obligation resting upon the Government to do it, and if there were, it would be powerless to do it. The simple truth is we would be driven to a silver basis—to silver monometallism. These dollars, therefore, would stand upon their real value. If the free and unlimited coinage of silver at a ratio of 16 ounces of silver to 1 ounce of gold would, as some of its advocates assert, make 53 cents in silver worth 100 cents and the silver dollar equal to the gold dollar, then we would have no cheaper money than now, and it would be no easier to get. But that such would be the result is against reason and is contradicted by experience in all times and in all lands. It means the debasement of our currency to the amount of the difference between the commercial and coin value of the silver dollar, which is ever changing, and the effect would be to reduce property values, entail untold financial loss, destroy confidence, impair the obligations of existing contracts, further impoverish the laborers and producers of the country, create a panic of unparalleled severity, and inflict upon trade and commerce a deadly blow. Against any such policy I am unalterably opposed.

#### BIMETALLISM.

Bimetallism can not be secured by independent action on our part. It can not be obtained by opening our mints to the unlimited coinage of the silver of the world at a ratio of 16 ounces of silver to 1 ounce of gold when the commercial ratio is more than 30 ounces of silver to 1 ounce of gold. Mexico and China have tried the experiment. Mexico has free coinage of silver and gold at a ratio slightly in excess of 164 ounces of silver to 1 ounce of gold, and while her mints are freely open to both metals at that ratio, not a single dollar in gold bullion is coined and circulated as money.

Gold has been driven out of circulation in these countries and they are on a silver basis alone. Until international agreement is had, it is the plain duty of the United States to maintain the gold standard. It is the recognized and sole standard of the great commercial nations of the world, with which we trade more largely than any other. Eighty-four per cent of our foreign trade for the fiscal year 1895 was with gold-standard countries, and our trade with other countries was settled on a gold basis.

#### WE NOW HAVE MORE SILVER THAN GOLD.

Chiefly by means of legislation during and since 1878, there has been put in circulation more than \$24,000,000 of silver, or its representative. This has been done in the honest effort to give to silver, if possible, the same bullion and coinage value, and encourage the concurrent use of both gold and silver as money. Prior to that time there had been less than nine millions of silver dollars coined in the entire history of the United States, a period of eighty-nine years. This legislation secures the largest use of silver consistent with financial safety and the pledge to maintain its parity with gold. We have to-day more silver than gold. This has been accomplished at times with grave peril to the public credit.

The so-called Sherman law sought to use all the silver product of the United States for money at its market value. From 1890 to 1893 the Government purchased 4,500,000 ounces of silver a month, or 54,000,000 ounces a year. This was one-third of the product of the world and practically all of this country's product. It was believed by those who then and now favor free coinage that such use of silver would advance its bullion value to its coinage value, but this expectation was not realized. In a few months, notwithstanding the unprecedented market for the silver produced in the United States, the price of silver went down very rapidly, reaching a lower point than ever before. Then, upon the recommendation of President Cleveland, both political parties united in the repeal of the purchasing clause of the Sherman law. We can not with safety engage in further experiments in this direction.

#### THE DOUBLE STANDARD.

On the 22d of August, 1881, in a public address, I said: "If we could have an international ratio, which all the leading nations of the world would adopt, and the true relation be fixed between the two metals, and all agree upon the quantity of silver which should constitute a dollar, then silver would be as free and unlimited in its privileges of coinage as gold is to-day. But that we have not been able to secure, and with the free and unlimited coinage of silver adopted in the United States, at the present ratio, we would be still further removed from any international agreement. We may never be able to secure it if we enter upon the isolated coinage of silver. The double standard implies equality at a ratio, and that equality can only be established by the concurrent law of nations. It was the concurrent law of nations that made the double standard; it will require the concurrent law of nations to reinstate and sustain it."

#### IT FAVORS THE USE OF SILVER MONEY.

The Republican party has not been, and is not now, opposed to the use of silver money, as its record abundantly shows. It has done all that could be done for its increased use, with safety and honor, by the United States acting apart from other governments. There are those who think that it has already gone beyond the limit of financial prudence. Surely we can go no farther, and we must not permit false lights to lure us across the danger line.

#### WE HAVE MORE SILVER THAN OTHER COUNTRIES.

We have much more silver in use than any country in the world except India or China—\$500,000,000 more than Great Britain, \$150,000,000 more than France, \$400,000,000 more than Germany, \$325,000,000 less than India, and \$125,000,000 less than China. The Republican party has declared in favor of an international agreement, and if elected President it will be my duty to

employ all proper means to promote it. The free coinage of silver in this country would defer, if not defeat, international bimetallism, and until an international agreement can be had, every interest requires us to maintain our present standard. Independent free coinage of silver at a ratio of 16 ounces of silver to 1 ounce of gold would insure the speedy contraction of the volume of our currency. It would drive at least 500,000,000 of gold dollars, which we now have, permanently from the trade of the country, at 1 greatly decrease our per capita circulation. It is not proposed by the Republican party to take from the circulating medium of the country any of the silver we now have.

On the contrary, it is proposed to keep all of the silver money now in circulation on a parity with gold by maintaining the pledge of the Government that all of it shall be equal to gold. This has been the unbroken policy of the Republican party since 1878. It has inaugurated no new policy. It will keep in circulation and as good as gold all of the silver and paper money which is now included in the currency of the country. It will maintain their parity. It will preserve their equality in the future as it has always done in the past. It will not consent to put this country on a silver basis, which would inevitably follow independent free coinage at a ratio of 16 to 1. It will oppose the expulsion of gold from our circulation.

#### FARMERS AND LABORERS SUFFER MOST.

If there is any one thing which should be free from speculation and fluctuation it is the money of a country. It ought never to be the subject of mere partisan contention. When we part with our labor, our products, or our property, we should receive in return money which is as stable and unchanging in value as the ingenuity of honest men can make it. Debasement of the currency means destruction of values. No one suffers so much from cheap money as the farmers and laborers. They are the first to feel its bad effects and the last to recover from them. This has been the uniform experience of all countries, and here, as elsewhere, the poor, and not the rich, are always the greatest sufferers from every attempt to debase our money. It would fall with alarming severity upon investments already made; upon insurance companies and their policy holders; upon savings banks and their depositors; upon building and loan associations and their members; upon the savings of thrift; upon pensioners and their families, and upon wage earners and the purchasing power of their wages.

#### UNLIMITED IRREDEEMABLE PAPER MONEY.

The silver question is not the only issue affecting our money in the pending contest. Not content with urging the free coinage of silver, its strongest champions demand that our paper money shall be issued directly by the Government of the United States. This is the Chicago Democratic declaration. The St. Louis People's declaration is that "our national money shall be issued by the General Government only, without the intervention of banks of issue, be full legal tender for the payment of all debts, public and private," and be distributed "direct to the people, and through lawful disbursements of the Government."

Thus, in addition to the free coinage of the world's silver, we are asked to enter upon an era of unlimited irredeemable paper currency. The question which was fought out from 1865 to 1879 is thus to be reopened, with all its uncertainties, and cheap-money experiments of every conceivable form foisted upon us. This indicates a most startling reactionary policy, strangely at variance with every requirement of sound finance; but the declaration shows the spirit and purpose of those who, by combined action, are contending for the control of the Government. Not satisfied with the debasement of our coin, which would inevitably follow the free coinage of silver at 16 to 1, they would still further degrade our currency and threaten the public honor by the unlimited issue of an irredeemable paper currency. A graver menace to our financial standing and credit could hardly be conceived, and every patriotic citizen should be aroused to promptly meet and effectually defeat it.

#### APPEALS TO PASSION ARE A MENACE TO OUR LIBERTIES.

It is a cause for painful regret and solicitude that an effort is being made by the use high the councils of the allied parties to divide the people of this country into classes and create distinctions among us which, in fact, do not exist and are repugnant to our form of government. These appeals to passion and prejudice are beneath the spirit and intelligence of a free people, and should be met with stern rebuke by those they are sought to influence, and I believe they will be. Every attempt to array class against class, "the classes against the masses," section against section, labor against capital, "the poor against the rich," or interest against interest in the United States is in the highest degree reprehensible. It is opposed to the national instinct and interest and should be resisted by every citizen. We are not a nation of classes, but of sturdy, free, independent, and honorable people, despising the demagogue, and never capitulating to dishonor. This ever-recurring effort endangers popular government, and is a menace to our liberties. It is not a new campaign device or party appeal. It is as old as government among men, but was never more untimely and unfortunate than now. Washington warned us against it, and Webster said in the Senate, in words which I feel are singularly appropriate at this time: "I admonish the people against the object of outcries like these. I admonish every industrious laborer of this country to be on his guard against such delusion. I tell him the attempt is to play off his passion against his interest, and to prevail on him, in the name of liberty, to destroy all the fruits of liberty."

#### PROTECTION OF SUPREME IMPORTANCE.

Another issue of supreme importance is that of protection. The peril of free silver is a menace to be feared; we are already experiencing the effect of partial free trade. The one must be averted; the other corrected. The Republican party is wedded to the doctrine of protection and was never more earnest in its support and advocacy than now. If argument were needed to strengthen its devotion to "the American system," or increase the hold of that system upon the party and people, it is found in the lesson and experience of the past three years. Men realize in their own daily lives what before was to many of them only report, history, or tradition. They have had a trial of both systems and know what each has done for them.

#### DEMANDED BY THE PUBLIC EXIGENCIES.

Washington in his Farewell Address, September 17, 1796, a hundred years ago, said:

"As a very important source of strength and security, cherish public credit. One method of preserving it is to use it as sparingly as possible, avoiding the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions in time of peace to discharge the debts which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear."

To facilitate the enforcement of the maxims which he announced he declared:

"It is essential that you should practically bear in mind that toward the payment of debts there must be revenue; that to have revenue there must be taxes; that no taxes can be devised which are not more or less inconvenient or unpleasant; that the intrinsic embarrassment inseparable from the selection of the proper objects (which is always a choice of difficulties) ought to

be a decisive motive for a candid construction of the conduct of the Government in making it, and for a spirit of acquiescence in the measures for obtaining revenue which the public exigencies may at any time dictate."

Animated by like sentiments, the people of the country must now face the conditions which beset them. "The public exigencies" demand prompt protective legislation which will avoid the accumulation of further debt by providing adequate revenues for the expenses of the Government. This is manifestly the requirement of duty. If elected President of the United States, it will be my aim to vigorously promote this object and give that ample encouragement to the occupations of the American people which, above all else, is so imperatively demanded at this juncture of our national affairs.

#### OUR CONDITION UNDER PROTECTION.

In December, 1892, President Harrison sent his last message to Congress. It was an able and exhaustive review of the condition and resources of the country. It stated our situation so accurately that I am sure it will not be amiss to recite his official and valuable testimony. "There never has been a time in our history," said he, "when work was so abundant, or when wages were so high, whether measured by the currency in which they are paid or by their power to supply the necessities and comforts of life. The general average of prices has been such as to give to agriculture a fair participation in the general prosperity. The new industrial plants established since October 6, 1890, and up to October 22, 1892, number 345, and the extensions of existing plants, 108. The new capital invested amounts to \$40,446,000, and the number of additional employees, 37,235. During the first six months of the present calendar year 135 new factories were built, of which 40 were cotton mills, 43 knitting mills, 26 woolen mills, 15 silk mills, 4 plush mills, and 2 linen mills. Of the 40 cotton mills, 21 have been built in the Southern States." This fairly describes the happy condition of the country in December, 1890. What has it been since, and what is it now?

#### OUR CONDITION EIGHT MONTHS LATER.

The messages of President Cleveland from the beginning of his second Administration to the present time abound with descriptions of the deplorable industrial and financial situation of the country. While no resort to history or official statement is required to advise us of the present condition, and that which has prevailed during the past three years, I venture to quote from President Cleveland's first message, August 8, 1893, addressed to the Fifty-third Congress, which he had called together in extraordinary session. "The existence of an alarming and extraordinary business situation," said he, "involving the welfare and prosperity of all our people, has constrained me to call together in extra session the people's representatives in Congress, to the end that through the wise and patriotic exercise of the legislative duties with which they solely are charged the present evils may be mitigated and dangers threatening the future may be averted."

"Our unfortunate financial plight is not the result of untoward events, nor of conditions related to our natural resources. Nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With plentiful crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurances to business enterprises, suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities they offer for loans, though heretofore satisfactory, are no longer accepted. Values supposed to be fixed are fast becoming conjectural and loss and failure have invaded every branch of business."

#### A STARTLING CHANGE IN BUSINESS CONDITIONS.

What a startling and sudden change within the short period of eight months, from December, 1892, to August, 1893! What had occurred? A change of Administration; all branches of the Government had been intrusted to the Democratic party, which was committed against the protective policy that had prevailed uninterruptedly for more than thirty-two years and brought unexampled prosperity to the country and firmly pledged to its complete overthrow and the substitution of a tariff for revenue only. The change having been decreed by the elections in November, its effects were at once anticipated and felt. We can not close our eyes to these altered conditions, nor would it be wise to exclude from contemplation and investigation the causes which produced them. They are facts which we can not as a people disregard, and we can only hope to improve our present condition by a study of their causes.

In December, 1892, we had the same currency and practically the same volume of currency that we have now. It aggregated in 1892 \$2,372,599,501; in 1893, \$2,323,000,000; in 1894, \$2,323,442,362, and in December, 1895, \$2,194,000,230. The per capita of money, too, has been practically the same during this whole period. The quality of the money has been identical—all kept equal to gold. There is nothing connected with our money, therefore, to account for this sudden and aggravated industrial change. Whatever is to be deprecated in our financial system, it must everywhere be admitted that our money has been absolutely good and has brought neither loss nor inconvenience to its holders. A depreciated currency has not existed to further vex the troubled business situation.

#### GOOD MONEY NEVER MADE TIMES HARD.

It is a mere pretense to attribute the hard times to the fact that all our currency is on a gold basis. Good money never made times hard. Those who assert that our present industrial and financial depression is the result of the gold standard have not read American history aright or been careful students of the events of recent years. We never had greater prosperity in this country in every field of employment and industry than in the busy years from 1890 to 1892, during all of which time this country was on a gold basis and employed more gold money in its fiscal and business operations than ever before. We had, too, a protective tariff under which ample revenues were collected for the Government and an accumulating surplus which was constantly applied to the payment of the public debt. Let us hold fast to that which we know is good. It is not more money we want. What we want is to put the money we already have at work. When money is employed, men are employed. Both have always been steadily and remuneratively engaged during all the years of protective-tariff legislation. When those who have money lack confidence in the stability of values and investments, they will not part with their money. Business is stagnated—the life-blood of trade is checked and congested. We can not restore public confidence by an act which would revolutionize all values, or an act which entails a deficiency in the public revenues. We can not inspire confidence by advocating repudiation or practicing dishonesty. We can not restore confidence either to the Treasury or to the people without a change in our present tariff legislation.

#### THE TARIFF OF 1894.

The only measure of a general nature that affected the Treasury and the employments of our people passed by the Fifty-third Congress was the general tariff act, which did not receive the approval of the President. Whatever virtues may be claimed for that act there is confessedly one which it

does not possess. It lacks the essential virtue of its creation—the raising of revenue sufficient to supply the needs of the Government. It has at no time provided enough revenue for such needs, but it has caused a constant deficiency in the Treasury and a steady depletion in the earnings of labor and land. It has contributed to swell our national debt more than \$32,000,000—a sum nearly as great as the debt of the Government from Washington to Lincoln, including all our foreign wars from the Revolution to the rebellion. Since its passage work at home has been diminished, prices of agricultural products have fallen, confidence has been arrested, and general business demoralization is seen on every hand.

#### THE TARIFFS OF 1890 AND 1894 CONTRASTED.

The total receipts under the tariff act of 1894 for the first twenty-two months of its enforcement, from September, 1894, to June, 1895, were \$57,615,338, and the expenditures \$40,413,351, or a deficiency of \$2,801,035. The decrease in our exports of American products and manufactures during the first fifteen months of the present tariff, as contrasted with the exports of the first fifteen months of the tariff of 1890, was \$231,353,330. The excess of exports over imports during the first fifteen months of the tariff of 1890 was \$213,972,968, but only \$59,758,633 under the first fifteen months of the tariff of 1894, a loss under the latter of \$157,214,335. The net loss in the trade balance of the United States has been \$196,983,607 during the first fifteen months' operation of the tariff of 1894, as compared with the first fifteen months of the tariff of 1890. The loss has been large, constant, and steady, at the rate of \$13,130,000 per month, or \$500,000 for every business day of the year.

#### LOSING IN BOTH DIRECTIONS.

We have either been sending too much money out of the country or getting too little in, or both. We have lost steadily in both directions. Our foreign trade has been diminished and our domestic trade has suffered incalculable loss. Does not this suggest the cause of our present depression and indicate its remedy? Confidence in home enterprises has almost wholly disappeared. Our shops are closed, or running on half time at reduced wages and small profit, if not actual loss. Our men at home are idle, and while they are idle men abroad are occupied in supplying us with goods. Our unrivaled home market for the farmer has also greatly suffered because those who constitute it—the great army of American wage earners—are without the work and wages they formerly had. If they can not earn wages they can not buy products. They can not earn if they have no employment, and when they do not earn the farmer's home market is lessened and impaired, and the loss is felt by both producer and consumer. The loss of earning power alone in this country in the past three years is sufficient to have produced our unfortunate business situation. If our labor was well employed, and employed at as remunerative wages as in 1892, in a few months every farmer in the land would feel the glad change in the increased demand for his products and in the better prices which he would receive.

#### NOT OPEN MINTS, BUT OPEN MILLS.

It is not an increase in the volume of money which is the need of the time, but an increase in the volume of business. Not an increase of coin, but an increase of confidence. Not more coinage, but a more active use of the money coined. Not open mints for the unlimited coinage of the silver of the world, but open mills for the full and unrestricted labor of American workmen. The employment of our mints for the coinage of the silver of the world would not bring the necessities and comforts of life back to our people. This will only come with the employment of the masses, and such employment is certain to follow the reestablishment of a wise protective policy which shall encourage manufacturing at home. Protection has lost none of its virtue and importance. The first duty of the Republican party, if restored to power in the country, will be the enactment of a tariff law which will raise all the money necessary to conduct the Government, secure honestly administered, and so adjusted as to give preference to home manufactures and adequate protection to home labor and the home market. We are not committed to any special schedules or rates of duty. They are and should be always subject to change to meet new conditions, but the principle upon which rates of duty are imposed remains the same. Our duties should always be high enough to measure the difference between the wages paid labor at home and in competing countries, and to adequately protect American investments and American enterprises.

#### OUR FARMERS AND THE TARIFF.

Our farmers have been hurt by the changes in our tariff legislation as severely as our laborers and manufacturers, badly as they have suffered. The Republican platform wisely declares in favor of such encouragement to our sugar interests "as will lead to the production on American soil of all the sugar which the American people use." It promises to our wool and woolen interests "the most ample protection," a guaranty that ought to commend itself to every patriotic citizen. Never was a more grievous wrong done the farmers of our country than that so unjustly inflicted during the past three years upon the woolgrowers of America. Although among our most industrious and useful citizens, their interests have been practically destroyed and our woolen manufactures involved in similar disaster. At no time within the past thirty-six years, and perhaps never during any previous period, have so many of our woolen factories been suspended as now. The Republican party can be relied upon to correct these great wrongs, if again intrusted with the control of Congress.

#### RECIPROCITY AND ITS EFFECTS.

Another declaration of the Republican platform that has ray most cordial support is that which favors reciprocity. The splendid results of the reciprocity arrangements that were made under authority of the tariff law of 1890 are striking and suggestive. The brief period they were in force, in most cases only three years, was not long enough to thoroughly test their great value, but sufficient was shown by the trial to conclusively demonstrate the importance and the wisdom of their adoption. In 1892 the export trade of the United States attained the highest point in our history. The aggregate of our exports that year reached the immense sum of \$1,000,278,148, a sum greater by \$100,000,000 than the exports of any previous year. In 1893, owing to the threat of unfriendly tariff legislation, the total dropped to \$847,965,194. Our exports of domestic merchandise decreased \$189,000,000, but reciprocity still secured us a large trade in Central and South America and a larger trade with the West Indies than we had ever before enjoyed. The increase of trade with the countries with which we had reciprocity agreements was \$5,500,515 over our trade in 1892 and \$16,440,721 over our trade in 1891. The only countries with which the United States traded that showed increased exports in 1893 were practically those with which we had reciprocity arrangements.

The reciprocity treaty between this country and Spain, touching the markets of Cuba and Puerto Rico, was announced September 1, 1891. The growth of our trade with Cuba was phenomenal. In 1891 we sold that country but 114,441 barrels of flour; in 1892, 366,175; in 1893, 616,496, and in 1894, 662,243. Here was a growth of nearly 500 per cent, while our exportations of flour to Cuba for the year ending June 30, 1895—the year following the repeal of the reciprocity treaty—fell to 379,856 barrels, a loss of nearly half our trade with that country. The value of our total exports of merchandise from the United States to Cuba in 1891—the year prior to the negotiation of the reciprocity treaty—was \$12,224,888; in 1892, \$17,963,579; in 1893, \$24,157,098; in 1894,

\$50,125,021, but in 1895, after the annulment of the reciprocity agreement, it fell to only \$12,867,661. Many similar examples might be given of our increased trade under reciprocity with other countries, but enough has been shown of the efficacy of the legislation of 1890 to justify the speedy restoration of its reciprocity provisions. In my judgment, Congress should immediately restore the reciprocity sections of the old law, with such amendments, if any, as time and experience sanction as wise and proper. The underlying principle of this legislation must, however, be strictly observed. It is to afford new markets for our surplus agricultural and manufactured products without loss to the American laborer of a single day's work that he might otherwise procure.

#### FOREIGN IMMIGRATION.

The declaration of the platform touching foreign immigration is one of peculiar importance at this time, when our own laboring people are in such great distress. I am in hearty sympathy with the present legislation restricting foreign immigration, and favor such extension of the laws as will secure the United States from invasion by the debased and criminal classes of the Old World. While we adhere to the public policy under which our country has received great bodies of honest, industrious citizens, who have added to the wealth, progress, and power of the country, and while we welcome to our shores the well-disposed and industrious immigrant, who contributes by his energy and intelligence to the cause of free government, we want no immigrants who do not seek our shores to become citizens. We should permit none to participate in the advantages of our civilization who do not sympathize with our aims and form of government. We should receive none who come to make war upon our institutions and profit by public disquiet and turmoil. Against all such our gates must be tightly closed.

#### OUR SOLDIERS AND SAILORS.

The soldiers and sailors of the Union should neither be neglected nor forgotten. The Government which they served so well must not make their lives or condition harder by treating them as suppliants for relief in old age or distress, nor regard with disdain or contempt the earnest interest one comrade naturally manifests in the welfare of another. Doubtless there have been pension abuses and frauds in the numerous claims allowed by the Government, but the policy governing the administration of the Pension Bureau must always be fair and liberal. No deserving applicant should ever suffer because of a wrong perpetrated by or for another. Our soldiers and sailors gave the Government the best they had. They freely offered health, strength, limb, and life to save the country in the time of its greatest peril, and the Government must honor them in their need, as in their service, with the respect and gratitude due to brave, noble, and self-sacrificing men who are justly entitled to generous aid in their increasing necessities.

#### OUR MERCHANT MARINE AND NAVY.

The declaration of the Republican platform in favor of the upbuilding of our merchant marine has my hearty approval. The policy of discriminating duties in favor of our shipping which prevailed in the early years of our history should be again promptly adopted by Congress and vigorously supported until our prestige and supremacy on the seas are fully attained. We should no longer contribute directly or indirectly to the maintenance of the colossal marine of foreign countries, but provide an efficient and complete marine of our own. Now that the American Navy is assuming a position commensurate with our importance as a nation, a policy I am glad to observe the Republican platform strongly indorses, we must supplement it with a merchant marine that will give us the advantages in both our coastwise and foreign trade that we ought naturally and properly to enjoy. It should be at once a matter of public policy and national pride to repossess this immense and prosperous trade.

#### CIVIL-SERVICE REFORM.

The pledge of the Republican national convention that our civil-service laws "shall be sustained and thoroughly and honestly enforced, and extended wherever practicable," is in keeping with the position of the party for the past twenty-four years, and will be faithfully observed. Our opponents decry these reforms. They appear willing to abandon all the advantages gained, after so many years' agitation and effort. They encourage a return to methods of party favoritism, which both parties have often denounced, that experience has condemned, and that the people have repeatedly disapproved. The Republican party earnestly opposes this reactionary and entirely unjustifiable policy. It will take no backward step upon the question. It will seek to improve, but never degrade, the public service.

#### OUR FINANCIAL INTEGRITY MUST BE DEFENDED.

There are other important and timely declarations in the platform which I can not here discuss. I must content myself with saying that they have my approval. If, as Republicans, we have lately addressed our attention, with what may seem great stress and earnestness, to the new and unexpected assault upon the financial integrity of the Government, we have done it because the menace is so grave as to demand especial consideration, and because we are convinced that if the people are aroused to the true understanding and meaning of this silver and inflation movement they will avert the danger. In doing this we feel that we render the best service possible to the country, and we appeal to the intelligence, conscience, and patriotism of the people, irrespective of party or section, for their earnest support.

#### FALSE ISSUES MUST BE BOLDLY MET.

We avoid no issues. We meet the sudden, dangerous, and revolutionary assault upon law and order, and upon those to whom is confided by the Constitution and laws the authority to uphold and maintain them, which our opponents have made, with the same courage that we have faced every emergency since our organization as a party, more than forty years ago. Government by law must first be assured; everything else can wait. The spirit of lawlessness must be extinguished by the fires of an unselfish and lofty patriotism. Every attack upon the public faith and every suggestion of the repudiation of debts, public or private, must be rebuked by all men who believe that honesty is the best policy, or who love their country and would preserve unsullied its national honor.

#### SECTIONALISM ALMOST OBLITERATED.

The country is to be congratulated upon the almost total obliteration of the sectional lines which for so many years marked the division of the United States into slave and free territory, and finally threatened its partition into two separate governments by the dread ordeal of civil war. The era of reconciliation, so long and earnestly desired by General Grant and many other great leaders, North and South, has happily come, and the feeling of distrust and hostility between the sections is everywhere vanishing, let us hope never to return. Nothing is better calculated to give strength to the nation at home, increase our power and influence abroad, and add to the permanency and security of our free institutions than the restoration of cordial relations between the people of all sections and parts of our beloved country. If called by the suffrages of the people to assume the duties of the high office of President of the United States, I shall count it a privilege to aid, even in the slightest degree, the promotion of the spirit of fraternal regard which should animate and govern the citizens of every section, State, or part of the Republic. After the lapse of a century since its utterance, let

us, at length, and forever hereafter, heed the admonition of Washington: "There should be no North, no South, no East, no West—but a common country." It shall be my constant aim to improve every opportunity to advance the cause of good government by promoting that spirit of forbearance and justice which is so essential to our prosperity and happiness by joining most heartily in all proper efforts to restore the relations of brotherly respect and affection which in our early history characterized all the people of all the States. I would be glad to contribute toward binding in indivisible union the different divisions of the country, which, indeed, now "have every inducement of sympathy and interest" to weld them together more strongly than ever. I would rejoice to see demonstrated to the world that the North and the South and the East and the West are not separated, or in danger of becoming separated, because of sectional or party differences. The war is long since over; "we are not enemies, but friends," and as friends we will faithfully and cordially cooperate, under the approving smile of Him who has thus far so signally sustained and guided us, to preserve inviolate our country's name and honor, its peace and good order, and its continued ascendancy among the greatest governments on earth.

Very respectfully, your obedient servant,

WILLIAM MCKINLEY.

These be golden words to-day. They point the people of the country to the pledges redeemed; they point the people of the country to hopes in the future; they call loudly upon Republicans to stand together and vindicate the man who has been faithful to his party pledges.

#### The Tariff.

#### REMARKS

OF

HON. JOHN J. LENTZ,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897,

On the report of the committee of conference on the disagreeing votes of the two houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. LENTZ said:

Mr. SPEAKER: I desire to place in the CONGRESSIONAL RECORD a protest against the proposed duty on hides received by me from leading manufacturers, wholesale houses, and business men of the capital district of Ohio—a constituency I have the honor to represent on this floor. Over their own signatures these representatives of large business interests charge that the duty levied on hides by the terms of the Dingley bill is placed there for the sole benefit of the "great beef packers," and that "this duty must be paid by the consumers of leather."

Let my colleague [Mr. GROSVENOR], whose vote will be cast in opposition to the protests of these leading business men of his own State—and I might fairly say of his own party—let the gentleman from Ohio [Mr. GROSVENOR], who is a member of the committee responsible for this measure, and who has repeatedly stated that "the foreigner pays the tax," explain to the signers of this petition—men engaged in the manufacture of leather, buggies, harness, boots and shoes—how grievously they err in making a statement that "the increased cost of domestic hides, equal to the duty, must be paid by the consumer"—to whom?—"to the great beef packers," the Swifts and the Armours, as interest probably on the money contributed last fall by them to defeat and thwart the will of the people.

It is not my purpose at this time to enter upon a discussion for or against this tariff on hides. I merely desire to go on record as a faithful representative, to the extent of my humble capacity, of the people of the capital district of President McKinley's own State. This petition, signed by many of the most influential business men of my own district, is the only expression I have received on the subject of hides from my constituents. I have all along contended, and still contend, that the only just tariff bill that can be framed, or ever will be framed, must be framed after hearing from each and all of the Congressional districts of the Union, rather than at star-chamber sessions of a few men closeted at the Arlington Hotel, where no one could gain access to them unless he brought credentials from the sugar trust or some other gigantic combine. The petition to which I refer is as follows:

COLUMBUS, OHIO, June 12, 1897.

DEAR SIR: Your great constituency—all the population—are consumers of leather.

The Senate committee's amendment to the Dingley tariff bill places a duty of 14 cents per pound, equal to 15 per cent, on imported hides (50 per cent greater than was required by the exigencies of the war). This will stop or so greatly curtail importations that little revenue can result to the Government. The increased cost of domestic hides, equal to the duty, must be paid by the consumers of leather for the benefit of the great beef packers and other butchers.

The rapidly increasing export business of over \$30,000,000 per annum in leather and leather goods, secured through patient labor and great sacrifices during the twenty-five years that hides have remained undisturbed on the

free list, will be destroyed. One-half of the gross amount of exports of leather and leather goods is represented by well-paid American labor, which would be released to compete for employment in other industries.

Please use your great influence to defeat this unjust proposition.

Respectfully,

Edwin B. Robbins, Wm. Burdell, Jr., C. J. Krag, W. D. Brickell, Daily Dispatch; The Columbus Rubber and Belting Company, per F. N. Brown; Coe & Spencer, F. & R. Lazarus & Co., J. H. & F. A. Sells; The Columbus Carriage Manufacturing Company, by Wm. S. S. Rodgers; The Peters & Herron Dash Company, by Chas. M. Peters, president; The Columbus Phaeton Company; The Climax Buggy Company, by C. H. Lott; The Wolfe Shoe Company; Buckeye Buggy Company, by F. L. Hughes, vice-president; The Scioto Buggy Company, per C. A. Huggins, secretary; Columbus Vehicle Company, by John M. Clark, president; W. D. Park, John Hayes & Co.

Hon. JOHN J. LENTZ, Washington, D. C.

My constituents are not alone in their view of this tariff on hides, and in support of this proposition, and in support of the petitioners from my district, I submit what a Republican member of this House from the Thirteenth district of Pennsylvania [Mr. BRUMM] wrote over his own signature for the Philadelphia Ledger on the 23d of last April:

What farmer would raise one more head of cattle because there is a duty of 1 or 2 cents a pound on hides? In fact, the hide is but an incident and not an object of production. The farmer gets as much a pound for the hoof, the horn, the hair, and the excrement in the bullock as he does for the hide or for the choicest tenderloin cut, for the farmer sells the whole bullock in gross by weight; yet all parts of the bullock are useful articles of commerce, each having its separate and distinct value. If a separate duty were to be placed on the hoof or the horn or the hair, the farmer would not get the benefit of that, no more than he would get the benefit of a duty placed on hides; the only person to be benefited by such a duty would be the great trusts, such as Swift & Co., Armour & Co., and the large abattoirs.

The farmer who raises the cattle hardly butchers more than one or two of the oxen in a year for himself; the rest he sells, which shows the fallacy of this cry in favor of protecting the farmer by placing a duty on hides, and, as before stated, if this duty will not increase the production of hides, it will make the 70,000,000 people who use leather pay more for it, and the abattoir trust and monopoly get all the benefit of it.

#### Civil Service Reform Run Mad.

The Cleveland Administration, Backed by an Aggressive Organization of Spillmen, has Stolen the Livery of Civil Service Reform to Serve the Devil of Partisanship in—The Young Men of the Country Ignored—A Trust in Office Formed—The Spirit and Letter of the Law Violated—The Deliberate Purpose of a Bureau to Build up an Office-holding Class in the United States—The People to be Excluded.

#### SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

The House having under consideration a conference report upon the deficiency appropriation bill—

Mr. GROSVENOR said:

Mr. SPEAKER: I propose to call the attention of the House and so many of the people of the country as may see fit to consider my remarks to some of the peculiar phases and developments and aggressions and violations of law which have tarnished the name of free government under the specious, false, and misleading cry of civil service reform. I wish to lay down as a foundation for my remarks, and as a suggestion to the gentlemen who are studying this phase of American politics in the light of past history, some strange and yet exceedingly interesting coincidences in the declarations of some of the great men of our country.

More men have based their political positions upon certain great questions upon the declarations of George Washington than upon the declarations of all the other statesmen of the United States put together. We are constantly reminded of his wisdom and sagacity and far-sightedness in the matter of our foreign relations. His retirement from the Army has become a classic, is transmitted to the American boy and girl in the school-book literature of the times; and if an American citizen ventures upon a line of policy that it can be found is different in effect and purpose and result from some remark of George Washington, he is at once gently informed that he is un-American and going astray, and, as a rule, he turns about and wheels into line with the understanding that he must be wrong, for Washington was on the other side.

Very recently one of the most distinguished men of the United States contributed a most beautiful, most eloquent, and most appropriate eulogium to the memory of George Washington. I refer to the very eloquent speech of the President of the United States, delivered in Philadelphia, on Saturday, the 15th day of May last. In that speech the President spoke as follows:

Masterful as were his military campaigns, his civil administration commands equal admiration. His foresight was marvelous; his conception of the philosophy of government, his insistence upon the necessity of education, morality, and enlightened citizenship to the progress and permanence of the

Republic can not be contemplated even at this period without filling us with astonishment at the breadth of his comprehension and the sweep of his vision.

The people of the United States and the people of the civilized world, polled upon the question, "Shall this declaration of the President of the United States be approved or disapproved?" would vote by a majority of ninety-nine out of a hundred that the language of our distinguished President was just and truthful.

On the 27th of September, 1795, General Washington wrote to Timothy Pickering, Secretary of War, a private letter, which has since appeared in an authentic form in the Writings of George Washington, by Jared Sparks, Volume XI, page 74. The letter was written in regard to an applicant for office, and General Washington declined to appoint him because he was not in accord and sympathy politically with the national administration of that day. Closing his letter he uses this language:

I shall not, whilst I have the honor to administer the Government, bring a man into any office of consequence knowingly whose political tenets are adverse to the measures which the General Government are pursuing; for this, in my opinion, would be a sort of political suicide. That it would embarrass its movements is most certain. But of two men equally well affected to the true interests of their country, of equal abilities, and equally disposed to lend their support, it is the part of prudence to give the preference to him against whom the least clamor can be excited. For such a one my inquiries have been made and are still making. How far I shall succeed is at this moment problematical.

Here was a declaration of Washington, which commends itself instantly to the sound judgment of every intelligent man. And now, what have we lived to see? What has been brought upon us? There is to-day in this great city of Washington not one single bureau in the hands of the friends of the current Administration. There is not an assistant secretary or head of a great bureau who is not compelled to send out his most confidential thoughts through the medium of his political enemies, and to-day, in the confidential relations existing between the President and his Cabinet and the men who are managing his Administration and the public all along the line, stands an array of unfriendly sentinels wishing, hoping, and praying for the overthrow of the Administration, and themselves possessed of every secret move and thought of the Administration.

You can not secure a statistical statement of a fact or a series of facts reflecting upon the condition of the country, its commerce, its imports, its exports, that does not come through the medium at some point along the line of some person or persons who hate the Administration and are looking forward with hope and joy to its ultimate overthrow.

The contrast between this day and the day of Washington is wonderful, and Washington's declaration that the conduct of the Administration of to-day in retaining in office these men in confidential positions is exactly what he said would be, in his opinion, "a sort of political suicide." Washington spoke of it as the deliberate act of an Administration, and little did he ever dream that the hour would come in American history when the President would have been forced by law to yield the appointing power, given him by the terms of the Constitution, to a bureau independent of the President, and whose orders, if he shall violate them, will lay him liable to indictment and impeachment.

Washington said that the appointment of such men to office "of consequence" would embarrass the movements of an Administration. There is not one movement that this Administration can make, great or small, significant or insignificant, that is not envied by this limitation upon the President's power and authority, which in spirit and in practical effect is a repeal of the Constitution of the United States.

Did anything more humiliating to the pride and spirit of an American citizen ever occur than the visitation to the White House of a trio of the enemies of the Administration, two of whom at least denounced him bitterly and scornfully during the whole of the great campaign of 1896, now fawning at the feet of power and demanding in the name of the law of the United States that the President of the United States shall not appoint a messenger or an assistant messenger to guard the archives of his own executive office without the consent and approval of this bureau of his malignant enemies?

Following the proceedings of the last campaign, tell me who was viler in the assaults made upon this Administration than the representatives of civil-service reform, who are to-day crouching at the feet of power, first, asking for favors to themselves in the way of ambassadorial appointments, and, second, menacing the President if he even dare to change a letter of the order to which I shall shortly refer. Follow the bureau back in its personnel to the lair from which it sprang, and you find the promoter of the organization Logan Carlisle, whose name will be forever in American politics, significant of plunder and debauchery of public office, and a fitting representative of this power which swept the Treasury clean of Republicans and Republican soldiers and filled it with Democrats and Confederate soldiers; brought from his own State and established here the man who to-day dares to dictate to the President of the United States who shall be his stenographer and his subordinate secretaries.

## THE ATTITUDE OF THE OPPONENTS OF THE RECENT ADMINISTRATION OF THIS LAW.

There has never been a cool, deliberate, dispassionate, and candid and just argument made by these men why this law should be upheld and vindicated. They have never yet dared touch the true test of the efficiency or inefficiency, the beneficent or nonbeneficent character of the administration of this law in the United States. I propose that they shall have an opportunity now. But what they have done was to denounce the men who opposed the greed of this crowd by applying to them vile epithets and disrespectful and unfair suggestions.

Let a man dare in the Congress of the United States point out the infamy of this "sweep" of the public places and he is called a spoilsman and is caricatured in the merchantable illustrated papers of the country as a plunderer of the Treasury and as a promoter of debauchery of public office. The publications that have swung from pole to pole, as the exigencies of patronage and personal hatred have operated, have published columns of abuse of men who, as independent in thought and action, have dared to question the propriety of the miserable administration of the Departments during the last Administration of the General Government. No word of argument, no word of illustration, has come from these people.

Present your statement of facts candidly and dispassionately as you please, point out the evil tendencies of this bureau, and point out its corrupt and weak administration, and the answer is, You are a brutal spoilsman. Before I get through I will attempt to show that the greatest brutality of spoilsmanship that ever disgraced the American people was under the head and cover and mask of civil-service reform by a technical and absolutely accurate following of this law and the orders of its promulgation and enforcement by the recent Administration, but I do not enter upon this point at this time. I want to state now my own position and the position of the men who stand with me—ninety-five out of every one hundred voting members of the Republican party in the United States of America.

First, I would limit appointments in the ordinary places and offices of the administration of the Government, and I would do this because I condemn the foundation upon which, and every step taken under it, whereby a class of officeholders is being created and perpetuated in the United States. "We, the people of the United States," in order to secure a government that would be satisfactory to them, undertook to be the Government of the people; and Abraham Lincoln said that the war of the rebellion on our side was prosecuted to prevent the Government "of the people, for the people, and by the people" from perishing from the earth. The general idea, then, at each of these great epochs of the Government was to continue and uphold a government "by the people;" not in the name of the people, not alone for the people, not through an agency to be constituted by the Executive of the Government, but by the people themselves.

Now, Mr. Speaker, I say that the fundamental idea, which it is impossible to eliminate from all these discussions, is this: that all the people of the United States—that is to say, the voters, the electors—who stand absolutely equal before the law, with equal political rights, and with equal duty and responsibility and opportunity, political equality that bars access by 69,900,000 of the people of the United States to more than 200,000 offices of the United States is a sham, a fraud, a delusion.

Start now with the proposition that every man in the United States holding a position and shielded by the Civil Service Commission is a life appointment, and you have a class separated from the common people of the country, placed upon a plane where they are exclusive, so far as political immunities and emoluments are concerned, for all time, measured by their lives, and then you have sapped the fundamental principle of a government by the people.

Why, Mr. Speaker, in most of the States of this Union the offices of importance to the taxpayers are limited in their occupation by one man to a term of years. The sheriffs, the treasurers, the men holding financial relations to the taxpayers of the country, the mayors of the great cities, many of the other and higher officials of the States, can only hold their offices for a limited time continuously, and this because of the fundamental idea that underlies the substructure of American government that there shall be no fastening of a certain class of men upon the public offices of the country, to the exclusion of the masses.

We talk about trusts and combines. The greatest trust on earth to-day, the trust that causes the expenditure of a hundred million dollars, is the civil-service trust of the United States of America. It is worse than any sugar trust or Standard Oil trust, if such things exist anywhere, for there is no trust in commercial procedure, no trust in financial operations, no trust in industrial relations that can not be broken by like industries; but here is a trust protected, it is said, by statistics, but which I deny, that takes into its embrace a class, a certain class, as I shall show later on, formed upon false principles of economy, and then the barrier of an insurmountable trust combination is thrown about it.

Let no man talk against trusts and combines in this House who

will shut his mouth and supinely sit down under the growth and development of this monstrosity. But I would provide by law that merit should be the touchstone of admission to public office. I would pass a law that would provide, in the first place, that no man should be considered for an office who did not furnish the appointing power with absolute and unqualified evidence of good moral character and distinguished fitness for public office. Before I get through I will show you that this civil-service law, as now administered, is utterly incompetent to work out that result.

What is the meaning of the word "merit?" It means, as defined in the Century Dictionary, "that which one deserves, desert (good or bad); also a ground of desert (service, kindness, benefit, or fault, blame, demerit), worth, value, importance."

I will try to show that if merit as applied to the appointments to office means good merit, good desert, then the recent administration of this law has been upon the merit system; but if it means good merit, good conduct, good action, proper fitness, and all that, I will try to show that the word "merit" does not appear in a vast majority of cases to the men who have come into the civil service under the ordinary merit system. But I was talking about what I would do.

I would have established in every department of this Government a system of examination so that when the man came and presented himself and asked for an appointment, if an appointment was conferred upon him, before he should take his place, or office or position, he should be examined by an examination so rigid as to bar the possibility of an inefficient appointment, but the examination should not be competitive with somebody else, for the very suggestion is the foundation stone upon which the whole failure of this machinery has been erected. It should be fitness for the place to which he aspires.

Now, let us see what has happened. The man has come there, come to the appointing power, which need be somebody. Who shall it be? Who better than the Representative from his own Congressional district? There should be furnished to the appointing power, as I have already said, an absolute assurance of good character, good habits, good morals, pleasing address, good tendencies in the estimation of somebody entitled to respect and confidence. He should be a friend of the current Administration. Then let him be subjected to the test which I have already mentioned, not whether he is superior to anybody else in the details of his examination, but whether, with his proof of good character and good morals, he shows adaptation and peculiar fitness for the business to which he is to be detailed.

Then let him be appointed, and appointed for a term of years, and when that term of years has expired give the appointing power the authority, if it is deemed wise and expedient, to retain him if it believes, or if they believe, that the best interests of the Government demand his retention; if not, let him go home with his experience and his emoluments, and he will be a better citizen than though he had participated in the Government and let some other young man come and take his place, appointed in the same way.

Now, then, how is this to be gotten at? Each and every Congressional district in the United States of America has an equal right to have a just and fair apportionment of the emoluments of office made to each district. I speak now of the minor appointments in the various places of the Government. I am not tenacious as to who shall be the recommending power from the various districts. There is in the United States to-day an exhibition of the operation of the merit system based upon substantially the same grounds to which I have already adverted—I refer to the Naval Academy at Annapolis and the Military Academy at West Point.

How do we create these men who are to command our Army and Navy in the future? We do it by the very system that I am in favor of. The cadets of these two great institutions are apportioned to the various States and Territories according to the Congressional Districts of the United States. The merit of the young man is assured by the certificate of the Congressman who nominates him; and so far as the nomination is concerned, it is final. His merit up to that date is assured. That is to say, that he has merit is assured.

It may not be that the Congressman has judged rightly as to the future examination of the young man, but, upon the mere statement of the Congressman, he holds the right to an examination to fill a vacancy that has been created by the operation of law, and he takes his position to be examined—to be examined in the branches of education which he is to pursue in the future; and if he is admitted, he is told and he understands, it comes to him, that no Congressional interference can benefit him, no wealth of parentage, no distinction of lineage shall benefit him. The son of the President must tread the pathway of the son of the Irish laborer. The son of Ulysses S. Grant walked in the same pathway and was subjected to the same tests as the son of John Sheridan, the old Irishman of Ohio, and they walked their pathways to distinction. But it was along the line of merit.

Thus would I administer the civil service of the Government.

Let the young man come upon the nomination of some suitable authority. Let him be nominated with the understanding that he is a man of soundness of health, soundness of mind, soundness of morals, and a desirable young man for the place; and then let him understand that the future of his term is to be a struggle for excellence, and that if he does not meet the full requirements of his place he will go home, and that his departure will be upon the notification of his removal. I scorn a condition that says that a young man or an old man shall not be removed from a public position under the Government only upon charges and a trial.

Let us see how that will work: A man has worked his way in—I will show you after a while how successful bad men have been in getting into places under this Government under civil-service regulations—and he can not be gotten rid of except by charges and a trial. The Departments would be clogged to overflowing with bad men, or there would be a hundred courts-martial going on every day.

Whenever you adopt a system that says that the employee of a great bureau of the Government shall be fastened in because of a percentage that he has gained in an examination, and shall not be removed except upon charges, and shall have a hearing, you have simply made a political babble out of the civil service of the United States Government; for if the Secretary of the Treasury is dissatisfied with the conduct and the work of an employee and wants to get rid of him he must file charges and he must open the door to the defendant, with lawyers and witnesses, and there must be a hearing and the weight of evidence must be against him, while every foundation stone of discipline and improvement of administration points to the fact that the head of the Department is the ruler of the Department and the people of the United States look to him for efficient conduct of his office, and he must be supreme in the details of those who are to administer it; and when you fall one hair short of that, you have simply got a town meeting with a babbling condition that no man can measure the horrors of. My proposition to have a tenure in these offices would relieve the Government of the horrible incubus of inefficient clerks and inefficient employees.

If you are going to try a man for his efficiency before you can remove him, would it not be a pitiable condition for the Secretary of the Interior to file charges that an employee ought to be removed because his mind is growing weak, because he is too old, because he is not active enough, and forthwith there is an issue of fact, pleadings in fact are filed or understood; a motion is filed that charges are not specific, then a demurrer is filed, and an amendment having again been made, an issue of fact is joined by a denial, and if this man has any right or any hearing he has a right to a full trial and a full hearing, and he has a right under the great constitutional provision to be heard by himself or by his counsel, and he has something to say about the tribunal that he is to be tried in. Then doctors are to be called and the mental condition of the man is to be described, and finally the Secretary of the Interior is to be defeated by the judgment that he is wrong in his charges, or else the man is to go forth to the world guilty of all the charges that are found against him. Oh, horror of horrors, what a condition!

Already we have decisions on the subject of the operation of this significant enactment. We have a judge, very eminent, very distinguished, learned, and capable who has decided that which commonplace, ordinary lawyers would consider fairly good law that when a United States marshal or collector of internal revenue goes out of office the deputies under him, that is, the agents appointed by him cease to have official existence. This seemed to be a reasonable view, but we now have some "crown" law, and we have discovered that another judge of a United States court has decided that the mere little circumstance of the principal going out of office does not in the smallest degree affect the agent, and that the deputies appointed by the marshals and collectors of internal revenue bloom on perpetually, outlive the principals and the successors of the principals, thus justifying my statement that this law in its operation is an attempt to establish an official class in this country.

Adopt the four-year rule or the six or eight year rule and when the young man has reached that point he goes forth with an honorable discharge and with the wisdom gained, and he goes home to his people with pride that he has had a hand in the Administration, in the running of the Administration, and with pride that he has come home with a certificate of good character. There would be no curse of the system of perpetual tenure as now found in England, and which it is sought to introduce in this country—a system of pensions under a civil list.

There, under a government that is of the people, for the people, and by the people to some extent, the employees of the government hold life tenure, but the government sees fit, without any trial or trial judges—oh, the sham of such a procedure!—to remove the individual and to place him upon a pension list, and the people of Great Britain are taxed annually and hourly to pay that man a stipend as long as he lives. Will we endure that in this country? Can we endure it? Dare any political power to assume

such an obligation? No political party will ever establish the theory of perpetual tenure of office without the power of removal and yet not attach to that enactment a system of pensions.

There is not a government on earth that has a system such as is sought to be created in this country that has not attached a civil pension list, and the evidence of the necessity is found when the chairman of the Civil Service Committee of this House solemnly introduced into this body a bill creating a civil pension list. He is right about it. If this system is to be kept up and perpetual appointments are to be made and a system of holding office in perpetuity is to be established, then humanity dictates that there shall be a civil pension list.

Let us see one party inaugurate it. Let us see one Congressman in the United States advise it. Let us see one county convention declare in favor of it, and then will the true inwardness of this system be laid bare to the people of this country.

I never knowingly recommended an unworthy man for office, and in this connection I will state that in the beginning of the Harrison Administration in 1889, I recommended the reinstatement of six Republicans who had been removed by the Cleveland Administration, and they were reinstated; and I recommended, without competitive examination, six young men to be appointed, and they were appointed. Of the twelve men thus entering the ranks of the service in 1889 not one of them disgraced himself, and not one of them was retired for failure to properly perform the duties of his respective position. I state this not to boast, but to present a contrast later on as to the workings of the civil-service law in the matter of the merit department.

There is no man in the world more zealous in the right discharge of his duty in this behalf than is the fair-minded, upright, conscientious Congressman. He has the eyes of 175,000 people in his own district leveled upon him in the discharge of any duty of this character that he may render, and he knows that in the selection of the few who may hold office from his Congressional district there will be heartburnings that can only be counteracted by a faithful discharge of his duty, and it is the good record of the men he appoints that he looks forward to for vindication and justification.

So, Mr. Speaker, the specious cry that we are spoilsmen will not much longer humbug the American people. We are not spoilsmen, but the men who condemn this law are clear-sighted, brave-hearted American citizens, ready and willing to sacrifice every position, if need be, for the vindication of what they believe to be right. It would be easier for the friends of this reform to go quietly about it, see the interests of their constituents sacrificed, see the growing cancer grow and spread, and quietly acquiesce in this unfortunate domination. It would be vastly easier for them to do so.

#### ANOTHER REFERENCE TO WASHINGTON.

Referring again to the statement of George Washington that it would be a sort of "political suicide" to appoint men to office that were enemies to the wants of the Administration, I want to call attention to some of the recent publications of some of the Departments in Washington. The administration of the General Government is to-day in the hands of the Republican party, and the responsibility of the Government is placed upon it. Every Republican in the United States of America has an interest in the success of the Administration of William McKinley.

Every Republican of the United States is jealous of every suggestion and intimation that goes to build up or destroy the influence of his Administration, and yet we have had during the present session of this Congress answer after answer coming from the various responsible Departments and bureaus of this Government which were so toned and shaped and colored in the interest of the last Administration and of the Democratic party, and so shaped and toned and colored as against the platform and principles of the Republican party as to be powerful campaign documents to be used this year in the very State of the President's home, and for the purpose of rebuke and overthrow of his Administration; and they come forth with the sanction of the men kept in office and held in power by the devotion of the Administration to the platform of his party and the sentiment of the country. But that is not all.

Let us see what we have. We are appointing collectors of internal revenue, and they in turn are to have, it appears—not to appoint—deputies, who are to go forth and transact business in their names, collect money due by special tax upon saloons and tobacco and all the various sources of revenue all over the country which goes into the Treasury; and yet the appointees of a former Administration—a Democratic Administration—bitterly opposed and hostile to the success of this Administration, are to carry on this whole business, while the collector, who has given an enormous bond for the safe and judicious administration of his office, can not even control the men who are to collect all this money.

The men charged with the duty of paying out something like \$135,000,000 to the pensioners of the country can not appoint or remove the men who sign their checks. They have given enormous bonds for the honest disbursement of the millions that come into

their hands, and yet the clerks who sign their names, and the agents who draw their money and imperil their bondsmen are men who have come to this Administration from a former Administration, enemies of this Administration, and willing to see a scandal, not that they are dishonest men, but quite willing to see a failure.

I have deemed it proper in this connection to introduce into this address a letter written on the 1st day of last March by the distinguished gentleman who has had the honor to hold the office of pension pay agent in the city of Washington during all the Administrations from General Arthur down to the present time. I do it because I will not make one statement of fact in this connection that I do not or can not prove by absolute proof.

All that I have said in regard to the horror and the outrage of these proceedings is more than justified in proof by this letter of Colonel Willson, and I point to his letter to show not only that, but that the whole system here of administration under the Cleveland Administration had become a great three-card monte game, by which favorites could be put in and others turned out, and all sorts of manipulations practiced in utter violation and disregard of law. Did this bureau sit by calmly while all this outrage was being perpetrated and not know of it? Were they ignorant of the manipulations described by Colonel Willson? Or, if they were advised, were they guilty of neglect of duty? Or is the system such that it can not be administered? I will put these statements in a concise form later on:

UNITED STATES PENSION AGENCY,  
Washington, D. C., March 1, 1897.

DEAR SIR: In connection with my reference to civil-service rules as applied to the pension agency clerks, in letter of this date, pertaining to the proposed consolidation of pension agencies, permit me to call your attention to the circumstances under which such rules were applied, and to what extent they have been evaded.

There are borne upon the rolls of the eighteen United States pension agencies 970,000 pensioners, to whom the pension agents disburse annually \$140,000,000. To protect the Government against loss, most of these agents give a bond of \$300,000. To assist these officials in the discharge of their duties, Congress appropriates \$460,000 annually for the employment of about 500 clerks, none of whom are under bond. The appointment of these clerks, under the law, rested with the agents prior to civil-service rules being applied to the agencies.

A clause in the last annual pension appropriation bill, making appropriation for the salaries of agency clerks, reads as follows:

"For clerk hire, \$450,000: *Provided*, That the amount of clerk hire at each agency shall be apportioned as nearly as practicable in proportion to the number of pensioners paid at each agency, and such salaries shall be subject to the approval of the Secretary of the Interior."

The report of the Commissioner of Pensions for the last fiscal year shows that the agency at New York City, with 52,998 pensioners on its rolls, was apportioned \$36,148.01 for clerk hire, while the agency at Columbus, Ohio, with 104,492 pensioners, received \$36,079.99. Topeka agency, with 105,041 pensioners, received \$37,134.08, while Philadelphia agency, with 58,656 pensioners, received \$31,945.17. Des Moines agency, with 58,668 pensioners, was only given \$24,612.02, and Milwaukee agency, with 59,974 pensioners, is given only \$19,653. When some of the agencies made large personal payments by checks there was some justice in giving those agencies an additional allowance on that account, but now that such payments are no longer made, there is no valid reason why the intent of Congress should not be strictly enforced.

Under the act of 1891, giving the Secretary of the Interior authority to approve the salaries paid to agency clerks, he, in 1896, for the first time (just prior to placing such clerks under civil-service rules) usurped the authority to (indirectly) appoint, promote, reduce, and discharge agency clerks, and did make many changes at that time.

Until the Secretary assumed such full control of the agency clerks, I considered the office with which I had been honored by Presidents Arthur, Cleveland, and Harrison as one of public trust. At that time I ceased to be a trustee, as the affairs of the agency were taken out of my hands, and, too, by those having no financial responsibility in the disbursements of the agency. Since then sixteen clerks have been appointed at this agency. In order to do this, the Secretary directed that several removals be made. Three of the clerks thus discharged by him were, after the agency clerks had been placed under civil-service rules, restored to the agency service, one being placed in the agency at Buffalo, N. Y., one in the agency at Philadelphia, Pa., and the other in this agency. This, too, without any civil-service examination.

Of the clerks whom the Secretary directed me to appoint, two were to fill vacancies in the \$900 grade, which had been caused by the removal of two competent clerks, thereby depriving several worthy clerks of a deserved promotion from \$600 to \$900. One of the women appointed was a personal friend of the Secretary from Atlanta, Ga., and the other a personal friend of the present Commissioner of Pensions. The Georgia clerk proved to be utterly worthless as an agency clerk, and was, after the clerks had been placed under civil-service rules, transferred to the Pension Bureau without, of course, ever having passed a civil-service examination. The other woman I subsequently recommended for dismissal for cause, and Commissioner Lochren approved the recommendation.

The then first deputy commissioner, Mr. Murphy, appealed to Commissioner Lochren to have her restored. Commissioner Lochren and Commissioner Murphy applied to me for her restoration. This I declined to do. Shortly after this I learned from the Civil Service Commission that it was in the power of the Commissioner of Pensions to restore her, by his representing to the Commission that the discharge was approved by him under a misapprehension of the facts. I then withdrew my recommendation for her discharge, substituting a leave of absence without pay, with the understanding with the Commissioner that under no circumstances should she be restored to the agency for duty. After Mr. Murphy became Commissioner he transferred her to the Pension Bureau, and has since, I understand, promoted her to \$1,200 per annum. One of the other appointments of the Secretary was a granddaughter of the late Ben Hill, of Georgia. She was on the laborers' roll of the Secretary's Office. This case is remarkable, as she was twice located in this agency, once before and once after civil-service rules were applied to the clerks. Each time there appeared to be a hitch somewhere, doubtless the last time with the Civil Service Commission, as she had never taken the civil-service examination.

Of the appointments which the Secretary directed me to make at that time there are two other interesting cases. One was the sister-in-law of his private secretary. She was appointed to the \$600 grade, and subsequently, after the clerks were placed under civil-service rules, promoted by the Sec-

retary to \$900; and, too, when the rules required that vacancies in higher grades should be filled by promotion from lower grades upon their merits. A remarkable feature in this case is, that this particular clerk had the lowest record for efficiency of any clerk in the agency. The other clerk was transferred to the Pension Bureau under civil-service rules. You will observe that these appointments were made just prior to applying such rules to agency clerks, thereby using this office as a medium through which these persons could enter the Department service without examination.

In Commissioner Murphy's report for the year ending June 30, 1896, appears the following statement: "On the 1st day of July, 1895, by Executive order, the clerks in the pension agencies were placed under civil-service rules."

If this be the case, by what authority did Secretary Smith cause Mr. Murphy, Acting Commissioner of Pensions, under date of July 10, 1895, to direct me to appoint a clerk at \$900 per annum to take effect at once, and three days later, July 13, direct me to reduce a clerk from \$1,000, a son of a veteran and one of the most efficient clerks in the agency, to \$900, and promote a clerk (whom he had three days before directed me to appoint) to the \$1,000 grade—to the place made vacant by such reduction? At that time I was given to understand that the civil-service rules did not apply to the agencies until July 15, 1895. From these dates it will be seen that efforts were made up to the last day, Saturday, July 13 (the 15th falling on the following Monday), to put in force this civil-service reform. I venture to assert that it would be found upon investigation, if the facts could be produced, that this condition of affairs existed in the other seventeen agencies for this period just prior to applying civil-service rules.

This scramble for positions in this agency was not confined to Secretary Smith. Commissioner Lochren asked me for several appointments, one of which I made. First Deputy Commissioner Murphy also asked me to make several appointments, one his sister-in-law, who was subsequently placed by him in the New York agency, where, I understand, she was promoted to \$1,200 and transferred to the Pension Bureau, I having declined to make the appointment. I did, however, appoint another person for him. This clerk he subsequently, on various occasions, asked me to promote, but this I could not do on her efficiency record. Within twenty-four hours, however, after he became Commissioner of Pensions he promoted this girl over more competent clerks without consulting me and, too, in violation of the civil-service rules.

Second Deputy Commissioner Bell asked me to appoint his daughter, which, of course I declined to do. The chief of the finance division, a division through which nearly all the official business of this agency passes, also asked me for an appointment, which was given him, but the clerk appointed at his request was subsequently discharged.

My unsatisfactory experience prompted me of late when vacancies occurred in the agency to ask the Pension Bureau, in making requisition upon the Civil Service Commission for clerks to fill such vacancies, that I be given male clerks. To this request no attention whatever was paid. Not only did the Pension Bureau fail to call upon the Commission for male clerks, but failed to call upon the Commission for any clerks. The three last clerks sent me were females. The first one was transferred here from the Philadelphia agency, a sister of Commissioner Murphy's private secretary. The second one was a woman who had for over twenty years been a clerk in the Pension Bureau, and was discharged early in 1895. She was reinstated and transferred to this agency, she having come here from her home in California for that purpose. As an agency clerk she is utterly worthless, and has recently been dismissed for cause. The third clerk was transferred to this agency on the 9th of November from the Boston agency, under the following circumstances:

On the 4th of November a vacancy occurred in this agency by resignation of a clerk in the \$900 grade, there being two lower grades—\$600 and \$720. Under civil-service rules and my instructions from the Pension Bureau, I at once recommended a clerk for promotion from the \$720 grade to fill the vacancy in the \$900 grade and one in the \$600 to \$720 grade. These promotions would leave a vacancy in the \$600 grade, which I asked to have filled with a male clerk. In response to this, Commissioner Murphy informed me that the vacancy in the \$900 grade would be filled by transfer of a female clerk from the Boston agency. This action not only deprived me of the services of a male clerk, but did a grave injustice to two efficient clerks by depriving them of their deserved promotion.

Upon receipt of this communication I called upon Judge Proctor, president of the Civil Service Commission, calling his attention to many points touched upon herein, particularly this last transfer. While he apparently recognized the injustice in the matter, he admitted his inability to take any action, as the regulations formulated by the Pension Bureau placing the agencies under civil-service rules gave that office authority to take full control of agency affairs. He evidently was impressed with my statement, as he said I could have the privilege of controlling the promotions in the agency hereafter if I would make application to the Commission; also said the Commission would consider the advisability of permitting the agents to deal directly with it, instead of the Pension Bureau, as at present. He asked me if the agency clerks were in the classified service, and as such appointed by the Secretary of the Interior prior to their having been placed under civil-service rules. I replied that Secretary Smith could not find any statute giving him such authority. He asked his chief clerk for any information he had upon that point.

The chief clerk said the Commission was in doubt as to whether the Secretary had such authority and had asked the Assistant Attorney-General of the Interior Department for his opinion. This gentleman replied that the Secretary had such authority. It is on the strength of this opinion that the agency clerks were placed under civil-service rules. A strange coincidence in this connection is the fact that this same Assistant Attorney-General who gave this opinion had, under date of January 21, 1895, asked me by letter to appoint a friend of his to a clerkship in this agency. If the validity of the order placing agency clerks under civil-service rules rests upon the decision of this Assistant Attorney-General who failed to secure an appointment from me, I can only say that they are not legally under such rules, as they were never in the classified service. Mr. Proctor remarked that if they were in the classified service they have been ever since the enactment of the civil-service law in 1893. This law provides as follows:

"Nor shall any officer not in the executive branch of the Government, or any person merely employed as a laborer or workman, be required to be certified hereunder."

The question arises, Were the employees of United States pension agencies in the executive branch of the Government?

Section 2, Article II of the United States Constitution, provides that all such shall be appointed by the President, by and with the consent of the Senate, by the President alone, or by the heads of Departments, or courts of law.

The employees of pension agencies never had appointments from any of these sources, but were employed and discharged by the agents (until Secretary Smith usurped such authority in 1895), as a bank, insurance company, or other business institution employs and discharges its employees. Several weeks after applying civil-service rules to the agencies on July 15, 1895, appointments were forwarded to the clerks of this agency bearing date July 1

1895, two weeks prior to placing them under such rules. These appointments were not signed by the "head of the department," but by Mr. Murphy, Acting Commissioner of Pensions.

Under the existing conditions I have no authority whatever over any of the numerous clerks upon whom I depend for assistance in the annual disbursement of nearly \$10,000,000. I can not even discharge the clerk who signs my official checks—representing this large disbursement—without the approval of the Commissioner of Pensions. In other words, the Commissioner of Pensions can select my clerks and compel me to retain them, even though I know them to be dishonest or inefficient. When they were first placed under civil-service rules, I was given the privilege of appointing my chief clerk and the clerk who signs my official checks, but with the beginning of the present fiscal year I was deprived of even this only remaining safeguard, notwithstanding the sureties on my official bond are required to justify in the sum of \$300,000 to insure the Government against loss through the acts of my clerks.

Under these conditions it would seem that in the event of any financial loss through the action of any dishonest or inefficient clerk thus selected, and contrary to my expressed wish, the prosecution would be greatly embarrassed in making out a case against my bondsmen.

All essential statements made in this connection can be substantiated by private and official papers in my possession.

Respectfully submitted.

SIDNEY L. WILLSON,  
United States Pension Agent.

Hon. WILLIAM B. ALLISON,  
United States Senate, Washington, D. C.

I might add in this connection that not only has this gentleman and his career, and character, and efficiency been attested by his retention in office through four Administrations, but every gentleman in this House having transactions with him will join me in certifying to his high character, his intelligence, and probity. He testified his love for his country upon the battlefield, and lost both his legs in defense of the flag, and has suffered physically beyond description, and yet has been subjected, under the forms and pretense of law, to humiliation beyond the descriptive power of man.

We have a business man at the head of the Treasury Department; a man very anxious, exceedingly anxious, that the letter and spirit, to the infinitesimal details, of the civil-service law shall be carried into effect and even be enlarged; and yet the men whom he orders to pay out a hundred and forty millions of dollars, whose bondsmen are responsible to the Government for the faithful disbursement of that money, have no voice in the appointment of the men who are to do this mighty financial transaction.

Would he employ a man in his bank at the dictation of somebody and retain him? Would he have a teller there to receive the money simply because he had answered a superior number of questions that are connected with a liberal education in this country? Would he have any man there that he himself had not selected, that he himself had not judged, that he had not received assurances, from men of his own selection, men whom he could trust, as to the capacity and integrity of the man? Yet he is called upon to uphold a system that places in the hands of irresponsible men, who have given no dollar of bond, the power to destroy the reputation and property of the men whom I have described.

Why, Mr. Speaker, it is unheard of. It is essentially bad business habits. It is essentially a repudiation of every principle of business fairness and business justness known to the human race.

I am going to point out facts in justification of what I have said. No man has the right to stand here and make the statements I have made in regard to the illegal aggressions of this bureau without producing evidence in support of what he has said, and if I am personal in some of my comments in the future, it will be because I will not be put in the position of declaiming against this system without evidence of the statements which I make.

For a long time it was understood that the Government Printing Office was not embraced in the operations of the civil-service law. It never was embraced except as it was seized upon, and it is one of the best evidences of the correctness of my position that no assault was made by the bureau of civil-service reform upon the Government Printing Office until the beginning of the Administration of Grover Cleveland on his second reign. The law was passed, as you are all aware, just as it stands to-day, so far as this question is involved, on the 16th day of January, 1893, and in order to be concise and definite in what I have to say, I insert the brief of one of the best-known lawyers in the United States and a gentleman who states himself in this connection, as will be seen in the last paragraph of the brief, that he was an attorney for the Government in all the litigation which has grown out of these matters in this city.

The paper is presented to the Government Printer, Hon. Frank W. Palmer, and is an argument to show that the Government Printing Office is not now, and never has been, covered by the terms or even the spirit of the civil-service law, and that section 7 of the act itself as explicitly excludes the Government Printing Office from the operation of the law as though it had said the Government Printing Office shall not be included in the operation of this statute. Here is the argument, and I submit it to the careful consideration of the distinguished champions and vindicators of the management of the civil service bureau under the second Administration of Grover Cleveland.

I do not want these gentlemen to now say, "You are a spoilsman," in answer to this argument. Please do not answer back that I am

a looter of the Treasury or of the public service, but answer this argument, if you can, and bear in mind that from 1883 down to the Administration of Grover Cleveland—his second term—the Civil Service Commission never dared to apply or seek to apply their domination over the Government Printing Office. The bureau must answer the public this question: Did you stand by for more than ten years and fail to discharge your duty to embrace the Government Printing Office within the scope of your domination and thus violate the spirit and purpose and letter of the law, or did you know then and there, and during all these years, that you had no business with the Government Printing Office and ought not to touch it? The public will say that your conduct speaks louder than any mere declamation. It was a matter clearly understood by the Administration itself that it had no right to touch this bureau of labor, this mechanical department, this department where no knowledge of astronomy or Greek or Latin was necessary:

APRIL 27, 1897.

Hon. FRANK W. PALMER,  
Superintendent of Public Printing.

SIR: In compliance with your request for my opinion as to the applicability of the civil-service law to the Government Printing Office, I have the honor to submit the following: The parts of the civil-service law of January 16, 1883, and the statutes referred to in it which seem to apply to this subject are set forth herein:

Section 158, Revised Statutes of the United States, which refers to the Executive Departments, provides as follows:

"Sec. 158. The provisions of this title shall apply to the following Executive Departments:

- "First. The Department of State.
- "Second. The Department of War.
- "Third. The Department of the Treasury.
- "Fourth. The Department of Justice.
- "Fifth. The Post-Office Department.
- "Sixth. The Department of the Navy.
- "Seventh. The Department of the Interior."

Section 163, Revised Statutes of the United States provides as follows:

"Sec. 163. The clerks in the Departments shall be arranged in four classes, distinguished as the first, second, third, and fourth classes."

Sections 1753 and 1754, Revised Statutes of the United States provide as follows:

"Sec. 1753. The President is authorized to prescribe such regulations for the admission of persons into the civil service of the United States as may best promote the efficiency thereof and ascertain the fitness of each candidate in respect to age, health, character, knowledge and ability for the branch of service into which he seeks to enter; and for this purpose he may employ suitable persons to conduct such inquiries, and may prescribe their duties and establish regulations for the conduct of persons who may receive appointment in the civil service," etc.

"Sec. 1754. Persons honorably discharged from the military or naval service by reason of disability resulting from wounds or sickness incurred in the line of duty shall be preferred for appointments to civil offices, provided they are found to possess the business capacity necessary for the proper discharge of the duties of such offices," etc.

The act of Congress entitled "An act to regulate and improve the civil service of the United States," approved January 16, 1883 (22 Stat. 406), commonly known as the civil-service act, provides first for the establishment of the Civil Service Commission and the appointment of Civil Service Commissioners, and then provides as follows:

"Sec. 2. That it shall be the duty of said commissioners:

Paragraph first. "To aid the President, as he may request, in preparing suitable rules for carrying this act into effect," etc.

Paragraph second. "And, among other things, said rules shall provide and declare, as nearly as the conditions of good administration will warrant, as follows:

"First. For open, competitive examinations for testing the fitness of applicants for the public service not classified or to be classified hereunder," etc.

"Second. That all the offices, places, and employments, so arranged or to be arranged in classes, shall be filled by selections according to grade from among those graded highest as the results of such competitive examinations."

"Fourth. That there shall be a period of probation before any absolute appointment or employment aforesaid."

Paragraph third. "Said Commission shall, subject to the rules that may be made by the President, make regulations for, and have control of, such examinations," etc.

Paragraph fifth. "Said Commission shall make an annual report to the President for transmission to Congress," etc.

"Sec. 3. That within sixty days after the passage of this act it shall be the duty of the Secretary of the Treasury, in as near conformity as may be to the classification of certain clerks now existing under the one hundred and sixty-third section of the Revised Statutes, to arrange in classes the several clerks and persons employed by the collector, naval officer, surveyor, and appraisers, or either of them, or being in the public service, at their respective offices in each customs district where the whole number of said clerks and persons shall be altogether as many as fifty," etc.

Paragraph second of this (sixth) section makes it the duty of the Postmaster-General to make a similar classification at certain post-offices.

Paragraph third of this section provides as follows:

Third. That from time to time said Secretary, the Postmaster-General, and each of the heads of Departments mentioned in the one hundred and fifty-eighth section of the Revised Statutes, and each head of an office, shall, on the direction of the President, and for facilitating the execution of this act, respectively revise any then existing classification or arrangement of those in their respective Departments and offices, and shall, for the purposes of the examination herein provided for, include in one or more of such classes, so far as practicable, subordinate places, clerks, and officers in the public service pertaining to their respective Departments not before classified for examination."

Section 7 provides as follows:

"Sec. 7. That after the expiration of six months from the passage of this act no officer or clerk shall be appointed and no person shall be employed to enter or be promoted in either of the said classes now existing, or that may

be arranged hereunder pursuant to said rules, until he has passed an examination, or is shown to be specially exempted from such examination in conformity herewith. But nothing herein contained shall be construed to take from those honorably discharged from the military or naval service any preference conferred by the seventeen hundred and fifty-fourth section of the Revised Statutes, nor to take from the President any authority not inconsistent with this act conferred by the seventeen hundred and fifty-third section of said statutes; nor shall any officer not in the executive branch of the Government, or any person merely employed as a laborer or workman, be required to be classified hereunder; nor, unless by direction of the Senate, shall any person who has been nominated for confirmation by the Senate be required to be classified or to pass an examination."

The portions of the statute not quoted are believed to contain nothing conflicting with the parts quoted or the views herein expressed. The references to these sections and paragraphs and subparagraphs by number, and by words which apparently duplicate some numbers, are somewhat inconvenient for purposes of reference, but are readily understood.

The above-quoted third paragraph of section numbered 6 in the civil-service act of 1883 declares—defines or limits—in express terms the branches of the Government service in which the departmental classification shall be adopted in the civil-service system. It provides "that from time to time said Secretary (of the Treasury), the Postmaster-General, and each of the heads of Departments mentioned in the one hundred and fifty-eighth section of the Revised Statutes, and each head of an office," shall respectively revise any then existing classification of those in their respective Departments and offices and shall, for the purposes of the examination herein provided for, include, in one or more of such classes, subordinate places, clerks and officers in the public service, "pertaining to their respective Departments not before classified for examination."

And said section 168 specifies the seven Departments of the Government, commonly known as the Executive Departments, namely, the Department of State, the Department of War, etc. If, therefore, the Government Printing Office is not one of those departments or an office in one of them, it is clearly not within the provisions of the statute, and the principles of the civil-service act of 1883 can not be held to be applicable to that office without doing violence to the express terms of the law and by palpable perversion of its meaning.

There are various offices in the several Executive Departments, for example, the Internal Revenue, the Bureau of Engraving and Printing, etc., of the Treasury Department, the heads of which offices and the Secretary of such Department shall, on the direction of the President, perform the service mentioned in said paragraph pertaining to their respective departments. And the fact has been judicially determined, substantially, that the Government Printing Office is not one of the Executive Departments of the United States. (See *United States v. Allison*, 91 U. S. Reports, page 338.)

That was an appeal from the Court of Claims in a class of cases commonly known as the "Twenty per cent Cases," where Allison, one of the petitioners, claimed the benefit of the 20 per cent resolution of 28th February, 1867 (14 Stat., page 599), which provided that certain civil officers, clerks, etc., including employees, male and female, in the Executive Mansion, and in certain specified Departments, or any bureau or division thereof, should be paid an additional compensation of 20 per cent on their respective salaries or pay.

The petitioner was an employee in the Government Printing Office, being paid by the day. And the Supreme Court held that the Government Printing Office not being a bureau or division of either of the Executive Departments or mentioned in the joint resolution of Congress, the employees thereof are not entitled to the additional compensation authorized by that resolution. This decision is, to my mind, conclusively to the effect that the Government Printing Office is not one of the Executive Departments, and I am therefore of the opinion that none of the employees of that office are embraced within the civil-service law.

Moreover, the Government Printing Office is not only omitted from the statutes which declare the branches of the Government to which the civil-service classification shall extend, as above shown, but by a careful reading of those statutes it will be seen that the language in section 7 exempting certain persons from the operation of the law applies to the Government Printing Office; and I am of opinion that it excludes the entire force.

Said section No. 7, after declaring that certain preference shall be given persons honorably discharged from the military and naval service, in accordance with section 1754, Revised Statutes United States, further declares:

"Nor shall any officer not in the Executive branch of the Government, or any person merely employed as a laborer or workman, be required to be classified herein," etc.

Who are comprised in the terms "officer," "laborer," "workman," in the Government Printing Office? A large portion of the force consists of compositors, printers, etc., who may be employed by the day, by the hour, or by the "em." When employed by the "em" it has been held judicially that they are mere contractors, and are not employees. The Court of Claims, in the above case of Allison vs. United States, held that printers in the Government Printing Office who were paid by the "em" were mere contractors with the Government (10 Ct. of Cl., 449). In that case the court followed the decision of the United States Supreme Court in Bell's case, 20th Wallace Reports, page 179, which was one of the above class of the "Twenty-per-cent Cases."

The petitioner, Bell, was a plate note printer, paid by the piece, in the Bureau of Engraving and Printing of the Treasury Department, and the Supreme Court held that he was not an "employee in an Executive Department within the meaning of the joint resolution;" and while the Supreme Court differed with the Court of Claims in some of its conclusions, the rule as to the status of printers employed by the "em," or by the piece, has not been disturbed. This class of the force in the Government Printing Office can not, therefore, be said to be "employees" of the Government in any sense; and consequently can not by any possibility be within the civil-service law.

It may be remarked that in the above "Twenty-per-cent Cases" the court held certain employees of the Executive Departments who were paid by the day to be within the civil-service. But it will be observed that those decisions were rendered upon the construction of a special remedial statute, and not upon the construction of the civil-service law now under consideration, which was enacted years after those decisions were rendered. Therefore persons paid by the day, who were held by the Supreme Court to have been contemplated by the 20-per-cent resolution, and consequently within the civil-service within the meaning of that resolution, can not be held to be embraced within the scope of the law now known as the civil-service law by virtue of those decisions.

But it is not desirable, nor is it necessary, to resort to a narrow interpretation of technical terms to ascertain whether the force of the Government Printing Office is embraced within the terms "officers," "laborers," or "workmen," for recent legislation of Congress, providing for the execution of the work of public printing and binding, which was enacted in view of existing law, indicates with sufficient clearness that that force was not intended to be included in the civil-service law. By section 49, act of Congress approved January 12, 1895, the Public Printer is authorized to "employ, at such rates of wages as he may deem for the interest of the Government and just to the persons employed, such proof readers, laborers, and other hands as may be necessary for the execution of orders for public printing and binding author-

ized by law; but he shall not at any time employ in the office more hands than the absolute necessity of the public work may require." Said act of 1895 also provides that "the Public Printer shall pay no greater price for composition than 50 cents per thousand ems, to pressmen 50 cents per hour, and 40 cents per hour for time work to printers and bookbinders," etc.

And in section 45 of said act it is expressly declared as follows:

"Sec. 45. It shall be the duty of the Public Printer to employ workmen who are thoroughly skilled in their respective branches of industry, as shown by trial of their skill under his direction."

Language so broad and clear as the above leaves no doubt in my mind of the correctness of the views above expressed as to the meaning of the words "officers," "laborers," and "workmen" employed in the civil-service act of 1883. Persons "thoroughly skilled in their respective branches of industry" are to be employed by the Public Printer for the effective purposes of the Government Printing Office; the Public Printer may employ by the hour, or by the "em," and the "skill" of his employees shall be tested by trial, not in accordance with rules or regulations promulgated by the Civil Service Commission, but "under his direction."

Again it will be observed, by reference to the opinions of the Supreme Court of the United States above referred to, that that court, in reviewing the entire legislation up to that time concerning the establishment of the Government Printing Office, not only holds that it is not a branch of any of the Executive Departments, but mentions the fact that the work of that office is carried on under the direction of Congress, and it may obviously be regarded, for the purposes of aiding in the work of Congress, as an adjunct of the legislative department, as much so as the document room, the folding room, or the Library of Congress.

I am aware that by Executive order of January 13, 1895, the civil-service classification was extended to every employee in the Government Printing Office. And I can not, without diffidence, express these convictions, in view of the eminence, learning, and wisdom of the officials at whose instance that order was promulgated. But I regard it as settled clearly that no rule or regulation can contravene legislative enactment. By section 1753, Revised Statutes of the United States, the President is authorized to prescribe regulations for the admission of persons into the civil service; but such regulations can not, to my mind, extend beyond the departments of the Government to which express enactment of Congress has limited them. If that could be, then rules and regulations could take the place of positive laws and be substituted for them.

If resort to argument were necessary in support of the conclusions above expressed, it would be found by reference to the fourth subparagraph of paragraph second of section No. 2, which provides that "there shall be a period of probation before any absolute appointment or employment aforesaid." In accordance with this law, departmental rule No. 8 provides for a probational period of six months, at the end of which period, if the conduct and capacity be satisfactory to the appointing officer, he shall receive absolute appointment. Can it be said that such a law or such a regulation was intended to apply to "every employee in the Government Printing Office," or such an establishment as the Government Printing Office, where nearly the entire force is employed by the hour?

Can it be said that persons employed by the hour or by the day shall first be appointed for a probational period of six months, at the end of which period, if his conduct and capacity be satisfactory to the appointing officer, he shall receive absolute appointment? I think not; even saying nothing of the express declaration of Congress in the act of 1895 above referred to, to the effect that the skill of the workmen employed by the Public Printer shall be thoroughly tested under the direction of that officer.

I submit these conclusions the more confidently because I reached the same result upon an examination of the civil-service laws in 1891, in the preparation of certain cases charging certain persons with violating these laws by being concerned in soliciting and receiving contributions for political purposes from employees in the Departments. These prosecutions involved an employee in the Government Printing Office who was paid by the day, which latter fact was brought out in evidence at the trial. The defendant was acquitted, and it is understood that the jury based its verdict upon the ground that the defendant was not, as a matter of fact, such an employee of an Executive Department in the civil service as to render him amenable to the law. Respectfully submitted.

To show you how the grasping tendencies of this octopus have reached out for things that were none of their business, I am going to refer you to the Secret Service Bureau of the Government. That is not a Department, nor even a bureau of a Department; but there is placed in the hands of the Secretary of the Treasury, subject to an appropriation, a lump sum of money to be used for the suppression of counterfeiting, etc. As appears by the statement which I shall append, nothing is said about how that money shall be expended, and there is nothing but the usage of the Government that justifies its expenditure by the Secretary of the Treasury.

You will see by the statement of Mr. Drummond the manner in which this Secret Service Department is run, and it will be seen that on the 1st day of January, 1894, the operatives of this employment were diversified in their politics, they having been employed, ostensibly at least, for their special skill as detectives, and there was every phase of politics in this country involved in the personnel of the people. There was even a Mugwump there, and one man who, it is said calmly and deliberately, had no politics at all. The manner in which that office was looted appears in this statement; and then comes the charming fact that the civil-service law of my country was extended over these thief-catchers; and there they are, but a single Republican left, merely a specimen, not a case, to show what evolution could do.

OFFICE OF DRUMMOND'S DETECTIVE AGENCY,  
New York City, November 25, 1896.

DEAR SIR: Believing you will be interested in what I have to say is my excuse for writing you at this time. It is true I am actuated to an extent by personal feeling, but my principal reason is to have righted to a degree one of the greatest humbugs ever foisted upon the people of this country. I refer to the extending of the civil service to the 30,000 officeholders by the President, after he had been in office a sufficient time to enable his assistants—his subordinates—to turn out of office every Republican, no matter what his worth, and substitute Democrats in their stead.

My reason for selecting you to address is twofold: First, because I read in the papers a few months since that you had asked that a list of the 30,000 employees referred to herein be sent to Congress; secondly, because I know

you will be consulted more than most Congressmen by the President after March 4 next regarding matters generally. Now, to be more explicit, among the 30,000 employees were the members of the Secret Service division in the Treasury Department. I believe that an inquiry will disclose the fact that no ruling of the President can have any force under the civil-service law that places within the classified service the Secret Service division of the Treasury for the reason that there is no such division known to law.

There is no such division mentioned on the statute books; such a division was never created by Congress, and it has no status in law. Very few, if any, members of either branch of Congress know anything about what the Secret Service division is. The facts are these: At the request, or upon the recommendation of the Secretary of the Treasury, a lump sum of money is appropriated annually by Congress for the suppression of counterfeiting; there is nothing in the act directing how the money shall or may be expended. It goes into what is termed the Treasury appropriations, simply because the Secretary of the Treasury, instead of the Attorney-General, has asked for it. Nothing is stated how it is to be expended; no lawful authority is even given the Secretary to expend it at all, but usage suggests that the Secretary may disburse it as he sees fit; therefore he selects from the public a man and appoints him, without authority of law, "Chief of the Secret Service division." He next appoints several clerks, and calls them clerks in the Secret Service division. Next he asks Congress to make an appropriation of about \$11,000 to sustain or pay for the chief and clerks of the Secret Service division. (Mind you, there never has been any law enacted authorizing the Secret Service division.)

Congress, acting from year to year from what their predecessors have done, makes the appropriation, believing they are properly furnishing means to carry on a branch of government that has a lawful existence. Very well, the Secretary now has a chief, clerks, and a messenger, and money to pay them; so he directs the chief to employ or recommend for employment a number of men taken from the general public, and the Secretary proceeds to appoint operatives, special operatives, and assistant operatives, and allows the chief to fix the per diem of each according to his idea of their worth and without regard to any law for same. These men are paid a per diem from \$3 to \$7 for 365 days in the year. Of course, if there appears reason for them to work on Sunday they do it, but such is not often the case. Nevertheless, they are per diem men, but are paid for the same number of days in the year as the man whose yearly salary is fixed by the statute. This, then, is the whole of the so-called Secret Service division of the Treasury Department.

I now ask you if the civil-service law can be extended to protect a corps of men who are employed without any authority of law except by inference? I will now give you a verbatim copy of the act appropriating the money that is used for the maintenance of the Secret Service division of the Treasury:

"Suppressing counterfeiting and other crimes: For the expenses of detecting, arresting, and delivering into the custody of the United States marshal having jurisdiction, dealers and pretended dealers in counterfeit money, and persons engaged in counterfeiting Treasury notes, bonds, national bank notes, and other securities of the United States and of foreign governments, as well as the coins of the United States and of foreign governments, and other felonies committed against the laws of the United States relating to the pay and bounty laws, including \$4,000 to make the necessary investigation of claims for reimbursement of expenses incident to the last sickness and burial of deceased pensioners under section 4718 of the Revised Statutes, and \$5,000 for the necessary investigation of violations of section 5209 of the Revised Statutes, and for no other purpose whatever."

The wording of this appropriation has been changed to suit the various chiefs from year to year, as you will see by looking over the Digest of Appropriations each year back to 1890.

Regarding the personnel of the Secret Service division on January 1, 1894:

A. L. Drummond, New York, chief, Republican.  
 Andrew McWilliams, Kentucky, chief clerk, Blackburn Democrat.  
 George E. McOmber, New York, operative, Republican.  
 Edward A. Abbott, Cleveland, Ohio, operative, Republican.  
 Henry M. Burnett, New Jersey, operative, Republican.  
 Michael G. Bauer, Kentucky, operative, Republican.  
 Albert R. Barrett, Pennsylvania, special operative, Republican.  
 Thomas B. Carter, Indiana, operative, Democrat.  
 William H. Forsyth, New York, operative, Democrat.  
 William P. Hazen, Ohio, operative, Democrat.  
 Nicholas R. Harris, California, operative, Democrat.  
 William B. Linder, Pennsylvania, operative, Republican.  
 Daniel McSweeney, New York, operative, Republican.  
 John F. McCullough, Missouri, operative, Republican.  
 Thomas L. Porter, Illinois, operative, Democrat.  
 Eli M. Stedman, Iowa, operative, Republican.  
 James J. Scanlon, New York, operative, Republican.  
 Joseph A. Walker, Colorado, operative, Mugwump.  
 Thomas T. Callaghan, New York, assistant operative, Republican.  
 Frank Esquerill, Pennsylvania, assistant operative, Republican.  
 Matthew T. Griffin, New York, assistant operative, Democrat.  
 William C. Wood, Philadelphia, assistant operative, Republican.  
 George E. Hayes, New York, assistant operative, Republican.  
 Richard Brunazzi, Texas, special operative, Republican.  
 George W. Drummond, New York, informer, Republican.  
 William J. Burns, Ohio, assistant operative, appointed as Republican, turned Democrat.  
 R. Theophilus, Pennsylvania, informer, Republican.  
 George A. Rock, Washington, D. C., clerk, no politics.  
 W. H. Moran, Laurel, Md., clerk, Democrat.  
 Virginia H. Carpenter, New York, clerk, Republican.  
 Martha D. Green, District of Columbia, clerk, Democrat.  
 James C. Graves, Kentucky, messenger, Democrat.  
 C. H. Callon, Kentucky, clerk, Democrat.  
 J. M. Columbian, New Jersey, informer, Republican.  
 Thirty-four, all told.

On February 1, 1894, A. L. Drummond resigned as chief, by request of Secretary Carlisle, and William P. Hazen, of Ohio, was appointed chief. At the date President Cleveland extended the civil service to cover the employees of the Secret Service division every Republican except Frank Esquerill had been turned out of the service and the places filled by Democrats—that is, 18 Republicans, 19 including the chief—while only 1 Democrat, James C. Graves, and he a Brecklaridge Democrat, had been disturbed. That left of the original 34, 14, the remaining 11 of which were of Democratic origin, 1 mugwump, 1 no politics, 1 Republican, and 1 turn coat Republican; or, in plain figures, only 1 out-and-out Republican was left in the service out of the original force of 34 at the time President Cleveland made his philanthropic (?) order extending to 30,000 old and trusted employees the protection of the civil service. Did you, or did any one else, ever witness such humbug? Of course I do not know the percentage of good, honest, and worthy Republicans who were sacrificed in the rest of the 30,000, but I opine the average was about the same after the three years' pruning by Logan Carlisle and his coworkers.

My point, first, is this: The President did not have power to include the

so-called Secret Service (existing without law) in his order. Second, if he did, was it not a wrong that should be righted by at once taking it out of the classified service, together with the balance of the 30,000 about the 5th of March, 1897?

Had I remained at Washington, it was my intention to have drafted an act having for its purpose the creating of a national police or detective force, allotting a certain number of men for each State, with fixed salaries, and then at the commencement subject all aspirants to a civil-service examination along the line of the duties to be performed, and appoint those who proved most worthy, whether they chanced to be of one or the other political faith. I believe this should be done at once. I believe the appropriation that has been made from year to year by Congress, for a purpose not clearly nor not at all defined and authorized by law, should be discontinued; that in the coming Congress not a dollar should be appropriated, or at least not until a law is enacted creating a lawful bureau or division to be intrusted with the expending of the money.

I have written you at length because I know every word I write is in the interest of good, honest, intelligent government.

I am not a candidate for any office, and do not write on that account. If a new chief is to be appointed, a fit man can be found in E. A. Abbott, at present director of the police department at Cleveland, Ohio. I have the honor to class as my acquaintance, and I believe as my friend, the honored William McKinley, President elect. I worked hard for his election, and contributed my money as much as I was able to the national and State committees, and I am willing to give my time and such humble service as I am capable of to go to Washington when Congress assembles, at my own expense, to assist in bringing about a reform, as I believe the creating of a national and lawful police detective force would be, and the discontinuance of the make-believe force we now have and which grew out of war times and has since been neglected from year to year until by hypocrisy it has been foisted upon the American people as a "good thing" and encircled in the immaculate folds of that "Mugwump" creation, the civil service.

Think of it! Not one of the men in the field force and only two or three in the office force have or can pass any sort of fair examination. Of course, not one of the field force, not even the chief, has passed any kind of examination. They were picked up here and there, some of them previously removed for cause, appointed operatives, and then a fence built around them by Mr. Cleveland in his philanthropy (?), and all on the outside told that they must pass a rigid examination as to mental and moral character before they could even hope to have an application considered. I should very much like to hear from you on this matter. I can furnish documentary proof of almost every allegation herein, and much more that will help you, provided you intend to take this branch of the Government out of the rut and place it on the statute books, where it belongs and should be, as we are the only great nation which has not a lawful body of men to look after the unlawful acts of its people.

Your obedient servant,

A. L. DRUMMOND.

Hon. CHARLES H. GROSVENOR, Athens, Ohio.

The foregoing, it will be seen, justifies my statement that in violation of law, cold-blooded and unconscientiously, they have looted the Departments of the Government and seized upon the men who were not covered by the provisions of the civil-service law.

THE ORIGINAL CIVIL-SERVICE LEGISLATION—THE PRESENT PRACTICE A WIDE AND UNJUSTIFIED DEPARTURE.

Mr. Speaker, I come now to discuss, in connection with the aggressions and growth of this bureaucracy the original idea of the promoters of this legislation. Had there been a suggestion to Congress in 1883 that this law would have been construed as it has been and the power of the Civil Service Commission have grown until it denounced the President and Cabinet officers and Congress, it would not have received 10 votes in either branch of the legislative body, and I make this statement in the light of the proof before us.

The original effort, following the law of 1853, was the effort of Mr. Jenckes, who played to the public galleries in 1860-67. He struggled on and on, and encountered defeat in the Thirty-ninth Congress by a vote of 72 to 66 in the House, 52 members refusing to vote. This chimerical system, which has since grown into an enactment, was spit upon by the distinguished members of Congress of that day, and it is pleasant now to consider that among the great statesmen of the hour who voted to table the whole business we find the names of Mr. Blaine, Mr. Kasson, Senator Wilson, Secretary Windom, Senator ALLISON, and Mr. Boutwell, while Conkling and Garfield refused to vote.

At that time Mr. Jenckes was challenged over and over again to bring forward any reason why such a law was to be passed. He was never able to do it, and finally, after his defeat, as above stated, he abandoned the field, so far as Washington and the Departments were concerned, and undertook to try and reach inefficiency, as he called it, in the customs and internal-revenue service. After the defeat and death of Mr. Jenckes, Mr. Schurz, who has never refused an office from any party, no matter what its principles were, brought the same bill into the Senate, but it was side-tracked by a production of Senator Trumbull, entitled "An act to prevent importunity and to maintain the independence of the Departments." "Senators wanted one thing," as has been well said by another, "but the civil-service 'reformers' wanted another, and finally they both joined hands, but for different objects, to reach the same result."

Mr. Ham, a most able and lucid writer upon this subject, has recently published a small pamphlet in which he reviews, with historic accuracy, the rise and promotion of this heresy. The Albany (N. Y.) Evening Journal quotes Mr. Ham with the following indorsement:

Mr. Ham treats the subject of civil-service reform, modeled after the English experiment, intelligently and candidly.

## This candid writer says:

## DENUNCIATION OF SPOILSMEN.

At this juncture the most alarming statements were made in the public press and on the stump, concerning the condition of the civil service. It was alleged to be corrupt, inefficient, and wholly under the control of Congress, and the country was flooded with untrue, unjust, and most malicious allegations and insinuations. The people were told that the country had come under the yoke of an office-holding oligarchy (Grant) and that its power was poisoning the vitals of the Republic. Every man who failed to fall down and worship at the British "competitive" shrine set up in the market places by Dorman B. Eaton was denounced as a "spoilsmen," and the very air was pregnant with the clamor of the demagogue and the applause of those who innocently followed in the wake of ambitious politicians cloaked in the garb of civil-service "reformers," while bells were tolled to warn the people against danger from the "officeholders" under General Grant.

Let us glance at the situation and conditions which existed about this time. The nation had just emerged from a death struggle to maintain its own existence. To raise the needed revenue, obtain supplies, and distribute them promptly to vast armies called into the field a large number of officeholders not needed in time of peace. Contractors were a necessary evil, and coming in contact with the peace contingent in office, abuses outside the Department may have come to infect the public service. The impetus of the war force was so great, and the peril so imminent, that the final result found the Government generously tardy in coping with evils which had crept in and attached themselves like barnacles to places invested with more or less power; millions of war and other claims remained to be adjusted, and the new system of internal-revenue taxation had become necessary.

Heavy amounts of revenue were and would long require to be raised, not only to repair losses, but to reward patriotism and to pay our indebtedness. A large force must be kept employed, and for the reasons stated, it was not entirely clean. This abnormal situation brought to the surface a lot of theorists, ambitious demagogues—reformers, some of whom were jealous of the civil and military personnel in power—who, in Congress and at the front, had carried the nation successfully through a great war. The conditions became ripe and the moment favorable to commence an agitation for anything that promised "reform."

Only a month or two after General Lee's surrender a select committee on "retrenchment" was raised in the House to investigate matters, and there was a suggestion in the resolve that the inquiry extend to the subject of appointments to office, to the examination of persons for place, and to the policy of continuing them in office for a fixed term. That was the original idea, and, aside from Mr. Jenckes's effort, that was the starting point of the present civil-service law.

A train of abuses is the inevitable result of a civil war; they would have been gradually removed without "competitive" examinations, because the trouble was not so much in the Departments as outside of them, but "civil-service reform" was sprung upon the people who were bearing heavy burdens, and they were made to believe by diligent efforts—that the remedy lay in this pretended reform. Petitions were circulated, editorials written, and speeches made which finally resulted in an educated clamor for the civil-service scheme that was eventually foisted upon the people. Public men who had labored hard during the war in Congress and had grown weary, began to gradually favor something—anything, which would relieve them from the "importunity" of those who desired places. These men were not brought to take this elixir because they either deemed the "competitive" idea necessary, or that it contained the elevating, eradicating, and purifying qualities claimed for it by the civil-service reformers. It simply furnished the machinery to relieve men from importunity."

For five years—from 1868 to 1871—the House of Representatives persistently refused to accept the civil-service idea, but the people had been pilled with all sorts of statements relating to the public service, and they finally took alarm. Not one in ten thousand, however, comprehended what the "reform" meant. Some interpreted it to signify a decrease in taxation and the purifying of the public service and as much more as an active and imaginary mind could be wrought to conceive. But Congress refused to move, until finally the "competitive" idea was hitched on as a "rider" to a sundry civil appropriation bill during the last hours of the session of 1870.

To attach this scheme to an appropriation bill smacked of unfair method. The motion to lay it on the table escaped defeat in the Senate by barely a vote, and it was accepted by the House under protest from General Logan and by a minority vote. It is known as section 1753 of the Revised Statutes, and remains in force. It thrust upon the President a responsibility which he did not desire and in a form which he did not suggest. The President felt the pressure of "importunity" and wished to get relief therefrom, but above all he regarded the real evil to be the careless recommendations of persons for place by Senators and Representatives almost inevitable during the war.

In December, 1870, President Grant said that in mercantile pursuits "the business man who gives a letter of recommendation to a friend to enable him to obtain credit of a stranger is regarded as morally responsible for the integrity of his friend and his ability to meet his obligations. A reformatory law which would enforce that principle against all indorseers of persons for public place would insure great caution in making recommendations."

There was assuredly no "competitive" idea conveyed in that suggestion—no indorsement in it to prevent "importunity" even; no intimation that it was necessary.

## TACTICS OF THE REFORMERS.

But the scheme had obtained a footing, and the reformers became supposedly intrenched behind a law which left its success or failure to rest upon the President. They at once determined to hold him, rather than themselves, responsible for any failure of the experiment; and the work of denouncing every man who declined to accept their civil-service elixir or "competitive" compound was begun with renewed vigor, at Government expense, in reports to the President. The word "reform" had been used to thrust upon the country something which the people did not want nor understand.

## JACKSON AS AN EXAMPLE.

Even the idea of using the word "reform" in the manner stated was not original. That word was just as effectually employed during the Administrations of Adams and Jackson by politicians to secure Jackson's election, and to excuse his removals from office, as the modern civil-service reformers used it to bring the "competitive" idea to the statute book.

Some modern "reformers" there were who hoped the cry would capture Republicans, tear them away from their party, build up the "Liberal" movement, perhaps make Carl Schurz President. They were simply handling the word "reform" as it had been used in the days of Benton, Clay, and Calhoun; just as Mr. Benton raised a "select committee on executive patronage" in 1836 under cover of a desire to reform the civil service. He and his friends then pretended to believe that the ship of state was about to go to pieces on the rock of "patronage," and danger signals were hoisted on every hilltop and kept brightly burning. The people were told that unless something was done, the nation would surely go to the demdition howlows without confession or prayer. The cry went up that the President had too much power;

the civil-service reformer of more modern times tells us that the average Senator and Representative had too much influence.

The Jackson adherents wanted their man and their principles and policy to prevail, and they raised the civil-service "reform" war cry. Jackson came to power in 1829, and six years later, in 1835-36, Clay and Calhoun combined and raised a select committee on civil-service reform. Calhoun had fallen out of line because of his stand on nullification; and, if ambitious, he also desired to punish Jackson.

The wording of the Calhoun-Clay resolve was so similar with that known as the Jenckes resolution in 1866-67 that it seems easy to divine whence the latter came. cursory examination will convince the most skeptical that the civil-service reformers of 1866-1883 drew all their inspiration as to pretended need and necessity for civil-service reform in this country from the reports made by Benton in 1826-27, and Clay and Calhoun in 1835-36.

The Calhoun-Clay report in 1835-36 alleged that honest and capable men were dismissed to make room for the base and corrupt; that the offices were made the spoils of victory, the reward of partisan service, and the means of substituting man worship for patriotism. To these allegations the reformers of 1866-1883 added but two ideas: That the civil service was inefficient, and the importunity of constituents exasperating. Benton met the attack of 1835 by saying that it proceeded from political animosities and was unfounded; that the charges emanated from barnacles who had been removed by Jackson.

Mr. Calhoun pointed out to Benton that his position was quite inconsistent with the language of his (Benton's) report in 1823, when the latter and his friends were assailing Adams, and the point made by the South Carolina Senator was well taken. Silas Wright was on the floor of the Senate and made sport of the fears expressed in the Clay-Calhoun report leveled at Jackson. He said:

"How are most of these officeholders appointed? Upon the recommendations and petitions of the people themselves, upon certificates of character, respectability, and moral worth, made by those who are neighbors and friends of the candidate, who know him personally and intimately, and most usually on the recommendation of the Representatives here of the person appointed. Are we, then, to assume that offices are bestowed as rewards for partisan service, without respect to merit?"

William L. Marcy's familiar remark, which the advocates of civil-service reform so delight to recall from its slumbers, viz, that "to the victors belong the spoils," contained a very essential appendage, which is always suppressed. Mr. Wright added, "but I do not mean to say that the victors should plunder their own camp." A very important qualification, indeed; one that carries a complete refutation of the construction generally placed on his original remark by the civil-service people.

In other words, while the political party which succeeds has a right to the offices—in order to enforce its policy and its principles upon the country, if it can—the argument was, and is, that its appointees have generally been men of character, honesty, and merit, not only that they might best serve the public interests, but to accomplish the purpose indicated, and in the very nature of things the best, the strongest, and most positive men were, as a rule, appointed. No political party will "plunder its own camp," and thus endanger its power by selecting dishonest, corrupt, or inefficient persons to hold office in time of peace.

## COLLAPSE OF THE ORIGINAL IDEA.

The original law of 1871 provided that the President might "prescribe such regulations for the admission of persons into the civil service of the United States as may best promote efficiency," etc. Following the passage of that act came the zealous efforts of the reformers to prepare rules and regulations to make the scheme work out their theories. They failed, and the competitive idea finally collapsed in 1875-76. The President, General Grant, said distinctly in his message of December, 1875, that—

If Congress adjourns without positive legislation on the subject of civil-service reform, I will regard such action as a disapproval of the system and will abandon it. Competitive examinations will be abandoned.

Congress, wisely and deliberately, and with its eyes wide open, did adjourn without any "positive legislation." Now, in this connection it is important to see whether or not the allegations of corruption and inefficiency alleged against the Republican Administration of that day were true or false. This child of despotism was born of those declarations; whatever there is of it now had its birth and origin because of the declarations made that in 1875-76 there was a condition in the Departments at Washington that required an enactment of this character.

There was not one officer of the General Government, nor bureau, that did not denounce as an outrage the slanders upon which these proceedings were based, and it was not strange to the men of those days that slanders should emanate from certain of the sources promoting this alleged reform. The Third Auditor of the Treasury said that the clerks appointed by competitive examination were not superior to those appointed in the old way. The Supervising Architect said that the civil-service law had led to demoralization, rivalries, and intrigues, and that no examination was of any value compared with practical tests, and he advised the repeal of so much of the law as had at that time been passed into enactment, to wit, section 1753 of the Revised Statutes.

The New York naval officer said that the examinations resorted to under the old system were the means of introducing into the service appointees equally as efficient as any appointed under the civil-service law.

The First Comptroller of the Treasury said "the evils from it exceeded the benefits."

The Third Assistant Postmaster-General said that the law "fell short of properly or satisfactorily filling its mission;" but, as this writer has well said, this fusillade was kept up, and the words "spoilsmen," "henchmen," "patronage," and "reform" were sung and echoed throughout the halls of Congress and throughout the air which surrounded politicians out of jobs, who had traded on their influence in the campaign preceding 1877.

Then came a determined effort, which unfortunately failed, to get rid of this whole business and go back to the simpler and more

effective terms of the law of 1853, as amended. In 1872 Senator Carpenter, of Wisconsin, one of the great leaders of the Republican party, moved an amendment to an appropriation bill to repeal that law. It failed by a slender majority of 8. But in 1874 the House of Representatives did attach an amendment to repeal the civil-service law of 1871. The Senate refused to concur, but moved to amend by striking it out and to give \$15,000 to enforce the law, and in conference the action of both branches failed and civil-service reform substantially came to a dead stop. The effect was, is, and remains that the competitive system was abandoned and denounced all along its pathway up to this date.

#### THE REAL OBJECT OF THE LAW.

The real object of the law, it was claimed at the time, was to make men in public stations accountable for their recommendations, and Senator MORRILL said that he desired to prevent intoxication among employees; and yet, as Mr. Ham has well said:

The average civil-service reformer of to-day will say that the one great purpose of the act of 1871 was to bring greater efficiency to the service; to destroy the patronage power of the politician. With this contrariety of ideas it is little wonder that the competitive idea of 1871 came to an untimely end. Senators did not concede that there was corruption or inefficiency in the grades which the law would reach.

No greater scandal or outrage was ever perpetrated upon the fair name of the American people than at the beginning of the civil-service law. There was no necessity for greater efficiency or purer morals in the Departments at Washington or in the great bureaus in other cities.

The Senators of 1871 made swift progress to denounce the whole business, and addressing himself to the Trumbull bill in that year Senator Morton, of Indiana, one of the great leaders of the Republican party, said:

It is said that there are a large number of incompetent and worthless clerks employed. Is that true? I believe the clerks here are as competent and as well qualified, and men of as good character, as can be found in any country. I believe our civil service is now conducted as well, if not better than at any former period of our history. We have gone on improving and reforming, and the civil service is getting better from year to year.

Senator Cameron, the great champion of the party in Pennsylvania said:

Takes them altogether, I do not believe there is a more efficient, a more honest, a more useful, and a worse paid body of people than these clerks.

The Secretary of the Treasury, Mr. Richardson, who was appealed to and who was in that year a man of courage, who was in that year a man who was not afraid of the babble and bluster of the noisy element in the country, said:

The business in the Treasury, upon the whole, is not only done in a satisfactory manner, but it will compare in accuracy and efficiency with the business of the country generally which is carried on by corporations and individuals.

He also affirmed "that the removals were no greater than was needed to insure vigor and infuse new life in the Department."

At that time the high priest, who, I believe, had not yet deserted his political party, although he was, perhaps, making ready and looking out for later engagements, said:

Whether the Departments at Washington are well or badly managed was an insignificant question.

Baffled and completely routed in his assaults upon the Government and upon the departmental service in Washington, he said that it was a matter of insignificance whether they were well or badly run. They were to be reformed whether there was any reform needed or not. In this connection it is well to quote what Representative Baker, of New Hampshire, said recently in a speech in this House:

Why, gentlemen, years ago I had the honor of serving in one of these Departments. I know what its personnel was from 1865 to 1874 by actual contact with it, and, by business and other relations with that Department, I have known it ever since, and I tell you that there has never been in the history of the Treasury Department, a time when it was so well managed, when it had clerks of such ability who so honestly and faithfully discharged their duties as during that so-called "spoils" time from 1865 to 1875.

Then came a little tinkering of the law in a legislative appropriation bill of August 15, 1876, and then came the great struggle to create public sentiment, and Mr. Ham has so well stated the unjust and libelous efforts that were made in that direction that I reproduce his remarks:

This only seemed to whet the keen appetite of the reformers, who commenced a systematic siege, and for several years in public print, in conventions, meetings, and on the stump, it was sought to create a sentiment which would justify a second appeal to Congress, of sufficient proportions to terrify and bulldoze the legislative branch into passing an elaborate act. Accordingly in 1877 Mr. Hayes was prevailed upon to allow Mr. Eaton to show how "competitive" examinations had worked in England and here. That gentleman labored on a brochure of 265 printed pages about two years and four months, at a good salary, going back to the Norman invasion and tracing the rise, progress, and causes of abuses in the British Empire, desiring, of course, to have the country assume that what had proceeded from the rule of English tyrants and feudalism existed here also or was likely to be precipitated upon this country, unless the "competitive" panacea was applied at once. It was a report calculated and intended to excite and alarm, but it had no application whatever to the existing conditions of our civil service. And the suggestion which is conveyed, to wit, that the abuses in England had been eradicated by civil-service "competitive" examinations was the weakest feature of his historical effort. Mr. Eaton's report showed that Parliament was under the sway, practically, of 160,000 voters. In some districts 10, 13, or 35 persons controlled an election. The rotten borough system there was in

full blast. Ninety members went up to Parliament on a total vote of but 4,500. Three lords controlled 31 members of the Commons. Of over 50 persons foisted on the Government between 1837 and 1855 several were found absolutely incompetent because of old age; titled barnacles, spoken of by Mr. Dickens.

Many others of the 50 were found entirely unqualified for diverse other reasons, such as bad character, ill health, and some could neither read nor write. Of 290 persons examined under the old system in 1855 in England 255 were rejected because of ignorance in spelling and arithmetic. There was assuredly need of education in England—even if it had to come under the guise of "competitive" examinations. But the scholastic effort to draw a parallel between the situation there and here was devoid of truth in its suggestion and lacking in true American pride. It was an insinuating libel upon the United States, printed at Government expense.

But this did not succeed and no civil-service law grew out of it. A well and distinguished civil-service reformer assailed Mr. Dawes, a Senator from Massachusetts, to know why the law had not been passed, and Mr. Dawes said, "How can you expect a law to be passed by Congress when the constituents of Congress do not want it?" And one of the theorists of that day said: "Of course, I know that it is true that no law which is very much in advance of the prevailing tone of public morality is ever effectually executed. It will not execute itself."

Mr. Dawes said, in that connection, "We can not get the legislation and make it permanent unless our constituents behind us will support us in it. We never rise higher than the fountain;" and thereupon a cheap-John stereotype system of printed headings and the old, old style of petitions, signed promiscuously in country stores and post-offices and everywhere, poured in upon Congress as an evidence of a growing public sentiment.

Now came the partial sanction of the civil-service reform movement. It did not originate in the House of Representatives; it never came from any immediate representatives of the people, but it had its origin in the Senate of the United States. Its progenitor ostensibly was Mr. Pendleton. It has been well said, and is true, that the bill containing the competitive scheme was handed to Mr. Pendleton, and was reported favorably, devoid of sections 8, 9, 10, 11, 12, 13, and 14, which really contain all of reform there is in the civil-service law.

The Senate amended the bill as reported by adding the above sections; 11, 12, 13, and 15 coming from Senator HAWLEY, who now has views on this great question, and section 14 from the late Senator Beck. Mr. Pendleton never drafted a line of the experiment. As Senator Miller said:

The bill is the joint work of a number of educated gentlemen who are organized for the purpose of promoting a reform in the civil service.

Senator Ingalls said:

This bill is not devised by either political party in the Senate; it was sent here by a self-constituted commission of exceedingly holy and wise men outside the Senate. It does not represent the sentiment of either of the political parties in this body. I know who drew up this bill; I know who sent it here, and I know the motives and the incentives that are being used to pass it.

And he added:

This bill appears to be supported by each party for the purpose of cheating the other. It is sustained by one party upon grounds that are absolutely adverse to those on which it is supported by the other, and it will end by defrauding both.

And who will say that to-day the intelligent, far-seeing, and shrewd men of all political parties do not recognize that they have and their constituents have and the country has been cheated by this bill?

Senator Logan said:

I do not protest against certain Senators constantly discussing this question, based upon the corruption of the clerical force of this country, because it has no foundation in fact.

But Mr. Pendleton then and there waved a flag of compromise which alone saved the bill, by declaring:

It has been said that the abandonment of the spoils system will retain in office the appointments of the Republican party. I do not think so. There is no proposition to extend the term of office nor anywise to limit the power of removal.

But to-day the Civil Service Commissioners demand that the power of removal shall be limited by an Executive order which the Executive has no constitutional power to issue, and in a recent article in the Forum the chairman of the executive committee of the National Civil Service Association says that the weak spots in the law as it stands to-day are, first, that there is no power of removal and, in fact and by inference, that no Presidential order can limit the power of the appointing heads of the Departments from making removals with or without cause, excepting in so far as the President can coerce the judgment and action of his Cabinet; and second, that there is no provision for the disabled; that is, there is no civil-pension list. As I have already said, that will be the next step needed. The step has already been taken by the honorable chairman of the Civil Service Committee of this House.

I shall here incorporate some of the pertinent discussions when this bill was pending. These choice excerpts are collated from speeches of HAWLEY, Pendleton, and Sherman, and has been well expressed by Senator MORGAN in the following:

Is not "importunity" the great evil against which we have to contend?

So it appears that—

The object of Senators on both occasions was relief against the importunities of those who desired places. The competitive scheme would throw all the minor office hunters upon the Civil Service Commission. It was not that competitive examinations were necessary. That idea would simply furnish the machinery which would attain the other desired result. And the consequence was that independently of the competitive scheme its machinery would defend men from "importunity."

That is to say, distinguished Senators who had risen upon the wave of results achieved by the workmen of their party at home wanted to put a legal barrier between the importunities for reward of their constituents who had made them great. This was the declared position, but General HAWLEY, the gallant old soldier, hero, and statesman of Connecticut, has said, as stated by Mr. Ham, and I quote a considerable amount of the collation of that indefatigable writer:

"Nine-tenths of those who do the headwork in the great political campaigns at home, in town and county and State committees, and who are at the polls distributing ballots, serving as counters, running out to bring in voters, and attending to correspondence are men who serve with no care for, no thought nor expectation of ever holding a political office. Nine-tenths of the men who subscribe money for the honorable uses of a campaign are of the same description. There has been a deal of unlimited and nonsensical abuse on that subject."

Why should Senators and Representatives erect a barrier between themselves and these men and the public service, seek the labor and financial assistance even of party friends, and then be able to turn about and say, in answer to a request for a position, "Oh, I can't help you; all the places are under the civil service." They ought to add—even if it is in a whisper—"which I helped to enact and now vote to continue." Ex-Senator Vilas gave the snap away when he said on the floor of the Senate April 7, 1896: "The relief which has been enjoyed by Senators and Representatives, not to speak of those intrusted with the offices of the Government, is in itself a second item of great consequence."

It may be of great consequence for a Senator to be able to turn a constituent down with the leverage of a law of his own creation, but the Senator who gloried in it has himself been retired, and the people are ready to retire more who may think as he does.

But in what way are Senators and Representatives advantaged by this law, so far as it may tend to relieve them from "importunity"? Without a civil-service law they would be asked to secure "appointments." Under the law they are importuned to keep persons in and also to secure reinstatements. We think the law increases the volume of importunity.

It is by and through political parties that this Government has worked out its greatest achievements and advances—and all before civil-service reform had an existence! By and through parties come purification, exposures of wrong, and economies. Destroy one of the incentives which a small percentage of party workers have—reward for fidelity and zeal—and a republican form of government will gradually lapse into a state of coma. Political parties are the vitalizing forces of our system. They consist in part of workers and organizers, not one in a thousand of whom seek Federal positions!

The strife between the comparatively few who do develop the unobjectionable and qualified person. The assumption is that unless competitive examination is resorted to we get incompetents. The whole country is full of qualified persons! Would Mr. Gage or any other bank president wanting a teller, cashier, note clerk, or other officer go to some "competitive" school for such an officer? And why not, as well as for a clerk in the Treasury?

So now it becomes pertinent to ascertain what was the real incentive of the Senators to pass the Pendleton bill. Was the civil service inefficient? I have already more than once commented; I shall continue to comment.

President Arthur said in 1881:

I declare my dissent from the severe and almost indiscriminate censure with which the present civil servants of the Government have been recently assailed. That they are, as a class, indolent, inefficient, and corrupt is a statement which has been often made and widely credited, but when the extent, variety, delicacy, and importance of their duties are considered, the great majority of the employees of the Government are, in my judgment, deserving of high commendation.

"I protest vigorously against the extreme denunciation of the existing system of this country," said Mr. HAWLEY. "It has become a fashion very largely among a class of men who have or claim for themselves a superior culture to the average, to speak of the whole public service of this country as corrupt. They have no right to such language. . . . I have an unutterable contempt for the man who justifies his neglect of his public duties by talking about the dirty waters of politics."

So the law was passed in fraud. It was conceived in sin, and brought forth in iniquity, for it is always iniquitous to intend to pass a law for one purpose, when covertly and secretly you intend it shall operate for another purpose. It went through the House in fraud of the rights of the members of the House and the people whom they represent. It was never intended to cover anything but the Departments in Washington, and that alone in its application to the clerical force. Had any man in those days said that that law would be tortured to affect the appointment by the President himself of an assistant messenger in the White House, there would have been no vote in favor of it on the floor of the Senate. It was an experiment to be tried upon the clerks in the Departments. The whole line of debate shows it. Mr. Pendleton himself says:

I said that this was a tentative effort; that it was intended to be an experiment; and it is because it is tentative, because it is intended as an experiment, that the committee thought it advisable to limit it.

Limit it to what? Why, to the very subjects that we say to-day it is limited to. Pendleton, its author, understood it so; Pendleton, its putative father, knew what it meant.

In 1888 Mr. Cox said that when the Pendleton bill came over from the Senate the House was about to take up an important shipping bill, and he at once proposed to Mr. Kasson, of Iowa,

that a vote be taken on the Pendleton bill without debate, and it was passed in that way, or, as Mr. Cox expressed it, "on the tidal wave of an emotion," and that emotion has emotionized out of office every Administration that has touched it with a single item, and its baneful effects are just being felt in this country; and here I quote from Mr. Ham what this experiment has cost the people of the United States:

As an "experiment" it has been used and abused as has no other law on the statute books. Specific details or cases to sustain this assertion will doubtless be forthcoming in due time; it is sufficient to now say that this has been done through the general rules, the special rules applicable to each Department, and the regulations, for be it known that the civil-service "trust," commission, or board of control of the Federal patronage, the three "bosses" over 87,000 places, and their predecessors, have erected a "machine" under those rules that would startle Tweed himself. Its original entrance or appointment rules, special rules for each Department, rules for transfer and promotions, and its regulations, and that delectable semipolitical "machine" in the Treasury for special or noncompetitive examinations, cover 53 pages of small type! Is it any wonder that Senators and Representatives "throw up their hands" when they attempt to discover what it all means?

The Departments were "blanketed" under civil-service reformer Cleveland to such an extent in the reach for jurisdiction that farmers and blacksmiths on Indian reservations and employees in sawmills, and cooks, even, are said to come within the rules. In fact, a doubt has arisen whether there are enough places "excepted" to satisfy even the very few remaining applicants from the State of Ohio!

But I shall have something to say more in detail before I close this address.

In this connection I desire to call attention to one of the infamies of this procedure. Grasping for control and plunder and patronage and spoils, this bureau reached out its tentacles and grasped the pension boards of the country, and an order of the boss spoilsman of the age, Grover Cleveland, extended over the pension boards, and it has been gravely intimated that had he remained in office four more years he would have extended civil-service rules over the ordinary methods of increase of population in the country.

These pension boards are mere auxiliaries of the Commissioner of Pensions. They are referees of that officer, to ascertain conditions and report facts. They are in no sense officers of the Government, and that fact has been solemnly adjudicated by the Supreme Court of the United States, and yet this grasping bureau, intent upon trampling upon the rights of the American people in its grasp for power, has declared that no man shall be a referee of the Pension Bureau unless he can pass a civil-service examination. Was absurdity ever so absurd?

There has been inquiry after inquiry addressed to the common sense of the people of the country as to why this has been done, and there never has been but one answer. It had been suspected that these boards had some political influence in the country, and so when Mr. Cleveland came in, in 1893, he speedily wiped off the face of the earth the old Republican boards; the soldier surgeons were driven into retirement, and in the State of Ohio, in eighty-eight counties, with three examiners in each county, there were not twenty Republican members of these boards left, and there were not, so far as I know and so far as I have heard, one ex-Union soldier left on the boards, and in the Southern States, and notably in one of the Southern States, a large proportion of the examiners on these boards were and are to this day ex-Confederates. These boards, thus constituted as Democratic boards by a Democratic President, felt it their duty to take up the work of politics in all the various avenues in which they move and exhibit their efficiency in the campaign of 1894.

The civil-service octopus—the Procter crowd—under the instruction of the Logan Carlises of this country, seized these boards, and required, first, that they should not be removed except for cause, and second, that they should pass a civil-service examination. A civil-service examination for what? I say that the promulgation of that order and its reference alike is a grievous insult to the medical profession of the United States.

Every one of those gentlemen, every member of those boards, must be a graduate of a medical college and must be skilled in surgery and must bear a commission and diploma certifying to the truth of that claim. They must have had long experience before they are eligible, and yet by a single proceeding an order is issued practically denouncing every diploma held by a physician in the United States. They say, "It is true that you have a diploma from the Jefferson Medical College, or the College of Physicians and Surgeons, or the Bellevue Hospital, that is all true enough, but we have a little political machine emanating out from Washington that wants to talk over with you the subject-matter and see whether your diploma is not a fraudulent diploma; to ascertain whether or not by some process you have not fraudulently gotten yourself constituted a doctor of medicine and surgery."

It is the most disgraceful order that ever emanated from a President of the United States, and Grover Cleveland was its author and the Procter crowd and the Logan Carlisle crowd were its promoters. Shame upon such an order that seeks to disgrace and humiliate a great professional body of gentlemen in the United States. What is it done for? It must have been done for political

purposes, for political reasons. It must have been done to take away from the soldier of the country men in accord with him.

Ninety out of every hundred soldiers of the Union Army are Republicans, and this is an effort, and I fear a successful effort, in large part at least, to take from the soldier the counsel and advice of his friend and transfer it to his political enemy; but I have said that I would show that less efficiency was attained under the civil service than under the old system, and I have two or three items of evidence to offer. First, the civil service of the Government has been crowded and overcrowded by reason of the inefficiency and incapacity of the men who are held in office by virtue of the civil-service law.

I get my figures from the article heretofore referred to by me, written by the chairman of the executive committee of the National Civil Service Association. In that article it appears that in 1883, when the civil-service law was passed, there were 131,800 members of the civil service of the Government. In 1897 there were 178,717, an increase of 46,917 in thirteen years. This increase is largely out of proportion to the increase of population in the United States, and yet during that period we have had the Dockery Act and report of the Dockery Commission, which was carried into execution, by which it was supposed that a large lopping off of the employees was to take place, but the growth of this civil-service domination has been so great that efficiency is no longer the rule.

Now, I heretofore adverted to the fact that in my capacity as a Member of Congress I requested the appointment, altogether, of twelve men in the Railway Mail Service, and declared that, so far as I knew, no one of them ever failed of high efficiency, good morals, and absolute fitness. I propose to demonstrate the truth of my statement when I say that competitive examinations and the action of this bureau have absolutely failed to bring into the public service true merit and true fitness. I have already in a former speech pointed out that two men had received positions in the public service who had been theretofore convicts in penal institutions.

I hold, Mr. Speaker, in my hand an official statement from the Railway Mail Service of the dismissals and removals in that service from March 5, 1893, to March 3, 1897. That statement gives the official record of 560 men who were removed from the Railway Mail Service during that period. It gives the date of the appointment, the name of the clerk, the line upon which he traveled, and the cause of his removal. Of those 560 removals 271 of them came through this merit system, through this competitive-examination system; came through the operation of this system that is to purify the morals of the civil service and enhance its efficiency; came through the system of this high and holy organization that says that each of these individuals was fitted for the place. The spoilsmen had been rejected.

The spoilsmen had been rebuked by these appointments. These men had come as the output and outgrowth of this purifying and purified system. What rejoicing there was when these men came forth with the grand and immaculate regalia of absolute fitness. There had been examined for these places perhaps 2,000 men, but there was the taint of the spoilsman upon some of them. Some of them did not know how to estimate the distance from the earth to the stars. Some of them did not quite understand all the peculiar habits of the bugs of America, and some of them were uninitiated into the mysteries of logarithms and geometry; but these men had passed a successful examination and "washed their robes" and made them white and immaculate in the pure stream of civil-service examination.

And now the Department has given to me the reasons why these men were dismissed. Opposite each one's name there appears a statement. I hold the paper in my hand, Mr. Speaker, and am therefore in possession of the record of each one of these men. I will not give the names of these men nor the reasons opposite their names why they were removed, for I seek not to humiliate them; but if any one of them, through some unwise friend, should challenge the truth of my statement, I may be driven to catalogue their names and embalm them in the CONGRESSIONAL RECORD and give the reasons assigned for their removal, but for the purposes of my address this would be unnecessary and harmful.

The following is the aggregate of reasons for these removals:

Failure to obey orders; intoxication.....	24
Robbing the mail.....	51
Violations of law.....	53
Inefficiency, etc.....	69
Poor examination and poor record.....	19
Careless, insubordinate, and inattentive.....	8
Fraudulent use of photograph commission.....	1
Physical disability.....	2
Criminal conduct.....	1
Immoral conduct.....	6
Interfering with other people's correspondence.....	1
Gambling.....	9
Loss of mail keys and no effort to recover.....	1
Selling railroad pass.....	1
Loosing mail.....	1
Running for office.....	1

Attending political convention.....	1
Falsely stating age to Civil Service Commission.....	1
Fraud.....	3
Lying about fellow-clerk.....	1
Bad habits and reputation.....	1
Dealing in lottery tickets.....	1
For being a disturbing element.....	1
Engaging in outside business.....	1
Tampering with mails.....	1
Failure to pay debts.....	2
Physical defects and misstatements regarding same.....	2
Fraud in case examination.....	2
Scandalous and unbecoming conduct.....	2
Speaking in an insulting and indecent manner of the President of the United States.....	1
Writing disrespectful letters to superior officers.....	1
Improper use of pass and statements concerning it.....	1
Gross carelessness in handling registered matter, intoxication, gambling, and failure to reply to official correspondence.....	1
Breach of trust and untruthfulness.....	1
On report of post-office inspectors.....	3
Untruthfulness and unreliability.....	1
Opening and reading correspondence passing through the mail, insubordination, aspiring to secure the removal of a fellow-clerk, and untruthful statements.....	1

Total..... 271

Is it not a remarkable circumstance that this system, this merit system, this system that searches among the higher class, the better element of the country, to fill the various positions—that 54 of their product should be removed or discharged for intoxication, 21 for robbing the mails, 53 for various violations of law, and 69 for inefficiency? To some of these removals there are attached other causes than the ones which I have put down; but, going from the top to the bottom of this list of reasons, if there ever was an exhibition of a higher development or a higher degree of total depravity than is here exhibited I would like to see it.

Tell me when it was that under the spoils system a condition like this existed. Tell me if there is a Cabinet officer who does not believe that other agencies which we could commend might readily insure the Government against such infamy of fraud as we have here. Why, this system can not even guard the Government against physical defects, and the Civil Service Commission is compelled to figure in this record as having been the victims of the false statements of these men in their examinations.

Now, if these facts be true, and they are, and no fair-minded man in the world will doubt them, no fair-minded man will require of me that I shall place the official record which I have in my hands in the RECORD; if this be true, I say, what may be inferred in the entire aggregation of appointments under the civil service in the United States? What sort of a hiving of criminals have we? What sort of a drag net for incapables have we here? What kind of a rallying point for drunkards and gamblers and thieves and robbers have we here? This is under the merit system. Good citizens, this is the merit system! This is not the spoilsman. His hands have not been smirched by office. They have come through the Procter-Carlisle combination in large part.

Oh, what a record! What a burning disgrace to the name of America that there is a system that shields these men upon their entering the public service by giving them a test that is no test of fitness. Why, this Commission violates the law daily and hourly in its issue of communications to the public. Nor do they talk about the language of the original statute. Well might Mr. George William Curtis say, as he did say—

If by admission to the civil service nothing were understood but a test of mere literary proficiency, then the competitive idea might well be opposed as unsatisfactory.

Pray tell me, ye disciples, what is there other than that? What is there left in this matter but their violation of law by an attempt to limit the power of removal and the literary examination of the applicant. Well might Senator Williams say, as he did say—

There is nothing in this little civil-service bill; nothing in the world. It does not amount to a hill of beans. It is a little entaplasim to cover only half of a pore eye. It is deceptive; it is a sham; it is a mere make-believe, and I will not vote for a measure the effect of which is to deceive the people of the country.

Scanning this record, and assuming, as I do, that it is a fair illustration of the workings of this entire system, we are not at a loss to know how the expenses of the civil service have run up to a figure that astound the men at home and abroad. We find that in the civil-service law there is nothing to aid the country or to protect the country from the incursion of bad men into office. Here is the utterance of President Arthur:

It is very questionable whether the attainment of the highest number of marks at a competitive examination should be the criterion by which applications for appointment should be tested. There are very many characteristics which go to make a model civil servant, prominent among which are probity, industry, good sense, good habits, good temper, patience, order, courteous conduct, self-reliance, and adherence to superior officers.

Here was the wisdom of an experienced man of the world, and his suggestions sound like a warning voice in the light of the exhibit which I have just made.

The original civil-service law in this connection used the words "capacity and fitness," recognizing in the very language itself that these words were not to be considered as synonymous. "And

[illegible]

One thousand seven hundred and eighty-nine dismissals and resignations took place in the Treasury Department alone in a trifle over three years of time, and I need not here state, for you all know, that resignations and dismissals mean practically the same thing. Note the number of those dismissed from the classified service and then note the number dismissed from the unclassified service, and reflect that there were 1,224 appointed without the intervention of the civil service, and then you will discover the fruitful field upon which Mr. Logan Carlisle operated his Procter-Carlisle machinery.

Now take the War Department. In that brief period of time

334 of those covered by the civil service were actually removed and 239 resigned, and these places filled and seized upon by the tidal wave of reform, and I believe that the Secretary of War was as free from deliberate violation of the principles of the law as any other Cabinet officer.

Now we come to the Interior Department; 1,195 dismissals and resignations took place in that happy family under the administration of Hon. Hoke Smith, 649 of them being in the classified service; and he appointed 829 men, unexamined, outside the civil service, and then placed the tentacles of the octopus upon them. Georgia received 105 appointments to fill these vacancies, only 23 from the classified service and 82 from the unclassified service, but they are all classified now; there is no trouble about that. Now take the promotions and reductions and study them carefully and you have reached a comprehension of the magnitude of this sweep—all done under the head of civil-service reform.

Now let us go to the Agricultural Department, presided over by that distinguished gentleman who was so aptly described on so many occasions on the floor of this House. He dismissed 1,116 men, 1,055 of them in the unclassified service. He appointed 2,033 from the unclassified service, and then the white wings of Cleveland enveloped and shadowed them. He promoted in the classified service 867, and at the end of the performance he had a civil-service department pure and simple, substantially all Democratic; and the man who managed that and dealt the awful blows to the soldiers employed in that Department is to-day holding a high position under this Government because of his alleged non-partisan character. I refer to Mr. Dabney, and I present in this connection an anonymous communication—that is, so far as its use in this connection is concerned—giving an account of the administration of the affairs of that Department, which I commend to the student of civil-service reform as indicating what it is possible for an Assistant Secretary of a Department to do:

WASHINGTON, D. C., March 22, 1897.

HON. JAMES WILSON,  
Secretary of Agriculture.

SIR: Having learned through the public prints that Dr. C. W. Dabney is to be appointed special agent in the Department of Agriculture, in charge of the scientific divisions thereof, I desire to file for your consideration the following protests:

For three years and three months Dr. Dabney has had full direction of the scientific work of the Department, and his unfitness for the position to which it is intended to appoint him has been demonstrated in many ways.

A few facts of common notoriety may serve to impress you with the necessity of a careful and timely consideration of the subject before final action is taken.

Dr. Dabney was selected by Mr. Morton as his coadjutor in the Department because of his full sympathy with the policy of repression, persecution, and sham reform which he wished to establish in the Department. It is too late now for Dr. Dabney to declare that he was opposed to those policies which during the past few years have brought so much criticism upon the Department. He did not fail to secure the appointment of dozens of his personal and political friends before the extension of the classified service, and to provide for their rapid advancement afterwards. It was only when asked to do anything for science alone, and not intended to advance his own personal interests, that he was found without influence with the Secretary.

It would be of interest if you would make inquiry respecting the number of persons Dr. Dabney has appointed to responsible positions, the localities from which they came, and their political affiliations.

There was a reign of terror during the past four years among such employees of the Department of Agriculture as were not personal favorites of the two secretaries nor in political sympathy with them as was without parallel in any other Department.

In his relations to the scientific work of the Department Dr. Dabney's attitude has been most objectionable. Almost his first act was the dismemberment of the Division of Botany for the sake of establishing a new division, of which he appointed as chief a personal friend from Knoxville. Without criticizing the qualifications of that gentleman, it is sufficient to call attention to the fact that the work could have been more economically and efficiently accomplished in the Division of Botany.

The work which Congress has authorized the Division of Forestry to accomplish has been hindered and thwarted in opposition to the earnest efforts which the chief of that division has put forth to carry it out.

Under the administration of Secretary Rusk the chief of the chemical division secured from Congress an appropriation for a systematic study of the physical and chemical composition of the soils of the United States, as you can see by consulting the appropriation bill for the fiscal year beginning the 1st of July, 1896. Without the knowledge of the chief chemist, Dr. Dabney established a new division for the study of soils, of which he appointed another personal friend chief. I cast no reflection on the capabilities of that gentleman, but the work could have been more efficiently and economically accomplished in the division where Congress first placed it, and where it naturally belongs.

Under a continuation of this policy other divisions may expect to see their work taken away and an endless multiplication of separate offices will follow. Instead of unifying and consolidating the scientific work of the Department, Dr. Dabney has divided and scattered it in order to reward personal and political friends, to annoy and antagonize old and experienced employees, and thus magnify the importance of his own supervisory qualifications. Not satisfied with the policy of divide et impera outlined above, he has farmed out the scientific work of the Department in all quarters where it has been possible to strengthen his personal following and create a sentiment to secure his retention for life in an office which would be lucrative and ought to be honorable.

He has inaugurated a policy of contract science by which his personal and political friends have been employed at so much a page to write articles for the Year Book and for farmers' bulletins which could have been done far better and without cost in the Department. Permit me to suggest that you make inquiry respecting the persons who have been employed in this way, how much they have been paid, and how many of them have signed, or have procured others to sign, petitions for the establishment of a directorate of scientific divisions.

Many of these contributions are of the flimsiest character, and some of them contain errors of so gross a nature as to bring the Department into discredit.

During the past two years Dr. Dabney has spent a great portion of his time in developing a plan to secure the establishment of the office of Director of Scientific Divisions, with an object which it does not require anyone with any great insight into human nature to understand. Many worthy and honest men have been led to join in this movement without thinking it possible that their aid could have been solicited for any unworthy personal motive. Dr. Dabney has left no resources untried to bring to the attention this scheme, not unworthy perhaps in principle, but wholly objectionable on account of its ill-concealed purpose.

He has endeavored to enlist the scientific men of Washington in this exhibition of political science, and has thereby almost succeeded in degrading science to the level of ward politics. Describing himself as a "broadly educated scientific man," he seeks to direct the work of men his easy superiors in education, scientific attainments, and reputation.

He has disregarded the spirit if not the letter of the civil-service law in having filled the Department with his personal followers before the civil-service law was extended. Twice he has disregarded the recommendation of the chief of the chemical division in filling the office of first assistant chemist. In the first instance the position was not in the classified service. Dr. Dabney, disregarding the advice of the chief chemist, appointed a personal friend and college mate, who had absolutely no experience in agricultural chemistry, was an alien, and before he could qualify was compelled to declare his intention of some day becoming an American citizen.

Surely a man of the standing of the chief of the chemical division in the scientific world should be respected in the matter of the selection of his first assistant, but this courtesy has been twice denied by Dr. Dabney.

The second occasion occurred after the office was in the classified service. The chief of the division recommended the regular promotion of the second assistant, and for the vacancy thus created the next employee in the regular line of promotion. These two gentlemen were "broadly educated scientific men," and one of them had had the executive experience of second assistant chemist for four years, having been regularly promoted to that position by Secretary Rusk on the recommendation of the chief of the division. During these four years he had frequently discharged the duties of acting chemist in an acceptable manner.

Both the gentlemen recommended for promotion had entered the service after an exhaustive competitive examination before the Civil Service Commission, in which the present second assistant secured the highest grade ever received by an applicant for a position in the Chemical Division. In accordance with the spirit of the civil-service rules, these gentlemen, on the recommendation of the Chief Chemist, were entitled to promotion. But such was not to be. Dr. Dabney wrote to a number of his friends and told them that an examination was to be held and urged them to become applicants for the position. I need not call your attention to the disappointment and demoralization which the action of the Assistant Secretary naturally has caused among the deserving employees in the classified service. In no other case, I believe, has the recommendation of a chief of a scientific division been disregarded respecting the appointment of a first assistant.

Not content with the political methods of enlisting the scientific men in favor of his schemes, he has had printed and distributed at public expense, without any warrant of law, the additional recommendations not contained in the Senate document giving his testimony before the Senate committee.

He has caused to be printed in the magazine Science an article on the desirability of establishing a scientific directorate and also a national university. Reprints of these articles he has sent out under the frank of the Department contrary to law.

In scientific work a man's merits or demerits should not be judged by his politics, but when it is clearly evident that a man not in sympathy with a single principle of the Administration has discriminated unjustly against those who are in political sympathy therewith, and who, moreover, has shown a lack of that broadness of view and freedom from personal bias so necessary in one who aspires to direct scientific work, simple justice demands that time should be taken to look into the matter before final action is accomplished.

Each one of the statements I have made above is capable of satisfactory proof, and as the father of one who has suffered from the discriminations noted, I ask that a full investigation be made before the appointment of Dr. Dabney as scientific director is consummated.

They succeeded during this Administration in getting out of these Departments 1,028 Union soldiers. Five hundred and fifty were appointed, but largely by promotion from lower grades, and this is the performance that stands to-day unrebutted, excepting that so far as pursuant to the rules of the civil service the President has reinstated, through his Cabinet officers, a large number of Union soldiers who were discharged. I shall speak of this matter more fully later on.

I have here some evidence tending to show how even this law itself furnishes no assurance of protection to anybody and how the Civil Service Commission is kept in constant ignorance of what is going on in the Departments. I assume this allegation, for I will not charge that body with crime.

I furnish here a list of Democrats promoted with especial rapidity in the office of the Auditor for the Post-Office Department, under the Treasury Department, during Grover Cleveland's Administration, and I want the thinking men who reflect that the future of this country is more or less intimately bound up in the administration of the civil service, to read the manipulations which have taken place in this office. I give the original appointment, the State from which the appointee came, and the rate of salary from that date to the date of the several promotions. As to illustrate, in the case of C. C. Jones, of Alabama, he was promoted on the 15th of July, 1894, from \$900 to \$1,200, and on the 17th of October, 1895, from \$1,200 to \$1,400. Take the case of Norman E. Webster, a sterling Democrat from Michigan, and he received four promotions in a trifle over one year, working his way by arithmetical progression seldom experienced in public life from \$720 to \$1,400.

I have marked with a star certain of those gentlemen who were promoted within the probationary period of six months in violation of civil-service rules and regulations.

List of Democrats promoted with especial rapidity in the Office of the Auditor for the Post-Office Department (Treasury Department), during Grover Cleveland's Administration, March 4, 1893, to March 3, 1897.

[Where no date of appointment is given, party was in service March 4, 1893.]

\* Promoted within probationary period of six months in violation of civil-service rules and regulations.

I here publish a letter which I received, transmitting this document, which had been in the hands of my correspondent, who had held it for the purpose of verification. It will be seen how he was amazed when he came to find that all but two of this list of rapid promotions, including the illegal promotions that were made, were Democrats.

HON. CHARLES H. GROSVENOR,  
House of Representatives.

WASHINGTON, D. C., April 21, 1897.

MY DEAR SIR: I submit herewith, in tabulated and condensed form, some data which I thought might prove of interest to you. I have carefully compiled it from House Document No. 180, Fifty-fourth Congress, second session. While precisely the same data are given in that document, they are not arranged in a form that would at all serve to bring out clearly and boldly the point I make in the table. A brief perusal of the table will show you the true extent to which favoritism was shown Democratic clerks in the civil service. It will also show you a few cases where promotions were made, even within the probationary period of six months, apparently a violation of existing civil-service rules and regulations.

I will add that in compiling the table I made a note of every case of rapid promotion as it occurred in regular order, irrespective of the politics of the

clerk, my intention being to draw a comparison between Republicans and Democrats as regards rapid promotions in this office. However, when I came to applying their politics to the respective clerks from the official record in this office, I found to my amazement that all but two of the clerks in the list were Democrats. Of course I abandoned the idea of a comparison, as in the light of such facts no comparison could be made. The table I inclose contains the list as originally prepared by me, with the solitary two Republicans duly indicated. I have added promotions in cases where they were made after the issuance of the document from which these statistics are taken (House Document No. 180, etc.).

In presenting you with this table, I distinctly disclaim any desire whatever of personal reflection on any of the clerks named; I merely wish to bring to your knowledge in a general way, and at a glance, how beautifully and impartially the civil-service law and the "merit system" was administered in the office I am in—the Sixth Auditor's Office, Treasury Department—and incidentally to point out to you a few mild violations of the said civil-service rules, as concerns promotions—knowing, as I do, that you have given some time to the study of the civil-service application during the Democratic Administration just ended, and that facts bearing on the matter will perhaps prove of some value to you in a small way.

In designating the promotions made within the probationary period, I did so from personal knowledge in the cases of S. B. Bain, Texas; W. A. Earhart, Utah, and H. C. Long, Mississippi. In the other cases it is possible that promotions were made after a transfer from another Department, which an inquiry at the Civil Service Commission would elicit, and I have governed myself in those cases strictly by statistics given in House Document No. 180, etc.

If you find the table of any interest, I shall be pleased to give you such other information as I may be able to obtain bearing on the subject. Of course I know that you will extend to me the courtesy of treating the matter, so far as I am concerned, in business confidence. The information is cheerfully given, without the slightest attempt or intention at personal reflection on the individuals whose names are given.

I hold in my hand, Mr. Speaker, a list of twelve persons, each one of whom I believe to have been appointed in violation of the civil-service law. I do not wish to publish the names, but I hold the list subject to the inspection of any gentleman who sees fit to verify my statement. One of them was discharged from the War Department for cause and appointed in the Internal Revenue Bureau and promoted to a fourteen-hundred-dollar place. Mr. Speaker, this is but a specimen of what has been going on, steadily, constantly, and persistently.

I furnish as a part of my address, and to illustrate my statement that neither system nor justice nor fairness has marked the administration of this law, the operations of the Land Office from June 30, 1893, to June 30, 1896. It presents to the American people the mode of operation by which the civil-service law can be prostituted to the vile purposes of the spoilsman. I present the tables first. Here they are:

#### Dismissals in the General Land Office, June 30, 1893.

Dismissals made in the General Land Office June 30, 1893, under provisions of the Dockery report, House Report No. 2350, Fifty-second Congress, second session, to accompany the legislative, executive, and judicial appropriation bill for the year ending June 30, 1894 (H. R. 10331).

That report provided for a reduction of two clerks of class 4, at \$1,800 each; six of class 3, at \$1,600 each; fourteen clerks of class 2, at \$1,400 each; twenty clerks of class 1, at \$1,200 each; sixteen clerks at \$1,000 each, and ten copyists at \$900 each—sixty-eight in all, with salaries aggregating \$31,800.

From the best obtainable data at this time the names herewith submitted indicate the clerks, with their salary and official residence, who were dismissed, as well as the politics of the same, namely, six clerks of class 4, at \$1,800 each; nineteen clerks of class 3, at \$1,600 each; fifteen clerks of class 2, at \$1,400 each; twelve clerks of class 1, at \$1,200 each; ten clerks at \$1,000 each; seven clerks at \$900 each, and one clerk at \$800; total, seventy in all.

c Secretary's Office.

I comment as follows: By the provisions of the Dockery law, which was, perhaps, a step toward modernizing systems of administration, though as to that I do not wholly commit myself, important changes were made in the personnel of the affairs of the Land Office. I might, perhaps, with propriety here say that so far as Mr. DOCKERY and his commission are concerned, I believe they were patriotic in their purpose and intended no sleight-of-hand performance such as followed the going into effect of the provisions of their bill. Mr. DOCKERY has given great time and attention to the subject and is entitled to credit, in my opinion, for having done the best he could in this behalf, but the record conclusively shows that this is what took place: Time-tried and faithful clerks were removed in numbers sufficient to come within the Dockery law.

Read the initial opposite their names and you will see how the service was to be benefited by the application of the merit system, and the merit system consisted in turning out the Republicans as quickly as possible, and getting rid of them, perhaps, as grossly incompetent. Then came the reductions so as to make room and way for that which was to follow, and see again how accurately the civil-service principle of merit was applied. You will see by an examination of the initials opposite their names that merit consisted in the political belief of the party, and then came the promotion of the remaining Democrats in the office, and read the initials opposite their names and see how few Republicans were promoted and how wonderfully efficient were the Democrats.

This is what has been going on in the Departments ever since this miserable law was inflicted upon the American people. What is the remedy? I shall speak of that farther on.

While this was going on in the Land Office, a civil-service reformer of the Carlisle-Procter stripe was operating in the Bureau of Engraving and Printing, a Bureau which I say and defy successful answer is not, at least so far as nine out of ten of its employees are concerned, covered by the civil-service law in any respect whatever. Merit in that department consisted in the color of the occupant of the position; and I want to present here the preamble and resolutions adopted at an organized meeting of the discharged colored printers' assistants, held in Washington in February last. It may be considered somewhat egotistical in me to introduce this at this time, but inasmuch as this document was sent to the Pres-

ident, and by the President's secretary sent to me, I feel at liberty to incorporate it in my remarks, and here it is:

Preamble and resolutions adopted at an organized meeting of discharged colored printers' assistants, held at Washington, D. C., tendering a vote of thanks to Gen. CHARLES H. GROSVENOR for the kind interest he manifested in their behalf.

## PREAMBLE.

Whereas under existing laws of the United States governing appointments into its classified service, which appointments must be made only upon the applicant passing a successful examination as provided according to the rules and regulations prescribed by the Civil Service Commission before its regularly constituted board of examination, the law prohibiting none who are morally, physically, and intellectually eligible from entering into competition, but embraces all as under its provisions, aliens and persons not naturalized have been allowed to compete in these examinations before the civil-service examining board, and after passing successful examination have received appointments, been allowed to serve out the probationary period of six months, and then have received permanent appointments, and have been allowed to remain in undisturbed enjoyment and possession of their official position, all of which demonstrates the benevolence, generosity, and liberality of our American institutions; and

Whereas the record of the colored people of this country can be traced back to two hundred and fifty years of unrequited toil, to noble deeds of heroism when the infant colonies were struggling to throw off the yoke of British tyranny and oppression from the plains of Boston and at every subsequent stage in our country's history where its life has been imperiled until a Union, cemented in blood, was firmly and forever sealed at Appomattox—record of which race has always been ranged on the side of patriotism, loyalty, and devotion to country, and the heroism of whose soldiers on the field of battle, fighting for the perpetuity of the Union and the preservation of these institutions forms one of the most brilliant chapters in the annals of our country's history; and

Whereas a few girls of this race which has never furnished a traitor to the country, some of them being the dependent relatives of fallen noble heroes, considering that they were a loyal people, morally, physically, and intellectually competent, determined to take the examination for the position of printer's assistant in the Bureau of Engraving and Printing, before the civil-service examining board with the general throng, which they did, and upon passing were placed on the register of eligibles in their respective order of excellence, as shown by the examination, the said examination occurring in the early part of President Harrison's Administration, the law was faithfully and honestly executed, and as a result some 88 colored girls were appointed as printers' assistants in the Bureau of Engraving and Printing, against about 300 whites; their record for ability, diligence, and excellence in the performance of the work assigned them fully justified the merit of their examinations as certified to by the civil-service board, and refutes the slanderous imputations upon their efficiency made for a pretext to the cause of their removal, as said colored girls demonstrated that they were physically, morally, and intellectually capable of performing any kind of work that any other females were capable of performing; and

Whereas at the close of General Harrison's Administration there were

some sixty colored girls employed as printers' assistants in the Bureau of Engraving and Printing; and

Whereas, when the present head of the Bureau of Engraving and Printing, who after having served several months as custodian of the plate vault, was appointed Chief, July 1, 1893, he immediately set about importuning the Secretary of the Treasury to take the appointment of printers' assistants out of the classified service; if that could not be done, he wanted a temporary suspension of the rules so as to prevent the appointment of colored women. This monstrous display of ignorance was demonstrated in the fact that it could not be done; and thereupon, the present Chief of the Bureau of Engraving and Printing began removing the colored printers' assistants by dismissing a group of 7 colored and 2 white; thereafter, however, principally only colored were dismissed, which was done in groups of 10 and 12 at a time, until out of the total sum of 88 colored girls only 10 remained against more than 300 white. Most of these dismissals of colored girls occurred in cold winter weather, with snow on the ground, and were unwarranted, heartless, and cruel, and in violation of law and against the best interest of public service, as their places were immediately filled by persons unfamiliar with a class of work in which by experience and education they had become proficient and expert, all falsehoods to the contrary notwithstanding. These girls were turned out without an hour's warning, and in many cases without a dollar to breast the cold winter's storms, and to carry the sad news home of coming starvation to their helpless loved ones—girls, too, the heroism of whose fathers on the field of battle made it possible for the present Chief of the Bureau and his assistant to hold their comfortable and lucrative positions. In some cases these dismissed colored girls were the only support of widowed mothers and small brothers and sisters, and had from five to twenty-four days of annual leave due them, but for which they never received any compensation, although Congress made a specific appropriation for this payment, but which was refused by the assistant chief. Some of the colored girls were not allowed to serve out their probationary period of six months, guaranteed them by law; and

Whereas, in filling the vacancies occasioned by the dismissal of colored girls, notwithstanding the fact that many on the list of eligibles who stood highest were colored, and were certified in that order as they appeared on the register, the present chief, aided by his assistant, found a way in which to violate the law, and rejected every colored girl certified by the Civil Service Commission after October 31, 1893, which makes it difficult to understand how an applicant who has passed an inferior examination would make a better and more efficient employee than one who had passed a superior examination—no rules in the books can make this anomaly plain to a candid mind—a principle which in itself destroys the intent, purpose, and spirit of the civil-service law—to provide the best and most intelligent material for the public service; and

Whereas, in our dire need and distress at witnessing our helpless and loved ones suffering for bread, and with every avenue of employment closed against us, we petitioned the President of the United States, Grover Cleveland, and appealed to the tender sensibilities of his soul, to interfere, and cause the law to be executed—which would have had the effect of righting the wrongs inflicted upon us by the present merciless head of the Bureau of Engraving and Printing, and his like merciless assistant, but without avail. The honorable Civil Service Commission reported the fact to Secretary Carlisle, that discriminations were being made in the Bureau of Engraving and Printing on account of color, and supplemented their report with the statement that it did not seem clear how all this inefficiency should be on the side of color and Republicans. Secretary Carlisle took no notice of the matter except to sustain the present chief and his assistant, who have continued to make discriminations on account of color up to the present time; and

Whereas the 18 white girls who were dismissed during the time that some 70 colored girls were dismissed were all reinstated upon their personal application, but in no instance was a colored girl reinstated, except one, in which case a United States Senator secured her reinstatement. Although the present chief has been repeatedly importuned to reinstate them, his reply has been, "They (meaning the colored girls) have all got to go." Or he would sometimes say, "I'll discharge who I please;" and

Whereas we are women and not politicians, our dismissal at the hands of the present chief and his assistant was an unprovoked war upon defenseless women, and totally unworthy of the conduct or action of gentlemen, and entirely inconsistent with the duty of and principles of United States officials; and

Whereas during the time that we were being driven from our official positions by the present chief and his assistant, whose narrow-minded hatred to people on account of color wholly unfit them to hold positions of profit or trust under the Government of the United States where, by their narrow-minded prejudice, they can deprive worthy and defenseless women and children of bread and cause untold suffering, Hon. CHARLES H. GROSVENOR, in the grandeur of his character and in the nobility of his soul, called attention to the matter on the floor of the House of Representatives, being the only honorable gentleman to take such action, thereby showing the courage of the true soldier, the far-sighted justice of the statesman, and the mercy and humanity of the philanthropist: Therefore

Be it resolved, That we, the printers' assistants, in organized meeting assembled, with cherished love and grateful remembrance, do hereby tender Gen. CHARLES H. GROSVENOR, member of Congress from the Eleventh Congressional district of the State of Ohio, a vote of thanks in grateful recognition for his noble, generous, and philanthropic friendship as manifested for us in so disinterested a manner at the time we were being driven from our official positions to encounter the consequent sufferings and destitution.

And be it further resolved, That we do not ask any special favor to be shown us on account of color, but simply petition that the law be vindicated, and that a thorough investigation be had to the method of observing the civil-service law in the Bureau of Engraving and Printing since March 4, 1893, up to the present time, by the present chief and his assistant.

And be it further resolved, That, although we are not politicians, yet we hail with sentiments of sincere joy the advent of the friends of law and order and good government into power.

And be it further resolved, That a copy of these resolutions be engrossed and forwarded to the President of the United States, to Hon. CHAS. H. GROSVENOR, and to Hon. LYMAN J. GAGE, Secretary of the Treasury, and to the honorable Senators and Members in the present Congress.

KATIE GIBSON, Chairman.  
MINNIE CRUTCHFIELD, Secretary.  
1015 Third street N.W.

Here is a clear, concise statement of the situation in the Office of the Supervising Architect of the Treasury Department. The writer comes to me indorsed by such men as Governor Ordway as a man beyond suspicion of corrupt purposes or of any lack of personal integrity:

WASHINGTON, D. C., March —, 1897.

Hon. CHARLES H. GROSVENOR, M. C., City.

DEAR SIR: After reading your severe but just criticisms upon the manipulations and misuses under the cover of which the civil-service law has been administered in some of the Departments of the Government and used for

the purpose of oppressing honest and faithful employees, I concluded to acquaint you with my own experience while employed in the Architect's Office of the Treasury Department, and with a few observations made thereafter.

It is due to you that I state my standing, personally and professionally. I am an architect and civil engineer of scientific training; also a resident of this city for many years. I have acquired and gathered valuable experience in all the branches of my profession during a lifelong successful practice in private, ecclesiastical, municipal, and Government work, filling numerous positions of trust and responsibility. This includes all the buildings and architectural adornments on the grounds of the Department of Agriculture, the fireproof reconstruction of the Smithsonian and Interior Department buildings, the design and construction of the National Museum and of the Medical Museum of the Army, etc., in all of which the limits of the appropriations were never exceeded.

On such a record and with a desire to secure for the Government the best available standing, professional knowledge and practice, I was, without application or solicitation, invited in the spring of 1893, by Supervising Architect James H. Windrim to accept the position of inspector of public buildings, under the Treasury Department, attending to outside work of importance and trust in all parts of the country, while he was himself kept busy in the Washington office. He, however, requested me to furnish him a few recommendations vouching for integrity and competency, so as to conform to the custom and uses of the Department. These were furnished by Gens. Thomas L. Casey and John M. Wilson, both of United States Engineers; further, by Senator J. S. MORRILL, with whom, as chairman of the Committee on Public Buildings and Grounds, I had frequent professional intercourse; by Senator TELLER, under whom, as Secretary of the Interior, I had reconstructed his Department building, and others.

I went on duty in July, 1893, and made a spotless record—most satisfactory to my superiors. In August, 1896, my resignation was demanded by Secretary Carlisle. On interrogation, Mr. William Steinway, of New York, a prominent Democrat, was informed by Carlisle "that Class received his appointment on political grounds, all his recommendations stating in some form or other that he was a reliable Republican."

Mr. Jere O'Rourke, ultra-Democratic, the Supervising Architect appointed by Mr. Carlisle, shortly after entering upon duty, protested in vain against the ruthless impairment of the public service for which he was held responsible, and for his opposition to the wholesale removal of much-needed, capable, tested men he was summarily discharged, without any reason being given, a few days after myself.

The duties performed by me, including delicate work, such as tests of qualities and strength of the alluvial soils of the Mississippi Valley and elsewhere, are now nominally performed by persons without any technical training, some of whom are not even versed in writing plain reports with any regard to orthography or syntax.

Immediately after Mr. Carlisle took charge, Mr. Henry C. McLean, of New York, the chief clerk and Assistant Supervising Architect, was summarily discharged. He had during twenty years steadily advanced within the office, mastered all the intricate details of the service, was a most industrious and efficient worker of well-tested integrity. He was superseded by C. E. Kemper, of Staunton, Va., a college chum of Logan Carlisle, whose pliant tool he continued to be during a so-called reorganization of the office, which benefited him pecuniarily, but was otherwise considered as a disorganization and demoralization of the force. Kemper was entirely ignorant of the Architect's office when he was placed virtually in full command.

The Supervising Architect's Office is not an untrammelled bureau; it is merely an adjunct of the administration machinery of the Treasury Department. The Architect is appointed by and subject to removal by the Secretary of the Treasury, who, during Cleveland's Administration, freely appointed leading subordinates without any consultation with the Architect.

The work of the office is done at present by about 160 persons, organized in eight separate divisions, which include clerical as well as technical branches. The well-trained trusty chiefs, and in some cases also assistants of the divisions, have all been removed, except one whose call for resignation was canceled after the Grand Army of the Republic had made it hot in favor of a comrade.

The new appointees include men totally unfitted for their duties. The dodge has lately been introduced of styling new appointees "temporary," so as to avoid the civil-service examination. After some time has elapsed the appointments are quietly made permanent or "senior" officials. It is stated that within the last few months at least twelve or more draftsmen were thus smuggled under the protection of the civil-service law.

Wherever new public buildings were started, locally recommended mechanics or architects used to be appointed as superintendents, their commissions expiring after the completion of the concerned buildings. Including the contingent forces there are about 150 such employees about the country. After the inauguration of the Cleveland Administration these superintendents were removed in the midst of their work, excluding such as were known as Democrats, and Democrats put in their places. The Treasury Department ruled that these men were under the protection of the civil-service law. They are now being changed from town to town or city, when their work is completed at home, and are supposed to be provided for for life.

P. H. McLaughlin was a sort of a walking overseer of masonry under the superintendent of the Washington City post-office at \$4 pay per diem. This task being completed, he was discharged some months ago. I just learn that he was reappointed (under Cleveland civil-service rules) on the 1st of March as inspector of operations in a Northern granite quarry at \$6 per diem.

In a word, the Supervising Architect's Office has been run entirely under the spoils system, and it needs overhauling on the first opportunity that some suitable committee can get, as an object lesson to the other branches of the Government under the boasted Cleveland civil-service system.

I have in my possession other documents in relation to this Bureau which I will not submit to the public at the present time because of certain exceedingly personal charges and the very ugly criticisms.

Mr. Speaker, I could go on multiplying the evidence of the base prostitutions of this law until the CONGRESSIONAL RECORD would scarcely hold the proof.

Now, in connection with what I have exhibited with regard to the Departments here in Washington, and, Mr. Speaker, what is known to every member of this House, independent of anything which I have said or exhibited here, take into consideration the fact that the great cities of the country, with their marshal offices, their collector offices, and all that have been thus dominated, thus looted, thus polluted, and you have some, although imperfect, knowledge of the base purposes to which we have come at last.

I will add a testimonial or two from outside the Departments at Washington. I offer one from Hon. Edgar Allan, the distinguished Republican lawyer of Richmond, Va., a man who has

held high and important stations under the Government and has always discharged his duties faithfully and admirably. His letter and exhibit are as follows:

RICHMOND, VA., March 25, 1897.

MY DEAR GENERAL: You and I have labored together as "partisans" for many years in different fields of labor, but I want now to send you a little "nonpartisan" communication.

I take it that you will in a day or two be in your element amid the discussion of the civil-service humbug, and thought it possible you might be able to utilize some facts in regard to its working in this city. I have carefully prepared a little statement, giving the number of employees under civil-service rules in the three principal departments of service here, together with some facts in relation to the constitution of the local examining board and the way they have worked the dodge under their "nonpartisan" system; and without submitting any comments, but simply supplying you with the facts, believe me to be,

Very truly yours,

EDGAR ALLAN.

Hon. C. H. GROSVENOR, M. C.,  
House of Representatives, Washington, D. C.

There are in the city of Richmond, Va., three Federal offices under the civil-service rules, viz: The post-office, the internal-revenue office, and customs office. There are about 80 employees in the post-office, 20 in the revenue office, and 7 in the customs office.

Under the last Cleveland Administration there have been 20 employees appointed by the postmaster for positions in the post-office, 10 of whom were not on the eligible list and 10 were drawn from said list, all (20) of whom were Democrats; not a single Republican was drawn.

In the internal-revenue office every officer was removed the day the collector qualified, 20 in all, and 20 active Democrats appointed.

In the customs-house all were removed the day the collector qualified, even the laborer and floor scrubber. Seven active Democratic partisans were appointed in their places, making a total of 47 appointments in the three offices, all Democrats, and only 10 stood an examination. All of them, except 3, have since been covered under the new civil-service rules.

There is a local examining board for each office consisting of 3 members, making 9 members on the three boards—8 of them are Democrats and 1 a Republican—and only 1 of the 9 stood an examination and was drawn from the eligible list, and he was the Republican member. The 8 Democrats were put in office without an examination.

For three nonpartisan boards, how does that strike you?

There is a result which shows what can be done, and here I present a communication received from Topeka, Kans., from a gentleman intimately connected with the postal service. It shows that the outrages which have had their origin in Washington have swept far and wide all over the country and have polluted the fountains and output of civil administration. Later on I will make some pertinent suggestions in regard to this fact:

TOPEKA, KANS., March 30, 1897.

Hon. CHARLES H. GROSVENOR, M. C.,  
Washington, D. C.

DEAR SIR: I hope you will pardon the liberty I take in writing you, but seeing the discussion taking place in Congress on the civil service, and having read your speech on that subject, I thought, perhaps, a few of its workings, as seen by one under the classified service might be of use in determining some changes or improvements in the manner of enforcing its rules. I believe civil service, if applied to clerical positions, and impartially administered, with examinations which are practical, would result in much good, but when administered from a political standpoint and for the advancement of those of the political faith of the party in power, will be neither beneficial nor lasting. Some of the errors existing under its present workings are so apparent to one not even familiar with it in detail as to require some changes or improvement. For instance, there is nothing practical in its examinations. To illustrate, if a private individual employs anyone to transact business for him, he will select someone familiar with the business, or with a general business knowledge. How do these examinations carry out these ideas? I venture the assertion that any boy or girl 16 years of age, from any of our city schools, would pass a better examination than any member of either branch of Congress; and why? Because the questions are fresh in their minds, consisting of where certain rivers rise, and into what

bodies of water they empty, the height of certain mountains, the location of certain ranges, etc.

A man in any kind of business a few years forgets these small details, as they are of no practical use outside of the schoolroom and do not demonstrate any practical business capacity in answering them. The result, practically, at least, in the mail service, is, we are getting principally schoolboys, with no practical business experience. Then the civil service is no protection to one under it, its whole power seeming to be to say who shall be admitted.

It is true one of its rules provides that before being removed charges shall be filed and a hearing given the party accused; but the first hearing he gets is a notice that his pay is stopped, and if he appeals to the Civil Service Commission, they inform him that is something they have nothing to do with. If in the mail service, this rests entirely with the division superintendent.

If reduced to a lower position, or fined two or more days' pay, perhaps on account of some unavoidable error, there is no recourse; the one-man power so decides, and, if strongly partisan in his views, has an opportunity to show great and unjust discrimination.

If civil service could be administered in certain positions which could properly be under the same, with no party partiality, it would be a nice thing, but can it be done in this country of ours under our present system of elections? I am afraid not.

I will cite you a few cases of promotions, reductions, etc., under the civil-service rules to show how impartial (or otherwise) the party in power is in construing the rules, and I have heard of no protest being made by the commission to the construction put on them by the Department.

Under Mr. Cleveland's first Administration seven clerks in charge of cars, of class 5, in this division were discharged from one line to make promotions for seven Democrats, with no protest from the commission. Was that civil service? These discharges all dated October 28th prior to the election; and had he been reelected, nearly all the Republican clerks were slated to go.

Under his last term a clerk of class 4 was made a division superintendent over all the older and more experienced clerks. Was that civil service or political influence? A clerk of class 1, at \$900 per annum, was promoted to \$1,000 per annum and made an assistant superintendent, again overriding the claims of older and better clerks. His father controls a Democratic newspaper. Two clerks of class 4, at \$1,150 per annum, were promoted to class 6 at \$1,400 per annum and made chief clerks while there were clerks of three times the length of service, and with much better records, who were not considered.

Two clerks of class 3 were promoted from \$1,000 per annum to \$1,400 and made chief clerks—more civil service. The superintendent of mails at the Kansas City, Mo., post-office, formerly a captain in the Union Army, was reduced from \$1,600 per annum to \$1,000 per annum and assigned to road duty, while a Democratic clerk of class 3 was promoted to his place. Five clerks of class 5, at \$1,300 per annum, have been reduced to class 4, at \$1,150 per annum, within the last few months on lines running out of Kansas City, thus promoting five Democrats who are now pleading the "baby act" and demanding protection under the civil-service law.

All the promotions named were of Democrats and no doubt were strictly in line with the civil-service rules as construed by them.

Had none of the older clerks who had practically taught these new apostles of Democratic proclivities all that they know about the business been efficient or qualified to fill the places in question it would not seem quite so rank an injustice.

I could continue this list indefinitely, but think that you will be able to see the beauties of the law as administered to us.

As a fitting climax to this fraudulent and partisan abuse of law, the nonpartisan board on February 7, just before the inauguration of President McKinley, comes out with a letter of instructions governing promotions in the mail service, endeavoring to perpetuate these "impartial" promotions and reductions and deterring any who might have aspirations to which they are entitled by long service and efficiency, under fear of removal by those over them who certainly got there through political influence and not by merit or efficiency. Will the perpetuation of such frauds tend to strengthen the Republican party?

These Democratic clerks all voted for "Bryan and the abolishment of civil service." While we of the Republican faith do not want to see any of them lose their position in the service, we do think that it would be nothing but justice that they should go back where political influence lifted them from, and, if we are to have civil service, let them take their chances the same as we are willing to do, instead of being held in positions to which they are not entitled.

#### OBTAINING MONEY UNDER FALSE PRETENSES.

There is another feature of this matter to which I now desire to call attention. I hold in my hands a compilation from House Document No. 79, table 21, pages 219 and 220, and table 10, pages 33, 34, and 35, inclusive:

[Civil Service Commission's report for the years ending June 30, 1895-96.]

From July, 1893, to June, 1896.	Number examined.	Number passed.	Number appointed.	Fees of notaries.	Fees of county clerks.*	Total fees.	Remarks.
Departmental service.....	54,406	35,636	7,496	\$13,023.00	\$27,216.00	\$40,239.00	
Customs service.....	35,005	14,509	3,032	6,251.25	12,502.50	18,753.75	
Postal service.....	104,104	62,915	24,302	26,026.00	52,052.00	78,078.00	
Railway Mail Service.....	22,824	15,904	5,497	5,706.00	11,412.00	17,118.00	Doctors' fees, \$39,942; no females examined.
Indian service.....	2,816	1,678	474	664.00	1,328.00	1,992.00	Doctors' fees, \$2,651.
Whole number for 13 years.....	191,329	117,143	38,208	47,831.45	95,064.50	142,895.95	No account as to the number of females examined.
Government printing service† (from August, 1893, to June, 1896):	1,821	744	264	279.75	1,069.00	1,348.75	
Compositors.....	130	64	3	32.50	50.00	82.50	Compositors—25 females examined; 11 passed, 6 appointed.
Pressmen.....	108	107	16	32.00	69.00	101.00	Female laborers, skilled—Examined, 400; passed, 366; appointed, none.
Bookbinders.....	9	6	3	2.25	4.50	6.75	
Electrotypers.....	20	14	.....	5.00	20.00	25.00	
Stereotypers.....	300	230	.....	195.00	300.00	495.00	
Laborers.....	.....	.....	.....	.....	.....	.....	
Grand total.....	193,150	117,887	38,472	48,111.25	96,088.50	144,199.75	

\* Estimated, as no data is obtainable unless the Commission is called upon to furnish the same to Congress.

† All appointments in the beginning of the civil-service test in the office were made temporary and very few received absolute appointment, the office being packed by him before having it placed in the classified service. Public Printer Benedict's report for the fiscal year ending June 30, 1896, page 12: "Number on the roll, 2,829; number reinstated during the year, 161; and 132 appointed from the civil service." The employees selected from the civil-service list, he says, averaged as well as the persons selected heretofore by him and his predecessors; but he does not claim that they are superior, as the Civil Service Commission would have the world believe.

In this table I present the number of persons examined by the civil-service administration from July, 1883, to June, 1896, the number passed successfully, the number appointed, the amount of fees of notaries and fees of county clerks, with their totals, including the doctors' fees, all these expenditures being necessary under the machinery of this red-tape system of civil-service examination.

Here, now, were 191,000 persons examined, and out of that number only 38,000 were appointed, and I believe I am correct in saying that the disproportion of appointments to applications and examinations has been steadily and constantly growing; and if I am right, it is safe to say that there are more than 200,000 people in the United States to-day who have been beguiled into taking a civil-service examination, have paid their expenses, including these notarial and clerk fees, and have received no appointment and never can receive an appointment, and this concern is magnifying itself from one end of the United States to the other, examining and examining and continuing to examine applicants for public favor as though there was some opportunity for those persons to get in under the operation of the law.

I do not vouch for this table, but it has been prepared from the reports of the Civil Service Commission, and I believe every item and detail of it is correct; and if that be so, tell me if that is not extracting money from these men by false pretenses. Oh, the humbug of these examinations, the outrage upon the innocent men and women of the United States involved in this system! And right here—I may as well do it one time as another, for I should fall short of my duty if I failed—I deny that these examinations, made upon the general principle that they are made, are of the slightest value in determining the "fitness" of the applicant.

I hold in my hands a list of questions proposed to be put into the police examinations of the city of New York, and these are certainly much more practical than the average civil-service examinations have been. Now, he is to be a policeman in the city of New York. Let us establish here very briefly what are the requisite qualifications of a policeman. First, I suppose I will be justified in saying that a primary requisite is soundness of body, physical soundness, and physical strength. Then, I assume that he must be a man of good temper, not, perhaps, amiable, but a man who can control his temper, a man who will not get flurried and stampeded. He ought to be a man who has general knowledge of the laws and duties regulating, controlling, and limiting the administration of the position in which he is going.

The component parts of the soils of the earth are not important to him. The elements, however, should be so mixed in him that he will be just, wise, and considerate and not inflexible in the performance of his duties. He must answer a percentage of questions like the following:

Divide seven-eighths of  $2\frac{1}{2}$  by  $1\frac{1}{2} \times 10\frac{1}{2}$ .

If a man can do that, you see he meets the civil-service requirements and is a splendid policeman.

Here is another:

From the sum of five-ninths and seventeen twenty-sevenths subtract the sum of thirteen-eightieths and one-sixth.

If he can do that, he can keep peace in the Tenderloin district.

Here is another:

How may the Constitution of the United States be amended?

That is important. That seems to me will be at once recognized as of vital importance. If the man does not know how to proceed to amend the Constitution of his glorious country, he would be inefficient as a policeman necessarily, and some boy just out of school would be exactly a charming competitor.

Name four Presidents of the United States who have been reelected to that office.

Splendid qualification that for a policeman. How bravely a man with that knowledge would assail a mob and beat back the assailants of innocence.

Who, under the Constitution, may make treaties between the United States and foreign countries?

That is the question now in dispute between Congress and the Executive, in a certain phase of it. What an admirable qualification for a policeman.

Now, here is one that comes to the absolute true inwardness of fitness:

Write in the space below a letter of not less than 125 words (exclusive of date line, signature, and address), stating whether you prefer to live in the city or in the country, and why.

What a splendid field for manipulation that offers. One man gives his reasons, and the examiner says those are correct; they are the reasons, I would rather live in the country. Another examiner says that is a mistake, my reasons are entirely different from those, and so the applicant for police honors is marked with a demerit.

But no man can be a policeman who can not answer this, every-one will say:

Write in the space below a letter of not less than 125 words (exclusive of date line, signature, and address), mentioning some of the most remarkable inventions of the past one hundred years, and why you regard the inventions named as important.

It seems to me that if this policeman, entering upon a practical duty, can tell us the best kind of a club, the most efficient pocket pistol, and the most satisfactory handcuffs, he is probably in a condition that would make him a pretty fair policeman, so far as that branch of the position goes. But here he is to roam over a hundred years and talk about the inventions of that hundred years. The propounder of this question himself can not answer it.

The most "remarkable" inventions, not the most valuable, not the most wonderful, but the most "remarkable." It is the word "remarkable" which leaves open all the doors of consideration that it is possible for the human mind to conceive of.

Write in the space below a letter of not less than 125 words (exclusive of date line, signature, and address), mentioning some of the advantages or disadvantages of being a poor man.

Is not that a most wonderful performance?

But here is one that the boys would say is a "dandy:"

Write in the space below a letter of not less than 125 words (exclusive of date line, signature, and address), mentioning what you know of the composition, number of members, and duties of the Congress of the United States.

When a man has answered that he would undoubtedly be fitted to guard the sleeping denizens of New York City, because in case of any incursion upon their rights he could so promptly bring to bear his knowledge of the duties of the Congress of the United States. Think of that.

But, perhaps, this is the most absurd of all of them:

Write in the space below a letter of not less than 125 words (exclusive of date line, signature, and address), stating whether or not the United States should acquire more territory.

Now, you see how vitally important it is that this question of territorial acquisition should be thoroughly understood by the people, and now, if we can only get the assurance that the applicant for a police position in the city of New York has right opinions, there is no trouble about the peace of the city; purity of elections and all that sort of thing is assured.

I have taken an illustration from the city of New York. The programme of that proceeding was later on transmitted to Washington, and the absurdities of the examinations here have grown with the development of this whole business. Little wonder is it that it should finally be ordered as a requirement of an applicant to set type that he should be able to hop twelve times on one foot. But I must hasten on.

Before reaching the concluding proposition I desire to present the draft of a bill which, in my judgment, would be exceedingly desirable and which would apply the rule of common sense to the administration of our civil affairs and relieve the current Administration of a vast amount of the odium now attached to the administration of this law. I not only publish the bill in this connection, but a concise argument in support of its merits.

A bill to amend act of Congress approved January 16, A. D. 1883, entitled "An act to regulate and improve the civil service of the United States."

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 7 of the act of Congress approved January 16, A. D. 1883, be, and the same hereby is, amended so as to provide that unless by the direction of the Senate and House of Representatives of the United States of America in Congress assembled any person who may be employed in any one of the eight Executive Departments or the Government Printing Office in the capacity of "private secretary" or "confidential clerk" to any one of the heads or the assistant heads of said Executive Departments or Government Printing Office, or to the chief clerk or disbursing clerk of any one of said Executive Departments or Government Printing Office, or to the head or deputy head or chief clerk of any bureau or office in any one of said Executive Departments or Government Printing Office; and any person who may be employed in the capacity of chief clerk or disbursing clerk in any one of said Executive Departments or Government Printing Office; and any person who may be employed in the capacity of head or deputy head, chief clerk, or chief of division of any bureau or office in any one of said Executive Departments or Government Printing Office, and whose duties are of an executive, advisory, and administrative character under the direction and supervision of the heads of said Executive Departments and Government Printing Office, and whose appointment is not now required by existing laws to be made by the nomination of the President with the confirmation of the Senate of the United States, shall not be allowed or required to be included in the classified civil service of the United States or to pass an examination for appointment, and that each of said employees and officials shall hereafter be selected and appointed to said positions by the heads of said Executive Departments and Government Printing Office in accordance with the laws authorizing the employment of said employees and officials, anything in any statute, rule, or regulation to the contrary notwithstanding.

The following may be said in connection with the provisions of the accompanying bill:

The employees in the several Executive Departments, or those who compose the civil service of the Government, are properly divisible into three classes:

First. The executive, advisory, and administrative class, which, under the direction and supervision of the Secretaries and Assistant Secretaries, includes the chief clerks of the Departments, the bureau heads, deputies, chief clerks and chiefs of divisions of bureaus of the Departments, whose duties and services are of an executive, advisory, and administrative character.

Second. The executory or clerical class, which includes all employees whose duties are altogether executory and clerical, and dependent upon the direction and supervision of that class of officials specified in the first class.

Third. The laboring or workmen's class, which includes all those employees who render services entirely of manual-labor character.

As will be seen from an examination of the civil-service rules, as amended to January 2, 1897, the present division of the Department employees is different:

First. The classified service includes all employees of any grade or designation whatsoever who are above laborers and workmen and below those positions which are required by law to be filled only by nomination of the President with the confirmation of the Senate.

Second. All those who are below the classified service, or all those employees who are employed merely and actually as laborers and workmen.

Third. All those employees who are above the classified service, embracing all those subordinate officials whose appointments are specifically required by the statutes to be made by the nomination of the President with the confirmation of the Senate.

Rule 3, paragraph 2a, shows the fact that all officers and employees of whatever designation, except those persons whose employment is merely as laborers and workmen, and all those officials whose appointments are made by the nomination of the President, subject to the confirmation of the Senate, are placed within the classified service and are made subject to the civil-service rules promulgated within the last few months of the last Democratic Administration, and excepting also those employees specified in Rule 6.

Thus it will be clearly seen that the only employees in the several Executive Departments of the Government who have been excepted from the classified civil service and whose appointments can be made without regard to the civil-service rules, are the following:

The private secretaries or confidential clerks, not exceeding two, to the President, or the head or Secretary of each of the eight Executive Departments; all those subordinate officials who have been specifically excluded or exempted from being included in the classified service by the provisions of section 7 of the act approved January 16, 1883, embracing all that class of officials whose appointments are required by the statutes to be made only by the nomination of the President, with the confirmation of the Senate, and who, it will be seen, are the Assistant Secretaries, the heads of bureaus, and some of the deputy heads of the bureaus forming a part of each of the Executive Departments.

The important fact should again be noted—the chief clerks of the Departments, some of the deputy heads of bureaus, the chief clerks and chiefs of divisions of the bureaus, although forming a very important part of the executive, advisory, and administrative corps of the Executive Departments, and not specifically required by the statutes to be made only by the nomination of the President subject to the confirmation of the Senate, are now, for the first time in the history of the civil service, included in the classified service, and no one of them can now be appointed except through the channels of the civil-service rules.

The forceful argument, the logical reason, etc., as to why each official in the several Executive Departments whose duties are of an executive, advisory, and administrative character should properly, rightfully, and most expediently be excluded by law from the classified service may be briefly indicated in this way:

The Constitution and laws define the powers, duties, and responsibilities of the executive branch of the Government and vest the executive power and matters thereunto appertaining in the President.

The Constitution and laws also prescribe the times and manner in which the citizens of the country, in the exercise of their guaranteed and sacred right of elective franchise—the fundamental and essential power of control of governmental affairs and institutions—shall elect and place in office the President—the chief executive officer—for the purpose of administering the affairs of Government and executing the laws enacted by the legislative branch.

The political parties, constituting the factions of the great body politic of American citizens, are always at issue on the main questions involving matters of national interest and governmental importance, relating to both internal and foreign affairs.

Each of the political parties meet in convention, adopt a platform incorporating and setting forth its position, pledges, and guarantees on such questions, and proceed to nominate its standard bearers for the Presidency and Vice-Presidency.

These are made known to the citizens, the campaign follows, and the question as to which of the standard bearers shall be elected to assume governmental control and administer governmental affairs, etc., is determined by the citizens at the polls.

By the expressed wish of the majority of the citizens, the candidates of the successful party are duly installed in office, and then find themselves charged with the great and responsible duty of administering the affairs of Government in accordance with the

policies set forth in the platform of the party that placed them in power, all as pledged and guaranteed to the voters.

Considering the provisions and intentment of the statutes and the expressed wish of the great majority of the citizens, by the exercise of their constitutionally vested elective franchise, composing the political party who successfully elect and place in governmental control and administration their standard bearers, it obviously and logically appears that it was the intention that the chief executive or administrative officers should be possessed of the unrestricted and unlimited right and power of selecting from their party all those official assistants provided by law for the administration of governmental affairs.

Until now this was the practice, but since the promulgation of the Executive order of May, 1896, that rightful and legally provided practice has been materially curtailed.

Under the present condition of the civil-service rules and the laws upon which the same are founded, so far as the Executive Departments proper are concerned, that power has been so encroached upon as to prevent its exercise beyond the positions of the Secretaries and Assistant Secretaries, heads of bureaus, and some deputy heads of bureaus.

Therefore, it will be seen that all right of selection and appointment, in accordance with the heretofore prevailing practice established by the statutes, of all that class of subordinate executive, advisory, and administrative officers whose services and assistance are so essential to governmental administration is denied, except through the channels of civil-service examination.

As has been stated, the large majority of this class of executive, advisory, and administrative officials are not appointed through the nomination of the President with the confirmation of the Senate.

By the Executive order promulgated by President Cleveland in November, 1896, they are included in the classified civil service and are made subject to the civil-service rules then promulgated by him, which obviously abridges and curtails the right and privilege, vested by the Constitution and statutes, exercised by himself and each of his predecessors, of selecting and appointing them from the party that elected and inducted in office the chief executive or administrative officers for the purpose of administering all governmental affairs in accordance with the policies adopted by the platform of that party, both in regard to internal and foreign affairs involving the public interests and welfare, and the pledges and guaranties made to the citizens in regard to the same.

Every one who is in the least informed in regard to the provisions of the organic laws of the Executive Departments and the various bureaus and officers forming a part thereof, or is acquainted in a practical way with the workings of the same, know of what valuable and essential assistance the subordinate executive, advisory, and administrative officials are to the executive heads of those departments in the administration of the vast amount of most important affairs intrusted to them.

It is a fact that the heads of the Executive Departments in the administration of the affairs of their respective departments necessarily rely for executive, advisory, and administrative assistance and cooperation upon their Assistant Secretaries, and either through them or directly upon the bureau officers, who in turn necessarily, in a very large measure, depend upon their deputies, chief clerks, and chiefs of divisions.

It is also a fact that the chiefs of divisions are by the very nature and condition of things necessarily the part of the executive, advisory, and administrative corps who make the investigations, ascertain the findings, exercise the judgment, prepare the decisions, take the actions, etc., in official matters, and of course they should perform these duties in accordance with the prescribed policies of the chief executive or administrative officers of the Departments.

The fallacy of the present condition of affairs could be well illustrated in this way:

The Republican party was placed in governmental control by the great majority of the citizens of the country upon the pledge that the gold standard and bimetallic policy, subject to international agreement, should be the fiscal policy of the present Administration, and all effort would be made to effectuate the same. The President and Secretary of the Treasury are now charged with that duty, and must necessarily depend upon many of the subordinate officials in the Treasury Department for advisory and executive and cooperating assistance, etc., in regard thereto. It is a fact that many of that class of officials now in office are admittedly and expressly of convictions opposed to that fiscal policy, and it is obvious that they can not conscientiously, sincerely, and honestly assist in the administration of a policy directly opposed to their individual convictions. Again, their prejudices, arising from their own convictions, may influence their hostility to the successful administration of that policy.

If all that has been said as to why the classified civil service should include all of the class of subordinate executive, advisory,

and administrative officers who were included by President Cleveland's order of November, 1896, is true, and such action will best subserve the best interests of the Government involved in the departmental service, and all that is herein said and could be further said and suggested is wrong, and the very converse is what is really right, then logically it must follow that the same line of reason and argument could even more forcibly be applied to the higher executive and administrative officials, viz, all deputy heads and heads of bureaus, assistant secretaries, etc., yet it would be the very height of absurdity for anyone to suggest and advocate the idea of securing the services of men for those positions through the channels of competitive civil-service examinations alone, or for anyone to attempt to logically maintain the proposition that the most suitable and best qualified and equipped men for such positions could be secured in that way rather than the present way of selections based upon personal knowledge predicated upon the known experience and affiliations of the individuals selected and appointed, as well as personal knowledge derived in the same way as to the reputed and well-attested integrity and character of the individuals.

Again, if this be correct, it would logically follow that the same line of reason and argument could be advanced as to the matter of filling even higher positions—for instance, Cabinet places, Civil Service Commissioners, Interstate Commerce Commissioners, judges, justices, and other officers of the judiciary, and so on—so as to apply to the very members of the legislative branch of the Government, the higher positions in the diplomatic corps, etc.; but surely no one would be so foolish as to even suggest such an absurd proposition.

Again, it must not be lost sight of that it is a fact well known to all that in every position of an executive, advisory, and administrative character, executive and administrative capacity is as essentially required of the incumbents as educational attainments. Certainly there can not be any system of examination devised that would demonstrate such qualifications, and they can only be known to be possessed or else demonstrated by actual trial.

Again, many of such positions are positions of trust, and many others involve such matters as are calculated to test the honesty and integrity of the incumbents, and surely there can be no method of competitive examination devised which would develop the moral character and the honesty and integrity of the parties examined, and those qualifications can only be ascertained from testimonials or attestations based upon personal knowledge.

In private life and private business the matter of selecting such assistance as may be needed is always based upon personal knowledge and reputation as to fitness, character, ability, etc., and it is in that way alone that each individual selects his doctor, his lawyer, his banker, his broker, his agent, his merchant, his clerk, his engineer, his architect, his children's tutors or instructors, or such services as he may need, no matter of what nature, and if after trial they do not prove satisfactory others are immediately selected, and so on until satisfactory services are obtained.

Prior to the last order promulgated by President Cleveland, so it has been by provision of the statutes and in actual practice, and so it should properly and for the most practical purposes be now, in regard to the higher class of services in the departmental service.

In regard to the prevailing system much could also be said as to an official class being created and maintained, its objectionable features, its being contrary to the principles of republican form of government, opposed to the old-time well-digested theory and practice of rotation in office being subversive of the best interests of the Government, etc.

Arguments, varied, multiplied, and logical, could be further suggested as to the expediency of legislation such as is suggested by the accompanying bill being enacted for the best interests of the public service.

Mr. Speaker, I do not undervalue education. No man knows better than I how desirable it is for a public man to have had the opportunity of a liberal education; no man knows better than I how a young man entering the public service is hampered and envied by the misfortunes of poverty in his youth; no man who was born in affluence and was fully educated can appreciate the burden that is borne by one who entered life in poverty, was located far removed from educational institutions and acquired whatever of education he has by hard struggle while laboring for a livelihood. But what I deny in this connection is that this educational test as administered by the Civil Service Commission in this country is a fair and a just test of a man's ability to perform the duties of a public officer, and I stand upon the further ground that this Government is a government of the people and by the people, and that the people should be all the people.

You have no right, Mr. Speaker, to so usurp, by legislation, the control of this Government. You have no more right to prescribe this academical test than you have the right to prescribe the test of race, of birth, or origin of private opinion. You have by these enactments, and by the orders made pursuant thereof, established

a test of fitness in this country that destroys the participation of 65,000,000 people in the administration of the National Government, except through the medium of this bureau; but the matter of emolument, of salary, of pay is of slight importance as compared to another consideration in my mind.

It is as good as a liberal education almost to a young man to come to Washington and participate for four years in the administration of his Government. It broadens his mind, it opens his mental eyes, it gives him a grasp of the scope and magnitude of his Government, and makes him in all his coming years a better citizen; and yet you have excluded this great class from the places of influence, the positions of advancement and opportunity, and to nine out of ten of the people of the United States you have shut the door of a government by the people. There is no government by the people.

Why, Mr. Speaker, what have the men of this country done who could not have passed a civil-service examination? I introduce this branch of my subject by a quotation from *Christian Morals*, Part II, Section IV, by Sir Thomas Browne. It is as follows:

It is an unjust way of compute, to magnify a weak head for some Latin abilities, and to undervalue a solid judgment because he knows not the genealogy of Hector. When that noble king of France would have his son to know but one sentence in Latin, had it been a good one, perhaps it had been enough. Natural parts and good judgment rule the world. States are not governed by erasmisms. Many have ruled well who could not perhaps define a commonwealth, and they who understand not the globe of the earth command a greater part of it.

The gentleman who kindly called my attention to this extract favored me with the following letter:

MARCH 13, 1897.

MY DEAR SIR: Your very polite letter of the 9th instant, in which you acknowledge the receipt of a note I sent you on the 5th, containing an expression of the sentiments of Sir Thomas Browne upon the subject of civil-service reform, is received.

I have not the pleasure of your acquaintance, but you are a public man of national reputation and therefore liable to have any number of letters, upon every kind of public questions, along incessantly at you. You doubtless treat these as one of the onera of your office.

My experience in politics has not been very extensive, but my observation has led me to believe two or three things to be true which "reformers" always deny. It seems to me to be beyond question that the ordinary politician fills an office just as efficiently and just as honestly as any other man, and that he is just as true to his word and has just as high notions of public decency as the ordinary reformer. The strongest advocates of what they are pleased to call political purity are themselves very often without any sense of honor. Lawrence Godkin, the editor of the *New York Nation*, a man who has lived in a sublimated atmosphere of political virtue and has been, without doubt, the holiest person in his vicinity, published an editorial in that paper during the Hayes-Tilden contest, in which he advised that some Hayes elector of Massachusetts should vote for Tilden and thus settle the matter.

The utter dishonesty of such a course and its unspeakable rascality never occurred to this sanctified reformer, but it would be safe to say that no politician would ever have suggested such a scheme. The person above named is still editing some "reform" newspapers, and writing a serial about the tendencies of Democracy, or something of that sort, and gliding along with a kind of holy, impervious air, as unconscious of moral turpitude as an Ashantee savage is of a breach of the seventh commandment. He could, however, pass just as good a civil-service examination as the two ex-convicts you mention.

The first "reform" treasurer of Cook County, Ill., ran off with all the public money he could get away with, while a regular politician in his place would probably have left the office with a good record. The reason is plain. The politician spends his life watching public opinion, and no man fears it more than he. Your civil-service man does not give a tinker's — for public opinion. It did not frock him and it is not able to unfrock him. It seems to me that in a popular government no step ought to be taken that will tend to lessen the virility of the administrative function. Fresh blood will prevent staleness and a lapse into pure routine, and give public affairs a vigor that otherwise will be lacking. The uninfluential citizen will often receive polite treatment from a man who serves the people, when he would not get it from a man who merely serves the Government.

Much might be said; but I am sending coals to Newcastle. You have studied this subject, while I have not, and my crude ideas will not probably add anything to your store.

Yours, very truly,

CHARLES W. THOMAS.

HON. CHARLES H. GROSVENOR, Washington.

I publish it because it comprehends the whole subject. We have put it in our Constitution that there shall be no religious test for citizenship or fitness for office. We have inveighed in our organic laws throughout the country against favoritism growing out of sectarian tendencies and everything of the kind, and yet we come here and put into operation a grand scheme to seize the places of the Government, transform the President of the United States into a great figurehead, destroy the power of Congress, absolutely annul the free will of the members of his Cabinet, and subject the whole appointing power to the control, regulation, and manipulation of a bureau of men. I denounce it as un-American. I denounce it as anti-Republican. I insist that it is a plain violation of the principles of a republican form of government.

What now? It is hardly worth while to inveigh against a condition and offer no remedy. I have already said what I would have. I would have these appointments made upon the suggestions of Members of Congress, of Senators, or upon representations made by distinguished citizens. I would stop the recommending power in its operation right there. I would apportion

the places of the Government known as clerical, strictly clerical, to the several States in proportion to their population, and the several Congressional districts in like manner. I would have the appointments made for four years.

I would not put a barrier against retentions in office, but I would have it understood that there is a tenure to the public offices of the country. It is nonsense to talk of the impossibility of the running of the Departments at Washington without the continuing of these people in power. The people of the country scorn the idea that the young men of the country are not capable of filling the places. I would have such an examination made of every man that the Department would be absolutely protected against the possibility of injury.

Mr. Speaker, the people of the United States will not submit to this manipulation of public office very much longer. I contemplated at first the publication in this connection of many hundreds of letters and resolutions which have come to me upon this subject, but I will not do it. There is not a member of this House who does not understand that from ocean to ocean and from every section of this country there are coming in every mail protests of the most serious character against this abomination, and the people of this country are not in the habit of submitting to wrongs and despotisms without protest, and the people of the country know how to protest. General Grant denounced this civil service as a fraud in substance and effect, and was reelected President of the United States.

General Garfield upheld it to a certain degree, not sufficient, however, to couple his name with the passage of the original act, and a Democrat succeeded his Administration. That Democrat upheld to some extent the civil-service law, and he gave away to a Republican. That Republican moved somewhat in the direction, and his party shouted loudly for civil-service reform, and he was retired. His successor again surrendered to the behests of these reformers and he was retired; and we are looking to the future.

I hold in my hand the letter of a very distinguished civil officer of one of the Republican States of this Union that is represented in this body by more than a half-score of Republican Representatives, and he states that no man will be elected from that State to the Fifty-sixth Congress who does not openly pledge himself to the repeal or material modification of this law. Mighty gatherings of citizens in remote corners of the country have forwarded to me their words of approval in this behalf. There are one hundred people in the United States opposed to the administration of this law where there is one in favor of it. You can not suppress the hundred with the one. I need not multiply words in this behalf.

The tide is rising. It carried to Mr. Bryan in 1896 hundreds of thousands of votes because of the suggestions of his platform and his declarations upon the stump. It will not be submitted to, Mr. Speaker, and here I warn its friends, submit to just and intelligent reformation of these abominable orders of Grover Cleveland or submit to the destruction of your statute. Flee from the earth, but go by peaceful routes of retreat. Retreat over the lines of just modification. Retreat over the lines that will take you back to the original purpose of this law. Then provide for its execution and its administration by a system that will cease to be the laughingstock and cease to excite the condemnation of mankind. Do that, and pure civil-service reform will have been established upon the wreck of a humbug. Do that, and the civil administration of this Government will be the execution of the will of the people, for the people, and by the people.

I only add a communication received from the veterans of Philadelphia, which speaks for itself:

[Headquarters Union Veteran Legion, Wilmington, Del. John P. Donahoe, national commander; William A. Reilly, adjutant-general; Jacob F. Slagle, judge-advocate-general, Pittsburgh, Pa.; Daniel Caldwell, inspector-general, 1519 North Twenty-second street.]

PHILADELPHIA, PA., January 18, 1897.

DEAR SIR: Your request of January 12, to forward a list of the veterans dismissed from the United States mint at Philadelphia, is received. We thank you most heartily for your interest in this matter, and forward herewith the list asked for and a copy of the protest and appeal which we have placed in the hands of Major McKinley. He has promised to give it his "best consideration in due time."

Very respectfully submitted.

J. C. HUNTERSON,

Secretary Committee, 311 Wharton street, Philadelphia.

Hon. C. H. GROSVENOR.

#### PROTEST AND APPEAL OF VETERANS.

We, the undersigned, your comrades and fellow-citizens, veterans of the war, removed from our positions in the United States mint at Philadelphia for political reasons, respectfully ask your consideration to this subject, which is of such vital importance to us.

First. We claim that we are entitled to the protection of the United States statutes regarding the veteran, which have heretofore been interpreted as assuring to us our places under the Government, in which we have rendered faithful and efficient service for years, and from which we were unjustly and unlawfully removed.

Second. Our removal, in each and every case, was without cause, except that we were loyal Republicans and our places were required for the Democratic partisan.

Third. The superintendent whose mandate removed us was himself dismissed in disgrace. This will certainly be accepted as proof of his unfitness to sit in judgment on men who bore unchallenged reputations as citizens, as well as honorable records as soldiers.

Fourth. The cruel dismissal of five of our number upon Decoration Day, May 30, 1894, who were maimed by the loss of an arm or a leg, gave a special emphasis to the bitterness of purpose of the superintendent giving such an order, and is without a parallel, in our loyal city, of hatred to the soldier.

#### THE MEN ALLUDED TO IN FOURTH ITEM.

GEO. A. BAKEOVER,  
F Co., 72d Pa.,  
Night watch.

GEO. W. BROWN,  
D Co., 29th Pa.,  
Doorkeeper.

WM. NICH,  
1st Pa. Art.,  
Gatekeeper.

JNO. L. GRAHAM,  
F Co., 29th Pa.,  
Gatekeeper.

HARRY J. COOPER,  
E Co., 71st Pa.,  
Elevator.

Fifth. The promulgation of the civil-service law was not made until the 24th day of November, 1896 (just twenty days after the election of Major McKinley), although it had been suggested years previously. It is therefore very evident that if Mr. Bryan had been elected it would not have been needed. But, as he was defeated, the law was necessary to prevent our reinstatement to places which had been filled by Democratic politicians, some of whom were not born when the war was on.

Against all of this we protest, and from all and each we appeal.

This summary statement of our case we place before you, cherishing the hope and belief that it will receive the consideration which it deserves. We have the courage of our convictions in making this protest and appeal, and having patiently awaited the turn of the tide, have no hesitation in asking such friendly support and action as will restore to us a reinstatement in our positions.

The action of the Democrats in placing the mint under civil service after the defeat of their party and before the inauguration of Major McKinley was dishonest in motive and partisan in purpose, as the conditions existing were perfectly understood by all who were interested, as well by those in authority. A resolution of inquiry had passed Congress, asking the Secretary of the Treasury why the veterans had been dismissed, to which Mr. Carlisle made answer in a curt sentence: "For the good of the service." Against the Secretary's remarks we place this our statement of facts, which will not be disputed, as they are incontrovertible. If our removal had been for inefficient service, or dereliction of duty, the answer to our appeal would be the record, by which we are willing to be judged.

We have associated as friends and comrades, making a common cause in our appeal, pledging ourselves to stand together. We present our case for adjustment, "praying that we may have and receive" that treatment which is our desert, and that the evil design and contrivance of Democratic partisans to prevent our reinstatement may not succeed.

Respectfully submitted.

A. J. ANDREWS, Chairman.  
JNO. C. HUNTERSON,  
Secretary, 311 Wharton street, Philadelphia.  
W. J. SIMPSON,  
DANIEL CALDWELL,  
THOS. S. KEYSER.

[From the special correspondence of the Philadelphia Evening Star, Saturday, January 9, 1897.]

WASHINGTON, D. C., January 8, 1897.

Congress has got down to work again and is making an effort to finish up some odds and ends, in addition to passing the appropriation bills, before the time for its existence to expire arrives.

It is significant that Congressman GROSVENOR, the near friend and in many respects the spokesman for Major McKinley, put through the House two days ago a resolution calling upon the President and the heads of the different Departments to report to Congress how the civil-service rules had been applied in the making of appointments during the Cleveland Administration, giving the names of the people who had been removed from office, the reasons therefor, and the names, business, and politics of the persons appointed to the vacancies.

A similar resolution was passed by the House last June, but no attention

was paid to it, either by the President or his Cabinet officials. Since GROSVENOR brought forth his new resolution the President says that the failure to comply with the requests of the June resolution was a matter of pure oversight. He is willing that Congress should have a full and frank reply. Mr. Grosvenor expects to show when the replies to the resolution reach the House that the Democrats in all of the Departments have grossly violated the spirit of the civil-service law, made removals right and left, and filled all available places with Administration Democrats. It is expected that GROSVENOR will cite the Philadelphia Mint as the leading example of how unjustly the civil-service law can be made to apply. The Mint employees did not come under the provisions of the law when the Cleveland Administration came into power, but after the man Cleveland appointed superintendent had ruthlessly removed nearly every Republican official in the Mint and placed Democrats in their stead, the office was put under the protection of the civil-service law. It is expected that when Mr. McKinley as President appoints a Republican superintendent, the application of the civil-service rules to the employees of the Mint will be suspended until the persons who were turned out by Superintendent Townsend for no other cause than that they were Republicans can be reinstated. It is stated that among the people dismissed by Mr. Townsend were twenty-five men who had served in the Army during the war. This was a direct violation of a law which says that, all other things being equal, in making appointments preference shall be given to ex-soldiers and ex-sailors who fought for the Union in the war of the rebellion.

As I in substance heretofore intimated, I make this proposition and ask the careful student of legal and political conditions in this country to answer one or more of the questions thus propounded. In the light of the wrongs and outrages committed under the guise and protection of this system, either, first, the bureau is criminal in its disregard of law and duty; or, second, it is so ignorant, if the law be a perfect one, that it can not discover and remedy the wrongs and outrages; or, third, the law is of such a character, so hedged in with generalities and so destroyed of its operation by limits within the text of the law, and so perverted by Executive orders and manipulations, that it is impossible of just and honest execution. Look back over the period of four years and say which horn of the dilemma you will take. For myself, I will not intimate that this bureau is corrupt. It is impossible, it seems to me, that they are ignorant and stupid, and hence it is that I condemn the law and its execution as being of such character as it is impossible of honest execution.

What is the remedy? Now, Mr. Speaker, I will conclude this very lengthy address by adverting to the true remedy. It is said the President ought to modify and change the orders of Mr. Cleveland. It must be borne in mind in this connection that President McKinley has always favored a civil-service system. He wisely put into his inaugural address a modification or suggestion that opened to Congress a proper channel of operation. Not everyone who shouts civil-service reform will be recognized by the President as a civil-service reformer. Not every order that grabs at public office will be recognized by him as a due and proper execution and development of civil-service reform, but this system and its outrages have all been born of Congressional action. They are all based upon the statute known as the civil-service enactment.

These were all the acts of Congress, and while they are in force it is the duty of the President of the United States to see that they are intelligently and properly executed. Until Congress intervenes, the President will stand by the law. He is not responsible for the odious construction that has been put upon this statute. The seizing of the Bureau of Engraving and Printing, the seizing upon the minor places in all the Departments, the looting of the Government Printing Office, and all these things that have been incident to the growth and aggressions of this organization, he is not responsible for.

It has all been done under the pretense of law, and I for one, deeply as I feel the wrongs, will not ask the President of the United States, even though my voice might be heeded, to incur the responsibility of reversing the action of his predecessors beyond that which to his own good sense and good judgment may be commended; but I will ask the Congress of the United States to modify this law, and I say right here, Mr. Speaker, without any menace, that this voice, this demand of the people, this shout of denunciation, has got to be recognized on this floor. I give warning that no committee on civil-service reform of the Fifty-fifth Congress shall smother the voice of the people.

The Representatives of the people here who have introduced measures upon this subject shall have an opportunity to be heard upon this floor. No consignment of bills and resolutions to the pigeonholes of a committee will be tolerated. Bring the measures back here, with or without your favorable recommendation, and let us see what the voice of the country is upon this subject, as testified by the Representatives on this floor. This will be satisfactory; nothing short of it will be satisfactory; and then, Mr. Speaker, if this Congress fails to act the elections of 1898 will be close at hand and the people of the country will be heard from, and when they are heard from we shall have more definite data upon which to act.

Mr. Speaker, Congress can not shift this responsibility, and I would not shift it if I could. I would not burden the Administration with my views upon this subject, much less ask it to act and be exposed to the scorn and contempt of the Mugwumps of the United States. I owe something to the men of my district and my State, and the time has not been reached by me when I scorn

to acknowledge it. I admit that whatever I have succeeded in doing in public life has been because of the kindness, the generosity, the high trust, the intelligence of the men of my district, and I am not ashamed to say here that I am obligated to them therefor.

The young men of my district have toiled by day and by night to build up, strengthen, and perpetuate the principles of the Republican party, and incidentally they have conferred political favor upon me. It is no degradation for me to ask them to work in our political cause. It does not lower my sense of personal dignity to rally the young men and the old men of my district in support of the principles of the party to which I belong, and I have not reached the crowning idea of self-aggrandizement where I look with contempt upon the men who are my constituents; and I am willing and anxious to aid them in sharing in the blessings and emoluments of the administration of my Government.

The men, Mr. Speaker, who in 1896 marched thousands and thousands of miles to hear the words of encouragement and instruction from the President, as he stood upon the steps of his home in Canton, are entitled to have something to say about the Government of the United States without being subjected to irritation and distress and trouble in trying to secure admission to these Departments. They worked for the country and they worked for the candidates, and I protest when I find that when they apply for admission to participation, upon equal terms, in the Administration of the Government, a door of a bureau is slammed in their faces and they are told that they are good enough to vote and march and carry banners and transparencies, but they are not good enough to hold office under the Government unless they can compete in scientific literary knowledge with the students of colleges with wealth, and whose friends my friends and your friends can not successfully meet.

Let us, Mr. Speaker, base our approval of an applicant for office upon his patriotic devotion to the Constitution and laws of his country, his intelligent conception of his functions and franchises, the discharge of his duties of citizenship in the position which he occupies, and his characteristics that can never be ascertained by an examining board.

The system of civil-service examination as applied by the law of New York turned out to be a most monstrous failure, and the splendid governor of New York took the matter up and presented it to the legislature, and the legislature has made an intelligent one, one that I would be satisfied with, and I believe to-day that the wise and patriotic people of New York approve of what he has done. It gives the opportunity which I have appealed for.

Mr. Speaker, give me love of country as against literary excellence; give me patriotism against pageantry; give me native-born intelligence and special fitness for special purposes as against mere book learning.

I appeal for the young men of my country; I appeal for a just interpretation of her laws and principles; I appeal for an application of the great principles of Abraham Lincoln's declaration, that this is a Government of the people, for the people, and by the people, and to that end I will work and suffer, if need be.

#### The Tariff.

#### SPEECH

OF

HON. E. R. RIDGELY,

OF KANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 19, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. RIDGELY said:

Mr. SPEAKER: I shall vote "no" to this bill.

The authors of this bill claim that it will accomplish two things—provide revenue for the Government and encourage industry. As to its revenue power I have no doubt. It will increase the taxes on every man, woman, and child in the nation, and gather into the Treasury many millions more each year than the present tariff law. To this I object for the reason that I believe we should meet the present revenue by such retrenchment in expenses as may be necessary to that end, as the masses who are to be taxed by this bill can not pay more taxes except by increased privations. In justice to them and their condition we ought to reduce taxes instead of increasing them, as this bill is boldly designed to do. This true this tax will be collected stealthily, it being included as part of the cost of every article that must find its way into the homes of the people. Its victims will not know what part of this cost is tax; yet their money will be taken in larger quantities than now, and they will suffer its loss even if they do not know just how it is taken.

But, Mr. Speaker, there is still a greater burden laid upon the people by this bill than the millions of increased revenue paid to the Government. Already the price of sugar and many other necessities have been advanced to the consumers. Not a dollar of this advance will go to the Government, but it will go and is going into the pockets of home and foreign speculators. This evil will continue on many articles, so long as this protective method of taxing shall be followed, for it has long since been demonstrated that for every dollar of tax which reaches the Treasury by the tariff route the people, by this method of taxation, are compelled to pay into private pockets from two to three times as much more.

Money taken from the people in this way and given to a few speculators must of necessity weaken the people and add to their burdens, privations, and suffering. It does not require the study of statistics, Mr. Speaker, to reveal the fact that we are rapidly centralizing the wealth and homes of this nation into the hands of a few. Many of these favored owners are not even citizens of our country, and hence do not pay a dollar of this tax. This centralization is in part the inevitable result and effect of our protection policy, aided by others which I will not mention here.

The evil of centralizing the titles to the farms, houses, and property of our country and the consequent growing army of homeless people will continue so long as the present policies of favoritism are continued—our tax policy being one. Can it be possible that a single member of this House expects that to increase the taxes on every citizen of our land, regardless of their ability to pay, will really produce prosperity?

This question brings us to the second purpose of this bill—the encouragement of industry. We are assured by our Republican opponents that it will shut out foreign goods, leaving our manufacturers in exclusive possession of our home markets, thus encouraging them to keep their factories running. This, they say, will employ the people and enable them to buy the goods, thus inaugurating perpetual motion in prosperity. Happy scheme! But why has it failed so often under this same protective policy? We should not deceive ourselves and the country by this vain hope, in the face of past and present experiences and facts.

Why, Mr. Speaker, in denial of the charge that our factories have been closed by reason of increased importation, the official reports reveal the fact that the total imports under the present Wilson law are many hundred thousand dollars less than for the same length of time under the McKinley law. So it will not do to say the present difficulties are chargeable to our imports. But let us give our Republican friends the full benefit of their argument in support of their patent protection perpetual prosperity policy. Let us grant them all the home market, shut out all foreign goods, start up your mills, and call into employment all the idle workers of the land. Under the present system you can not run six months until you will be compelled to shut down fully half your mills, again turn into forced idleness half the people; while these same doctors will again cry out "overproduction" just as they have so often in the past. We speak from experience and not prediction.

Why has this resulted in the past, and why will it again? The answer is not to be found in either low tariff or high tariff. No, gentlemen, we have got to look elsewhere to find the causes of our troubles. Find them we must, and remove them, too, before prosperity can be realized and maintained.

Let us briefly look at our present system of industry and taxation; with present machinery, each man produces newly created values of \$4 each day. We pay him, say, an average of \$2 for his day's work (half this is nearer the average). Now, if he did not have to pay any taxes he could only buy \$2 worth of the goods out of what his day's labor has created, leaving unsold in the factory half the values each day. How long can the factory be run until its owners will cry out overproduction and shut down, for we have reached the condition where this illustration is almost the universal rule in all departments of production.

The great masses of our people having lost their houses and property, they have no longer security to buy goods on credit. The mill owners can not keep the mills running on credit sales, and the people have but little cash to buy with. This is a true statement of our condition under our present system. We have got to doctor it with other than tariff and unequal tax pills, which, so far as prices of materials are advanced, only adds to our difficulties by leaving more goods unsold.

Having thus hurriedly stated the difficulty which every observer in the land must see and having shown that our protective scheme has failed and will again fail as a remedy, I will now briefly present what, in my judgment, would at least partially remedy these conditions so far as a tax system can reach them. I would so change our laws, and if need be our constitutions, as to raise our national, State, and local revenues by a graduated tax on the wealth of the country and not on the necessities of the poor, as this and all tariff bills must do.

I would by a graduated tax on concentrated wealth not only raise the needed revenue to meet the present current expenses of the Government, including all State and local taxes, but I would largely increase our public improvement fund; and with this I

would put every man in the land, who applied, at work on public improvements at such liberal wages as would compel our factory and mine owners to materially advance present wages or lose their operatives. With the people in our valleys crying out for water, we can profitably employ the army of idle of to-day, creating a great national system of reservoirs on the high lands with irrigating and navigable canals to connect and distribute the water as needed, and by so doing save the valleys from floods and the plains from drought, while the people would all be employed at good pay, and would readily buy all the products of our farms, mines, and factories, provided we pay them better and stop taxing them unjustly.

This system can be extended without limit, as we can hardly conceive of a condition which will not require man's labor to produce supplies for his comfort, and in building, changing, and repairing of public property.

If perchance we find that less hours work will do all that is necessary, then, in the name of common sense and humanity, let us reduce the hours of labor to all.

Mr. Speaker, I intend, before this session closes, to introduce a graduated tax bill, and I sincerely wish this Congress would substitute such a bill for the pending tariff measure; but I have no hopes of this. However, the people throughout the nation are earnestly studying these problems, and they will, in the near future, send men to these halls who will do more than revamp old tax systems and quarrel over schedules.

For years we have had the protective system in force as part of our national policy, and it has steadily been an aid and ally in the continued tendency to centralize all wealth (the product of labor) in the hands of the few; and has also steadily increased the mortgage indebtedness on the homes of our people.

The census of 1890 gives the total value of all kinds of property in the United States, not counting Alaska, as \$65,037,091,197, divided as follows:

Real estate and improvements thereon.....	\$39,544,544,333
Personal property, including railroads, mines, etc.	25,492,546,864

this valuation being based on the selling value of the property. The total assessed value of this property, both real and personal, is \$25,473,173,418, divided as follows:

Real estate and improvements.....	\$18,956,556,675
Personal property.....	6,476,616,743

By reference to these figures, it will be seen that our system of assessment and taxation are unjust now to the farmer and home owner so far as property taxes are concerned, as the real estate and improvements pay taxes on nearly half of the actual value, while the assessed value of personal property is only one-fourth the real value, leaving the burden of property tax on the homes. And now, by this bill the revenue to be raised for the Government is to be a burden on the daily necessities of our people, instead of putting it on the wealthy, who should pay it, and to whom such payment would be no burden.

The increase of wealth from 1880 to 1890, as shown by the census returns, was 49.02 per cent.

Increase in population during same time was 24.86 per cent.

While the increase in mortgage indebtedness of the country during the same period was 146.53 per cent.

The figures show unmistakably where we are drifting, and it means, Mr. Speaker, that unless our economic policies are changed our people will soon be a nation of tenants, instead of home owners, and should be a warning to us ere it is too late to change our policy and save our nation.

This bill, instead of changing for the better, goes further than any previous one in fastening the chains of slavery now being forged by corporate wealth upon the great masses of the common people. The supporters of this bill clamor loudly for aid to the manufacturer. Let us see what the figures show in this regard for the benefit of the wealth producer (the laborer). Referring again to the census of 1890 we find the—

Total value of manufactured products to be.....	\$9,372,437,283
Cost of raw material.....	5,167,044,076
Difference (value added by labor).....	4,205,393,207
Paid in wages.....	2,283,216,529
Tribute paid by labor to capital.....	1,922,376,678

And now, in addition to this tribute we, by our action here in passing this bill, add to the cost of every necessity the laborer has to have for his daily subsistence—everything he needs for his table and everything he needs for his clothing. All this is in the wrong direction for relief. What is needed is a policy of taxation that will place this burden upon those who are able to bear it without inconvenience or suffering. We should place a graduated tax on all incomes above a reasonable amount for a comfortable living; and if, as our Supreme Court say, this is not constitutional, let us change our Constitution to enable justice to be done to our toiling masses.

"The greatest good to the greatest number" should be our motto, rather than the protection and enrichment of the few, and

the enslavement of the many, as is now the tendency of things, to be aided and hastened by the passage of the pending bill.

Already there is a strong and growing sentiment permeating all parties, classes, and parts of the nation, demanding not only the changes I have indicated, but others also that are soon to be adopted by an intelligent people, which will not only "provide revenue and encourage industry," but they will in reality produce equity and general prosperity for all, as our nation again resumes its march at the head of the column of nations.

#### Currency Commission.

In April, 1897, President McKinley appointed a foreign monetary commission to *discontinue* the gold standard.

In July, 1897, he wants to appoint a home monetary commission to *continue* the gold standard.

For which does he stand?

#### SPEECH

OF  
HON. JOHN W. GAINES,  
OF TENNESSEE,  
IN THE HOUSE OF REPRESENTATIVES,  
Saturday, July 24, 1897.

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 379) to provide revenue for the Government and to encourage the industries of the United States.

Mr. GAINES said:

Mr. SPEAKER: Shortly after the beginning of this extra session of Congress President McKinley appointed what is called the Wolcott monetary commission to go to Europe for the purpose of discontinuing the gold standard in the United States by international agreement, as proclaimed by the Republican platform upon which the President was elected last November. At the same session of this same Congress, the same year, the same President, for the same people, those of the United States, urgently requests Congress to enact a law creating a home monetary commission—to do what? To *continue*, not *discontinue*, the gold standard, regardless of an international agreement. The President, you see, has deliberately at the same session of Congress, the same year, and for the same people, indorsed a plan to *discontinue* the gold standard, and at the same session of Congress, the same year, and for the same people, indorsed a plan to *continue* the gold standard; and, mind you, in each instance he is working ostensibly for the same people, to wit, those of the United States.

Several questions here naturally arise:

First. Does the President and his party want, in good faith, to discontinue the gold standard by international agreement, which means international bimetalism, the very opposite of the gold standard?

Second. Does the President and his party want to continue, not discontinue, the gold standard?

Bimetalism and gold monometallism are diametrically opposed to each other.

But still the President and his party have indorsed both systems, and would have Congress work for both, when we well know that both can not exist in this country at the same time.

Third. Are these plans and operations unbusinesslike? To continue working for the gold standard is to lessen the effects of all efforts at bimetalism. To work at the continuance of the gold standard and to work for bimetalism at the same time is the same in effect as working against both propositions.

Fourth. The President, it seems, very earnestly undertakes to do both; but which does he want done?

He has appointed the Wolcott commission to discontinue the gold standard and to reinstate bimetalism, and that commission is now "summering" in Europe with "good prospects of success," if the press properly quotes Mr. WOLCOTT. The President promptly appointed this commission, and the Government, at a heavy expense, has sent them abroad to do the very thing that the President in his remarkable message of to-day asks you in effect not to do.

And in the face of this the President asks Congress to create another commission to work in the United States for the purpose of continuing the gold standard and to appropriate \$100,000 to defray the attending expenses. What will foreign countries think of the President and the good faith that he should show them by and through the Wolcott commission? Will they not say, "Your President has just sent a most urgent message to Congress for the purpose of creating a commission to continue the gold standard, and here you are, representing the same President, the same Congress, the same nation, the same year, asking us to join the United States in discontinuing the gold standard? Here is bad faith and duplicity."

I submit that upon the part of the President it is unbusinesslike. It would seem by his words and acts that he is for the gold

standard and against the gold standard; for international agreement and against international agreement; for carrying out the Republican platform and against carrying it out; for carrying out the Palmer platform and against carrying it out.

From this message it appears that he has utterly abandoned all hope of international bimetalism without recalling the Wolcott commissioners, and now seeks to maintain and continue, by and through the United States alone, the gold standard, thus abandoning bimetalism by international agreement, and joining the gold monometallists.

The President's message says:

A notable assembly of business men, with delegates from twenty-nine States and Territories, was held at Indianapolis in January of this year. The financial situation commanded their earnest attention, and after two days' session the convention recommended to Congress the appointment of a monetary commission. I commend this report to the consideration of Congress.

Notice that the President "commends this report to the consideration of Congress." What does that report say? It starts out for the maintenance of the gold standard outright, regardless of everything and everybody and all nations. I read from that report:

This conference declares that it has become necessary that a consistent, straightforward, and deliberately planned monetary system shall be inaugurated, the fundamental basis of which should be: First, that the present gold standard should be maintained.

The "fundamental basis," then, of this report is the continuance of the present gold standard, while, Mr. Speaker, the "fundamental basis" of the Wolcott commission is to discontinue the present gold standard. This conference report was promulgated by the Indianapolis convention, which assembled in January last, who, though few in number, with much money made Mr. McKinley's election sure.

That "notable assembly of business men"—"business men," mind you—insists that the present gold standard should be maintained, and without requesting the President to recall the Wolcott commission which is trying to discontinue the gold standard, they demand that the present gold standard shall be maintained. Does that look like "business"?

These "business men" would have the two commissions at work at the same time—one to discontinue the gold standard, at work in Europe at the expense of the people, the other to continue the gold standard in this country and by this country, at the expense of the people. And, mind you, the President says:

I commend this report to the consideration of Congress.

This "notable assembly of business men" came to this conclusion after two days' session, while 6,000,000 people who voted for McKinley, after great deliberation not only for two days but since 1876, came to the deliberate conclusion that the gold standard should be discontinued, but by international agreement; while the McKinley vote and Bryan vote—nearly 12,000,000—want the "gold standard" discontinued, the former by international agreement, the latter without waiting for it.

In the face of this authority, from "we the people," the President deliberately follows the plan of the "notable assembly of business men," and in the most importunate manner insists that these 12,000,000 of voters were wrong, and that their deliberations since 1876, including his own, should and must come to naught, and that the gold standard should be the "fundamental basis" upon which our finances should be built and continued.

This message says this commission is to "report their conclusions on or before the 1st day of November next, in order that the same day it may be transmitted by me to Congress for its consideration at its next regular session." It is seen by this language that the President would appear to be in earnest about the appointment of this commission, and therefore equally in earnest about continuing the gold standard. Now, suppose this commission had been appointed, and that it had in due course reported that the gold standard be continued. And suppose that the Wolcott commission should also report in due course that an international agreement had been arranged for discontinuing the gold standard. Here the President would have both reports, diametrically opposed to each other! One to continue and the other to discontinue the gold standard, both of which he had favored.

Now, what would the President do? He could no longer straddle. He could no longer be duplex. What would he report to Congress?

Another remarkable feature of this message is this. He says:

This subject should receive the attention of Congress at this special session. It ought not to be postponed until the regular session.

The President knew the House and Senate had both agreed to adjourn at 9 o'clock p.m. (July 24, 1897), and yet with this knowledge this message was sent to Congress within less than two hours before this hour when both Houses adjourned. The President knew that it could not and would not be considered in this short time in either House. He knew it would pass the House by brute force, but that it would not pass the Senate. This action is another evidence of the bad faith, the poor judgment, the cheap politics, and the unbusinesslike methods of the President and his party.

In closing his message, the President says:

It is to be hoped that the report thus made will be so comprehensive and sound as to receive the support of all parties and the favorable action of Congress.

How is it possible, I respectfully ask, for Congress to receive favorably the action of the two commissions, one to continue and the other to discontinue the gold standard? And how could "all parties" receive favorably such reports?

The President's message on this subject lacks courage; it lacks good faith; it is a miserable, unbusinesslike straddle.

If followed, it would make confusion more confused and international bimetalism less possible.

But the President knows how "all parties" have been on this "gold and silver" question, since he has affiliated at different times with "all parties" on this question. In Congress he voted with "all parties" to remonetize silver.

HIS "ALL PARTIES" RECORD.

Let us see what Mr. McKinley voted for while a member of this House, and what he said afterwards.

1. November 5, 1877, he voted for the Bland 16 to 1 free coinage of silver act, entitled "An act to authorize the free coinage of the standard silver dollar, and to restore its legal-tender quality."

2. February 21, 1878, he voted against laying this Bland bill and Senate amendments thereto on the table.

3. On the same day he voted for the two Senate amendments to this Bland bill, which amendments required (1) the monthly purchase of no less than two and no more than four millions of silver bullion, and (2) the monthly coinage of the same into standard silver dollars.

4. February 28, 1878, he voted for this Bland-Allison Act, and by this vote aided in its passage and becoming a law over President Hayes's veto.

January 29, 1878, Mr. McKinley voted for the resolution offered by Senator Stanley Matthews, of the nonsilver-producing State, Ohio, which reads as follows:

*Be it resolved by the Senate (the House of Representatives concurring therein), That all the bonds of the United States issued or authorized to be issued under the said act of Congress hereinbefore recited are payable, principal and interest, at the option of the Government of the United States, in silver dollars of the coinage of the United States, containing 412½ grains each of standard silver, and that to restore to its coinage such silver coined as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith nor in derogation of the rights of the public creditor.*

This resolution was agreed to by the following vote: Senate—yeas, 43; nays, 22. House, yeas, 189; nays, 79.

Senators Thurman and Matthews, of Ohio, voted yea, while the lamented Isham G. Harris, of my own State, was paired for it, and his colleague, the great lawyer and distinguished statesman, Judge James E. Bailey, voted for it. Each and every member of Congress from Tennessee voted for it, as follows: Bright, Caldwell, Dibrell, Riddle, House, Atkins, Young, Whitthorne, Thornburg, and McFarland. The great speech of Judge Bailey in favor of this resolution which I have read is a monument to his genius, his patriotism, and his statesmanship.

5. April 8, 1886, the Bland free-coinage bill was reported adversely, and a substitute was offered therefor, providing that silver coinage under the Bland-Allison law should be suspended July 1, 1886, unless previously remonetized by international agreement. Mr. McKinley voted against this substitute.

6. In 1888, at the Republican national convention, Mr. McKinley reported the platform, which declared that—

The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

This was condemnatory of Mr. Cleveland's recommendation to repeal the Bland-Allison Act. Mr. Cleveland now favors the gold standard (the Indianapolis convention views), which Mr. McKinley indorses in his message of to-day outright.

7. In 1890, Mr. McKinley, as chairman of the House Ways and Means Committee and leader in the Fifty-first Congress, earnestly advocated the Sherman silver-purchasing act of 1890 as better than the Bland-Allison Act and as the next best thing to free coinage, saying of it:

We can not have free coinage now except in the manner provided in the bill: To defeat this bill means to defeat all silver legislation, and to leave us with two millions a month only, when by passing the bill we would have four and a half millions a month of Treasury notes, as good as gold.

8. May 7, 1890, he said in the House:

When merchandise is the cheapest, men are the poorest; and the most distressing experience in the history of our country—aye, in all human history—have been when everything was the lowest and cheapest, measured by gold, for everything was the highest and the dearest measured by labor.

9. When he was nominated for Congress against Mr. Warwick, in his speech of acceptance, he said:

We made another pledge. The Republican party is in favor of the use of both gold and silver as money; that the one should not be discriminated against, but that both should be equal and alike recognized by the Government. That pledge has been kept. The Congress of the United States has passed a law which utilizes every ounce of the silver product of the United States, and even more; utilized it for money, and turns it into the channels of trade and avenues of business, and as a result silver is nearer a parity with gold to-day than it has been in the last fifteen years. By this law we have

not only increased the circulating medium of the country, but we have made that circulating medium absolutely safe. Not a single Democrat voted for the silver bill. It passed in spite of Democratic opposition. The Democrats had the House of Representatives and the Presidency for four years, and did nothing for silver but discredit it. Cleveland's first act was to demand the suspension of the coinage of the silver dollar. We pledged the restoration of silver to its true and ancient relation in our monetary system, and it has been done.

10. September 27, 1890, Mr. McKinley wrote Mr. Perkins:

I have always been in favor of the free and unlimited coinage of the silver product of the United States, and have so voted on at least two occasions during the time I have been in public life. I was not willing to extend this coinage to the silver of the world and open the mints to foreign countries without charge, as proposed by gentlemen on the floor of the House. My purpose was to secure immediate legislation that could credit and dignify our silver coin. I believe the law which we enacted this session will accomplish that result. It utilizes every dollar's worth of the silver product of the United States, and even more.

Now listen as to what effect he says the law has on increasing the value of silver. He says:

The value of that legislation (Sherman Act, 1890) has already been apparent in the enhanced value given to silver.

Here he admits he voted for free coinage. He said:

You may remember, as indicating my position on this subject, that I voted to pass the silver bill in the Forty-fifth and Forty-sixth Congresses over the veto of President Hayes.

Now listen to this wonderful stone-wall position he took and compare that with his present duplex position. He concluded his letter thus:

With me political and economic questions are a conviction, and while I may not always be right, I am always willing to let those whose suffrages I seek know exactly what they are.

I respectfully submit that it would take a powerful political microscope to discover just now his political and economic convictions on the money question.

11. October 27, 1890, he proceeded to deliberately fool the Farmers' Alliance of his own State. He wrote "Secretary, Stark County Farmers' Alliance," as follows:

First, I am opposed to all trusts and combinations of the times in the restraint of trade, and would favor any legislation which would destroy them. I voted for the Sherman antitrust bill, which was a step in the right direction.

And yet Mr. McKinley carefully omitted to condemn the Republican Senators for voting as a unit against the several Senate antitrust amendments to the present Dingley bill. Mr. McKinley's letter continues:

I am in favor of the use of all the silver product of the United States for money as a circulating medium; I would have silver and gold alike.

Yet he would not in 1897 have gold and silver "alike."

12. June 14, 1890, Mr. McKinley in this House said:

I am for the biggest use of silver in the currency of the country. I would not dishonor it; I would give it credit and honor with gold. I would make no discrimination. I would utilize both metals as money and discredit neither. I want the double standard.

Yet he says now he wants the single gold standard.

13. At Akron, Ohio, 1891, Mr. McKinley denounced Mr. Cleveland's policy in unmeasured terms. He said:

During all of his years at the head of the Government he was dishonoring one of our precious metals, one of our own great products, discrediting silver and enhancing the price of gold. He endeavored, even before his inauguration to office, to stop the coinage of silver dollars, and afterwards, and to the end of his Administration, persistently used his power to that end. He was determined to contract the circulating medium and demonetize one of the coins of commerce, limit the volume of money among the people, make money scarce, and therefore dear. He would have increased the value of money and diminished the value of everything else—money the master and everything else the servant. He was not thinking of the "poor" then. He had left "their side." He was not "standing forth in their defense." Cheap coats, cheap labor, and dear money; the sponsor and promoter of these professing to stand guard over the poor and lowly. Was there ever more glaring inconsistency or reckless assumption? He believes that poverty is a blessing to be promoted and encouraged, and that a shrinkage in the value of everything but money is a national benediction.

August 26, 1896, in his letter of acceptance, Mr. McKinley said:

Against any such policy I am unalterably opposed. Bimetallism can not be secured by independent action on our part. \* \* \* Until international agreement is had, it is the plain duty of the United States to maintain the gold standard.

We see from these utterances that Mr. McKinley has been on all sides of this question. He has been with "all parties," and yet he stated emphatically in his letter to Mr. Perkins this:

With me political and economic questions are a conviction.

Then why has he varied so in his conviction? For free coinage and against it; for remonetizing silver and against it; for paying our bonds in silver dollars and against it; for remonetizing silver over the President's veto and against it. He denounces Mr. Cleveland's attack on the Bland-Allison Act and the Sherman law, by which latter law silver coinage was stopped, and now he indorses it; he was for the double standard and now against it; he was for the free coinage of our own silver product and now against it; he said that everything is lowest and cheapest measured in gold, and now he says that gold is best for the laborers and farmers in this country; he favored bimetallism by international agreement, and now indorses the maintenance of the gold standard; he was elected on the promise to procure, if possible, international bimetallism, and now in effect opposes it; he appointed a foreign monetary commission to discontinue the gold standard, and now he recom-

mends the appointment of a monetary commission to continue the gold standard.

He wires in and he wires out,  
He leaves the people still in doubt  
Whether the snake that made the track  
Was going north or coming back.

14. But it is beyond question, it seems to me, that this message was sent in as a subterfuge to further lend to the people of this country the hope of financial relief promised them in the last campaign. Mr. McKinley knew, as stated, it could not become a law this session. He purposely, evidently, omitted to send his message to Congress any sooner than he did that it might not be considered, its merits and demerits pointed out, and a decent life or death given the measure. He will go back to his State, which has so long honored him, and say to that restless and long-suffering people, "Wait a little longer; do you not see what I have done and am doing? I have appointed an international monetary commission to discontinue the gold standard, and I have recommended a law which has passed a Republican House to create a monetary commission to continue the gold standard. Do you not see what I am doing?" The cry has gone up, Mr. Speaker, all over this country for financial relief, and the people demand it. It went up throughout this Union from 1876 to 1878, when silver was partially remonetized, giving some relief. No louder cry went up from any State than Ohio, as witnessed by the words of the Hon. Stanley Matthews on the 10th day of December, 1877, in the Senate, which I beg to have made a part of my remarks.

Mr. Matthews, a Senator from the State of Ohio, said:

Mr. President, the general assembly of the State of Ohio at its session last winter adopted the following resolution:

"Resolved, That common honesty to the taxpayers, the letter and the spirit of the contract under which the great bodies of its indebtedness was assumed by the United States, and true financial wisdom each and all demand the restoration of the silver dollar to its former rank as lawful money."

Continuing, Mr. Matthews said:

This resolution was passed with great unanimity. There were but three negative votes in the house of representatives and one in the senate, and I have no doubt it expresses the deliberate and considered public opinion of the people of that State with the same proportion among them as to unanimity as was evidenced by the vote of their representatives in the general assembly.

Mr. Speaker, in the course of the debate in the Senate upon the concurrent resolution Senator Matthews further said:

But my statement is that gold has risen in value with all commodities, and therefore with silver, and with silver only because it has risen in value with all commodities.

I have the testimony of my observation; I have the testimony in the list of bankruptcies, which I read; I have the testimony in the list of sheriffs sales I have noticed; I have the testimony in the prices to which real estate has shrunk; and I could recount instances in that city, which I believe to-day the soundest and most prosperous one on the continent, where business has been transacted the least on credit—I mean the city in which I live (Cincinnati)—where the depreciation in real estate and in every article of property other than gold itself has been actually unexampled. What else means all this cry of discontent? What else means all this half-suppressed murmur of dissatisfaction?

#### WHEN DO PEOPLE CRY?

Do gentlemen suppose that people are crying out when they suffer no pain? Do they suppose that the voice of lamentation comes up from the homes and houses of the people merely that they may hear themselves shriek and cry? Or is it the truth and is it the fact that the distress of the country is beyond all historical comparison in our country, and that to-day it will require but a few more turns of the wheel to submerge the majority of the body of the people into hopeless bankruptcy? So, then, Mr. President, on any ground and in any view that I am able to take, if we restore the silver dollar to its former and accustomed place in our legislation, in our coinage, and in our currency, we are still paying the public debt and all private debts according to a large and overflowing measure of value.

On August 1, 1877, the Republicans of Ohio met, and in convention assembled declared:

We are in favor of both silver and gold as money; that both shall be a legal tender for the payment of all debts, except those specifically provided for by law, with coinage and valuation so regulated that our people shall not be placed at a disadvantage in our trade with foreign nations; and that both metals shall be kept in circulation as the money of the nation, as contemplated by the Constitution; and we therefore demand the remonetization of silver.

If in 1877 the "remonetization of silver" would remove any disadvantages of trade with foreign nations, and keep "in circulation as the money of the nation both gold and silver" and "as contemplated by the Constitution," why will it not do so now? The Bland-Allison law, as we see, partially remonetized silver; business revived under its invigorating influence, and hence it was that on June 12, 1878, the Republicans of Ohio again met in convention and adopted the following financial plank:

The financial question having been disposed of by Congress—

Bland-Allison law—

and the country at present needing repose in order that capital may seek investment and that industries may revive, thus increasing the demand for labor, the situation ought to be accepted; and we oppose the further agitation of the question at this time as injurious to business and devoid of other than evil results.

The Republicans of Ohio, including Mr. McKinley, were content to let the Bland-Allison law remain, feeling assured that business would revive, as it did.

And now, without more, I desire to make part of my remarks also and to commend to the consideration of the American people portions of the great speech of the Hon. William D. Bynum, made

in this House March 20, 1886, in making a minority report in favor of free coinage. It is all the more delightful to read since that distinguished gentleman is now stumping the country, saying to the farmers and the people that the gold standard only, and not bimetallism, is the thing for them, and that the gold standard only can bring relief. He said:

"Mr. Speaker, I desire to occupy the attention of the House for a time in the discussion of the measure now before it looking to the free coinage of the silver dollar. I do not expect that I shall be able to say anything that will change the opinion of any member of the House, and yet I believe that no better use can be made of the time of the House than that which has and will be taken up in the examination of this important matter. It is by this means that the people will become educated upon the subject and be prepared to give a correct and intelligent expression of their views when the proper time arrives for them to speak.

"The President and Secretary of the Treasury have strongly recommended the suspension of the coinage of silver dollars. A partisan and supporter of the Administration, possessing unlimited confidence in the integrity and patriotism of the Executive and his Secretary, I have and expect, whenever and wherever I consistently can, to support their views and uphold their policies. I am, however, upon this question compelled to dissent from the views expressed by the President in his message and the Secretary in his report. \* \* \*

"Having signed the report of the minority of the Committee on Coinage, which recommends the passage of this bill making the coinage of silver dollars free and unlimited, occupying advanced ground, I ought to be able to give some plausible reason, whether satisfactory or not, for the position I occupy.

"The Bland bill, which passed the House on the 5th day of November, 1877, by an overwhelming vote, provided for the free and unlimited coinage of the silver dollar containing 412½ grains, as provided in the act of January 18, 1837.

"The bill was amended in the Senate so as to require the Government to purchase not less than \$2,000,000 worth of silver bullion, and to coin not less than two nor more than four million dollars per month. The friends of silver, in the presence of a hostile Administration, were willing to accept the compromise measure. Had the spirit and intention of this law been honestly carried out by the coinage of the maximum limit or the product of our own mines, it is more than probable that the problem would have been settled before this either by the adoption of free coinage or by suspension.

"The execution of this law, however, has been in the hands of the enemies of the silver dollar; coinage has been restricted to the minimum limit, and the excess of bullion produced from our mines thrown upon the market as a commodity. The effect of such a policy only tended to further depress the market value of silver bullion.

"I am in favor of the free coinage of silver because I believe it to be a palpable violation of the Constitution and of the rights of the States and the people to in any wise limit or restrict the coinage of either metal. By the Articles of Confederation the right of coining money belonged concurrently to the States, Congress possessing only the exclusive right to regulate the alloy and value. Can it be inferred that when the States parted with the right to coin money and consented to the restriction upon the powers to make nothing but gold and silver a legal tender they intended that the Federal Government should coin or not coin money as Congress might determine? Did they intend by this concession to become dependent upon the will of legislation, or to continue to rely upon natural resources, which had been the policy of all governments from the foundation of the world, to furnish the supply of money?

"Silver pays the laborer for his work in the field, in the manufactory, in the shops, and in the mines. It purchases his provisions from the grocer, pays the rent, and clothes his family. As well said, 'It is the people's money.' Take away silver and you destroy the industries of the people, which furnish the balance of trade in our favor, and our gold will leave us to square the account. Give to American labor plenty of silver and it will furnish products that other nations will purchase and pay for in gold. Gold will not be driven out so long as the balance of trade is in our favor; it will not remain when the balance is against us. Gold is, and ever has been, an unreliable money. The great interests of our people, transacted largely upon confidence and credit, should have a basis neither timid nor cowardly. If you confine the people of this country to the single standard of gold, periods of depression more lasting and more terrible than we have ever experienced will be our portion. As well said by Senator Ingalls: 'No enduring fabric of national prosperity can be built on gold.' \* \* \*

"Driven to cover by the facts, upon the proposition that silver will expel gold, the advocates of suspension say that we have all the silver we can use, all that will circulate upon a par with gold, and that if we coin more the monetary values of the two metals will part. Of all the sophistries advanced this is the most fallacious. Will some gentleman tell me what relative uses they per-

form as money, after being coined by the Government, that will cause them to separate? After being officially stamped as money and given full legal-tender power, what advantage will one possess over the other? When will a silver dollar pay less than its monetary value—when will a gold dollar pay more? The power of sovereignty within the confines of the Government fixes the relative values of the two coins as money, and the values of the materials of which they are made as commodities in the markets can have no influence upon their circulation. \* \* \* The fiat of the Government gives to one the same qualities as the other, and it is beyond the power of individuals to discriminate except by specific contract. \* \* \*

"So long as the two coins perform the functions of money they must circulate upon an equality.

"Again, the advocates of gold approach us with open hands and smiling countenances, but I fear with a dagger concealed beneath their cloaks. 'Oh,' they say, 'we want silver! We are bimetallists, but we want an honest dollar. Suspend coinage and we will drive England, Germany, and other nations to bimetallism, and then the price of silver bullion will appreciate and our dollar will be worth a hundred cents.' To the friends of silver I wish to say, 'Be not deceived.' A suspension of coinage means demonetization.

"We should remember that the discrimination made against silver is what has already driven the bullion value of the silver dollar, as compared with the gold, down to 80 cents. Our country, without silver coin, with an immense debt to pay, every dollar of which, by every principle of law and equity, of honesty and justice, was payable in silver coin, was the desert upon which this current should have been turned. Such a policy would probably have averted the great panic of 1873, which swept across the country like a besom of destruction, marking its course by a destruction of values never before witnessed.

"Silver was demonetized without the consent or the least knowledge upon the part of the people. \* \* \*

"With all this discrimination against it, silver has held a place in all the governments of the world, performing the functions of a medium of exchange between the great body of the people. \* \* \* Free coinage will make the silver in a dollar worth a hundred cents. It will do more. It will make wheat and cotton, homes and farms, sweat and muscle, worth a hundred cents to the dollar.

"We have to-day \$1,594,000,000 in coin and paper. It will take \$1,376,000,000, nearly as much more, to give us the amount per capita that France has. For one, I am in favor of opening the mints and letting the bright stream flow through the channels of trade and commerce unimpeded until 'idle money becomes as unproductive as idle labor.' Let us try the experiment. If it proves a failure we can easily abandon it before any serious harm is done.

"We are told that silver is cheap money, that it is unjust to creditors and a fraud upon the laboring man. The advocates have loudly proclaimed, and in tones of great sympathy, that the continued coinage of silver will so cheapen money that prices will immeasurably go up and the laboring classes be the greatest sufferers. The disinterested philanthropy of the man who opens his vaults, views his gold, and laments that money is likely to become cheap, to the great detriment and injury of the working classes, is wonderful. These gentlemen are the first to discover, however, that cheap money means low wages. It has always been the prevalent idea that money was fixed and unchangeable, and that it was the price of commodities that fluctuated. \* \* \*

"Labor has always been considered the first and greatest of commodities. When money is cheap, prices are inflated and wages go up. When money is dear, prices are depressed and wages go down. There is not a laboring man to be found who does not know that when prices are up wages are not only high, but work plenty; that when prices are down, wages are low and work difficult to obtain. When prices are falling there is discontent and disaster; when they are rising there is pleasure and prosperity.

"It is because of the shrinkage of values, as well as the detriment of labor, that I raise my voice and utter a protest against this crusade that has been in the past so successfully waged in behalf of the moneyed interests, to the utter and almost complete destruction of the welfare of the people.

"The people of the West are in debt; their farms, their homes, and, in many instances, their beds are mortgaged. They have been paying exorbitant rates of interest to the East until they are impoverished. The prices of their products have fallen, their lands shrunk in value until they begin to stagger beneath the weight of their burdens. They are energetic, laborious, and patriotic. During the days when the nation's body was bleeding from a hundred wounds and its life trembling in the balance, they poured out their richest blood and treasure that it might be saved. They faced the death-dealing grape and canister upon a hundred fields that this Government might be preserved as one great, indissoluble nation, and they now ask that in the majesty of its strength and power its great, strong arm shall not be raised to at one blow strike them down to want and beggary." [Great applause.]
